Methoxychlor insecticide composition. E. I. du Pont de Nemours and Company. 501,880, Aug. 24; Serial No. 543,578, published May 25, 1948.
Mouthwaah. L. E. Stelly. 440,288, Aug. 24; Serial No. 503,476, published May 11, 1948.
Mouthwashes, powders, and paste, etc., K. A. Lingner. 70,021, re-renewed July 21, 1948. O. G. Aug. 24.
Oil, Synthetic. Beck Koller & Co., Inc. 324,454, May 21, 1935. Republished Aug. 24.
Ointment for rectal application. Otis Clapp & Son, Inc. 312,355, Apr. 24, 1934. Republished Aug. 24.
Ointment for the treatment of various skin affections. Upjohn Company. 248,197, renewed Oct. 16, 1948. O. G. Aug. 24.
Ointment preparation, Antiseptic. Spohn Medical Company. 501,751, Aug. 24; Serial No. 519,145, published May 25, 1948.
Parasiticides. California Spray-Chemical Corporation. 440,310, Aug. 24; Serial No. 511,063, published July 15, 1947.
Perfume, cologne, facial cream, etc. D. Merrell. 501,742, Aug. 24; Serial No. 483,187, published May 18, 1948.
Perfumery and flavoring products. Daarmann-De Laire-Schaefer Co. 41,630, Dec. 8, 1903. New certificate. O. G. Aug. 24.
Perfumes and toilet waters. G. R. Parkinson. 432,475. Sept. 2, 1948. Republished Aug. 24.
Pharmaceutical preparation. Grant Chemical Company, Inc. 501,860, Aug. 24; Serial No. 537,309, published May 25, 1948.
Preparation for the prevention and treatment of acute and chronic localized infections. White Laboratories, Inc. 432,210, Aug. 26, 1947. Republished Aug. 24.
Preparation for the relief of the symptoms of ordinary overindulgence in alcoholic beverages. Frailey Industries, Inc. 501,862, Aug. 24; Serial No. 537,444, published May 25, 1948.
Preparation for the treatment of burns. G. M. Wotherspoon. 501,834, Aug. 24; Serial No. 532,534, published May 25, 1948.
Preparation to be applied to the soil for destroying insects, etc., vermin and the like. Andrew Wilson, Inc. 364,994, Feb. 21, 1939. Republished Aug. 24.
Preparations for the hygienic care of the eyes. Murine Company, Inc. 501,781, Aug. 24; Serial No. 528,635, published May 25, 1948.
Preservatives, disinfectants and controllers of bacteria, mold and slimes in general, General. Buckman Laboratories, Inc. 501,747, Aug. 24; Serial No. 515,153, published May 4, 1948.
Remedy for animals, External. A. B. Young. 52,798, May 15, 1906. Republished Aug. 24.
Remedy for colds, catarrh, etc. Bacorn Company. 92,779, July 29, 1913. Republished Aug. 24.
Resin, Synthetic. General Electric Company. 240,134, renewed Mar. 20, 1948. O. G. Aug. 24.
Rust inhibiting compounds. Skybryte Company. 342,290, Jan. 12, 1937. Republished Aug. 24.
Salve or balm. F. S. Colwell. 119,266, Nov. 13, 1917. Republished Aug. 24.
Salve or ointment, Medicinal. Dixie Laboratories, Inc. 372,192, Oct. 24, 1939. Republished Aug. 24.
Sedative. Otis Clapp & Son, Inc. 297,470, Sept. 13, 1933. Republished Aug. 24.
Sedative. Otis Clapp & Son, Inc. 311,791, Apr. 3, 1934. Republished Aug. 24.
Solder, Liquid. H. P. Riordan. 440,305, Aug. 24; Serial No. 509,101, published May 11, 1948.
Toilet powder. Otis Clapp & Son, Inc. 193,807, Jan. 6, 1925. Republished Aug. 24.
Vitamin compounds. Vioral Company. 501,870, Aug. 24; Serial No. 538,202, published May 25, 1948.
Vitamin prepartion, Conditioning. W. Cooper & Nephews, Incorporated. 385,996, Mar. 25, 1941. Republished Aug. 24.
Vitaminous dietary supplement. E. R. Squibb & Sons. 250,079, renewed Nov. 27, 1948. O. G. Aug. 24.
Yeast protein and casein hydrolysates. Kingsland-Ferguson, Inc. 501,818, Aug. 24; Serial No. 531,040, published Apr. 27, 1948.

CLASS 7

Rope of vegetable fiber. Columbian Rope Company. 129,652, Mar. 9, 1920. Republished Aug. 24.

Twine composed of a mixture of hemp and jute. Columbian Rope Company. 128,835, Jan. 6, 1920. Republished Aug. 24.
Twine, rope and cordage. Columbian Rope Company. 102,999, Mar. 16, 1915. Republished Aug. 24.

CLASS 9

Guns and parts thereof. L. C. Smith Gun Company, Incorporated. 427,698–9, Feb. 18, 1947. Republished Aug. 24.
Guns and parts thereof. L. C. Smith Gun Company, Incorporated. 428,276, Mar. 18, 1947. Republished Aug. 24.
Rifles and shotguns. Marlin Firearms Company. 429,575, May 6, 1947. Republished Aug. 24.

CLASS 10

Fertilizer. Central Chemical Corporation of Maryland. 393,389, Feb. 10, 1942. Republished Aug. 24.
Fertilizer preparation. Andrew Wilson, Inc. 313,203, May 22, 1934. Republished Aug. 24.
Fertilizers. Central Chemical Corporation of Maryland. 373,612, Dec. 12, 1939. Republished Aug. 24.
Soil conditioner in the nature of a fertiliser. Andrew Wilson, Inc. 364,299, Jan. 24, 1939. Republished Aug. 24.
Soil conditioners and fertilizers, Hydrated lime. United States Gypsum Company. 256,777, May 21, 1929. Republished Aug. 24.

CLASS 11

Carbon papers, typewriter ribbons, inks, etc. W. Koreska. 242,392, renewed May 22, 1948. O. G. Aug. 24.
Inks. California Ink Company, Inc. 501,867, Aug. 24; Serial No. 538,095, published May 25, 1948.
Inks, Printing and lithographing. H. D. Roosen Company, Inc. 501,868–9, Aug. 24; Serial Nos. 538,175–6, published May 25, 1948.

CLASS 12

Blocks or slabs of granite, etc., Polished. Rock of Ages Corporation. 286,033, Aug. 11, 1931. Republished Aug. 24.
Building blocks, Pumice. Western Pumistone Products Company. 429,606, May 6, 1947. Republished Aug. 24.
Cement and hot water tank covers of corrugated asbestos paper, Furnace. Asbestos Supply Company of Seattle. 431,645, July 29, 1947. Republished Aug. 24.
Construction materials composed of asphalt and fibre or other binding material therefor. W. R. Meadows, Inc. 294,010, June 9, 1931. Republished Aug. 24.
Fibre and bituminous material and bituminous containing compositions, Strips of. Servicised Products Corporation. 440,330, Aug. 24; Serial No. 516,736, published May 18, 1948.
Insulation building board. Stewart Inso Board Company. 256,897. May 28, 1929. Republished Aug. 24.
Joists and steel trusses for building construction, Steel. Truscon Steel Company. 501,885, Aug. 24; Serial No. 506,070.
Lime. Farnam Cheshire Lime Company. 220,483, Nov. 9, 1926. Republished Aug. 24.
Lime and plaster. United States Gypsum Company. 303,754, June 6, 1933. Republished Aug. 24.
Magnesite compositions in powdered form. Flexotile Floor Company. 141,549, Apr. 26, 1921. Republished Aug. 24.
Material premixed with an adhesive compound, Granulated. Donnelly-Trent Co. 440,374, Aug. 24; Serial No. 479,171.
Plaster, Gypsum. United States Gypsum Company. 398,613, Nov. 10, 1942. Republished Aug. 24.
Road joints. W. R. Meadows, Inc. 227,057, Apr. 26, 1927. Republished Aug. 24.
Roofing, Slate and asphalt composition. Belknap Hardware & Manufacturing Company. 245,521, renewed Aug. 14, 1948. O. G. Aug. 24.
Tile, etc., Ceramic clay wall. Cambridge Tile Manufacturing Co. 395,439, May 26, 1942. Republished Aug. 24.
Ventilators, transoms, doors, windows, and panels, Built-in. Ventilouvre Company. 227,075, Apr. 26, 1927. Republished Aug. 24.

CLASS 13

Catches, handles for hoods, grab handles, etc. North & Judd Manufacturing Company. 242,829–30, renewed June 5, 1948. O. G. Aug. 24.
Clamps or belt fasteners, Belt. Victor Balata & Textile Belting Co. 214,819, July 6, 1926. Republished Aug. 24.
Conduits, liquid control valves, pipe and pipe fittings, Metal. Ray Burner Company. 324,644, May 28, 1935. Republished Aug. 24.
Nails, Clinching. G. G. Roberts Corporation. 243,931, renewed July 3, 1948. O. G. Aug. 24.
Plastic products. Plastic Die and Tool Corporation. 417,609, Nov. 6, 1945. Republished Aug. 24.
Steel wares, Enameled. Columbia Enameling & Stamping Co. 242,755, renewed June 5, 1948. O. G. Aug. 24.
Tub fillers and valves, Metallic. Globe Valve Corporation. 424,950, Oct. 29, 1946. Republished Aug. 24.
Tubes and pipes, Metal. Wheatland Tube Company. 325,041, June 11, 1935. Republished Aug. 24.
Utensil composed of aluminum alloy, Cooking. Advance Aluminum Castings Corp. 387,960, June 10, 1941. Republished Aug. 24.

CLASS 14

Forgings, Drop. Porter Forge and Furnace Inc. 348,421, July 27, 1937. Republished Aug. 24.
Forgings, Ferrous and nonferrous metal. J. H. Williams & Co. 393,800, Mar. 3, 1942. Republished Aug. 24.
Forgings, Metal. J. H. Williams & Company. 34,562, Apr. 24, 1900. Republished Aug. 24.
Forgings, rail anchors, rail-anchor springs etc., Steel. Canton Forge & Axle Company. 197,761, Apr. 2, 1925. Republished Aug. 24.
Ingots, bronze ingots, pig lead, etc., Brass. H. Kramer & Company. 249,157, renewed Nov. 6, 1948. O. G. Aug. 24.
Plates for vaults and safes, Metal. Guardian Metals Company. 222,104, Dec. 21, 1926. Corrected. O. G. Aug. 24.
Sheets, Galvanized steel. Superior Sheet Steel Company. 375,112, Feb. 6, 1940. Republished Aug. 24.
Sheets having a copper content, Rolled steel. Superior Sheet Steel Company. 150,982, Jan. 10, 1922. Republished Aug. 24.

CLASS 15

Corn-oil. Corn Products Refining Company. 69,624, renewed June 23, 1948. O. G. Aug. 24.
Greases, Valve lubricating. Rockwell Manufacturing Company. 428,477, Mar. 25, 1947. Republished Aug. 24.
Oils and greases, Certain named. Standard Oil Company (New Jersey). 211,361, Apr. 6, 1926. Corrected. O. G. Aug. 24.
Oils, Cutting. D. A. Stuart & Co. 134,443, Aug. 31, 1920. Republished Aug. 24.
Oils, Range and furnace fuel. Bay Oil Company, Inc. 347,996, July 13, 1937. Republished Aug. 24.
Oils, Refined, semirefined, and unrefined. Standard Oil Company (New Jersey). 211,361, renewed Jan. 5, 1948. O. G. Aug. 24.
Petroleum products. Panhandle Refining Company. 244,682, renewed July 24, 1948. O. G. Aug. 24.

CLASS 16

Enamel, Ready-mixed. Phelan-Faust Paint Mfg. Co. 336,917, July 21, 1936. Republished Aug. 24.
Finish, Liquid hard drying. C-Z Chemical Company. 416,703, Sept. 25, 1945. Republished Aug. 24.
Lacquer, Brushing. Phelan-Faust Paint Manufacturing Company. 216,648, Aug. 3, 1926. Republished Aug. 24.
Liquid containing oil. James B. Sipe & Company. 221,440, renewed Nov. 30, 1946. O. G. Aug. 24.
Oil, Synthetic. Beck, Koller & Co., Inc. 324,190, May 14, 1935. Republished Aug. 24.
Paint, Semipaste. Phelan-Faust Paint Manufacturing Company. 204,136, Oct. 6, 1925. Republished Aug. 24.
Paints. Paint Merchandising Council. 440,275, Aug. 24; Serial No. 462,649, published Apr. 4, 1944.
Paints. Southern States Iron Roofing Company. 420,610, Apr. 23, 1946. Republished Aug. 24.
Paints. Southern States Iron Roofing Company. 421,034, May 14, 1946. Republished Aug. 24.
Paints and enamels. Technical Color & Chemical Works, Inc. 397,184–5, Aug. 25, 1942. Republished Aug. 24.
Paints, Ready-mixed. Phelan-Faust Paint Mfg. Co. 362,984, Dec. 6, 1938. Republished Aug. 24.
Paints, swimming pool finish, Waterproof. Phelan-Faust Paint Mfg. Co. 414,752, June 26, 1945. Republished Aug. 24.
Paints, varnishes, stains, and enamels. Santa Fe Builders Supply Company. 212,425–6, May 4, 1926. Republished Aug. 24.
Polish and floor dressing, Floor. Hillyard Chemical Company. 246,538, renewed Sept. 11, 1948. O. G. Aug. 24.
Resin, Synthetic. Beck, Koller & Co., Inc. 355,205, Mar. 8, 1938. Republished Aug. 24.
Varnish, Japan, driers, and liquid fillers. Boston Varnish Company. 60,252, Feb. 5, 1907. Republished Aug. 24.
Wall coverings in the nature of paints, Plastic. United States Gypsum Company. 254,389, Mar. 26, 1929. Republished Aug. 24.
Wax, Floor. R. A. Myers & Company. 368,225, Aug. 25, 1942. Republished Aug. 24.
Wax, Powdered. C-Z Chemical Company. 415,688, Aug. 14, 1945. Republished Aug. 24.

CLASS 17

Cigarettes. Constitution Tobacco Products Corp. 426,456, Dec. 24, 1946. Republished Aug. 24.
Cigarettes. Fleming-Hall Tobacco Co., Inc. 501,752, Aug. 24; Serial No. 519,268, published May 25, 1948.
Cigars. Corral Wodiska y Ca. 245,778, renewed Aug. 21, 1948. O. G. Aug. 24.
Cigars and smoking tobacco, chewing tobacco, and cigarettes. John Hudson Moore, Inc. 501,746, Aug. 24; Serial No. 512,074, published May 25, 1948.
Tobacco and cigarettes, Smoking. Lane, Limited. 501,795, Aug. 24; Serial No. 529,277, published May 25, 1948.

Tobacco, Chewing and smoking. Bloch Brothers Tobacco Co. 501,855, Aug. 24; Serial No. 536,038, published May 25, 1948.

CLASS 19

Automobiles and constructive parts thereof. Packard Motor Car Company. 195,900, Mar. 3, 1925. Republished Aug. 24.
Axle assembly, Unitary. Trailer Company of America. 403,036, Aug. 31, 1943. Republished Aug. 24.
Braking mechanisms and parts, recoil checks, etc., Friction. John Warren Watson Company. 249,591, renewed Nov. 20, 1948. O. G. Aug. 24.
Car-parts, Railway. Canton Forge & Axle Company. 197,998, Apr. 28, 1925. Republished Aug. 24.
Refuse bodies devised for mounting on vehicles. Heil Co. 420,114, Mar. 26, 1946. Republished Aug. 24.
Trailers. Trailer Company of America. 361,574, Oct. 25, 1938. Republished Aug. 24.
Trailers and parts thereof. Trailer Company of America. 411,996, Feb. 13, 1945. Republished Aug. 24.
Trailers and parts thereof, Automotive. Trailer Company of America. 416,949, Oct. 9, 1945. Republished Aug. 24.
Trailers of the two- and four-wheel type and parts thereof. Trailer Company of America. 412,137, Feb. 20, 1945. Republished Aug. 24.
Trucks, Motor. International Motor Company. 231,645, Aug. 23, 1927. Republished Aug. 24.
Vehicles and motor trucks, Used passenger motor. J. Baker. 440,353, Aug. 24; Serial No. 522,064, published May 11, 1948.

CLASS 21

Antennae and parts thereof. H. R. Habig. 440,366, Aug. 24; Serial No. 524,324, published May 11, 1948.
Batteries and flashlight cases, Dry. Burgess Battery Company. 501,772, Aug. 24; Serial No. 527,907, published May 18, 1948.
Batteries, flashlight cases, and electric hand lamps and lanterns, Dry. Burgess Battery Company. 501,875, Aug. 24; Serial No. 539,591, published May 4, 1948.
Bushings, Insulated. D-O Industrial Products. 501,856, Aug. 24; Serial No. 536,241, published May 18, 1948.
Cable, Nonmetallic sheathed. Crescent Insulated Wire & Cable Co., Inc. 338,306, Sept. 1, 1936. Republished Aug. 24.
Cord, Rubber-sheathed portable electric. Crescent Insulated Wire & Cable Co. Inc. 248,787, Oct. 30, 1928. Republished Aug. 24.
Cordage and conductors, Portable electrical. Crescent Insulated Wire & Cable Company. 338,282, Sept. 1, 1936. Republished Aug. 24.
Disintegrator and mixer, Electrical. Waring Products Corporation. 440,344, Aug. 24; Serial No. 520,660, published May 25, 1948.
Driven machines. Either hand operated or foot-pedal operated, electrically. R. G. Haskins Company. 382,223, Oct. 22, 1940. Republished Aug. 24.
Electric hammers and their controls, etc., Unitary hand. Syntron Company. 419,108, Feb. 5, 1946. Republished Aug. 24.
Electrical apparatus. Jensen Manufacturing Company. 501,769, Aug. 24; Serial No. 527,518, published Apr. 20, 1948.
Electrical apparatus. Ray Burner Company. 288,885, Nov. 10, 1931. Republished Aug. 24.
Electrical goods and apparatus. Edwards and Company, Inc. 294,311, May 24, 1932. Republished Aug. 24.
Electrical goods and apparatus. Edwards and Company, Inc. 294,313, May 24, 1932. Republished Aug. 24.
Electrical goods and apparatus. Edwards and Company, Inc. 294,934, June 14, 1942. Republished Aug. 24.
Electrical goods and apparatus. Edwards and Company, Inc. 318,385, Oct. 23, 1934. Republished Aug. 24.
Extension outfit, Combination. Belden Manufacturing Company. 501,835, Aug. 24; Serial No. 532,679, published May 11, 1948.
Fans, Electric. Berns Manufacturing Corporation. 501,819, Aug. 24; Serial No. 531,080, published May 18, 1948.
Fixture, Electric lighting. Ledlin Light Designers, Inc. 440,301, Aug. 24; Serial No. 507,681, published May 11, 1948.
Fixtures, and electric illuminated displays and signs, etc., Electric lighting. Sight Light Corporation. 440,320, Aug. 24; Serial No. 514,309, published May 25, 1948.
Fixtures, Electric lighting. Alexander-Tagg Industries. 501,801, Aug. 24; Serial No. 529,540, published May 18, 1948.
Flashlights. Universal Flashlight Company Inc. 501,872, Aug. 24; Serial No. 538,678, published May 25, 1948.
Insulating compounds, Electrical. Union Carbide and Carbon Corporation. 440,309, Aug. 24; Serial No. 509,800, published May 25, 1948.
Insulation, Rubber. Crescent Insulated Wire and Cable Company. 338,307, Sept. 1, 1936. Republished Aug. 24.
Juicers, Electrical fruit. Dormeyer Corporation. 440,290, Aug. 24; Serial No. 504,163, published May 4, 1948.
Laminated material. Continental Fibre Company. 201,874, Aug. 11, 1925. Republished Aug. 24.
Lamps, Electric. Lightolier, Incorporated. 501,812, Aug. 24; Serial No. 530,649, published May 18, 1948.
Lamps, Electric. S & M Lamp Co., Incorporated. 501,863, Aug. 24; Serial No. 537,737, published May 25, 1948.
Lighting equipment, Automotive vehicle. Universal Metal Products Co., Inc. 501,806, Aug. 24; Serial No. 529,840, published May 18, 1948.
Lights for vehicles, Electric driving. Appleton Electric Company. 501,760, Aug. 24; Serial No. 526,660, published June 1, 1948.
Line equipment, Electrical. Reliable Electric Company. 501,768, Aug. 24; Serial No. 527,500, published May 18, 1948.
Loudspeakers. Altec Lansing Corporation. 440,323, Aug. 24; Serial No. 515,212, published May 4, 1948.
Magnets, magnetic clutches, and magnetic separators. Dings Magnetic Separator Co. 390,697, Sept. 30, 1941. Republished Aug. 24.
Microphones and loudspeakers for use with electrical sound, etc. Dictaphone Corporation. 440,282, Aug. 24; Serial No. 497,299, published Jan. 20, 1948.
Motors, Vertical hollow shaft electrical. U. S. Electrical Motors, Inc. 440,338, Aug. 24; Serial No. 519,386, published May 25, 1948.
Phonographs, Electric. Westinghouse Electric Supply Company. 440,348, Aug. 24; Serial No. 520,846, published May 25, 1948.
Radio home receivers, electric phonographs and television receiving sets. O. Goldstein. 440,289, Aug. 24; Serial No. 503,900, published May 4, 1948.
Radio receivers, electric radio-phonographs, antennas, etc. Westinghouse Electric Corporation. 440,361, Aug. 24; Serial No. 523,301, published May 25, 1948.
Radio receiving sets. Molded Insulation Company. 501,854, Aug. 24; Serial No. 535,733, published May 11, 1948.
Radio receiving sets and loop aerials. Trav-ler Manufacturing Corporation. 234,087, renewed Oct. 18, 1947. O. G. Aug. 24.
Sockets, Electric. Crest Electric Mfg. Co. 440,308, Aug. 24; Serial No. 509,694, published May 4, 1948.
Spark plugs and storage and dry cell batteries. Affiliated Retailers, Inc. 501,813, Aug. 24; Serial No. 530,701, published May 18, 1948.
Switch, Regulating electric. Sun-Vic Controls Limited. 440,287, Aug. 24; Serial No. 503,017, published May 25, 1948.
Tapes, Electro-sensitive paper recording. Rahn Instruments, Inc. 440,360, Aug. 24; Serial No. 523,188, published May 11, 1948.
Telephone instruments, telephone stations and accessories, magneto generators, etc. United States Instrument Corporation. 501,825, Aug. 24; Serial No. 531,741, published May 18, 1948.
Television lead-in wire. Anaconda Wire and Cable Company. 440,343, Aug. 24; Serial No. 520,602, published May 11, 1948.
Timing devices. Eagle Signal Corporation. 386,322, Apr. 1, 1941. Republished Aug. 24.
Tools, Unitary portable electric. Chicago Pneumatic Tool Company. 440,283, Aug. 24; Serial No. 497,917, published May 11, 1948.
Transformers, reactors, ballasts, etc., Electromagnetic. Jefferson Electric Company. 501,770, Aug. 24; Serial No. 527,558, published May 18, 1948.
Tubes and electrical condensers, Electronic. Amperex Electronic Corporation. 440,295–7, Aug. 24; Serial Nos. 507,285–7, published May 11, 1948.
Tubes, etc., Gas. Eitel-McCullough, Inc. 422,407, July 23, 1946. Republished Aug. 24.
Waffle irons, electric bread toasters, electric stoves, etc., Electric. Rutenber Electric Co. 501,849, Aug. 24; Serial No. 534,475, published May 25, 1948.
Wire or cord, Flexible insulated electric. Crescent Insulated Wire & Cable Co., Inc. 410,218, Nov. 14, 1944. Republished Aug. 24.

CLASS 22

Bait, Artificial. Enterprise Manufacturing Company. 246,912, renewed Sept. 18, 1948. O. G. Aug. 24.
Dolls, toy animals, toy figures, etc. Geo. Borgfeldt & Co. 243,325, renewed June 19, 1948. O. G. Aug. 24.
Fishing lines. United States Whip Company. 249,952–4, renewed Nov. 27, 1948. O. G. Aug. 24.
Fishing lines. United States Whip Company. 250,077, renewed Nov. 27, 1948. O. G. Aug. 24.
Fishing reels. Enterprise Manufacturing Company. 244,085–6, renewed July 10, 1948. O. G. Aug. 24.

CLASS 23

Abrading, grinding and lapping machines, Electrically and hydraulically controlled. Norton Company. 440,316, Aug. 24; Serial No. 513,133, published May 11, 1948.
Adzes, augers, auger-bits, etc. Belknap Hardware and Manufacturing Co. 70,312, re-renewed Aug. 18, 1948. O. G. Aug. 24.
Apparatus which consists of a unit having sanding and grinding wheels. Chiropody Research & Engineering Co. 440,307, Aug. 24; Serial No. 509,396, published May 4, 1948.

Bearings, Roller. Roller Bearing Company of America. 501,784, Aug. 24; Serial No. 528,822, published May 4, 1948.
Brushes used as machine accessories, wire brushes and brushes made from wire, etc. Osborn Manufacturing Company. 417,157, Oct. 16, 1945. Republished Aug. 24.
Cleaning machines. Storm, Inc. 440,363, Aug. 24; Serial No. 523,723, published May 25, 1948.
Cleaning machines and equipment, Sewer. J. C. Fitzgerald. 440,311, Aug. 24; Serial No. 511,076, published May 18, 1948.
Comb and hair cutter, Combination. S. E. A. Sanders. 440,306, Aug. 24; Serial No. 509,249, published May 18, 1948.
Egg beater, Hand operated. L. C. McConnell. 440,328, Aug. 24; Serial No. 516,556, published May 18, 1948.
Engines, Diesel and gasoline marine. Mack Manufacturing Corporation. 385,202, Feb. 18, 1941. Republished Aug. 24.
Farm machinery. Avco Manufacturing Corporation. 440,368, Aug. 24; Serial No. 524,760, published May 11, 1948.
Files, saw blades; joint tools with cutting edges, etc. Peter Stubs, Limited. 68,731–2, re-renewed Apr. 28, 1948. O. G. Aug. 24.
Fire extinguishers and parts thereof, Portable hand and wheeled chemical. General Detroit Corp. 440,335, Aug. 24; Serial No. 518,830, published May 11, 1948.
Gear blanks and gear wheels, Diamond State Fibre Company. 177,543, Dec. 18, 1923. Republished Aug. 24.
Gears. Mack Manufacturing Corporation. 385,203, Feb. 18, 1941. Republished Aug. 24.
Gears, Precision. Beaver Gear Works, Inc. 424,438, Oct. 8, 1946. Republished Aug. 24.
Grading and leveling implements, Earth. Marvin Landplane Co. 416,114, Aug. 28, 1945. Republished Aug. 24.
Handles, Tool. J. H. Williams & Co. 347,500, June 29, 1937. Republished Aug. 24.
Inflating devices, Tire. Kidde Manufacturing Co., Inc. 501,777, Aug. 24; Serial No. 528,108, published May 25, 1948.
Jacks, Automobile. Auto Specialties Manufacturing Company. 410,448, Nov. 28, 1944. Republished Aug. 24.
Jacks, Automobile. Auto Specialties Manufacturing Company. 411,188, Jan. 9, 1945. Republished Aug. 24.
Kits containing a safety razor and safety razor blades. American Safety Razor Corporation. 440,337, Aug. 24; Serial No. 519,112, published Nov. 18, 1947.
Machine parts of copper base alloy, etc., Wear resistant and corrosion resistant. Ampco Metal, Inc. 501,743, Aug. 24; Serial No. 492,021, published May 25, 1948.
Machines and wire-spray pistols. Metallizing Company of America. 440,276, Aug. 24; Serial No. 472,116, published May 25, 1948.
Machines, apparatus, and parts thereof. Universal Winding Company. 355,144, Mar. 8, 1938. Republished Aug. 24.
Machines, apparatus, and parts thereof for winding thread, yarn, cord, etc. Universal Winding Company. 380,178, Aug. 13, 1940. Republished Aug. 24.
Machines for attaching metal binders to the article to be bound. Cercia, Inc. 350,175, Sept. 21, 1937. Republished Aug. 24.
Machines for peeling bark from logs. C. Mathewson. 501,780, Aug. 24; Serial No. 528,574, published May 18, 1948.
Mixers, Self-propelled portable concrete. R. G. Le Tourneau, Inc. 440,341, Aug. 24; Serial No. 519,766, published May 25, 1948.
Molds, Cast and machined. Falls Engineering & Machine Company. 440,312, Aug. 24; Serial No. 511,206, published May 4, 1948.
Nozzles, Sandblast and compressed air. George Pfaff, Inc. 440,279, Aug. 24; Serial No. 482,073, published May 4, 1948.
Picking machines, Poultry. C. B. Mueller. 440,281, Aug. 24; Serial No. 496,563, published May 4, 1948.
Pliers, wrenches, screw drivers. Duke Products, Inc. 440,303, Aug. 24; Serial No. 508,589, published May 18, 1948.
Presses, Hydraulic. American Steel Foundries. 440,345, Aug. 24; Serial No. 520,673, published May 18, 1948.
Presses, Mechanical. V. D. Anderson Company. 323,657, Apr. 23, 1935. Republished Aug. 24.
Pump and injector, Governor fuel. Mack Manufacturing Corporation. 381,500, Sept. 24, 1940. Republished Aug. 24.
Pumps, slip-on connections for tire pumps, etc., Tire. F. I. Jaden. 176,469, Nov. 27, 1923. New certificate. O. G. Aug. 24.
Razor blades. Autostrop Safety Razor Company, Inc. 242,751, renewed June 5, 1948. O. G. Aug. 24.
Rolling mills, chilled-iron rolls, gray-iron rolls, etc. Farrel-Birmingham Company, Incorporated. 245,978, renewed Aug. 28, 1948. O. G. Aug. 24.
Slings, Hoisting. R. W. Weeks. 440,300, Aug. 24; Serial No. 507,447, published May 11, 1948.
Spraying machines. Vernon Equipment Corporation. 440,286, Aug. 24; Serial No. 500,501, published May 11, 1948.
Tableware. Englishtown Cutlery, Ltd. 440,298, Aug. 24; Serial No. 507,306, published May 25, 1948.
Tableware. Englishtown Cutlery, Ltd. 440,299, Aug. 24; Serial No. 507,308, published May 25, 1948.
Tilling and cultivating machines, Soil. Rototiller Inc. 426,015, Dec. 10, 1946. Republished Aug. 24.
Tool kits. Auto Specialties Manufacturing Company. 373,155, Nov. 28, 1939. Republished Aug. 24.
Tools. Canton Forge & Axle Company. 199,166, June 2, 1925. Republished Aug. 24.
Tools and rail anchor wrenches. Canton Forge & Axle Company. 199,166, Apr. 23, 1935. Republished Aug. 24.
Type casting machines. Monomelt Co., Inc. 501,779, Aug. 24; Serial No. 528,297, published May 25, 1948.
Typewriting machines and parts thereof. Royal Typewriter Company, Inc. 110,779, June 13, 1916. Republished Aug. 24.
Vehicle washing and drying apparatus, Motor. Commerce Pattern Foundry and Machine Co. 440,322, Aug. 24; Serial No. 514,935, published May 11, 1948.
Vending machine, Coin-controlled automatic food and commodity. A. B. T. Manufacturing Corporation. 440,352, Aug. 24; Serial No. 521,376, published May 18, 1948.
Vises, Metallic. Metallic Vise Co., Inc. 440,294, Aug. 24; Serial No. 506,828, published May 4, 1948.
Winding-machines and parts thereof. Universal Winding Company. 99,667, Sept. 8, 1914. Republished Aug. 24.
Wrenches. Whitman & Barnes Manufacturing Company. 51,576, Apr. 17, 1906. Republished Aug. 24.
Wrenches and pipe-vises, Pipe. J. H. Williams & Co. 42,226, Mar. 8, 1904. Republished Aug. 24.
Wrenches and socket-wrench sets. Bonney Forge & Tool Works. 246,827, renewed Sept. 28, 1948. O. G. Aug. 24.

CLASS 25

Padlocks. Eagle Lock Company. 413,987, May 22, 1945. Republished Aug. 24.
Padlocks. Eagle Lock Company. 414,152, May 29, 1945. Republished Aug. 24.

CLASS 26

Gauges, Electrical type pressure. Ettel-McCullough, Inc. 418,898, Jan. 15, 1946. Republished Aug. 24.
Meters, Water. Badger Meter Manufacturing Company. 417,553, Oct. 30, 1945. Republished Aug. 24.
Tanks and measuring dispensing pumps, Combined liquid. Bennett Pumps Corporation. 242,794, June 5, 1928. Republished Aug. 24.
Tubes, Thermometer. Buffalo Dental Manufacturing Company. 47,788, Nov. 21, 1905. Republished Aug. 24.

CLASS 27

Clocks. Arnold Clock Corporation. 440,291, Aug. 24; Serial No. 505,031, published May 25, 1948.
Clocks, Electric. Club Aluminum Products Company. 501,853, Aug. 24; Serial No. 535,388, published May 25, 1948.
Clocks, Electric. Radio Corporation of America. 440,372, Aug. 24; Serial No. 526,287, published May 25, 1948.
Watches and watch movements. Schwob, Adolphe, Inc. 191,324, Nov. 4, 1924. Republished Aug. 24.
Watches, clocks, and parts of watches. Fortis Watch Ltd. 440,321, Aug. 24; Serial No. 514,414, published May 25, 1948.

CLASS 28

Flatware and holloware, Sterling silver. Watson Company. 501,763, Aug. 24; Serial No. 527,089, published May 25, 1948.
Jewelry. Bridal Ring Co., Inc. 501,887, Aug. 24; Serial No. 520,929.
Jewelry. D. Jacobs. 501,820, Aug. 24; Serial No. 531,212, published May 25, 1948.
Rings, bar pins, scarf pins, etc., Finger. Baskin Brothers. 180,195, Feb. 26, 1924. Republished Aug. 24.
Rings, charms, and brooches, Finger. A. W. Hein. 440,347, Aug. 24; Serial No. 520,808, published May 25, 1948.

CLASS 55

Operation of airlines and the transportation of passengers, freight and mail. Mid-Continent Airlines, Inc. 501,883, Aug. 24; Serial No. 531,043, published May 25, 1948.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 24TH DAY OF AUGUST, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Burroughs Adding Machine Company, assignee: *See*—
Muller, Robert L.
Delson, Louis E. Chicago, Ill. Bundling and binding means. Re. 23,029, Aug. 24.
Holt, Wendell R., Aberdeen, Md. Educational device. Re. 23,030, Aug. 24.
Muller, Robert L., assignor to Burroughs Adding Machine Company, Detroit, Mich. Calculating machine. Re. 23,031, Aug. 24.

LIST OF PLANT PATENTEES

Symonds, Henry J., Decorah, Iowa. Carnation plant. 805, Aug. 24.

LIST OF DESIGN PATENTEES

Air-Way Electric Appliance Corporation, assignee: *See*—
Florian, Gordon W.
American Duplex Company, assignee: *See*—
Schuhmann, Richard L.
Ashman, Albert M., Seal Beach, Calif. Hydraulic press. 150,670, Aug. 24.
Astatic Corporation, The, assignee: *See*—
Federico, Joseph B.
Bauer, Clarence E., Norwalk, assignor to Danbury Rubber Co., Inc., Danbury, Conn. Door mat. 150,671, Aug. 24.
Beck, Derwood A., Seville, assignor to Goodyear Aircraft Corporation, Akron, Ohio. Airplane. 150,672, Aug. 24.
Becker, Aloysius W., assignor to Dearborn Stove Company, Chicago, Ill. Casing for a space heater. 150,673, Aug. 24.
Becker, Aloysius W., assignor to Dearborn Stove Company, Chicago, Ill. Casing for a space heater. 150,674, Aug. 24.
Begga, David T.: *See*—
Winkler, Frederic C., and Begga.
Bogoff, Herman, Chicago, Ill. Link bracelet. 150,675, Aug. 24.
Brusseau, Mary J., Detroit, Mich. Combined illuminable clock, telephone stand, and calendar. 150,676, Aug. 24.
Burke & James, Inc., assignee: *See*—
Drucker, Albert.
California Thimble Corporation, assignee: *See*—
Howser, Claude M.
Carnelll, Francis J., New York, N. Y. Wrench. 150,677, Aug. 24.
Chernow, Michael, New York, N. Y. Earring or similar article. 150,678, Aug. 24.
Coro, Inc., assignee: *See*—
Katz, Adolph.
Cunningham, Walter C., Horsham, England, assignor to The National Marking Machine Company, Cincinnati, Ohio. Racking table. 150,679, Aug. 24.
Curtiss-Wright Corporation, assignee: *See*—
Steele, Frederick I.
Danbury Rubber Co., Inc., assignee: *See*—
Bauer, Clarence E.
Dawson, William M., Dallas, Tex. Trailer. 150,680, Aug. 24.
Dearborn Stove Company, assignee: *See*—
Becker, Aloysius W.
Douglas Aircraft Company, Inc., assignee: *See*—
Glasgow, Charles S., and Wood.
Drucker, Albert, assignor to Burke & James, Inc., Chicago, Ill. Photographic enlarger. 150,681, Aug. 24.
Duester, Hans J., assignor to J. Major and H. J. Duester, Chicago, Ill. Extensible band for watch bracelet or analogous article. 150,682, Aug. 24.
Eames, Charles, West Los Angeles, Calif., assignor to Evans Products Company, Detroit, Mich. Chair. 150,683, Aug. 24.
Eames, Charles, West Los Angeles, Calif., assignor to Evans Products Company, Detroit, Mich. Tilt-back chair. 150,684, Aug. 24.
Eames, Charles, West Los Angeles, Calif., assignor to Evans Products Company, Detroit, Mich. Chair. 150,685, Aug. 24.
Evans Products Company, assignee: *See*—
Eames, Charles.
Faeder, Jack P., Beverly Hills, Calif. Combined cup and saucer display stand. 150,686, Aug. 24.
Federico, Joseph B., New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio. Microphone or the like. 150,687, Aug. 24.
Ferar, Montgomery: *See*—
Reeves, Herbert M., and Ferar.
Ferar, Montgomery, Detroit, Mich., assignor to Florence Stove Company, Gardner, Mass. Gas cookstove. 150,688, Aug. 24.
Fischer, Howard L., St. Paul, Minn. Knife. 150,689, Aug. 24.
Florence Stove Company, assignee: *See*—
Ferar, Montgomery.
Reeves, Herbert M., and Ferar.
Florian, Gordon W., Bridgeport, Conn., assignor to Air-Way Electric Appliance Corporation, Toledo, Ohio. Vacuum cleaner. 150,690, Aug. 24.
Giovagnoni, Violet, New York, N. Y. Negligee. 150,691, Aug. 24.
General Motors Corporation, assignee: *See*—
Loewy, Raymond.
Glasgow, Charles S., Los Angeles, and C. C. Wood, West Los Angeles, assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif. Airplane. 150,692, Aug. 24.
Glenmore Distilleries Company, assignee: *See*—
Oberwinder, John F.
Goodyear Aircraft Corporation, assignee: *See*—
Beck, Derwood A.
Guzman, Samuel, and H. Rappaport, New York, N. Y. Tray or similar article. 150,693, Aug. 24.
Hardman, Rena B., Los Angeles, Calif. Overshoe. 150,694, Aug. 24.
Haskell, Edward F., New York, N. Y. Cake of soap. 150,695, Aug. 24.
Howser, Claude M., Santa Barbara, Calif., assignor to California Thimble Corporation. Finger-shaped thimble. 150,696, Aug. 24.
Judd, Beatrice, Richmond, Va. Pin-up hat tree. 150,697, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 150,698, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 150,699, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,700, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Bracelet or similar article. 150,701, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,702, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,703, Aug. 24.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,704, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,705, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,706, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,707, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,708, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,709, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,710, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,711, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Bracelet or similar article. 150,712, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Bracelet or similar article. 150,713, Aug. 24.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 150,714, Aug. 24.
King, Theodore T., assignor of forty-nine percent to J. C. Young, Grand Prairie, Tex. Mortar and cement finishing tool. 150,715, Aug. 24.
Kirsten, Kurt F. J., Seattle, Wash. Hang-type smoker's pipe. 150,716, Aug. 24.
Knight, George C., Detroit, Mich. Vehicle ornament or the like. 150,717, Aug. 24.
Levin, Irving, New York, N. Y. Illuminator globe. 150,718, Aug. 24.
Loewy, Raymond, New York, N. Y., assignor to General Motors Corporation, Dayton, Ohio. Electric range. 150,719, Aug. 24.
Major, John, assignee: *See*—
Deuster, Hans J.
Marks, Max J.: *See*—
Schwartz, Martin W., and Marks.
Meltzer, Morris, Detroit, Mich. Trouble light guard. 150,720, Aug. 24.
Modarelli, James J., Berea, assignor to The San Hygene Upholstery Company, Akron, Ohio. Upholstered chair. 150,721, Aug. 24.
National Marking Machine Company, The, assignee: *See*—
Cunningham, Walter C.
Neville, Rey W., Trinity, assignor to Tomlinson of High Point, High Point, N. C. Cabinet. 150,722, Aug. 24.
Oberwinder, John F., St. Louis, Mo., assignor to Glenmore Distilleries Company, Louisville, Ky. Book end. 150,723, Aug. 24.
Oberwinder, John F., St. Louis, Mo., assignor to Glenmore Distilleries Company, Louisville, Ky. Book end. 150,724, Aug. 24.
Oiljak Manufacturing Co., Inc., The, assignee: *See*—
Vogel, Fenick A.
Olmsted, Roger W., San Mateo, Calif. Billboard frame molding. 150,725, Aug. 24.
Phelan, Thomas V., Trenton, N. J. Ring. 150,726, Aug. 24.
Price, Charles P., Boston, Mass. Gas heater. 150,727, Aug. 24.
Rappaport, Herbert: *See*—
Guzman, Samuel, and Rappaport.
Reeves, Herbert M., Kankakee, Ill., and M. Ferar, Detroit, Mich, assignors to Florence Stove Company, Gardner, Mass. Gas cookstove. 150,728, Aug. 24.
Sandler, Jacob, New York, N. Y. Shoe. 150,729, Aug. 24.
Sandler, Jacob, New York, N. Y. Shoe. 150,730, Aug. 24.
Sandler, Jacob, New York, N. Y. Shoe. 150,731, Aug. 24.
San Hygene Upholstery Company, The, assignee: *See*—
Modarelli, James J.
Schilling, Joseph L., Kearny, N. J. Kiddie car. 150,732, Aug. 24.

Auto Research Corporation, assignee: *See*—
Kocher, Edward H.
Baash-Ross Tool Company, assignee: *See*—
Johnson, Glenn D., and Beissinger.
Baghuis, Ludovicus H., Utrecht, Netherlands. Spring suspension for motorbuses or like vehicles. 2,447,679, Aug. 24.
Bahner, Carl T., Jefferson City, Tenn. B-diketones and preparing them. 2,447,626, Aug. 24.
Baker, Benjamin P.: *See*—
Leeds, Winthrop M., and Baker.
Ludwig, Leon R., and Baker, and Cumming.
Baker, Benjamin P., Turtle Creek, and R. H. Leitzel, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Compressed gas circuit interrupter. 2,447,627, Aug. 24.
Baker Castor Oil Company, The, assignee: *See*—
Jubanowsky, Louis J.
Baker, Hayward R., Mt. Rainier, Md., and W. A. Zisman, Washington, D. C., assignors to United States of America as represented by the Secretary of the Navy. Additives for silicone oils. 2,447,483, Aug. 24.
Baker, John G., Evansville, Wis., assignor to United Aircraft Corporation, East Hartford, Conn. Propeller vibration damping means. 2,447,628, Aug. 24.
Balcar, Frederick R., Stamford, Conn., assignor to Air Reduction Company, Incorporated, New York, N. Y. Concentration of chlorine. 2,447,824, Aug. 24.
Baldwin Locomotive Works, The, assignee: *See*—
Capuzzi, Edmund C.
Decker, Gerard Q., 3rd, and Capuzzi.
Sonntag, Alfred.
Baliff, Doyle D., Gary, Ind. Flashlight attachment for firearms. 2,447,892, Aug. 24.
Ball, Albert P., assignor to Briggs Manufacturing Company, Detroit, Mich. Drainboard and tub construction. 2,447,788, Aug. 24.
Banker, Oscar H., Evanston, assignor to New Products Corporation, Chicago, Ill. Transmission. 2,447,552, Aug. 24.
Barfod, Frederik, assignor to Bendix Aviation Corporation, South Bend, Ind. Carburetor. 2,447,791, Aug. 24.
Barnes, Robert R., and W. G. McCulloch, Candler, assignors to American Enka Corporation, Enka, N. C. Stop motion mechanism. 2,447,553, Aug. 24.
Barr, Edgar E., North Woburn, assignor to Polaroid Corporation, Cambridge, Mass. Evaporating crucible for coating apparatus. 2,447,789, Aug. 24.
Barr, Edgar E., North Woburn, and C. D. West, assignors to Polaroid Corporation, Cambridge, Mass. Birefringent solid film comprising intimate mixture of minute particles of isophthalic acid and terephthalic acid and manufacture. 2,447,790, Aug. 24.
Bartholy, Frederick E., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Radio direction and range indicator. 2,447,728, Aug. 24.
Bates, Dorr R., Lansing, Mich. Fishhook extractor. 2,447,554, Aug. 24.
Bauer, Walter C., Chevy Chase, assignor, by mesne assignments, to The Briggs Filtration Company, Bethesda, Md. Filtering system. 2,447,680, Aug. 24.
Bauman, John J., Abington, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Alarm system for electric refrigerators. 2,447,893, Aug. 24.
Bauman, John J., Abington, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Electric refrigerator alarm system. 2,447,894, Aug. 24.
Bauman, John J., Abington, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Alarm system for electric refrigerators. 2,447,895, Aug. 24.
Baxter, Don, Inc., assignee: *See*—
Evans, Newton.

Beard, Jonathan H., Beaumont, Tex. Rocking inner-jaw end wrench. 2,447,835, Aug. 24.

Beaudoin, Roland, Woodside, Long Island, N. Y. Electrical iron holder. 2,447,555, Aug. 24.

Becker, Joseph, Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc. Coking chamber with enlarged upper portion. 2,447,837, Aug. 24.

Beckwith, Edwin L., Brookline, and A. P. Swett, Westwood, Mass., assignors to Beckwith Manufacturing Company, Dover, N. H. Stiffening shoe parts. 2,447,681, Aug. 24.

Beckwith Manufacturing Company, assignee: *See*—
Beckwith, Edwin L., and Swett.

Beeber, Allan R. A., Highland Park, D. D. Jacobus, Glen Ridge, and C. W. Keuffel, Bernardsville, assignors to Keuffel & Esser Company, Hoboken, N. J. Precision images and producing them. 2,447,836, Aug. 24.

Beisinger, Victor J., Los Angeles, and G. D. Johnson, Compton, said Beisinger assignor to Richfield Oil Corporation, and said Johnson assignor to Baash-Ross Tool Company, Los Angeles, Calif. Apparatus for forming a section of casing below casing already in position in a well hole. 2,447,629, Aug. 24.

Bell Aircraft Corporation assignee: *See*—
Trotter, John C.

Bell, Richmond T. and C. M. Thacker, Highland Park, assignors to The Pure Oil Company, Chicago, Ill. Synthesizing aliphatic mercaptans and sulfides. 2,447,481, Aug. 24.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Mueller, George E.
Retallack, John B.
Ronci, Victor L.

Bendix Aviation Corporation, assignee: *See*—
Alvino, Alphonse V.
Barfod, Frederik.
Bolt, Jay A., and Moore.
Cox, Parker G.
McNairn, Oral C.
Miller, Donald L.
Nardone, Romeo M.
Price, Harold W.
Schultz, Harold B.
Singleton, William W., and Dasher.
Teague, Walter D., Jr.

Bentzien, Leonard T.: *See*—
Pearson, Herbert F., and Bentzien.

Bergstrom, Albert L., and Harold D. Stover, assignors to The Timken Roller Bearing Company, Canton, Ohio. Unit handled double row roller bearing. 2,447,838, Aug. 24.

Bergstrom, Albert L., assignor to The Timken Roller Bearing Company, Canton, Ohio. Unit handled double row roller bearing. 2,447,928, Aug. 24.

Berry, Frank, Corinth, Miss. Rotary internal-combustion engine of the rotary abutment type. 2,447,608, Aug. 24.

Berry, Frank, Corinth, Miss. Multistage rotary fluid power device of the rotary abutment type. 2,447,929, Aug. 24.

Bertea, Alex, Pasadena, Calif. Check valve. 2,447,729, Aug. 24.

Biagi, Leon J., Rumford, R. I., assignor to Swank, Inc. Money clip. 2,447,996, Aug. 24.

Bigge, John L., assignor to Gits Bros. Mfg. Co., Chicago, Ill. High-speed oil seal. 2,447,930, Aug. 24.

Bingley, Frank J., Chestnut Hill, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Drive mechanism for the intermittent movement in a television motion-picture projector. 2,447,839, Aug. 24.

Biquard, Pierre, Boulogne-Billancourt, France, assignor to International Standard Electric Corporation, New York, N. Y. Supersonic measuring apparatus. 2,447,485, Aug. 24.

Birtman Electric Company, assignee: *See*—
French, Edward A.

Bitney, Dewey H., assignor to Union Steel Products Company, Albion, Mich. Pallet or skid for handling materials. 2,447,556, Aug. 24.

Blackburn, Wayne E., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Making selenium rectifiers. 2,447,630, Aug. 24.

Blackstone Manufacturing Co., Inc., assignee: *See*—
Kline, Donald.

Blaney, Aubrey Middleton, Barkingside, Ilford, England. Collapsible perambulator or push chair. 2,447,557, Aug. 24.

Blessing, William H., Meriden, Conn., assignor to General Motors Corporation, Detroit, Mich. Gauging apparatus for controlling a grinding operation. 2,447,558, Aug. 24.

Bloemers, Gradus F., Utrecht, Netherlands. System for transferring package freight. 2,447,559, Aug. 24.

Blout, Elkan R., assignor to Polaroid Corporation, Cambridge, Mass. Birefringent solid film of evaporated and deposited isophthalic acid. 2,447,792, Aug. 24.

Boekman, Carl, and Richard Luttich, East Akron, Ohio. Chuck. 2,447,682, Aug. 24.

Bolu, Maximilian Reu, Pasadena, Calif., assignor, by mesne assignments, to The Signal Manufacturing Company, Los Angeles, Calif. Sofa bed hinge. 2,447,683, Aug. 24.

Bolt, Jay A., Ann Arbor, Mich., and R. W. Moore, assignors to Bendix Aviation Corporation, South Bend, Ind. Auxiliary charge regulating device. 2,447,793, Aug. 24.

Borg-Warner Corporation, assignee: *See*—
Warner, Archibald A.

Boss, Marcel C., Westfield, assignor to Mabor Company, Inc., Clark Township, Union County, N. J. Vapor phase degreasing apparatus, including temperature control of vapor condensers. 2,447,840, Aug. 24.

Boxwell, Norman L., assignee: *See*—
Merline, Edward O.

Braithwaite, Charles H., Jr., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Waterproof electrical coil. 2,447,631, Aug. 24.

Branson, Charles D., Knoxville, Tenn., assignor to Robertshaw-Fulton Controls Company. Temperature regulator. 2,447,560, Aug. 24.

Breece, John T., New Albany, Ind. Making marquetry inlay. 2,447,609, Aug. 24.

Brenner, Rebecca, Brooklyn, N. Y. Head and clothing protector. 2,447,561, Aug. 24.

Brewer, Philip D., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Hydrocarbon peroxides. 2,447,794, Aug. 24.

Briggs Filtration Company, The, assignee: *See*—
Bauer, Walter C.

Briggs Manufacturing Company, assignee: *See*—
Ball, Albert P.

Britton, Karl B., Cleveland, Ohio. Gear shifting mechanism. 2,447,730, Aug. 24.

Bronwer, Benjamin W., Auburn, and V. F. Sepavich, assignors to Crompton & Knowles Loom Works, Worcester, Mass. Picking cam and mounting therefor. 2,447,795, Aug. 24.

Brown, David C., and W. M. Paige, Detroit, Mich. Apparatus for processing photographic articles. 2,447,684, Aug. 24.

Brown, Doris M., assignee: *See*—
McClintock, Lewis C.

Browne, Thomas E., Jr.: *See*—
Strom, Albert P., and Browne.

Brownlee, Allen L.: *See*—
Alstrom, Albert L., and Brownlee.

Bruestle, Carl O., Rahway, assignor to Syncro Machine Company, Perth Amboy, N. J. Taping head for cable insulating machine. 2,447,841, Aug. 24.

Bryant Electric Company, The, assignee: *See*—
Webster, Benjamin C.

Buckley, Gerard D., Blackley, Manchester, England, assignor to Imperial Chemical Industries, Limited. Nitrosulfones. 2,447,974, Aug. 24.

Bumgarner, Lester M., Port Townsend, Wash. Nonrefillable bottle. 2,447,484, Aug. 24.

Bureau, Achille G., Forest Hills, N. Y. Cardcase. 2,447,731, Aug. 24.

Burke, Jerry A., Jr., U. S. Navy. Condenser system for airplane engines. 2,447,486, Aug. 24.

Burri, Ernst, assignor to Inpaco A.-G., Zurich, Switzerland. Device for supporting workpieces to be tooled. 2,447,562, Aug. 24.

Bush, George L., Flushing, assignor to The Teleregister Corporation, New York, N. Y. Magnetic lock relay. 2,447,632, Aug. 24.

Bussey, William H., Chicago, assignor to E. L. Kahn, trustee, Glencoe, Ill. Grid structure for electron discharge tubes. 2,447,796, Aug. 24.

Buttery, Kenneth T., assignor to Sutherland Paper Company, Kalamazoo, Mich. Collapsible covered container or box. 2,447,563, Aug. 24.

Cabes, Lucien A. B.: *See*—
Den Hertog, Martinus, and Cabes.

Calfee, John D., Westfield, and R. M. Thomas, Union, N. J., assignors to Standard Oil Development Company. Solid halogen derivatives of polymerized methyl pentadiene. 2,447,610, Aug. 24.

California Packing Corporation, assignee: *See*—
Dunn, Guy A.

Cameron, Jarrett L., Orangefield, and F. J. Malloy, assignors to Levingston Shipbuilding Company, Orange, Tex. Back-pressure check valve. 2,447,842, Aug. 24.

Campbell, Charles H., Kent, Ohio, and R. W. Ostermayer, Clairton, Pa.; said Ostermayer assignor to said Campbell. Rubber-reclaiming oil. 2,447,732, Aug. 24.

Campbell, Charles H., Kent, Ohio, and R. W. Ostermayer, Clairton, Pa.; said Ostermayer assignor to said Campbell. Rubber-reclaiming oil. 2,447,733, Aug. 24.

Candee, Andrew H., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric vehicle control system. 2,447,633, Aug. 24.

Capuzzi, Edmund C.: *See*—
Decker, Gerard Q., 3d, and Capuzzi.

Capuzzi, Edmund C., Philadelphia, Pa., assignor to The Baldwin Locomotive Works. Field control for transformer torquemeter signal coils. 2,447,734, Aug. 24.

Carlin, Herbert J., East Orange, and J. F. Chapman, Madison, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor operated tap changer. 2,447,634, Aug. 24.

Carnahan, Chalon W., Evanston, Ill., assignor to Zenith Radio Corporation. Noise reducing circuits. 2,447,564, Aug. 24.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Maurer, Walter C.

Carter, Russell W., assignor of thirty per cent to Wheelock and Cumming, Inc., Des Moines, Iowa. Mechanical movement device. 2,447,931, Aug. 24.

Cash, A. W., Company, assignee: *See*—
Terry, Charles M.

Cass, Thomas F., Jr., Wayne, D. Kirk, Chicago, Ill., and F. W. Lanigan, Lincoln, Mass., assignors to Container Corporation of America, Chicago, Ill. Apparatus for sealing containers. 2,447,997, Aug. 24.

Caswell, George A., assignor to Taylor Instrument Companies, Rochester, N. Y. Shakedown device for thermometers. 2,447,635, Aug. 24.

Chamberlain, James M. W., assignee, et al.: *See*—
Nathan, Tracy D., Rowe, and Chamberlain.

Chapman, James F.: *See*—
Carlin, Herbert J., and Chapman.

Chenicek, Joseph A., Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Production of aldehydes by a halogen-hydrogen exchange reaction. 2,447,565, Aug. 24.

Cherin, Emanuel T., and B. Favorman, San Francisco, Calif. Blouse. 2,447,735, Aug. 24.

Cheshier, Elton E.: *See*—
Cheshier, W. J. and E. E.

Cheshier, W. J. and E. E., Rotan, Tex. Electric lighting systems. 2,447,736, Aug. 24.

Chester, Albert D., Vallejo, Calif. Drill press vise with slidable and swingable jaws. 2,447,685, Aug. 24.

Chinn, George L., Detroit, Mich. Traversing mechanism. 2,447,487, Aug. 24.

Christensen, Edward C., Denmark, Wis. Latch bolt for towing poles. 2,447,737, Aug. 24.

Ciapetta, Frank G.: *See*—
Macuga, Stephen J., Ciapetta, and Heiligmann.

Ciba Limited, assignee: *See*—
Ruperti, Andreas.

Clapp, Richard C., and J. Krapche, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Preparation of substituted acylanilides. 2,447,996, Aug. 24.

Clark, Harry F., Oakwood, assignor to General Motors Corporation, Dayton, Ohio. Single-phase motor control. 2,447,488, Aug. 24.

Clark, Richard U., Belmont, assignor to Raytheon Manufacturing Company, Newton, Mass. Lead-in bushing. 2,447,489, Aug. 24.

Clarke, William C., Jr., Dundalk, Md., assignor to Armco Steel Corporation. High-temperature turbine. 2,447,896, Aug. 24.

Clarke, William C., Jr., Dundalk, Md., assignor to Armco Steel Corporation. High-temperature stainless steel. 2,447,897, Aug. 24.

Colaiaco, August P., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Vapor electric device. 2,447,637, Aug. 24.

Colaiaco, August P., and D. L. Hopper, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Pump. 2,447,636, Aug. 24.

Colaner, Louis, Sr., Freehold, N. J. Automobile fender construction. 2,447,898, Aug. 24.

Collings, William R., H. N. Fenn, and H. J. Fletcher, assignors to Dow Corning Corporation, Midland, Mich. Production of siloxane resins. 2,447,611, Aug. 24.

Collins, Arthur A., Cedar Rapids, Iowa, assignor to Collins Radio Company. Radio transmitting and receiving system. 2,447,490, Aug. 24.

Collins Radio Company, assignee: *See*—
Collins, Arthur A.

Colwill, Richard H., Chicago, Ill. Centerimeter. 2,447,932, Aug. 24.

Commercial Solvents Corporation, assignee: *See*—
Johnson, Harold G.
Senkus, Murray.
Smith, Everett F.

Cone Automatic Machine Company, Inc., assignee: *See*—
Ingalls, John M.

Conn, C. G., Ltd., assignee: *See*—
Kent, Earle L., and Treseder.

Conner, Edison W., Detroit, Mich. Toilet seat. 2,447,738, Aug. 24.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Welge, Victor.

Container Corporation of America, assignee: *See*—
Cass, Thomas F., Jr., Kirk, and Lanigan.

Cookman, Helen C., assignor to M. E. Cookman, New York, N. Y. Tie. 2,447,843, Aug. 24.

Cookman, Mary E., assignee: *See*—
Cookman, Helen C.

Coon, Grant W.: *See*—
Mages, Morris L., and Coon.

Coon, Grant W., assignor to Magnaflux Corporation, Chicago, Ill. Method and means for detecting flaws in magnetizable objects. 2,447,899, Aug. 24.

Cooper, Basil P.: *See*—
Mellerio, Lucien P., and Cooper.

Cooper, Charles A.: *See*—
Hill, Maurice G., and Cooper.

Corley, Ernest L., Charleston, S. C. Sleeve holding device. 2,447,491, Aug. 24.

Courtney, Edward J., Oaklyn, N. J. Pressure gauge. 2,447,739, Aug. 24.

Covent, Barnett, assignee, et al.: *See*—
Keith, Glenn.

Cox, Joseph H., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Excitation control system for vapor electric devices. 2,447,638, Aug. 24.

Cox, Parker G., Detroit, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind. Edge filter. 2,447,797, Aug. 24.

Crane Packing Company, assignee: *See*—
Payne, Frank M.

Crawley, Charles H., assignor to The Weatherhead Company, Cleveland, Ohio. Hose coupling. 2,447,900, Aug. 24.

Crawley, James B., Washington, D. C., assignor to Radio Corporation of America. Timing modulation. 2,447,492, Aug. 24.

Crittenden, Philip L., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Compressor valve mechanism. 2,447,686, Aug. 24.

Crompton & Knowles Loom Works, assignee: *See*—
Brouwer, Benjamin W., and Sepavich.

Croninger, George J.: *See*—
Miller, William J. Reese, and Croninger.

Crowley, John C., Willoughby, assignor to The Dill Manufacturing Company, Cleveland, Ohio. Tire repair clamp. 2,447,740, Aug. 24.

Croxall, William J., Bryn Athyn, and H. T. Neher, Bristol, assignors to Röhm & Haas Company, Philadelphia, Pa. Preparation of acetal bodies from polyhydric alcohols. 2,447,975, Aug. 24.

Cumming, James M.: *See*—
Leeds, Winthrop M., and Cumming.
Ludwig, Leon E., Baker, and Cumming.

Cummings, Ira R., deceased, by M. P. Cummings, executrix, Cranford, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Ionizing means for electrostatic dust-precipitation apparatus. 2,447,933, Aug. 24.

Cummings, Margaret F., executrix: *See*—
Cummings, Ira R.

Curry, Robert S., Jr.: *See*—
Depp, Marlin C., Curry, and Fragola.

Curtis, Dale M., Nitro, W. Va., assignor to American Viscose Corporation, Wilmington, Del. Cutting apparatus. 2,447,976, Aug. 24.

Cutter Laboratories, assignee: *See*—
Cutter, Robert K.

Cutter, Robert K., assignor to Cutter Laboratories, Berkeley, Calif. Snake bite kit. 2,447,844, Aug. 24.

Cuttino, William H.: *See*—
Marbury, Ralph E., Owens, and Cuttino.

Daly, Thomas A., Sharon, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Torpedo battery compartment. 2,447,639, Aug. 24.

D'Andrea, James: *See*—
Johnson, Nolan L., and D'Andrea.

Daniel, Arthur F., Fairhaven, N. J., assignor to the United States of America as represented by the Secretary of War. Sealing device for dry cells. 2,447,493, Aug. 24.

Danley, Jeannette D., assignee: *See*—
Messick, Turner B.

Danloe, Pierre, Neuilly-sur-Seine, France. Obtaining multicolor pictures. 2,447,687, Aug. 24.

Dan River Mills, Incorporated, assignee: *See*—
Littlejohn, Robert A.

Dasher, Don E.: *See*—
Singleton, William W., and Dasher.

Davidson, Harry S., and L. J. Gagliano, assignors to Imperial Paper and Color Corporation, Glens Falls, N. Y. Manufacture of lead halides. 2,447,742, Aug. 24.

Deakin, Gerald, assignor to International Standard Electric Corporation, New York, N. Y. Telephone register control system. 2,447,494, Aug. 24.

Deane, Henry N., assignor to Simplex Time Recorder Co., Gardner, Mass. Clock control mechanism. 2,447,798, Aug. 24.

De Baufre, William L., Lincoln, Nebr. Liquid oxygen pump. 2,447,741, Aug. 24.

Decker, Gerard Q., 3rd., Bradford Hills, and E. C. Capuzzi, Philadelphia, Pa., assignors to The Baldwin Locomotive Works. Apparatus for measuring a condition on a rotating member. 2,447,566, Aug. 24.

De Lancey, Ralph W., assignor to The Miller Company, Meriden, Conn. Heating system. 2,447,901, Aug. 24.

De Lancey, Ralph W., assignor to The Miller Company, Meriden, Conn. Fuel control for hot-air heaters. 2,447,902, Aug. 24.

Den Hertog, Martinus, and L. A. B. Cabes, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y. Register switch utilizing a plurality of discharge tubes. 2,447,495, Aug. 24.

Depp, Marlin C., Hempstead, R. S. Curry, Jr., Baldwin, and C. F. Fragola, East Hempstead, N. Y., assignors to The Sperry Corporation. Flax valve system and operation. 2,447,496, Aug. 24.

Detroit Rex Products Company, assignee: *See*—
Dinley, Clarence F.

Devaux, Lucien, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y. Block entrance initiated train signaling system. 2,447,497, Aug. 24.

Dewé, assignee: *See*—
De Wrangell, Mathieu.

De Wrangell, Mathieu, Paris, assignor to Dewé, Clichy (Seine), France. Combination lock. 2,447,785, Aug. 24.

Dickinson, Arthur H., Greenwich, Conn., assignor to International Business Machines Corporation, New York, N. Y. Sequential electronic commutator with supplementary grid control. 2,477,799, Aug. 24.

Dickinson, Arthur H., Greenwich, Conn., assignor to International Business Machines Corporation, New York, N. Y. Sequential electronic commutator with supplementary grid control. 2,447,800, Aug. 24.

Dieter, Walter G., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Glass-topped tennis table. 2,447,743, Aug. 24.

Dill Manufacturing Company, The, assignee: *See*— Crowley, John C.

Dimit, Dwan G., Sierra Madre, Calif. Card holder with slide. 2,447,903, Aug. 24.

Dinesen, Laurits, assignor to Perfection Manufacturing Corporation, Minneapolis, Minn. Pulsator for milking machines. 2,447,688, Aug. 24.

Diniey, Clarence F., assignor to Detroit Rex Products Company, Detroit, Mich. Apparatus for solvent extraction. 2,447,845, Aug. 24.

Ditchfield, Frank, assignor to The Youngstown Steel Door Company, Cleveland, Ohio. Car door. 2,447,846, Aug. 24.

Doppelheuer, Frank P., assignor to one-half to J. D. Doppelheuer, Connellsville, Pa. Bottle carrier. 2,447,934, Aug. 24.

Doppelheuer, James D., assignee: *See*— Doppelheuer, Frank P.

Dow Corning Corporation, assignee: *See*— Collings, William R., Fenn, and Fletcher.

Dowe, Leo H., St. Louis, Mo. Dial indicator mount for slide callpers. 2,447,612, Aug. 24.

Dresser, Willis R., Long Hill, Conn. Compensated step-by-step mechanism. 2,447,847, Aug. 24.

Dreyfus, Camille, New York, N. Y. Stretching of cellulose ester yarn. 2,447,567, Aug. 24.

Duebener, Lydia, assignee: *See*— Silndee, Richard O.

Duemler, Virgil E., assignor to Gilbert & Barker Manufacturing Company, West Springfeld, Mass. Pumping unit. 2,447,744, Aug. 24.

Duncan, Gordon W.: *See*— Zimmer, John C., and Duncan.

Dunham, George W., assignor to R. R. Dunham, Westport, Conn. Toaster. 2,447,641, Aug. 24.

Dunham, Ruth R., assignee: *See*— Dunham, George W.

Dunn, Guy A., Oakland, assignor to California Packing Corporation, San Francisco, Calif. Method and apparatus for orienting, peeling, halving, and coring pears. 2,447,640, Aug. 24.

Du Pont, E. L., de Nemours & Company, assignee: *See*— Vieira, Nicholas R.

Dysart, Norman R., Riverside, Calif., assignor of thirty-seven and one-half percent to G. L. Fox and thirty-seven and one-half percent to C. F. Smith, Amarillo, Tex. Pressure indicator for pneumatic tires. 2,447,689, Aug. 24.

Eames, William F., Westfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system. 2,447,935, Aug. 24.

Eaton Manufacturing Company, assignee: *See*— Hoern, Joseph H.

Edison Wood Products, Incorporated, assignee: *See*— Webb, Charles E.

Edwards, Hilbert E., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Cleaning and centrifuging apparatus. 2,447,848, Aug. 24.

Eidson, Greyburn T., Irving, assignor of one-third to L. N. Moore and one-third to M. A. Phillips, Dallas, Tex. Automatic chicken feeder. 2,447,745, Aug. 24.

Eisler, Charles, South Orange, N. J. Machine for forming bottoms on glass. 2,447,568, Aug. 24.

Eisler, Charles, South Orange, N. J. Tabulating machine. 2,447,569, Aug. 24.

Eisler, Charles, South Orange, N. J. Bellows clamp. 2,447,570, Aug. 24.

Eitel-McCullough, Inc., assignee: *See*— Sorg, Harold E. Williams, Paul D.

Ekenstam, Edward D., Los Angeles, Calif., assignor of one-half to Southwest Paving Company. Ditch paving machine. 2,447,571, Aug. 24.

Ekstedt, John W., Union, and A. F. Pityo, Clifton, N. J. Forming crown caps. 2,447,690, Aug. 24.

Electronic Laboratories, Inc., assignee: *See*— Hings, Donald L.

Elgin Softener Corporation, assignee: *See*— McGill, Chester T., and Rowe.

Ellis, Charles A., assignor to American Optical Company, Southbridge, Mass. Trial frame having pivoted temple connections. 2,447,936, Aug. 24.

Ellis, Reuben H., Alexandria, and M. A. Milling, Anderson, Ind. Laying submerged pipes. 2,447,937, Aug. 24.

Ellner, George G., Long Island, N. Y. Electrical fixture or the like. 2,447,498, Aug. 24.

Emde, Kurt, Itasca, Ill., assignor to Zenith Radio Corporation. Radio cabinet. 2,447,572, Aug. 24.

Erk, Anthony S., Montreal, Quebec, Canada, assignor, by mesne assignments, to Northam Warren Corporation, Stamford, Conn. Brush-stem forming machine. 2,447,499, Aug. 24.

Evans, Newton, Montrose, assignor to Don Baxter, Inc., Glendale, Calif. Device for packaging and dispensing intravenous solutions. 2,447,691, Aug. 24.

Evensen, Christian, Melrose Park, Ill. Coffee-making apparatus. 2,447,692, Aug. 24.

Fairey Aviation Company Limited, The, assignee: *See*— Forsyth, Archibald G.

Falsey, Simon J., New Haven, Conn. Hose supporter. 2,447,904, Aug. 24.

Favorman, Benjamin: *See*— Chrein, Emanuel T., and Favorman.

Fay, Charles H., Houston, Tex., assignor to Shell Development Company, San Francisco, Calif. Magnetometer. 2,447,849, Aug. 24.

Federal Laboratories, Inc., assignee: *See*— Weinert, Carl R.

Feldman, Samuel, Brooklyn, assignor to Felport Incorporated, New York, N. Y. Cap construction. 2,447,850, Aug. 24.

Felport Incorporated, assignee: *See*— Feldman, Samuel.

Fenn, Howard N.: *See*— Collings, William R., Fenn, and Fletcher.

Ferguson, John P., Berkeley, Calif., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Phase control system for vapor electric converters. 2,447,642, Aug. 24.

Ferris, Seymour W., Mount Holly, N. J., E. R. Lamson, Hatboro, and D. M. Smith, Norwood, assignors to The Atlantic Refining Company, Philadelphia, Pa. Guided free film distillation method. 2,447,746, Aug. 24.

Fiehl, Michael: *See*— Lake, Clair D., and Fiehl.

Filachione, Edward M., Philadelphia, and C. H. Fisher, Abington, Pa., assignors to United States of America as represented by the Secretary of Agriculture. Manufacture of esters of hydroxy carboxylic acids. 2,447,693, Aug. 24.

Finch, Harold L., Davenport, Iowa. Ceiling and wall construction. 2,447,694, Aug. 24.

First Industrial Corporation, assignee: *See*— Riche, Arthur L.

Fisher, Charles H.: *See*— Filachione, Edward M., and Fisher.

Fletcher, Herbert J.: *See*— Collings, William R., Fenn, and Fletcher.

Folke, Bengt E., Mamaroneck, assignor to Nathan Manufacturing Company, New York, N. Y. Terminal check for mechanical lubricators. 2,447,695, Aug. 24.

Fonda, Gorton R., Schenectady, N. Y., assignor to General Electric Company. Luminescent screen indicating changes in image formation. 2,447,851, Aug. 24.

Fonken, Gunther S.: *See*— Mozingo, Ralph, and Fonken.

Forsyth, Archibald G., Cheam, assignor to The Fairey Aviation Company Limited, Hayes, Middlesex, England. Combustion gas and steam turbine arrangement. 2,447,696, Aug. 24.

Fox, Grady L., assignee, et al.: *See*— Dysart, Norman A.

Fragola, Caesar F.: *See*— Depp, Marlin C., Curry, and Fragola.

French, Edward A., Chicago, Ill., assignor to Birtman Electric Company. Tank type suction cleaner. 2,447,500, Aug. 24.

Friedrich, Ed, Inc., assignee: *See*— Hardin, Hubert W.

Frisch, Erling, Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,447,644, Aug. 24.

Frisch, Erling, Pittsburgh, and M. R. Lory, Irwin, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Ship propulsion controls. 2,447,643, Aug. 24.

Fry, Horace P., Jr., Swarthmore, R. W. Stanley, Drexel Hill, and H. J. McDermott, Prospect Park, Pa., assignors to American Viscose Corporation, Wilmington, Del. Conditioning filamentary material. 2,447,977, Aug. 24.

Gagliano, Louis J.: *See*— Davidson, Harry S., and Gagliano.

Garfunkle, Morris H., Newark, N. J. Support for portable fire baskets. 2,447,938, Aug. 24.

Gartin, Elmer G., Claremont, N. H., assignor to Joy Manufacturing Company. Bearing structure. 2,447,852, Aug. 24.

Gates Rubber Company, The, assignee: *See*— Mueller, William M., and Heckethorn.

Gaylord Container Corporation, assignee: *See*— Williams, Benjamin M.

Gaynor, Edwin G., Fairfield, Conn. Socket for fluorescent lamps. 2,447,801, Aug. 24.

Geigy, J. R., A. G., assignee: *See*— Martin, Henry, and Gysin.

General Electric Company, assignee: *See*— Fonda, Gorton R. Rochow, Eugene G. Scheidorf, Marvel W. Seaver, John D. Wahlman, Lawrence C.

General Motors Corporation, assignee: *See*— Blessing, William H. Clark, Harry F.

General Spring Corporation, assignee: *See*— Wood, Joseph K.

Gerbes, Otto, Goose Creek, Tex., assignor to Standard Oil Development Company. Isomerizing paraffins. 2,447,573, Aug. 24.

Gibbons, Frank J., Worcester, Mass., deceased; H. J. Gibbons, administrator. Safety cranking means for hand wheels of machine spindles and the like. 2,447,574, Aug. 24.

Gibbons, Harry J., administrator: *See*— Gibbons, Frank J.

Gilbert & Barker Manufacturing Company, assignee: *See*— Duemler, Virgil E.

Gilowitx, Benjamin, Bronx, assignor of twelve and one-half percent to I. Skrilow, and twelve and one-half per cent to A. Levin, New York, N. Y. Rotatable rubber heel. 2,447,905, Aug. 24.

Gits Bros. Mfg. Co., assignee: *See*— Biggs, John L.

Gleitz, Herbert, Euclid, and C. E. Miller, East Cleveland, assignors to The Marquette Metal Products Company, Cleveland, Ohio. Spindle for textile mill use. 2,447,854, Aug. 24.

Gleitz, Jerome D., Euclid, assignor to The Marquette Metal Products Company, Cleveland, Ohio. Oil pump. 2,447,853, Aug. 24.

Gluntz, Roger, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y. Grid electrode for electron discharge devices. 2,447,501, Aug. 24.

Goldberg, Elias, assignee, et al.: *See*— Keith, Glenn.

Goldberg, Max W., West Bend, assignor to Modern Equipment Company, Port Washington, Wis. Teapot spout ladle. 2,447,747, Aug. 24.

Goldpress Company, Inc., The, assignee: *See*— Anon, Jacob.

Goodwin, Arthur E., Eggertsville, N. Y., and L. R. Ludwig, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Locking-bar motor frame assembly. 2,447,645, Aug. 24.

Goodwin, Carl W., Plainfield, N. J., and K. R. Allen, Ridgewood, N. Y., assignors to American Seal-Kap Corporation of Delaware, Wilmington, Del. Cap die. 2,447,855, Aug. 24.

Gosparlin, Frederick, Glendale, Calif. Adjustable mute. 2,447,939, Aug. 24.

Goss Printing Press Company, assignee: *See*— Riggs, Joseph A., Worthington, and Knell. Worthington, Emory W.

Gotschall, Orin C., near Salem, Ohio. Radiator connection hose. 2,447,697, Aug. 24.

Grady, Francis A., assignee, et al.: *See*— Sabee, Reinhardt N., and White.

Graham, John D., Santa Ana, Calif. Buffer. 2,447,748, Aug. 24.

Granath, Axel G., Chicago, assignor to H. S. Simpson, Evanston, Ill. Apparatus for aerating granular material. 2,447,575, Aug. 24.

Great American Industries, Inc., assignee: *See*— Hellmann, Reinhard K.

Groppell, Eugene, New Orleans, La. Hatch cover. 2,447,906, Aug. 24.

Gruen Watch Company, The, assignee: *See*— Hall, Donald S.

Gulf Research & Development Company, assignee: *See*— Pigott, Reginald J. S., and Taylor.

Gustafson, Gilbert E., River Forest, Ill., assignor to Zenith Radio Corporation. Portable radio receiver. 2,447,576, Aug. 24.

Gysin, Hans: *See*— Martin, Henry, and Gysin.

Haase, Byron, Bloomington, Ind. Novelty rotary display stand. 2,447,751, Aug. 24.

Haberer, Bert, Oakland, Calif. Appliance for the spine. 2,447,698, Aug. 24.

Hale, Frederick W., assignor to Ashworth Bros. Inc., Worcester, Mass. Wire coil conveyor belt. 2,447,613, Aug. 24.

Hall, Donald S., assignor to The Gruen Watch Company, Cincinnati, Ohio. Advertising stand with removable display panel. 2,447,978, Aug. 24.

Hallett, Alfred, Los Angeles, assignor by mesne assignments, to Hallett Manufacturing Company, Inglewood, Calif. Ignition switch shield housing. 2,447,749, Aug. 24.

Hallett Manufacturing Company, assignee: *See*— Hallett, Alfred.

Halpine, Paul A., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Vapor electric device. 2,447,646, Aug. 24.

Hancock, Myron S., Wilkinsburg, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Motor winding. 2,447,647, Aug. 24.

Hardin, Hubert W., assignor to Ed Friedrich, Inc., San Antonio, Tex. Open top refrigerated display case. 2,447,699, Aug. 24.

Hardy, René, Paris, France, assignor to International Standard Electric Corporation, New York, N. Y. System for radio direction finding and similar purposes. 2,447,502, Aug. 24.

Harper, James G., and Cecil W. Hopkins, assignors to Landis Machine Company, Waynesboro, Pa. Wheel dressing mechanism. 2,447,503, Aug. 24.

Harris, George C., assignor to Hercules Powder Company, Wilmington, Del. Derivative of the adduct of levopimaric acids and maleic anhydride and preparation thereof. 2,447,750, Aug. 24.

Harris, Walter R., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Current regulating generator and control. 2,447,648, Aug. 24.

Harrison, John W., Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric heating apparatus and control. 2,447,649, Aug. 24.

Hartford National Bank and Trust Company, trustee: *See*— Kalff, Louis C., and Legras. Warmoltz, Nicolaas.

Hass, Henry B., West Lafayette, Ind., and A. C. Whitaker, Oakmont, Pa., assignor to Purdue Research Foundation, West Lafayette, Ind. Fluorodinitroethanes. 2,447,504, Aug. 24.

Hassman, Ray J., San Francisco, Calif. Sled. 2,447,700, Aug. 24.

Hathaway, Claude M., Denver, Colo. Apparatus for recording an oscillographic record. 2,447,752, Aug. 24.

Haumerson, Fred C., assignor to Walker Manufacturing Company of Wisconsin, Racine, Wis. Pump mechanism. 2,447,650, Aug. 24.

Haveg Corporation, assignee: *See*— Adams, William H., Jr., and Lebach.

Haselton, Clarence H., Upper Darby, Pa. Christmas card display device simulating a tree. 2,447,856, Aug. 24.

Hebard, Hugh C.: *See*— Imber, Jack and Hebard.

Heckethorn, John E.: *See*— Mueller, William M., and Heckethorn.

Heiligmann, Randall G.: *See*— Macuga, Stephen J., Ciapetta, and Heiligmann.

Hellmann, Reinhard K., assignor to Great American Industries, Inc., Meriden, Conn. Hermetically sealed switchboard. 2,447,753, Aug. 24.

Hemminger, Charles E., Westfield, and C. W. Tyson, Summit, N. J., assignors to Standard Oil Development Company. Treating hydrocarbon fluids. 2,447,577, Aug. 24.

Henderson, Clara M., Burlington, Iowa. Ironing-board attachment. 2,447,907, Aug. 24.

Hensel, Franz R., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Making porous bearing surfaces. 2,447,980, Aug. 24.

Hensel, Franz R., and E. I. Larsen, assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind. Copper base alloy for metal evaporation. 2,447,979, Aug. 24.

Hercules Powder Company, assignee: *See*— Harris, George C.

Hewitt, Ellis E., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Load compensating fluid pressure brake equipment. 2,447,857, Aug. 24.

Hill, C. V., & Company, Inc., assignee: *See*— MacMaster, Malcolm D.

Hill, Maurice G., and C. A. Cooper, Leicester, England, assignors to United Shoe Machinery Corporation, Flemington, N. J. Stiffening the uppers of shoes. 2,447,578, Aug. 24.

Hings, Donald L., Ottawa, Ontario, Canada, assignor to Electronic Laboratories, Inc., Indianapolis, Ind. Radio signaling circuit. 2,447,701, Aug. 24.

Hirsch, Charles, New York, N. Y., assignor to American Wheelabrator & Equipment Corporation. Tumbling machine. 2,447,802, Aug. 24.

Hirschhorn, Louis, Roslyn, assignor, by mesne assignments, to National Urn Bag Co., Inc., Long Island City, N. Y. Manufacturing and filling of essence containing packages for brewing beverages. 2,447,754, Aug. 24.

Hobby, Harold E., assignor to Simplex Time Recorder Co., Gardner, Mass. Tape time-recorder with differentiated records. 2,447,803, Aug. 24.

Hoe, R., & Co., Inc., assignee: *See*— Stempel, Laszlo M.

Hoern, Joseph H., Birmingham, Mich., assignor to Eaton Manufacturing Company, Cleveland, Ohio. Valve seat assembly. 2,447,858, Aug. 24.

Holland, Inez, Rockville Center, N. Y. Waterproof foldable handbag for baby accessories. 2,447,940, Aug. 24.

Holophane Company, Inc., assignee: *See*— Tuck, Davis H.

Holst, Paul F. G., Mount Healthy, Ohio. Electron beam focusing circuit. 2,447,804, Aug. 24.

Holtz, Robert F.: *See*— Lappin, Lester S., and Holtz.

Homelite Corporation, assignee: *See*— Worth, Robert.

Hooker Electrochemical Company, assignee: *See*— Stuart, Kenneth E.

Hoots, Paul F., New Orleans, La. Folding clothes rack for automobiles. 2,447,908, Aug. 24.

Hopkins, Cecil W.: *See*— Harper, James G., and Hopkins.

Hoppe, Richard J. S., Maplewood, Mo. Clothes pole. 2,447,614, Aug. 24.

Hopper, Dwight L.: *See*— Colaiaco, August P., and Hopper.

Howe, Eugene E.: *See*—
Snyder, Harold R., and Zambito.

Hübner, Oluf, Klampenborg, near Copenhagen, assignor to H. Lundbeck & Co., Kemisk Pharmaceutisk Laboratorium A/S Copenhagen, Denmark. Producing benzolsulfonamido-1,3,4-thiodiazole compounds. 2,447,702, Aug. 24.

Huffman, Max O.: *See*—
Ricketts, Denton T., Huffman and Schmunk.

Hughes, Arthur L., assignee: *See*—
McCain, Henry C.

Hunsiker, Fred, assignor to The Weatherhead Company, Cleveland, Ohio. Tool for beading or expanding metallic tube ends. 2,447,909, Aug. 24.

Hurst, Basil L., Clarendon, Tex. Landing position indicator for aircraft. 2,447,910, Aug. 24.

Hyman, Mark, Jr., assignor to Polaroid Corporation, Cambridge, Mass. Composite resinous sheet of birefringent material and making the same. 2,447,805, Aug. 24.

Imber, Jack, and H. C. Hebard, Greenford, England. Aerial bomb, pyrotechnic device and the like. 2,447,941, Aug. 24.

Imbert, Roger J., Paris, and G. Mission, Bagneux, assignors to Societe Rateau (Société Anonyme), Paris, France. Turbine distributor and nozzle. 2,447,942, Aug. 24.

Imperial Chemical Industries Limited, assignee: *See*—
Buckley, Gerard D.
Irving, Francis, and Livingston.
Wareing, Robert J.

Imperial Paper and Color Corporation, assignee: *See*—
Davidson, Harry S., and Gagliano.

Ingalls, John M., assignor to Cone Automatic Machine Company, Inc., Windsor, Vt. Stock pusher. 2,447,859, Aug. 24.

Inpaco A.-G., assignee: *See*—
Burri, Ernst.

International Business Machines Corporation, assignee: *See*—
Dickinson, Arthur H.
Lake, Clair D., and Fiehl.
Roth, Robert I.

International Standard Electric Corporation, assignee: *See*—
Biquard, Pierre.
Deakin, Gerald.
Den Hertog, Martinus, and Cabes.
Devaux, Lucien.
Glunts, Roger.
Hardy, René.
Moscrip, William R.
Richards, Edward A.
Smullin, Louis D.

Interval Instruments, Inc., assignee: *See*—
Rieber, Frank.

Irving, Francis, and A. Livingston, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. Anthraquinone vat dyestuffs. 2,447,981, Aug. 24.

Jacobus, David D.: *See*—
Beeber, Allan E. A., Jacobus, and Keuffel.

Jaroch, Louis, Brooklyn, N. Y. Rake cleaning attachment. 2,447,679, Aug. 24.

Jenkins, Howard H., San Marino, Calif., assignor to American Pipe and Construction Co. Molding ends of concrete pipes. 2,447,703, Aug. 24.

Jennings, Lawrence D., and J. Naymik, Sharon, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control mechanism. 2,447,651, Aug. 24.

Jennings, Oliver S., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit breaker. 2,447,652, Aug. 24.

Jeppson, George N., assignor to Norton Company, Worcester, Mass. Pulpstone. 2,447,943, Aug. 24.

Johnson, Everett A., Park Ridge, assignor to Standard Oil Company, Chicago, Ill. Hydrocarbon synthesis with fluidized catalyst regeneration. 2,447,505, Aug. 24.

Johnson, Harold G., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Nitro amines and preparing same. 2,447,653, Aug. 24.

Johnson, Nolan L., and J. D'Andrea, Piqua, Ohio. Garbage can cover. 2,447,944, Aug. 24.

Jones, Allen R., Elizabeth, N. J., assignor to Standard Oil Development Company. Chemical composition. 2,447,615, Aug. 24.

Jones, Chase B., and D. K. Mecham, Berkeley, Calif., assignors to United States of America as represented by the Secretary of Agriculture. Dispersing keratin proteins and the composition resulting therefrom. 2,447,860, Aug. 24.

Joy Manufacturing Company, assignee: *See*—
Gartin, Elmer G.

Jubanowsky, Louis J., Vaux Hall, assignor to The Baker Castor Oil Company, Jersey City, N. J. Coating and impregnating composition. 2,447,506, Aug. 24.

Junge, Arthur J., St. Louis, Mo. Oil thief. 2,447,861, Aug. 24.

Kahn, Robert L., trustee: *See*—
Bussey, William H.

Kalff, Louis C., and A. N. Legras, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Portable phonograph. 2,447,999, Aug. 24.

Kane, Joseph A., Philadelphia, Pa. Hanger for brooms, tools, and the like. 2,447,862, Aug. 24.

Kaumans, Paul M., Topeka, Kans. Device for testing electric irons. 2,447,580, Aug. 24.

Keith, Glenn, Hollywood, Md., assignor of one-fourth to M. M. Weinstein, one-tenth to B. Covent, one-tenth to W. Mintz, one-tenth to H. Weinstein, and one-tenth to B. Goldberg, Detroit, Mich. Sealing cap for vacuum bottles and the like. 2,447,581, Aug. 24.

Kemmer, Frank R., Louisville, Ky., assignor to Reynolds Metals Company. Manufacture of alkaline earth metals. 2,448,000, Aug. 24.

Kent, Earle L., Elkhart, Ind., and R. C. Treseder, Dayton, Ohio, said Kent assignor to C. G. Conn, Ltd., Elkhart, Ind. Vibration indicating apparatus. 2,447,863, Aug. 24.

Kenyon, Alonzo F., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Torque control system for electric reel motors. 2,447,654, Aug. 24.

Kenyon, David R., Smithtown, N. Y., assignor to The Sperry Corporation. Balancing circuit. 2,447,507, Aug. 24.

Keuffel, Carl W.: *See*—
Beeber, Allan E. A., Jacobus, and Keuffel.

Kilheffer, Lawrence D.: *See*—
Mumma, Robert E., and Kilheffer.

Kirk, Douglas: *See*—
Case, Thomas F., Jr., Kirk, and Lanigan.

Kirkland, Thelma L. and T. J., San Francisco, Calif. Washboard attachment for washing machine agitators. 2,447,765, Aug. 24.

Kirkland, Thomas J.: *See*—
Kirkland, Thelma L. and T. J.

Kirschbaum, Herbert S., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,447,655, Aug. 24.

Kleinfeld, Rudolph B., West Salem, Ohio. Engine cylinder. 2,447,506, Aug. 24.

Kline, Donald, Aurora, assignor to Blackstone Manufacturing Co., Inc., Chicago, Ill. Adjustable shelving construction. 2,447,704, Aug. 24.

Klumb, Carl E., assignor to West Bend Equipment Corporation, West Bend, Wis. Caster construction. 2,447,582, Aug. 24.

Knell, Christopher V.: *See*—
Riggs, Joseph A., Worthington, and Knell.

Knowler, Henry, Isle-of-Wight, assignor to Saunders-Roe Limited, East Cowes, Isle-of-Wight, England. Mooring gear for flying boats. 2,447,945, Aug. 24.

Koch, Theodoor, Oosterbeek, Netherlands, assignor to American Enka Corporation, Enka, N. C. Preparation of cyclic oximes. 2,447,583, Aug. 24.

Kocher, Edward H., Boonton, N. J., assignor to Auto Research Corporation. Lubrication. 2,447,509, Aug. 24.

Koppers Company, Inc., assignee: *See*—
Becker, Joseph.

Koster, Frederick W., Wallingford, Pa., assignor to American Viscose Corporation, Wilmington, Del. Method and apparatus for handling continuous yarns and the like. 2,447,982, Aug. 24.

Krapcho, John: *See*—
Clapp, Richard C., and Krapcho.

La Forge, James L., Caruthersville, Mo. Rattler. 2,447,946, Aug. 24.

Lake, Clair D., Binghamton, and M. Fiehl, Endicott, assignors to International Business Machines Corporation, New York, N. Y. Cam operated circuit breaker. 2,447,806, Aug. 24.

Lamson, Edward R.: *See*—
Ferris, Seymour W., Lamson, and Smith.

Landis Machine Company, assignee: *See*—
Harper, James G., and Hopkins.

Lane-Wells Company: *See*—
Turechek, George F.

Langdon, Jesse D., Long Beach, Calif. Adjustable check valve. 2,447,510, Aug. 24.

Lanigan, Francis W.: *See*—
Case, Thomas F., Jr., Kirk, and Lanigan.

Lappin, Lester S., Camden, and R. F. Holtz, Merchantville, N. J., assignors to Radio Corporation of America. Electronic power generation. 2,447,616, Aug. 24.

Larsen, Earl L.: *See*—
Hensel, Franz R., and Larsen.

Larson, August A.: *See*—
Larson, George K., and Larson.

Larson, George K., Smethport, and A. A. Larson, Johnsonburg, Pa. Variable union. 2,447,947, Aug. 24.

Lathrop, Harvey, Forest Hills, Long Island, N. Y. Calendar having folding, adjustable date elements slidably receivable in supporting frame. 2,447,807, Aug. 24.

Lea, Charles W., Valley Stream, N. Y., assignor to American Machine and Foundry Company. Article infeed mechanism for wrapping machines. 2,447,948, Aug. 24.

Leaf, Walter B., Denver, Colo. Treating water. 2,447,511, Aug. 24.

Leahy, James F., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Heel attaching. 2,447,512, Aug. 24.

Lebach, Hans H.: *See*—
Adams, William H., Jr., and Lebach.

Lee, Leonard P., assignee: *See*—
Tippen, Frank J.

Leeds, Winthrop M., Wilkinsburg, and B. P. Baker, Turtle Creek, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,447,949, Aug. 24.

Leeds, Winthrop M., Forest Hills, and J. M. Cumming, Turtle Creek, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter 2,447,950, Aug. 24.

Legras, August N.: *See*—
Kalff, Louis C., and Legras.

Levin, Abraham, assignee: *See*—
Gilowitz, Benjamin.

Levingston Shipbuilding Company, assignee: *See*—
Cameron, Jarrett L., and Malloy.

Leviton, Bernard, assignee, et al.: *See*—
Salisbury, Leonard B.

Lewis, Frank M., Weston, Mass., assignor, by mesne assignments, to Lima-Hamilton Corporation, Hamilton, Ohio. Fuel injection means for free piston engines. 2,447,513, Aug. 24.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Dieter, Walter G.
Ryan, Joseph D., and Shaw, Jr.

Lieser, Theodor, Halle A. D. Saale, Germany, assignor to American Bemberg Corporation, New York, N. Y. Dissolving cellulose in ammoniacal copper compounds. 2,447,514, Aug. 24.

Lilienfeld, Antonie, administratrix: *See*—
Lilienfeld, Leon.

Lilienfeld, Leon, deceased, Vienna, Germany, by A. Lilienfeld, Winchester, Mass., administratrix, assignor to Lilienfeld Patents Inc., Boston, Mass. Treating cellulose ethers to improve their dissolving properties. 2,447,756, Aug. 24.

Lilienfeld, Leon, deceased, Vienna, Germany, by A. Lilienfeld, Winchester, Mass., administratrix, assignor to Lilienfeld Patents, Inc., Boston, Mass. Treating cellulose ethers to improve their dissolving properties. 2,447,757, Aug. 24.

Lilienfeld Patents Inc., assignee: *See*—
Lilienfeld, Leon.

Lilly, Vernon S., assignee, et al.: *See*—
Sabee, Reinhardt N., and White.

Lima-Hamilton Corporation, assignee: *See*—
Lewis, Frank M.

Lindfelt, Edward C., Des Moines, Iowa. Glove. 2,447,951, Aug. 24.

Little, John W., Scarsdale, N. Y., assignor, by mesne assignments, to American Viscose Corporation, Wilmington, Del. Shrinkable container closure. 2,447,963, Aug. 24.

Littlejohn, Robert A., Danville, Va., assignor to Dan River Mills, Incorporated. Pivot mounting for looms and the like. 2,447,864, Aug. 24.

Livingston, Alistair: *See*—
Irving, Francis, and Livingston.

Lodge, Alvin, Detroit, Mich., assignor to American Viscose Corporation, Wilmington, Del. Apparatus for spinning artificial staple fibers. 2,447,984, Aug. 24.

Lory, Marion R.: *See*—
Frisch, Erling, and Lory.

Lubbock, Isaac, and H. J. Poole; said Lubbock assignor to The Asiatic Petroleum Company, Limited, London, England. Igniting device for combustion chambers. 2,447,758, Aug. 24.

Ludwig, Leon R.: *See*—
Goodwin, Arthur E., and Ludwig.

Ludwig, Leon R., Forest Hills, B. P. Baker and J. M. Cumming, Turtle Creek, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Compressed gas-operated circuit interrupters with position indicator. 2,447,656, Aug. 24.

Ludwig, Leon R., Buffalo, and C. P. Troncatti, Eggertsville, N. Y., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Die-cast squirrel cage and blower. 2,447,657, Aug. 24.

Lundbeck, H., & Co., Kemisk Pharmaceutisk Laboratorium A/S, assignee: *See*—
Hübner, Oluf.

Luttich, Richard: *See*—
Bockman, Carl F., and Luttich.

Lyon, George A., Allenhurst, N. J. Wheel cover. 2,447,515, Aug. 24.

Lyon, George A., Allenhurst, N. J. Wheel cover. 2,447,516, Aug. 24.

Mabor Company, Inc., assignee: *See*—
Boss, Marcel C.

Macip, Luis G., Barcelona, Spain. Folding carriage for children. 2,447,705, Aug. 24.

MacMaster, Malcolm D., Yardley, Pa., assignor to C. V. Hill & Company, Inc. Open top access refrigerated display case. 2,447,759, Aug. 24.

MacMaster, Malcolm D., Woodside, Pa., assignor to C. V. Hill & Company, Inc., Trenton, N. J. Self-service display and storage case. 2,447,760, Aug. 24.

MacNeill, George L., Pennside, Pa. Strainer. 2,447,952, Aug. 24.

Macro, Samuel, Colne, England. Loom shuttle swell. 2,447,761, Aug. 24.

Macuga, Stephen J., Lansdowne, F. G. Ciapetta, Drexel Hill, and R. G. Heiligmann, Yeadon, assignors to The Atlantic Refining Company, Philadelphia, Pa. Organic cation exchange adsorbents prepared from spent alkylation sulfuric acid or similar material. 2,447,762, Aug. 24.

Magee, Morris L., and G. W. Coon, assignors to Magnaflux Corporation, Chicago, Ill. Magnetic field gauge. 2,447,911, Aug. 24.

Magnaflux Corporation, assignee: *See*—
Coon, Grant W.
Magee, Morris L., and Coon.

Mahan, John E.: *See*—
Schulze, Walter A., and Mahan.

Mallory, P. R., & Co., Inc., assignee: *See*—
Hensel, Franz R., and Larsen.

Malloy, Frank J.: *See*—
Cameron, Jarrett L., and Malloy.

Manigila, Giuseppe, New York, N. Y. Hair brushing device. 2,447,953, Aug. 24.

Manson, Samuel S., Cleveland, Ohio. Electrical analyzer for 45° strain rosette data. 2,447,517, Aug. 24.

Marbury, Ralph E., J. B. Owens, and W. H. Cuttino, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Shunt capacitor bank. 2,447,658, Aug. 24.

Marin, Louis H., executor: *See*—
Marinsky, Davis.

Marinsky, Davis, deceased, Bronx, N. Y.; L. H. Morin, executor. Tape dispenser. 2,447,518, Aug. 24.

Marinsky, Davis, deceased, Bronx, N. Y.; L. H. Morin, executor. Tape dispenser. 2,447,519, Aug. 24.

Markwood, Paul W., assignor to American Enka Corporation, Enka, N. C. Indicator. 2,447,584, Aug. 24.

Marquette Metal Products Company, The, assignee: *See*—
Gleitz, Jerome D.

Marshall, Bruce G., Vicksburg, Miss. Compression testing and like apparatus. 2,447,586, Aug. 24.

Marsillius, Newman M., Trumbull, Conn. Indexing device. 2,447,808, Aug. 24.

Marston, John R., Portsmouth, Va. Venetian slat. 2,447,706, Aug. 24.

Martin, Henry, and H. Gysin, assignors to J. R. Geigy A. G., Basel, Switzerland. Acyl glycine amides. 2,447,587, Aug. 24.

Marvel Equipment Corporation, assignee: *See*—
Roethel, John H.

Mason, Ralph B., Baton Rouge, La., assignor to Standard Oil Development Company. Reduction of the ash content of nitroaromatic compounds. 2,447,585, Aug. 24.

Mass, Morris, New York, N. Y. Device for determining photoelectrically the concentration of a solute in a solvent. 2,447,985, Aug. 24.

Maurer, Walter C., McKeesport, Pa., assignor to Carnegie-Illinois Steel Corporation. Determining columbium carbide in stainless steel. 2,447,763, Aug. 24.

Maurette, René G., Beverly, assignor to Sylvania Electric Products, Inc., Salem, Mass. Lighting fixture. 2,448,001, Aug. 24.

May, Harry C., East McKeesport, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Control apparatus for a plurality of motors. 2,447,707, Aug. 24.

McCaffrey, Evelyn, Jamaica, N. Y. Bathing cap. 2,447,708, Aug. 24.

McCain, Henry C., Compton, assignor of fifty per cent to A. L. Hughes, Walnut Park, Calif. Paintbrush suspension. 2,447,764, Aug. 24.

McClintock, Lewis C., Palmdale, Calif., assignor to D. M. Brown, Pittsburgh, Pa. Extensible plank or the like. 2,447,865, Aug. 24.

McCulloch, Walter G.: *See*—
Barnes, Robert R., and McCulloch.

McCune, Joseph C., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Deceleration control apparatus. 2,447,709, Aug. 24.

McCune, Joseph C., Edgewood, and G. K. Newell, near Pitcairn, assignors to The Westinghouse Air Brake Company, Wilmering, Pa. Deceleration control apparatus. 2,447,710, Aug. 24.

McDaniel, Ernest C., Denver, Colo. Trailer dolly. 2,447,659, Aug. 24.

McDermott, Henry J.: *See*—
Fry, Horace P., Stanley, and McDermott.

McGill, Chester T., Elgin, and H. C. Rowe, Jr., Chicago, assignors to Elgin Softener Corporation, Elgin, Ill. Electrovolumetric control device for a water treating device comprising a motor operated valve mechanism having an electrically connected time switch. 2,447,520, Aug. 24.

McNab, John G.: *See*—
Rogers, Dilworth T., and McNab.

McNairn, Oral C., East Orange, assignor to Bendix Aviation Corporation, Teterboro, N. J. Apparatus for counting the revolutions of a shaft after discontinuance of power. 2,447,588, Aug. 24.

Mecham, Dale K.: *See*—
Jones, Chase B., and Mecham.

Meldman, Edward C., Milwaukee, Wis. Shoe and inserts. 2,447,954, Aug. 24.

Mellerio, Lucien P., and B. P. Cooper, Leicester, England, assignors to United Shoe Machinery Corporation, Flemington, N. J. Rivet stem puller and cutter. 2,447,589, Aug. 24.

Meltzer, Jack, New York, N. Y. Shoe construction having stitched-in insole and pressure-covered molded heel counter. 2,447,590, Aug. 24.

Merck & Co., Inc., assignee: *See*—
Mosingo, Ralph, and Fonken.
Snyder, Harold R., and Smith.

Merline, Edward O., assignor to Norman I. Boxwell, Detroit, Mich. Shifter arrangement. 2,447,866, Aug. 24.

Meroni, Charles F., assignee, et al.: *See*—
Sabee, Reinhardt N., and White.

Messick, Turner B., assignor of one-half to Jeannette D. Danley, Denver, Colo. Float valve. 2,447,591, Aug. 24.

Mikis, Ernest, San Antonio, Tex. Precision leveling chuck. 2,447,711, Aug. 24.

Miklowitz, Julius, Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Wedge grip for tensile testing machines. 2,447,660, Aug. 24.

Miller, Charles E.: *See*—
Gleitz, Herbert, and Miller.

Miller Company, The, assignee: *See*—
De Lancey, Ralph W.

Miller, Donald L., Pine City, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind. Engine starter drive. 2,447,765, Aug. 24.

Miller Pottery Engineering Company, assignee: *See*—
Miller, William J., Reese, and Croninger.

Miller, William J., Swissvale, Pa., L. P. Reese, Scio, Ohio, and G. J. Croninger, said Miller and said Croninger assignors to Miller Pottery Engineering Company, Swissvale, Pa. Apparatus for decorating articles. 2,447,521, Aug. 24.

Millholland, Raymond A., and W. F. Sully, Indianapolis, Ind. Arc welding system. 2,447,955, Aug. 24.

Milling, Martin A.: *See*—
Ellis, Reuben H., and Milling.

Millman, Herman, Brooklyn, N. Y. Developing rack 2,447,986, Aug. 24.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Underwood, Orville J., and Feigal.

Minnesota Mining & Manufacturing Company, assignee: *See*—
Simons, Joseph H.

Mintz, William, assignee, et al.: *See*—
Keith, Glenn.

Miquet, Paul L. J., and M. P. Perron, Saint-Julien-de-Maurienne, France, vested in the Attorney General of the United States. Electrothermic gas producer. 2,447,809, Aug. 24.

Mission, Gilbert: *See*—
Imbert, Roger J., and Mission.

Modern Equipment Company, assignee: *See*—
Goldberg, Max W.

Modern-Aire Mfg. Corporation, assignee: *See*—
Turek, Stanley P.

Monarch Governor Company, assignee: *See*—
Anderson, James W., Jr.

Monick, John C., Longview, Wash. Drier. 2,447,766, Aug. 24.

Monsanto Chemical Company, assignee: *See*—
Mowry, David T.

Montclair Research Corporation, assignee: *See*—
Rust, John B.
Rust, John B., and Pfeifer.

Moore Company, The, assignee: *See*—
Moore, Robert D.

Moore, L. N., assignee: *See*—
Eidson, Greyburn T., Moore, and Phillips.

Moore, Robert D., assignor to The Moore Company, Kansas City, Mo. Seal for fans. 2,447,957, Aug. 24.

Moore, Robert W.: *See*—
Bolt, Jay A., and Moore.

Moran, William C., Laurel Springs, N. J., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa. Indicator for impact testing machines. 2,447,767, Aug. 24.

Morders, Howard, Bethesda, Md. Connecting separated parts of bicycle frames. 2,447,956, Aug. 24.

Morrow, John W.: *See*—
Pastoret, John E., and Morrow.

Moscrip, William R., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Machinery for vacuum tube manufacture. 2,447,522, Aug. 24.

Mowry, David T., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Resinous material containing maleodinitrile. 2,447,810, Aug. 24.

Mowry, David T., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Resinous interpolymers containing 1,2-dicyano-1-chloroethylene. 2,447,811, Aug. 24.

Mowry, David T., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Polymeric material containing 1,2-dicyano-1-methylethylene. 2,447,812, Aug. 24.

Mowry, David T., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Resinous interpolymer containing 1,2-dicyano-1-phenylethylene. 2,447,813, Aug. 24.

Mosingo, Ralph, Elizabeth, and G. S. Fonken, Paterson, assignors to Merck & Co., Inc., Rahway, N. J. Catalytic hydrogenation of 2,4-diamino-5-nitroso-6-hydroxy pyrimidine. 2,447,523, Aug. 24.

Mueller, George E., Jackson Heights, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Microwave antenna. 2,447,768, Aug. 24.

Mueller, William M., Denver, and John E. Heckethorn, Littleton, assignors to The Gates Rubber Company, Denver, Colo. Variable pitch V-type pulley. 2,447,958, Aug. 24.

Muir, Wellington W., Lockport, N. Y. Internal-combustion engine cooling system. 2,447,592, Aug. 24.

Mumma, Robert E., and L. D. Kilheffer, assignors to The National Cash Register Company, Dayton, Ohio. Electron tube impulse generator. 2,447,661, Aug. 24.

Munday, John C., Cranford, N. J., assignor to Standard Oil Development Company. Production of primary alkyl halides. 2,447,593, Aug. 24.

Musher Foundation, Incorporated, assignee: *See*—
Zeneses, Alexander M.

Nardone, Romeo M. Teaneck, assignor to Bendix Aviation Corporation, Teterboro, N. J. Scavenging means for aircraft engines. 2,447,912, Aug. 24.

Nathan Manufacturing Company, assignee: *See*—
Folke, Bengt E.

Nathan, Tracy D., Cuyahoga Falls, assignor of one-third to T. S. Rowe, Kent, and one-third to J. M. W. Chamberlain, Akron, Ohio. Cushioning device. 2,447,712, Aug. 24.

National Blank Book Company, assignee: *See*—
Schade, John.

National Cash Register Company, The, assignee: *See*—
Mumma, Robert E., and Kilheffer.

National-Standard Company, assignee: *See*—
Pierce, Robert C.

National Urn Bag Co., Inc., assignee: *See*—
Hirschhorn, Louis.

Navy, United States of America as represented by the Secretary of, assignee: *See*—
Baker, Hayward R., and Zisman.

Naymik, Joseph: *See*—
Jennings, Lawrence D., and Naymik.

Neher, Harry T.: *See*—
Croxall, Willard J., and Neher.

Nelson, Seddon C., Front Royal, Va., assignor to American Viscose Corporation, Wilmington, Del. Rotary cutter. 2,447,617, Aug. 24.

New Products Corporation, assignee: *See*—
Banker, Oscar H.

Newell, George K.: *See*—
McCune, Joseph C., and Newell.

Newell, George K., near Pitcairn, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Brake and sanding control apparatus. 2,447,718, Aug. 24.

Nicholson, Harlow W., Elwood, Ill. Portable grinding stand. 2,447,618, Aug. 24.

Nies, Abby W., Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y. Azo dyestuffs of the pyrazolone series. 2,447,867, Aug. 24.

Nordquist, Ronald E. J., Maplewood, N. J., assignor to American Can Company, New York, N. Y. Can closing machine. 2,447,524, Aug. 24.

Nordquist, Ronald E. J., Maplewood, N. J., assignor to American Can Company, New York, N. Y. Can closing machine. 2,447,525, Aug. 24.

Northam Warren Corporation, assignee: *See*—
Erk, Anthony S.

Norton Company, assignee: *See*—
Jeppson, George N.

Novak, Arthur F., Louisville, assignor to Joseph E. Seagram & Sons, Inc., Shively, Ky. Synthesizing vitamins in stillage. 2,447,814, Aug. 24.

Olsen, Tinius, Testing Machine Company, assignee: *See*—
Moran, William C.

Olvis, James E., Glendale, Calif. Combined door holder and burglar alarm. 2,447,526, Aug. 24.

Olvis, James E., Glendale, Calif. Window operable burglar alarm. 2,447,527, Aug. 24.

Ortleb, Douglas, St. Louis, Mo. Ink agitator. 2,447,868, Aug. 24.

Ostermayer, Robert W.: *See*—
Campbell, Charles H., and Ostermayer.

Owens, James B.: *See*—
Marbury, Ralph E., Owens, and Cuttino.

Paige, Weldon M.: *See*—
Brown, David C., and Paige.

Panhandle Eastern Pipe Line Company, assignee: *See*—
Stephens, Dishman K.

Parry, Frank, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Lubricating means for sewing machine loop takers. 2,447,987, Aug. 24.

Pastoret, John E., and J. W. Morrow, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Brushholder mounting. 2,447,662, Aug. 24.

Payne, Frank E., Glencoe, assignor to Crane Packing Company, Chicago, Ill. Fluid seal. 2,447,663, Aug. 24.

Paynter, Horace J., Union, N. J., assignor to American Can Company, New York, N. Y. Container treating machine. 2,447,528, Aug. 24.

Pearce, Leslie O. G., Hammond, Ind., assignor to American Maize-Products Company. Making prolamines. 2,448,002, Aug. 24.

Pearson, Herbert F., Menomonee Falls, and L. T. Bentzien, Milwaukee, Wis. Cleaner rod guide for gun barrels. 2,447,869, Aug. 24.

Pegg, Edward H. R., Cranford, assignor to Westinghouse Electric Elevator Company, Jersey City, N. J. Electrostatic coating apparatus and method. 2,447,664, Aug. 24.

Perfection Manufacturing Corporation, assignee: *See*—
Dinesen, Laurits.

Perkins, Roderick B., Jr., Houston, Tex., assignor, by mesne assignments, to Petrolite Corporation, Ltd., Wilmington, Del. Removing impurities from hydrocarbons. 2,447,529, Aug. 24.

Perkins, Roderick B., Jr., Houston, Tex., assignor to Petrolite Corporation, Ltd., Wilmington, Del. Purifying oils. 2,447,530, Aug. 24.

Perron, Marcel P.: *See*—
Miquet, Paul L. J., and Perron.

Petersen, Louis S., Forest Hills, assignor to F. L. Smidth & Co., New York, N. Y. Feeding and weighing apparatus. 2,447,594, Aug. 24.

Petrolite Corporation, Ltd., assignee: *See*—
Perkins, Roderick B., Jr.

Philco Corporation, assignee: *See*—
Bauman, John J.
Bingley, Frank J.

Phillips, Ben and M., Planada, Calif. Loading and transporting device. 2,447,959, Aug. 24.

Phillips, M. A., assignee: *See*—
Eidson, Greyburn T., Moore, and Phillips.

Phillips, Merle: *See*—
Phillips, Ben and M.

Phillips Petroleum Company, assignee: *See*—
Schulze, Walter A., and Mahan.

Pickett, Lamar: *See*—
Zisman, William A., and Pickett.

Pierce, Robert C., Niles, Mich., assignor to National-Standard Company. Simultaneously beaming and electroplating wires. 2,447,531, Aug. 24.

Pierson, Louis A., Meriden, Conn. Ampoule neck cutter. 2,447,988, Aug. 24.

Pigott, Reginald J. S., and C. R. Taylor, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Sampler for gas-liquid mixtures. 2,447,595, Aug. 24.

Pityo, Albert F.: *See*—
Ekstedt, John W., and Pityo.

Polaroid Corporation, assignee: *See*—
Barr, Edgar E.
Blout, Elkan R.
Hyman, Mark, Jr.
West, Cutler D.
Woodward, Robert B.

Polcyn, Bernard H., Milwaukee, Wis. Drinking container and jar closure fitting. 2,447,870, Aug. 24.

Poole, Harold J.: *See*—
Lubbock, Isaac, and Poole.

Pratt, Perry W., Manchester, assignor to United Aircraft Corporation, East Hartford, Conn. Ignition control. 2,448,003, Aug. 24.

Previdi, William T., Allendale, N. J. Zipped-in underarm gusset. 2,447,989, Aug. 24.

Price, Foster S., Sterling City, Tex. Vaccination device. 2,447,596, Aug. 24.

Price, Harold W., assignor to Bendix Aviation Corporation, South Bend, Ind. Fluid pressure controlled power steering mechanism. 2,447,815, Aug. 24.

Pringey, Glenn B., Euclid, Ohio, assignor, by decree of distribution, to H. P. Pringey. Method of and means for cooling beverages. 2,447,769, Aug. 24.

Pringey, Helen P., assignee: *See*—
Pringey, Glenn B.

Protseller, Harry W., Fairmont, Minn., assignor to Tampa Aviation, Inc., Tampa, Fla. Refrigerated products and methods and apparatus for producing same. 2,447,665, Aug. 24.

Purdue Research Foundation, assignee: *See*—
Hass, Henry B., and Whitaker.
Whaley, Randall M.

Pure Oil Company, The, assignee: *See*—
Bell, Richmond T., and Thacker.

Purifoy, George R., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Dynamic braking system for series motors. 2,447,666, Aug. 24.

Quadt, Raymond A.: *See*—
Smith, Albert A., Jr., and Quadt.

Raby, Victor R., Los Angeles, Calif. Camera carriage. 2,447,667, Aug. 24.

Radio Corporation of America, assignee: *See*—
Crawley, James B.
Lappin, Lester S., and Holtz.
Williams, Ferd E.

Raffold Process Corporation, assignee: *See*—
Rafton, Harold R.

Rafton, Harold R., Andover, Mass., assignor to Raffold Process Corporation. Treatment of pigment comprising calcium carbonate. 2,447,532, Aug. 24.

Ratchford, Charles E., Long Beach, Calif. Combination jar wrench and holder. 2,447,770, Aug. 24.

Ray, William A., North Hollywood, Calif. Safety cutoff system for fuel burners. 2,447,668, Aug. 24.

Raytheon Manufacturing Company, assignee: *See*—
Clark, Richard U.

Reed, Charles H., Fort Stanton, N. Mex. Self-locking electric outlet and plug. 2,447,597, Aug. 24.

Reese, Lewis P.: *See*—
Miller, William J., Reese, and Croninger.

Reese, Lewis P., Scio, Ohio. Making pottery molds. 2,447,598, Aug. 24.

Retallack, John B., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Automatic toll ticketing system. 2,447,533, Aug. 24.

Reynolds Metals Company, assignee: *See*—
Kemmer, Frank R.

Richards, Edward A., London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y. Metal rectifier. 2,447,534, Aug. 24.

Richards, Lillian D., Washington, D. C. Food grater. 2,447,714, Aug. 24.

Richardson, Paul E., assignee: *See*—
Alexander, Samuel T.

Riehe, Arthur L., Freeport, Ill., assignor to First Industrial Corporation, Wilmington, Del. Switch mechanism. 2,447,871, Aug. 24.

Richfield Oil Corporation, assignee: *See*—
Beissinger, Victor J., and Johnson.

Ricketts, Denton T., M. O. Huffman, and J. D. Schmunk, Findlay, Ohio. Muffler remover. 2,447,960, Aug. 24.

Rieber, Frank, assignor to Interval Instruments, Inc., New York, N. Y. Temperature responsive variable frequency oscillator. 2,447,816, Aug. 24.

Rieber, Frank, assignor to Interval Instruments, Inc., New York, N. Y. Temperature or pressure responsive variable frequency oscillator. 2,447,817, Aug. 24.

Rieber, Frank, assignor to Interval Instruments, Inc., New York, N. Y. Periodic reversing drive. 2,447,818, Aug. 24.

Riggs, Joseph A., Hillsdale, E. W. Worthington, Chicago, and C. V. Knell, Glen Ellyn, assignors to The Goss Printing Press Company, Chicago, Ill. Printing unit and drive mechanism therefor. 2,447,872, Aug. 24.

Riley, Lynn G., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Remote-control system. 2,447,669, Aug. 24.

Robertshaw-Fulton Controls Company, assignee: *See*—
Branson, Charles D.

Robinson, Joseph, New York, N. Y. Container closure. 2,447,535, Aug. 24.

Robinson, Joseph, New York, N. Y. Container closure. 2,447,536, Aug. 24.

Robison, Silas E., Waldron, Mich. Hitch pin. 2,447,913, Aug. 24.

Rochow, Eugene G., Schenectady, N. Y., assignor to General Electric Company. Preparation of organohalogenosilanes. 2,447,873, Aug. 24.

Rodway, John, Lincoln, England. Rotary blower, compressor and exhauster. 2,447,961, Aug. 24.

Roethel, John H., assignor to Marvel Equipment Corporation, Detroit, Mich. Window guide for vehicle bodies. 2,447,990, Aug. 24.

Rogers, Dilworth T., Summit, and J. G. McNab, Cranford, N. J., assignors to Standard Oil Development Company. Sulfurized esters of oxalic acid. 2,447,619, Aug. 24.

Rogers, Frank, Estancia, N. Mex. Water bag bracket. 2,447,771, Aug. 24.

Röhm & Haas Company, assignee: *See*—
Croxall, Willard J., and Neher.

Ronci, Victor L., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coupled cavity resonator. 2,447,537, Aug. 24.

Rosa, Anthony G., Lyndhurst, N. J. Electrical terminal connector. 2,447,814, Aug. 24.

Rose, William G., Berkeley, Calif., assignor to the United States of America as represented by the Secretary of Agriculture. Esters of diacyl-glycerophosphoric acids. 2,447,715, Aug. 24.

Rosenblatt, Pauline E., Cleveland, Ohio. Maternity pantie. 2,447,875, Aug. 24.

Ross, Adolph H., assignee: *See*—
Williams, Richard O.

Roth, Robert L., Hawthorne, assignor to International Business Machines Corporation, New York, N. Y. Commutator. 2,447,819, Aug. 24.

Rowe, Charles E., assignor of one-third to S. M. Wilson, Corydon, Ind. Method and apparatus for carbonating liquids used for drinking. 2,447,716, Aug. 24.

Rowe, Harry C., Jr.: *See*—
McGill, Chester T., and Rowe.

Rowe, Theodore S., assignee, et al.: *See*—
Nathan, Tracy D., Rowe, and Chamberlain.

Rumble, Roy W., Pretoria, Transvaal, Union of South Africa. Form for molding concrete in situ. 2,447,670, Aug. 24.

Ruperti, Andreas, Arlesheim near Basel, Switzerland, assignor to Ciba Limited. Making alkali cellulose. 2,447,914, Aug. 24.

Rust, John B., West Orange, N. J., assignor to Montclair Research Corporation. Woolen treatment and products therefor. 2,447,538, Aug. 24.

Rust, John B., Montclair, N. J., assignor to Montclair Research Corporation. Treatment of wool. 2,447,539, Aug. 24.

Rust, John B., Montclair, N. J., assignor to Montclair Research Corporation. Butadiene-acrylate interpolymer treatment of wool. 2,447,540, Aug. 24.

Rust, John B., Montclair, N. J., assignor to Montclair Research Corporation. Aqueous dispersions of butadiene polymers and treatment of wool therewith. 2,447,876, Aug. 24.

Rust, John B., Montclair, N. J., assignor to Montclair Research Corporation. Wool shrinkproofing baths containing butadiene copolymers and their utilization. 2,447,877, Aug. 24.

Rust, John B., Montclair, N. J., assignor to Montclair Research Corporation. Wool shrinkproofing baths containing butadiene copolymers and their utilization. 2,447,878, Aug. 24.

Rust, John B., East Hanover, N. J., assignor to Montclair Research Corporation. Aqueous wool treating baths comprising chloroprene methacrylate copolymers. 2,448,004, Aug. 24.

Rust, John B., East Hanover, N. J., assignor to Montclair Research Corporation. Aqueous wool treating baths comprising chloroprene copolymers. 2,448,005, Aug. 24.

Rust, John B., Montclair, N. J. and C. W. Pfeifer, Philadelphia, Pa., assignors to Montclair Research Corporation. Aqueous dispersions of butadiene polymers and treatment of wool therewith. 2,447,772, Aug. 24.

Ryan, Joseph D., Toledo, Ohio, and F. B. Shaw, Jr., Baltimore, Md., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Preparing polyvinyl acetal ketal resins. 2,447,773, Aug. 24.

Sabee, Reinhardt N., Detroit, and C. S. White, Dearborn, assignors of one-fifth to said Sabee, one-fifth to said White, one-fifth to F. A. Grady, Detroit, Mich., one-fifth to C. F. Meroni, Evanston, Ill., and one-fifth to V. S. Lilly, Detroit, Mich. Making plastic structure. 2,447,541, Aug. 24.

Salisbury, Leonard B., La Crescenta, assignor, by mesne assignments, of one-half to S. and B. Leviton, Los Angeles, Calif. Thimble. 2,447,774, Aug. 24.

Saunders-Roe Limited, assignee: *See*—
Knowler, Henry.

Schade, John, assignor to National Blank Book Company, Holyoke, Mass. Binder mechanism. 2,447,775, Aug. 24.

Scheffer, Raymond J., assignee: *See*—
Wheeler, Harold A.

Scheldorf, Marvel W., Schenectady, N. Y., assignor to General Electric Company. Antenna. 2,447,579, Aug. 24.

Schmerling, Louis, assignor to Universal Oil Products Company, Chicago, Ill. Methylation of aromatic hydrocarbons. 2,447,590, Aug. 24.

Schmunk, John D.: *See*—
Ricketts, Denton R., Huffman and Schmunk.

Schuck, Raymond W., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. High-speed bearing. 2,447,671, Aug. 24.

Schultz, Harold B., assignor to Bendix Aviation Corporation, South Bend, Ind. Regulating valve. 2,447,820, Aug. 24.

Schulze, Walter A., and J. E. Mahan, Bartlesville, Okla., assignors to Phillips Petroleum Company. Production of unsaturated nitriles. 2,447,600, Aug. 24.

Schwalbe, Franz G., assignor, by mesne assignments, to Toledo Engineering Company, Inc., Toledo, Ohio. Cut-off machine. 2,447,962, Aug. 24.

Seagram, Joseph E., & Sons, Inc., assignee: *See*—
Novak, Arthur F.

Seaver, John D., Marblehead, Mass., assignor to General Electric Company. Magnetometer. 2,447,880, Aug. 24.

Segal, Samuel, New York, N. Y., assignor to Wilson-Jones Company, Chicago, Ill. Loose-leaf binder. 2,447,963, Aug. 24.

Sengpiel, William J., assignor to The Sikes Company, Buffalo, N. Y. Tilting chair seat and back rest. 2,447,601, Aug. 24.

Senkus, Murray, assignor to Commercial Solvents Corporation, Terre Haute, Ind. Making nitroalkyl cyclic amines. 2,447,821, Aug. 24.

Senkus, Murray, assignor to Commercial Solvents Corporation, Terre Haute, Ind. 5-Nitrotetrahydro-1,3-oxazines and preparing them. 2,447,822, Aug. 24.

Sepavich, Victor F.: *See*—
Brouwer, Benjamin W., and Sepavich.

Seward, Edgar C., Arlington, Va. Material handling pallet. 2,447,542, Aug. 24.

Shell Development Company, assignee: *See*—
Fay, Charles H.

Shelley, Robert J., Coconut Grove, Fla. Beverage cabinet having a rotatable compartmented member. 2,447,602, Aug. 24.

Sherwood, Robert H., Ketchum, Idaho. Protective visor. 2,447,776, Aug. 24.

Signal Manufacturing Company, The, assignee: *See*—
Bolu, Maximilian R.

Sikes Company, The, assignee: *See*—
Sengpiel, William J.

Simmon Brothers, Inc., assignee: *See*—
Weisglass, Louis L.

Simons, Joseph H., State College, Pa., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Fluorination of organic compounds. 2,447,717, Aug. 24.

Simplex Lime Recorder Co., assignee: *See*—
Hobby, Harold B.

Simplex Paper Corporation, assignee: *See*—
Wood, Arthur H.

Simplex Time Recorder Co., assignee: *See*—
Deane, Henry N.

Simpson Electric Company, assignee: *See*—
Simpson, Ray R.

Simpson, Herbert S., assignee: *See*—
Granath, Axel G.

Simpson, Ray R., River Forest, assignor to Simpson Electric Company, Chicago, Ill. Rotary switch. 2,447,718, Aug. 24.

Singer Manufacturing Company, The, assignee: *See*—
Parry, Frank.

Singleton, William W., and D. E. Dasher, assignors to Bendix Aviation Corporation, Detroit, Mich. Forming molds. 2,447,620, Aug. 24.

Sisk, Thomas M., Clovis, Calif. Stapling kit. 2,447,915, Aug. 24.

Skrilow, Irving, assignee: *See*—
Gilowitz, Benjamin.

Slepoff, Mack: *See*—
Abend, Irving J., and Slepoff.

Slindee, Richard O., Indianapolis, Ind., assignor to L. Duebener, St. Paul, Minn. Cord handled bag. 2,447,964, Aug. 24.

Slovack, Alvin J., Houston, Tex. Tire deflation indicator. 2,447,777, Aug. 24.

Smidth, F. L., & Co., assignee: *See*—
Petersen, Louis S.
Treshow, Michael.

Smidth, Leonard, New York, N. Y. Urea-formaldehyde molding composition. 2,447,621, Aug. 24.

Smith, Albert A., Jr., Metuchen, and R. A. Quadt, Woodbridge, N. J., assignors to American Smelting and Refining Company, New York, N. Y. Apparatus for chlorodising aluminum-base alloys. 2,447,672, Aug. 24.

Smith, Charles F., assignee, et al.: *See*—
Dysart, Norman A.

Smith, Curtis W.: *See*—
Snyder, Harold R., and Smith.

Smith, Douglas M.: *See*—
Ferris, Seymour W., Lamson, and Smith.

Smith, Everet F., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Production of N-substituted furfurylamines. 2,447,823, Aug. 24.

Smullin, Louis D., Nutley, N. J., assignor to International Standard Electric Corporation, New York, N. Y. Ultra high frequency modulator. 2,447,543, Aug. 24.

Snyder, Ballard F., Spokane, Wash. Shoe. 2,447,603, Aug. 24.

Snyder, Harold R., Urbana, Ill., H. E. Howe, Linden, and A. J. Zambito, assignors to Merck & Co., Inc., Rahway, N. J. Synthesis of tryptophane. 2,447,544, Aug. 24.

Snyder, Harold R., Urbana, Ill., and C. W. Smith, Berkeley, Calif., assignors to Merck & Co., Inc., Rahway, N. J. Synthesis of tryptophane and intermediates therefor. 2,447,545, Aug. 24.

Societe Rateau (Société Anonyme), assignee: *See*—
Imbert, Roger J., and Mission.

Sonntag, Alfred, Greenwich, Conn., assignor, by mesne assignments, to The Baldwin Locomotive Works. Multiload range weighing system for materials testing machines. 2,447,778, Aug. 24.

Sorg, Harold E., Redwood City, assignor to Eitel-McCullough, Inc., San Bruno, Calif. Electron tube. 2,447,719, Aug. 24.

Southwest Paving Company, assignee: *See*—
Ekenstam, Edward D.

Sparr, William M., Looneyville, W. Va. Razor blade holder. 2,447,965, Aug. 24.

Spencer, Lloyd, assignor to Lane-Wells Company, Los Angeles, Calif. Automatic shutoff apparatus for oil wells. 2,447,546, Aug. 24.

Sperry Corporation, The, assignee: *See*—
Depp, Marlin C., Curry, and Fragola.
Kenyon, David E.

Sperti Faraday Inc., assignee: *See*—
Von Voigtlander, Frederick.

Staggers, John W., Washington, D. C. Building wall. 2,447,916, Aug. 24.

Standard Oil Company, assignee: *See*—
Johnson, Everett A.

Standard Oil Development Company, assignee: *See*—
Calfee, John D., and Thomas.
Gerber, Otto.
Hemminger, Charles E., and Tyson.
Jones, Allen R.
Mason, Ralph B.
Munday, John C.
Rogers, Dilworth T., and McNab.
Zimmer, John C., and Duncan.

Standard Telephones and Cables Limited, assignee: *See*—
Willoughby, Eric O.

Stanley, Richard W.: *See*—
Fry, Horace P., Jr., Stanley, and McDermott.

Starr, Alfred E., New York, N. Y. Radio direction finder. 2,448,006, Aug. 24.

Steinert, Emil F., Sharon, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Reactor with movable core member. 2,447,673, Aug. 24.

Stempel, Lassie M., assignor, by mesne assignments, to R. Hoe & Co., Inc., New York, N. Y. Resilient bearer for offset presses. 2,447,991, Aug. 24.

Stephens, Dishman K., assignor to Panhandle Eastern Pipe Line Company, Kansas City, Mo. Expandable fluid actuated pipe cleaning apparatus. 2,447,966, Aug. 24.

Stone, William R., Washington, D. C. Golf club. 1,447,967, Aug. 24.

Stover, Harold D.: *See*—
Bergstrom, Albert L., and Stover.

Strattman, Edwin A., New Orleans, La. Spirally contractable mop wringing attachment for scrub buckets. 2,447,917, Aug. 24.

Strom, Albert P., Forest Hills, and T. E. Browne, Jr., Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,447,674, Aug. 24.

Stuart, Kenneth R., assignor to Hooker Electrochemical Company, Niagara Falls, N. Y. Electrolytic alkali chlorine cells. 2,447,547, Aug. 24.

Sully, Wilbur F.: *See*—
Millholland, Raymond A., and Sully.

Sutherland Paper Company, assignee: *See*—
Buttery, Kenneth T.

Swank, Inc., assignee: *See*—
Biagi, Leon J.

Swett, Adelbert P.: *See*—
Beckwith, Edwin L., and Swett.

Sylvania Electric Products, Inc., assignee: *See*—
Maurette, René G.

Snycro Machine Company, assignee: *See*—
Bruestle, Carl O.

Taggart, Thomas C., Hanover, Pa. Fiber roll former. 2,447,604, Aug. 24.

Tampa Aviation, Inc., assignee: *See*—
Protseller, Harry W.

Taplin, John F., Westfield, N. J. Speed governing mechanism. 2,447,779, Aug. 24.

Tauty, René, Clichy, France; vested in the Attorney General of the United States. Quick releasable parachute harness. 2,447,824, Aug. 24.

Taylor, Charles R.: *See*—
Pigott, Reginald J. S., and Taylor.

Taylor Instrument Companies, assignee: *See*—
Caswell, George A.
Young, Albert J.

Teague, Walter D., Jr., Alpine, assignor to Bendix Aviation Corporation, Teterboro, N. J. Aircraft cabin pressure regulator. 2,447,918, Aug. 24.

Telgen, Austin F., Moorhead, Minn. Adjustable support. 2,447,919, Aug. 24.

Teleregister Corporation, The, assignee: *See*—
Bush, George L.

Terry, Charles M., assignor to A. W. Cash Company, Decatur, Ill. Flow-proportioning valve. 2,447,920, Aug. 24.

Thacker, Carlisle M.: *See*—
Bell, Richmond T., and Thacker.

Thomas, Albert, Munhall, Pa. Parachute shroud link. 2,447,921, Aug. 24.

Thomas, Bernard C., Renton, Wash. Fish pole. 2,447,720, Aug. 24.

Thomas, Robert M.: *See*—
Calfee, John D., and Thomas.

Thomason, Fulis L., Charlotte, N. C. Lubrication apparatus for twister rings. 2,447,548, Aug. 24.

Timken Roller Bearing Company, The, assignee: *See*—
Bergstrom, Albert L., and Stover.

Tippen, Frank J., Coventry, England, assignor to L. P. Lee, Stratford-on-Avon, England. Pressure fluid servomotor. 2,447,825, Aug. 24.

Toledo Engineering Company, Inc., assignee: *See*—
Schwalbe, Franz G.

Torie, Magnus, Seattle, Wash. Poultry nest. 2,447,826, Aug. 24.

Treseder, Robert C.: *See*—
Kent, Earle L., and Treseder.

Treshow, Michael, Pacific Palisades, Calif., assignor to F. L. Smidth & Co., New York, N. Y. Mill bearing construction. 2,447,605, Aug. 24.

Troncatti, Carl P.: *See*—
Ludwig, Leon R. and Troncatti.

Trotter, John C., Williamsville, assignor to Bell Aircraft Corporation, Buffalo, N. Y. Hydraulic stop for gun mount system. 2,447,968, Aug. 24.

Tuck, Davis H., Redding Ridge, Conn., assignor to Holophane Company, Inc., New York, N. Y. Explosion-proof lighting equipment. 2,447,922, Aug. 24.

Tuck, Davis H., Redding Ridge, Conn., assignor to Holophane Company, Inc., New York, N. Y. Lighting system and lighting units for use therein. 2,447,923, Aug. 24.

Turechek, George F., assignor to Lane-Wells Company, Los Angeles, Calif. Automatic shutoff device for oil wells. 2,447,827, Aug. 24.

Turek, Stanley P., La Grange, assignor to Modern-Aire Mfg. Corporation, Chicago, Ill. Extensible supporting post for clotheslines. 2,447,992, Aug. 24.

Tyson, Charles W.: *See*—
Hemminger, Charles E., and Tyson.

Uhlanet, Herman, Newark, N. J. Adjustable thermal limit switch. 2,447,622, Aug. 24.

Underwood Corporation, assignee: *See*—
Wise, Elmer L.

Underwood, Orville J., and R. S. Feigal, assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Potentiometer assembly. 2,4427,780, Aug. 24.

Union Oil Company of California, assignee: *See*—
Brewer, Philip D.

Union Steel Products Company, assignee: *See*—
Bitney, Dewey H.

United Aircraft Corporation, assignee: *See*—
Baker, John G.
Pratt, Perry W.

United Shoe Machinery Corporation, assignee: *See*—
Hill, Maurice G., and Copper.
Leahy, James F.
Mellerio, Lucien P., and Cooper.

Universal Oil Products Company, assignee: *See*—
Chenicek, Joseph A.
Schmerling, Louis.

Vieira, Nicholas R., Charlotte, N. C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Dyeing textile fibers with vat dye. 2,447,993, Aug. 24.

Vitale, John A., Olean, N. Y. Costumer. 2,447,924, Aug. 24.

Von Voigtlander, Frederick, Ann Arbor, Mich., assignor, by mesne assignments, to Sperti Faraday Inc. Electric switch. 2,447,969, Aug. 24.

Vorbusch, George, New Orleans, La. Gas burner supporting stand. 2,447,925, Aug. 24.

Wahl, Albert G., Los Angeles, Calif. Telephone handpiece support. 2,447,721, Aug. 24.

Walker Manufacturing Company of Wisconsin, assignee: *See*—
Haumerson, Fred C.

Walley, Omar C., Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Reversible single-phase motor. 2,447,675, Aug. 24.

War, United States of America as represented by the Secretary of, assignee: *See*—
Daniel, Arthur F.

Wareing, Robert J., Birmingham, England, assignor to Imperial Chemical Industries Limited. Apparatus for cooling or attemperating oil or other liquid. 2,447,970, Aug. 24.

Warmoltz, Nicolaas, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Electric discharge tube. 2,447,781, Aug. 24.

Warner, Archibald A., Rockford, assignor to Borg-Warner Corporation, Chicago, Ill. Universal joint. 2,447,881, Aug. 24.

Warner, Archibald A., Rockford, assignor to Borg-Warner Corporation, Chicago, Ill. Universal joint. 2,447,882, Aug. 24.

Weatherhead Company, The, assignee: *See*—
Crawley, Charles H.
Hunsiker, Fred.

Webb, Charles E., New London, Wis., assignor to Edison Wood Products, Incorporated, West Orange, N. J. Crib. 2,447,722, Aug. 24.

Webster, Benjamin C., Fairfield, assignor to The Bryant Electric Company, Bridgeport, Conn. Electrical receptacle. 2,447,676, Aug. 24.

Weinert, Carl R., West View, assignor to Federal Laboratories, Inc., Pittsburgh, Pa. Tree suspension grenade device. 2,447,971, Aug. 24.

Weinert, Carl R., West View, assignor to Federal Laboratories, Inc., Pittsburgh, Pa. Target balloon. 2,447,972, Aug. 24.

Weinstein, Harry, assignee, et al.: *See*—
Keith, Glenn.

Weinstein, Milton M., assignee, et al.: *See*—
Keith, Glenn.

Weisglass, Louis L., New York, assignor, by mesne assignments, to Simmon Brothers, Inc., Long Island City, N. Y. Color control for photographic enlargers. 2,447,724, Aug. 24.

Weige, Victor, assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif. Ignition system. 2,447,782, Aug. 24.

West, Cutler D.: *See*—
Barr, Edgar E., and West.

West, Cutler D., assignor to Polaroid Corporation, Cambridge, Mass. Light-polarizing prism. 2,447,828, Aug. 24.

West Bend Equipment Corporation, assignee: *See*—
Klumb, Carl E.

Western Electric Company, Incorporated, assignee: *See*—
Willous, Charles E.

Westinghouse Air Brake Company, The, assignee: *See*—
Crittenden, Philip L.
Hewitt, Ellis R.
May, Harry C.
McCune, Joseph C.
McCune, Joseph C., and Newell.
Newell, George K.

Westinghouse Electric Corporation, assignee: *See*—
Arnold, Edwin E.
Astin, James S.
Baker, Benjamin P., and Leitzel.
Bartholy, Frederick E.
Blackburn, Wayne E.
Braithwaite, Charles H., Jr.
Candee, Andrew H.
Carlin, Herbert J., and Chapman.
Colaiaco, August P.
Colaiaco, August P., and Hopper.
Cox, Joseph H.
Cummings, Ira R.
Daly, Thomas A.
Eames, William F.
Edwards, Hilbert E.
Ferguson, John P.
Frisch, Erling.
Frisch, Erling, and Lory.
Goodwin, Arthur E., and Ludwig.
Halpine, Paul A.
Hancock, Myron S.
Harris, Walter R.
Harrison, John W.
Jennings, Lawrence D., and Naymik.
Jennings, Oliver S.
Kenyon, Alonzo F.
Kirschbaum, Herbert S.
Leeds, Winthrop M., and Baker.
Leeds, Winthrop M., and Cumming.
Ludwig, Leon R., Baker, and Cumming.
Ludwig, Leon R., and Troncatti.
Marbury, Ralph E., Owens, and Cuttino.
Miklowitz, Julius.
Pastoret, John E., and Morrow.
Purifoy, George R.
Riley, Lynn G.
Schuck, Raymond W.
Steinert, Emil F.
Strom, Albert P., and Browne.
Walley, Omar C.

Westinghouse Electric Elevator Company, assignee: *See*—
Pegg, Edward H. R.

Whaley, Randall M., West Lafayette, assignor to Purdue Research Foundation, Lafayette, Ind. Germanium-helium alloys and rectifiers made therefrom. 2,447,829, Aug. 24.

Wheeler, Harold A., assignor to R. J. Scheffler, Grand Rapids, Mich. Thermostatic air circulation control. 2,447,723, Aug. 24.

Wheelock and Cummins, Inc., assignee: *See*—
Carter, Russell W.

Whitaker, Arthur C.: *See*—
Hass, Henry B., and Whitaker.

White, Charles S.: *See*—
Sabee, Reinhardt N., and White.

Whitman, Lawrence C., Pittsfield, Mass., assignor to General Electric Company. Electrical induction apparatus. 2,447,883, Aug. 24.

Wicker, Dan B., Dunbar, W. Va., assignor to American Viscose Corporation, Wilmington, Del. Spinneret. 2,447,994, Aug. 24.

Wico Electric Company, assignee: *See*—
Alstrom, Albert I., and Brownlee.

Wiczer, Sol B., Washington, D. C. Antiknock motor fuel. 2,447,926, Aug. 24.

Williams, Benjamin M., assignor to Gaylord Container Corporation, St. Louis, Mo. Heavy-duty shipping carton. 2,447,077, Aug. 24.

Williams, Ferd E., Princeton, N. J., assignor to Radio Corporation of America. Luminescent zinc fluoride. 2,447,927, Aug. 24.

Williams, Paul D., Palo Alto, assignor to Eitel-McCullough, Inc., San Bruno, Calif. Coated anode for electron discharge devices. 2,447,973, Aug. 24.

Williams, Richard O., assignor of one-half to A. H. Ross, Los Angeles, Calif. Plug locking attachment for extension cords. 2,447,783, Aug. 24.

Willoughby, Eric O., assignor to Standard Telephones and Cables Limited, London, England. Radio glide path landing system for aircraft. 2,447,549, Aug. 24.

Willous, Charles E., West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Material working apparatus. 2,447,884, Aug. 24.

Wilson-Jones Company, assignee: *See*—
Segal, Samuel.

Wilson, S. Morris, assignee: *See*—
Rowe, Charles E.

Wine, William E., Parker, Va. Assemblage of refrigerating units. 2,447,606, Aug. 24.

Wise, Elmer L., Bridgeport, Conn., assignor to Underwood Corporation. Type bar mechanism for typewriting machines. 2,447,885, Aug. 24.

Wood, Arthur H., assignor to Simplex Paper Corporation, Adrian, Mich. Apparatus for creping paper. 2,447,784, Aug. 24.

Wood, Joseph K., assignor to General Spring Corporation, New York, N. Y. Support device. 2,447,830, Aug. 24.

Woodward, Robert B., assignor to Polaroid Corporation, Cambridge, Mass. Evaporated and deposited birefringent film comprising aromatic compound, the molecules of which contain planar groupings. 2,447,831, Aug. 24.

Worth, Robert, Nutley, N. J., assignor to Homelite Corporation, East Port Chester, Conn. Power hammer. 2,447,886, Aug. 24.

Worthington, Emory W.: *See*—
Riggs, Joseph A., Worthington, and Knell.

Worthington, Emory W., assignor to The Goss Printing Press Company, Chicago, Ill. Printing press frame. 2,447,887, Aug. 24.

Young, Albert J., assignor to Taylor Instrument Companies, Rochester, N. Y. Thermometer. 2,447,888, Aug. 24.

Youngstown Steel Door Company, The, assignee: *See*—
Ditchfield, Frank.

Zambito, Arthur J.: *See*—
Snyder, Harold R., and Smith.

Zemelman, Roscoe E., University City, Mo. Kaleidoscope. 2,447,623, Aug. 24.

Zenith Radio Corporation, assignee: *See*—
Carhahan, Chalon W.
Emde, Kurt.
Gustafson, Gilbert E.

Zenses, Alexander M., assignor of one-half to Musher Foundation, Incorporated, New York, N. Y. Fruit flavored food composition. 2,447,550, Aug. 24.

Zimmer, John C., Union, and G. W. Duncan, Westfield, N. J., assignors to Standard Oil Development Company. Lubricant. 2,447,607, Aug. 24.

Zisman, William A.: *See*—
Baker, Hayward R., and Zisman.

Zisman, William A., Washington, D. C., and L. Pickett, Arlington, Va. Clearing water surfaces of oil. 2,447,551, Aug. 24.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 24TH DAY OF AUGUST, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Bundling and binding means. L. E. Delson. Re. 23,029, Aug. 24.

Calculating machine. R. L. Muller. Re. 23,031, Aug. 24.
Educational device. W. R. Holt. Re. 23,030, Aug. 24.

LIST OF PLANT INVENTIONS

Plant, Carnation. H. J. Symonds. 805, Aug. 24.

LIST OF DESIGN INVENTIONS

Airplane. D. A. Beck. 150,672, Aug. 24.
Airplane. C. S. Glasgow and C. C. Wood. 150,692, Aug. 24.
Airplane. F. I. Steele. 150,736, Aug. 24.
Band for watch bracelet or analogous article, Extensible. H. J. Duester. 150,682, Aug. 24.
Base, Trophy. D. K. Williams. 150,744, Aug. 24.
Book end. J. F. Oberwinder. 150,724–5, Aug. 24.
Bracelet. T. F. Strub. 150,738, Aug. 24.
Bracelet, Link. H. Bogoff. 150,675, Aug. 24.
Bracelet or similar article. A. Katz. 150,701, Aug. 24.
Bracelet or similar article. A. Katz. 150,712–13, Aug. 24.
Brooch or similar article. A. Katz. 150,706, Aug. 24.
Brooch or similar article. A. Katz. 150,708–9, Aug. 24.
Brooch or similar article. A. Katz. 150,711, Aug. 24.
Brooch or similar article. H. Schreiner. 150,733, Aug. 24.
Cabinet. R. W. Neville. 150,722, Aug. 24.
Car, Kiddie. J. L. Schilling. 150,732, Aug. 24.
Casing for a space heater. A. W. Becker. 150,673–4, Aug. 24.
Chair. C. Eames. 150,683, Aug. 24.
Chair. C. Eames. 150,685, Aug. 24.
Chair, Tilt-back. C. Eames. 150,684, Aug. 24.
Chair, Upholstered. J. J. Modarelli. 150,721, Aug. 24.
Cleaner, Spark plug. F. A. Vogel. 150,740, Aug. 24.
Cleaner, Vacuum. G. W. Florian. 150,690, Aug. 24.
Clock, telephone stand, and calendar, Combined illuminable. M. J. Brusseau. 150,676, Aug. 24.
Coffee mill. R. L. Schuhmann. 150,734, Aug. 24.
Cookstove, Gas. M. Ferar. 150,688, Aug. 24.
Cookstove, Gas. H. M. Reeves and M. Ferar. 150,728, Aug. 24.
Cup and saucer display stand, Combined. J. P. Faeder. 150,686, Aug. 24.
Dress. A. Waite. 150,741, Aug. 24.
Dress ensemble. J. F. Strassner. 150,737, Aug. 24.
Earring or similar article. M. Chernow. 150,678, Aug. 24.
Earring or similar article. A. Katz. 150,700, Aug. 24.
Earring or similar article. A. Katz. 150,702–5, Aug. 24.
Earring or similar article. A. Katz. 150,707, Aug. 24.
Earring or similar article. A. Katz. 150,710, Aug. 24.
Fence post top member. W. A. Webster. 150,742, Aug. 24.
Globe, Illuminator. I. Levin. 150,718, Aug. 24.
Guard, Trouble light. M. Meltzer. 150,720, Aug. 24.
Hat tree, Pin-up. B. Judd. 150,697, Aug. 24.
Heater, Gas. C. P. Price. 150,727, Aug. 24.
Knife. H. L. Fischer. 150,689, Aug. 24.
Lighting fixture, Electric. M. W. Schwartz and M. J. Marks. 150,735, Aug. 24.
Luminaire. F. C. Winkler and D. T. Beggs. 150,745, Aug. 24.
Mat, Door. C. E. Bauer. 150,671, Aug. 24.
Microphone or the like. J. B. Federico. 150,687; Aug. 24.
Molding, Billboard frame. R. W. Olmsted. 150,725, Aug. 24.
Necklace or similar article. A. Katz. 150,698–9, Aug. 24.
Necklace or similar article. A. Katz. 150,714, Aug. 24.
Negligee. V. Giovagnoni. 150,691, Aug. 24.
Ornament or the like, Vehicle. G. C. Knight. 150,717, Aug. 24.
Overshoe. R. B. Hardman. 150,694, Aug. 24.
Photographic enlarger. A. Drucker. 150,681, Aug. 24.
Pipe, Hang-type smoker's. K. F. J. Kirsten. 150,716, Aug. 24.
Press, Hydraulic. A. M. Ashman. 150,670, Aug. 24.
Range, Electric. R. Loewy. 150,719, Aug. 24.
Ring. T. V. Phelan. 150,726, Aug. 24.
Shoe. J. Sandler. 150,729–31, Aug. 24.
Shoe. A. Wertheim. 150,743, Aug. 24.
Soap, Cake of. E. F. Haskell. 150,695, Aug. 24.
Table, Racking. W. C. Cunningham. 150,679, Aug. 24.
Thimble, Finger-shaped. C. M. Howser. 150,696, Aug. 24.
Tool, Mortar and cement finishing. T. T. King. 150,715, Aug. 24.
Trailer. W. M. Dawson. 150,680, Aug. 24.
Tray or similar article. S. Guzman and H. Rappaport. 150,693, Aug. 24.
Vanity. C. A. Thomson. 150,739, Aug. 24.
Wrench. F. J. Carnelli. 150,677, Aug. 24.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 24TH DAY OF AUGUST, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acetal bodies from polyhydric alcohols, Preparation of. W. J. Croxall and H. T. Neher. 2,447,975, Aug. 24.
Acyl glycine amides. H. Martin and H. Gysin. 2,447,587, Aug. 24.
Acylanilides, Preparation of substituted. R. C. Clapp and J. Krapcho. 2,447,998, Aug. 24.
Additives for silicone oils. H. R. Baker and W. A. Zisman. 2,447,483, Aug. 24.
Adjustable check valve. J. D. Langdon. 2,447,510, Aug. 24.
Adjustable support. A. F. Teigen. 2,447,919, Aug. 24.
Adjustable thermal limit switch. H. Ulanet. 2,447,622, Aug. 24.
Aerial bomb, pyrotechnic device and the like. J. Imber and H. C. Hebard. 2,447,941, Aug. 24.
Agitator, Ink. D. Ortlieb. 2,447,868, Aug. 24.
Aircraft cabin pressure regulator. W. D. Teague, Jr. 2,447,918, Aug. 24.
Alarm system, Electric refrigerator. J. J. Bauman. 2,447,894, Aug. 24.
Alarm system for electric refrigerators. J. J. Bauman. 2,447,893, Aug. 24.
Alarm system for electric refrigerators. J. J. Bauman. 2,447,895, Aug. 24.
Aldehydes by a halogen-hydrogen exchange reaction, Production of. J. A. Chenicek. 2,447,565, Aug. 24.
Aliphatic mercaptans and sulfides, Synthesizing. R. T. Bell and C. M. Thacker. 2,447,481, Aug. 24.
Alkyl halides, Production of primary. J. C. Munday. 2,447,593, Aug. 24.
Alloy for metal evaporation, Copper base. F. R. Hensel and E. I. Larsen. 2,447,979, Aug. 24.
Alloys and rectifiers made therefrom, Germanium-helium. R. M. Whaley. 2,447,829, Aug. 24.
Ammoniacal copper compounds, Dissolving cellulose in. T. Lieser. 2,447,514, Aug. 24.
Ampoule neck cutter. L. A. Pierson. 2,447,988, Aug. 24.
Analyzer for 45° strain rosette data, Electrical. S. S. Manson. 2,447,517, Aug. 24.
Anode for electron discharge devices, Coated. P. D. Williams. 2,447,973, Aug. 24.
Antenna. M. W. Scheldorf. 2,447,879, Aug. 24.
Antenna, Microwave. G. E. Mueller. 2,447,768, Aug. 24.
Apparatus for aerating granular material. A. G. Granath. 2,447,575, Aug. 24.
Apparatus for chlorodizing aluminum-base alloys. A. A. Smith, Jr., and R. A. Quadt. 2,447,672, Aug. 24.
Apparatus for cooling or attemperating oil or other liquid. R. J. Wareing. 2,2447,970, Aug. 24.
Apparatus for counting the revolutions of a shaft after discontinuance of power. O. C. McNairn. 2,447,588, Aug. 24.
Apparatus for creping paper. A. H. Wood. 2,447,784, Aug. 24.
Apparatus for decorating articles. W. J. Miller, L. P. Reese, and G. J. Croninger. 2,447,521, Aug. 24.
Apparatus for forming a section of casing below casing already in position in a well hole. V. J. Beissinger and G. D. Johnson. 2,447,629, Aug. 24.
Apparatus for measuring a condition on a rotating member. G. Q. Decker, 3rd, and E. C. Capuzzi. 2,447,566, Aug. 24.
Apparatus for oil wells, Automatic shutoff. L. Spencer. 2,447,546, Aug. 24.
Apparatus for processing photographic articles. D. C. Brown and W. M. Paige. 2,447,684, Aug. 24.
Apparatus for recording an oscillographic record. C. M. Hathaway. 2,447,752, Aug. 24.
Apparatus for sealing containers. T. F. Cass, Jr., D. Kirk, and F. W. Lanigan. 2,447,997, Aug. 24.
Apparatus for solvent extraction. C. F. Dinley. 2,447,845, Aug. 24.
Apparatus for spinning artificial staple fibers. A. Lodge. 2,447,984, Aug. 24.
Appliance for the spine. B. Haberer. 2,447,698, Aug. 24.
Assemblage of refrigerating units. W. E. Wine. 2,447,606, Aug. 24.
Automatic chicken feeder. G. T. Eidson. 2,447,745, Aug. 24.
B-diketones and preparing them. C. T. Palmer. 2,447,626. Aug. 24.
Back-pressure check valve. J. L. Cameron and F. J. Malloy. 2,447,842, Aug. 24.
Bag: *See*—
  Cord handled bag.
Balancing circuit. D. E. Kenyon. 2,447,507, Aug. 24.
Balloon, Target. C. R. Weinert. 2,447,972, Aug. 24.
Bank, Shunt capacitor. R. E. Marbury, J. B. Owens, and W. H. Cuttino. 2,447,658, Aug. 24.
Bar mechanism for typewriting machines, Type. E. L. Wise. 2,447,885, Aug. 24.
Bathing cap. E. McCaffrey. 2,447,708, Aug. 24.
Baths comprising chloroprene copolymers, Aqueous wool treating. J. B. Rust. 2,448,005, Aug. 24.
Baths comprising chloroprene methacrylate copolymers, Aqueous wool treating. J. B. Rust. 2,448,004, Aug. 24.
Baths containing butadiene copolymers and their utilization, Wool shrinkproofing. J. B. Rust. 2,447,877–8, Aug. 24.
Battery compartment, Torpedo. T. A. Daly. 2,447,639, Aug. 24.
Beaming and electroplating wires, Simultaneously. R. C. Pierce. 2,447,531, Aug. 24.
Bearer for offset presses, Resilient. L. M. Stempel. 2,447,991, Aug. 24.
Bearing: *See*—
  High-speed bearing.
  United handled double row roller bearing.
Bearing construction, Mill. M. Treshow. 2,447,605, Aug. 24.
Bearing structure. E. G. Gartin. 2,447,852, Aug. 24.
Bearing surfaces, Making porous. F. R. Hensel. 2,447,980, Aug. 24.
Bellows clamp. C. Eisler. 2,447,570, Aug. 24.
Belt, Wire coil conveyer. F. W. Hale. 2,447,613, Aug. 24.
Benzoisulfonamido-1,3,4-thiodiazole compounds, Producing. O. Hübner. 2,447,702, Aug. 24.
Beverages, Cooling. G. B. Pringey. 2,447,769, Aug. 24.
Binder, Loose-leaf. S. Segal. 2,447,963, Aug. 24.
Binder mechanism. J. Schade. 2,447,775, Aug. 24.
Blouse. E. T. Cherin and B. Favorman. 2,447,735, Aug. 24.
Blower, compressor and exhauster, Rotary. J. Rodway. 2,447,961, Aug. 24.
Bolt for towing poles, Latch. E. C. Christensen. 2,447,737, Aug. 24.
Bottle carrier. F. P. Doppelheuer. 2,447,934, Aug. 24.
Bottle, Nonrefillable. L. M. Bumgarner. 2,447,484, Aug. 24.
Bracket: *See*—
  Indicator mounting bracket.
  Water bag bracket.
Brake and sanding control apparatus. G. K. Newell. 2,447,713, Aug. 24.
Brake equipment, Load compensating fluid pressure. E. E. Hewitt. 2,447,857, Aug. 24.
Braking system for series motors, Dynamic. G. R. Purifoy. 2,447,666, Aug. 24.
Brushholder mounting. J. E. Pastoret and J. W. Morrow. 2,447,662, Aug. 24.
Buffer. J. D. Graham. 2,447,748, Aug. 24.
Burglar alarm, Window operable. J. E. Olvis. 2,447,527, Aug. 24.
Bushing, Lead-in. R. U. Clark. 2,447,489, Aug. 24.
Butadiene-acrylate interpolymer treatment of wool. J. B. Rust. 2,447,540, Aug. 24.
Butadiene polymers and treatment of wool therewith, Aqueous dispersions of. J. B. Rust. 2,447,876, Aug. 24.
Cabinet: *See*—
  Radio cabinet.
Cabinet having a rotatable compartmented member, Beverage. R. J. Shelley. 2,447,602, Aug. 24.
Cage and blower, Die-cast squirrel. L. R. Ludwig and C. P. Troncatti. 2,447,657, Aug. 24.
Calendar having folding, adjustable date elements slidably receivable in supporting frame. H. Lathrop. 2,447,807, Aug. 24.
Cam and mounting therefor, Picking. B. W. Brouwer and V. F. Sepavich. 2,447,795, Aug. 24.
Cap: *See*—
  Bathing cap.
Cap construction. S. Feldman. 2,447,850, Aug. 24.
Cap die. C. W. Goodwin and K. R. Allen. 2,447,855, Aug. 24.
Cap for vacuum bottles and the like, Sealing. G. Keith. 2,447,581, Aug. 24.
Caps, Forming crown. J. W. Ekstedt and A. F. Pityo. 2,447,690, Aug. 24.
Car door. F. Ditchfield. 2,447,846, Aug. 24.
Carrier: *See*—
  Bottle carrier.
Carbide in stainless steel, Determining columbium. W. C. Maurer. 2,447,763, Aug. 24.

Carbonating liquids used for drinking, Method and apparatus for. C. E. Rowe. 2,447,716, Aug. 24.
Carburetor. F. Barfod. 2,447,791, Aug. 24.
Card case. A. G. Bureau. 2,447,731, Aug. 24.
Carriage, Camera. V. R. Raby. 2,447,667, Aug. 24.
Carriage for children, Folding. L. G. Macip. 2,447,705, Aug. 24.
Carton, Heavy-duty shipping. B. M. Williams. 2,447,677, Aug. 24.
Case: *See*—
  Card case.
  Combination cigarette and match case.
  Open top access refrigerated display case.
  Open-top refrigerated display case.
  Self-service display and storage case.
Caster construction. C. E. Klumb. 2,447,582, Aug. 24.
Catalytic hydrogenation of 2,4-diamino-5-nitroso-6-hydroxy pyrimidine. R. Mozingo and G. S. Fonken. 2,447,523, Aug. 24.
Cavity resonator, Coupled. V. L. Ronci. 2,447,537, Aug. 24.
Ceiling and wall construction. H. L. Finch. 2,447,694, Aug. 24.
Cells, Electrolytic alkali chlorine. K. E. Stuart. 2,447,547, Aug. 24.
Cellulose, Making alkali. A. Ruperti. 2,447,914, Aug. 24.
Centerimeter. R. H. Colwill. 2,447,932, Aug. 24.
Chamber with enlarged upper portion, Coking. J. Becker. 2,447,837, Aug. 24.
Charge regulating device, Auxiliary. J. A. Bolt and R. W. Moore. 2,447,793, Aug. 24.
Check, Door. S. T. Alexander. 2,447,678, Aug. 24.
Check for mechanical lubricators, Terminal. B. E. Folke. 2,447,695, Aug. 24.
Check valve. A. Bertea. 2,447,729, Aug. 24.
Chemical composition. A. R. Jones. 2,447,615, Aug. 24.
Chuck. C. Bockman and R. Luttich. 2,447,682, Aug. 24.
Chuck, Precision leveling. E. Mikis. 2,447,711, Aug. 24.
Circuit: *See*—
  Balancing circuit.
  Electron beam focusing circuit.
  Radio signaling circuit.
Circuit breaker. O. S. Jennings. 2,447,652, Aug. 24.
Circuit breaker, Cam operated. C. D. Lake and M. Fiehl. 2,447,806, Aug. 24.
Circuit interrupter. W. M. Leeds and B. P. Baker. 2,447,949, Aug. 24.
Circuit interrupter. W. M. Leeds and J. M. Cumming. 2,447,950, Aug. 24.
Circuit interrupter. A. P. Strom and T. E. Browne, Jr. 2,447,674, Aug. 24.
Circuit interrupter, Compressed gas. B. P. Baker and R. H. Leitzel. 2,447,627, Aug. 24.
Circuits, Noise reducing. C. W. Carnahan. 2,447,564, Aug. 24.
Circulation control, Thermostatic air. H. A. Wheeler. 2,447,723, Aug. 24.
Clamp: *See*—
  Bellows clamp.
  Tire repair clamp.
Clamping means, Die. J. Anon. 2,447,995, Aug. 24.
Cleaner: *See*—
  Tank type suction cleaner.
Cleaning and centrifuging apparatus. H. E. Edwards. 2,447,848, Aug. 24.
Cleaning attachment, Rake. L. Jarosh. 2,447,579, Aug. 24.
Clip: *See*—
  Money clip.
Closing machine, Can. R. E. J. Nordquist. 2,447,524–5, Aug. 24.
Closure, Container. J. Robinson. 2,447,535–6, Aug. 24.
Clothes rack for automobiles, Folding. P. F. Hoots. 2,447,908, Aug. 24.
Coating and impregnating composition. L. J. Jubanowsky. 2,447,506, Aug. 24.
Coating apparatus and method, Electrostatic. E. H. R. Pegg. 2,447,664, Aug. 24.
Coffee-making apparatus. C. Evensen. 2,447,692, Aug. 24.
Coil, Waterproof electrical. C. H. Braithwaite, Jr. 2,447,631, Aug. 24.
Collapsible covered container or box. K. T. Buttery. 2,447,563, Aug. 24.
Color control for photographic enlargers. L. L. Weisglass. 2,447,724, Aug. 24.
Combination cigarette and match case. O. Q. Atkinson. 2,447,787, Aug. 24.
Combination jar wrench and holder. C. E. Ratchford. 2,447,770, Aug. 24.
Combination lock. M. de Wrangell. 2,447,785, Aug. 24.
Commutator. R. I. Roth. 2,447,819, Aug. 24.
Commutator with supplementary grid control, Sequential electronic. A. H. Dickinson. 2,447,799–800, Aug. 24.
Compressed gas-operated circuit interrupters with position indicator. L. R. Ludwig, B. P. Baker, and J. M. Cumming. 2,447,656, Aug. 24.
Concentration of chlorine. F. R. Balcar. 2,447,834, Aug. 24.
Condenser system for airplane engines. J. A. Burke, Jr. 2,447,486, Aug. 24.
Connector: *See*—
  Electrical terminal connector.
Container and jar closure fitting, Drinking. B. H. Polcyn. 2,447,870, Aug. 24.
Container closure, Shrinkable. J. W. Little. 2,447,983, Aug. 24.
Container treating machine. H. J. Paynter. 2,447,526, Aug. 24.
Control apparatus for a plurality of motors. H. C. May. 2,447,707, Aug. 24.
Control device for a water treating device comprising a motor operated valve mechanism having an electrically connected time switch, Electrovolumetric. C. T. McGill and H. C. Rowe, Jr. 2,447,520, Aug. 24.
Control mechanism. L. D. Jennings and J. Naymik. 2,447,651, Aug. 24.
Control mechanism, Clock. H. N. Deane. 2,447,798, Aug. 24.
Control system. W. F. Eames. 2,447,935, Aug. 24.
Control system, Electric vehicle. A. H. Candee. 2,447,633, Aug. 24.
Control system for electric reel motors, Torque. A. F. Kenyon. 2,447,654, Aug. 24.
Control system for vapor electric devices, Excitation. J. H. Cox. 2,447,638, Aug. 24.
Control system, Telephone register. G. Deakin. 2,447,494, Aug. 24.
Cord handled bag. R. O. Slindee. 2,447,964, Aug. 24.
Costumer. J. A. Vitale. 2,447,924, Aug. 24.
Coupling: *See*—
  Hose coupling.
Cover: *See*—
  Garbage can cover.
  Hatch cover.
  Wheel cover.
Cranking means for hand wheels of machine spindles and the like, Safety. F. J. Gibbons. 2,447,574, Aug. 24.
Crib. C. E. Webb. 2,447,722, Aug. 24.
Crucible for coating apparatus, Evaporating. E. E. Barr. 2,447,789, Aug. 24.
Cushioning device. T. D. Nathan. 2,447,712, Aug. 24.
Cutoff machine. F. G. Schwalbe. 2,447,962, Aug. 24.
Cutoff system for fuel burners, Safety. W. A. Ray. 2,447,668, Aug. 24.
Cutter: *See*—
  Ampoule neck cutter.
  Rotary cutter.
Cutting apparatus. D. M. Curtis. 2,447,976, Aug. 24.
Cyclic oximes, Preparation of. T. Koch. 2,447,583, Aug. 24.
Deceleration control apparatus. J. C. McCune. 2,447,709, Aug. 24.
Deceleration control apparatus. J. C. McCune and G. K. Newell. 2,447,710, Aug. 24.
Derivative of the adduct of levo-pimaric acids and maleic anhydride and preparation thereof. G. C. Harris. 2,447,750, Aug. 24.
Developing rack. H. Millman. 2,447,986, Aug. 24.
Device for determining photoelectrically the concentration of a solute in a solvent. M. Mass. 2,447,985, Aug. 24.
Device for packaging and dispensing intravenous solutions. N. Evans. 2,447,691, Aug. 24.
Device for supporting workpieces to be tooled. E. Burri. 2,447,562, Aug. 24.
Device for testing electric irons. P. M. Kaumans. 2,447,580, Aug. 24.
Die: *See*—
  Cap die.
Dispenser: *See*—
  Tape dispenser.
Dispersions of butadiene polymers and treatment of wool therewith, Aqueous. J. B. Rust and C. W. Pfeifer. 2,447,772, Aug. 24.
Display device simulating a tree, Christmas card. C. H. Hazelton. 2,447,856, Aug. 24.
Distributor and nozzle, Turbine. R. J. Imbert and G. Mission. 2,447,942, Aug. 24.
Dolly, Trailer. E. C. McDaniel. 2,447,659, Aug. 24.
Door: *See*—
  Car door.
Drainboard and tub construction. A. P. Ball. 2,447,788, Aug. 24.
Drier. J. C. Monick. 2,447,766, Aug. 24.
Drive, Engine starter. D. L. Miller. 2,447,765, Aug. 24.
Drive mechanism for the intermittent movement in a television motion-picture projector. F. J. Bingley. 2,447,839, Aug. 24.
Dyestuffs, Anthraquinone vat. F. Irving and A. Livingston. 2,447,981, Aug. 24.
Dyestuffs of the pyrazolone series, Azo. A. W. Nies. 2,447,867, Aug. 24.
Edge filter. P. G. Cox. 2,447,797, Aug. 24.
Electron discharge tube. N. Warmoltz. 2,447,781, Aug. 24.
Electric switch. F. Von Voigtlander. 2,447,969, Aug. 24.
Electrical fixture or the like. G. G. Ellner. 2,447,498, Aug. 24.
Electrical iron holder. R. Beaudoin. 2,447,555, Aug. 24.
Electrical receptacle. R. C. Webster. 2,447,676, Aug. 24.
Electrical terminal connector. A. G. Rosa. 2,447,874, Aug. 24.
Electrode for electron discharge devices, Grid. R. Giuntx. 2,447,501, Aug. 24.
Electromagnetic mechanism. A. V. Alvino. 2,447,890, Aug. 24.
Electron beam focusing circuit. P. F. G. Holst. 2,447,804, Aug. 24.

Electron tube. H. E. Sorg. 2,447,719, Aug. 24.
Electron tube impulse generator. R. E. Mumma and L. D. Kilhefter. 2,447,661, Aug. 24.
Engine cooling system, Internal-combustion. W. W. Muir. 2,447,592, Aug. 24.
Engine cylinder. R. B. Kleinfeld. 2,447,508, Aug. 24.
Engine of the rotary abutment type, Rotary internal-combustion. F. Berry. 2,447,608, Aug. 24.
Essence containing packages for brewing beverages, Manufacturing and filling of. L. Hirschhorn. 2,447,754, Aug. 24.
Esters of diacyl-glycerophosphoric acids. W. G. Rose. 2,447,715, Aug. 24.
Esters of hydroxy carboxylic acids, Manufacture of. E. M. Filachione and C. H. Fisher. 2,447,693, Aug. 24.
Esters of oxalic acid, Sulfurized. D. T. Rogers and J. G. McNab. 2,447,619, Aug. 24.
Ethers to improve their dissolving properties, Treating cellulose. L. Lilienfeld. 2,447,756–7, Aug. 24.
Excitation control system for vapor electric devices. J. H. Cox. 2,447,638, Aug. 24.
Extractor: *See*—
Fishhook extractor.
Feeder: *See*—
Automatic chicken feeder.
Feeding and weighing apparatus. L. S. Petersen. 2,447,594, Aug. 24.
Fender construction, Automobile. L. Colaner, Sr. 2,447,898, Aug. 24.
Fibers with vat dye, Dyeing textile. Nicholas R. Vieira. 2,447,993, Aug. 24.
Field control for transformer torque-meter signal coils. E. C. Capuzzi. 2,447,734, Aug. 24.
Filamentary material, Conditioning. H. P. Fry, Jr., R. W. Stanley, and H. J. McDermott. 2,447,977, Aug. 24.
Film comprising aromatic compound, the molecules of which contain planar groupings, Evaporated and deposited birefringent. R. B. Woodward. 2,447,831, Aug. 24.
Film comprising intimate mixture of minute particles of isophthalic acid and terephthalic acid and method of manufacture, Birefringent solid. E. E. Barr and C. D. West. 2,447,790, Aug. 24.
Film distillation method, Guided free. S. W. Ferris, E. R. Lamson, and D. M. Smith. 2,447,746, Aug. 24.
Film of evaporated and deposited isophthalic acid, Birefringent solid. E. R. Blout. 2,447,702, Aug. 24.
Filter: *See*—
Edge filter.
Filtering system. W. C. Bauer. 2,447,680, Aug. 24.
Fishhook extractor. D. R. Bates. 2,447,554, Aug. 24.
5-Nitrotetrahydro-1,3-oxazines and preparing them. M. Senkus. 2,447,822, Aug. 24.
Flash apparatus, Photographic. I. J. Abend and M. Slepoff. 2,447,832, Aug. 24.
Flashlight attachment for firearms. D. D. Balliff. 2,447,892, Aug. 24.
Flaws in magnetizable objects, Detecting. G. W. Conn. 2,447,899, Aug. 24.
Float valve. T. B. Messick. 2,447,591, Aug. 24.
Flow-proportioning valve. C. M. Terry. 2,447,920, Aug. 24.
Fluid power device of the rotary abutment type, Multistage rotary. F. Berry. 2,447,929, Aug. 24.
Fluorodinitroethanes. H. B. Hass and A. C. Whitaker. 2,447,504, Aug. 24.
Food composition, Fruit flavored. A. M. Zenzes. 2,447,550, Aug. 24.
Form for molding concrete in situ. R. W. Rumble. 2,447,670, Aug. 24.
Forming machine, Brush-stem. A. S. Erk. 2,447,499, Aug. 24.
Frame: *See*—
Printing press frame.
Frame having pivoted temple connections, Trial. C. A. Ellis. 2,447,936, Aug. 24.
Fuel, Antiknock motor. S. B. Wiczer. 2,447,926, Aug. 24.
Fuel control for hot-air heaters. R. W. De Lancey. 2,447,902, Aug. 24.
Fuel injection means for free piston engines. F. M. Lewis. 2,447,513, Aug. 24.
Garbage can cover. N. L. Johnson and J. D'Andrea. 2,447,944, Aug. 24.
Gas and steam turbine arrangement, Combustion. A. G. Forsyth. 2,447,696, Aug. 24.
Gas burner supporting stand. G. Vorbusch. 2,447,925, Aug. 24.
Gas producer, Electrothermic. P. L. J. Miquet and M. P. Perron. 2,447,809, Aug. 24.
Gauge: *See*—
Magnetic field gauge. Pressure gauge.
Gauging apparatus for controlling a grinding operation. W. H. Blessing. 2,447,558, Aug. 24.
Gear for flying boats, Mooring. H. Knowler. 2,447,945, Aug. 24.
Generator: *See*—
Electron tube impulse generator.
Generator and control, Current regulating. W. R. Harris. 2,447,648, Aug. 24.
Glass topped tennis table. W. G. Dieter. 2,447,743, Aug. 24.
Glove. E. C. Lindfelt. 2,447,951, Aug. 24.

Holding device, Sleeve. E. L. Corley. 2,447,491, Aug. 24.
Hose coupling. C. H. Crawley. 2,447,900, Aug. 24.
Hose, Radiator connection. O. C. Gotschall. 2,447,697, Aug. 24.
Hydrocarbon fluids, Treating. C. E. Hemminger and C. W. Tyson. 2,447,577, Aug. 24.
Hydrocarbon synthesis with fluidized catalyst regeneration. E. A. Johnson. 2,447,505, Aug. 24.
Hydrocarbons, Methylation of aromatic. L. Schmerling 2,447,599, Aug. 24.
Hydrocarbons, Removing impurities from. R. B. Perkins, Jr. 2,447,529, Aug. 24.
Igniting device for combustion chambers. I. Lubbock and H. J. Poole. 2,447,758, Aug. 24.
Ignition control. P. W. Pratt. 2,448,003, Aug. 24.
Ignition system. V. Weige. 2,447,782, Aug. 24.
Images and producing them, Precision. A. R. A. Beeber, D. D. Jacobus, and C. W. Keuffel. 2,447,836, Aug. 24.
Indexing device. N. M. Marsilius. 2,447,808, Aug. 24.
Indicating system, Line fault. J. S. Astin. 2,447,625, Aug. 24.
Indicator: *See*—
Radio direction and range indicator. Tire deflation indicator.
Indicator. P. W. Markwood. 2,447,584, Aug. 24.
Indicator for aircraft, Landing position. B. L. Hurst. 2,447,910, Aug. 24.
Indicator for impact testing machines. W. C. Moran. 2,447,767, Aug. 24.
Indicator for pneumatic tires, Pressure. N. A. Dysart. 2,447,689, Aug. 24.
Indicator mounting bracket. C. A. Akert. 2,447,624, Aug. 24.
Induction apparatus, Electrical. L. C. Whitman. 2,447,883, Aug. 24.
Infeed mechanism for wrapping machines, Article. C. W. Lea. 2,447,948, Aug. 24.
Inlay, Making marquetry. J. T. Breece. 2,447,609, Aug. 24.
Ionizing means for electrostatic dust-precipitation apparatus. I. R. Cummings. 2,447,933, Aug. 24.
Ironing-board attachment. C. M. Henderson. 2,447,907, Aug. 24.
Joint: *See*—
Universal joint.
Kaleidoscope. R. E. Zemelman. 2,447,623, Aug. 24.
Keratin proteins and the composition resulting therefrom, Dispersing. C. B. Jones and D. K. Macham. 2,447,860, Aug. 24.
Kit, Snake bite. R. K. Cutter. 2,447,844, Aug. 24.
Kit, Stapling. T. M. Sisk. 2,447,915, Aug. 24.
Ladle, Teapot spout. M. W. Goldberg. 2,447,747, Aug. 24.

Landing system for aircraft, Radio glide path. E. O. Willoughby. 2,447,549, Aug. 24.
Lecithin composition. W. J. Allingham. 2,447,726, Aug. 24.
Light for sewing machines, Attachable. J. Auer. 2,447,833, Aug. 24.
Lighting equipment, Explosion-proof. D. H. Tuck. 2,447,922, Aug. 24.
Lighting fixture. R. G. Maurette. 2,448,001, Aug. 24.
Lighting system and lighting units for use therein. D. H. Tuck. 2,447,923, Aug. 24.
Lighting systems, Electric. W. J. and E. E. Cheshier. 2,447,736, Aug. 24.
Link. Parachute shroud. A. Thomas. 2,447,921, Aug. 24.
Liquid oxygen pump. W. L. DeBaufre. 2,447,741, Aug. 24.
Loading and transporting device. B. and M. Phillips. 2,447,959, Aug. 24.
Lock: *See*—
Combination lock.
Lock relay, Magnetic. G. L. Bush. 2,447,632, Aug. 24.
Locking attachment for extension cords, Plug. R. O. Williams. 2,447,783, Aug. 24.
Locking-bar motor-frame assembly. A. E. Goodwin and L. R. Ludwig. 2,447,645, Aug. 24.
Lubricant. J. C. Zimmer and G. W. Duncan. 2,447,607, Aug. 24.
Lubricating means for sewing machine loop takers. F. Parry. 2,447,987, Aug. 24.
Lubrication. E. H. Kocher. 2,447,509, Aug. 24.
Lubrication apparatus for twister rings. F. L. Thomason. 2,447,548, Aug. 24.
Machine for forming bottoms on glass tubes. C. Eisler. 2,447,568, Aug. 24.
Machinery for vacuum tube manufacture. W. R. Moscrip. 2,447,522, Aug. 24.
Magnetic field gauge. M. L. Mages and G. W. Coon. 2,447,911, Aug. 24.
Magneto, Flywheel. A. I. Alstrom and A. L. Brownlee. 2,447,727, Aug. 24.
Magnetometer. C. H. Fay. 2,447,849, Aug. 24.
Magnetometer. J. D. Seaver. 2,447,880, Aug. 24.
Material working apparatus. C. E. Willous. 2,447,884, Aug. 24.
Mechanical movement device. R. W. Carter. 2,447,931, Aug. 24.
Metals, Manufacture of alkaline earth. F. R. Kemmer. 2,448,000, Aug. 24.
Mirror, Rear view. J. W. Anderson, Jr. 2,447,786, Aug. 24.
Modulator, Ultra high frequency. L. D. Smullin. 2,447,543, Aug. 24.
Molding composition, Urea-formaldehyde. L. Smidth. 2,447,621, Aug. 24.
Molding ends of concrete pipes. H. H. Jenkins. 2,447,703, Aug. 24.
Molds, Forming. W. W. Singleton and D. E. Dasher. 2,447,620, Aug. 24.
Molds, Making pottery. L. P. Reese. 2,447,598, Aug. 24.
Money clip. L. J. Biagi. 2,447,996, Aug. 24.
Mop wringing attachment for scrub buckets, Spirally contractable. E. A. Strattman. 2,447,917, Aug. 24.
Motor: *See*—
Reversible single-phase motor.
Motor control, Single-phase. H. F. Clark. 2,447,488, Aug. 24.
Motor winding. M. S. Hancock. 2,447,647, Aug. 24.
Mount for slide calipers, Dial indicator. L. H. Dowe. 2,447,612, Aug. 24.
Mounting: *See*—
Brush holder mounting.
Mounting for looms and the like, Pivot. R. A. Littlejohn. 2,447,864, Aug. 24.
Muffler remover. D. T. Ricketts, M. O. Hoffman, and J. D. Schmunk. 2,447,960, Aug. 24.
Mute, Adjustable. F. Gosparlin. 2,447,939, Aug. 24.
N-substituted furfurylamines, Production of. E. F. Smith. 2,447,823, Aug. 24.
Nest, Poultry. M. Torie. 2,447,826, Aug. 24.
Nitriles, Production of unsaturated. W. A. Schulze and J. E. Mahan. 2,447,600, Aug. 24.
Nitro amines and preparing same. H. G. Johnson. 2,447,653, Aug. 24.
Nitroalkyl cyclic amines, Making. M. Senkus. 2,447,821, Aug. 24.
Nitrosulfones. G. D. Buckley. 2,447,974, Aug. 24.
Novelty rotary display stand. B. Haase. 2,447,751, Aug. 24.
Oil pump. J. D. Gleitz. 2,447,853, Aug. 24.
Oil, Rubber-reclaiming. C. H. Campbell and R. W. Ostermayer. 2,447,733–2, Aug. 24.
Oil seal, High-speed. J. L. Biggs. 2,447,930, Aug. 24.
Oil thief. A. J. Junge. 2,447,861, Aug. 24.
Oils, Purifying. R. B. Perkins, Jr. 2,447,530, Aug. 24.
Open top access refrigerated display case. M. D. MacMaster. 2,447,759, Aug. 24.
Open-top refrigerated display case. H. W. Hardin. 2,447,699, Aug. 24.
Organic cation exchange adsorbents prepared from spent alkylation sulfuric acid or similar material, S. J. Macuga, F. G. Ciapetta, and R. G. Heiligmann. 2,447,762, Aug. 24.
Organic compounds, Fluorination of. J. H. Simons. 2,447,717, Aug. 24.
Organohalogenosilanes, Preparation of. E. G. Rochow. 2,447,873, Aug. 24.
Orienting, peeling, halving, and coring pears, Method and apparatus for. G. A. Dunn. 2,447,640, Aug. 24.
Pallet, Material handling. E. C. Seward. 2,447,542, Aug. 24.
Pallet or skid for handling materials. D. H. Bitney. 2,447,556, Aug. 24.
Pantie, Maternity. P. E. Rosenblatt. 2,447,875, Aug. 24.
Paraffins, Isomerizing. O. Gerbes. 2,447,573, Aug. 24.
Parts of bicycle frames, Connecting separated. H. Morders. 2,447,956, Aug. 24.
Paving machine, Ditch. E. D. Ekenstam. 2,447,571, Aug. 24.
Perambulator or push chair, Collapsible. A. M. Blaney. 2,447,557, Aug. 24.
Periodic reversing drive. F. Rieber. 2,447,818, Aug. 24.
Peroxides, Hydrocarbon. P. D. Brewer. 2,447,794, Aug. 24.
Phase control system for vapor electric converters. J. P. Ferguson. 2,447,642, Aug. 24.
Phonograph, Portable. L. C. Kalff and A. N. Legras. 2,447,999, Aug. 24.
Pictures, Obtaining multicolor. P. Danlos. 2,447,687, Aug. 24.
Pigment comprising calcium carbonate, Treatment of. H. R. Rafton. 2,447,532, Aug. 24.
Pin: *See*—
Hitch pin.
Pipe cleaning apparatus, Expandable fluid actuated. D. K. Stephens. 2,447,966, Aug. 24.
Pipes, Laying submerged. R. H. Ellis and M. A. Milling. 2,447,937, Aug. 24.
Pistol with a 3-pronged biasing spring, Pivoted breech block. J. B. Arrowsmith. 2,447,891, Aug. 24.
Plank or the like, Extensible. L. C. McClintock. 2,447,865, Aug. 24.
Plastic structure, Making. R. N. Sabee and C. S. White. 2,447,541, Aug. 24.
Plate, Sine angle. C. Adler. 2,447,889, Aug. 24.
Pole, Clothes. R. J. S. Hoppe. 2,447,614, Aug. 24.
Pole, Fish. B. C. Thomas. 2,447,720, Aug. 24.
Polymeric material containing 1,2-dicyano-1-methylethylene. D. T. Mowry. 2,447,812, Aug. 24.
Polyvinyl acetal ketal resins, Preparing. J. D. Ryan and F. B. Shaw, Jr. 2,447,773, Aug. 24.
Portable grinding stand. H. W. Nicholson. 2,447,618, Aug. 24.
Post for clotheslines, Extensible supporting. S. P. Turek. 2,447,992, Aug. 24.
Potentiometer assembly. O. J. Underwood and R. S. Felgal. 2,447,780, Aug. 24.
Power generation, Electronic. L. S. Lappin and R. F. Holtz. 2,447,616, Aug. 24.
Pressure controlled power steering mechanism, Fluid. H. W. Price. 2,447,815, Aug. 24.
Pressure gauge. E. J. Courtney. 2,447,739, Aug. 24.
Printing press frame. E. W. Worthington. 2,447,887, Aug. 24.
Printing unit and drive mechanism therefor. J. A. Riggs, E. W. Worthington, and C. V. Knell. 2,447,872, Aug. 24.
Prism, Light-polarizing. C. D. West. 2,447,828, Aug. 24.
Prolamines, Making. L. O. G. Pearce. 2,448,002, Aug. 24.
Propulsion controls, Ship. E. Frisch and M. R. Lory. 2,447,643, Aug. 24.
Protector: *See*—
Head and clothing protector.
Pulley, Variable pitch V-type. W. M. Mueller and J. E. Heckethorn. 2,447,958, Aug. 24.
Pulpstone. G. N. Jeppson. 2,447,943, Aug. 24.
Pulsator for milking machines. L. Dinesen. 2,447,688, Aug. 24.
Pump: *See*—
Liquid oxygen pump. Oil pump.
Pump. A. P. Colaiaco and D. L. Hopper. 2,447,636, Aug. 24.
Pump mechanism. F. C. Haumerson. 2,447,650, Aug. 24.
Pumping unit. V. E. Duemler. 2,447,744, Aug. 24.
Pusher, Stock. J. M. Ingalls. 2,447,859, Aug. 24.
Rack: *See*—
Developing rack.
Radio cabinet. K. Emde. 2,447,572, Aug. 24.
Radio direction and range indicator. F. E. Bartholy. 2,447,728, Aug. 24.
Radio direction finder. A. R. Starr. 2,448,006, Aug. 24.
Radio signaling circuit. D. L. Hings. 2,447,701, Aug. 24.
Range weighing system for materials testing machines, Multiload. A. Sonntag. 2,447,778, Aug. 24.
Rattler. J. L. La Forge. 2,447,946, Aug. 24.
Razor blade holder. W. M. Sparr. 2,447,965, Aug. 24.
Reactor with movable core member. E. F. Steinert. 2,447,673, Aug. 24.

Receiver, Portable radio. G. E. Gustafson. 2,447,576, Aug. 24.
Rectifier, Metal. E. A. Richards. 2,447,534, Aug. 24.
Rectifiers, Making selenium. W. E. Blackburn. 2,447,630, Aug. 24.
Reduction of the ash content of nitroaromatic compounds. R. B. Mason. 2,447,585, Aug. 24.
Receptacle: *See*—
Electrical receptacle.
Refrigerated products and methods and apparatus for producing same. H. W. Protzeller. 2,447,665, Aug. 24.
Regulating system. E. Frisch. 2,447,644, Aug. 24.
Regulating system. H. S. Kirschbaum. 2,447,655, Aug. 24.
Regulating valve. H. B. Schultz. 2,447,820, Aug. 24.
Regulator: *See*—
Aircraft cabin pressure regulator.
Temperature regulator.
Remote-control system. L. G. Riley. 2,447,669, Aug. 24.
Resinous interpolymer containing 1,2-dicyano-1-phenylethylene. D. T. Mowry. 2,447,813, Aug. 24.
Resinous interpolymers containing 1,2-dicyano-1-chloroethylene. D. T. Mowry. 2,447,811, Aug. 24.
Resinous material containing maleodinitrile. D. T. Mowry. 2,447,810, Aug. 24.
Resins, Production of siloxane. W. R. Collings, H. N. Fenn, and H. J. Fletcher. 2,447,611, Aug. 24.
Reversible single-phase motor. O. C. Walley. 2,447,675, Aug. 24.
Rivet stem puller and cutter. L. P. Mellerio and B. P. Cooper. 2,447,589, Aug. 24.
Rocking inner-jaw end wrench. J. H. Beard. 2,447,835, Aug. 24.
Roll former, Fiber. T. C. Taggart. 2,447,604, Aug. 24.
Rotary cutter. S. C. Nelson. 2,447,617, Aug. 24.
Rotary switch. R. R. Simpson. 2,447,718, Aug. 24.
Sampler for gas-liquid mixtures. R. J. S. Pigott and C. R. Taylor. 2,447,595, Aug. 24.
Scavenging means for aircraft engines. R. M. Nardone. 2,447,912, Aug. 24.
Screen indicating changes in image formation, Luminescent. G. R. Fonda. 2,447,851, Aug. 24.
Seal, Fluid. F. E. Payne. 2,447,663, Aug. 24.
Seal for fans. R. D. Moore. 2,447,957, Aug. 24.
Sealing device for dry cells. A. F. Daniel. 2,447,493, Aug. 24.
Seat: *See*—
Toilet seat.
Seat and back rest, Tilting chair. W. J. Sengpiel. 2,447,601, Aug. 24.

Valve seat assembly. J. H. Hoern. 2,447,858, Aug. 24.
Valve system and operation, Flax. M. C. Depp, R. S. Curry, Jr., and C. F. Fragola. 2,447,496, Aug. 24.
Vapor electric device. A. P. Colaiaco. 2,447,637, Aug. 24.
Vapor electric device. P. A. Halpine. 2,447,646, Aug. 24.
Vapor phase degreasing apparatus, including temperature control of vapor condensers. M. C. Boss. 2,447,840, Aug. 24.
Vibration damping means, Propeller. J. G. Baker. 2,447,628, Aug. 24.

Vibration indicating apparatus. E. L. Kent and R. C. Treseder. 2,447,683, Aug. 24.
Vise with slidable and swingable jaws, Drill press. A. D. Chester. 2,447,685, Aug. 24.
Visor, Protective. R. H. Sherwood. 2,447,776, Aug. 24.
Vitamins in stillage, Synthesizing. A. F. Novak. 2,447,814, Aug. 24.
Wall, Building. J. W. Staggers. 2,447,916, Aug. 24.
Washboard attachment for washing machine agitators. T. L. and T. J. Kirkland. 2,447,755, Aug. 24.
Water bag bracket. F. Rogers. 2,447,771, Aug. 24.
Water surfaces of oil, Clearing. W. A. Zisman and L. Pickett. 2,447,551, Aug. 24.
Water, Treating. W. B. Leaf. 2,447,511, Aug. 24.
Welding system, Arc. R. A. Millholland and W. F. Sully. 2,447,955, Aug. 24.
Wheel cover. G. A. Lyon. 2,447,515–16, Aug. 24.
Wheel dressing mechanism. J. G. Harper and C. W. Hopkins. 2,447,503, Aug. 24.
Wool, Treatment of. J. B. Rust. 2,447,539, Aug. 24.
Woolen treatment and products therefor. J. B. Rust. 2,447,538, Aug. 24.
Wrench: *See*—
Rocking inner-jaw end wrench.
Yarn, Stretching of cellulose ester. C. Dreyfus. 2,447,567, Aug. 24.
Yarns and the like, Method and apparatus for handling continuous. F. W. Koster. 2,447,982, Aug. 24.
Zinc fluoride, Luminescent. F. E. Williams. 2,447,927, Aug. 24.

CLASSIFICATION OF PATENTS

ISSUED AUGUST 24, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, thiru number=patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

J. R. CLARK CO.

v.

RICH LADDER MFG. CO.

No. 5404, No. 5405, No. 5406. Decided May 4, 1948.

Petition for rehearing denied June 14, 1948

[— F.2d —; 78 USPQ 23]

1. TRADE-MARKS — DESCRIPTIVENESS — "RID-JID" PHONETIC EQUIVALENT OF RIGID.

Held that "Rid-Jid" as pointed out in the registrations sought to be canceled and in the application here opposed is the phonetic equivalent of the word rigid.

2. SAME—SAME—"RIG-JID" FOR IRONING TABLES OR STEPLADDERS.

Held that since the mark "Rig-Jid" for ironing tables or stepladders was fully intended by all the different companies that used the mark that it should convey to the public the idea of rigidity as a characteristic or quality of the article to which applied, the appellant had not exclusive right of use which entitled it to register the mark and upon the basis of such registration, deprive others of the legitimate use of a common descriptive term or word.

APPEAL from the Patent Office. Cancellation Nos. 4553 and 4516. Opposition No. 23,508.

AFFIRMED.

Frank A. Whiteley for Clark.

Frank Zugelter (*Zugelter and Zugelter* of counsel) for Rich.

GARRETT, *P. J.*:

In this proceeding there are involved two petitions by appellee to cancel trade-mark registrations of the notation RID-JID held by appellant, and one opposition by appellee to appellant's application for a third registration of the same term. The issues being substantially identical, the three cases were submitted before the tribunals of the Patent Office upon a single record. Before the Commissioner of Patents who (acting through the First Assistant Commissioner), 70 USPQ 1, affirmed the decisions of the Examiner of Trade-Mark Interferences in each case. The three cases were briefed and argued together, and he disposed of them in a single decision.

The appeal to this court, therefore, was stated in the notice of appeal to be "a single unitary appeal for all three cases, since the same facts determine each of the above noted proceedings." We so accept it and, following the example of the Commissioner, we shall deal with all three of the cases in a single decision.

Also, in the interest of clarity, we shall follow the course of the Commissioner and of the attorneys before us by referring to appellant as Clark and to appellee as Rich.

It is unnecessary that the background of the case be recited in minute detail.

It appears that a company by name of Oregon Wooden-Ware Manufacturing Company, a corporation of Illinois, probably during the first half of the year 1918, adopted and used (but is not claimed to have registered) the trade-mark RID-JID for certain of its products not fully identified in the record before us; that in July 1920 a company by name of Rid-Jid Products Corporation acquired the assets of Oregon Wooden-Ware Manufacturing Company, and on August 12, 1924, upon an application filed March 28, 1924, secured registration under the act of February 20, 1905, of the notation "Rid-Jid" for use on ironing tables, the registration being numbered 187,917; that subsequently Clark acquired such an interest in the assets of Rid-Jid Products Corporation and a successor thereof that it claimed ownership of the mark for ironing tables, and certificate was, in fact, renewed to it in the Patent Office, the copy in the record before us being stamped, "Renewed August 12, 1944, to the J. R. Clark Company, a corporation of Minnesota."

Cancellation of registration 187,917 is involved in Appeal No. 5404.

In Appeal No. 5405, there is involved the cancellation of registration No. 230,289.

The latter registration is for the same term—"Rid-Jid"—printed with type of a somewhat different appearance. It was registered in the name of The J. R. Clark Company July 19, 1927, upon an application filed in the Patent Office December 24, 1936, for use on stepladders and stepladder stools. Use was alleged "since on or about Dec. 21, 1923." The registration was under the act of February 20, 1905.

Sufficient appears of record to show that Clark and Rich have been business rivals for many years, competing actively in many—perhaps all—of the states as manufacturers and sellers of various kinds of wooden articles, including ironing tables, stepladders, and stepladder stools, the precise articles to which the mark involved in the proceedings before us have been applied. It further appears that there has been litigation between them relative to patent, trade-mark, and unfair competition complaints.

Vol. 613 • No. 4 Tuesday, August 24, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

The instant litigation seems to have grown out of an allegation of unfair competition made by Clark against Rich in a letter of May 24, 1941, written by Clark's attorney, the text of which reads:

> My client, The J. R. Clark Company of this city, has called to my attention your catalogue, without number or title, but which I am informed is of recent issue, and particularly to your advertisements of ironing tables on pages 32 and 33.
>
> On page 32 you refer to your ironing table designated as The Rich Auto Krat, with the statement "The most RIGID table on the market." On the following page under the title The Rich Durex appears the statement "This is the same RIGID ironing table as the Auto Krat." In both of these cases the word rigid is printed in full caps more conspicuously than your trade-mark terms "Auto Krat" and "Durex."
>
> You cannot be ignorant of the fact that my client's ironing tables have for many years borne the trade-mark term "RID-JID" as per the enclosed folder, and that this term has been very extensively advertised and is well-known throughout the United States as indicating my client's very superior ironing table. Your use of the word RIGID in the manner in which you use it must, therefore, be presumed to be for the purpose of obtaining the benefit and advantage of that advertising and public knowledge and certainly will have that effect and is a clear encroachment upon my client's rights in the good-will of its business connected with the sale of its "RID-JID" ironing tables.
>
> In my opinion this is a clear case of unfair competition. Hence, on behalf of my client I must ask for immediate written assurance that you will withdraw the two objectionable pages from your catalogue and see to it that there is no repetition of this objectionable and damaging advertising.
>
> Please let me hear from you in respect to this within the next week or ten days.

Under date of May 27, 1941, counsel for Rich responded to the letter of counsel for Clark, the pertinent portion of the reply reading:

> Your letter of May 24, 1941, addressed to Rich Ladder Mfg. Co., Cincinnati, Ohio, was referred to me.
>
> It is my recollection that the Rich Company has been using the descriptive word RIGID in substantially the manner and form that now constitutes the apparent basis of your complaint, since a date prior to the patent infringement suit between our clients, and which was concluded several years ago.
>
> I shall examine into the matter further and in due course I shall address you again and advise you as to the position that Rich Company will assume upon your complaint.
>
> • • • • • • •

So far as disclosed by the record, there was no further correspondence between the parties and no proceedings were instituted by Clark respecting the alleged unfair competition, but on April 30, 1943, almost two years after the exchange of the quoted letters, Clark filed an application, Serial No. 460,287, for the registration of the term for use on ironing tables. The application was identical in all material respects with certificate No. 187,917, hereinbefore described, which was renewed to Clark August 12, 1944, and it is noted that the application asserted "Applicant is the owner of registration under Certificate No. 187,917," which meant, of course, that Clark was claiming ownership of the certificate at the time of filing the application some thirteen months before the certificate was renewed to the J. R. Clark Company upon the records of the Patent Office.

Following the publication respecting the Clark application, which appeared in the OFFICIAL GAZETTE of the Patent Office for June 1944, Rich (The Rich Ladder and Manufacturing Company is stated to be a corporation of the State of Ohio, having its principal place of business in the city of Cincinnati) filed the notice of opposition which is here involved in Appeal No. 5406, being Opposition No. 23,508. The notice of opposition seemingly was filed July 21, 1944.

Adverting again to certificate No. 187,917 for use of the mark on ironing tables, it may be repeated that it was renewed to Clark August 12, 1944. On September 25, 1944, Rich filed the petition to cancel it (Cancellation No. 4453).

The petition to cancel certificate No. 230,289 for use of the mark on stepladders and stepladder stools was filed January 27, 1945 (Cancellation No. 4516).

Seemingly, some testimony had been taken in the opposition case and first cancellation case before the petition in the second cancellation case was filed. A stipulation was entered into that such testimony and any thereafter taken might be used with the same force and effect in the last cancellation case as in the first and as in the opposition case. Thus the testimony, so far as relevant, was made applicable to all three of the proceedings.

That which we regard as the really fundamental ground upon which Rich bases opposition to the registration is embodied in the first paragraph of the notice of opposition. This paragraph reads:

> The term RID-JID sought to be registered by the applicant is merely a phonetic variation of the term RIGID wherefore same is primarily descriptive of various products of the general category produced by the applicant and the opposer, wherefore registration of the term RIGID or any phonetic variation thereof, for example, RID-JID would constitute an encroachment upon the general right of the public to lawfully utilize a word or term common in the English language and particularly applicable to products of the character produced by the opposer.

In subsequent paragraphs it is alleged that Rich has extensively used the term "rigid" printed in capital letters in advertising its various products including ironing boards of various types, ladders of various types and other products; that the registration sought by Clark would be inimical to the interests of Rich, and that Rich would be damaged thereby. Reference is made to the notice given Rich in the letter of May 24, 1941, supra, alleging unfair competition, and of the reply of Rich thereto. Other litigation between the parties is alluded to.

There are other allegations which do not seem to us to be particularly relevant but which even if treated as relevant need not be considered in view of our conclusion upon what we have designated as the really fundamental allegation in the notice of opposition.

In the answer of Clark it is first stated:

> 1. Answering Paragraph 1 of the Notice of Opposition, each allegation therein contained is expressly denied.

In subsequent parts of the answer the allegation by Rich that the term RIGID, prominently displayed in full caps, was used by Rich in advertising its various products is admitted, but it is charged, in effect, that its use in that form was begun after Clark by extensive advertising, etc., had built up a large and valuable good will in the term RID-JID as a trade-mark, and further charged that—

> • • • this use of the term RIGID in prominently displayed caps by opposer upon goods substantially identical with those of applicant, was not an honest use in the sense of or for the purpose of giving a mere descriptive meaning to the word rigid, but was so prominently displayed and used deliberately and intentionally for the purpose of fraudulently trading upon applicant's aforesaid good will and of passing off the goods of opposer as and for the goods of applicant.

Clark, of course, denies that Rich would be damaged by the registration sought or that Rich has been, or is likely to be, damaged by the registration which it is sought to have canceled. In fact Clark, upon the theory that Rich has been guilty of unfair competition, insists, in effect, that Rich has no right either to oppose the registration or to petition for the cancellation of the registrations which have been secured. We quote from the concluding paragraph of Clark's answer to the notice of opposition, the following:

> 16. And applicant believes and charges and asserts the fact to be that opposer has filed this opposition, not in good faith because of any possible damage it could be caused by reason of the registration of the trade-mark RID-JID to the applicant, but in the hope that it, by any means, and specifically by means of this opposition proceeding, opposer could defeat the registration of the applicant's trade-mark RID-JID, it thereby might secure for itself some kind of license or opportunity to continue with unpunished impunity and to greatly expand its fraudulent unfair competition with applicant and its trading upon and unlawfully enjoying the benefits of applicant's good will in its trade-mark RID-JID. For which reason applicant alleges and charges that opposer does not come into Court here with clean hands and for that reason, in addition to the other reasons herein stated, should have its Notice of Opposition dismissed.

As has been indicated, it is obvious that the issues are the same in the three cases. If the opposition be sustained the petitions for cancellation should be granted for the same reasons. On the other hand, if the opposition be overruled and the application for registration allowed, the petitions for cancellation should be denied. So, it is unnecessary to review the different pleadings separately in rendering our decision.

There is a very elaborate record in the case, several hundred pages of it consisting of testimony the most of which is irrelevant and unnecessary to a decision upon the issues actually involved here.

The primary question is whether the term "RID-JID" is the phonetic equivalent of the common dictionary word "rigid."

We take it that if the word "rigid" whether printed with capital letters or small letters by use of either plain or fanciful type were applied to ironing tables, stepladders and stepstools, as the term "RID-JID" is shown to have been applied to such articles, there would not be the slightest doubt in the mind of any reasonably well-informed person that such word—"rigid"—was descriptive of a character or quality of the ironing tables, or stepladders, or stepstools, and that it was deliberately used for that reason.

The Commissioner of Patents after reciting that it was the opinion of the Examiner of Trade-Mark Interferences that the mark is merely descriptive of the merchandise to which applied said:

> • • • It need hardly be added that his finding of descriptiveness was based upon the obvious fact that "RID-JID" is the phonetic equivalent of the word "rigid." Cf. *American Druggists' Syndicate* v. *United States Industrial Alcohol Co.*, 55 App. D. C. 140, 2 F.2d 942; *Otard, Inc.*, v. *Italian Swiss Colony*, 31 CCPA 955, 141 F.2d 706.

The Commissioner conceded, of course, that the two terms differ in appearance—a matter which Clark suggested before us—but pointed out that Clark is in no position to dispute their identity in sound and meaning because Clark had objected to Rich's use of "rigid" printed in capital letters as being a clear encroachment upon Clark's trade-mark rights.

[1], [2] We are in entire agreement with the view that RID-JID as printed in the registrations sought to be canceled and in the application here opposed is the phonetic equivalent of the word rigid. Furthermore, we are of opinion that it is a fair inference from the record taken as a whole that it was fully intended by all the different companies that used the mark that it should convey to the public the idea of rigidity as a characteristic or quality of the article to which applied. The parties, of course including Clark, had the unquestionable right to so use the term, but they had no exclusive right of use which entitled them to register the mark and upon the basis of such registration, deprive others including Rich, of the legitimate use of a common descriptive term or word.

We are here dealing only with the opposition to Clark's application for registration and the two petitions for cancellation of the registrations hereinbefore described. We entertain no doubt of Rich's right to prosecute the opposition, nor of the right to prosecute the petitions for cancellation, and, for the reasons stated, we are of opinion that the opposition should be sustained, the application of Clark denied, and that both petitions for cancellation should be sustained.

Therefore, the decision of the Commissioner approving each of the decisions of the Examiner of Trade-Mark Interferences is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, J., was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE FREEMAN

No. 5433. Decided May 4, 1948

[168 F.2d 81; 77 USPQ 596]

1. CLAIMS—LIMITATIONS DISCLOSED BUT NOT EXPRESSED NOT CONSIDERED.

   Held that limitations not in a claim need not be considered, and that a decision of the Board should not be reversed by reading into a claim a limitation not expressed in the claim and not considered by the Board.

2. PATENTABILITY—APPARATUS FOR EMBOSSING SHOE MATERIAL.

   Certain claims to an apparatus for embossing shoe upper material which differs from the prior art in a manner which enables greater precision in positioning the work piece with respect to the gauge *Held* noninventively different from the prior art.

APPEAL from the Patent Office. Serial No. 497,985.

AFFIRMED.

Allen & Allen (*E. S. Allen* and *Gibson Yungblut* of counsel) for Freeman.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

GARRETT, *P. J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Examiner rejecting the single claim of appellant's application for patent. As finally rejected by the Examiner the claim was numbered 11, but another numbered 12 was substituted for the appeal, the tribunals of the Patent Office evidently consenting thereto.

According to the specification the subject matter "relates to a practice and apparatus whereby decorative deformations of shoe upper material are so formed therein as to simulate overlay pieces, inset pieces and the like, with which shoes have in the past been decorated." The claim on appeal is an apparatus claim which reads as follows:

> 12. In combination for use in a die press, for use with a plate designed to be heated, and having its active face covered with a generalized embossing design, a work support element and gauging means on the work support element so arranged as to leave exposed on the work support an area of a piece of work to be impressed with the said design, and from which piece of work a shoe is to be built, and a relatively smooth raised portion on the work support so located with reference to the gauge as to bring into impression receiving contact a specialized portion of the exposed area of the piece of work to the exclusion of the remainder of the piece of work, in the precise location desired, as indicated by positioning the work with respect to the gauge, said specialized portion of said area corresponding to a portion of the shoe when finished from the said piece of work, which will indicate visually when the shoe is in use, a piece of material of different origin from the rest of the material.

In the brief for appellant the claim is simplified by a paraphrased version "setting forth only the positively claimed elements," as follows:

> In combination:
> 1. A work support (for use with a heated over-all embossing plate in a die press).
> 2. Gauging means on the work support arranged to leave exposed on the work support an area to be impressed with said design.
> 3. A relatively smooth raised portion on the work support, so located with reference to the gauge as to bring a specialized portion of the exposed area of the work piece (to the exclusion of the remainder) into the precise location desired, as indicated by positioning the work with respect to the gauge.

It is thought that the following descriptive matter taken from the decision of the Board will aid in understanding the device and its operation:

> To emboss an ornamental effect on leather applicant uses a plate having a face covered with a generalized embossing design or effect, capable of being heated and of an area larger than any of the areas to be ornamented. The embossed face of the plate is the one that will contact the finished surface of the leather. To support the leather, contacting its unfinished surface and holding its finished surface against an area corresponding to the area to be embossed, the device of the above claim is provided, applicant can thus use a single embossed die for any size area, merely by varying the size and shape of the supporting member of the claim.
>
> The appealed claim is limited by its positive recital to a work support such as is shown in Figs 2 or 3, although the claim makes reference to the intended use of the work holder in a setting which includes the heated embossing plate.

There is disclosed a die plate which may be mounted in a machine of a type such as that shown in a patent to applicant, No. 2,035,956, issued in 1936, and not shown in the drawings in the instant case. The operating surface of the die plate simulates some desired finish for leather. The leather to be embossed is pressed against the die plate while hot. In one of the drawings there is shown a plan view of a work holder in the form of a plate which has a hold-down and gauging member. It is said that this member may be a "mask" of a character familiar in the shoe decorating art. It is taught that the plate may have gauging lines inscribed on its surface. A block on the plate is located on the work holder in proper position relative to the guide lines inscribed on the plate. The block itself is an outline of that portion of the work to be embossed.

In rejecting the claim for lack of invention over prior art, the Primary Examiner cited the following patents in the order named: Schwartz, 269,721, December 26, 1882; Stuparich, 748,232, December 29, 1903; Reeder, 1,706,744, March 26, 1929; Freeman, 2,035,956, March 31, 1936; Mattlage, 2,165,286, July 11, 1939; Knight, 2,278,618, April 7, 1942.

Neither the Primary Examiner in his statement following the appeal to the Board, nor the Board in its decision set forth any analysis of the references. Apparently, both deemed the claim rejectable upon any one of the patents to Schwartz, Stuparich, or Mattlage, in view of either Freeman or Knight.

The Board, apparently, placed most emphasis on Mattlage and Knight.

Both the Solicitor for the Patent Office and counsel for appellant have analyzed each of the references, and we shall follow their example to the extent deemed necessary.

The patent to Schwartz discloses printing upon metallic foil by pressing the foil between a platen having a reticulate surface and a bed carrying an inked or colored type block or plate. The impression block may be smooth and unbroken so that the whole of the foil is printed in one or more solid colors; or it may be formed with raised letters, figures, or other characters which alone are printed on the foil.

The Stuparich patent relates to a process of manufacturing photographic mounts having a plain center portion and an embossed or decorated margin or frame area. It provides a backing card having its central portion cut to the desired configuration. The card to be embossed is placed upon the backing card in proper alignment as to the edges of both cards and the two cards are presssed together by suitable means, the means specifically disclosed in the patent being "heavy metal" rollers which roll closely together, the cards being passed between them.

The patent to Reeder seems to have been cited merely for its showing of an embossing die heated by circulating hot water therein. Counsel for appellant makes no claim of invention based upon heating a leather embossing die and this reference requires no further attention.

The patent to Freeman (appellant here) relates to "shoe ornamenting machinery." It is a long document, has many drawings, and embraces many claims. The specific disclosures pointed out in the brief of the Solicitor for the Patent Office are "a work supporting anvil upon which the work is placed and aligned with respect to marking and cutting dies," and the teaching that "in order to insure accurate positioning and aligning of the work on the work support, gauging means are provided in a position bearing a definite relation to the dies and support."

The Mattlage patent "relates to embossed sheet material having a surface pattern, and more particularly to a process for producing patterns in continuous sheet material by embossing." The brief of the Solicitor for the Patent Office refers to the heating element of this patent (which requires no attention because of admissions of counsel for appellant hereinbefore referred to in connection with the Reeder patent) and to the recital in the specification reading:

> It has now been discovered that the same embossing plate may be used for the production of an almost unlimited series of designs by appropriate alteration of the contacting surface areas of the embossing beds which are relatively inexpensive.

A further recital of the specification is that of "embossing sheet material, which may be plain or may have been previously embossed either by plate or roller embossing by pressing it between the embossing plate and an embossing bed, the bed being of the type wherein a portion facing the embossing plate has been removed." Certain figures of the drawings show an arrangement wherein starting material is being passed between the embossing plate and the embossing bed from which latter a portion has been cut away.

The patent to Knight is stated in the specification to relate "to shoe machinery, and more particularly to improvements in die assemblies for use in ornamenting shoe uppers and shoe parts by the formation of cut-outs or perforations in portions thereof, and also by the application of printed markings in the work."

In the brief of the Solicitor for the Patent Office it is pointed out that the Knight die assembly is used in a machine having pressure applying means to provide relative movement between a supported work piece and the operating elements of the die, and that a gauge mask is provided, consisting of a frame and a gauge plate which is shaped to provide gauging edges.

In his brief, counsel for appellant treated the Schwartz, Stuparich, and Mattlage patents as references relating to embossing and the Freeman and Knight patents as "showing ornamenting machines involving some problem of work location," and, after discussing the references separately, summarized briefly his reasons for contending that it was error to deny patentability to the appealed claim.

With respect to the Schwartz, Stuparich, and Mattlage patents the brief states:

> These references may thus be summarized by saying that they all show a selective printing or embossing where the supporting surface is coextensive with the embossing plate, or element, so that the problem of locating a small area less than the area of the work piece which is to be embossed and which must be precisely located with respect to the boundaries of the work piece, is certainly not solved by these references.
>
> Applicant has for the first time conceived of the combination of a large, overhead, reciprocating die, a lower work support having a shaped raised portion which in coaction with the die will accurately determine the area of the embossing treatment, and a gauging means which will locate the work piece with respect to the raised portion so that the accurately determined area of embossing can be *accurately positioned* with respect to the periphery of the work piece.
>
> The raised portion is of lesser area than the work piece. It is covered and obscured by the work piece and the work piece must be accurately located even though the raised portion lies inward of at least three of its edges. If the raised portion is a platen, edge registration of the work with the platen is impossible—yet this is the only suggestion made by the prior art. [Italics quoted.]

[1] One difficulty confronting appellant in the consideration of the foregoing contention is that the limitation reading "The raised portion is of lesser area than the work piece," which is urged as distinguishing from the prior art, is not expressed in the claim, and it is, of course, well settled that limitations not in a claim need not be considered. Certainly we should not reverse a decision of the Board by reading into a claim a limitation not expressed in the claim and not considered by the Board.

The claim does specify "a relatively smooth raised portion on the work support so located with reference to the gauge as to bring into impression receiving contact a specialized portion of the exposed area of the piece of work to the exclusion of the remainder of the piece of work * * *," but this limitation, we think, is clearly disclosed in a drawing of the Mattlage patent.

It is conceded, however, in the brief of the Solicitor for the Patent Office that "the basic references do not disclose how to precisely locate the work piece." This, as we understand it, means that it is conceded that there is no disclosure of how to place the piece which is to be embossed or ornamented in conformity with that limitation of the claim reading, "in the precise location desired, as indicated by positioning the work with respect to the gauge."

It has been pointed out that both Freeman and Knight provide gauging means of kinds described respectively in their specifications and it was held by the tribunals of the Patent Office, in effect, that there is no invention in providing a gauging means where shoe parts are being embossed, in view of either one of the patents to Freeman or Knight, but, as we understand it, this holding does not have reference to the limitation in the claim relative to placing the work piece "in the precise location desired * * *," but to that limitation in the earlier part of the claim reading "gauging means on the work support element so arranged as to leave exposed on the work support an area of a piece of work to be impressed with the said design, and from which piece of work a shoe is to be built." This limitation is very broad and we are not disposed to disagree with the view that it shows nothing patentable over the gauging means of either Freeman or Knight, even though it may be true that in fact the gauging means disclosed by them might not serve appellant's purpose. If he had something structurally different he should have defined it in the claim.

[2] It has not been held, of course, that the structural features shown in the prior art are the same as those named in the claim. The holding is to the effect that no invention was involved in modifying the prior-art features so as to meet the features of the claim.

We have carefully considered the question of whether modifying the prior art in a manner which enables greater precision in positioning the work piece with respect to the gauge amounts to inven-

tion, assuming that appellant has done that. We are not convinced it did amount to invention.

There are other questions in the case but they are of a minor character and their determination is not important. So, we omit discussion of them.

The decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

POWELL *v.* POUPITCH

No. 5428. Decided April 6, 1948

[— F.2d —; 77 USPQ 379]

1. INTERFERENCE—REDUCTION TO PRACTICE—TESTS—GENERAL RULE.

It is the general rule that a reduction to practice can be effected only by tests in actual service or under conditions simulating those of actual service. Exceptions to the rule are made only in cases where the invention is simple and the manner in which it will operate can be determined by inspection alone.

2. SAME—SAME—SAME—SAME.

Although it is true that the interference counts do not limit the fastening means to use on an aeroplane appellant's application indicates no other use for the device disclosed and where the device made by appellant in 1941 was not tested as a fastener on any article, *Held* that, since the device was not tested in the place where it was designed to be used, a reduction to practice cannot properly be accorded on the basis of speculation that there might have been some possible use for which its suitability might be obvious without actual tests.

3. SAME—SAME—APPLICATIONS OF DIFFERENT INVENTORS COMMONLY ASSIGNED.

An application by one inventor cannot inure to the benefit of another even though the applications have a common assignee.

4. SAME—SAME—DILIGENCE.

Where appellant completed the device in October 1941, but no application for patent was filed until September 1942, appellee having reduced to practice constructively in April 1942, *Held* that if appellant's application be considered alone, the time required for its preparation was unreasonably long.

5. SAME—SAME—SAME.

Diligence does not require that an attorney shall drop all his other work and concentrate on a single invention; if he has a reasonable backlog of work and takes up his cases in the order in which they were filed, this is sufficient.

6. SAME—SAME—SAME.

Where appellant's application was not prepared by the attorney in its regular turn, but work on it was delayed in favor of applications which were considered more important, *Held* that under the circumstances of this case, appellant and his assignee were lacking in diligence.

7. SAME—PRIORITY—METAL FASTENING DEVICE.

Having been the last to reduce the invention in issue to practice, and having been lacking in diligence during the critical period, *Held* appellant is not entitled to prevail in this proceeding, and that the decision of the Board of Interference Examiner's awarding priority to appellee is affirmed.

APPEAL from the Patent Office. Interference No. 81,133.

AFFIRMED.

Walter I. Jones (*Charles F. Miller, Jr.*, of counsel) for Powell.

Moore, Olson & Trexler (*Roy H. Olson, Curtis F. Prangley, Robert W. Byerly* and *Charles L. Sturtevant*, of counsel) for Poupitch.

HATFIELD, *J.*:

This is an appeal in an interference proceeding from the decision of the Board of Interference Examiners of the United States Patent Office awarding priority of invention of the counts in issue to Ouglesa Jules Poupitch, appellee. The interference is between appellant's application No. 459,986, filed September 28, 1942, and three patents to appellee, No. 2,324,268, granted on an application filed January 30, 1942, No. 2,324,269, granted on an application filed April 8, 1942, and No. 2,314,368, also granted on an application filed April 8, 1942.

Count 1 is sufficiently illustrative of the counts in issue. It reads:

A sheet metal fastening device having a portion adapted to be secured to a support, a locking section normally spaced from the plane of said first mentioned portion and centrally apertured to accommodate a rotary stud equipped with oppositely disposed lateral lugs and carried by a member adapted to be detachably associated with said support, the material of the locking section in the vicinity of said central aperture being outwardly stressed to provide arcuate cam surfaces projecting outwardly beyond the surface of the locking section stock for cooperation with said lateral lugs, and a sheet metal stud ejecting spring elements having a free extremity positioned externally of said cam surfaces.

The invention in issue relates to metal fasteners of the rotary stud type, especially designed for coupling airplane cowling sheets together. Each of the fasteners disclosed by the parties comprises a sheet metal part which is apertured to receive the shaft of a stud which passes through registering openings in the two parts which are to be joined together. The stud carries a cross pin which, upon rotation of the stud, engages the sheet metal part to prevent removal of the stud.

The Board of Interference Examiners held that appellee had established no date of invention prior to the filing dates of the applications on which his patents were issued, namely, January 30, 1942, for count 5, which originated in his patent, No. 2,324,268, and April 8, 1942, for the other counts, which originated in his patents, Nos. 2,324,269 and 2,314,368. The Board further held that appellant had established conception of the invention in issue, and the embodiment of his conception in a device as early as October 1941, but that appellant had failed to establish reduction to practice prior to his filing date, September 28, 1942, and had also failed to show diligence over the period from immediately prior to April 8, 1942, when appellee's last two applications were filed, until appellant filed his application on September 28, 1942.

The evidence on behalf of appellant establishes the making of a device in October 1941, which device was held by the Board of Interference Examiners to satisfy the requirements of each of the counts. The evidence, however, fails to show any actual tests of this device as a fastener on aeroplane parts or elsewhere, the device being merely operated by hand and not used to secure any two parts together.

[1] It is, of course, the general rule that a reduction to practice can be effected only by tests in actual service, or under conditions simulating those of actual service. See *Sperry v. Aufiero et al.*, 30 CCPA (Patents) 908, 134 F.2d 174, 56 USPQ 573, 552 O. G. 563. Exceptions to the rule stated are made only in cases where the invention is simple and the manner in which it will operate can be determined by inspection alone. In the instant case it is quite clear, in view of the strains and vibrations to which parts of an aeroplane are subjected in use, that it would be impossible to determine whether or not a cowling sheet fastener would operate satisfactorily without making tests in actual service. The fact that generally similar fastening devices had been used successfully does not establish that the device made by appellant in 1941 would have been successful in actual use, since it is evident that very slight differences in the proportioning and arrangement of the parts of a locking device may make the difference between success and failure, especially under such conditions as are encountered in aeroplanes.

[2] Counsel for appellant points out that the interference counts do not limit the fastening means to use on an aeroplane. This is true, but appellant's application indicates no other use for the device disclosed, and the device made by appellant in 1941 was not tested as a fastener on any article. Since the device was not tested in the place where it was designed to be used, a reduction to practice cannot properly be accorded on the basis of speculation that there might have been some possible use for which its suitability might be obvious without actual tests.

The case of *Smith* v. *Place*, 23 CCPA (Patents) 1260, 84 F.2d 196, 29 USPQ 604, 472 O. G. 739, relied on by appellant, involved a snap fastener of quite a different type from the fastening means here involved. In that case it was held to be obvious from mere inspection "that the invention must be successful for the purpose intended." As hereinbefore pointed out, it is not obvious from inspection of the fastener made by appellant in 1941 that it would be successful for the intended use on an aeroplane. The present case, therefore, is clearly distinguishable from the case of *Smith* v. *Place*, supra.

We are of opinion that the invention here in issue is not of such a nature that it can be held to have been successfully reduced to practice without testing it as an actual fastening means, and that the Board of Interference Examiners, therefore, properly held that appellant had not established a reduction to practice of the invention prior to his filing date, September 28, 1942.

[3] Counsel for appellant contend that appellant should be accorded a constructive reduction to practice on the basis of an application filed by Walter I. Jones on January 16, 1942, and assigned to the assignee of appellant's application. However, an application by one inventor cannot inure to the benefit of another even though the applications have a common assignee. See *Hartley* v. *Joyce*, 25 CCPA (Patents) 1100, 96 F.2d 296, 37 USPQ 525, 496 O. G. 284.

[4] It remains to be considered whether appellant exercised reasonable diligence in preparing and filing his application during the critical period. The testimony of appellant's witness Walter I. Jones is to the effect that the device called for by the claims in issue, which was completed in October 1941, was at that time turned over to one John Todd, who prepared patent applications for the United-Carr Fastener Corporation, appellant's assignee, with instructions to prepare an application on that device. Todd left the employ of the corporation in February 1942 and, up to that time, had done nothing toward preparing such an application.

On February 28, 1942, the witness Jones wrote to Charles F. Miller, one of appellant's counsel and who testified in the case, asking if Mr. Miller could do patent work for the United-Carr Fastener Corporation. In response to this letter, Mr. Miller went to Cambridge, Mass., on March 9, 1942, at which time about thirty different constructions were turned over to him for the preparation of patent applications. The next evidence of activity in preparing appellant's application involved in this interference is the testimony of Mr. Miller to the effect that he prepared sketches for the draftsman, the witness George L. Fowler, which sketches he took to Cambridge on June 8, 1942, and explained them to Mr. Fowler who was to prepare the drawings for the patent application. Mr. Miller further testified that he prepared a draft of the specification and forwarded it to the witness Jones on August 27, 1942. The application, in final form, was executed on September 25, 1942, and filed on September 28, 1942. The application is a comparatively simple one, including only two sheets of drawings.

It thus appears that on April 8, 1942, which is the latest date that can be ascribed to appellee for his reduction to practice of any of the counts of the present interference, nothing was being done toward the preparation of appellant's application. At that time, it was merely one of a large number of cases which had been assigned to Mr. Miller a month earlier, and on June 8, 1942, two months later, nothing had been done beyond the making of some preliminary sketches. After those sketches were made, more than three and one-half months more elapsed before the application was filed.

[5] It is evident that, if appellant's application be considered alone, the time required for its preparation was unreasonably long, and that if the delay is to be excused it must be on the basis of other duties which required Mr. Miller's attention. It is true that diligence does not require that an attorney shall drop all his other work and concentrate on a single invention and that, if he has a reasonable backlog of work and takes up his cases in the order in which they are filed, this is sufficient.

In the instant case, however, it appears that appellant's application here involved was not prepared in its regular turn, but that work on it was deferred

in favor of other applications. Thus, Mr. Miller testified as follows:

> During my visit here in March of 1942 I talked with Mr. Powell. It is my recollection that he stated that he did not understand that this construction had gone into commercial production or had been placed on sale. I therefore decided that it was not as important in order of time as some of the others that had been placed in commercial production. As I was quite busy in connection with some other interferences and litigation at the time, I deferred preparing an application in this case until after the more urgent cases had been prepared.

[6] It is clear from the quoted statement that appellant's application was not prepared in regular order, but that work on it was delayed in favor of applications which were considered more important. The situation presented is, therefore, similar to that in the case of *Brown, Jr.* v. *Barton*, 26 CCPA (Patents) 889, 102 F.2d 193, 41 USPQ 99, 505 O. G. 5. In that case, although the requirement of diligence extended over a period of only slightly more than five weeks, it was held that diligence was lacking where the application in question was passed over in favor of other applications. In the instant case, the critical period is much longer than it was in the case of *Brown, Jr.* v. *Barton*, supra.

The question of diligence is one which must be determined by consideration of the particular circumstances of each individual case. We are of opinion that, under the circumstances of this case, appellant and his assignee were lacking in diligence during the period between April 8, 1942, when appellee had constructively reduced to practice the subject matter of all the counts of this interference, and September 28, 1942, when appellant's application here involved was filed. Having been the last to reduce the invention in issue to practice, and having been lacking in diligence during the critical period, appellant is not entitled to prevail in this proceeding. Accordingly, it is unnecessary that we consider appellee's contention that appellant's application will not support the interference counts.

For the reasons stated, the decision of the Board of Interference Examiners is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

MELTON ET AL. *v.* NETHERLY ET AL.

No. 5434. Decided May 4, 1948

[167 F.2d 1016; 77 USPQ 599]

1. INTERFERENCE—CLAIMS COPIED FROM PATENT—RIGHT TO MAKE.

Where the claims which now form the counts of the present interference were allowed by the Board of Appeals after considering appellant's patent, the application for the reissue of which is involved in this interference, *Held* that, since the patent was clearly considered by the Board of Appeals, which could and should have recommended a rejection thereon, if it had been of the opinion that the counts are readable on or unpatentable over the disclosure of appellant's patent, the failure of the Board to make such a recommendation indicates that it was of the opinion, as was the Board of Interference Examiners in the instant case that the counts of this interference cannot be made by appellants.

2. SAME—PRIORITY—ABRASIVE ARTICLE.

Held that the counts of the interference are limited to the use of different materials for the sizing and bonding coats and that, therefore they are not supported by appellant's application; and *Held* that the decision of the Board of Interference Examiners, awarding priority to appellees, is affirmed.

APPEAL from the Patent Office. Interference No. 80,951.

AFFIRMED.

William H. Webb, Donald A. Gardiner, and *Stebbins, Blenko and Webb* (*George E. Stebbins* of counsel) for Melton et al.

Harold J. Kinney for Netherly et al.

HATFIELD, *J.*:

This is an appeal in an interference proceeding from the decision of the Board of Interference Examiners of the United States Patent Office awarding priority of invention of the counts in issue to George P. Netherly, Gilbert R. Anderson, and Bert S. Cross, appellees.

The interference involves appellees' patent, No. 2,269,415, issued January 6, 1942, on an application filed December 11, 1937, and an application filed by appellants for the reissue of their patent, No. 2,201,194, issued May 21, 1940, on an application filed September 23, 1933. The interference issue is defined in the following counts:

> 1. An abrasive article comprising abrasive grains secured to a backing by a plurality of coatings of bonding materials including a primary bonding coating and a sizing coating, said abrasive grains being positioned in said bonding coating in predetermined oriented relation to said backing and reinforced and substantially maintained in said predetermined position by said sizing coating, said bonding coating being of a material selected with respect to the material of said sizing coating such as to be substantially unsoftened and undissolved by the material of said sizing coating in fluid form.
>
> 2. The method of manufacturing coated abrasives comprising adhesively coating a backing sheet with a viscous grit-bonding coat, depositing abrasive particles in oriented position on said adhesively coated backing sheet and adhering the particles to said sheet with said grit-bonding coat, solidifying said grit-bonding coat, then applying thereon an organic grit-sizing in the form of a liquid layer, said grit-sizing being of such character that it does not soften or dissolve said grit-bonding coat to any substantial extent, thereby to produce a sized flexible abrasive article in which the orientation of the abrasive particles is not substantially impaired by the application of the said grit-sizing coat.
>
> 3. The method of manufacturing flexible coated abrasive articles as defined in count 2 further characterized in that the said grit-sizing is applied as a single coat in the production of the finished flexible abrasive article.

The invention in issue relates to an abrasive article comprising a backing sheet to which abrasive grains are secured in oriented position by means of adhesive material and to a method of making such an article. Two adhesive layers are employed, one of which is applied directly to the backing and secures the abrasive grains thereto, while the second adhesive layer is applied on top of the first, for securing the grains more firmly in position. Each of the counts requires that the first adhesive layer be not softened or dissolved by the second.

The record discloses that the preliminary statements filed by appellees allege no date of invention as early as the filing date of the original application of appellants. The Board of Interference Examiners awarded priority to appellees on the ground that appellants were not entitled to make the counts, first, because their original application did not disclose the subject matter thereof, and second, because appellants did not present the claims constituting the counts in issue until more than one year after they appeared in appellees' patent, and appellants were not claiming the subject matter of the counts within one year after the issuance of that patent.

The first question to be considered here, therefore, is whether appellants' original application supports the counts. If it does not, priority was properly awarded to appellees.

The important feature of the counts, so far as the instant controversy is concerned, is the prevention of softening or dissolving of the first adhesive coat when the second is applied. Appellees' patent, in which the counts originated, discloses several methods of achieving this result, one of which methods involves a proper selection of different materials for the two adhesive coatings. Appellants, on the other hand, always use the same material for both adhesive coatings, and avoid softening of the first coating by drying and setting that coating before the second coating is applied, and by the particular method of application of the second coating. It is contended by counsel for appellees, and it was held by the Board of Interference Examiners, that the counts of the instant interference are limited to the use of different materials for the two adhesive coatings.

Count 1, in its introductory expression, refers to the use of a plurality of coating of bonding materials. The use of the plural word "materials" in this connection would seem to be a definite indication that different materials are employed for the different coatings. Moreover, the final portion of count 1 reads:

> * * * said bonding coating being of a material selected with respect to the material of said sizing coating such as to be substantially unsoftened and undissolved by the material of said sizing coating in fluid form.

The quoted language clearly contemplates that two different materials are to be used, since it would not be logical to say that a material was selected with respect to itself so that a certain result would be produced.

Count 2 is a process claim which is generally similar to count 1 and which contains the limitation "* * * said grit-sizing being of such character that it does not soften or dissolve said grit-bonding coat to any substantial extent." The quoted language clearly implies that the coatings are of different materials and that it is because of this difference that the bonding coat is not softened or dissolved. Count 2, if reasonably construed, does not contemplate a process in which successive coatings of a single material are applied in a manner which prevents softening.

Count 3 is dependent on count 2 and contains all the limitations of that count. Count 3, therefore, is also limited to the use of different materials for the bonding and sizing coatings.

[1] It appears from the record that, during the pendency of appellees' application on which their patent involved in this interference was granted, certain of the claims, including those which now form the counts of this interference, were finally rejected by the Primary Examiner as unpatentable over prior art. In the brief filed by the applicants, in support of their appeal, the attention of the Board of Appeals was directed to appellants' patent which is the patent sought to be reissued by appellants' application involved in this interference. The argument was presented to the Board of Appeals that the rejection of the appealed claims was inconsistent with the allowance of claim 9 of the Melton et al. patent. In commenting on this situation, the Board of Appeals stated:

> Their main argument is centered about the issues of an interference, one of the counts of which is now claim 9 of the Melton Patent No. 2,201,194 * * * the contention is that certain counts of the interference are broader than the claims in the present application and therefore there is no warrant for the Examiner to combine references (most of which have early filing dates) as he does not anticipate the appealed claims. This argument is convincing to us * * *.

In its decision, the Board of Appeals allowed the claims which now form the counts of the present interference, and this decision was rendered with the Melton et al. patent, an application for the reissue of which is involved in this interference, before the Board and specifically referred to in its decision. That patent has an effective date much earlier than the filing date of the application in which those claims were allowed, and it is evident that the allowance could not properly have been made if the Board had considered that the Melton et al. patent disclosed the subject matter of any of the allowed claims. Further, claim 9 of the Melton et al. patent, which is heavily relied on in the instant interference by counsel for appellants in support of appellants' right to make the counts, was specifically referred to by the Board of Appeals in its decision.

Counsel for appellants point out that the Primary Examiner did not reject any of the claims corresponding to the counts in the instant interference on the Melton et al. patent, and urge that that patent is not a part of the prior art of record in appellees' patent here involved. It is unnecessary to determine whether or not the patent was technically a part of the prior art of record. It certainly was a part of the prior art, so far as appellees' application was concerned, and it was clearly considered by the Board of Appeals, which could and should have recommended a rejection of the claims which constitute the counts in issue, if it had been of the opinion that the counts were readable on or unpatentable over the disclosure of the Melton et al. patent. The failure of the Board to make such a recommendation indicates that it was of the opinion, as was the Board of Interference Examiners in the instant case, that the counts of this interference cannot be made by appellants.

Counsel for appellants here refer to various portions of the record of appellees' patent which allegedly show that a broad interpretation was placed on the counts here in issue. Those portions and the arguments with respect to them, have been carefully considered but, although they indicate that appel-

lees, at times, stated that their invention was not limited to the use of different materials for the bonding and sizing coating, they do not show that there was ever a clear contention that the claims constituting the counts here involved are not so limited.

[2] We are of opinion that the counts of this interference are limited to the use of different materials for the sizing and bonding coats and that, therefore, they are not supported by appellants' application. In view of this conclusion, it is unnecessary to consider the holding of the Board of Interference Examiners that appellants are precluded from an award of priority by reason of their delay in presenting the counts.

The decision of the Board of Interference Examiners, awarding priority to the junior parties, is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

PATENT SUITS

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922]

(C. C. A. Ill.) Wilms and Petersen reissue patent, No. 20,676, for an electric switch, *Held* invalid. *Id.*

Cancellation Notice

West Virginia Macaroni Co., its assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Hershel California Fruit Products Co., San Jose, Calif., to effect the cancellation of trade-mark registration of West Virginia Macaroni Co., Clarksburg, W. Va., No. 258,853, dated July 16, 1929, and the notice of such proceeding sent by registered mail to the said West Virginia Macaroni Co., at the said address having been returned by the post office undeliverable, notice is hereby given that unless said West Virginia Macaroni Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Assistant Commissioner of Patents.

July 22, 1948.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,437,020. TRAP. Patented Mar. 2, 1948. Device traps rats, mice, and other rodents alive. Consists of a removable plate with spring wings for gripping the open end of an empty can. A door carrying a spring is hinged to one side of the plate and has a bait-carrying arm pivoted to one side for insertion into the can. A short arm movable with the bait-carrying arm has a finger piece to open or close the door. A rodent entering the trap pulls on the bait and causes the bait-supporting arm to pull the short arm inwardly, allowing the spring to snap the door closed. (Owner) Charles J. Ford, 132 Nassau St., New York 7, N. Y. Groups 33—49—59; 40. Reg. No. 9,853.

Pat. 2,441,267. POWER TRANSMISSION SHOCK ABSORBER. Patented May 11, 1948. Spring leaves grouped into series and coupled in a divided power shaft absorb sudden shocks and jars. The assembly comprises a pair of hubs, a group of spring leaves within, including an intermediate long leaf and graduated shorter outer leaves which function as shock absorbers. The intermediate leaves are connected at each end by coupling pins and the sections of the power shaft joined so shock-absorbing activity will be had between them in the driving of the shaft for transmitting power energy to machinery. (Owner) Carl Gulbrandsen, 2985 N. W. 51 Terrice, Miami, Fla. Group 38—31. Reg. No. 9,854.

Pat. 2,439,635. TOOLHOLDER. Patented Apr. 13, 1948. A boring tool holder for mounting on a conventional tool post of a lathe for clamping boring bars of various diameters. A pair of clamping frames are mounted at opposite sides of the tool post, a cross bar at one end, and a clamping plate at other end. The frames are moved endwise into clamping relation to cross bar to clamp the tool holder between the ends and cross member. The clamping plate is slidable along the frames into engagement with the other ends. An adjusting screw threaded through the cross bar bears against the tool post to prevent separation of the frames. (Owner) Eugene Ruch, 23306 Farmington Road, Farmington, Mich. Group 35—43—69. Reg. No. 9,855.

Pat. 2,439,710. COLLAPSIBLE WILD FOWL DECOY. Patented Apr. 13, 1948. Decoy has a foldable body of hingedly connected duplicate half-sections of waterproofed cardboard. One section is provided with a pivotally mounted frame, and the other with clips for holding the frame. Frame constitutes a spreader and retainer for the half-sections and has a depending rod usable as an anchoring stake on land or as a supporting pin in water for a detachable float and an adjustable counterweight. Float may be slipped up on pin to support decoy in water or based on the ground to help balance decoy when used on land. (Owner) W. A. Banigan, 1443 Pine St., Redding, Calif. Group 39—49. Reg. No. 9,856.

The following 10 patents are owned by G. Solomon Padial, Hotel Plaza, Avenida Diego de Losada, S. Bernardino, Caracas, Venezuela.

Pat. 2,038,612. CIGARETTE PROCESSING MACHINE. Patented Apr. 28, 1936. This machine compacts tobacco filler of cigarette to eliminate the annoyance of loose bits of tobacco that find their way into the mouth of a smoker. Cigarettes in a hopper are fed one at a time into a casing which includes a grooved rotor operable to deliver cigarettes endwise into a guide tubing connected with a blast of air. The air-blast strikes one end of the cigarette and compacts the tobacco filler so that a short portion at one end of the cigarette wrapper is left unfilled. The machine may be adapted as an attachment to standard cigarette processing machines, or used by itself. Group 35—59. Reg. No. 9,857.

Pat. 2,040,883. ELECTRONIC TUBE. Patented May 19, 1936. The operative elements of an electron tube may be protected from static and other outside interference by a metal foil shield wrapped around the plate, grid, cathode, and filament of the tube. The ends of the shield overlap and are tied at each end. So that interference may be grounded, the shield is tied around the glass stud on which the grid, etc., are mounted by a wire preferably connected to an extra grounded prong which projects through the base of the tube. Group 36—61. Reg. No. 9,858.

Pat. 2,072,722. HYDRAULIC TRANSMISSION. Patented Mar. 2, 1937. A gear-locking assembly carried by rings in anti-friction engagement with opposite sides of internal and external gear wheels of this hydraulic transmission permits the driven shaft to be rotated forwardly or rearwardly. Normally in engagement with the internal gear, dogs pivoted to the rings are connected to movable cam blocks, the plungers of which project through the walls of the transmission stator. By manipulating a lever the plungers are moved inwardly, drawing the blocks rearwardly and pulling the dogs out of engagement with the internal gear. The inner ends of the plungers simultaneously project into slots in the rings holding them against movement, as a result of which rotation of the driven shaft is reversed. When drawn outwardly, the cam blocks are thrown back to their original position, forcing the dogs into engagement with the internal gear so that the driven shaft is again forwardly rotated. Group 35—61. Reg. No. 9,859.

Pat. 2,121,576. CLAMP. Patented June 21, 1938. This clamp is a carpenter's tool designed to hold tongue and groove boards in proper position while the boards are being nailed. The clamp includes a pair of bars connected centrally and held in parallel relation by pivoted links. The inner face of each of the bars is provided with spurs which bite into the side of the board, the spurs on one of the bars being rounded to permit longitudinal movement of the bar relative to the board. A plunger of general inverted channel shape is mounted on one of the bars so that it may be moved lengthwise. A gear wheel, pinioned to one of the bars, meshes with a rack on the plunger and is turned when an associated lever is oscillated. Group 33—59. Reg. No. 9,860.

Pat. 2,141,770. CONTROL DEVICE FOR RADIO RECEIVING SETS. Patented Dec. 27, 1938. Control comprises a casing which includes a resistor and a central rotatable shaft on which a disk is fixed. A rolling ball is arranged between the disk and resistor. The shaft has an annular groove which registers with a radial opening in the casing enabling a forked bar acting as a spring to engage the groove. This maintains frictional and electrical contact with the ball when the shaft is manually turned to control the output of a loudspeaker. Group 36—61. Reg. No. 9,861.

Pat. 2,150,010. TRAILER HITCH. Patented Mar. 7, 1939. A conical shell (fixed to a trailer by bracket arms) houses a conical-shaped body threaded to a cap ring. The ring and body form a socket for a ball-ended shaft connected to a towing vehicle. A cable (wound on a windlass held within the bracket) is attached to the smaller end of the conical body by a screw plug. In practice, the trailer and towing vehicle are coupled when the plug is threaded to the conical body and the cable is wound on the windlass by the movement of a hand lever associated with a ratchet and pawl. Spring-pressed pins on the housing fit within a groove on the body to assure firm coupling. Group 33—59. Reg. No. 9,862.

Pat. 2,167,533. TORQUE COMPENSATOR FOR AIRPLANES. Patented July 25, 1939. The object of this aircraft device is to compensate for the torque of a plane engine and the action or non-action of the force of air against either the wings or ailerons, separately or in combination. Generally stated, the plane engine rests on a base arranged to turn slightly in proportion to the torque of the engine. Torque is transmitted to a cylinder and piston of a hydraulic system by connecting rods. A feeler arrangement for the ailerons consists of a swingable plate joined by springs to rods likewise associated with the hydraulic system. The device functions automatically without interfering with the operation of the conventional controls. Group 37—21. Reg. No. 9,863.

Pat. 2,172,549. UMBRELLA. Patented Sept. 12, 1939. The canopy of this umbrella is inflatable and, when not in use, is nested in a small casing which acts as a portion of the handle. The canopy is made of rubber or a substitute material and attached to a pump arrangement that also functions as the remainder of the handle. The umbrella is assembled by inflating the canopy through the manipulation of a piston rod, after which the handle portions are threaded together. The canopy is collapsed by manipulation of a check valve and the canopy forced into the casing, the casing being capped so that the umbrella may be conveniently carried in the purse or pocket of wearing apparel. Group 39—95. Reg. No. 9,864.

Pat. 2,180,127. AUTOMOBILE PARKING DEVICE. Patented Nov. 14, 1939. This device permits an automobile to be driven up to a parking space and parked without backing. A stop, in the form of a post is associated with an arc-shaped platform. The platform incorporates a series of inclined rollers, the post arranged to move forward and back on a guided carriage. Both sections function by means of a cable and drum arrangement connected at one end to the carriage and to the platform at the other by a spring. A car striking the post continues forward until its rear wheels ride on the inclined rollers; the rear wheels skid sidewise, moving the automobile into parking position. The device is supported so that it is substantially flush with a garage floor, street, or other place or installation in which a car must be parked in limited space. Group 38—31. Reg. No. 9,865.

Pat. 2,182,648. AIRPLANE. Patented Dec. 5, 1939. The use of shock absorbers and a cable arrangement in this plane moves the rudder to overcome a tendency of planes to veer sharply to one side since one or the other of the wheels meets with greater resistance in landing. The shock absorbers are interposed between sections of rearwardly extending struts, on which the wheels are mounted. Each shock absorber comprises an outer casing that encloses a spring-pressed piston. A shaft, which projects through a slot in the piston, supports a pulley and cable that moves the rudder in accordance with the forward or rearward movement of the wheels. Group 37—22. Reg. No. 9,866.

Pat. 2,354,461. ADJUSTABLE COUNTERSINK OR THE LIKE. Patented July 25, 1944. Countersink is provided with segmental bits which may be quickly adjusted to countersink different size holes to any of a wide range of angles. The bits may be quickly removed for re-sharpening or replacement by other bits for various purposes, such as spot facing, end milling, reaming, counterboring, or as a pilot countersink. Each bit held in a cavity of an arbor head is a segment of a solid of revolution which is in the form of a disc having a flat and a concave side. A rod slidably positioned within bore contacts bits and holds them locked in the cavities. The mass of bits and arbor head are combined as one solid body effective close to the bit heels to back up their cutting edges with a minimum stress in bits. A protractor may be laid alongside of arbor to give a direct gauge of bit angle, thereby affording a convenient means of setting tool. Several different types of bits are shown as well as a modification of the arbor. (Owner) Fred Hotchner, 2905½ South Western Ave., Los Angeles 7, Calif. Group 35—41—43. Reg. No. 9,867.

Pat. 2,442,410. HANGING APPLIANCE. Patented June 1, 1948. A stiff metal bar has, fastened at the center, spaced diverging upright members joined at their wider spaced ends to form a hook. A spring arm on the bar is movable between the spaced members for engagement with the underside of a rod to lock the appliance in transverse position. May be attached or detached with one hand. Articles are hung on cross bar by conventional spring-clip clothespins. Modification for adaptation to clothesline shown. (Co-owner) Lawrence S. Pawkett, L. S. Pawkett & Co., Insurance Bldg., San Antonio 5, Tex. Groups 33—12—59; 34—41; 40. Reg. No. 9,868.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 24, 1948

[VOL. 613. No. 4]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 481,530. KENNETH FURR, doing business as Furr Hybrids, Genoa, Ill. Filed Mar. 30, 1945.

CRIB-BUSTER

The word "Crib" is disclaimed apart from the mark.
FOR SEED CORN.
Claims use since September 1939.

Ser. No. 505,531. SVENSKA CELLULOSA AKTIEBOLAGET, Stockholm, Sweden. Filed July 12, 1946.

SCA

FOR SULPHITE AND SULPHATE PAPER PULP, RAYON PULP, GROUND WOOD, AND TALL OIL AND DISSOLVING PULPS FOR VARIOUS USES IN THE INDUSTRIAL ARTS.
Claims use since 1941.

Ser. No. 508,179. NATIONAL GYPSUM COMPANY, Buffalo, N. Y. Filed Aug. 28, 1946.

KIMBALLTON

FOR GROUND LIMESTONE EMPLOYED IN ROCK DUSTING COAL MINES.
Claims use since May 21, 1946.

CLASS 2

RECEPTACLES

Ser. No. 521,238. BOLAND MFG. CO., Chicago, Ill. Filed Apr. 24, 1947.

Crysto-Cleer

No claim is made to the word "Cleer" apart from the mark as shown.
FOR GOODS MADE OF "PLASTIC" FILM: STORAGE BAGS, BAGS FOR STORING FOOD IN REFRIGERATORS, BREAD BAGS, BAGS FOR THE JACKETS OF MEN'S SUITS, GARMENT BAGS, DRESS BAGS, SUIT BAGS, BLANKET BAGS, LINEN BAGS, AND PILLOW BAGS.
Claims use since Apr. 6, 1945.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 507,509. BILTON'S ABRASIVES, LIMITED, London, England. Filed Aug. 16, 1946.

ZEDITE

FOR ABRASIVE WHEELS; ABRASIVE COMPOSITIONS CONSISTING OF ABRASIVE PARTICLES AND A BONDING SUBSTANCE; AND BONDING COMPOSITIONS HAVING ABRASIVE PROPERTIES.
Claims use since Nov. 2, 1945.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 469,916. SALES AFFILIATES, INC., New York, N. Y. Filed May 3, 1944.

Marinello

FOR HAIR WAVING LOTIONS.
Claims use since Apr. 25, 1944.

Ser. No. 503,179. ASSOCIATED MERCHANDISING CORPORATION, New York, N. Y. Filed June 3, 1946.

PRIVATE SEAL

FOR BAY RUM, CAMPHORATED OIL U. S. P., CASTOR OIL, COD LIVER OIL U. S. P. NORWEGIAN, ESSENCE OF PEPPERMINT U. S. P., GLYCERIN C. P. BY VOLUME U. S. P., GLYCERIN-ROSE WATER, EPSOM SALT U. S. P., ZINC STEARATE U. S. P., ANALGESIC BALM, ANTISEPTIC AND MOUTH WASH, ASTRINGENT MOUTH WASH, ASPIRIN TABLETS, BORIC ACID OINTMENT, EPHEDRINE NASAL OIL, GLYCERIN SUPPOSITORIES U. S. P., ZINC OINTMENT U. S. P., MINERAL OIL EMULSION WITH AGAR AND PHENO, HALIBUT LIVER OIL CAPSULES PLAIN, VITAMIN PREPARATIONS, COD LIVER OIL CONCENTRATE TABLETS, MILK OF MAGNESIA U. S. P., OLIVE OIL U. S. P. IMPORTED, RHUBARB AND SODA MIXTURE, RUBBING ALCOHOL COMPOUND, SPIRITS AMMONIA AROMATIC U. S. P., SPIRITS CAMPHOR U. S. P., TINCTURE IODINE U. S. P. FR. SQ., WHITE MINERAL OIL RUSSIAN U. S. P., WITCH HAZEL EXTRACT N. F., SODA MINT TABLETS, SODA MINT AND PEPSIN TABLETS, ALUM POWDER U. S. P., BICARB OF SODA, BORAX POWDER, BORIC ACID POWDER U. S. P., CITRATES AND CARBONATES, EFF. SOD. PHOSPHATE U. S. P., MILK OF MAGNESIA TABLETS, BEEF, IRON AND WINE, ALKALINE EFF. TABLETS, HYGIENIC POWDER-ANTISEPTIC, LAVENDAR SCENTED RUB, CASCARA 5, GR. CC., SODA BICARB TABLETS, RHINITIS TABLETS, RHUBARB AND SODA TABLETS, EPHEDRINE NASAL JELLY N. F., LAXATIVE COLD TABLETS, EMETINE DENTAL CREAM, MINT FLAVORED DENTAL CREAM, MAGNESIA DENTAL CREAM, TOOTH POWDER, STANDARD N. F. QUALITY WITCH HAZEL.

Claims use since Apr. 5, 1939.

Ser. No. 505,903. THE MALTINE COMPANY, New York, N. Y. Filed July 19, 1946.

The mark consists of a single capital M, symmetrical in design and suggestive of ram's horns, superimposed on a circle.

FOR BLOOD TONIC, VITAMIN CAPSULES WITH DICALCIUM PHOSPHATE, PREPARATION FOR RELIEF OF ASTHMA AND HAY FEVER, VITAMIN TABLETS, PREPARATION FOR TREATMENT OF GLANDULAR DEFICIENCIES, ANTISEPTIC AND DEODORANT, CHOLERETIC, AND IRON AND VITAMIN CAPSULES.

Claims use on Blood Tonic since October 1930; on Vitamin Capsules with Dicalcium Phosphate since Sept. 15, 1933; on Preparation for Relief of Asthma and Hay Fever since July 27, 1937; on Vitamin Tablets since June 24, 1938; on Preparation for Treatment of Glandular Deficiencies since July 11, 1938; on Antiseptic and Deodorant since Apr. 1, 1940; on Choleretic since Oct. 10, 1945; and on Iron and Vitamin Capsules since Mar. 15, 1946.

Ser. No. 509,672. HELENE PESSL, INC., New York, N. Y. Filed Sept. 24, 1946.

FOR TOOTH PASTE, SHAMPOO, HAIR LOTION, AND PINE BATH FOAM.

Claims use since Dec. 12, 1945.

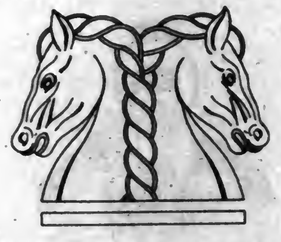
Ser. No. 512,389. CUTTER LABORATORIES, Berkeley, Calif. Filed Nov. 12, 1946.

VITADEX-B

The letter "B" in the mark is disclaimed apart from the mark as shown.

FOR DEXTROSE, THIAMINE, NICOTINAMID, RIBOFLAVIN, PYRIDOXINE IN ISOTONIC SOLUTION OF SODIUM CHLORIDE, FOR INTRAVENOUS FEEDING.

Claims use since March 1943.



Ser. No. 515,794. RUTLER CHEMICAL COMPANY, INC., Perth Amboy, N. J., and Washington, D. C. Filed Jan. 15, 1947.

Analube

FOR SURGICAL LUBRICANT.

Claims use since Oct. 1, 1946.

Ser. No. 524,304. COURTLEY, LTD., New York, N. Y. Filed June 17, 1947.

FOR HAIR DRESSINGS, PRE-SHAVE LOTION, SHAVE LOTION, TALCUM POWDER, BODY POWDER AND DUSTING POWDER, COLOGNE, DEODORANTS, MATERIAL HAVING WATER SOFTENING PROPERTY FOR ADDITION TO BATH TO PRODUCE BUBBLE BATH, PERFUMES, AND TOILET WATER AND SHAMPOO.

Claims use since September 1937.

Ser. No. 524,827. SOCONY-VACUUM OIL COMPANY, INCORPORATED, New York, N. Y. Filed June 25, 1947.

FOR COMPOSITIONS FOR CLEANING WATER COOLING SYSTEMS IN INTERNAL COMBUSTION ENGINES; COMPOSITIONS FOR SEALING LEAKS IN RADIATORS USED IN THE COOLING SYSTEMS OF INTERNAL COMBUSTION ENGINES; COMPOSITIONS FOR PREVENTING RUST, CORROSION, AND SCALE IN ENGINE COOLING SYSTEMS; ANTI-FREEZING LIQUIDS; LUBRICANT CONTAINING NO OIL OR GREASE FOR RUBBER PARTS AND SHACKLES; HYDRAULIC BRAKE FLUIDS; DISINFECTANTS AND INSECTICIDES AND BASE OILS USED AS CARRIERS FOR THE SAME; LIQUID PETROLEUM GASES.

Claims use since Oct. 15, 1934.

Ser. No. 525,811. FRANK M. FAHRBACH, doing business as Fahrbach Chemical Company, Newton, Miss: Filed July 3, 1947.

UL-RID

FOR CHEMICAL PREPARATION ESPECIALLY DESIGNED FOR TEMPORARY RELIEF OF STOMACH DISTRESS DUE TO HYPERACIDITY, SOUR STOMACH, GAS BLOATING, AND HEARTBURN.

Claims use since Feb. 1, 1946.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 512,742. KEYSTONE ROOFING MANUFACTURING COMPANY, York, Pa. Filed Nov. 16, 1946.

PERMA-LAY

FOR THERMAL INSULATING MATERIAL CONSISTING OF ASPHALT SATURATED AND COATED PAPER, FOR BUILDING PURPOSES, BETWEEN OUTER AND INNER WALLS, AND BENEATH FLOORING, ALSO BENEATH SHINGLES.

Claims use since Mar. 20, 1946.

Ser. No. 524,634. TILO ROOFING COMPANY, INC., Stratford, Conn. Filed June 21, 1947.

TILO

FOR ROOFING MATERIALS—NAMELY, ASPHALT SHINGLES, ROLL FELT ROOFINGS, ROOFING PAPER AND FELTS, WEATHER-PROOFING AND WATER-PROOFING MATERIALS OF BITUMINOUS NATURE, ALONE, AND IN COMBINATION WITH MATERIALS OF FIBROUS AND FABRIC NATURE FOR USE ON ROOFS; THERMAL INSULATING MATERIALS OF BITUMINOUS AND FIBROUS NATURE FOR USE IN INSULATING ROOFS OF BUILDINGS AND FOR GENERAL INSULATING PURPOSES; FOR SIDING MATERIALS—NAMELY, SIDING SHINGLES OF ASPHALT AND ASBESTOS-CEMENT TYPES FOR USE IN BUILDING CONSTRUCTION, IMPROVEMENT AND REPAIR; FOR WALLBOARDS AND SHEETS OF ASBESTOS-CEMENT TYPE FOR INTERIOR AND EXTERIOR USE IN AND ON BUILDINGS AND STRUCTURES; FOR WEATHER-PROOFING AND WATER-PROOFING MATERIALS OF BITUMINOUS, FIBROUS AND FABRIC NATURE FOR WATER-PROOFING AND WEATHER-PROOFING BUILDINGS AND STRUCTURES AND FOR GENERAL WEATHER-PROOFING AND WATER-PROOFING PURPOSES; FOR THERMAL INSULATING MATERIALS OF BITUMINOUS AND FIBROUS TYPES USED COMMONLY IN INSULATING BUILDINGS AND STRUCTURES; FOR PLASTICS OF ASPHALT OR ASBESTOS NATURE, CEMENTS, AND COMPOUNDS OF THE SEMI-PLASTIC OR SEMI-LIQUID OR OTHER DEGREE OF PLASTICITY, ANY OF WHICH IS OF AN ASPHALT OR ASBESTOS NATURE, FOR USE IN WEATHER-PROOFING OR WATER-PROOFING AND OTHERWISE SEALING OR CONDITIONING ROOFS, SIDINGS, WALLS OR BASEMENTS OF BUILDINGS OR IN BUILDINGS.

Claims use since 1915.

Ser. No. 525,870. NATIONAL CARBON COMPANY, INC., New York, N. Y. Filed July 1, 1947.

KARBATE

FOR CARBON AND GRAPHITE CONSTRUCTION MATERIALS AND STRUCTURAL ELEMENTS—NAMELY, BRICKS, BEAMS, BLOCKS, PLATES, SLABS, TILE, RODS, GRATINGS, TUBES, AND TUBE SHEETS.

Claims use since 1939.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 521,681. PARCLEAT COMPANY, INC., Washington, D. C. Filed May 1, 1947.

PARCLEAT

FOR DETACHABLE CLEATED NON-SKID METAL SOLE PLATE FOR ATTACHMENT TO SHOE SOLES.
Claims use since October 1946.

CLASS 15

OILS AND GREASES

Ser. No. 514,071. SOCONY-VACUUM OIL COMPANY, INCORPORATED, New York, N. Y. Filed Dec. 11, 1946.

Armvac

FOR PETROLEUM OILS, GREASES, WAXES, AND COMPOUNDS FOR CUTTING, TEMPERING, SLUSHING, FLUSHING, AND QUENCHING.
Claims use since Dec. 13, 1944.

Ser. No. 524,828. SOCONY-VACUUM OIL COMPANY, INCORPORATED, New York, N. Y. Filed June 25, 1947.

FOR PETROLEUM PRODUCTS WITH OR WITHOUT ADMIXTURES OF OTHER MATERIALS FOR ILLUMINATING, HEATING, POWER, BURNING, LUBRICATING, CUTTING, GREASING, TEMPERING, QUENCHING, SLUSHING, AND FLUSHING; MINERAL WAX, WAX CANDLES, PENETRATING OILS.
Claims use since Jan. 1, 1933.

Ser. No. 524,952. COLONIAL CANDLE CO. OF CALIFORNIA, San Rafael, Calif. Filed June 27, 1947.

No claim is made to the representation of the goods apart from the mark.
FOR WAX CANDLES.
Claims use since Apr. 15, 1947.

CLASS 19

VEHICLES

Ser. No. 504,816. GEORGE ZAVADIL, doing business as Plyak Boat Company, Baltimore, Md. Filed June 28, 1946.

PLYAK

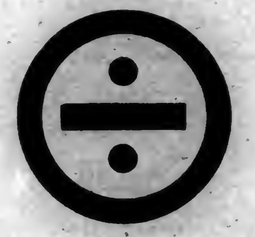
FOR CANOES AND ROW BOATS.
Claims use since May 14, 1946.

Ser. No. 517,580. MERRILL AND MCKINNEY, Indianapolis, Ind. Filed Feb. 15, 1947.

BI-KART

The word "Kart" is disclaimed apart from the mark.
FOR BICYCLE DRAWN CARTS.
Claims use since Dec. 1, 1946.

Ser. No. 520,219. ISLAND CREEK BOAT SHOP, Oxford, Md. Filed Apr. 5, 1947.



Plylite

FOR SMALL BOATS, DINGHIES, TENDERS PROPELLED BY OARS, SAIL OR MOTOR, TO BE USED BY THEMSELVES OR AS A TENDER OR AUXILIARY TO A LARGER VESSEL, AND STRUCTURAL PARTS OF THE BOATS INCLUDING HATCHES, SKYLIGHTS, HAND RAILS.
Claims use since Dec. 15, 1946.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 525,021. OREFRACTION INCORPORATED, Pittsburgh, Pa. Filed June 27, 1947.

FOR PREPARED CERAMIC ELECTRICAL INSULATING MATERIALS SOLD IN COMMINUTED BULK.
Claims use since May 14, 1940.

Ser. No. 525,734. EDWIN L. WIEGAND COMPANY, Pittsburgh, Pa. Filed July 2, 1947.

FOR ELECTRIC HEATING UNITS AND ELECTRIC HEATERS—NAMELY, STRIP HEATERS, SEGMENT HEATERS, RING HEATERS, DISC HEATERS, HALF-SHEATHED HEATERS, CARTRIDGE HEATERS, CYLINDER HEATERS, SCREW-BASE HEATERS, ROD HEATERS, TUBULAR HEATERS, RADIANT HEATERS, OVEN HEATERS, BROILER HEATERS, FOOD TABLE HEATERS, AIR BLAST HEATERS, AIR DUCT HEATERS, UNIT HEATERS FOR SPACE HEATING, STEAM GENERATORS, CIRCULATION HEATERS, FLAT IRON HEATERS, PERCOLATOR HEATERS, CONVECTION HEATERS, HOT PLATES, RANGE PLATES, RANGE UNITS, STOVES, COOKING PLATES, HEATING PLATES, URN HEATERS, MELTING POTS, SOLDERING IRONS, FLUID SUPERHEATERS PRINCIPALLY FOR INDUSTRIAL PURPOSES, FLUID PREHEATERS PRINCIPALLY FOR INDUSTRIAL PURPOSES, RADIATORS, AIR HEATERS, BLOWER HEATERS, SPACE HEATERS, LIQUID HEATERS, IMMERSION HEATERS, INFRA-RED-RAY GENERATORS, FLATIRON BASES, AND BRANDING APPARATUS, AND PARTS THEREOF, AND ELECTRIC HEATING ELEMENTS, ELECTRIC RESISTANCE ELEMENTS, ELECTRIC RESISTANCE UNITS, ELECTRIC RESISTORS, ELECTRIC RHEOSTATS, ELECTRIC TRANSFORMERS, ELECTRO-MAGNETIC CONTACTORS, ELECTRIC SWITCHES, ELECTRIC THERMAL CUTOUTS, ELECTRIC CIRCUIT BREAKERS, ELECTRIC RESISTOR WIRE, ELECTRIC RESISTOR RIBBON, AND ELECTRICAL INSULATING TUBING, BEADS, BLOCKS, BUSHINGS, AND BODIES, AND PARTS THEREOF.
Claims use since January 1945.

Ser. No. 525,735. EDWIN L. WIEGAND COMPANY, Pittsburgh, Pa. Filed July 2, 1947.

Chromalox

FOR ELECTRIC HEATING UNITS AND ELECTRIC HEATERS—NAMELY, STRIP HEATERS, SEGMENT HEATERS, RING HEATERS, DISC HEATERS, HALF-SHEATHED HEATERS, CARTRIDGE HEATERS, CYLINDER HEATERS, SCREW-BASE HEATERS, ROD HEATERS, TUBULAR HEATERS, RADIANT HEATERS, OVEN HEATERS, BROILER HEATERS, FOOD TABLE HEATERS, AIR BLAST HEATERS, AIR DUCT HEATERS, UNIT HEATERS FOR SPACE HEATING, STEAM GENERATORS, CIRCULATION HEATERS, FLAT IRON HEATERS, PERCOLATOR HEATERS, CONVECTION HEATERS, HOT PLATES, RANGE PLATES, RANGE UNITS, STOVES, COOKING PLATES, HEATING PLATES, URN HEATERS, MELTING POTS, SOLDERING IRONS, FLUID SUPERHEATERS PRINCIPALLY FOR INDUSTRIAL PURPOSES, FLUID PREHEATERS PRINCIPALLY FOR INDUSTRIAL PURPOSES, RADIATORS, AIR HEATERS, BLOWER HEATERS, SPACE HEATERS, LIQUID HEATERS, IMMERSION HEATERS, INFRA-RED-RAY GENERATORS, FLATIRON BASES, AND BRANDING APPARATUS, AND PARTS THEREOF, AND ELECTRIC HEATING ELEMENTS, ELECTRIC RESISTANCE ELEMENTS, ELECTRIC RESISTANCE UNITS, ELECTRIC RESISTORS, ELECTRIC RHEOSTATS, ELECTRIC TRANSFORMERS, ELECTRO-MAGNETIC CONTACTORS, ELECTRIC SWITCHES, ELECTRIC THERMAL CUTOUTS, ELECTRIC CIRCUIT BREAKERS, ELECTRIC RESISTOR WIRE, ELECTRIC RESISTOR RIBBON, AND ELECTRICAL INSULATING TUBING, BEADS, BLOCKS, BUSHINGS, AND BODIES, AND PARTS THEREOF.
Claims use since October 1920.

Ser. No. 525,737. EDWIN L. WIEGAND COMPANY, Pittsburgh, Pa. Filed July 2, 1947.

Applicant does not claim the exclusive use to the words "Electric Heating," or to any representation of any of the goods, apart from the mark.
FOR ELECTRIC HEATING UNITS AND ELECTRIC HEATERS—NAMELY, STRIP HEATERS, SEGMENT HEATERS, RING HEATERS, DISC HEATERS, HALF-

SHEATHED HEATERS, CARTRIDGE HEATERS, CYLINDER HEATERS, SCREW-BASE HEATERS, ROD HEATERS, TUBULAR HEATERS, RADIANT HEATERS, OVEN HEATERS, BROILER HEATERS, FOOD TABLE HEATERS, AIR BLAST HEATERS, AIR DUCT HEATERS, UNIT HEATERS FOR SPACE HEATING, STEAM GENERATORS, CIRCULATION HEATERS, FLAT IRON HEATERS, PERCOLATOR HEATERS, CONVECTION HEATERS, HOT PLATES, RANGE PLATES, RANGE UNITS, STOVES, COOKING PLATES, HEATING PLATES, URN HEATERS, MELTING POTS, SOLDERING IRONS, FLUID SUPERHEATERS PRINCIPALLY FOR INDUSTRIAL PURPOSES, FLUID PREHEATERS PRINCIPALLY FOR INDUSTRIAL PURPOSES, RADIATORS, AIR HEATERS, BLOWER HEATERS, SPACE HEATERS, LIQUID HEATERS, IMMERSION HEATERS, INFRA-RED-RAY GENERATORS, FLATIRON BASES, AND BRANDING APPARATUS, AND PARTS THEREOF, AND ELECTRIC HEATING ELEMENTS, ELECTRIC RESISTANCE ELEMENTS, ELECTRIC RESISTANCE UNITS, ELECTRIC RESISTORS, ELECTRIC RHEOSTATS, ELECTRIC TRANSFORMERS, ELECTRO-MAGNETIC CONTACTORS, ELECTRIC SWITCHES, ELECTRIC THERMAL CUTOUTS, ELECTRIC CIRCUIT BREAKERS, ELECTRIC RESISTOR WIRE, ELECTRIC RESISTOR RIBBON, AND ELECTRICAL INSULATING TUBING, BEADS, BLOCKS, BUSHINGS, AND BODIES, AND PARTS THEREOF.
Claims use since 1927.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 508,838. M. T. DAVIDSON COMPANY, Brooklyn, N. Y. Filed Sept. 11, 1946. Under section 5b of the act of 1905 as amended in 1920.

DAVIDSON

Applicant is the owner of registration No. 120,961, of March 19, 1918, effected on the ground of actual and exclusive use for the ten years next preceding Feb. 20, 1905.
FOR STEAM PUMPS, PUMPING ENGINES, AND CONDENSER AND EVAPORATORS FOR USE IN CONNECTION WITH STEAM PUMPS, USED ON RECIPROCATING AND CENTRIFUGAL PUMPING MACHINERY.
Claims use since 1877.

Ser. No. 512,878. VOKES LIMITED, Guildford, England. Filed Nov. 19, 1946.

AMBER CROSS

FOR SILENCERS AND SILENCING APPARATUS (I. E., MUFFLERS AND SIMILAR APPARATUS FOR SILENCING INLET AND EXHAUST SYSTEMS) FOR MACHINERY FOR ENGINES AND FOR MOTORS INCLUDING SILENCERS FOR THE ENGINES AND MOTORS OF HAND VEHICLES AND PARTS THEREOF.
Claims use since July 1945.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 491,945. AMERICAN OPTICAL COMPANY, Southbridge, Mass. Filed Nov. 21, 1945.

VERHOEFF STEREOPTOR

The name "Verhoeff" is disclaimed for registration purposes apart from the mark shown.
FOR OPHTHALMIC DIAGNOSTIC INSTRUMENTS—NAMELY, INSTRUMENTS FOR THE DETERMINATION OF DEPTH PERCEPTION IN BINOCULAR VISION.
Claims use since July 24, 1945.

Ser. No. 504,024. ARLIN PRODUCTS, INCORPORATED, Detroit, Mich. Filed June 17, 1946.

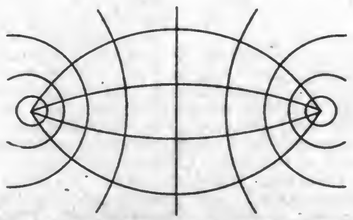
INSPECTRON

FOR ELECTRIC GAUGING MECHANISMS FOR DETERMINING PHYSICAL DIMENSIONS.
Claims use since Jan. 28, 1946.

Ser. No. 509,207. THE DUAL PARKING METER COMPANY, Canton, Ohio. Filed Sept. 17, 1946.

DUAL

FOR PARKING METERS.
Claims use since August 1945.



Ser. No. 509,555. APPARATUS DEVELOPMENT COMPANY, Wethersfield, Conn. Filed Sept. 23, 1946.

HYPOSCOPE

FOR APPARATUS FOR ELECTRICALLY INDICATING THE CONDUCTIVITY OF AQUEOUS SOLUTIONS OF ACIDS, ALKALIES, AND SALTS TO MEASURE THE CONCENTRATION THEREOF.
Claims use since June 3, 1946.

Ser. No. 519,146. THE TEXAS COMPANY, New York, N. Y. Filed Mar. 17, 1947.

CHRONOCARTOGRAPH

FOR ELECTRO-MECHANICAL INSTRUMENTS FOR THE STUDY OF THE FLOW CHARACTERISTICS OF THE FLUIDS IN AN OIL FIELD BY MEASURING THE ELECTROMOTIVE POTENTIALS IN A SOLUTION OF AN ELECTROLYTE IN A MODEL OF THE OIL FIELD.
Claims use since Feb. 12, 1947.

Ser. No. 519,147. THE TEXAS COMPANY, New York, N. Y. Filed Mar. 17, 1947.

CHRONOCARTOGRAPH

FOR ELECTRO-MECHANICAL INSTRUMENTS FOR THE STUDY OF THE FLOW CHARACTERISTICS OF THE FLUIDS IN AN OIL FIELD BY MEASURING THE ELECTROMOTIVE POTENTIALS IN A SOLUTION OF AN ELECTROLYTE IN A MODEL OF THE OIL FIELD.
Claims use since Feb. 12, 1947.

Ser. No. 520,927. LINUS L. BLANCHARD, Hillside, N. J. Filed Apr. 18, 1947.

KAM-A-KANE

Applicant disclaims the word "Kane" apart from the mark as shown.
FOR CANES WHICH MAY BE TRANSPOSED INTO A STAND FOR HOLDING CAMERAS.
Claims use since Jan. 8, 1947.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 510,559. ALPCO, INC., Providence, R. I. Filed Oct. 10, 1946.

Aro-Sac

FOR JEWELRY FOR PERSONAL WEAR OR ADORNMENT, NOT INCLUDING WATCHES.
Claims use since Aug. 27, 1946.

CLASS 33

GLASSWARE

Ser. No. 525,050. ALBERT VILLAUDY, Hollywood, Calif. Filed June 27, 1947.

UP TO YOU

FOR DRINKING GLASSES.
Claims use since May 10, 1947.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 519,669. JOHN P. KLOPPENBORG, doing business as Kloppenborg Aluminum Foundry, Davenport, Iowa. Filed Mar. 27, 1947.

RIVER BREEZE

No claim is made for the word "Breeze" apart from the mark shown.
FOR CIRCULATING AND EXHAUST FANS.
Claims use since Jan. 1, 1947.

CLASS 37

PAPER AND STATIONERY

Ser. No. 502,577. HANO PAPER CORPORATION, New York, N. Y. Filed May 22, 1946.

The drawing is lined for red and blue.
FOR PAPER PRODUCTS—NAMELY, PRINTING, WRITING, DRAWING, TRACING, WRAPPING, BOX-COVER, BOOKBINDING, WAXED, OILED, COATED, FOIL, AND PARCHMENT PAPER; PAPER BOARDS, BRISTOL BOARDS, TICKET BRISTOLS, BOX BOARDS, DISPLAY BOARDS; GUMMED PAPERS—NAMELY, GUMMED LABEL PAPER, AND BLANK AND/OR PARTIALLY PRINTED GUMMED LABELS; DECORATED PAPERS; BLOTTING PAPERS; SCHOOL SUPPLIES—NAMELY, COMPOSITION BOOKS, MEMORANDUM BOOKS, LOOSE-LEAF FILLERS; PAPER NAPKINS; AND TOILET PAPER ROLLS.
Claims use since May 1, 1946.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 487,085. FRANK B. LANSBERG, doing business as Scripture Text Tape Co., St. Louis, Mo. Filed Aug. 13, 1945.

"TESTIMONI-TAPE"

The word "Tape" is disclaimed apart from the mark as shown.
FOR TAPE AND LABELS OF GUMMED PAPER, CELLOPHANE, AND THE LIKE, FOR APPLICATION TO PACKAGES, LETTERS AND OTHER OBJECTS, AND IMPRINTED WITH SCRIPTURAL OR LIKE MESSAGES.
Claims use since June 18, 1945.

Ser. No. 505,908. NATIONAL CHIROPRACTIC ASSOCIATION, INC., Webster City, Iowa. Filed July 19, 1946.

Healthways

FOR PERIODICAL PUBLICATION.
Claims use since May 1, 1946.

Ser. No. 512,055. DEARFIELD PUBLISHING COMPANY, Chicago, Ill. Filed Nov. 5, 1946.

FOXY FAGAN

Applicant disclaims the exclusive use of the name "Fagan" apart from the mark.
FOR COMIC MAGAZINES PUBLISHED IN A SERIES.
Claims use since Oct. 28, 1946.

Ser. No. 519,218. REUBEN NOEL PERLEY, Omaha, Nebr. Filed Mar. 18, 1947.

EIGHT STAR FOODS

No claim is made to the exclusive use of the word "Foods" apart from the mark shown.
FOR PRINTED MENU CARDS SOLD AS SUCH.
Claims use since Feb. 1, 1947.

Ser. No. 526,238. INTERNATIONAL ASSOCIATION, HIGH TWELVE CLUBS, St. Louis, Mo. Filed July 4, 1947.

HIGH TWELVIAN

FOR MONTHLY MAGAZINE.
Claims use since May 17, 1921.

CLASS 39

CLOTHING

Ser. No. 494,929. SEWELL MANUFACTURING COMPANY, Bremen, Ga. Filed Jan. 17, 1946.

CAPITOL CLOTHES

No claim is made to the word "Clothes" per se.
FOR MEN'S SUITS, STUDENTS' SUITS AND SPORT COATS.
Claims use since Dec. 3, 1945.

Ser. No. 497,935. INDUSTRIAL SYNTHETICS CORPORATION, Irvington, N. J. Filed Mar. 9, 1946.

SUPPLEX

FOR SUSPENDERS, MEN'S AND WOMEN'S GARMENT BELTS, SHOES, SHOE WELTS, SHOE UPPERS, SHOE PLATFORM LININGS, SHOE SOLES, SHOE HEELS, SHOE BINDINGS, AND SHOE BOWS.
Claims use since August 1945.

Ser. No. 504,581. PIMLICO HEADWEAR COMPANY, Baltimore, Md. Filed June 25, 1946.

PIMLICO

FOR CLOTH, FELT, SILK, AND PLASTIC HATS.
Claims use since Mar. 5, 1946.

Ser. No. 509,038. D. B. ROSENBLATT, INCORPORATED, Minneapolis, Minn. Filed Sept. 13, 1946.

Burnbrae

FOR MEN'S COATS.
Claims use since July 18, 1946.

Ser. No. 520,479. THE TOWNE SHOP, Phoenix, Ariz. Filed Apr. 10, 1947.

SUN COLONY

FOR LADIES' AND MISSES' CLOTHING—NAMELY, SLIPS, BRASSIÈRES, PANTS, HOSIERY, NIGHTGOWNS, AND PAJAMAS, SUN SUITS, SHORTS, AND HALTERS, BLOUSES, SLACKS, OUTER SKIRTS, SHOES MADE OF LEATHER, RUBBER, CANVAS, OR COMBINATIONS THEREOF, AND GIRDLES.
Claims use since Jan. 25, 1947.

Ser. No. 522,852. HENRIETTA F. EISENACH, Saginaw, Mich. Filed May 22, 1947.

Dapper-Dan

FOR INFANTS' GARMENTS—NAMELY, DIAPERS, SLEEPERS, PAJAMAS, PLAY SUITS, AND NIGHT GOWNS.
Claims use since Apr. 19, 1947.

Ser. No. 522,917. ALO-SCHECHNER, INC., New York, N. Y. Filed May 23, 1947.

MacAIG

FOR SWEATERS AND CARDIGANS FOR BOYS AND GIRLS; BROTHER AND SISTER SETS—NAMELY, TWO-PIECE BOYS' SUITS AND TWO-PIECE GIRLS' SUITS; BOYS' SUITS; CHILDREN'S DRESSES; PULLOVER SHIRTS; OVERALLS; BLOUSES; AND KNITWEAR—NAMELY, PAJAMAS, PANTY SUITS, CREEPERS, SNOWSUITS, AND DRESSES.
Claims use since Feb. 15, 1947.

CLASS 40

FANCY GOODS, FURNISHINGS, AND NOTIONS

Ser. No. 503,167. HARRY L. MASON, New York, N. Y. Filed June 1, 1946.

"Love Birds"

FOR COSTUME ORNAMENTS—NAMELY, PINS, MADE OUT OF PLASTIC MATERIAL.
Claims use since Feb. 20, 1946.

Ser. No. 521,112. CASINO NOVELTY EMBROIDERY CO., New York, N. Y. Filed Apr. 22, 1947.

FOR SEQUINS, AND SEQUIN TRIMMINGS.
Claims use since Jan. 1, 1945, as to "Be Wise Sequinize," and since Sept. 1, 1946, as to the mark as a whole.

CLASS 42

KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR

Ser. No. 470,939. COHN-HALL-MARX CO., New York, N. Y. Filed June 6, 1944.

The drawing is lined for the color red. Applicant disclaims the exclusive use of the word "Fabric" apart from the mark.
FOR PIECE GOODS OF COTTON, RAYON AND/OR SILK, OR COMBINATIONS THEREOF.
Claims use since May 1, 1944.

Ser. No. 516,768. GOODALL-SANFORD, INC., Sanford, Maine. Filed Feb. 1, 1947.

GOODALLITE

FOR VINYL PLASTIC FILM OR SHEETING SOLD IN BOLTS, FOR USE AS UPHOLSTERY AND IN MAKING UP INTO HANDBAGS, SHOES, AND THE LIKE.
Claims use since Nov. 15, 1946.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 511,626. L. A. LEISTIKOW & SONS, INC., Chicago, Ill. Filed Oct. 28, 1946. Under 10-year proviso.

LEISTIKOW

FOR FRESH, SMOKED, AND PICKLED FISH.
Claims use since June 1, 1880.

Ser. No. 516,117. CUMBERLAND MFG. COMPANY, Nashville, Tenn. Filed Jan. 22, 1947.

COMO

FOR IMITATION FOOD FLAVORING EXTRACTS.
Claims use since 1900.

Ser. No. 517,253. LIK-IT PET RATION CO., Spencer, Mass. Filed Feb. 10, 1947.

THREE KITTENS

No claim is made to the word "Kittens" apart from the mark.
FOR FROZEN CAT FOOD.
Claims use since Dec. 21, 1945.

Ser. No. 518,914. LINA SCHEIM, doing business as Wilhelm Scheim Wwe. Lucul-Nahrmittelfabrik, Zurich, Switzerland. Filed Mar. 12, 1947.

LUCUL

FOR MEAT SOUP, CHICKEN SOUP, CLEAR AND THICKENED OXTAIL SOUP, GRAVY, ASPIC, MEAT FLAVORINGS, AND EXTRACT OF BEEF.
Claims use since August 1934.

Ser. No. 519,486. NORRIS INC., Atlanta, Ga. Filed Mar. 24, 1947.

Sirron

FOR CANDY.
Claims use since September 1917.

Ser. No. 521,169. AMERICAN CRAB MEAT CO., INC., Boston, Mass. Filed Apr. 23, 1947.

Applicant disclaims the word "Kittens" separately from the mark.
FOR CANNED CAT FOOD.
Claims use since Apr. 8, 1942.

Ser. No. 523,088. OTIS, MCALLISTER & CO., San Francisco, Calif. Filed May 26, 1947.

The figure of the man is fanciful.
FOR CANNED FISH.
Claims use since 1934.

Ser. No. 525,098. P. M. C. COMPANY, INC., Swedesboro, N. J. Filed June 28, 1947.

PACAMA

FOR CANNED TOMATOES, TOMATO PASTE, AND TOMATO PUREE.
Claims use since Jan. 2, 1947.

Ser. No. 526,197. GEO. D. BROWN & SON, INC., doing business as Chelan Falls Orchards, Chelan Falls, Wash. Filed July 4, 1947.

No claim is made to the outline of the label apart from the mark as shown.
FOR FRESH APPLES.
Claims use since 1920.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Ser. No. 525,557. JACK DANIEL DISTILLERY, LEM MOTLOW, PROP., INC., Lynchburg, Tenn. Filed July 2, 1947.

The trade-mark consists merely in the portrait and signature of Lem Motlow, nephew of Jack Daniel, and president of applicant corporation, consent given.
FOR WHISKEY.
Claims use since July 27, 1940.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Ser. No. 493,738. NATHAN J. BROWN, doing business as Transolene Co., and Plastic Distributors, Barrington and Chicago, Ill. Filed Dec. 22, 1945.

TRANSOGLASS

FOR PLASTIC COATED METAL WIRE SCREEN USED AS A GLASS SUBSTITUTE.
Claims use since September 1925.

ACT OF 1946

The following trade-marks are published in compliance with section 12(a) of the Trade-Mark Act of 1946. Notice of opposition under section 13 may be filed within thirty days of this publication. See Rules 20.1 to 20.5.
As provided by section 31 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 520,814. JEFFERSON LAKE SULPHUR COMPANY, INC., Houston, Tex. Filed July 31, 1947.

Applicant claims ownership of registration No. 429,059.
FOR CARBON BLACK.
Claims use since July 16, 1946.

Ser. No. 522,500. NORTHRUP, KING & CO., Minneapolis, Minn., and Berkeley, Calif. Filed Aug. 29, 1947.

GOLF

Applicant claims ownership of registration No. 235,374.
FOR GRASS SEEDS.
Claims use since Jan. 1, 1924.

Ser. No. 526,580. ASSOCIATED SEED GROWERS, INCORPORATED, New Haven, Conn. Filed July 5, 1947. Under section 2f of the act of 1946.

EASY-GRO

FOR GRASS SEED.
Claims use since Oct. 1, 1939.

Ser. No. 527,197. FOUKE FUR COMPANY, St. Louis, Mo. Filed July 5, 1947.

TRANSVELDT

Applicant claims ownership of registration No. 358,152.
FOR FUR SKINS, HIDES, AND PELTS.
Claims use since Jan. 14, 1937.

Ser. No. 527,198. FOUKE FUR COMPANY, St. Louis, Mo. Filed July 5, 1947.

Applicant claims ownership of registrations Nos. 151,130, 194,582, 321,309, and 418,557.
FOR FUR SKINS, HIDES, AND PELTS.
Claims use since Dec. 10, 1919.

Ser. No. 532,983. LAKELAND NURSERIES, Faribault, Minn. Filed Aug. 30, 1947.

LAKELAND

FOR NURSERY STOCKS.
Claims use since Jan. 1, 1947.

Ser. No. 533,662. ANDREWS NURSERY COMPANY, Faribault, Minn. Filed Sept. 6, 1947. Under section 2f of the act of 1946.

ANDREWS

FOR NURSERY STOCKS.
Claims use since 1872.

Ser. No. 535,213. ANDREWS NURSERY COMPANY, Faribault, Minn. Filed Sept. 22, 1947.

FOR NURSERY STOCKS.
Claims use since Aug. 13, 1925.

CLASS 2

RECEPTACLES

Ser. No. 511,226. KIECKHEFER CONTAINER COMPANY, Camden, N. J. Filed Oct. 4, 1947.

CLEATAINER

FOR SHIPPING CONTAINERS FORMED OF FIBERBOARD AND WOOD.
Claims use since July 24, 1946.

Ser. No. 526,645. UNITED STATES RUBBER COMPANY, New York, N. Y. Filed July 5, 1947.

ES
ES

FOR FOOD TRAYS MOLDED OF PLASTIC MATERIAL.
Claims use since Feb. 19, 1947.

Ser. No. 535,640. SOUTHERN STATES IRON ROOFING COMPANY, Savannah, Ga. Filed Sept. 24, 1947. Under section 2f of the act of 1946.

EVERWEAR

Applicant claims ownership of registration No. 382,728.
FOR METAL DRUMS.
Claims use since October 1935.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 530,746. LOS ANGELES SOAP COMPANY, Los Angeles, Calif. Filed Aug. 7, 1947. Under section 2f of the act of 1946.

SCOTCH SOAP

The word "Soap" is disclaimed apart from the mark.
Applicant claims ownership of registration No. 308,029.
FOR SOAPS.
Claims use since Oct. 4, 1932.

Ser. No. 532,900. ARMOUR AND COMPANY, Chicago, Ill. Filed Aug. 30, 1947.

ARMOURITE

FOR COATED ABRASIVE PRODUCTS HAVING A FLEXIBLE BACKING WITH AN ABRASIVE SECURED TO THE BACKING BY AN ADHESIVE.
Claims use since 1919.

Ser. No. 541,177. THE MORTON S. PINE COMPANY, Cleveland, Ohio. Filed Nov. 14, 1947. Under section 2f of the act of 1946.

DAY'S LIQUID Pine Cleanser

Applicant claims ownership of registration No. 218,336.
FOR LIQUID DETERGENT CLEANER.
Claims use since Oct. 28, 1924.

Ser. No. 547,965. CHARLES H. BESLY AND COMPANY, Chicago, Ill. Filed Jan. 26, 1948.

TITAN BESLY

FOR GRINDING DISCS AND WHEELS.
Claims use since Feb. 14, 1922.

Ser. No. 550,591. ESSENTIAL CHEMICALS CO., Milwaukee, Wis. Filed Feb. 26, 1948.

SOAPTERGENT

FOR SOAP.
Claims use since Jan. 30, 1947.

Ser. No. 552,739. ARMOUR AND COMPANY, Chicago, Ill. Filed Mar. 23, 1948.

dial

FOR BATH AND TOILET SOAP.
Claims use since Nov. 10, 1947.

Ser. No. 552,890. SPIRITTINE CHEMICAL COMPANY, Wilmington, N. C. Filed Mar. 24, 1948.

Spirittine

Applicant claims ownership of registrations Nos. 51,506, 259,984, and 260,161.
FOR LIQUID SOAP, PINE CLEANSER, AND SWEEPING COMPOUND.
Claims use since 1900.

Ser. No. 554,138. MARKEM MACHINE COMPANY, Keene, N. H. Filed Apr. 8, 1948.

MARKEM

FOR CLEANING COMPOUND FOR CLEANING INK FROM METAL RESERVOIRS.
Claims use since June 15, 1921.

CLASS 5

ADHESIVES

Ser. No. 544,912. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Dec. 19, 1947.

FOR LINOLEUM PASTE.
Claims use since Jan. 1, 1945.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 505,892. HELENE CURTIS INDUSTRIES, A DIVISION OF NATIONAL INDUSTRIES, INC., Chicago, Ill., said National Industries, Inc., now by change of name Helene Curtis Industries, Inc. Filed Oct. 18, 1947.

FOR SHAMPOO.
Claims use since July 10, 1946.

Ser. No. 509,561. CARLISLE DRUG CO., Nashville, Tenn. Filed Sept. 11, 1947. Under section 2f of the act of 1946.

CARLISLE'S

FOR MEDICINAL REMEDY FOR TREATMENT OF ATHLETE'S FOOT.
Claims use since Jan. 1, 1940.

Ser. No. 514,495. JOHN E. RESPONDEK, doing business as Romo Drug Co., Detroit, Mich. Filed Nov. 12, 1947.

ROMO COMPOUND

Applicant disclaims the word "Compound" except as used in connection with the other features of the mark.
Applicant claims ownership of registrations Nos. 414,403 and 417,399.
FOR LIQUID MEDICINAL PRODUCT TO BE USED FOR THE TREATMENT OF RHEUMATISM, ARTHRITIS, NEURALGIA, HEADACHE AND ACHES AND PAINS.
Claims use since Nov. 15, 1946.

Ser. No. 517,918. METROPOLITAN REFINING CO., INC., New York, N. Y. Filed Sept. 10, 1947. Under section 2f of the act of 1946.

SLUDGOUT

FOR COMPOSITION FOR TREATMENT OF FUEL OILS TO PREVENT AND ELIMINATE SLUDGE.
Claims use since December 1937.

Ser. No. 520,705. HUNTINGTON LABORATORIES, INC., Huntington, Ind. Filed Nov. 25, 1947. Under section 2f of the act of 1946.

MILLERS RELIEF

FOR CHLORINATED HYDROCARBON FUMIGANT USED FOR "SPOT FUMIGATION" OF MILL MACHINERY, IN VAULTS, WAREHOUSES, ETC.
Claims use since Jan. 15, 1924.

Ser. No. 526,784. CHURCH & DWIGHT CO., INC., New York, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

CHURCH & CO'S

Applicant claims ownership of registrations Nos. 369,752, 369,753, and 435,332.
FOR SAL SODA AND BICARBONATE OF SODA (BAKING SODA).
Claims use since 1874.

Ser. No. 527,473. TABLE ROCK LABORATORIES, INC., Greenville, S. C. Filed July 5, 1947.

ZIBORAL

Applicant claims ownership of registration No. 320,258.
FOR ANTISEPTIC DOUCHE.
Claims use since July 9, 1934.

Ser. No. 529,220. AMERICAN ANILINE PRODUCTS, INC., New York, N. Y. Filed July 23, 1947.

PIXOL

FOR DYEING ASSISTANTS INCLUDING DISPERSANTS, PENETRANTS, AND ANTI-BRONZING AGENTS.
Claims use since May 25, 1944.

Ser. No. 530,513. INTERNATIONAL PRODUCTS CORPORATION, New York, N. Y. Filed Aug. 5, 1947.

INTERNATIONAL PRODUCTS CORPORATION

The words "Products Corporation" are disclaimed apart from the mark.
FOR TANNING EXTRACTS.
Claims use since Mar. 31, 1920.

Ser. No. 531,150. J. B. ROERIG AND COMPANY, Chicago, Ill. Filed Aug. 12, 1947. Under section 2f of the act of 1946.

ADBILE

FOR MEDICINAL PREPARATION CONTAINING OXBILE AND VITAMINS USEFUL IN THE TREATMENT OF BILIARY TRACT AND HEPATIC DYSFUNCTIONS.
Claims use since July 18, 1939.

Ser. No. 531,151. J. B. ROERIG AND COMPANY, Chicago, Ill. Filed Aug. 12, 1947.

APEXOL

FOR MEDICINAL PREPARATION CONTAINING NATURAL FISH LIVER OIL USEFUL IN THE TREATMENT OF SUCH CONDITIONS AS ACNE, KERATOSIS, FOLLICULARIS, AND ICHTHYOSIS AND FOR THE TREATMENT OF VITAMIN A DEFICIENCIES.
Claims use since May 23, 1940.

Ser. No. 531,152. J. B. ROERIG AND COMPANY, Chicago, Ill. Filed Aug. 12, 1947.

APOLARTHRON

FOR MEDICINAL PREPARATION CONTAINING VITAMIN USEFUL IN THE TREATMENT OF ACNE, PSORIASIS AND FOLLICULAR HYPERKERATOSIS.
Claims use since Sept. 8, 1936.

Ser. No. 533,572. E. F. HOUGHTON & CO., Philadelphia, Pa. Filed Sept. 5, 1947.

MAR TEMP

Applicant claims ownership of registration No. 183,194.
FOR MIXTURE OF INORGANIC SALTS HAVING A LOW MELTING POINT AND SUITABLE FOR USE AS A MOLTEN TEMPERING MEDIA FOR THE HEAT TREATMENT OF STEELS.
Claims use since Dec. 23, 1943.

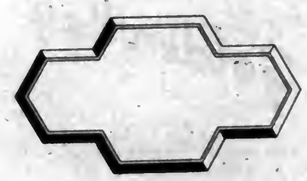
Ser. No. 536,125. PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Sept. 29, 1947.

DIGITALONE

FOR DIGITALIS EXTRACT.
Claims use since May 23, 1904.

Ser. No. 536,767. CHIPMAN CHEMICAL COMPANY, INC., Bound Brook, N. J. Filed Oct. 4, 1947.

BENZAHEX



FOR AGRICULTURAL INSECTICIDES AND FUNGICIDES.
Claims use since Sept. 17, 1947.

Ser. No. 537,428. CROOKES LABORATORIES, INC., New York, N. Y. Filed Oct. 10, 1947.

DECUPRYL

FOR FUNGICIDAL SOLUTION FOR USE IN THE TREATMENT OF FUNGUS INFECTIONS OF THE SKIN.
Claims use since Sept. 3, 1947.

Ser. No. 538,191. SPENCER CHEMICAL COMPANY, Kansas City, Mo. Filed Oct. 17, 1947.

FOR SOLID CARBON DIOXIDE, ANHYDROUS AMMONIA, NITROGEN SOLUTION COMPRISING A SOLUTION OF AMMONIUM NITRATE IN AMMONIA LIQUOR AND AQUA AMMONIA.
Claims use on anhydrous ammonia since Aug. 30, 1947; on nitrogen solution comprising a solution of ammonium nitrate in ammonium liquor since Sept. 3, 1947; and on aqua ammonia since Sept. 4, 1947.

Ser. No. 539,195. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed Oct. 27, 1947.

HSPA ACTIVATOR

Applicant disclaims the word "Activator" apart from the mark.
FOR HERBICIDES.
Claims use since Oct. 15, 1947.

Ser. No. 539,491. CHICAGO PHARMACAL COMPANY, Chicago, Ill. Filed Oct. 30, 1947.

No. X2
ANETIC

The word "Anetic" is disclaimed apart from the mark.
FOR OINTMENT USED IN THE TREATMENT OF HEMORRHOIDS.
Claims use since Jan. 1, 1945.

Ser. No. 540,207. THE HAROLD N. SIMPSON COMPANY, Oak Park, Ill. Filed Nov. 5, 1947.

Stay Young

FOR VITAMIN CAPSULES.
Claims use since Sept. 1, 1942.

Ser. No. 540,979. BO-KAY PERFUME CO., New York, N. Y. Filed Nov. 13, 1947.

BO-KAY

Applicant claims ownership of registration No. 265,130.
FOR PERFUME, COLOGNE, DEODORANT, POMADES, HAIR DRESSINGS, TALCUM, HAND AND FACE LOTIONS, COMPLEXION POWDER, LIPSTICK, AND EAU DE COLOGNE.
Claims use since Oct. 1, 1918.

Ser. No. 541,068. ELIZABETH ARDEN SALES CORPORATION, New York, N. Y. Filed Nov. 14, 1947.

ARDENA
PAT-A-CRÈME

The term "Pat-A-Crème" is disclaimed apart from the mark. Applicant claims ownership of registrations Nos. 279,960, 399,170, and 436,253.
FOR CREAMY POWDER FOUNDATION TO BE PATTED ON THE SKIN.
Claims use since Sept. 3, 1946.

Ser. No. 541,268. THE DOW CHEMICAL COMPANY, Midland, Mich. Filed Nov. 15, 1947. Under section 2f of the act of 1946.

MIDLAND VAT BLUE R.

Applicant claims ownership of registration No. 219,025.
FOR VAT DYES.
Claims use since May 1, 1925.

Ser. No. 544,331. CUTTER LABORATORIES, Berkeley, Calif. Filed Dec. 15, 1947.

PENIVET

FOR VETERINARIAN SODIUM PENICILLIN.
Claims use since July 1947.

Ser. No. 545,004. SAMUEL W. KENDALL, doing business as The Vitalife Company, Muscle Shoals City, Ala. Filed Dec. 20, 1947.

VITALIFE

FOR CHEMICAL COMPOSITION IN GRANULAR OR TABLET FORM ADAPTED FOR INTERNAL INTRODUCTION INTO PLANTS AND TREES FOR USE IN THE TREATMENT OF DISEASES.
Claims use since Mar. 15, 1947.

Ser. No. 546,726. S. B. PENICK & COMPANY, New York, N. Y. Filed Jan. 10, 1948.

IMPREGNO

FOR INSECTICIDE CONCENTRATE.
Claims use since June 1, 1939.

Ser. No. 546,727. S. B. PENICK & COMPANY, New York, N. Y. Filed Jan. 10, 1948.

PYREXCEL 20

The numeral "20" is disclaimed.
FOR INSECTICIDE CONCENTRATE AS A CONSTITUENT IN THE MANUFACTURE OF INSECTICIDES.
Claims use since Sept. 20, 1946.

Ser. No. 549,045. BACON PRODUCTS COMPANY, Chattanooga, Tenn. Filed Feb. 7, 1948.

INSTO

FOR INSECTICIDES.
Claims use since Jan. 21, 1948.

Ser. No. 550,913. THE GREAT AMERICAN TEA COMPANY, New York, N. Y. Filed Mar. 1, 1948.

Golden Key

Applicant claims ownership of registration No. 200,998.
FOR HAIR LOTION AND A LIQUID MASSAGING PREPARATION.
Claims use since Mar. 1, 1930, for liquid massaging preparation; and since Mar. 8, 1930, for hair lotion.

Ser. No. 550,916. THE GREAT AMERICAN TEA COMPANY, New York, N. Y. Filed Mar. 1, 1948.

Applicant claims ownership of registration No. 200,998.
FOR ANTISEPTIC MOUTH WASH.
Claims use since Mar. 8, 1930.

Ser. No. 550,919. THE GREAT AMERICAN TEA COMPANY, New York, N. Y. Filed Mar. 1, 1948.

Golden Key

Applicant claims ownership of registration No. 200,998.
FOR LIQUID COUGH PREPARATION.
Claims use since Mar. 8, 1930.

Ser. No. 551,007. THE GREAT AMERICAN TEA COMPANY, New York, N. Y. Filed Mar. 2, 1948.

Golden Key

Applicant claims ownership of registration No. 200,998.
FOR LIQUID STARCH, LAUNDRY STARCH, PERFUMED STARCH, AND PREPARATION IN CAKE FORM TO BE MIXED WITH STARCH TO GIVE CLOTHES FRESH NEW APPEARANCE.
Claims use since 1918 on laundry starch; since July 5, 1937, on perfumed starch; since Aug. 20, 1946, on liquid starch; and since Mar. 5, 1932, on a preparation used with starch.

Ser. No. 551,062. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Mar. 2, 1948.

Abergic

FOR MEDICINAL PREPARATIONS FOR THE TREATMENT OF HYPERSENSITIVITY.
Claims use since Dec. 30, 1947.

Ser. No. 551,063. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Mar. 2, 1948.

Cominose

FOR MEDICINAL PREPARATION FOR USE IN NUTRITIONAL DEFICIENCIES.
Claims use since Dec. 4, 1947.

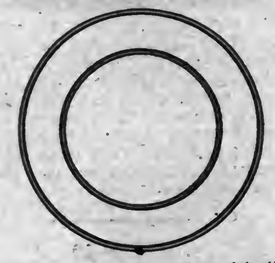
Ser. No. 551,064. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Mar. 2, 1948.

Proliquose

FOR MEDICINAL PREPARATION FOR USE IN NUTRITIONAL DEFICIENCIES.
Claims use since Dec. 4, 1947.

Ser. No. 551,067. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Mar. 2, 1948.

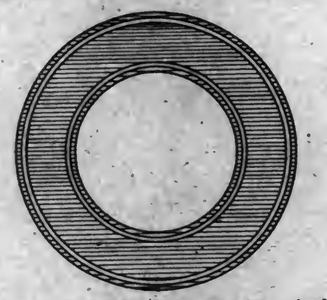
Soluaminose



FOR MEDICINAL PREPARATION FOR USE IN NUTRITIONAL DEFICIENCIES.
Claims use since Dec. 4, 1947.

Ser. No. 553,015. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed Mar. 25, 1948.

BEST MAN



Applicant claims ownership of registration No. 380,462.
FOR HAIRDRESSING.
Claims use since May 23, 1947.

Ser. No. 553,677. CHURCH & DWIGHT CO. INC., New York, N. Y. Filed Apr. 2, 1948.

Applicant claims ownership of registrations Nos. 59,574 (renewed and re-renewed), 258,621, 360,967, and 377,408.
FOR SAL SODA, AND BICARBONATE OF SODA (BAKING SODA).
Claims use since 1869.

Ser. No. 553,678. CHURCH & DWIGHT CO. INC., New York, N. Y. Filed Apr. 2, 1948.

The drawing is lined for the color blue. Applicant claims ownership of registrations Nos. 59,817 (renewed and re-renewed), 258,622, and 360,880.
FOR SAL SODA, WASHING SODA, AND BICARBONATE OF SODA (BAKING SODA).
Claims use since 1869.

Ser. No. 553,681. CHURCH & DWIGHT CO. INC., New York, N. Y. Filed Apr. 2, 1948. Under section 2f of the act of 1946.

Applicant claims ownership of registrations Nos. 59,095 (renewed and re-renewed), 426,956, and 426,957.
FOR SAL SODA AND BICARBONATE OF SODA (BAKING SODA).
Claims use since 1876.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Ser. No. 530,635. FABER, COX & GREGG, INC., New York, N. Y. Filed Aug. 6, 1947.

FOR PIPES, PIPE CLEANERS, ASH TRAYS OR RECEIVERS, CIGAR AND CIGARETTE TUBES AND HOLDERS, CIGARETTE CASES AND PAPERS CUT TO SIZE; MOISTENERS FOR CIGARS, CIGARETTES, AND MANUFACTURED TOBACCO; TABLE SMOKING SETS, SMOKERS' COMPACT, HUMIDORS, MATCH STRIKERS, PIPE RACKS AND CASES, PIPE BUTTONS AND TOBACCO JARS AND POUCHES.
Claims use since Jan. 15, 1934.

CLASS 10

FERTILIZERS

Ser. No. 549,193. TENNESSEE CORPORATION, New York, N. Y. Filed Feb. 9, 1948.

HORTI-FERTZ

FOR FERTILIZER.
Claims use since Mar. 1, 1939.

Ser. No. 549,865. AGRICULTURAL MINERALS COMPANY, Montgomery, Ala. Filed Feb. 17, 1948.

AGRI-MINS

FOR FERTILIZERS.
Claims use since Dec. 15, 1947.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 515,446. NORTHWESTERN STATES PORTLAND CEMENT COMPANY, Mason City, Iowa. Filed Dec. 11, 1947. Under section 2f of the act of 1946.

-NORTH WESTERN-

Applicant claims ownership of registration No. 70,578.
FOR PORTLAND CEMENT AND MASONS' CEMENT.
Claims use since Jan. 1, 1908.

Ser. No. 520,563. E. J. LAVINO AND COMPANY, Philadelphia, Pa. Filed Aug. 6, 1947.

PERIKROM

Applicant claims ownership of registration No. 398,636.
FOR REFRACTORY SHAPES OR BRICKS.
Claims use since Apr. 1, 1947.

Ser. No. 534,235. N. V. BETONFABRIEK DE METEOOR, Rheden, Holland. Filed Sept. 12, 1947.

STELCON

Applicant claims ownership of Netherlands registration No. 64,598, dated April 6, 1933.
FOR STEEL ANCHOR PLATES AND CONCRETE BLOCKS HAVING STEEL ANCHOR PLATES ANCHORED THERETO PARTICULARLY SUITABLE FOR FLOORING SUBJECT TO HEAVY USE.

Ser. No. 537,296. DEWEY PORTLAND CEMENT COMPANY, Kansas City, Mo. Filed Oct. 9, 1947. Under section 2f of the act of 1946.

DEWEY

Applicant claims ownership of registrations Nos. 290,413 and 351,473.
FOR PORTLAND CEMENT AND MASONS' CEMENT.
Claims use since Feb. 16, 1931.

Ser. No. 537,317. INLAND STEEL COMPANY, Chicago, Ill. Filed Oct. 9, 1947.

-INLAND-

Applicant claims ownership of registration No. 494,272.
FOR SHEET PILING, BEAMS AND CHANNEL BARS FOR USE AS CONSTRUCTION MATERIAL; AND STRUCTURAL SHAPES, ALL MADE OF STEEL.
Claims use since March 1922.

Ser. No. 539,457. STOPALL WATERPROOFING MANUFACTURERS, INC., Kalamazoo, Mich. Filed Oct. 29, 1947.

STOPALL

FOR WATERPROOFING MATERIAL COMPRISING A LIQUID MIXTURE OF ORGANIC MATERIALS FOR BRUSHING OR SPRAYING ON MASONRY AND FOR PENETRATION THEREINTO.
Claims use since June 1, 1941.

Ser. No. 539,823. MASONITE CORPORATION, Chicago, Ill., and Laurel, Miss. Filed July 14, 1947.

Applicant claims ownership of registration No. 853,146.
FOR FIBER BOARD, THERMAL INSULATING BOARD, COMPOSITE BOARD, CONSTRUCTION BOARD, SYNTHETIC LUMBER OR ARTIFICIAL LUMBER, HARDBOARD AND HEAT AND SOUND INSULATING PRODUCTS IN SHEET AND BLANKET FORM FOR USE FOR VARIOUS CONSTRUCTION PURPOSES, SUCH AS BUILDING, PANELS, FURNITURE AND THE LIKE.
Claims use since Mar. 17, 1930.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 528,665. WHEATLAND TUBE COMPANY, Philadelphia, Pa. Filed July 15, 1947.

In the drawing the stippling is for shading purposes only.
FOR METAL WATER AND STEAM PIPE.
Claims use since June 11, 1947.

Ser. No. 529,693. THE RELIANCE GAUGE COLUMN COMPANY, Cleveland, Ohio. Filed July 26, 1947.

Reliance

Applicant claims ownership of registrations Nos. 32,083, 88,025, and 161,597.
FOR LIQUID GAGE VALVES, GAGE COCKS AND FLOATS.
Claims use since July 1888.

Ser. No. 529,902. MACLEAN-FOGG LOCK NUT COMPANY, Chicago, Ill. Filed July 29, 1947.

MF

FOR VARIOUS TYPES OF NUTS AND BOLTS, NUT LOCKING DEVICES OF THE KIND CONSISTING OF A PLATE HAVING A BOLT HOLE AND A BENDABLE NUT-ENGAGING TONGUE, RAILWAY CAR FLOOR CLIPS, RAILWAY CAR THRESHOLD PLATES, METAL WASHERS, COTTER KEYS, METAL DEFECT CARD RECEPTACLES FOR RAILWAY CARS, AND RAILWAY CAR JOURNAL BOX HINGE LUG WEAR PLATES OR CLIPS.
Claims use since December 1925.

Ser. No. 530,017. PLASTI-GLO MANUFACTURING COMPANY, Chicago, Ill. Filed July 30, 1947.

Charmatic

FOR DRAPERY AND CURTAIN BRACKETS.
Claims use since Apr. 15, 1947.

Ser. No. 531,284. THE V. D. ANDERSON COMPANY, Cleveland, Ohio. Filed Aug. 14, 1947.

The section lining in the drawing indicates the color red. Applicant claims ownership of registration No. 323,657.
FOR STEAM TRAPS.
Claims use since 1893.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 542,386. ZIV STEEL & WIRE CO., Chicago, Ill. Filed Nov. 25, 1947.

ZIV'S LOPHOS

Applicant disclaims the name "Ziv's" apart from the mark shown.
FOR DRILL AND TOOL STEEL.
Claims use since January 1912.

Ser. No. 542,389. ZIV STEEL & WIRE CO., Chicago, Ill. Filed Nov. 25, 1947.

ZIV'S DUMORE

Applicant disclaims the name "Ziv's" apart from the mark. Applicant claims ownership of registration No. 233,889.
FOR DRILL AND TOOL STEEL.
Claims use since July 1, 1926.

CLASS 15

OILS AND GREASES

Ser. No. 472,432. PETROLEUM HEAT AND POWER COMPANY, New York, N. Y. Filed Aug. 1, 1947.

PETROHEAT

Applicant claims ownership of registrations Nos. 293,762 and 302,248.
FOR FUEL OILS FOR HEATING PURPOSES.
Claims use since Dec. 1, 1931.

Ser. No. 526,833. THE PURE OIL COMPANY, Chicago, Ill. Filed July 5, 1947.

WOCOLUBE

Applicant claims ownership of registration No. 124,431.
FOR LUBRICATING GREASE.
Claims use since Aug. 19, 1933.

Ser. No. 535,608. PATE OIL COMPANY, Milwaukee, Wis. Filed Sept. 24, 1947.

WATERGLIDE

FOR LUBRICATING OILS AND GREASES.
Claims use since June 20, 1945.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 542,079. BROWN & WILLIAMSON TOBACCO CORPORATION, Louisville, Ky. Filed Nov. 24, 1947.

Life

Applicant claims ownership of registrations Nos. 420,924 and 378,055.
FOR CIGARS, CIGARETTES, SMOKING TOBACCO, CHEWING TOBACCO, AND SNUFF.
Claims use since August 1924.

Ser. No. 542,121. GRADIAZ ANNIS & CO., INC., Tampa, Fla. Filed Nov. 24, 1947.

FOR CIGARS.
Claims use since March 1922.

CLASS 19

VEHICLES

Ser. No. 541,109. E. A. LABORATORIES, INC., Brooklyn, N. Y. Filed Nov. 14, 1947.

Applicant claims ownership of registration No. 380,293.
FOR VEHICLE HEATERS.
Claims use since Aug. 6, 1939.

Ser. No. 541,602. THE FRANK F. TAYLOR COMPANY, Norwood, Ohio. Filed Nov. 18, 1947. Under section 2f of the act of 1946.

TAYLOR-TOT

Applicant claims ownership of registration No. 422,852.
FOR WALKER STROLLERS AND STROLLERS.
Claims use since Dec. 31, 1924.

Ser. No. 542,648. PICK MANUFACTURING COMPANY, West Bend, Wis. Filed Nov. 28, 1947. Under section 2f of the act of 1946.

Pick

Applicant claims ownership of registration No. 413,772.
FOR AUTOMOBILE BRAKE SHOES, SHOCK ABSORBERS, AND CAPS FOR AUTOMOBILE HUBS, RADIATORS, AND GASOLINE TANKS.
Claims use since Mar. 1, 1930.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 528,048. BURGESS BATTERY COMPANY, Chicago and Freeport, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

BURGESS

Applicant claims ownership of registrations Nos. 235,104, 236,626, and 406,111.
FOR PORTABLE ELECTRIC ENGRAVING AND CUTTING IMPLEMENTS.
Claims use since 1941.

Ser. No. 530,889. ACME ELECTRIC CORPORATION, Cuba, N. Y. Filed Aug. 9, 1947.

ACME

Applicant claims ownership of registrations Nos. 212,544, 332,171, 413,459, and 414,196.
FOR BATTERY CHARGERS, VOLTAGE REGULATORS, BALLASTS AND REACTORS, AND TRANSFORMERS OF AUTO AND INSULATED TYPES, OF OIL AND AIR-COOLED TYPES, AND OF NORMAL AND LEAKAGE REACTANCE TYPES, SAID ELECTRICAL EQUIPMENT BEING FOR ELECTRIC SIGNS, COMMUNICATION, LIGHTING, POWER, INDUSTRIAL, RADIO, AND ELECTRONIC APPLICATIONS.
Claims use since Jan. 1, 1920.

Ser. No. 530,891. ACME ELECTRIC CORPORATION, Cuba, N. Y. Filed Aug. 9, 1947.
Applicant claims ownership of registrations Nos. 212,544, 332,171, 413,459, and 414,196.

ACME

FOR BATTERY CHARGERS, VOLTAGE REGULATORS, BALLASTS AND REACTORS, AND TRANSFORMERS OF AUTO AND INSULATED TYPES, OF OIL AND AIR-COOLED TYPES, AND OF NORMAL AND LEAKAGE REACTANCE TYPES, SAID ELECTRICAL EQUIPMENT BEING FOR ELECTRIC SIGNS, COMMUNICATION, LIGHTING, POWER, INDUSTRIAL, RADIO AND ELECTRONIC APPLICATIONS.
Claims use since Jan. 1, 1920.

Ser. No. 530,892. ACME ELECTRIC CORPORATION, Cuba, N. Y. Filed Aug. 9, 1947.

Acme ACME Electric

The word "Electric" is disclaimed apart from the mark. Applicant claims ownership of registrations Nos. 212,544, 332,171, 413,459, and 414,196.
FOR BATTERY CHARGERS, VOLTAGE REGULATORS, BALLASTS AND REACTORS, AND TRANSFORMERS OF AUTO AND INSULATED TYPES, OF OIL AND AIR-COOLED TYPES, AND OF NORMAL AND LEAKAGE REACTANCE TYPES, SAID ELECTRIC EQUIPMENT BEING FOR ELECTRIC SIGNS, COMMUNICATION, LIGHTING, POWER, INDUSTRIAL, RADIO, AND ELECTRONIC APPLICATIONS.
Claims use since July 19, 1936.

Ser. No. 534,265. FORD INSTRUMENT COMPANY, INC., Long Island City, N. Y. Filed Sept. 12, 1947.

Telesyn

FOR SYNCHRONOUS ELECTRICAL ANGULAR MOTION TRANSMITTERS AND REPEATERS.
Claims use since Aug. 13, 1947.

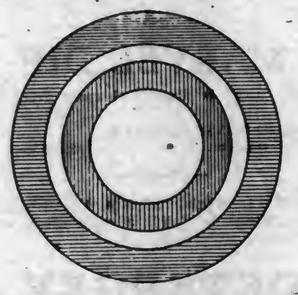
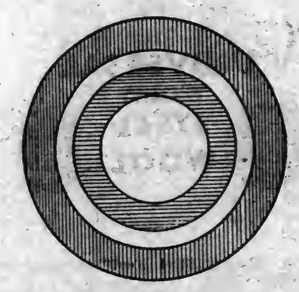
FOR LIQUID SOAP.
Claims use since Sept. 6, 1927.

Reg. No. 299,231. Registered Nov. 22, 1932. JAMES H. RHODES & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.



FOR STEEL WOOL AND PUMICE STONE.
Claims use since January 1914.

Reg. No. 301,392. Registered Feb. 28, 1933. JAMES H. RHODES & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.



FOR STEEL WOOL PUT UP IN SMALL CLOTH COVERED BLOCKS.
Claims use since Sept. 10, 1931.

Reg. No. 332,344. Registered Feb. 11, 1936. COLUMBIAN ROPE COMPANY, Auburn, N. Y., a corporation of New York. Republished by registrant.

The drawing is lined for the colors red, white, and blue.
FOR BONDED BODIES OR ARTICLES COMPOSED ESSENTIALLY OF VEGETABLE FIBERS USED FOR BUFFING PURPOSES OR FOR SUPPORTING ABRASIVE MATERIALS.
Claims use since on or about May 6, 1935.

Reg. No. 333,915. Registered Apr. 14, 1936. COLUMBIAN ROPE COMPANY, Auburn, N. Y., a corporation of New York. Republished by registrant.

The drawing is lined for the colors red, white, and blue.
FOR BONDED BODIES OR ARTICLES COMPOSED ESSENTIALLY OF VEGETABLE FIBERS USED FOR BUFFING PURPOSES AND FOR SUPPORTING ABRASIVE MATERIALS.
Claims use since on or about May 6, 1935.

Reg. No. 333,936. Registered Apr. 14, 1936. ROYAL SOAP & CHEMICAL COMPANY, Los Angeles, Calif. Republished by Floyd L. Eddy, Los Angeles, Calif.

LOYAL

FOR HOUSEHOLD CLEANSER, MECHANIC'S PASTE SOAP, METAL AND GLASS POLISH, AND MECHANIC'S SOAP FOR THE HANDS.
Claims use since July 16, 1931.

Reg. No. 339,241. Registered Sept. 29, 1936. JAMES H. RHODES & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

"DC"

FOR STEEL WOOL PUT UP IN FINGER PROTECTION FORM.
Claims use since January 1933.

Reg. No. 342,244. Registered Jan. 12, 1937. JAMES H. RHODES & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

BEAVER
STEEL WOOL

The words "Steel Wool" are disclaimed.
FOR STEEL WOOL.
Claims use since Sept. 22, 1920.

Reg. No. 342,245. Registered Jan. 12, 1937. JAMES H. RHODES & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

UNIVERSAL
QUALITY
STEEL
WOOL

The words "Quality Steel Wool" are disclaimed.
FOR STEEL WOOL.
Claims use since Sept. 22, 1920.

Reg. No. 387,817. Registered June 3, 1941. ADVANCE ALUMINUM CASTINGS CORP., Chicago, Ill., a corporation of Illinois. Republished by registrant.

WOW

FOR CLEANING AND POLISHING MATERIAL AND STEEL WOOL PADS FOR CLEANING AND POLISHING COOKING UTENSILS AND THE LIKE, AND OTHER METAL ARTICLES.
Claims use since October 1925.

Reg. No. 397,662. Registered Sept. 15, 1942. CHAS. W. YOUNG & Co., Philadelphia, Pa. Republished by G. B. Young, doing business as United States Soap Manufacturing, Philadelphia, Pa.

CYGNET SOAP

The word "Soap" is disclaimed, apart from the mark as shown.
FOR SOAP.
Claims use since Mar. 31, 1905.

Reg. No. 403,546. Registered Sept. 28, 1943. JAMES H. RHODES & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

NAVAJO

FOR CHAMOIS FOR CLEANSING AND POLISHING PURPOSES.
Claims use since Apr. 21, 1941.

Reg. No. 403,547. Registered Sept. 28, 1943. JAMES H. RHODES & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Chalet

FOR CHAMOIS FOR CLEANSING AND POLISHING PURPOSES.
Claims use since July 1, 1941.

Reg. No. 413,686. Registered May 8, 1945. THE EMULSOL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

EMULSEPT

FOR BACTERICIDAL DETERGENTS.
Claims use since on or about Sept. 4, 1941.

Reg. No. 417,308. Registered Oct. 23, 1945. C-Z CHEMICAL COMPANY, Beloit, Wis. Republished by Allied Home Products Corporation, Beloit, Wis., a corporation of Wisconsin.

MARVEL DIP

The word "Dip" is disclaimed apart from the mark as shown.
FOR LIQUID GLASS CLEANER.
Claims use since on or about Sept. 12, 1939.

Reg. No. 423,911. Registered Sept. 17, 1946. DON BAXTER, INC., Glendale, Calif., a corporation of Nevada. Republished by registrant.

DETERGEX

FOR ALKALINE DETERGENT ADAPTED FOR CLEANING BLOOD TRANSFUSION EQUIPMENT, SURGICAL INSTRUMENTS, AND HOSPITAL LABORATORY GLASSWARE.
Claims use since Apr. 27, 1944.

Reg. No. 427,073. Registered Jan. 28, 1947. JAMES H. RHODES & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

EAGER BEAVER

FOR STEEL WOOL.
Claims use since Aug. 9, 1945.

Reg. No. 428,975. Registered Apr. 15, 1947. JAMES H. RHODES & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

COLOSO

FOR STEEL WOOL, PUMICE, AND OTHER POLISHING STONES.
Claims use since Jan. 30, 1945.

CLASS 5

ADHESIVES

Reg. No. 112,219. Registered Aug. 22, 1916. JAMES H. RHODES & COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The legends appearing on the drawing are disclaimed.
FOR STONE-CEMENT AND STONE-PUTTY.
Claims use since about June 1895.

Reg. No. 418,114. Registered Dec. 4, 1945. PHELAN-FAUST PAINT MFG. CO., St. Louis, Mo., a corporation of Missouri. Republished by registrant.

CEMENTSPAR

FOR ADHESIVE CEMENT FOR ATTACHING LABELS WHICH MAY ALSO BE APPLIED OVER THE LABELS AFTER THEY HAVE BEEN ATTACHED TO FORM A TRANSPARENT WATER AND OIL REPELLANT FINISH.
Claims use since Sept. 8, 1943.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 52,798. Registered May 15, 1906. ALBERT B. YOUNG, Buffalo, N. Y. Republished by Cling-Surface Company, Buffalo, N. Y., a corporation of New York.

Sozo-nux

FOR EXTERNAL REMEDY FOR ANIMALS.
Claims use since Aug. 19, 1903.

Reg. No. 71,170. Registered Nov. 3, 1908. FLORENCE V. LIPPMAN, Savanah, Ga. Republished by Clarence H. Cohen, Augusta, Ga.

PPP

FOR MEDICINE USED AS A BLOOD PURIFIER.
Claims use since about Jan. 1, 1880.

Reg. No. 86,257. Registered Apr. 23, 1912. NORTHAM WARREN, New York, N. Y. Republished by Northam Warren Corporation, Stamford, Conn., a corporation of New York.

CUTEX

FOR CUTICLE REMOVER IN LIQUID FORM.
Claims use since Nov. 10, 1911.

Reg. No. 92,021. Registered June 10, 1913. NORTHAM WARREN, New York, N. Y. Republished by Northam Warren Corporation, Stamford, Conn., a corporation of New York.

Cutex

FOR NAIL BLEACH, ROUGE FOR NAILS, SKIN, AND LIPS, TALCUM POWDER AND NAIL POLISH.
Claims use since Aug. 24, 1912.

Reg. No. 92,779. Registered July 29, 1913. THE BACORN COMPANY, Elmira, N. Y., a corporation of New York. Republished by registrant, present location Elmira Heights, N. Y.

Forkola

FOR A REMEDY FOR COLDS, CATARRH, TONSILITIS, PNEUMONIA, HEADACHE, NEURALGIA, COUGH, SORE THROAT, ECZEMA, CROUP, SCALDS, BURNS, HAY-FEVER, PILES, CUTS, BRUISES, SPRAINS, SALT-RHEUM, TOOTHACHE, QUINSY, EARACHE, POISON-IVY POISONING, SUNBURN, RHEUMATISM, CHILBLAINS, ASTHMA, AND BRONCHITIS.
Claims use since Feb. 15, 1911.

Reg. No. 96,159. Registered Apr. 7, 1914. ABRAHAM D. MURPHEY, Cincinnati, Ohio. Republished by The Odorono Company, Inc., Stamford, Conn., a corporation of New York.

ODORONO

FOR TOILET LOTION FOR PREVENTING EXCESSIVE PERSPIRATION.
Claims use since July 1, 1909.

Reg. No. 119,266. Registered Nov. 13, 1917. FRANK S. COLWELL, doing business as The Almoline Company, Pawnee City, Nebr. Republished by registrant.

ALMOLINE

FOR SALVE OR BALM FOR TREATMENT OF COLD, CATARRH, HAY FEVER, CROUP, WHOOPING COUGH, PILES, SORENESS OF THE MUSCLES, BOILS, SORE FEET, SCALP DISEASE, ECZEMA, AND KINDRED DISEASES.
Claims use since Feb. 12, 1914.

Reg. No. 181,309. Registered Mar. 18, 1924. ANTONINO R. MARTINO, doing business as Italy Laboratories, New York, N. Y. Republished by Italy Laboratories, Inc., New York, N. Y., a corporation of New York.

Dr. Martino's Radio Lax

FOR LAXATIVE TABLETS.
Claims use since Sept. 1, 1923.

Reg. No. 193,807. Registered Jan. 6, 1925. OTIS CLAPP & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

TALIZIN

FOR TOILET POWDER.
Claims use since Jan. 1, 1909.

Reg. No. 199,867. Registered June 16, 1925. MORANA INCORPORATED, New York, N. Y. Republished by Van Ameringen-Haebler, Inc., New York, N. Y., a corporation of New York.

Boussine

FOR AROMATIC COMPOUNDS SUITABLE FOR PERFUMING PURPOSES.
Claims use since Feb. 13, 1925.

Reg. No. 225,416. Registered Mar. 15, 1927. ALBERT B. YOUNG, doing business as Barnes Company, Buffalo, N. Y., assignor to Cling-Surface Company, Buffalo, N. Y., a corporation of New York. Republished by Cling-Surface Company, Buffalo, N. Y., a corporation of New York.

FOR BALSAMS FOR BURNS, WOUNDS, CHAPPED HANDS, SUNBURN, AND INSECT STINGS.
Claims use since Jan. 28, 1926.

Reg. No. 252,647. Registered Feb. 12, 1929. ANTONINO R. MARTINO, doing business as Italy Laboratories, New York, N. Y. Republished by Italy Laboratories, Inc., New York, N. Y., a corporation of New York.

The word "Nori" is disclaimed.
FOR BLOOD AND NERVE TONIC.
Claims use since Aug. 1, 1927.

Reg. No. 267,974. Registered Mar. 4, 1930. PLEXO PREPARATIONS, INC., New York, N. Y., a corporation of New York. Republished by registrant.

PLEXOLAN

FOR COLD CREAMS, CLEANSING CREAMS, REFRESHING CREAMS, AND MEDICINAL PREPARATIONS HAVING HEALING PROPERTIES SUITABLE FOR CHAPPED SKIN, ROUGH SKIN, IRRITATED SKIN, ABRASIONS, PIMPLES, SKIN ERUPTIONS, ECZEMA, CORNS, CALLOUSES, WIND BURN, SUNBURN, AND SIMILAR AILMENTS.
Claims use since Aug. 28, 1929.

Reg. No. 290,139. Registered Dec. 22, 1931. THE EMULSOL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

EMARGOL

FOR EMULSION AND MARGARINE IMPROVING SUBSTANCES, PARTICULARLY EMULSIFYING AGENTS AND SUBSTANCES FOR PREVENTING "WEEPING" OR "LEAKING," AND FOR PREVENTING SPATTERING DURING FRYING.
Claims use since Dec. 2, 1929.

Reg. No. 290,226. Registered Dec. 22, 1931. OTIS CLAPP & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

PHENOCASALATE

FOR LAXATIVE.
Claims use since July 17, 1931.

Reg. No. 294,696. Registered June 7, 1932. WATERLOX, INC., Detroit, Mich. Republished by The Empire Varnish Company, Cleveland, Ohio, a corporation of Ohio.

WATERLOX

FOR TRANSPARENT LIQUID CHEMICAL WATERPROOFING COMPOUND FOR STEEL, LINOLEUM, RUBBER, CORK, WOOD, TEXTILES, PAPER, LEATHER, CANVAS, CEMENT, AND PLASTER, AND FOR MIXING WITH PAINTS AND VARNISHES OR USED OVER THEM AND AS A VEHICLE FOR ALUMINUM AND GOLD BRONZE POWDERS.
Claims use since Dec. 18, 1931.

Reg. No. 296,982. Registered Aug. 30, 1932. WATERLOX, INC., Detroit, Mich. Republished by The Empire Varnish Company, Cleveland, Ohio, a corporation of Ohio.

FOR TRANSPARENT LIQUID CHEMICAL WATERPROOFING COMPOUND FOR STEEL, LINOLEUM, RUBBER, CORK, WOOD, TEXTILES, PAPER, LEATHER, CANVAS, CEMENT, AND PLASTER, AND FOR MIXING WITH PAINTS AND VARNISHES OR USED OVER THEM AND AS A VEHICLE FOR ALUMINUM AND GOLD BRONZE POWDERS.
Claims use since Dec. 18, 1931.

Reg. No. 297,470. Registered Sept. 13, 1932. OTIS CLAPP & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

MENALGESIA

FOR SEDATIVE.
Claims use since Apr. 23, 1932.

Reg. No. 298,541. Registered Nov. 1, 1932. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

FUNG-O

FOR LIQUID AGRICULTURAL FUNGICIDES.
Claims use since Dec. 28, 1925.

Reg. No. 300,163. Registered Jan. 10, 1933. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

TRI-TOX-CIDE

FOR AGRICULTURAL INSECTICIDES.
Claims use since June 11, 1932.

Reg. No. 300,577. Registered Jan. 24, 1933. OTIS CLAPP & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

CALCACAINE

FOR ANTACID ANTI-PYRETIC TABLET.
Claims use since July 13, 1932.

Reg. No. 311,791. Registered Apr. 3, 1934. OTIS CLAPP & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

PALBROMA

FOR SEDATIVE.
Claims use since May 7, 1932.

Reg. No. 312,355. Registered Apr. 24, 1934. OTIS CLAPP & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

OBTUNDORRHOID

FOR OINTMENT FOR RECTAL APPLICATION.
Claims use since May 1914.

Reg. No. 315,522. Registered July 31, 1934. OTIS CLAPP & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

OCASOL

FOR EMULSION OF MINERAL OIL.
Claims use since Jan. 24, 1934.

Reg. No. 315,523. Registered July 31, 1934. OTIS CLAPP & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

DIMACID

FOR ANTIACID TABLET.
Claims use since Jan. 18, 1934.

Reg. No. 318,039. Registered Oct. 16, 1934. THE HAMILTON LABORATORIES, INC., Hamilton, Ohio, a corporation of Delaware. Republished by registrant, present location Asheville, N. C.

MERPHENYL

FOR ANTISEPTIC TOPICAL PREPARATIONS OF THE NATURE OF OINTMENT, SOLUTIONS, PASTES, AND POWDERS.
Claims use since Apr. 9, 1934.

Reg. No. 324,454. Registered May 21, 1935. BECK KOLLER & CO., INC., Detroit, Mich. Republished by Reichhold Chemicals, Inc., Detroit, Mich., a corporation of Delaware.

Beckolin

FOR SYNTHETIC OIL FOR USE IN THE INDUSTRIAL ARTS SUCH AS IN THE MANUFACTURE OF LINOLEUM OIL CLOTH, SHADE CLOTH, PRINTING INKS, AND THE LIKE.
Claims use since Nov. 14, 1934.

Reg. No. 342,290. Registered Jan. 12, 1937. THE SKYBRITE COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

RUSTTOX

The words "of Rust" are disclaimed.
FOR RUST INHIBITING COMPOUNDS FOR STOPPING AND PREVENTING CORROSION ON METALS.
Claims use since on or about Apr. 1, 1931.

Reg. No. 354,771. Registered Feb. 22, 1938. OTIS CLAPP & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

CORELS

FOR LAXATIVE.
Claims use since Sept. 10, 1937.

Reg. No. 354,772. Registered Feb. 22, 1938. OTIS CLAPP & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

LACTIVES

FOR LAXATIVE TABLET.
Claims use since Sept. 10, 1937.

Reg. No. 355,191. Registered Mar. 8, 1938. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

JAP-RO-CIDE

FOR INSECTICIDE ESPECIALLY ADAPTED FOR JAPANESE BEETLES.
Claims use since July 18, 1936.

Reg. No. 356,424. Registered Apr. 26, 1938. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

ROTOFUME

The lining is for shading only.
FOR LIQUID AGRICULTURAL INSECTICIDES.
Claims use since Nov. 21, 1932.

Reg. No. 359,183. Registered Aug. 9, 1938. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

Wilson's FORM-O-DUST

The words "Dust" and "Wilson's" are disclaimed. The lining in the drawing is for shading only.
FOR INSECTICIDE AND FUNGICIDE ADAPTED FOR TREATING SEED AND SOIL.
Claims use since Mar. 15, 1936.

Reg. No. 364,993. Registered Feb. 21, 1939. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

Wilson's RID-O-RAT

The word "Wilson's" is disclaimed.
FOR EXTERMINATOR FOR RATS AND OTHER RODENTS.
Claims use since March 1933.

Reg. No. 364,994. Registered Feb. 21, 1939. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

Wilson's SOIL-O-GAS

The words "Wilson's," "Soil," and "Gas" are disclaimed.
FOR PREPARATION TO BE APPLIED TO THE SOIL FOR DESTROYING INSECTS, VERMIN, AND THE LIKE.
Claims use since March 1933.

Reg. No. 366,860. Registered May 2, 1939. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

SUPER-CIDE

FOR PLANT INSECTICIDES.
Claims use since Nov. 15, 1938.

Reg. No. 369,579. Registered Aug. 1, 1939. PEARSON PHARMACAL COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

dri-dew

FOR DEODORANT.
Claims use since Apr. 8, 1938.

Reg. No. 372,192. Registered Oct. 24, 1939. DIXIE LABORATORIES, INC., Martinsville, Va., a corporation of Virginia. Republished by registrant.

OINTORUB

FOR MEDICINAL SALVE OR OINTMENT TO BE USED BY LOCAL APPLICATION AND FOR EXTERNAL USE ONLY.
Claims use since May 15, 1939.

Reg. No. 372,193. Registered Oct. 24, 1939. DIXIE LABORATORIES, INC., Martinsville, Va., a corporation of Virginia. Republished by registrant.

FOR LINIMENT USED IN THE TREATMENT OF MUSCULAR ACHES AND PAINS, TIRED AND ACHING FEET, CORNS, BUNIONS, INSECT BITES, SUNBURN, SPRAINS, STIFF JOINTS, CUTS, AND BURNS.
Claims use since May 15, 1939.

Reg. No. 381,001. Registered Sept. 10, 1940. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

MON-O-SPRA

The word "Spra" is disclaimed apart from the mark as shown.
FOR COMBINED INSECTICIDE AND FUNGICIDE.
Claims use since Mar. 8, 1940.

Reg. No. 383,031. Registered Nov. 19, 1940. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

WILSONITE

FOR INSECTICIDES AND FUNGICIDES.
Claims use since Apr. 8, 1930.

Reg. No. 384,519. Registered Jan. 21, 1941. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

TRI-ROSE SURE SPRAY

The words "Rose Spray" are disclaimed.
FOR INSECTICIDE-FUNGICIDE.
Claims use since Mar. 16, 1938.

Reg. No. 385,996. Registered Mar. 25, 1941. WILLIAM COOPER & NEPHEWS, INCORPORATED, Chicago, Ill., a corporation of Illinois. Republished by registrant.

VITA-VURV

FOR A CONDITIONING VITAMIN PREPARATION FOR USE AS A DIETARY SUPPLEMENT IN FEEDING DOGS.
Claims use since Aug. 9, 1940.

Reg. No. 391,910. Registered Dec. 2, 1941. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

SPI-TOX

The word "Tox" is disclaimed.
FOR INSECTICIDES.
Claims use since December 1937.

Reg. No. 396,974. Registered Aug. 11, 1942. AMERICAN GLOSSITE CO., INCORPORATED, New York, N. Y., a corporation of New York. Republished by registrant, present location Putnam, Conn.

GLOSSITE

FOR GLOSSY COATING FOR PAPER PRODUCTS.
Claims use since Jan. 2, 1942.

Reg. No. 401,376. Registered May 11, 1943. THE HAMILTON LABORATORIES, INC., Hamilton, Ohio, a corporation of Delaware. Republished by registrant, present location Asheville, N. C.

MERFENELOPE

FOR PACKAGED GERMICIDE FOR CONTROL OF PULP AND PAPER MILL SLIMES.
Claims use since Nov. 24, 1942.

Reg. No. 411,353. Registered Jan. 16, 1945. PHELAN-FAUST PAINT MFG. CO., St. Louis, Mo., a corporation of Missouri. Republished by registrant.

KEMA* TOX

The drawing is lined for the color red. The word "Tox" is disclaimed apart from the mark as shown.
FOR CHEMICAL PREPARATION FOR USE IN THE CONTROL OF TERMITES.
Claims use since July 1943.

Reg. No. 411,369. Registered Jan. 16, 1945. THE EMULSOL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

EMULSEPT

FOR CONCENTRATED TOPICAL BACTERICIDE AND FUNGICIDE.
Claims use since on or about Sept. 4, 1941.

Reg. No. 418,353. Registered Dec. 18, 1945. OLD DUTCH INDUSTRIAL PRODUCTS CO., INC., Harrison, N. J., a corporation of New Jersey. Republished by registrant.

ACE

FOR SHOE DYES.
Claims use since February 1944.

Reg. No. 432,210. Registered Aug. 26, 1947. WHITE LABORATORIES, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

OTOMIDE

FOR A PREPARATION FOR THE PREVENTION AND TREATMENT OF ACUTE AND CHRONIC LOCALIZED INFECTIONS, SPECIFICALLY OF THE MIDDLE AND EXTERNAL EAR.
Claims use since Nov. 21, 1944.

Reg. No. 432,464. Registered Sept. 2, 1947. THE UNITED PIECE DYE WORKS, Lodi, N. J., a corporation of New Jersey. Republished by registrant.

UNIDURE

FOR CHEMICAL PREPARATION FOR TREATING AND FINISHING FABRICS TO RENDER THE SAME CREASE RESISTANT.
Claims use since Feb. 17, 1944.

Reg. No. 432,475. Registered Sept. 2, 1947. GEORGE R. PARKINSON, Katonah, N. Y. Republished by registrant.

EROS

FOR PERFUMES AND TOILET WATERS.
Claims use since July 24, 1946.

CLASS 7

CORDAGE

Reg. No. 102,999. Registered Mar. 16, 1915. COLUMBIAN ROPE COMPANY, Auburn, N. Y., a corporation of New York. Republished by registrant.

The triangle is lined to indicate the colors red, white, and blue.
FOR TWINE, ROPE, AND CORDAGE MADE OF VEGETABLE FIBER.
Claims use since Sept. 8, 1914.

Reg. No. 128,335. Registered Jan. 6, 1920. COLUMBIAN ROPE COMPANY, Auburn, N. Y., a corporation of New York. Republished by registrant.

BLUE GRASS

FOR TWINE COMPOSED OF A MIXTURE OF HEMP AND JUTE.
Claims use since Sept. 30, 1918.

Reg. No. 129,652. Registered Mar. 9, 1920. COLUMBIAN ROPE COMPANY, Auburn, N. Y., a corporation of New York. Republished by registrant.

The representation of the rope is disclaimed. The trademark consists of a red yarn and blue yarn separated by a plain Manila yarn incorporated in and constituting one of the strands of which the rope is formed.
FOR ROPE OF VEGETABLE FIBER.
Claims use since Mar. 6, 1919.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

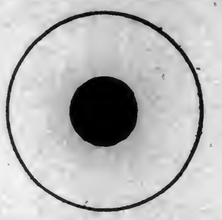
Reg. No. 427,698. Registered Feb. 18, 1947. THE L. C. SMITH GUN COMPANY, INCORPORATED, Fulton, N. Y., a corporation of New York. Republished by registrant.

L. C. SMITH

FOR GUNS AND PARTS THEREOF.
Claims use since 1893.

Reg. No. 427,699. Registered Feb. 18, 1947. THE L. C. SMITH GUN COMPANY, INCORPORATED, Fulton, N. Y., a corporation of New York. Republished by registrant.

HUNTER



FOR GUNS AND PARTS THEREOF.
Claims use since 1893.

Reg. No. 428,276. Registered Mar. 18, 1947. THE L. C. SMITH GUN COMPANY, INCORPORATED, Fulton, N. Y., a corporation of New York. Republished by registrant.

CROWN

FOR GUNS AND PARTS THEREOF.
Claims use since 1912.

Reg. No. 429,575. Registered May 6, 1947. THE MARLIN FIREARMS COMPANY, New Haven, Conn., a corporation of Connecticut. Republished by registrant.

The drawing consists of a circle of solid black surrounded by a white annular band.
FOR RIFLES AND SHOTGUNS.
Claims use since Dec. 5, 1921.

CLASS 10

FERTILIZERS

Reg. No. 256,777. Registered May 21, 1929. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

RED TOP

FOR HYDRATED LIME SOIL CONDITIONERS AND FERTILIZERS.
Claims use since June 27, 1927.

Reg. No. 313,203. Registered May 22, 1934. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

Wilson's EUREKA

FOR FERTILIZER PREPARATION.
Claims use since Nov. 27, 1933.

Reg. No. 364,299. Registered Jan. 24, 1939. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

RHODY-LIFE

FOR SOIL CONDITIONER IN THE NATURE OF A FERTILIZER, ESPECIALLY ADAPTED FOR RAISING RHODODENDRONS, AZALEAS, ETC.
Claims use since June 1926.

Reg. No. 373,612. Registered Dec. 12, 1939. CENTRAL CHEMICAL CORPORATION OF MARYLAND, Hagerstown, Md., a corporation of Maryland. Republished by registrant.

CENTRAL CHEMICAL CORPORATION OF MD. GARDENRITE HAGERSTOWN MARYLAND

The words "Dependable Quality" and "Hagerstown, Maryland," are disclaimed.
FOR FERTILIZERS.
Claims use since Mar. 15, 1939.

Reg. No. 393,389. Registered Feb. 10, 1942. CENTRAL CHEMICAL CORPORATION OF MARYLAND, Hagerstown, Md., a corporation of Maryland. Republished by registrant.

FAMOUS
FARMPHOS

FOR FERTILIZERS.
Claims use since June 5, 1941.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 141,549. Registered Apr. 26, 1921. FLEXOTILE FLOOR COMPANY, Rockford, Ill., a corporation of Illinois. Republished by registrant.

FLEXOTILE

FOR MAGNESITE COMPOSITIONS IN POWDERED FORM FOR MAKING PLASTIC BUILDING MATERIAL.
Claims use since Nov. 23, 1912.

Reg. No. 220,483. Registered Nov. 9, 1926. FARNAM CHESHIRE LIME COMPANY, Cheshire, Mass. Republished by United States Gypsum Company, Chicago, Ill., a corporation of Illinois.

The drawing is lined for the color blue. The words or letter press appearing in the drawing are disclaimed, apart from the mark as shown.
FOR LIME.
Claims use since about 1908.

Reg. No. 227,057. Registered Apr. 26, 1927. W. R. MEADOWS, INC., Elgin, Ill., a corporation of Illinois. Republished by registrant.

SEALTIGHT

FOR ROAD JOINTS, THAT IS, EXPANSIBLE AND COMPRESSIBLE MEMBERS ADAPTED FOR INSERTION BETWEEN EXPANSIBLE AND CONTRACTIBLE PORTIONS OF CONCRETE STRUCTURES SUCH AS ROADWAYS.
Claims use since March 1926.

Reg. No. 227,075. Registered Apr. 26, 1927. THE VENTILOUVRE COMPANY, Bridgeport, Conn. Republished by The Ventilouvre Co., Incorporated, Marietta, Ohio, a corporation of Connecticut.

PANELOUVRE

FOR BUILT-IN VENTILATORS, TRANSOMS, DOORS, WINDOWS, AND PANELS.
Claims use since May 5, 1925.

Reg. No. 256,897. Registered May 28, 1929. STEWART INSO BOARD COMPANY, South St. Joseph, Mo. Republished by United States Gypsum Company, Chicago, Ill., a corporation of Illinois.

INSOBOARD

The word "Board" is disclaimed.
FOR INSULATING BUILDING BOARD.
Claims use since Dec. 1, 1927.

Reg. No. 284,010. Registered June 9, 1931. W. R. MEADOWS, INC., Elgin, Ill., a corporation of Illinois. Republished by registrant.

Guardian of the Pavement

The word "Pavement" is disclaimed apart from the mark shown.
FOR CONSTRUCTION MATERIALS COMPOSED OF ASPHALT AND FIBRE OR OTHER BINDING MATERIAL THEREFOR—NAMELY, EXPANSION JOINT.
Claims use since Feb. 28, 1930.

Reg. No. 286,033. Registered Aug. 11, 1931. ROCK OF AGES CORPORATION, Burlington, Vt., a corporation of Vermont. Republished by registrant, present location Barre, Vt.

FOR POLISHED BLOCKS OR SLABS OF GRANITE, AND GRANITE HEWN, DRESSED, POINTED,

PITCHED, POLISHED, OR OTHERWISE MANUFACTURED AND SUITABLE FOR USE FOR MONUMENTAL OR BUILDING PURPOSES.
Claims use since May 22, 1924.

Reg. No. 303,754. Registered June 6, 1933. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The words "Grand Prise" are disclaimed. The drawing is lined for the colors blue and red.
FOR LIME AND PLASTER.
Claims use since Feb. 26, 1917.

Reg. No. 395,439. Registered May 26, 1942. THE CAMBRIDGE TILE MANUFACTURING CO., Cincinnati, Ohio, a corporation of Ohio. Republished by registrant.

Suntile

FOR CERAMIC, CLAY WALL TILE, GLAZED AND UNGLAZED.
Claims use since Mar. 1, 1936.

Reg. No. 398,613. Registered Nov. 10, 1942. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

STRUCTO-CAL

FOR GYPSUM PLASTER.
Claims use since April 1940.

Reg. No. 429,606. Registered May 6, 1947. WESTERN PUMISTONE PRODUCTS COMPANY, San Carlos, Calif., a corporation of California. Republished by registrant.

The representation of the block is disclaimed.
FOR PUMICE BUILDING BLOCKS.
Claims use since March 1946.

Reg. No. 431,645. Registered July 29, 1947. ASBESTOS SUPPLY COMPANY OF SEATTLE, Seattle, Wash., a corporation of Washington. Republished by registrant.

FOR FURNACE CEMENT AND HOT WATER TANK COVERS OF CORRUGATED ASBESTOS PAPER.
Claims use since February 1928.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 214,819. Registered July 6, 1926. VICTOR BALATA & TEXTILE BELTING CO., New York, N. Y., a corporation of Pennsylvania. Republished by registrant.

Petrol

FOR BELT CLAMPS OR BELT FASTENERS.
Claims use since July 1, 1925.

Reg. No. 324,644. Registered May 28, 1935. RAY BURNER COMPANY, San Francisco, Calif. Republished by Ray Oil Burner Co., San Francisco, Calif., a corporation of Delaware.

VISCOSITY

FOR METAL CONDUITS, LIQUID CONTROL VALVES, PIPES, AND PIPE FITTINGS.
Claims use since November 1934.

Reg. No. 325,041. Registered June 11, 1935. WHEATLAND TUBE COMPANY, Wheatland, Pa., a corporation of Pennsylvania. Republished by registrant.

QFR

FOR METAL TUBES AND PIPES.
Claims use since June 20, 1934.

Reg. No. 387,960. Registered June 10, 1941. ADVANCE ALUMINUM CASTINGS CORP., Chicago, Ill., a corporation of Illinois. Republished by registrant.

The words "Maid," "Cast," and "Aluminum" are disclaimed apart from the mark as shown.
FOR COOKING UTENSILS COMPOSED OF ALUMINUM ALLOY—TO WIT, SAUCE PANS, PANCAKE

GRIDDLES, DUTCH OVENS, PRESERVING KETTLES, FRENCH ROASTERS, TEA KETTLES, DRIP COFFEE MAKERS, AND OMELET PANS.
Claims use since Oct. 1, 1937.

Reg. No. 417,609. Registered Nov. 6, 1945, PLASTIC DIE AND TOOL CORPORATION, Los Angeles, Calif., a corporation of California. Republished by registrant.

DURABRITE

FOR PLASTIC PRODUCTS — NAMELY, SINK STRAINERS AND DUST PANS.
Claims use since Feb. 1, 1944.

Reg. No. 424,950. Registered Oct. 29, 1946. GLOBE VALVE CORPORATION, Delphi, Ind., a corporation of Indiana. Republished by registrant.

The word "Line" is disclaimed.
FOR METALLIC TUB FILLERS AND VALVES FOR USE IN CONNECTION WITH CONVENTIONAL BATH TUBS, SINKS, LAVATORIES, AND THE LIKE.
Claims use since Oct. 24, 1945.

CLASS 14

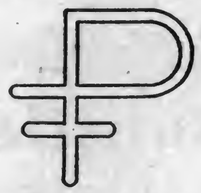
METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 34,562. Registered Apr. 24, 1900. J. H. WILLIAMS & Co., Brooklyn, N. Y., a corporation of New York. Republished by registrant, present location Buffalo, N. Y.

VULCAN

FOR METAL FORGINGS.
Claims use since on or about May 1, 1899.

Reg. No. 150,982. Registered Jan. 10, 1922. THE SUPERIOR SHEET STEEL COMPANY, Louisville, Ohio. Republished by Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois.



The words "Copper Laden Steel Sheets" are disclaimed apart from the mark as shown.
FOR ROLLED STEEL SHEETS HAVING A COPPER CONTENT.
Claims use since Apr. 22, 1921.

Reg. No. 197,761. Registered Apr. 21, 1925. CANTON FORGE & AXLE COMPANY, Canton, Ohio. Republished by Poor & Company, Chicago, Ill., a corporation of Delaware.

FOR STEEL FORGINGS, RAIL ANCHORS, RAIL-ANCHOR SPRINGS, AND RAILROAD SWITCH CLAMPS.
Claims use since about Mar. 3, 1924.

Reg. No. 348,421. Registered July 27, 1937. PORTER FORGE AND FURNACE INC., Everett, Mass., a corporation of Massachusetts. Republished by registrant.

FOR DROP FORGINGS.
Claims use since July 1936.

Reg. No. 375,112. Registered Feb. 6, 1940. THE SUPERIOR SHEET STEEL COMPANY, Canton, Ohio. Republished by Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois.

LASTIKOTE

FOR GALVANIZED STEEL SHEETS.
Claims use since Sept. 26, 1939.

Reg. No. 393,800. Registered Mar. 3, 1942. J. H. WILLIAMS & Co., Buffalo, N. Y., a corporation of New York. Republished by registrant.

The word "Forgings" is disclaimed apart from the mark as shown.
FOR FERROUS AND NONFERROUS METAL FORGINGS.
Claims use since Sept. 17, 1941.

CLASS 15

OILS AND GREASES

Reg. No. 134,443. Registered Aug. 31, 1920. D. A. STUART & Co., Chicago, Ill. Republished by D. A. Stuart Oil Co., Limited, Chicago, Ill., a corporation of Canada.

SUPER-KOOL

The word "Kool" is disclaimed.
FOR CUTTING OILS.
Claims use since on or about July 1, 1918.

Reg. No. 347,996. Registered July 13, 1937. BAY OIL COMPANY, INC., Providence, R. I. Republished by American Mineral Spirits Company, Chicago, Ill., a corporation of Illinois.

FOR RANGE AND FURNACE FUEL OILS.
Claims use since Feb. 11, 1937.

Reg. No. 428,477. Registered Mar. 25, 1947. ROCKWELL MANUFACTURING COMPANY, Pittsburgh and Homewood, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant, present location Pittsburgh, Pa.

FOR VALVE LUBRICATING GREASES.
Claims use since Dec. 13, 1945.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 60,252. Registered Feb. 5, 1907. BOSTON VARNISH COMPANY, Everett, Mass. Republished by Boston Varnish Company, Everett, Mass., a corporation of Massachusetts.

Kyanize

FOR VARNISH, JAPAN, DRIERS, AND LIQUID FILLERS.
Claims use since 1891.

Reg. No. 204,186. Registered Oct. 6, 1925. PHELAN-FAUST PAINT MANUFACTURING COMPANY, St. Louis, Mo. Republished by Phelan-Faust Paint Mfg. Co., St. Louis, Mo., a corporation of Missouri.

TRIPLE LINK

FOR SEMIPASTE PAINT.
Claims use since December 1902.

Reg. No. 212,425. Registered May 4, 1926. SANTA FE BUILDERS SUPPLY COMPANY, Santa Fe, N. Mex., a corporation of New Mexico. Republished by registrant.

SANBUSCO

FOR PAINTS, VARNISHES, STAINS, AND ENAMELS, EACH IN DRY PASTE, LIQUID, AND READY MIXED FORMS.
Claims use since Feb. 1, 1925.

Reg. No. 212,426. Registered May 4, 1926. SANTA FE BUILDERS SUPPLY COMPANY, Santa Fe, N. Mex., a corporation of New Mexico. Republished by registrant.

FOR PAINTS, VARNISHES, STAINS, AND ENAMELS, EACH IN DRY PASTE, LIQUID, AND READY MIXED FORMS.
Claims use since Feb. 1, 1925.

Reg. No. 216,048. Registered Aug. 3, 1926. PHELAN-FAUST PAINT MANUFACTURING COMPANY, St. Louis, Mo. Republished by Phelan-Faust Paint Mfg. Co., St. Louis, Mo., a corporation of Missouri

Phelac

FOR BRUSHING LACQUER.
Claims use since Jan. 2, 1926.

Reg. No. 254,389. Registered Mar. 26, 1929. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

TEXTONE

FOR PLASTIC WALL COVERINGS IN THE NATURE OF PAINT.
Claims use since Mar. 5, 1924.

Reg. No. 324,190. Registered May 14, 1935. BECK, KOLLER & Co., INC., Detroit, Mich. Republished by Reichhold Chemicals, Inc., Detroit, Mich., a corporation of Delaware.

Beckolin

FOR SYNTHETIC OIL FOR USE IN PAINTS, VARNISHES, ENAMELS, LACQUERS, AND THE LIKE.
Claims use since Nov. 14, 1934.

Reg. No. 336,917. Registered July 21, 1936. PHELAN-FAUST PAINT MFG. CO., St. Louis, Mo. Republished by Phelan-Faust Paint Mfg. Co., St. Louis, Mo., a corporation of Missouri.

SAVOY-SATIN

FOR READY-MIXED ENAMEL FOR INTERIOR USE.
Claims use since Jan. 2, 1936.

Reg. No. 355,205. Registered Mar. 8, 1938. BECK, KOLLER & Co., INC., Detroit and Ferndale Station, Detroit, Mich. Republished by Reichhold Chemicals, Inc., Detroit, Mich., a corporation of Delaware.

BECKAMINE

FOR SYNTHETIC RESIN, FOR USE IN PAINTS, VARNISHES, ENAMELS, LACQUERS, AND THE LIKE.
Claims use since Oct. 1, 1937.

Reg. No. 362,984. Registered Dec. 6, 1938. PHELAN-FAUST PAINT MFG. CO., St. Louis, Mo. Republished by Phelan-Faust Paint Mfg. Co., St. Louis, Mo., a corporation of Missouri.

The words "House Painting System," "Crawling," "Blistering," "Cracking," "Peeling," and "Fading" are disclaimed.
FOR READY-MIXED PAINTS.
Claims use since the 18th day of July, 1938.

Reg. No. 368,225. Registered June 13, 1939. R. A. MYERS & COMPANY, St. Paul, Minn. Republished by Sterling Jones Laboratories, doing business as R. A. Myers & Company, St. Paul, Minn., a corporation of Minnesota.

DURE-O-WAX

The word "WAX" is disclaimed.
FOR FLOOR WAX.
Claims use since October 1937.

Reg. No. 397,184. Registered Aug. 25, 1942. TECHNICAL COLOR & CHEMICAL WORKS, INC., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

RED-DEVIL

The drawing is lined for the color red.
FOR PAINTS AND ENAMELS—NAMELY, FLOOR, DECK, FLAT, GLOSS, INTERIOR, EXTERIOR, ASPHALTUM, STIPPLE, QUICK DRYING, AND ALUMINUM PAINTS AND ENAMELS; EXTERIOR AND INTERIOR VARNISHES; PAINT AND VARNISH REMOVER; OIL STAINS, VARNISH STAINS, AND PENETRATING STAINS; PAINT PIGMENTS AND PAINT OILS; LACQUERS; PREPARED, FINISHED SHELLACS, AND SHELLAC VARNISHES, AND POLISHES—NAMELY, PREPARED FURNITURE PASTE, NO RUBBING FLOOR AND FURNITURE, PASTE WAX-WOOD, WAX AND AUTO POLISHES.
Claims use since May 1917.

Reg. No. 397,185. Registered Aug. 25, 1942. TECHNICAL COLOR & CHEMICAL WORKS, INC., Brooklyn, N. Y., a corporation of New York. Republished by registrant.

RED-DEVIL

The drawing is lined for the color red.
FOR PAINTS AND ENAMELS—NAMELY, FLOOR, DECK, FLAT, GLOSS, INTERIOR, EXTERIOR, ASPHALTUM, STIPPLE, QUICK DRYING, AND ALUMINUM PAINTS AND ENAMELS; EXTERIOR AND INTERIOR VARNISHES; PAINT AND VARNISH REMOVER; OIL STAINS, VARNISH STAINS, AND PENETRATING STAINS, PAINT PIGMENTS, AND PAINT OILS; LACQUERS; PREPARED FINISHED SHELLACS AND SHELLAC VARNISHES, AND POLISHES—NAMELY, PREPARED FURNITURE PASTE, NO RUBBING FLOOR AND FURNITURE, PASTE WAX-WOOD, WAX AND AUTO POLISHES.
Claims use since Jan. 1, 1934.

Reg. No. 414,752. Registered June 26, 1945. PHELAN-FAUST PAINT MFG. CO., St. Louis, Mo., a corporation of Missouri. Republished by registrant.

Hydroflex

FOR WATERPROOF PAINTS; SWIMMING POOL FINISH—NAMELY, AN ENAMEL OR PAINT; CONCRETE FLOOR FINISHES—NAMELY, FINISHING PAINTS OR ENAMELS, EXTERIOR ENAMELS; AND WATERPROOFING ENAMELS.
Claims use since Mar. 15, 1938.

Reg. No. 415,688. Registered Aug. 14, 1945. C-Z CHEMICAL COMPANY, Beloit, Wis. Republished by Allied Home Products Corporation, Beloit, Wis., a corporation of Wisconsin.

DANCENE

FOR POWDERED WAX FOR DANCE FLOORS.
Claims use since on or about Feb. 10, 1939.

Reg. No. 416,703. Registered Sept. 25, 1945. C-Z CHEMICAL COMPANY, Beloit, Wis. Republished by Allied Home Products Corporation, Beloit, Wis., a corporation of Wisconsin.

PERMA-SURF

FOR LIQUID HARD DRYING FINISH FOR FURNITURE.
Claims use since on or about Aug. 5, 1939.

Reg. No. 420,610. Registered Apr. 23, 1946. SOUTHERN STATES IRON ROOFING COMPANY, Savannah, Ga., a corporation of Georgia. Republished by registrant.

Swif-Cote

The word "Cote" is disclaimed.
FOR PAINTS IN PASTE FORM.
Claims use since April 1944.

Reg. No. 421,034. Registered May 14, 1946. SOUTHERN STATES IRON ROOFING COMPANY, Savannah, Ga., a corporation of Georgia. Republished by registrant.

NuGalv

FOR PAINTS IN LIQUID AND POWDER FORM.
Claims use since Sept. 10, 1940.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 426,456. Registered Dec. 24, 1946. CONSTITUTION TOBACCO PRODUCTS CORP., New York, N. Y., a corporation of New York. Republished by registrant.

CONSTITUTION

FOR CIGARETTES.
Claims use since Mar. 25, 1946.

CLASS 19

VEHICLES

Reg. No. 195,900. Registered Mar. 3, 1925. PACKARD MOTOR CAR COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

ASK THE MAN WHO OWNS ONE

FOR AUTOMOBILES AND CONSTRUCTIVE PARTS THEREOF.
Claims use since 1923.

Reg. No. 197,998. Registered Apr. 28, 1925. CANTON FORGE & AXLE COMPANY, Canton, Ohio. Republished by Poor & Company, Chicago, Ill., a corporation of Delaware.

FOR RAILWAY CAR-PARTS—NAMELY, ROLLERS FOR SIDE BEARINGS FOR CARS; AND FOR AUTOMOBILE PARTS, AND PARTICULARLY AUTOMOBILE AXLES, AUTOMOBILE DOUBLE ARMS, AUTOMOBILE SINGLE ARMS, AUTOMOBILE YOKES, AUTOMOBILE HUBS, AND AUTOMOBILE KNUCKLES.
Claims use since on or about May 20, 1924.

Reg. No. 231,645. Registered Aug. 23, 1927. INTERNATIONAL MOTOR COMPANY, New York, N. Y. Republished by Mack Manufacturing Corporation, New York, N. Y., a corporation of Delaware.

FOR MOTOR TRUCKS.
Claims use since on or about Sept. 21, 1921.

Reg. No. 361,574. Registered Oct. 25, 1938. THE TRAILER COMPANY OF AMERICA, Cincinnati, Ohio. Republished by The Trailmobile Company, Cincinnati, Ohio, a corporation of Delaware.

Trailmobile

FOR TRAILERS.
Claims use since May 26, 1915.

Reg. No. 403,036. Registered Aug. 31, 1943. THE TRAILER COMPANY OF AMERICA, Cincinnati, Ohio. Republished by The Trailmobile Company, Cincinnati, Ohio, a corporation of Delaware.

TRAIL-AXLE

The word "Axle" is disclaimed.
FOR UNITARY AXLE ASSEMBLY SOLD AS AN AUXILIARY FOR TRUCK OR TRACTOR.
Claims use since January 1941.

Reg. No. 411,996. Registered Feb. 13, 1945. THE TRAILER COMPANY OF AMERICA, Cincinnati, Ohio. Republished by The Trailmobile Company, Cincinnati, Ohio, a corporation of Delaware.

FOR TRAILERS AND PARTS THEREOF, SPECIFICALLY BODIES AND CABS SOLD AS SEPARATE UNITS.
Claims use since Dec. 5, 1912.

Reg. No. 412,137. Registered Feb. 20, 1945. THE TRAILER COMPANY OF AMERICA, Cincinnati, Ohio. Republished by The Trailmobile Company, Cincinnati, Ohio, a corporation of Delaware.

TRAILMOBILE

FOR TRAILERS OF THE TWO AND FOUR WHEEL TYPE AND PARTS THEREOF.
Claims use since May 26, 1915.

Reg. No. 416,949. Registered Oct. 9, 1945. THE TRAILER COMPANY OF AMERICA, Cincinnati, Ohio. Republished by The Trailmobile Company, Cincinnati, Ohio, a corporation of Delaware.

HIGHLAND

FOR AUTOMOTIVE TRAILERS AND PARTS THEREOF, SPECIFICALLY BODIES AND CABS SOLD AS SEPARATE UNITS.
Claims use since Dec. 5, 1912.

Reg. No. 420,114. Registered Mar. 26, 1946. THE HEIL CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

COLECTO-PAK

The word "Pak" is disclaimed.
FOR REFUSE BODIES DEVISED FOR MOUNTING ON VEHICLES.
Claims use since Apr. 15, 1945.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 201,874. Registered Aug. 11, 1925. THE CONTINENTAL FIBRE COMPANY, Newark, Del. Republished by Continental-Diamond Fibre Company, Newark, Del., a corporation of Delaware.

The trade-mark appears as two black lines in the body of the material. The representation of a section of the material is disclaimed apart from the mark as shown.
FOR LAMINATED MATERIAL FOR ELECTRICAL INSULATION.
Claims use since June 20, 1923.

Reg. No. 248,787. Registered Oct. 30, 1928. CRESCENT INSULATED WIRE & CABLE CO. INC., Trenton, N. J., a corporation of New Jersey. Republished by registrant.

The word "Cord" is disclaimed apart from the mark as shown.
FOR RUBBER-SHEATHED PORTABLE ELECTRIC CORD.
Claims use since about April 1928.

Reg. No. 288,885. Registered Nov. 10, 1931. RAY BURNER COMPANY, San Francisco, Calif. Republished by Ray Oil Burner Co., San Francisco, Calif., a corporation of Delaware.

FOR ELECTRICAL APPARATUS, PARTICULARLY AUTOMATIC ELECTRICAL CONTROL UNITS FOR OIL AND GAS BURNERS AND OIL AND GAS FURNACES.
Claims use since April 1931.

Reg. No. 294,311. Registered May 24, 1932. EDWARDS AND COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

MELOCALL

FOR ELECTRICAL GOODS AND APPARATUS, CONSISTING OF ELECTRICALLY OPERATED BELLS SUCH AS SIGNALING BELLS.
Claims use since on or about Dec. 10, 1931.

Reg. No. 294,313. Registered May 24, 1932. EDWARDS AND COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

BUZACALL

FOR ELECTRICAL GOODS AND APPARATUS, CONSISTING OF ELECTRICALLY OPERATED BUZZERS.
Claims use since on or about Dec. 10, 1931.

Reg. No. 294,934. Registered June 14, 1932. EDWARDS AND COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ANNUNCIETTE

FOR ELECTRICAL GOODS AND APPARATUS CONSISTING OF ELECTRICALLY OPERATED VISUAL SIGNALING DEVICES AND COMBINED AUDIBLE AND VISUAL SIGNALING DEVICES, SUCH AS ARE USED IN HOUSEHOLDS, OFFICES, PULLMAN CARS, HOTELS, AND THE LIKE TO DESIGNATE VISUALLY THE SOURCE OF THE CALL AND TO SIGNAL AUDIBLY THE FACT THAT A VISUAL SIGNAL HAS BEEN ACTUATED.
Claims use since on or about Dec. 10, 1931.

Reg. No. 318,385. Registered Oct. 23, 1934. EDWARDS AND COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.

ADAPT-A-BEL

FOR ELECTRICAL GOODS AND APPARATUS, PARTICULARLY ELECTRICALLY OPERATED BELLS.
Claims use since on or about June 22, 1934.

Reg. No. 338,282. Registered Sept. 1, 1936. CRESCENT INSULATED WIRE & CABLE COMPANY, Trenton, N. J., a corporation of New Jersey. Republished by registrant.

PERMACORD

The word "Cord" is disclaimed.
FOR PORTABLE ELECTRICAL CORDAGE AND CONDUCTORS.
Claims use since Feb. 19, 1935.

Reg. No. 338,306. Registered Sept. 1, 1936. CRESCENT INSULATED WIRE & CABLE CO. INC., Trenton, N. J., a corporation of New Jersey. Republished by registrant.

CRES FLEX

FOR NONMETALLIC SHEATHED CABLE FOR CARRYING ELECTRICAL CURRENTS.
Claims use since Aug. 24, 1931.

Reg. No. 338,307. Registered Sept. 1, 1936. CRESCENT INSULATED WIRE AND CABLE COMPANY, Trenton, N. J., a corporation of New Jersey. Republished by registrant.

ENDURITE

FOR RUBBER INSULATION APPLIED TO ELECTRICAL CONDUCTORS AND WIRE CABLE AND CONDUCTORS HAVING SAID RUBBER INSULATION APPLIED THERETO.
Claims use since Sept. 17, 1935.

Reg. No. 382,223. Registered Oct. 22, 1940. R. G. HASKINS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

HASKINS

FOR EITHER HAND OPERATED OR FOOT-PEDAL OPERATED, ELECTRICALLY DRIVEN MACHINES FOR TAPPING, SCREW DRIVING, NUT SETTING AND CONTAINER CAPPING; ALSO PORTABLE ELECTRICALLY DRIVEN MULTIPURPOSE MACHINES USING FLEXIBLE SHAFTS FOR TRANSMITTING POWER.
Claims use since Jan. 17, 1940.

Reg. No. 386,322. Registered Apr. 1, 1941. EAGLE SIGNAL CORPORATION, Moline, Ill., a corporation of Massachusetts. Republished by registrant.

MULTIFLEX

FOR TIMING DEVICES FOR CONTROLLING ELECTRICAL CIRCUITS AND PARTS OF SUCH DEVICES.
Claims use since July 22, 1940.

Reg. No. 390,697. Registered Sept. 30, 1941. DINGS MAGNETIC SEPARATOR CO., Milwaukee, Wis., a corporation of Wisconsin. Republished by registrant.

The drawing is lined for the color red but is not restricted to the color.

FOR MAGNETS, MAGNETIC CLUTCHES, AND MAGNETIC SEPARATORS.

Claims use since on or about Apr. 23, 1941.

Reg. No. 410,218. Registered Nov. 14, 1944. CRESCENT INSULATED WIRE & CABLE CO., INC., Trenton, N. J., a corporation of New Jersey. Republished by registrant.

CreSynCord

The word "Cord" is disclaimed apart from the mark as shown.

FOR FLEXIBLE INSULATED ELECTRIC WIRE OR CORD.

Claims use since Mar. 21, 1944.

Reg. No. 419,108. Registered Feb. 5, 1946. SYNTRON COMPANY, Homer City, Pa., a corporation of Delaware. Republished by registrant.

SYNTRON

FOR UNITARY HAND ELECTRIC HAMMERS AND THEIR CONTROLS; ELECTRIC DRILLS, GRINDERS, SANDERS, AND HACK SAWS; AND INDUSTRIAL ELECTRIC PAPER JOGGERS AND PACKERS; ELECTRIC VIBRATORS AND THEIR CASES, ELECTRIC CONCRETE FORM VIBRATORS, AND ELECTRIC CONTROLLERS THEREFOR.

Claims use since Dec. 1, 1922.

Reg. No. 422,407. Registered July 23, 1946. EITEL-McCULLOUGH, INC., San Bruno, Calif., a corporation of California. Republished by registrant.

Eimac

FOR GAS TUBES, WHEREIN ELECTRODES ARE MOUNTED IN AN ENVELOPE CONTAINING GASEOUS ATMOSPHERE—NAMELY, MERCURY VAPOR RECTIFIERS AND THE LIKE.

Claims use since January 1938.

Reg. No. 42,226. Registered Mar. 8, 1904. J. H. WILLIAMS & CO., Brooklyn, N. Y., a corporation of New York. Republished by registrant, present location Buffalo, N. Y.

VULCAN

FOR PIPE WRENCHES AND PIPE-VISES.

Claims use since June 1897.

Reg. No. 51,576. Registered Apr. 17, 1906. THE WHITMAN & BARNES MANUFACTURING COMPANY, Akron, Ohio. Republished by J. H. Williams & Co., Buffalo, N. Y., a corporation of New York.

BULL DOG

FOR WRENCHES.

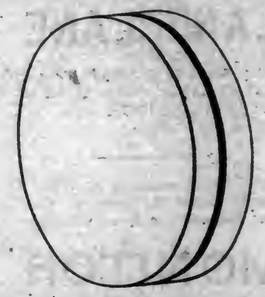
Claims use since about the year 1894.

Reg. No. 99,667. Registered Sept. 8, 1914. UNIVERSAL WINDING COMPANY, Boston, Mass., and Providence, R. I. Republished by Universal Winding Company, Cranston, R. I., a corporation of Massachusetts.

FOR WINDING-MACHINES AND PARTS THEREOF, FOR WINDING YARN, THREAD, AND OTHER MATERIAL IN CONES, COPS, BOBBINS, AND PACKAGES.

Claims use since July 1, 1893.

Reg. No. 110,779. Registered June 13, 1916. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y., a corporation of New York. Republished by registrant.



The representation of a type-writing machine is disclaimed.

FOR TYPEWRITING MACHINES AND PARTS THEREOF.

Claims use since October 1911.

80 Claims. (Cl. 235—58)

1. In a front-feed machine of the class described adapted to be driven through cycles of operation, the combination of front-feed means for receiving and holding a work sheet in front-fed position, said front-feed means being movable from a closed to an open-throat condition and vice versa, a normally inactive electric motor, direct independent driving connections between said motor and said front-feed means, and means controlling said motor and driving connections operable to energize said motor and to condition said driving connections to cause said front-feed means to be moved to open-throat condition by said motor.

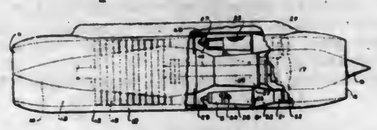
PLANT PATENTS

GRANTED AUGUST 24, 1948

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

805
CARNATION PLANT
Henry Jacob Symonds, Decorah, Iowa
Application March 28, 1947, Serial No. 737,822
1 Claim. (Cl. 47—60)

The new and distinct variety of carnation plant substantially as herein shown and described, characterized particularly by its healthy and vigorous growth, its prolific production of flowers, its long, slender but strong stems, its non-splitting calyx, and the novelty and permanency of the bright Rose Red to Tyrian Rose color of its large, high-centered flowers.



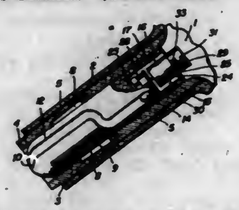
PATENTS

GRANTED AUGUST 24, 1948

2,447,481
METHOD OF SYNTHESIZING ALIPHATIC MERCAPTANS AND SULFIDES
Richmond T. Bell and Carlisle M. Thacker, Highland Park, Ill., assignors to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application December 31, 1943, Serial No. 516,548
21 Claims. (Cl. 260—609)

1. The method of synthesizing aliphatic mercaptans and sulfides from hydrogen sulfide and olefinic hydrocarbons which comprises chemically reacting a mixture of hydrogen sulfide and olefinic hydrocarbons in contact with anhydrous aluminum chloride in the presence of anhydrous hydrogen chloride the molal ratio of olefinic hydrocarbons to hydrogen sulfide being within the limits of 10:1 to 1:10.

2,447,482
TURBINE APPARATUS
Edwin E. Arnold, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 25, 1945, Serial No. 590,285
2 Claims. (Cl. 263—19)

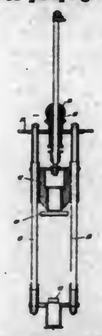


1. In a gas turbine plant combustor supplied with fuel and furnishing motive fluid mixture of products of combustion and air for operating a turbine driving a compressor which supplies air to the combustor to support combustion of fuel and to mix with the resulting products of combustion to produce a motive fluid mixture of suitable temperature, said combustor including an elongated wall structure bounded externally by a space supplied with air under pressure and bounding an interior elongated passage which diverges in the downstream direction; and means for supplying fuel to the upstream end of said passage; said wall structure having openings providing for flow of air from the external bounding space to the interior passage at the upstream end of the latter and throughout its length, including upstream and downstream sections bounding combustion zone and mixing zone portions of the passage, and embodying a foraminous wall member providing said downstream section with the aforesaid openings of the latter constituted by its foraminations and a refractory wall member joined to the foraminous wall member to provide said upstream section with the refractory wall member bounding the combustion zone portion of the passage; and said openings being so distributed over said sections that combustion of the fuel, aided by incandescence of the refractory wall member, is completed in the combustion zone portion of the passage and the resulting products of combustion are mixed with air in the mixing zone portion of the passage to provide motive fluid mixture of suitable temperature leaving the downstream end of the passage.

2,447,483
ADDITIVES FOR SILICONE OILS
Hayward R. Baker, Mount Rainier, Md., and William A. Zisman, Washington, D. C., assignors to the United States of America as represented by the Secretary of the Navy
No Drawing. Application April 15, 1944, Serial No. 531,241
4 Claims. (Cl. 252—49.6)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

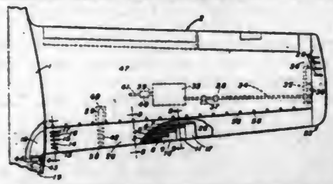
1. A hydraulic and lubricating fluid composition comprising essentially a silicone fluid and from about 0.1% to about 2.0% by weight of a corrosion inhibiting compound selected from the group consisting of fatty acids, chloroaryl substituted fatty acids, alkaryl substituted fatty acids and hydroaryl substituted fatty acids wherein the fatty acid chain contains from about 10 to about 18 carbon atoms.

2,447,484
NONREFILLABLE BOTTLE
Lester M. Bumgarner, Port Townsend, Wash.
Application February 20, 1946, Serial No. 648,878
3 Claims. (Cl. 215—23)



1. In a non-refillable bottle having a neck, said neck having longitudinally extending opposed tapered slots formed in the inner surface of the wall of said neck, a valve supporting plug slidably disposed in said bottle neck, spring projected locking pins disposed transversely of said plug adapted to seat in the opposed tapered slots in the bottle neck for locking said plug in said bottle neck, said plug being formed with a valve chamber in its inner end, oppositely disposed longitudinally extending offset slots formed in the outer surface of said plug communicating at their inner ends with the inner end of said valve chamber, a longitudinally ported valve body in said valve chamber, a valve stem disposed longitudinally and centrally through said valve body, and valve closure caps on the ends of said valve stem being alternately engageable with the ends of said valve body as said body is tilted to pouring position and then is placed in its normal upright position.

2,447,485
SUPERSONIC MEASURING APPARATUS
Pierre Biquard, Boulogne-Billancourt, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application September 27, 1943, Serial No. 504,085
In France June 4, 1942
4 Claims. (Cl. 178—44)



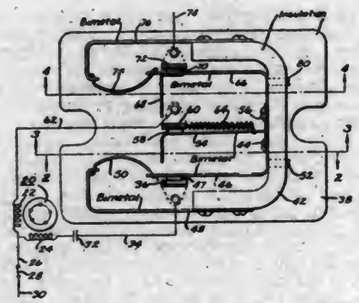
1. In a device for determining time intervals by passing supersonic waves from one supported

element to another supported element and measuring the distance between said elements, a liquid filling the entire path of said supersonic waves between said elements and comprising a mixture of substances of definite composition and having opposing thermal coefficients with respect to the speed of propagation of supersonic

waves therethrough, said mixture having a thermal coefficient just sufficient in sign and degree to offset substantially variations in the distance between said elements brought about by variation of the coefficient of thermal expansion of the means supporting both elements over a predetermined range of temperatures for example the so-called room temperature range.

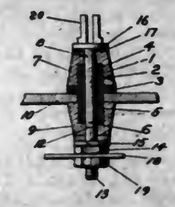
2,447,486
CONDENSER SYSTEM FOR AIRPLANE ENGINES
Jerry A. Burke, Jr., United States Navy
Application April 17, 1945, Serial No. 588,881
8 Claims. (Cl. 244—57)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In an airplane wing; means within said wing forming a first conduit for exhaust gases, so arranged that the exhaust gases passing through said conduit are in heat exchange relationship with the air passing over the exterior surface of the wing; means within said wing forming a second conduit for atmospheric air so arranged that the air within said second conduit and the exhaust gases in said first conduit are in heat exchange relationship; means for delivering atmospheric air to and discharging the air from said second conduit; baffle means for collecting condensate from said first conduit, and means for storing the condensate.



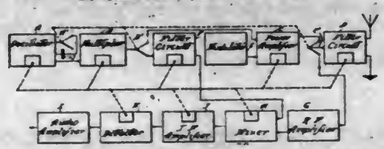
2,447,487
TRAVERSING MECHANISM
George I. Chinn, Detroit, Mich.
Application March 31, 1945, Serial No. 586,014
2 Claims. (Cl. 89—41)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a traversing device for a rotatable turret of a tank vehicle in which the hull of the vehicle has a supporting ring provided on its inner face with a ring gear, and the turret has a ring concentric with the hull ring, is supported on the hull ring and is rotatable relative to the hull ring, the turret being supported by the turret ring, the combination of a housing mounted on the turret ring; a shaft journaled in said housing; a pinion keyed on said shaft and meshing with said ring gear; a counter shaft journaled in said housing; gearing connecting said two



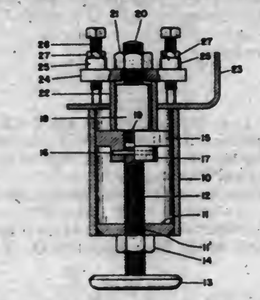
shafts; a second housing mounted on said turret ring; a shaft journaled in said second housing; a third housing mounted on said turret ring; a shaft journaled in said third housing; means connecting both of said last mentioned shafts with said countershaft for driving said countershaft; and a pair of manually operated means mounted in said second and third housings, respectively, for driving said last mentioned shafts, respectively.

2,447,488
SINGLE-PHASE MOTOR CONTROL
Harry F. Clark, Oakwood, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application March 28, 1946, Serial No. 657,792
19 Claims. (Cl. 318—221)



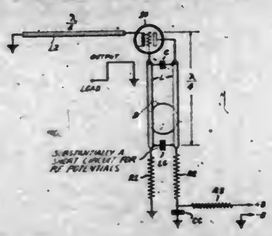
1. A control for an electric motor having main and phase windings comprising a first bimetal strip means and a snap-acting switch contact means connected to and operated to open position by said first strip means upon heating thereof to control the energization of the phase winding, means for heating said first strip means coincidentally with the energization of the phase winding, a second bimetal strip means movable away from said first strip means upon heating and movable toward said strip means upon cooling, said second strip means being provided with means for reclosing said switch contact means, and means for heating said second strip means coincidentally with the energization of the main winding.

2,447,489
LEAD-IN BUSHING
Richard U. Clark, Belmont, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application January 9, 1943, Serial No. 471,897
4 Claims. (Cl. 174—153)



1. A lead-in bushing, comprising a member of resilient material having a passage extending longitudinally therethrough, an electric conductor having a diameter greater than the normal contracted diameter of said passage but sufficiently small to permit the conductor to be forced through said passage without exceeding the elastic limits of said material, an outer shell having an interior surface conforming in shape to and fitting closely with an exterior surface of said resilient member when said member is in its normal unexpanded state, a flange on said member, and means for compressing said flange against and retaining it on a rim of said shell whereby when the parts are assembled said conductor expands said resilient member to exert radial pressure upon the interior walls of said shell and thereby avoids leakage between said conductor and said resilient member or between said member and said shell.

2,447,490
RADIO TRANSMITTING AND RECEIVING SYSTEM
Arthur A. Collins, Cedar Rapids, Iowa, assignor to Collins Radio Company, a corporation of Iowa
Application February 28, 1944, Serial No. 524,204
10 Claims. (Cl. 250—13)



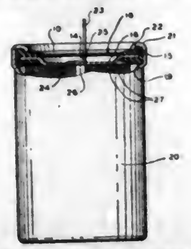
4. Radio apparatus of the character described, including: wave generating means variable over a predetermined frequency range; means for amplifying and transmitting waves of any selected frequency in said range; means for displacing the frequency of the waves a given percentage of the selected frequency; a superheterodyne receiving system having an intermediate frequency amplifier tunable over a band corresponding to the difference between the initial and displaced frequencies of said waves throughout said range, a mixer delivering its output to the intermediate frequency amplifier, and means for coordinating the variation of the generating means with the tuning of the intermediate frequency amplifier; and selectively operable means for connecting the wave generating means to the amplifying means in one operative position and for actuating the displacing means and connecting the wave generating means to the mixer of the receiving system in another operative position, whereby the displaced waves serve as the local heterodyning waves for said receiving system and the received frequency is identical with the transmitted frequency.

2,447,491
SLEEVE HOLDING DEVICE
Ernest L. Corley, Charleston, S. C.
Application August 29, 1945, Serial No. 613,404
1 Claim. (Cl. 113—99)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

An adjustable clamping device adapted to hold a cylindrical sleeve in position for welding in an opening in a metal plate comprising a cylindrical body adapted to abut said metal plate, an end plate secured in said cylindrical body, a bolt threadedly engaged with said end plate, a movable plate for supporting said sleeve secured to the end of said bolt and slideably engaged in said cylindrical body and adapted to be adjustably positioned thereby relative to said metal plate, a dismountable spindle adapted to fit within said sleeve threadedly engaged in said movable plate, a projection coaxially secured and extending from said spindle, a closing plate loosely mounted on said projection, means for adjustably positioning said closing plate with respect to said metal plate, and means mounted on said projection for securing said closing plate relative to said metal plate and said movable plate,whereby said sleeve is securely supported on said spindle and between said movable plate and said closing plate.

2,447,492
TIMING MODULATION
James Bruce Crawley, Washington, D. C., assignor to Radio Corporation of America, a corporation of Delaware
Application April 15, 1944, Serial No. 531,269
6 Claims. (Cl. 179—171.5)

1. In electrical apparatus, a high frequency circuit arrangement including parallel lines the electrical length of which determines in part the tun-



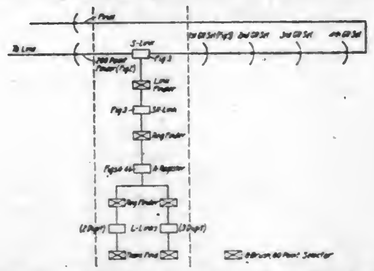
ing of the circuit and the frequency of operation thereof, means for substantially short-circuiting said lines at one end thereof, a metallic element located adjacent said lines intermediate the ends thereof, said metallic element comprising a surface parallel to said lines the dimension of which surface along the length of the lines is an appreciable fraction of the lines length so that said metallic element is electrically coupled to a substantial part of the length of the lines, and means for controlling the position of the metallic element with respect to the lines in accordance with control potentials, the arrangement being such that movement of the member toward the lines increases the frequency to which the circuit is tuned and movement of the member away from the lines decreases the frequency to which the circuit is tuned.

2,447,493

SEALING DEVICE FOR DRY CELLS

Arthur F. Daniel, Fairhaven, N. J., assignor to the United States of America as represented by the Secretary of War

Application April 12, 1945, Serial No. 588,049
4 Claims. (Cl. 136—133)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



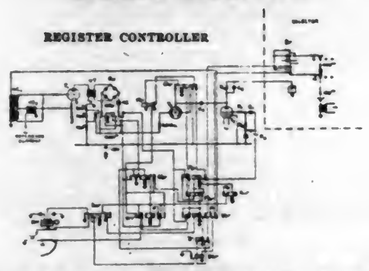
4. In a primary cell having electrodes, a metallic disc contacting one of the electrodes and having an elevated peripheral flange, and a resilient sealing disc over and completely covering the metallic disc and having a thickened peripheral portion with an internal groove which receives the flange of the metallic disc to grip the same and provide a leakproof structure.

2,447,494

TELEPHONE REGISTER CONTROL SYSTEM

Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application April 21, 1944, Serial No. 532,141
13 Claims. (Cl. 179—18)



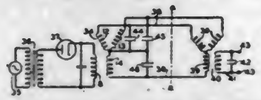
1. In a telephone system, a plurality of lines, means including normally inactive non-numerical and numerical switches for connecting a calling with a called line, a link between said switches, a plurality of registers adapted to be set by calling lines for controlling the operation of the numerical switches, normally inactive switching means for connecting an idle register with a non-numerical and a numerical switch, and means operable upon the initiation of a call for substantially simultaneously starting a non-numerical switch and the switching means to establish a connection between the calling line and a numerical switch and between an idle register and the last-mentioned connection.

2,447,495

REGISTER SWITCH UTILIZING A PLURALITY OF DISCHARGE TUBES

Martinus den Hertog and Lucien Alfred B. Cabes, Antwerp, Belgium, assignors to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application May 8, 1943, Serial No. 486,275
In the Netherlands July 11, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires July 11, 1961
12 Claims. (Cl. 179—18)



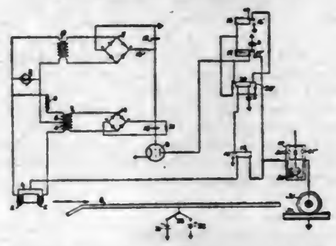
1. In an electrical control system, a variably operable register switch, a plurality of selector switches variably operable in accordance with the operation of said register, each selector having an operating magnet, a control circuit therefor, a plurality of multi-electrode discharge tubes in the register, a first one of said tubes having electrodes in said control circuit, a circuit for controlling a second one of said tubes controlled by the selector, and a control circuit for the first tube controlled by the second tube.

2,447,496

FLUX VALVE SYSTEM AND METHOD OF OPERATION

Marlin C. Depp, Hempstead, Robert S. Curry, Jr., Baldwin, and Caesar F. Fragola, East Hempstead, N. Y., assignors to The Sperry Corporation, a corporation of Delaware

Application February 3, 1944, Serial No. 520,880
1 Claim. (Cl. 177—351)



A flux valve compass system including a flux valve comprising a plurality of relatively radially arranged core legs of permeable magnetic material having their longitudinal axes extending in substantially co-planar relation and bifurcated at their inner ends, a common exciting core extending perpendicular to the longitudinal axes of said legs and interposed between the bifurcated ends of each, an exciting coil on said exciting core and pick-up coils on said core legs positioned outwardly beyond the bifurcated ends thereof, a source of alternating current, a half-wave rectifier connected to said source and with said exciting coil to supply half-wave only exciting current thereto, said valve being characterized by the fact that its signal voltage output is of the same frequency as said alternating current source, and a receiver connected for control by the signal voltages developed in said pick-up coils and energized with currents of the same frequency as that of said current source, whereby a phase-sensitive operation of said receiver at the frequency of the flux valve-exciting current is effected with substantially zero resultant permanent polarization of the flux valve legs to thereby provide accurate compass indications throughout 360°.

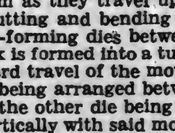
2,447,497

BLOCK ENTRANCE INITIATED TRAIN SIGNALING SYSTEM

Lucien Devaux, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application March 10, 1943, Serial No. 478,696
In France May 29, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires May 29, 1961
19 Claims. (Cl. 246—62)

1. A system for transmitting impulses to a locomotive signal device comprising a paramagnetic track contact, means for feeding current of predetermined polarity between said contact and the rails, a cooperative contact mounted on the locomotive, a source of alternating current carried by said locomotive, a first circuit connecting the locomotive contact with the signal device adapted to be energized on engagement of the locomotive and track contact, and obtaining circuit return via car wheels and rails, and second circuit means, including an electro-magnet mounted on the locomotive to pass close to the track contact, operative to actuate said signal device responsive to inductive influence of the track contact thereon and traversed by current from said alternating current source, and means responsive to said first circuit energizing to render said second and inductively energized circuit inoperative.



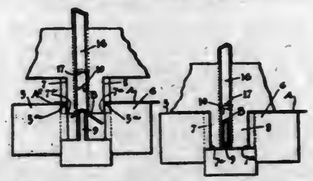
2,447,498

ELECTRICAL FIXTURE OR THE LIKE

George G. Ellner, Long Island, N. Y.

Application March 23, 1944, Serial No. 527,708
4 Claims. (Cl. 240—51.11)

1. An electrical fixture comprising a shell, a support in said shell, said support being hollow, a partition in said support dividing same into sections, a transformer mounted on said support, electrical wiring connected to the primary of said transformer and disposed within one of said sections, other electrical wiring connected to the secondary of said transformer and disposed within another of said sections, sockets mounted on

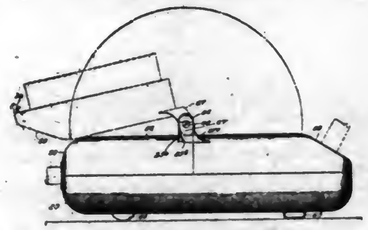


said support, an ultra-violet radiating lamp connected to said sockets, said shell having spaced perforated end walls, a propeller adjacent each of said end walls, a shaft connecting said propellers, and means for driving said shaft.

2,447,499

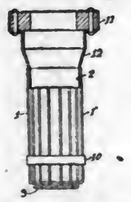
BRUSH-STEM FORMING MACHINE

Anthony S. Erk, Montreal, Quebec, Canada, assignor, by mesne assignments, to Northam Warren Corporation, Stamford, Conn., a corporation of New York



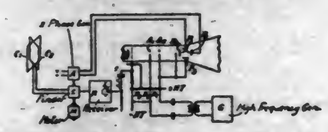
Application March 18, 1946, Serial No. 655,195
9 Claims. (Cl. 153—2)

1. A brush-stem forming machine comprising a pair of stationary, laterally spaced, blank cutters provided with cutting edges extending along their inner upper, longitudinal corner portions, means for feeding sheet material over said cutters so that the sheet material bridges the space between the cutters, a pair of movable, laterally spaced, blank cutters arranged to travel on a vertical path and to be received between the stationary cutters when moved downwardly to their lowermost position, said movable cutters being provided along their outer, lower, longitudinal corner portions with cutting edges coacting with the cutting edges of the stationary cutters to cut a brush-stem blank from the sheet material during downward travel of the movable cutters, a stationary anvil around which the blank is bent into substantially V-shape by the movable cutters as they travel downwardly between the stationary cutters, said anvil being arranged between the stationary cutters, so that it is received in the space between the movable cutters during the blank bending operations, said movable cutters serving to retain and carry the V-shaped blank between them as they travel upwardly following the blank cutting and bending operation, and a pair of tube-forming dies between which the V-shaped blank is formed into a tubular brush-stem during upward travel of the movable cutters, one of said dies being arranged between the movable cutters and the other die being arranged so that it travels vertically with said movable cutters and is also shifted horizontally to and from a tube-forming position beneath the space between the movable cutters, the arrangement being such that, before the movable cutters reach their uppermost position the upward travel of the V-shaped blank is stopped by the tube-forming surface of the die arranged between said cutters and



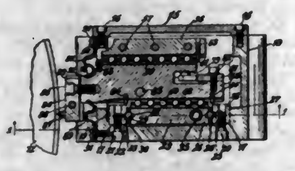
the other die is shifted horizontally to a tube-forming position beneath said blank so that the blank is formed into a tube between the two dies as the horizontally shiftable die continues to travel upwardly with the cutters and relatively to the stationary blank.

2,447,500
TANK TYPE SUCTION CLEANER
Edward A. French, Chicago, Ill., assignor to Birtman Electric Company, a corporation of Illinois
Application October 2, 1944. Serial No. 556,824
7 Claims. (Cl. 183—37)



7. In a tank type cleaner comprising a generally cylindrical, elongated casing having a dust chamber at one end thereof, a closure member forming a part of said casing and serving as a closure for said dust chamber, said closure member having one end pivotally attached to the casing and the opposite end detachably secured to the casing, a screen filter located at the end of the dust chamber adjacent the pivotal attachment of the closure member to the casing, and means on the closure member for sealing the filter in operating position when the closure is shut and freeing the filter for removal from the casing when the closure is in open position, said means including a transverse flange carried by the upper inner surface of the casing behind the filter and a complementary transverse flange carried by the closure and adapted to press on the front of the filter adjacent said first mentioned flange.

2,447,501
GRID ELECTRODE FOR ELECTRON DISCHARGE DEVICES
Roger Glunts, Lyon, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application April 13, 1943, Serial No. 482,902
In France February 15, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires February 15, 1961
7 Claims. (Cl. 250—27.5)

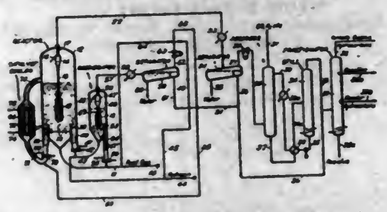


1. A squirrel cage type grid electrode for an electron discharge device comprising sets of at least two adjacent metallic elements of substantially U form, the elements of each set being substantially parallel to one another with their longitudinal arms supported in a cylindrical surface and their transverse portions positioned in a common plane substantially perpendicular to the cylindrical surface, the transverse portions of different sets being arranged in superimposed parallel planes.

2,447,502
SYSTEM FOR RADIO DIRECTION FINDING AND SIMILAR PURPOSES
René Jean Hardy, Paris, France, assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application November 27, 1941, Serial No. 420,655
In France April 20, 1940
Section 1, Public Law 690, August 8, 1946
Patent expires April 20, 1960
5 Claims. (Cl. 343—118)

1. In a direction finder, rotatable radiation direction sensing means, means for rotating said sensing means, a cathode ray indicator including a screen for displaying a luminous spot responsive to said cathode ray, means for rotating said cathode ray relatively to said screen and synchronously with said first mentioned rotating means, means for deflecting said cathode ray radially back and forth during rotation thereof, and spot controlling means responsive to waves from said sensing means for extinguishing the luminous spot produced by said cathode ray and responsive to a minimum of waves from said sensing means for momentarily overcoming said extinguishing effect.

2,447,503
WHEEL DRESSING MECHANISM
James G. Harper and Cecil W. Hopkins, Waynesboro, Pa., assignors to Landis Machine Company, Waynesboro, Pa., a corporation of Pennsylvania
Application April 6, 1944, Serial No. 529,810
6 Claims. (Cl. 125—11)

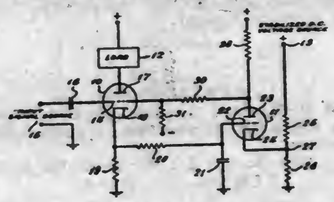


1. In wheel dessing mechanism, a housing, a tool slide carriage, means for mounting said carriage within the housing for reciprocating motion longitudinally of the housing, a bracket transversely positioned within the housing on one end of the carriage and fixed thereto, guide means on the bracket spaced from and extending transversely across the carriage, a tool carrying slide, and anti-friction bearing units between said slide and the carriage and guide means, supporting said slide for reciprocating movement on the carriage in a path substantially at right angles to the path of reciprocation of said carriage.

2,447,504
FLUORODINITROETHANES
Henry B. Hass, West Lafayette, Ind., and Arthur Charles Whitaker, Oakmont, Pa., assignors to Purdue Research Foundation, West Lafayette, Ind., a corporation of Indiana
No Drawing. Application December 7, 1945, Serial No. 633,540
4 Claims. (Cl. 260—644)

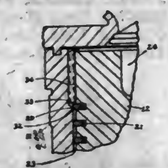
1. 1,2-dichloro-1,2-difluoro-1,2-dinitroethane.

2,447,505
HYDROCARBON SYNTHESIS WITH FLUIDIZED CATALYST REGENERATION
Everett A. Johnson, Park Ridge, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application April 13, 1944, Serial No. 530,875
1 Claim. (Cl. 260—449.6)



The method of producing normally liquid products by a carbon monoxide-hydrogen synthesis reaction which method comprises passing a carbon monoxide-hydrogen mixture upwardly through a reaction zone in contact with a large mass of solid synthesis catalyst regeneratable by hydrogen and of small particle size at such a rate as to produce a liquid-like turbulent dense phase of said catalyst in said zone superimposed by a light catalyst phase, maintaining said zone under conditions of temperature and pressure for effecting reaction of said carbon monoxide and hydrogen to produce normally liquid products, centrifugally separating catalyst particles from the upper light catalyst phase within the reaction zone itself, passing the centrifugally separated catalyst as a downwardly moving column into a zone which is below the level of the dense catalyst phase and at least partially surrounded by said dense catalyst phase in the reaction zone but which is separated from said dense catalyst phase, introducing hydrogen at a low point in said last-named zone and passing catalyst from the base of said column back to said dense catalyst phase through said last-named zone while it is simultaneously undergoing aeration with said hydrogen.

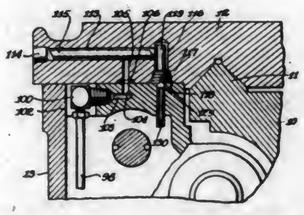
2,447,506
COATING AND IMPREGNATING COMPOSITION
Louis John Jubanowsky, Vaux Hall, N. J., assignor to The Baker Castor Oil Company, Jersey City, N. J., a corporation of New Jersey
No Drawing. Application July 31, 1944, Serial No. 547,519
14 Claims. (Cl. 106—250)



1. A substantially solid, fusible impregnating and coating composition which is resistant to the solvent action of hydrocarbons, which comprises a mixture of a solid, substantially saturated ester of a fatty acid containing more than ten carbon atoms per molecule and a polyhydric alcohol, which ester contains an oxygen atom in its molecular structure other than those present in the ester linkages and which melts above about 50° C., and has an iodine number less than about 10, and 5 to 50% by weight, based on the total mixture, of a non-hydrogenated air-blown unsaturated ester of a polyhydric alcohol and an unsaturated fatty acid derivable from unsaturated vegetable oils.

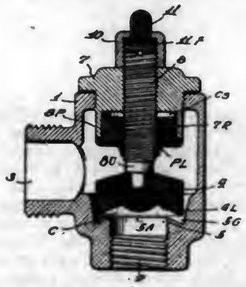
2,447,507
BALANCING CIRCUIT
David E. Kenyon, Smithtown, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application January 16, 1946, Serial No. 641,591
20 Claims. (Cl. 315—27)

1. In a current stabilizing circuit, the combination of a first electron discharge tube having an anode, cathode and control grid; means for supplying an intermittent signal wave to the control grid of said tube; anode and cathode loads coupled to said tube; an averaging circuit; means for applying a cathode potential of said first discharge tube to said averaging circuit at least for a portion of each cycle of said signal wave whereby an averaged potential is obtained; means for providing a reference potential; a second electron discharge tube responsive to the difference between said reference potential and said average potential for generating a control potential; and means for altering the potential on the grid of said first discharge tube in response to said control potential whereby the average current through said anode load remains substantially constant during said portion of each cycle of said signal wave.



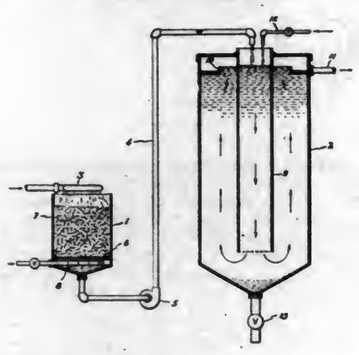
2,447,508
ENGINE CYLINDER
Rudolph B. Kleinfeld, West Salem, Ohio
Application February 12, 1944, Serial No. 522,045
2 Claims. (Cl. 123—193)

1. In a cylinder and piston construction having a fluid chamber at one end, a cylinder wall and a piston wall having a clearance space therebetween, said piston wall adapted to have an end thereof in close proximity to the said chamber at predetermined intervals and having an annular groove spaced from the said end with a ring mounted therein, said ring having a flat annular surface contacting the said cylinder wall so as to seal the said clearance space, the improvement comprising a relief bore in the said cylinder wall extending toward the said chamber from a point in the said wall contacted by an



intermediate portion of the flat annular surface of the said ring when the said end of the said piston wall is at its closest proximity to the said chamber, said relief bore having a diameter substantially equal to the maximum diameter to which the said cylinder wall will normally be worn by the said ring during the life of the cylinder and having a substantial length, said piston wall having a smaller outside diameter in a portion thereof spaced from the said ring and extending to the said end than in the remaining portion thereof so as to form with the juxtapositioned relief bore and cylinder wall a restricted annular conduit from the said chamber of uniform width and of sufficient length to effect a turbulence to the flow of fluid from the said chamber sufficient to scour the conduit surfaces free of abrasive deposit.

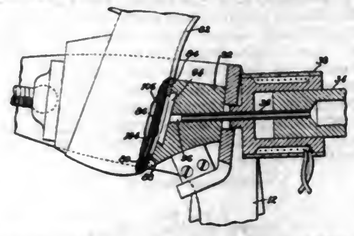
2,447,509
LUBRICATION
Edward H. Kocher, Boonton, N. J., assignor to Auto Research Corporation, a corporation of Delaware
Application August 3, 1940, Serial No. 350,653
3 Claims. (Cl. 184—6)



1. In a machine lubricating installation, a bore system, having communicating bores across a machine structure, the end of one of said bores being recessed to receive a gasket and said gasket being of greater depth than the recess so that upon assembly of the parts it will be compressed into its recess, the inner face of said gasket substantially engaging the lateral wall of said recess, said gasket having oblique side walls spaced from and upon compression being expanded to tightly fit against said lateral wall of the recess.

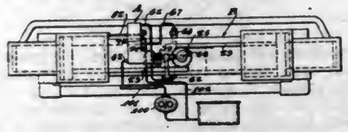
2,447,510
ADJUSTABLE CHECK VALVE
Jesse D. Langdon, Long Beach, Calif.
Application February 5, 1944, Serial No. 521,244
4 Claims. (Cl. 251—50)

1. An adjustable check valve comprising a casing having an inlet and an outlet, one end of said casing closed by a bonnet having a recess with an open end facing said inlet, a packing inserted in said recess and having a stem receiving opening therethru, a valve stem adjustably threaded thru said bonnet and packing and having an inner end projecting toward said inlet, the inner face of said packing being exposed to pressure within said casing, a valve member slidably connected to the end of said valve stem that is toward said inlet and adapted to seat across said inlet, said packing being made of deformable material capable of returning to normal shape after being deformed, the inner end of said stem being of a diameter to pass thru the opening in said packing whereby said valve member will contact said packing when in fully opened position.



2,447,511
METHOD OF TREATING WATER
Walter B. Leaf, Denver, Colo.
Application May 2, 1944, Serial No. 533,683
3 Claims. (Cl. 210—16)

1. A method of removing silica from silica-containing water which comprises forming a silica adsorbing hydroxide by passing a stream of silica-containing water downwardly over a mass of ferrous metal having a high surface to volume ratio and simultaneously passing a stream of air upwardly over the wetted surfaces of the ferrous metal, separating the treated water solution from the ferrous metal mass, next precipitating ferric compounds from the separated water solution by mixing a coagulant comprising an inorganic, water soluble material from the group consisting of alkali metal and alkaline earth metal hydroxides with the solution, and then separating the solids from the liquid of the resulting aqueous suspension solution.

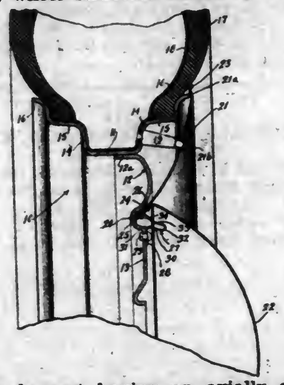


2,447,512
HEEL ATTACHING
James F. Leahy, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application March 22, 1947, Serial No. 736,548
21 Claims. (Cl. 36—24.5)

1. A method for permanently fastening adjacent shoe parts together, which comprises forming the lasted heel seat of a shoe with a central recess extending substantially to the outer edge of the heel seat, providing a heel with plastic retaining means at its attaching face, clamping the said heel in position upon the lasted heel seat, injecting a flowable resin to substantially fill the said central recess and engage the plastic

retaining means, and causing the plastic material to harden to unite the parts.

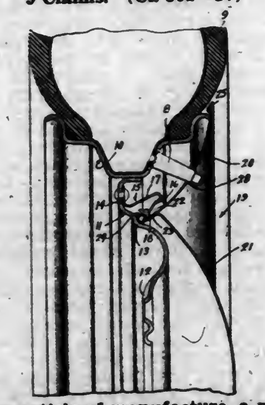
2,447,513
FUEL INJECTION MEANS FOR FREE PISTON ENGINES
Frank M. Lewis, Weston, Mass., assignor, by mesne assignments, to Lima-Hamilton Corporation, Hamilton, Ohio, a corporation of Virginia
Application August 4, 1944, Serial No. 548,116
21 Claims. (Cl. 123—46)



19. In an internal combustion engine of the free piston type having a fuel injection nozzle, a fuel injection passage thereto, and a valve operable to open and close said passage, means forming a chamber having an inwardly opening check valve controlled communication with a fluid pressure supply source and also having a controlled pressure bleed outlet, means operable by the engine pistons to increase the pressure in said chamber a predetermined extent to move the valve to closed position during a compression stroke of the pistons, and means operable by a predetermined compression pressure of the engine to yieldingly oppose movement of the valve to closed position and to overcome said chamber pressure and move the valve to open position for the injection of a fuel charge when the pistons are at or near the terminus of their compression strokes.

2,447,514
METHOD OF DISSOLVING CELLULOSE IN AMMONIACAL COPPER COMPOUNDS
Theodor Lieser, Halle-on-the-Saale, Germany, assignor to American Bemberg Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application December 12, 1940, Serial No. 369,905. In Germany November 13, 1939
4 Claims. (Cl. 106—167)

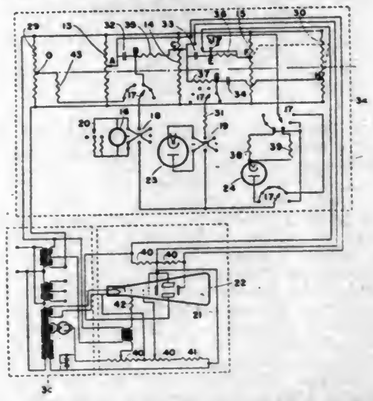
1. A method of dissolving cellulose which comprises treating a cellulose with a solution of ammoniacal copper compounds at normal room temperature and then gradually cooling said solution to a temperature of about —7 to —8° C. to completely dissolve said cellulose therein, said solution comprising a copper compound selected from the group consisting of copper hydroxide, copper sulphate and copper oxychloride dissolved in water containing about 3 to 5.6 per cent by weight of ammonia.



2,447,515
WHEEL COVER
George Albert Lyon, Allenhurst, N. J.
Application November 1, 1943, Serial No. 508,470
5 Claims. (Cl. 301—37)

1. In a wheel structure including a tire rim

and a body part having an axially outwardly opening annular groove, a wheel cover adapted to be mounted in covering relation to the outer side of the wheel structure, separately formed inner and outer circular cover portions, said inner portion having its radially outer margin formed to provide a generally axially inwardly and radially inwardly extending flange, the inner margin of said outer cover portion being disposed in snug face to face relation with the outer face of said flange, an outturned retaining and reinforcing bead on said flange protruding beyond said margin and effectual to lock said cover portions against separation, the united flange and margin cooperating to provide a multi-thickness attachment flange for the cover substantially reinforced by said bead, said bead being received in said groove, and retaining means on said body part holding said bead against the radially outer side of said groove.

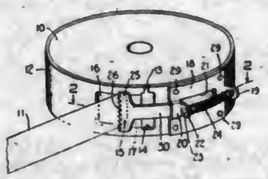


2,447,516
WHEEL COVER
George Albert Lyon, Allenhurst, N. J.
Application April 10, 1944, Serial No. 530,354
9 Claims. (Cl. 301—37)

1. As an article of manufacture, a wheel cover comprising a multiple of concentric and nested

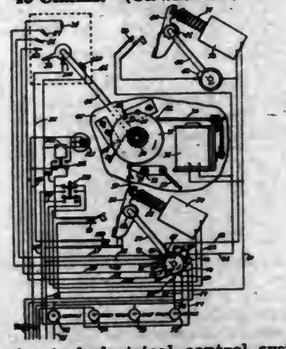
circular portions each having surfaces inclined relative to the vertical and adapted to interfit for establishing a joint between the portions whereby they are held together as a unitary device, there being provided at said junction shoulder means for retaining cooperation with a wheel, one of said portions comprising a plastic annulus adapted to be flexed over the inclined surface of the other portion in the attaching of the two portions together.

2,447,517
ELECTRICAL ANALYZER FOR 45° STRAIN ROSETTE DATA
Samuel S. Manson, Cleveland, Ohio
Application March 12, 1945, Serial No. 582,371
2 Claims. (Cl. 235—61)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



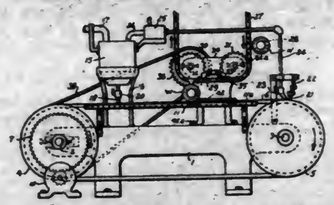
1. In an electric circuit for determining characteristic data about a stress point on the surface of a thin walled structure to which a rosette is applied consisting of three strain gages mounted at 0°, 45° and 90° about said point for providing signals in accordance with said stresses; a source of alternating current, a pair of lines connected to said source, four potentiometers connected in parallel across said lines and having a center reference point, a movable contact on each of said potentiometers controlled by one of three knobs, each knob being connected for moving the contact on one of said potentiometers for adjusting it with respect to the corresponding center reference point in accordance with the signals obtained from the three strain gages respectively, the fourth contact being moved simultaneously a corresponding amount by the third knob in the opposite direction from its center reference point, a branch comprising a reactance and a resistance, of equal magnitude at the frequency of the alterating current used, connected in series between the first and second contacts, another similar branch between the second and third contacts, a third branch having similar elements, reversed, between the second and fourth contacts, means including a multi-position switch for indicating the combined potential across the resistance of said first branch and the reactance of said second branch in one position of said switch, calibrated to show the value of the maximum shear strain, and for indicating the scalar sum of the above combined potential and the potentials across the resistances of the first and third branches in another position of said switch, said sum being calibrated to show the value of the major principal strain, and the scalar difference between said potential and the sum of the other two potentials to show the value of the minor principal strain, said means including a cathode day oscillograph having a radial scale and means for impressing the potentials across the first and second branches on the normally positioned pairs of plates respectively in said oscillograph, whereby the angle of the major principal axis will be indicated on the radial scale by the resultant trace.

2,447,518
TAPE DISPENSER
Davis Marinsky, Bronx, N. Y.; Louis H. Morin executor of estate of said Davis Marinsky, deceased
Application December 17, 1945, Serial No. 635,559
11 Claims. (Cl. 164—845)



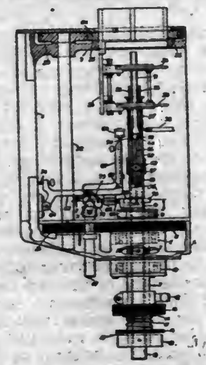
1. A dispensing device of the character described, said device comprising a pair of plates having inturned flanges at one end, a pair of pins joining the other end of the plates at side portions thereof, a tape cutter and holder member pivotally supported on one of said pins and adapted to bear on the other of said pins, and said member having at its free edge a cutter.

2,447,519
TAPE DISPENSER
Davis Marinsky, Bronx, N. Y.; Louis H. Morin executor of estate of said Davis Marinsky, deceased
Application December 14, 1946, Serial No. 716,363
9 Claims. (Cl. 164—47)



1. A tape dispenser comprising a casing with which a spool of tape is detachably mounted, the casing having a peripheral wall encircling the spool, said wall having spaced openings between which is a tape engaging platform, the tape from the spool arranged in the casing being adapted to be drawn through one of said openings, a cutter movable circumferentially of the wall of the casing toward and from said openings, and said cutter having a cutter edge adapted to engage and sever tape withdrawn from the casing at a point beyond and in spaced relation to the platform and over the other of said openings, leaving a tape end exposed at the second opening beyond said platform for engagement by the fingers of a hand.

2,447,520
ELECTROVOLUMETRIC CONTROL DEVICE FOR A WATER TREATING DEVICE COMPRISING A MOTOR OPERATED VALVE MECHANISM HAVING AN ELECTRICALLY CONNECTED TIME SWITCH
Chester T. McGill, Elgin, and Harry C. Rowe, Jr., Chicago, Ill., assignors to Elgin Softener Corporation, Elgin, Ill., a corporation of Illinois
Application July 9, 1943, Serial No. 494,032
45 Claims. (Cl. 210—24)



1. A mechanical-electrical control system for a base exchange water softener, comprising in combination with a softener operatively connected with a source of raw water and to a service system and having also a drain connection and operative connection to a source of brine for regeneration of water softening material in the softener, a source of electric current supply, an electric motor electrically connected with said source of current supply, valve means having an operating shaft turnable by the motor to establish different water circuits for the softener in backwashing, salt washing, and rinsing, and for softening in different positions of rotation of the shaft, circuit-breaking switch means comprising a plurality of first contact elements electrically connected with said current supply and motor, and a first rotary member operatively connected to the valve operating shaft to contact said elements in different positions of the valve means, starting switch means for the motor comprising a plurality of second contact elements and a second rotary member, electric circuits including said first contact elements with some of said second contact elements and said motor, timing switch means comprising a plurality of angularly spaced third contact elements and a rotary contact movable toward engagement with said third contact elements from a starting position in intermittent step-by-step movements, to predetermine the duration of softening, backwashing, salt washing, and rinsing, means for returning said rotary contact to the starting position, a ratchet wheel connected with the rotary contact for turning it step-by-step in the forward direction, a holding pawl therefor and an advancing pawl, an electromagnetic device operatively connected with the holding pawl for releasing the same and operatively connected with the rotary member of said starting switch to index the same one step for each release of the holding pawl, electric circuits including said third contact elements and others of the second contact elements and said electromagnetic device, a meter for measuring the flow of water passing through the softener, and means operatively connecting said meter with said advancing pawl intermittently to turn the rachet wheel step-by-step in a forward direction in proportion to the amount of water passed through the softener.

2,447,521
APPARATUS FOR DECORATING ARTICLES
William J. Miller, Swissvale, Pa., Lewis P. Reese, Scio, Ohio, and George J. Croninger, Swissvale, Pa.; said Miller and said Croninger assignors to Miller Pottery Engineering Company, Swissvale, Pa., a corporation of Pennsylvania
Application March 29, 1941, Serial No. 385,892
16 Claims. (Cl. 91—12)

4. In apparatus for banding articles of the class described, a rotatable article holder for receiving and supporting articles to be banded, a movably mounted grooved banding member having a rectilinear portion lying in a horizontal plane, means for feeding paint into the groove in said rectilinear portion of the grooved member, the rate of travel of the banding member relative to the feeding means being such that the groove is filled to capacity at the feeding point, and means for moving the article holder relative to the rectilinear portion of the grooved member to thereby contact the article with the contents of the groove.

2,447,522
MACHINERY FOR VACUUM TUBE MANUFACTURE
William Roswell Moscrip, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application May 9, 1944, Serial No. 534,790
In Great Britain May 21, 1943
12 Claims. (Cl. 49—2)

1. In a machine for the manufacture of vacuum tubes, a circular stem forming device comprising a cylindrical member for supporting the stem, a rod pivotally mounted intermediate its ends in the member and having a forming roller at one end thereof to contact the internal surface of the stem, a wheel secured to said rod and extending outside said cylindrical member, a sec-

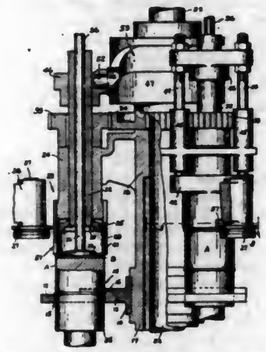
ond forming roller mounted to contact the outer surface of the stem, a pivotal mount for said second forming roller, and means pressing against said wheel and said pivotal mount for forcing said rollers against the outer and internal surfaces of said stem.

2,447,523

CATALYTIC HYDROGENATION OF 2,4-DIAMINO-5-NITROSO-6-HYDROXY PYRIMIDINE

Ralph Mozingo, Elizabeth, and Gunther S. Fonken, Paterson, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey

No Drawing. Application November 13, 1946, Serial No. 709,436
11 Claims. (Cl. 260—251)



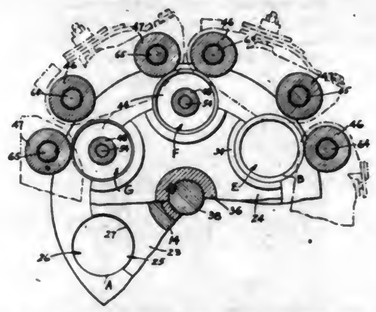
1. The process of preparing 2,4,5-triamino-6-hydroxy-pyrimidine which comprises reacting 2,4-diamino-5-nitroso - 6 - hydroxy-pyrimidine with hydrogen and a hydrogenation catalyst, in the presence of an aqueous alkaline solution.

2,447,524

CAN CLOSING MACHINE

Ronald E. J. Nordquist, Maplewood, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application June 25, 1945, Serial No. 601,452
4 Claims. (Cl. 113—23)



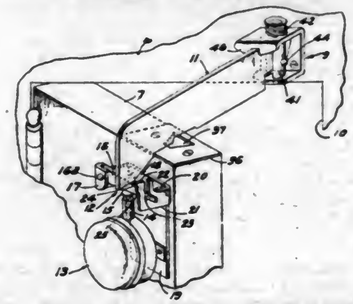
1. A can closing machine for sealing covers onto filled cans, comprising a seaming head including a rotatable chuck having means for rotating the same and a seaming roller for sealing a cover onto a filled can, a support turret beneath the seaming head having a ledge seat disposed about a turret opening in vertical alignment with said chuck for supporting a filled can with its superimposed cover, a vertically movable non-rotatable sleeve surrounding said chuck above said turret seat, means for moving the sleeve downwardly into engagement with the peripheral portion of a can supported cover on said turret seat to press the cover tightly against the can to prevent escape of the can contents and for maintaining such engagement during subsequent lifting of the can, and a rotatable plunger vertically movable through said turret opening for engagement with the bottom of the can to lift the can with its superimposed cover from said seat into rotative engagement with the rotating chuck to cause the can and cover to rotate, said sleeve moving means being further operable to lift said sleeve out of engagement with said cover immediately prior to engagement of said chuck and said seaming roller with the can cover to rotate the can and cover to seam the cover onto the can.

2,447,525

CAN CLOSING MACHINE

Ronald E. J. Nordquist, Maplewood, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application June 25, 1945, Serial No. 601,453
3 Claims. (Cl. 113—23)



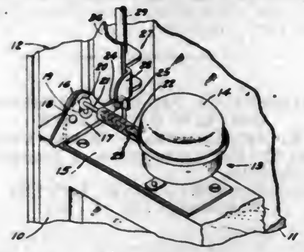
1. In a can closing machine for sealing covers onto cans, the combination of a support member including a plurality of seaming heads each having a rotatable chuck therein for engaging respective covers on cans to be sealed, a plurality of seaming roll holders swingably mounted on said member and respectively disposed between adjacent chucks, first and second operation seaming rollers on each of said holders, a first such holder being swingable in opposite directions to engage its first operation seaming roller with the cover of a can on one of said chucks for an initial partial sealing operation onto its can and alternately to engage its second operation seaming roller with a partially sealed cover of a can on an adjacent second chuck for a final sealing operation thereon, a second such seaming roll holder being swingable to engage its first operation seaming roller with the cover of the can on the second chuck for an initial partial sealing operation thereon before the second operation seaming roller of the first holder is engaged therewith.

2,447,526

COMBINED DOOR HOLDER AND BURGLAR ALARM

James E. Olvis, Glendale, Calif.

Application March 30, 1946, Serial No. 658,454
8 Claims. (Cl. 116—91)



1. In a construction of the kind described, a clip mounted on a door frame superjacent to the door opening and adjacent to that side of a door opening which is farthest from the hinges of the door, a door holder arm having an anchored end connected to said clip and a free end portion adjustable to and from a holding relation to the upper edge portion of said door, means yieldingly acting upon said arm tending to swing downwardly its free end, and an alarm mounted on said door frame, and actuating mechanism for said alarm mounted on the door and operatively related to the free end portion of said arm at times to be put into operation thereby, parts of said arm extending downwardly different distances for engagement with the upper edge of the door thus to regulate the action of the arm upon the alarm when the door is opened.

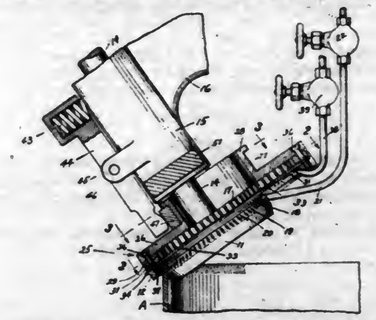
2,447,527

WINDOW OPERABLE BURGLAR ALARM

James E. Olvis, Glendale, Calif.

Application April 8, 1946, Serial No. 660,316
10 Claims. (Cl. 116—86)

1. In a burglar alarm structure, a rigid, vertical strip attached to and extending interiorly along a window sash at one side of the window opening, said opening having upper and lower relatively movable sashes, there being a series of longitudinally spaced apart recesses in said strip, a vertical rod secured in the window sash in an adjacent parallel relation to said series of recesses, a clip slidably and turnably mounted on said rod and having a finger selectively entrant into said recesses when the window is shut, and an alarm assembly mounted upon the upper surface of a lower sash in said window opening; said alarm assembly comprising an operating pin to set off and stop a bell, a spring tending to longitudinally extend said operating pin in relation to said bell to a position wherein the latter is silent, and a cam arm mounted upon the aforesaid lower sash and having a seat normally in engagement with said operating pin, said cam arm being movable to and from a position wherein it forces said pin from said seat against the opposition of its spring and causes the bell to sound; the aforesaid clip which slides and turns on the vertical rod having its aforesaid finger swingable into individual recesses of the aforesaid strip to hold said finger against sliding along the rod and in a position wherein another part of said clip lies in the path of said cam arm to move the latter and cause the bell to sound when there is a relative vertical movement between the two sashes, said adjustable clip being carried by the upper sash.



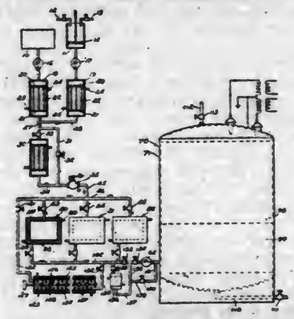
2,447,528

CONTAINER TREATING MACHINE

Horace J. Paynter, Union, N. J., assignor to American Can Company, New York, N. Y., a corporation of New Jersey

Application March 12, 1945, Serial No. 582,313
12 Claims. (Cl. 91—49)

10. In a device for applying liquid coating material to marginal edge portions of containers and container parts, the combination of a rotatable applying member having two adjacently disposed applying faces one of which is engageable with the edge of a container part to be coated and the other of which is engageable with a marginal edge portion thereof adjacent the edge of the part to be coated, means for depositing on said applying faces a quantity of liquid coating material for transfer to the edge and marginal

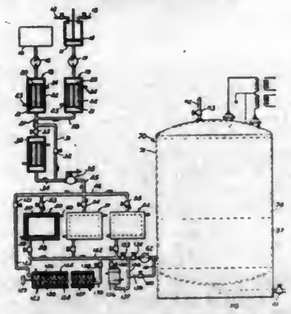


portions of said container part so that these portions will be fully covered with a film of coating material, and an annular pressure member rotatably surrounding said applying member in eccentric relation to the axis of the latter, said pressure member engaging said container part for pressing the marginal edge portion of the part against the faces of said applying member to receive the film of coating material therefrom.

2,447,529

METHOD FOR REMOVING IMPURITIES FROM HYDROCARBONS

Roderick B. Perkins, Jr., Houston, Tex., assignor, by mesne assignments, to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware



Application April 5, 1938, Serial No. 200,098
19 Claims. (Cl. 204—190)

19. A process for removing from a hydrocarbon oil acidic impurities capable of reacting with an aqueous alkaline solution to form water-soluble reacted impurities, which process includes the steps of: mixing with said oil a sufficient amount of said aqueous alkaline solution to react with said acidic impurities, said mixing being of sufficient intensity to form an emulsion of the water-in-oil type and to disperse the aqueous alkaline solution throughout the oil to provide droplets thereof for reaction with said acidic impurities and to produce a dispersed phase of said emulsion

comprising water-soluble reacted impurities; conditioning said emulsion by maintaining same for a period of at least one hour while preventing substantial separation of the constituents of said emulsion during said period to permit the dispersed aqueous alkaline solution to react with said impurities; then substantially completely resolving said emulsion by subjecting same to the action of a high-voltage electric field of sufficient intensity to coalesce the dispersed aqueous phase thereof; and separating the coalesced aqueous material from the oil while containing said reacted impurities, whereby said reacted impurities are recovered from the oil in association with the separated aqueous material.

2,447,530
PROCESS FOR PURIFYING OILS
Roderick B. Perkins, Jr., Houston, Tex., assignor to Petrolite Corporation, Ltd., Wilmington, Del., a corporation of Delaware
Application January 3, 1940, Serial No. 312,222
4 Claims. (Cl. 204—190)

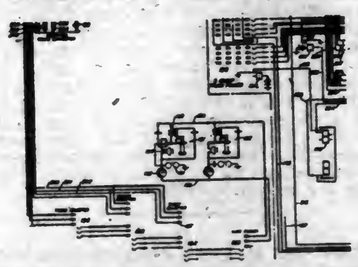
1. A process for removing from a hydrocarbon oil impurities capable of reacting with an acid to form reaction products, which process includes the steps of: mixing with an oil containing said acid reactable impurities a sufficient amount of said acid to react with said impurities, said mixing being of sufficient intensity to form an emulsion of the oil continuous type and to disperse the acid throughout the oil to provide droplets thereof for reaction with said impurities and to produce a dispersed phase of said emulsion comprising reaction products; substantially completely resolving said emulsion by subjecting same to the action of a high-voltage electric field of sufficient intensity to coalesce the dispersed phase thereof; separating the coalesced material from the oil while containing said reaction products, whereby said reaction products are recovered from the oil in association with the separated material; and emulsifying an alkaline solution into the oil from which said coalesced material has been separated and then electrically coalescing and removing said alkaline solution from the oil.

2,447,531
METHOD OF SIMULTANEOUSLY BEAMING AND ELECTROPLATING WIRES
Robert C. Pierce, Niles, Mich., assignor to National-Standard Company, a corporation of Michigan
Application November 11, 1944, Serial No. 562,953
2 Claims. (Cl. 204—28)

1. The method of simultaneously beaming and electroplating a plurality of wires of low elastic limit and small diameter which comprises passing a plurality of separate wires from separate let-off devices simultaneously through a series of baths including a plating bath, passing an electric current through the wires whereby a thin layer of plated metal is deposited thereon from the plating bath, the wires being under a common tension during plating but being laterally

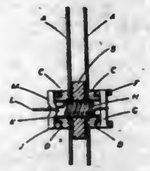
spaced in the plating bath and the wires being suspended throughout substantially their entire course in a catenary of small depth in which the wires form a single body wherein the wires are close together throughout substantially all of said catenary except within the plating bath, and then beaming the wires upon a take-up device connected by the wires to the let-off devices.

2,447,532
TREATMENT OF PIGMENT COMPRISING CALCIUM CARBONATE
Harold R. Rafton, Andover, Mass., assignor to Raffold Process Corporation, a corporation of Massachusetts
Application December 27, 1946, Serial No. 718,649
10 Claims. (Cl. 23—66)



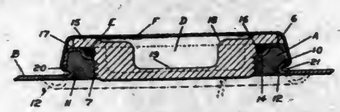
8. The method of modifying a pigment comprising calcium carbonate which comprises subjecting a slurry comprising said pigment and water to blows from the teeth of a circular saw rotating at a peripheral velocity of not less than substantially 100 feet per second until a reduction is effected in at least one of the properties of adhesive requirement and oil absorption of said pigment of not less than one-tenth of the original value of said property, said slurry constituting at least one jet, the longitudinal axis of said jet being located substantially in a plane of rotation of said saw, said jet being directed from beyond the periphery of said saw substantially toward the center of rotation thereof into the path of said teeth, the slurry of said jet being free to move upon, and at the point of, the striking of each such blow.

2,447,533
AUTOMATIC TOLL TICKETING SYSTEM
John B. Retallack, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 27, 1942, Serial No. 448,783
9 Claims. (Cl. 179—7.1)



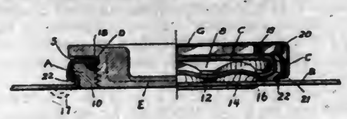
6. In an automatic toll ticketing system, a calling line, a called line, a trunk, means for extending a connection from said calling line to said called line over said trunk, a digit register in said trunk operable following the seizure of said trunk to register a digit of the called line number and to assist in the establishment of a connection to said called line, means for thereafter restoring said register, a printer in said trunk having a rotatable type-wheel, a distributor having as

many segments as there are characters to be printed, a brush rotatable with said type-wheel for engagement with said segments and a print magnet, registers operable following the response of the called subscriber and until said calling subscriber releases said connection for registering digits indicative of the minutes of the elapsed time of conversation, a stepping relay and a stepping magnet for said digit register whereby said register may be advanced as a progress switch for successively rendering said elapsed time registers effective to selectively connect marking po-



tential to said distributor segments, a circuit for said print magnet effective upon the engagement of said distributor brush with a marked segment to arrest the rotation of said type-wheel and to cause the operation of said stepping relay, and a circuit for said stepping magnet established upon the operation of said stepping relay, said stepping relay upon operating causing the release of said print magnet and said print magnet upon releasing in turn releasing said stepping relay whereby said stepping magnet is effective to advance said digit register.

2,447,534
METAL RECTIFIER
Edward Arthur Richards, London, England, assignor, by mesne assignments, to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Application June 15, 1944, Serial No. 540,375
In Great Britain July 15, 1943
4 Claims. (Cl. 175—366)

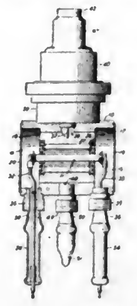


1. A metal rectifier assembly comprising a plurality of parallel connected rectifier units assembled on a metal bar, each of said units comprising at least a pair of rectifier discs with their base plates adjacent said bar and electrically connected therewith, washers contacting the counter electrode surfaces of said discs, fusible metal connections associated with said washers and arranged to connect a plurality of said counter electrode surfaces in parallel, said discs, washers and fusible metal connections being assembled on the metal bar and maintained in electrical contact by means of a helical spring passing through an aperture in said bar.

2,447,535
CONTAINER CLOSURE
Joseph Robinson, New York, N. Y.
Application November 28, 1944, Serial No. 565,461
2 Claims. (Cl. 285—49)

1. In a closure receiving ring-like insert for a metal container, in combination, a wall of the container having an opening defined by an outwardly extending sleeve, the outer end portion of the sleeve having an annular inwardly directed right-angle flange formed with a depressed marginal gasket receiving seat, and an externally flanged ring-like insert disposed in said sleeve and having an annular depression formed to receive the depressed seat portion of the sleeve, the outer end portion of the sleeve being preformed so that the inner face of the wall defining the depressed marginal gasket receiving seat is spaced from the opposite inner face of the sleeve a distance less than the thickness of the outer end portion of the ring-like insert, whereby to provide tensioned gripping engagement between the insert and the sleeve when the inner end portion of the sleeve is forced inwardly beneath the external flange of the insert to force the insert into the preformed outer end of the sleeve and to form skin-tight engagement between all the mating surfaces of the parts.

2,447,536
CONTAINER CLOSURE
Joseph Robinson, New York, N. Y.
Application May 23, 1945, Serial No. 595,344
5 Claims. (Cl. 285—49)



1. In a closure receiving ring-like insert for a metal container, in combination, a wall of the container having an opening defined by an outwardly extending sleeve, the outer end portion of the sleeve having an annular inwardly directed right-angle flange formed with a depressed marginal gasket receiving seat, and an externally flanged ring-like insert disposed within said sleeve and having an annular depression formed to receive the depressed seat portion of the sleeve, a portion of the metal forming the inner end of the sleeve being forced into engagement with said insert beneath the flange of the latter so as to firmly grip and maintain the insert within said sleeve, with the opposite end of the insert substantially flush with the inner face of the container wall.

2,447,537
COUPLED CAVITY RESONATOR
Victor L. Ronci, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 10, 1944, Serial No. 517,660
9 Claims. (Cl. 315—39)

1. A cavity resonator comprising a block of conductive material having a bore therein, said

bore having an enlarged portion providing a ledge, and a plurality of conductive straps mounted upon said ledge, each said strap having a plurality of conductive tabs extending

radially inward toward the center of said bore, each said tab having a portion extending axially along said bore, and positioned between said straps and the inner edge of said ledge.

2,447,538

WOOLEN TREATMENT AND PRODUCTS THEREFOR

John B. Rust, West Orange, N. J., assignor to Montclair Research Corporation, a corporation of New Jersey

No Drawing. Application May 26, 1944, Serial No. 537,537

6 Claims. (Cl. 260—29.7)

1. The method of treating wool which comprises heating the wool in an aqueous emulsion at a temperature of from 40° C. to the boiling point of the bath containing a synthetic butadiene polymer of 100% polymerization and a non-cationic emulsifying agent in the presence of at least 25% by weight on the polymer of a water-soluble neutral salt of an alkali metal as conditioning electrolyte, the pH of the bath being below 7 to give deposition of from 1 to 25% by weight of polymer on the wool, the bath being substantially stable in the absence of the wool, the amount of the butadiene polymer being sufficient to give substantial shrinkproofing properties to the wool while retaining substantially its normal hand.

2,447,539

TREATMENT OF WOOL

John B. Rust, Montclair, N. J., assignor to Montclair Research Corporation, a corporation of New Jersey

No Drawing. Application November 16, 1944, Serial No. 563,791

6 Claims. (Cl. 260—29.7)

2. A bath for treating wool to give shrinkproofing with substantially normal hand which comprises an aqueous substantially stable emulsion containing a synthetic copolymer of 100% polymerization of butadiene-1.3 and from 5 to 50% based on the weight of the copolymer of a methacrylate ester, the esterifying group having less than 8 carbon atoms, in amount to give 1 to 25% by weight of polymer deposition on the wool, a non-cationic emulsifying agent, and at least 25% by weight on the copolymer of a water-soluble neutral salt of an alkali metal as conditioning electrolyte, the pH of the bath being below 7.

2,447,540

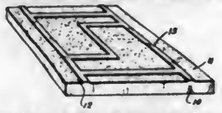
BUTADIENE-ACRYLATE INTERPOLYMER TREATMENT OF WOOL

John B. Rust, Montclair, N. J., assignor to Montclair Research Corporation, a corporation of New Jersey

No Drawing. Application May 18, 1945, Serial No. 594,585

6 Claims. (Cl. 260—29.7)

2. A bath for treating wool to give shrinkproofing with substantially normal hand which comprises an aqueous substantially stable emulsion containing a copolymer of 100% polymerization of butadiene —1.3 and from 10 to 60% by weight of the copolymer of an acrylate ester, the esterifying group being selected from alkyl and aryl groups of not more than 8 carbon atoms, the amount of copolymer being present to give 1 to 25% by weight of copolymer deposition on the wool, a non-cationic emulsifying agent, and at least 25% on the weight of the copolymer of a water-soluble neutral salt of a monovalent salt forming radical as conditioning electrolyte, the pH of the bath being below 7.



2,447,541

METHOD OF MAKING PLASTIC STRUCTURE

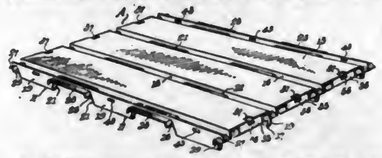
Reinhardt N. Sabee, Detroit, and Charles S. White, Dearborn, Mich., assignors of one-fifth to said Sabee, one-fifth to said White, one-fifth to Francis A. Grady, all of Detroit, Mich., one-fifth to Charles F. Meroni, Evanston, Ill., and one-fifth to Vernon S. Lilly, Detroit, Mich.

Application January 29, 1945, Serial No. 575,116

13 Claims. (Cl. 154—94)

1. In a method of making a plastic article the steps of applying to a metallic cathode an electrical resist material in such form as to leave exposed a predetermined interrupted discontinuous pattern of metal, electrolytically depositing on said exposed interrupted pattern a predetermined amount of metal, embedding the metal deposit in a given surface of a plastic and stripping the plastic and metal deposit from the interrupted metal cathode.

2,447,542



MATERIAL HANDLING PALLET

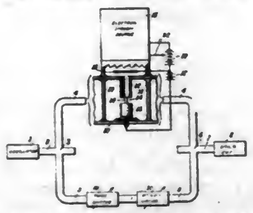
Edgar C. Seward, Arlington, Va.

Application August 13, 1947, Serial No. 768,406

4 Claims. (Cl. 248—120)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A pallet for carrying and stowing cargo, which comprises a platform, spaced parallel corrugations in the platform having bottoms defining supporting ribs having downwardly converging sides of a width sufficient to receive similar ribs of another pallet to be nested therewith, the said ribs supporting the platform above a supporting surface to enable insertion therebetween of forks of a lift-truck for lifting the platform off from its supporting surface, and transverse parallel inverted channel members secured to the platform on the under surface thereof, the said members also being adapted to receive the forks of a lift-truck, whereby the platform may be lifted by the truck from any direction of approach.



2,447,543

ULTRA HIGH FREQUENCY MODULATOR

Louis D. Smullin, Nutley, N. J., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware

Application August 15, 1947, Serial No. 768,821

16 Claims. (Cl. 179—171.5)

1. A modulator for modulating radio frequency carrier energy in response to an electron stream, comprising a carrier energy source, a wave guide coupled to said source, an evacuated resonant gap provided in said wave guide, a nuclear particle detector of the electron multiplier type, and means to direct electrons from said detector across said gap to effect absorption of carrier energy traversing said wave guide.

2,447,544

SYNTHESIS OF TRYPTOPHANE

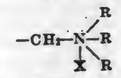
Harold R. Snyder, Urbana, Ill., and Eugene E. Howe, Linden, and Arthur J. Zambito, Rahway, N. J., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey

No Drawing. Application October 21, 1944, Serial No. 559,836

16 Claims. (Cl. 260—319)

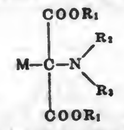
1. The process that comprises condensing a 3-aminomethyl indole compound with an unsubstituted ring nitrogen and having tertiary N-substituents selected from the class consisting of alkyl, aryl, and aralkyl groups and groups wherein the substituents form part of a N-heterocyclic radical with an acylamidomalonic ester having an active hydrogen on the central carbon atom, thereby forming the corresponding ester of α-acylamido-α-carboxy-β-(3-indole)-propionic acid.

2,447,545



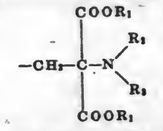
SYNTHESIS OF TRYPTOPHANE AND INTERMEDIATES THEREFOR

Harold R. Snyder, Urbana, Ill., and Curtis W. Smith, Berkeley, Calif., assignors to Merck & Co., Inc., Rahway, N. J., a corporation of New Jersey



No Drawing. Application October 21, 1944, Serial No. 559,837

21 Claims. (Cl. 260—319)



1. The process that comprises reacting an indole compound having a β substituent of the formula

where R is selected from the class consisting of alkyl, aryl, and aralkyl groups, and X is a halogen, with a compound of the formula

where R_1 is selected from the class consisting of alkyl, aryl, and aralkyl groups, R_2 is selected from the class consisting of hydrogen and acyl groups, R_3 is an acyl group, and M is an alkali metal, to form an indole compound having a β substituent of the formula

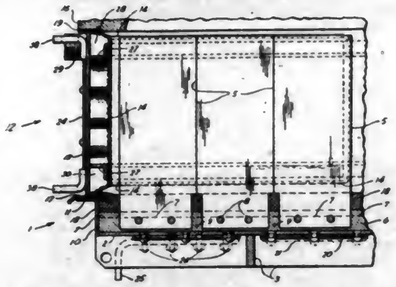
heating this compound in dilute aqueous alkali to hydrolyze the groups R_1 and acidifying to form the corresponding dicarboxylic acid, heating said dicarboxylic acid with water to form the corresponding monocarboxylic acid, deacylating said monocarboxylic acid by heating in aqueous alkali, and acidifying the resulting alkaline solution to precipitate dl-tryptophane.

2,447,546

AUTOMATIC SHUTOFF APPARATUS FOR OIL WELLS

Lloyd Spencer, Los Angeles, Calif., assignor to Lane-Wells Company, Los Angeles, Calif., a corporation of Delaware

Application March 30, 1942, Serial No. 436,733



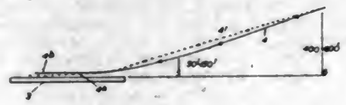
14 Claims. (Cl. 166—2)

1. A shut-off apparatus comprising: a supporting structure; a sealing element depending from said supporting structure defining a passageway adapted to be closed and having walls expansible into sealing engagement with a surrounding tubing; a valve member positioned below said sealing member and movable upwardly to seal said passageway and expand said sealing element into sealing engagement with said tubing; a stem for said valve member extending into said supporting structure; means for locking said stem relative to said supporting structure to hold said valve member open; and a slidable keeper for maintaining said locking means in locked condition, said keeper defining with said supporting structure a flow passage of reduced

area whereby, upon flow of fluids above a predetermined velocity, a pressure differential is created tending to move said keeper to free said locking means.

2,447,547
ELECTROLYTIC ALKALI CHLORINE CELL
Kenneth E. Stuart, Niagara Falls, N. Y., assignor to Hooker Electrochemical Company, Niagara Falls, N. Y., a corporation of New York
Application June 2, 1945, Serial No. 597,259
5 Claims. (Cl. 204—266)

1. In an electrolytic alkali chlorine cell comprising a cathode assembly including a foraminous metal structure and cathodic electrodes housed in an upright, liquid-retaining metal wall; an anode assembly co-operative therewith, including upright anodic electrodes having their lower ends embedded in a slab of low melting metal; a top closure member for said retaining wall; and a bottom closure member for said retaining wall and support for said cathode and anode assemblies, said bottom closure member being provided with an upturned border and said upturned border having a normally horizontal flat face around its upper rim, said slab being protected against anodic electrolysis by a layer of impervious, electrically non-conducting pressure-plastic material extending around and between the lower ends of said anodic electrodes to said bottom closure upturned border and making a sealing bond therewith: the improvement which consists in that said retaining wall is of thin plate; that the lower edge of said retaining wall plate lies in a flat boundary plane; that the lower border of the foraminous structure is continuous and conductively joined to the inner face of the retaining wall plate, flush with the lower edge thereof, leaving said edge exposed to form a gasket bearing surface of a width limited by the thickness of said retaining wall plate; that the flat face of the bottom closure upturned border conforms with the lower rim of the retaining wall in plan view and extends inwardly and outwardly thereof; and that said face is provided with a flat gasket of impervious, resilient material, the lower edge of said retaining wall plate resting upon said gasket and making a normally liquid-tight closure therewith under the weight of the superstructure.



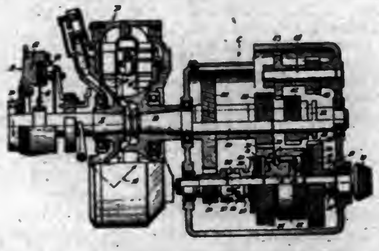
2,447,548
LUBRICATION APPARATUS FOR TWISTER RINGS
Falls L. Thomason, Charlotte, N. C.
Application June 20, 1946. Serial No. 677,997
13 Claims. (Cl. 184—7)

1. Lubrication apparatus for twister rings mounted in a ring rail comprising a member mounted for vertical movement below the ring rail, and having a plurality of annular wells therein for containing a lubricant, means for raising said member and holding it in a position

to where the lower edges of the rings will project into the annular wells, said member when released moving downwardly by gravity below the rings to where it will not impede progress in removing and installation of new travelers.

2,447,549
RADIO GLIDE PATH LANDING SYSTEM FOR AIRCRAFT
Eric Osborne Willoughby, London, England, assignor to Standard Telephones and Cables Limited, London, England, a British company
Application March 13, 1944, Serial No. 526,205
In Great Britain March 5, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires March 5, 1963
12 Claims. (Cl. 343—108)

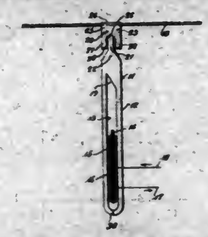
1. A radio glide path system for aircraft of the kind in which the glide path is defined on the aircraft by a constant field or signal strength relationship of two field strength patterns overlapping in a vertical plane comprising two antenna systems for producing said overlapping pattern said antenna systems being spaced apart in the direction of the glide path, said antenna systems being oriented with relation to each other in the direction of said glide path in relation to ground to cause the path of constant field or signal relationships of the overlapping patterns to commence in a substantially horizontal direction at a point in front of the said antenna systems as regards the landing aircraft.



2,447,550
FRUIT FLAVORED FOOD COMPOSITION
Alexander M. Zenses, New York, N. Y., assignor of one-half to Musher Foundation, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application December 14, 1942, Serial No. 468,998. In Mexico December 16, 1941
10 Claims. (Cl. 99—132)

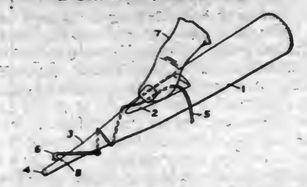
1. A fruit flavored, stable, jellified food composition, said composition being derived from a raw juice selected from the group consisting of cane juice, beet juice and sorghum juice, said juice being expressed directly from cane, sugar beet and sorghum and containing its ash forming ingredients and said composition having an ash content of between 0.25% and 2.5% based upon total solids, said composition having a pH of between 2.5 and 3.6 and said composition containing a pectin as the jellifying agent, said ash content in said juice having been reacted with a food acid selected from the group consisting of tartaric acid, citric acid, malic acid, lactic acid, glycolic acid and phosphoric acid, between about 25 to 200 parts by weight of said food acid being reacted with each 100 parts by weight of ash.

2,447,551
CLEARING WATER SURFACES OF OIL
William A. Zisman, Washington, D. C., and Lamar Pickett, Arlington, Va.
No Drawing. Application June 22, 1943, Serial No. 491,838
4 Claims. (Cl. 252—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A method of opening an oil-free area in a water surface oil blanket not exceeding one-half inch in thickness comprising impelling the oil from the area into the surrounding region by introducing to the water surface at a position within said blanket a solution of a compound selected from the group consisting of sorbitan monooleate, sorbitan monoricinoleate and mannide monooleate, the said solution consisting of about twenty-five percent by weight of said compound dissolved in a solvent selected from the group consisting of hexanol and octanol.

2,447,552
TRANSMISSION
Oscar H. Banker, Evanston, Ill., assignor to New Products Corporation, Chicago, Ill., a corporation of Delaware
Application March 6, 1944, Serial No. 525,145
6 Claims. (Cl. 74—368)

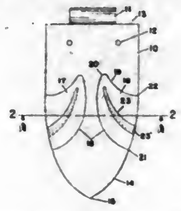


1. In a transmission of the character described, a driving shaft, a driven shaft arranged in spaced parallel relation to the driving shaft, two gears secured to the driving shaft, a high speed gear journaled on the driven shaft in mesh with one of said gears on the driving shaft, a low speed gear mounted on the driven shaft in mesh with the other of said gears on the driving shaft, shiftable clutch means on the driven shaft for releasably connecting either said high speed gear or said low speed gear with the driven shaft, overrunning clutch means on the driven shaft having one element secured to said low speed gear, other shiftable clutch means on the driven shaft for releasably connecting the other element of the overrunning clutch means with the driven shaft, manually operable control means for shifting the first and last named clutch means into their disengaged positions, and other manually operable control means for shifting the first named clutch means to release said high speed gear from the driven shaft without disengaging the second mentioned clutch means, whereby to transfer the drive immediately from said high speed gear to said low speed gear through the pick up afforded by the overrunning clutch means.

2,447,553
STOP MOTION MECHANISM
Robert R. Barnes and Walter G. McCulloch, Candler, N. C., assignors to American Enka Corporation, Enka, N. C., a corporation of Delaware
Application December 26, 1946, Serial No. 718,278
3 Claims. (Cl. 28—51)

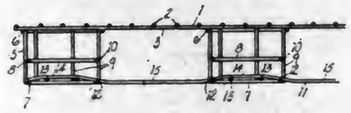
1. In a drop wire adapted to be supported by a thread in a raised position and having a shank portion which in a lowered position of the wire, coacts with machine control means, means defining a thread eyelet including a first side connected to the shank portion, a second side connected to the first side and tines extending from the second side into the plane of the first side, said tines defining with the material of said first side slots for the passage of thread laterally into the eyelet.

2,447,554
FISHHOOK EXTRACTOR
Dorr R. Bates, Lansing, Mich.
Application May 15, 1946, Serial No. 669,883
1 Claim. (Cl. 43—29)



A fish hook extractor, comprising a solid wooden cylindrical portion, a solid wooden tapered portion having a blunt end, the said tapered portion being integral with the said cylindrical portion and extending in one direction therefrom, the said tapered portion adapted for imbedding a point of a fish hook thereinto, and a notch in the said cylindrical portion adapted for resting the thumb to securely hold a portion of a fish line.

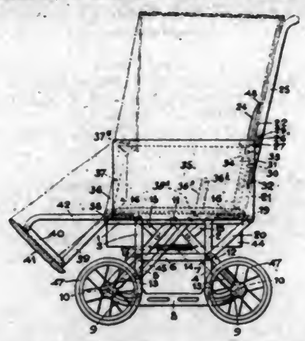
2,447,555
ELECTRICAL IRON HOLDER
Roland Beaudoin, Woodside, Long Island, N. Y.
Application October 29, 1946, Serial No. 706,383
1 Claim. (Cl. 248—117.2)



An iron holder plate consisting essentially of a metal plate of iron dimensions having a pointed end conforming to the shape of the pointed end of an iron, the material of said metal plate being extended upward in a pair of spring wings from opposite sides of said plate to positions over the plate, the inner edges of said wings being spaced to admit an iron handle and curved to guide the handle, the wings at the parts nearest the point of the plate being spaced apart a distance less than the full width of the iron, and the wings in inactive position being spaced from the plate a

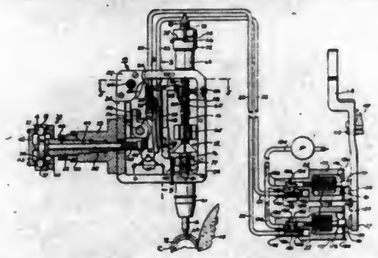
distance somewhat less than the thickness of an iron, so as to grip an iron between the plate and

the spring wings and sidewise between the bases of the wings.



2,447,556
PALLET OR SKID FOR HANDLING MATERIALS
Dewey H. Bitney, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich., a corporation of Michigan
Application June 5, 1947, Serial No. 752,751
7 Claims. (Cl. 248—120)

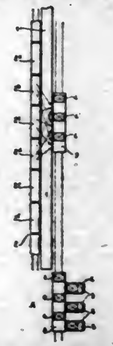
1. In a pallet, the combination of a top comprising upper and lower series of wire slats disposed in crossed relation and welded at their crossing points, corner, intermediate and center legs comprising top, bottom and intermediate vertically spaced annular horizontal members, the top member being split, and vertical rods welded to the horizontal members, the top horizontal members being welded to the lower series of top slats, and pairs of bottom rods arranged in spaced pairs and in crossing relation over the bottom horizontal members of the legs and welded thereto and to each other at their crossing points.



2,447,557
COLLAPSIBLE PERAMBULATOR OR PUSH CHAIR
Aubrey Middleton Blaney, Barkingside, Ilford, England
Application November 5, 1945, Serial No. 626,777
In Great Britain April 3, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires April 3, 1964
5 Claims. (Cl. 280—37)

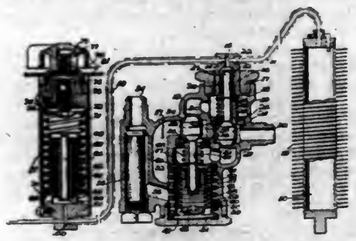
1. An improved collapsible perambulator or push-chair comprising a chassis with a seat framework, parallel linkage pivoted on each side to said seat framework and carrying a pair of longitudinal supports for two axles, spring elements also pivoted to said seat framework adjacent said parallel linkage and adapted to restrain the movement of the wheel axles during the collapsing operation, a transversely folded and pivoted back adapted to be swung down to form two sides of a container holding the collapsed vehicle, a folding handle and levers in association therewith for collapsing the parallel linkage with a small effort, a step capable of folding inwards to form a third side of the container, two sides of the body being also adapted to be folded down to form a fourth and fifth side of the container, the sixth side of the container

being formed by the seat proper resting on the seat framework.



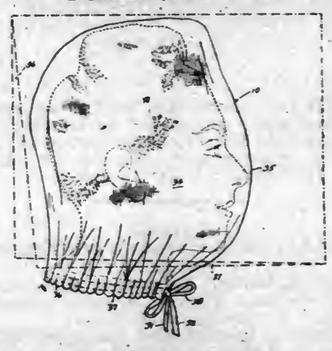
2,447,558
GAUGING APPARATUS FOR CONTROLLING A GRINDING OPERATION
William H. Blessing, Meriden, Conn., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 28, 1945, Serial No. 602,115
26 Claims. (Cl. 51—165)

1. In apparatus for controlling the grinding of an article to a size determined by the size of another article, gauging mechanism responsive to the reduction in size of the article being ground, a valve operated by the gauging mechanism, fluid pressure actuated means controlled by said valve for effecting a change in the rate of grinding, mechanism responsive to the size of the other article for adjusting the operative position of said valve, and means providing for a relative adjustment between the gauging mechanism and the valve to predetermine the size of the article at which said valve will be operated.



2,447,559
SYSTEM FOR TRANSFERRING PACKAGE FREIGHT
Gradus F. Bloemers, Utrecht, Netherlands
Application November 10, 1945, Serial No. 627,846
In the Netherlands November 21, 1940
5 Claims. (Cl. 214—152)

1. A system for transferring package freight from a first conveyance to a plurality of second conveyance means comprising the steps of moving said first conveyance means substantially adjacent one side of a stationary platform, spacing a plurality of load receiving means transversely on a movable platform at intervals greater than the width of said load receiving means and positioning said movable platform on the other side of said stationary platform, moving said freight from said first conveyance means across said stationary platform to said load receiving means and loading said freight thereon, moving said movable platform to a zone disposed at a distance from said stationary platform, loading freight on a plurality of second load receiving means, loading said second load receiving means with said freight loaded thereon on a plurality of second conveyance means, moving said second

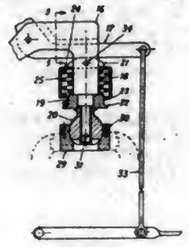


conveyance means into said zone and in juxtaposition with respect to said spaces between said first load receiving means, discharging said second load receiving means with said freight loaded thereon to said spaces between said first load receiving means, moving said movable platform to bring said first loaded load receiving means into juxtaposition with respect to said plurality of second conveyance means, and moving said first loaded load receiving means from said movable platform to said juxtaposed second conveyance means.

2,447,560
TEMPERATURE REGULATOR
Charles D. Branson, Knoxville, Tenn., assignor to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application June 29, 1945, Serial No. 602,225
7 Claims. (Cl. 236—1)

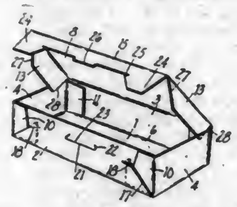
2. In a temperature regulator for controlling the flow of either a cooling medium or a heating medium to a heat exchanger, in combination with a casing, a valve member therein, means in said casing providing a pair of valve ports with which said member is adapted to cooperate and a thermostat subjected to the temperature to be controlled and operatively connected to said valve member, said casing having passages leading to the respective valve ports, a valve in said casing for predetermining whether the medium to be controlled shall flow through one or the other of said passages, a thermostat operatively connected to said last named valve, said casing including means providing a chamber in which said last named thermostat is disposed, said casing having an inlet passage for the medium to be controlled in communication with said chamber adjacent one end thereof and a passage leading to said last named valve and in communication with said chamber adjacent the opposite end thereof.

2,447,561
HEAD AND CLOTHING PROTECTOR
Rebecca Brenner, Brooklyn, N. Y.
Application February 7, 1946, Serial No. 646,085
1 Claim. (Cl. 2—174)



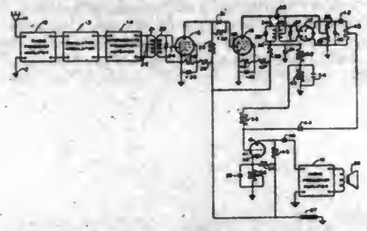
A head and clothing protector for use by a wearer, comprising: a blank of light and air transmitting material of elongated shape, having a transverse fold and opposed side portions merging into a front portion, the opposed upper edges of said blank being interconnected, said protector having a continuous rear and bottom opening; said protector having a hollow hem at the free edges thereof; said hem having a hem opening disposed at the juncture of the lower edges of the side portions where they meet the lower edge of said front portion; and means to constrict said rear and bottom opening, said means comprising an elongated flexible tying element slidably disposed within said hollow hem; the ends of said tying element projecting through said hem opening and being tieable under the wearer's chin, said tying element when pulled and tied eliminating the rear opening and bringing its border against the rear of the neck of the wearer.

2,447,562
DEVICE FOR SUPPORTING WORKPIECES TO BE TOOLED
Ernst Burri, Zurich, Switzerland, assignor to Inpaco A.-G., Zurich, Switzerland
Application April 21, 1945, Serial No. 589,520
In Switzerland February 25, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires February 25, 1964
4 Claims. (Cl. 81—21)



1. A workpiece holding device having a pivoted jaw for holding a tapered workpiece, comprising a base having a spherical socket therein, a horizontally disposed member having a downwardly extending leg, a ball on the lower end of said leg and adapted to be movably secured in said socket, an upwardly extending arm on said horizontal member, a laterally pivoted jaw on said arm, a

second horizontally disposed member pivoted to the first said member and having an upwardly extending jaw adapted to coact with the first mentioned jaw, a spring on the downwardly extending leg of the first said member and cooperat-



ing with the second said member to forceably close said jaws, said second horizontal member being extended beyond said leg to form an operating lever, whereby said jaws may be manually parted for insertion of the workpiece.

2,447,563
COLLAPSIBLE COVERED CONTAINER OR BOX
Kenneth T. Buttery, Kalamazoo, Mich., assignor to Sutherland Paper Company, Kalamazoo, Mich., a corporation of Michigan
Application April 11, 1947, Serial No. 740,795
7 Claims. (Cl. 229—36)

6. A container comprising bottom, front, rear and end walls, the end walls having front corner flaps extending from the front ends thereof, and a cover connected to the top edge of the rear wall and having a closure flap on its swinging edge, the front wall having end slits opening at its end edges and extending diagonally outward from adjacent its bottom edge, the outer end portions of the slits being angularly disposed relative to their inner portions, the portions of the front wall above the slits being inwardly deflectable, the front wall also having a central longitudinal slit therein, the front corner flaps having upwardly directed tongues on their outer edges engageable with the lower edges of the inwardly deflectable portions of the front wall when the corner flaps are disposed through the end slits, the closure flap being adapted to overlap the front wall and having end portions adapted to be inserted through the said end slits in the front wall, such portions having inwardly facing tongues engageable with the edges of the end slits, the closure flap having an intermediate tongue engageable with the central slit in said front wall whereby the closure end portions are retained in engagement with the said front wall end slits.

2,447,564
NOISE REDUCING CIRCUITS
Chalon Wesley Carnahan, Evanston, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application January 30, 1943, Serial No. 474,066
29 Claims. (Cl. 250—20)

11. In combination, a source of a frequency modulated carrier wave, a pair of cascade connected electron discharge devices arranged for limiting the intensity of said carrier wave below a predetermined intensity, the second of said two cascade connected discharge devices being connected to associated resistor means and being arranged for rectifying said carrier waves to produce a unidirectional voltage and for amplifying said unidirectional voltage to produce a control voltage, means for utilizing a component of said carrier wave limited by said second device, and means responsive to said control voltage for altering the performance of said utilizing means.

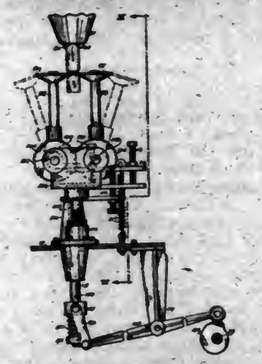
2,447,565
PRODUCTION OF ALDEHYDES BY A HALOGEN-HYDROGEN EXCHANGE REACTION
Joseph A. Chenicek, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application January 31, 1946, Serial No. 644,673
7 Claims. (Cl. 260—599)

1. A process which comprises reacting an acyl halide and a saturated hydrocarbon containing at least one tertiary carbon atom per molecule in the presence of a Friedel-Crafts catalyst at a temperature of from about —40° to about 100° C. and for a time such as to convert said acyl halide into an aldehyde and said saturated hydrocarbon into a halogenated hydrocarbon having the same number of carbon atoms per molecule as said hydrocarbon.

4. A process which comprises reacting an aroyl halide and a saturated hydrocarbon containing at least one tertiary carbon atom per molecule in the presence of a Friedel-Crafts catalyst at a temperature of from about —40° to about 100° C. and for a time such as to convert said aroyl halide into an aldehyde and said saturated hydrocarbon into a halogenated hydrocarbon having the same number of carbon atoms per molecule as said hydrocarbon.

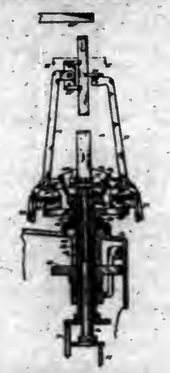
2,447,566
APPARATUS FOR MEASURING A CONDITION ON A ROTATING MEMBER
Gerard Q. Decker, 3rd, Bradford Hills, and Edmund C. Capuzzi, Philadelphia, Pa., assignors to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application May 31, 1946, Serial No. 673,454
12 Claims. (Cl. 323—75)

1. An electrical system comprising a set of inductively associated power input windings, a set of inductively associated output windings, a rotating shaft, certain of the input windings and of the output windings being mounted on said shaft for rotation therewith, condition responsive impedance means, also mounted on said shaft for rotation therewith and electrically connected to the windings of each set that are mounted on the shaft whereby power is supplied to said impedance means and an output voltage is trans-



mitted therefrom in response to a change of condition, one of said sets of windings being divided and arranged so that their polarity opposes each other, and the windings of the other of said sets being so disposed with respect to said divided windings that the input flux is substantially incapable of inducing an output voltage in the output windings, whereby a change in impedance in response to a change of condition is the essential source of output voltage.

2,447,567
STRETCHING OF CELLULOSE ESTER YARN
Camille Dreyfus, New York, N. Y.
No Drawing. Application October 17, 1944, Serial No. 559,129
10 Claims. (Cl. 8—132)

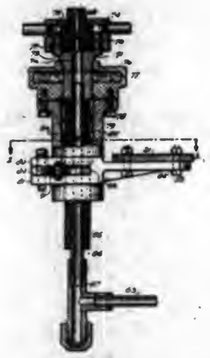


1. Process for the production of strong filaments, threads, yarns and like textile materials, which comprises subjecting filaments, threads, yarns and like textile materials, having a basis of an organic ester of cellulose ripened in its primary solution to an acyl value equivalent to that of a cellulose acetate having an acetyl value of 40 to 45%, calculated as acetic acid, to the action of a hot aqueous fluid medium at substantially atmospheric pressure, until they are softened, and imparting a substantial degree of stretch of at least 5 times to said softened textile material to increase the tenacity thereof.

2,447,568
MACHINE FOR FORMING BOTTOMS ON GLASS TUBES
Charles Eisler, South Orange, N. J.
Application January 20, 1944, Serial No. 519,060
1 Claim. (Cl. 49—7)

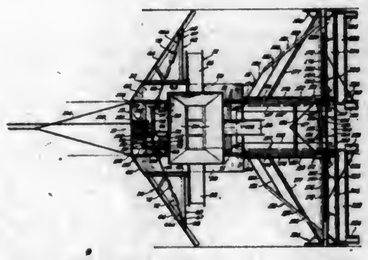
A tube forming device comprising a bracket, shafts journalled in said bracket in spaced, parallel relation, hubs fixed to said shafts, shafts fixed to said hubs, idler rollers rotatably mounted on the ends of the last mentioned shafts, intermeshing gears fixed to the first mentioned shafts, means engaging one of said gears to actuate the same to oscillate the idler rollers relative to each other, and means in said device spaced from and medially aligned with said bracket to position a glass tube intermediate said rollers, the parts being so juxtaposed that said rollers may circumferentially engage said tube at diametrically opposed points to form the latter on oscillation of said rollers.

2,447,569
TUBULATING MACHINE
Charles Eisler, South Orange, N. J.
Application January 20, 1944, Serial No. 519,062
2 Claims. (Cl. 49—1)



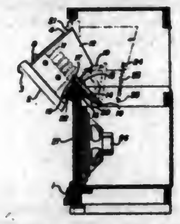
1. A chuck for uniting a pair of sections of tubing in a tubulating machine having a spider, said chuck comprising a support member, a retaining ring engaging said support member and spider to mount the support member on the spider, a pair of brackets mounted on said support member in opposed, spaced relation, jaw arms pivoted to said brackets, jaws on said arms, adapted to hold a section of tubing therebetween in position for uniting with a second section of tubing, a chuck, a chuck shaft on said chuck, keying means engaging said chuck shaft and support to slidably and rotatably key the same together, jaws in said chuck adapted to hold said second section of tubing therebetween, a lift plate engaging said jaws and supporting said second section of tubing in said jaws, said lift plate being adapted to move the jaws into and out of said chuck so that said jaws will respectively engage and disengage said second section of tubing, a lift shaft depending from said plate, and means to slidably and rotatably key the lift shaft to said chuck shaft, said lift shaft being adapted to move the jaws out of the chuck to carry the second section of tubing into engagement with the first mentioned section of tubing.

2,447,570
BELLOWS CLAMP
Charles Eisler, South Orange, N. J.
Original application March 30, 1944, Serial No. 528,813. Divided and this application February 24, 1945, Serial No. 579,675
1 Claim. (Cl. 285—122)



In a bellows clamp for holding a bellows during the operation of exhausting and filling

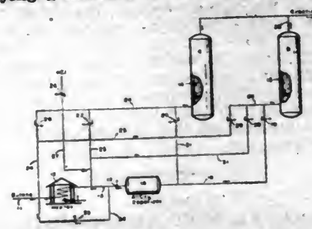
the same, wherein said bellows may be subjected to a heating operation to facilitate exhausting and filling the same, a holder head having an open top cup formed on its upper end and being externally threaded, a resilient disc seated in said cup, a bellows exhaust tube receiving nipple having a flanged lower end seated on said disc within the top of the cup, an internally threaded



cap secured on the threaded upper end of the holder head, the top of the cap being formed with a central opening through which said nipple extends, a bearing interposed between the top of the cap and the upper face of the flange on said nipple, and a manifold to which said holder head is secured, said manifold having an interior channel for cooling purposes.

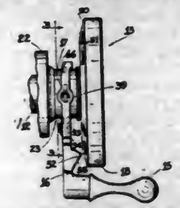
2,447,571
DITCH PAVING MACHINE
Edward D. Ekenstam, Los Angeles, Calif., assignor of one-half to Southwest Paving Company, a corporation of California
Application January 20, 1945, Serial No. 573,652
24 Claims. (Cl. 61—63)

1. An asphalt ditch paving machine comprising, in combination, a flat bottomed pan adapted to bear on and slide along the flat bottom of a ditch, guide means mounted on said pan and having a broad bearing surface disposed to engage the sloping sides of the ditch to hold said pan on its course, and means carried on said pan at the rear end thereof for distributing asphalt mix uniformly over the sides and bottom of the ditch and thereafter compacting and smoothing said asphalt.



2,447,572
RADIO CABINET
Kurt Emde, Itasca, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application October 8, 1945, Serial No. 620,979
1 Claim. (Cl. 250—14)

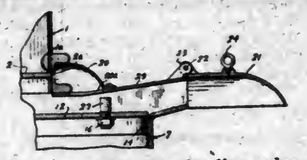
In combination in radio apparatus, a radio unit, a cabinet having at least a front wall and a pair of side walls, said front wall being provided with an opening therein, and means for supporting said radio unit in movable relation to said cabinet, said radio unit including a radio circuit, a top panel having mounted therein controls for said circuit, a front panel fixedly mounted to said top panel and normal thereto, said front panel having a size and shape substantially identical with that of the opening of the front wall, said circuit being supported by one of said panels, and a housing for said circuit, said housing including side panels attached to said top and front panels in normal relation thereto, said housing having a cross-sectional area less than the area of said front panel and being so attached to said front panel that said panel extends beyond said housing and said top panel relatively slightly, said supporting means including a pair of mechanical linkages of differing lengths each pivotally secured at its opposite ends to one of the side portions of said housing and to the corresponding side wall of said cabinet, respectively, the shorter of said linkages being pivotally secured to said cabinet and said housing closer to said front wall and front panel, respectively, than the longer of said linkages, the lengths and pivot points for each linkage being chosen so that movement of said radio unit from a closed position to an opened position follows a constrained path which consists of a translational portion, a combined translational and rotational portion, and a smooth transitional portion between the aforementioned portions, the lengths of said portions being such that for a given size of radio unit and said opening in said front wall, said top panel is rotated to the desired inclination with a minimum total translation of said unit.



2,447,573
PROCESS FOR ISOMERIZING PARAFFINS
Otto Gerbes, Goose Creek, Tex., assignor to Standard Oil Development Company, a corporation of Delaware
Application March 13, 1945, Serial No. 582,429
4 Claims. (Cl. 260—683.5)

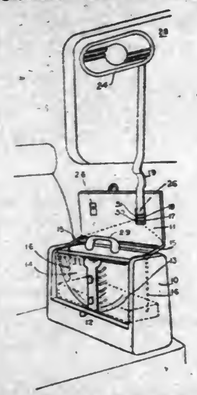
1. In an isomerization process, the steps of forming a feed stock consisting essentially of low molecular weight normal paraffinic hydrocarbon, discharging a mixture of isomerizable low molecular weight paraffin feed stock and aluminum chloride vapor free from promoter gas into a porous support at a temperature of approximately 300° F. to cause adsorption of the aluminum chloride on the porous support and form an active catalytic mass, passing feed stock free from promoter gas at atmospheric temperature into the active catalytic mass and cooling said mass to a temperature in the range of 230° to 270° F., supplying a mixture of feed stock and hydrogen

chloride to the cooled active catalytic mass to cause isomerization therein at a temperature in the range of 230° to 270° F. and removing isomerized product from the active catalytic mass.



2,447,574
SAFETY CRANKING MEANS FOR HAND WHEELS OF MACHINE SPINDLES AND THE LIKE
Frank J. Gibbons, Worcester, Mass.; Harry J. Gibbons administrator of said Frank J. Gibbons, deceased
Application June 15, 1946, Serial No. 677,072
12 Claims. (Cl. 192—67)

1. In a safety cranking device for a rotatable shaft, a handle-carrying member extending radially of said shaft and mounted thereon for free turning movement substantially about the shaft axis and for rocking movement about an axis transverse to said shaft axis, there being matching projections and depressions associated with said member and shaft respectively, and adapted when in registration angularly and radially to be interengaged by said rocking movement for the clutching together of member and shaft, to procure cranking of the latter by the former, said mounting permitting radial play between said member and shaft of such amplitude as to preclude such radial registration when said member is pendent from the shaft, in the lower half of its swing, and to obtain such radial registration when said member is moved into the upper half of its swing to rest upon said shaft.



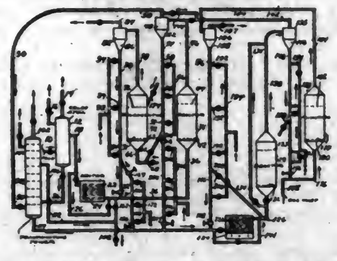
2,447,575
APPARATUS FOR AERATING GRANULAR MATERIAL
Axel G. Granath, Chicago, Ill., assignor to Herbert S. Simpson, Evanston, Ill.
Application March 12, 1945, Serial No. 582,321
1 Claim. (Cl. 259—1)

In an apparatus wherein sand is mulled in a first container and then transferred to a second container for aerating, a control door mounted on one of the containers for slidable opening and closing of a common port between the said containers, said door adapted to be moved partially open for regulating the quantity of sand passing therethrough, and means defining a chamber communicating with the interior of said second container and having an opening communicating with said first container in line with said con-

trol door for receiving the leading edge of the control door in its closed position, whereby sand pushed ahead of said door in its movement to its closed position is disposed in said second container.

2,447,576
PORTABLE RADIO RECEIVER
Gilbert E. Gustafson, River Forest, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application March 11, 1944, Serial No. 526,095
2 Claims. (Cl. 250—14)

1. In radio apparatus comprising a case enclosing a radio circuit having two terminals and a door closing at least a portion of one side of said case, the combination of long arm hinge members permanently fixed substantially perpendicularly to one edge of said door and permanently secured pivotally on an adjacent side of said case about an axis lying substantially parallel to said one side of said case and substantially midway of said adjacent side of said case, a handle substantially centrally located on said adjacent side of said case, said door being arranged to open on said hinge members away from said case a distance sufficient to move over said handle to a position on the other side of said handle from said one side of said case, a unitary loop antenna structure having snap fastening means connected in circuit therewith, snap fastening means complementary to said snap fastening means of said antenna structure arranged on that side of said door adjacent said case when said door is closed, means for connecting said snap fastening means of said door with said two terminals of the radio circuit through said hinge members, and a flexible two conductor transmission line having snap fastening means on the ends thereof respectively complementary to said snap fastening means on said antenna structure and said snap fastening



means on said door, said line being detachably connected between said door and said antenna structure and providing connections through said snap fastening means, line, and hinge members between said antenna structure and said radio circuit terminals, said two first mentioned snap fastening means being arranged so that said antenna structure may be supported on said door and connected to said two terminals by cooperation between said two first mentioned snap fastening means when said line is detached from the door and antenna.

2,447,577

TREATING HYDROCARBON FLUIDS

Charles E. Hemminger, Westfield, and Charles W. Tyson, Summit, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

Application March 25, 1943, Serial No. 480,448
15 Claims. (Cl. 196—52)

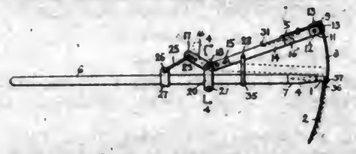
1. A process for treating hydrocarbon fluids which comprises separating a hydrocarbon oil into a residual oil fraction containing vaporizable and unvaporizable constituents and a condensate fraction, contacting the condensate fraction with hot catalyst particles to vaporize the condensate fraction and raise it to conversion temperature, passing the mixture into a reaction zone, separating vaporous reaction products from dry spent catalyst, mixing the residual oil fraction with hot regenerated catalyst, heating the residual oil fraction and catalyst to a higher temperature than said first mentioned temperature to convert and substantially completely vaporize the residual oil fraction leaving unvaporized deposits on the catalyst, separating vaporous reaction products from dry spent catalyst, regenerating at least a portion of the first mentioned spent catalyst and using most of the regenerated hot catalyst for admixture with the condensate fraction and at least a part as the catalyst for the residual oil fraction conversion.

2,447,578

ART OF STIFFENING THE UPPERS OF SHOES

Maurice Godfrey Hill and Charles Alan Cooper, Leicester, England, assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

No Drawing. Application April 24, 1942, Serial No. 440,350. In Great Britain May 10, 1941
3 Claims. (Cl. 154—46)



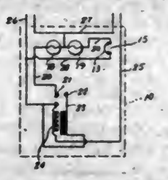
1. In a method of making a laminated stiffener blank which comprises assembling in superposed relation a plurality of layers of the desired shape one of which at least is pervious to a solution of a cellulosic ester impregnating stiffening substance, with a measured quantity of the solution between two of the layers, and subsequently exerting pressure upon both faces of the assembled stiffener to force the stiffening solution through the pervious layer, the pressure being greater on a selected locality of the blank than on other localities of the blank whereby the locality subjected to greater pressure contains a smaller amount per unit area of stiffening substance than said other localities, that improvement which consists in supplying adjacent to said selected locality of the laminated article before the pressure is exerted, borax as a gelling agent to prevent seepage of said solution into said selected locality.

2,447,579

RAKE CLEANING ATTACHMENT

Louis Jarosh, Brooklyn, N. Y.

Application March 8, 1945, Serial No. 581,595
4 Claims. (Cl. 56—400.08)



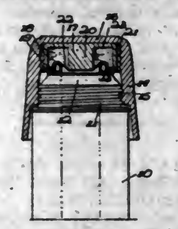
1. A rake comprising an elongated handle; a middle bar; means to pivotally support the rear portion of the middle bar on the handle; a spring urging the front portion of the bar upward; means to limit the upward movement of the middle bar; a cross-bar secured to the front end of the handle; a plurality of arcuate tines extending downward from the cross-bar; side bars secured at the rear ends to the middle bar in front of the pivoting means, the side bars diverging from the middle bar; a scraping plate pivotally connected at the upper portion thereof to the front ends of the side bars and extending downward therefrom; and resilient means to rotate the scraping plate toward the tines, the middle bar together with the side bars being adapted to be manually rotated for causing the lower edge portion of the scraping plate to slide downward in yieldable engagement with the outer sides of the tines.

2,447,580

DEVICE FOR TESTING ELECTRIC IRONS

Paul M. Kaumans, Topeka, Kans.

Application July 19, 1946, Serial No. 684,798
3 Claims. (Cl. 73—1)



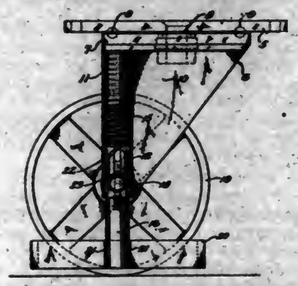
1. A device for testing electric irons, comprising a base support including a top member of fireproof material, an instrument board mounted upon the base support, an instrument circuit mounted upon the board, a tube having a part carried by the top member and arranged to contact with the sole of the electric iron and containing an expansible fluid, means to connect the instrument circuit with a source of electric current, means to connect the circuit of an electric iron with the instrument circuit, the instrument circuit and electric circuit being connected in series, a visible pilot lamp connected in the instrument circuit for obtaining current therefrom, means connected in the instrument circuit to close the pilot lamp circuit when the electric iron circuit is closed, a second visible pilot lamp connected in the instrument circuit to receive current therefrom, a switch operated by the fluid in the tube when the fluid expands and connected with the second pilot lamp to cause such second pilot lamp to glow when the sole of the iron is heated to a selected maximum temperature, and adjustable means on the instrument board to set the switch to close at the maximum degree of heat desirable for the sole of the iron.

2,447,581

SEALING CAP FOR VACUUM BOTTLES AND THE LIKE

Glenn Keith, Hollywood, Md., assignor of one-fourth to Milton M. Weinstein, one-tenth to Barnett Covent, one-tenth to William Mintz, one-tenth to Harry Weinstein, and one-tenth to Elias Goldberg, all of Detroit, Mich.

Application July 28, 1944, Serial No. 546,955
2 Claims. (Cl. 215—43)



1. A combined sealing cap and drinking cup element for a vacuum bottle having an orifice lip, said element comprising a cup provided with a rim and a base and having detachably positioned in its base a plug provided with an annular recess containing a fluid, a flexible diaphragm secured to the plug and covering the fluid, and internal thread means provided in the cup adjacent to its rim for engaging the bottle and holding the cup thereon with the lip of the bottle pressing the diaphragm into the recess.

2,447,582

CASTER CONSTRUCTION

Carl E. Klumb, West Bend, Wis., assignor to West Bend Equipment Corporation, West Bend, Wis., a corporation of Wisconsin

Application August 10, 1945, Serial No. 609,986
5 Claims. (Cl. 16—44)

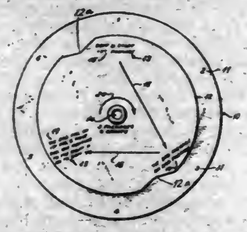
1. In a caster construction, a depending bracket, a wheel, means in said bracket rotatably supporting said wheel for vertical yielding movement, a foot guard near the lower peripheral portion of the wheel, and means connected to the wheel support for supporting said foot guard for vertical yielding movement with the wheel.

2,447,583

PREPARATION OF CYCLIC OXIMES

Theodoor Koch, Oosterbeek, Netherlands, assignor to American Enka Corporation, Enka, N. C., a corporation of Delaware

No Drawing. Application December 17, 1946, Serial No. 716,877. In the Netherlands March 5, 1946
10 Claims. (Cl. 260—566)



9. A method for the preparation of a cycloalkanone oxime having from 4 to 10 ring carbon atoms comprising reacting a cycloalkanone-bisulfite addition compound with a compound selected from the class consisting of nitrous acid and alkali metal salts thereof.

2,447,584

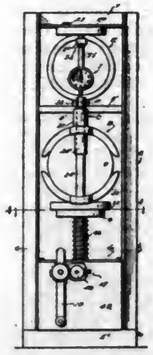
INDICATOR

Paul W. Markwood, Enka, N. C., assignor to American Enka Corporation, Enka, N. C., a corporation of Delaware

Application September 24, 1945, Serial No. 618,275
4 Claims. (Cl. 35—74)

1. Educational apparatus for guiding a machine operator through a plurality of cyclic operations, each cycle including a plurality of sequential steps, each of which steps must be performed in sequence on each of a number of machines greater than the number of steps in a cycle, said apparatus comprising means bearing a symbol representing each of the machines under the control of an operator, means bearing symbols indicating each of the steps of the cycle and the order of their performance, and means mounting said symbol bearing means for relative movement from a position where each step symbol registers with a separate machine symbol to successive positions where every step symbol registers with a different machine symbol whereby the operator is guided to perform the sequential steps of the cycle on each of the machines.

2,447,585

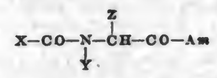


REDUCTION OF THE ASH CONTENT OF NITROAROMATIC COMPOUNDS

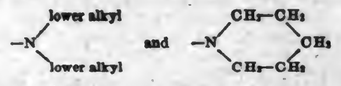
Ralph Burgess Mason, Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application October 7, 1943, Serial No. 505,411
5 Claims. (Cl. 260—645)

1. The improvement in the method of separating non-filterable ash-producing material from commercial nitroaromatics, which comprises adding to said nitroaromatics a small quantity of a solid water-soluble drying inorganic salt.



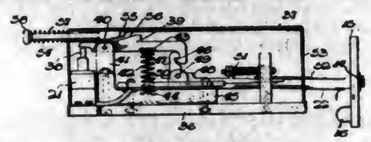
2,447,586
COMPRESSION TESTING AND LIKE APPARATUS
Bruce G. Marshall, Vicksburg, Miss.
Application February 9, 1944, Serial No. 521,692
5 Claims. (Cl. 73—94)



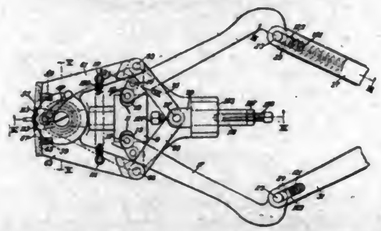
3. A load measuring device comprising an upright frame, a load applying jack mounted in the bottom of said frame and including a vertically movable lifting screw, a cross-piece fixed in the frame above said jack and having a central opening, a load measuring unit mounted within said frame, said unit embodying a resilient ring and a flexure measuring dial fixed to said ring at one side of the latter and having a pointer actuating contact pin engaging the inner surface of said ring at the diametrically opposite side of the latter, and a headed work load applying pin extending through and slidable in said opening of the cross-piece, the head of said work load applying-pin engaging the outer surface of said opposite side of said ring.

2,447,587
ACYL GLYCINE AMIDES
Henry Martin and Hans Gysin, Basel, Switzerland, assignors to J. R. Geigy A. G., Basel, Switzerland, a Swiss firm
No Drawing. Application August 28, 1944, Serial No. 551,636. In Switzerland December 18, 1942
4 Claims. (Cl. 260—561)

1. An acylated aliphatic aminocarboxylic acid amide corresponding to the formula



wherein Am stands for a radical of a secondary amine selected from the group consisting of

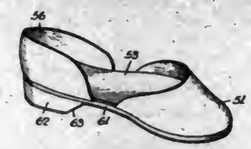


X—CO— stands for an acyl radical of a carboxylic acid selected from the group consisting of aliphatic and cycloaliphatic carboxylic acids with at most 7 carbon atoms, Y stands for a member selected from the group consisting of methyl, ethyl, propyl, butyl, allyl, cyclopentyl and cyclohexyl radicals, and Z stands for lower alkyl.

2,447,588
APPARATUS FOR COUNTING THE REVOLUTIONS OF A SHAFT AFTER DISCONTINUANCE OF POWER
Oral C. McNairn, East Orange, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application March 23, 1944, Serial No. 527,856
7 Claims. (Cl. 73—116)

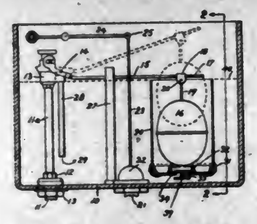
1. A device for testing a unit having a motor, comprising, an output shaft driven by said motor including an abutment, a switch included in the circuit of said motor and adapted to open or close said circuit, a counter connected into said circuit in parallel with said switch, and a device including a pair of fingers adapted to be engaged by said abutment during rotation of said shaft, one of said fingers being operatively connected to said switch and the other finger being connected in the electrical circuit of said counter to complete said circuit upon engagement by said abutment.

2,447,589
RIVET STEM PULLER AND CUTTER
Lucien Paul Mellerio and Basil Pomeroy Cooper, Leicester, England, assignors to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application June 20, 1944, Serial No. 541,230
In Great Britain November 23, 1943
7 Claims. (Cl. 218—19)



1. A rivet-setting tool comprising means arranged to grip a portion of the stem of a rivet-setting mandril, means arranged to swage and sever the stem between said gripping means and a hollow rivet surrounding another portion of the stem, toggle means arranged to operate said swaging and severing means, a supporting structure by which said means are all maintained in assembled relation, and an actuating mechanism arranged to shift said gripping means and the knee of said toggle means successively and both lengthwise of the mandril to upset a rivet and swage the mandril.

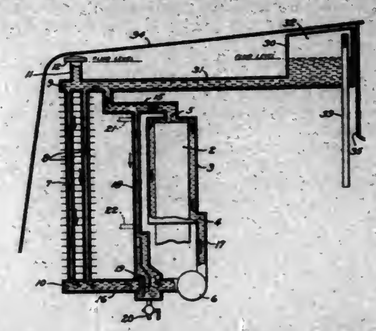
2,447,590
SHOE CONSTRUCTION HAVING STITCHED-IN INSOLE AND PRESSURE-COVERED MOLDED HEEL COUNTER
Jack Meltzer, New York, N. Y.
Application December 1, 1945, Serial No. 632,140
2 Claims. (Cl. 36—19.5)



1. In a shoe, an upper having a vamp portion and a heel portion, a lining for said heel portion,

an outer sole, an insole having its edge stitched to said upper, said vamp portion having an anchoring extension projecting beyond the stitched edge of said insole and turned under to lie between the insole and the outer sole, a counter molded into sandwiched and bonded relation to

said heel portion and lining, and means independent of said outer sole for connecting said covered counter to the forward portion of the shoe, said counter having a base, said insole having lateral wings in the shank region of the shoe, and said connecting means securing said counter base to said wings.

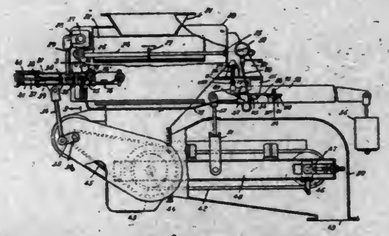


2,447,591
FLOAT VALVE
Turner B. Messick, Denver, Colo., assignor of one-half to Jeannette D. Danley, Denver, Colo.
Application January 3, 1947, Serial No. 720,133
4 Claims. (Cl. 137—104)

1. In a flush box having a water inlet and outlet pipe, in connection therewith and a valve in the inlet pipe, control means for the inlet valve comprising an arm having a float suspended therefrom near its outer end and a receptacle into which the float projects, said receptacle having a base provided with an opening communicating the interior of the receptacle and the tank, a check valve in the opening permitting liquid to flow from the receptacle into the tank, and means for frictionally securing the receptacle to the tank comprising wall engaging lugs projecting in opposite directions, and means for urging the projections against the opposite surfaces of the tank wall to secure the receptacle in position therein.

2,447,592
INTERNAL-COMBUSTION ENGINE COOLING SYSTEM
Wellington W. Muir, Lockport, N. Y.
Application September 13, 1945, Serial No. 616,124
17 Claims. (Cl. 123—178)

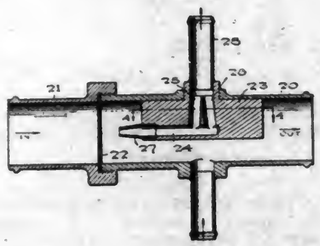
4. A cooling system for an internal combustion engine provided with a cooling jacket, comprising a downflow radiator, a pump, and fluid conducting connections between said jacket, said radiator and said pump for establishing a cooling circuit, a tank for cooling fluid maintained at a level above the cooling circuit, a vent for the system connected to the coldest portion of said tank, a fluid conducting conduit connecting said tank and the circuit, said conduit serving to conduct vapors travelling toward said vent as well as serving as a gravity feed for the fluid flowing



from said tank to the circuit, and means for filling the circuit and a portion of said tank.

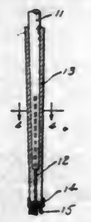
2,447,593
PRODUCTION OF PRIMARY ALKYL HALIDES
John C. Munday, Cranford, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application May 10, 1943, Serial No. 486,419
9 Claims. (Cl. 260—658)

1. Method of producing primary halogenated hydrocarbons, which comprises reacting an olefin, halogenated in a primary position, with an isoparaffin in the presence of a catalyst consisting of halosulfonic acid under alkylation conditions, at a temperature between about 0° C. and about —70° C.



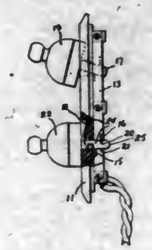
2,447,594
FEEDING AND WEIGHING APPARATUS
Louis S. Petersen, Forest Hills, N. Y., assignor to F. L. Smidth & Co., New York, N. Y., a corporation of New Jersey
Application April 1, 1944, Serial No. 529,216
10 Claims. (Cl. 222—55)

1. Apparatus for supplying material at a constant rate, which comprises material feeding means including a pair of elements, one of which is stationary and the other of which reciprocates, and mechanical means for reciprocating the second element to effect feeding of the material, a conveyor receiving material from the feeding means and movable from an initial position as the load thereon varies, a weigh beam connected to the conveyor and operable to hold it in said initial position when it is carrying a selected load, said beam being movable by the conveyor as the latter changes position in response to varying



loads, and means operated by the conveyor as the latter moves from its initial position for acting on the means for reciprocating the second element to vary the length of the stroke thereof.

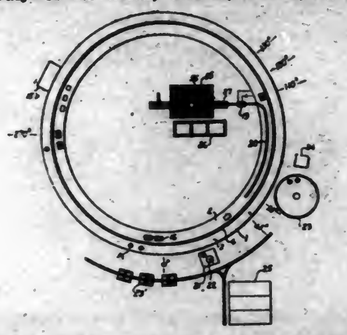
2,447,595
SAMPLER FOR GAS-LIQUID MIXTURES
Reginald J. S. Pigott and Charles R. Taylor, Pittsburgh, Pa., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
Application April 16, 1945, Serial No. 588,624
1 Claim. (Cl. 73—422)



Apparatus for obtaining homogeneous samples of gas-liquid mixtures in flow through a conduit without substantial pressure loss in the conduit therebeyond, comprising an orifice plate for forming a vena contracta in the flowing stream and thereby raising its Reynolds number, a sampling tube having an opening of such dimensions as to make possible sampling at a velocity approaching the velocity of the main stream, said sampling tube extending centrally of the stream into the vena contracta thereof at a point downstream of the orifice approximately one-half the diameter of said conduit, for abstracting samples of the mixture in the same direction and at substantially the same speed as the rate of the main flow at such point of highest turbulence.

2,447,596
VACCINATION DEVICE
Foster S. Price, Sterling City, Tex.
Application June 3, 1947, Serial No. 752,154
3 Claims. (Cl. 128—253)

1. A vaccinating device comprising a tubular body member having a stepped bore defining a relatively large diameter upper bore portion and a relatively small diameter lower bore portion opening through the lower end of said body member, said bore portions defining a stop shoulder therebetween, a brush secured to the lower end of said body member, and a handle member having a lower end portion removably insertible in the large diameter portion of said body member and a needle projecting axially from the lower end of said handle member to extend through said smaller diameter bore portion of said body member, said lower end portion being insertible into the bore of said body member so as to engage the lower end thereof with said stop shoulder whereby the degree of projection of said needle below the lower end of said body member is positively limited to a position within said brush.



2,447,597
SELF-LOCKING ELECTRIC OUTLET AND PLUG
Charles H. Reed, Fort Stanton, N. Mex.
Application August 28, 1945, Serial No. 613,108
9 Claims. (Cl. 173—330)

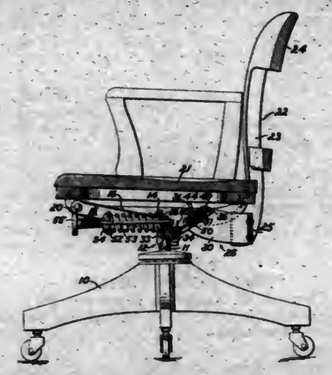
9. An electrical connector assembly comprising a plug having a pair of contact prongs extending therefrom, shoulders on the edges of each of said prongs adjacent the end thereof, a receptacle comprising a faceplate formed with a pair of slots positioned to receive said prongs, buss bars mounted on the back surface of said faceplate, retaining lugs on said buss bars positioned relative to said slots and between which said prongs can be passed and withdrawn with said plug in an inclined position with respect to said faceplate, said shoulders being arranged on said prongs so that at least one of said shoulders can engage behind one of said retaining lugs and said plug moved from the inclined position to a position flush with the said faceplate so as to positively engage the shoulder behind the retaining lug and thereby lock said plug in position on said faceplate.

2,447,598
METHOD OF MAKING POTTERY MOLDS
Lewis P. Reese, Scio, Ohio
Application October 2, 1943, Serial No. 504,746
2 Claims. (Cl. 25—155)

1. The method of forming articles from plaster, which comprises placing a plurality of molds on an annular rotatable table, continuously rotating said table to repeatedly carry the molds through a series of zones, and while said table is rotating, feeding liquid plaster to said molds in one zone in the path of movement of the molds, permitting the plaster to solidify in the molds in another zone adjacent said first mentioned zone, opening the molds and removing the plaster articles therefrom in still another zone and closing the molds preparatory to receiving another charge of liquid plaster, placing the plaster article removed from its mold on said table in a position radially outwardly of its mold, thereby conveying the

plaster article to a finishing zone, and finishing the article in said zone.

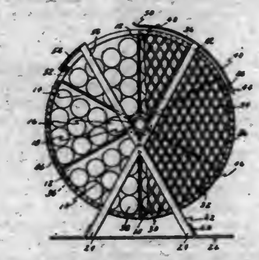
2,447,599
METHYLATION OF AROMATIC HYDROCARBONS
Louis Schmerling, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application March 31, 1941, Serial No. 386,110
24 Claims. (Cl. 260—671)



1. A process for producing methylated aromatic hydrocarbons which comprises subjecting an aromatic hydrocarbon to contact with a methylating agent at a temperature of from about 350° to about 500° C. in the presence of a catalyst containing as its active ingredient an acid-acting compound of phosphorus.

2,447,600
PRODUCTION OF UNSATURATED NITRILES
Walter A. Schulze and John E. Mahan, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware
Application May 4, 1944, Serial No. 534,162
10 Claims. (Cl. 260—464)

1. A process for the production of a nitrile of an unsaturated carboxylic acid which comprises mixing a substantially anhydrous conjugated diolefin hydrocarbon with substantially anhydrous hydrogen cyanide in vapor phase, and passing the resulting mixture of vapors over a substantially anhydrous cuprous salt under substantially anhydrous conditions and at a temperature between 400° and 1000° F. and at a pressure less than 100 pounds per square inch gage and such that the reaction mixture is in vapor phase, and recovering a resulting nitrile of an unsaturated carboxylic acid so produced.

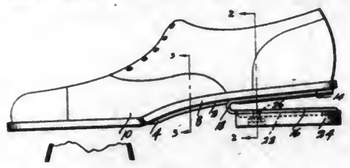


2,447,601
TILTING CHAIR SEAT AND BACK REST
William J. Sengpiel, Buffalo, N. Y., assignor to The Sikes Company, Buffalo, N. Y.
Application February 19, 1946, Serial No. 648,580
7 Claims. (Cl. 155—77)

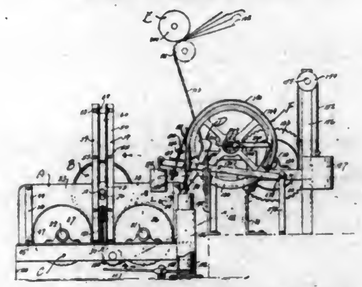
1. A chair comprising a seat, a support for the seat, means pivotally connecting said seat to said support, spring means tending to oppose tilting movement of said seat in one direction, a back, means pivotally connecting said back at its lower end to the rear end portion of the seat, bell crank means pivotally carried by said support and having one arm thereof engaging said spring means, and means rigidly carried by said back for slidable connection with the other arm of said bell

crank for causing relative pivotal movement of said back and seat as said back is tilted back and forth upon its pivotal support.

2,447,602
BEVERAGE CABINET HAVING A ROTATABLE COMPARTMENTED MEMBER
Robert J. Shelley, Coconut Grove, Fla.
Application October 30, 1945, Serial No. 625,581
6 Claims. (Cl. 312—148)



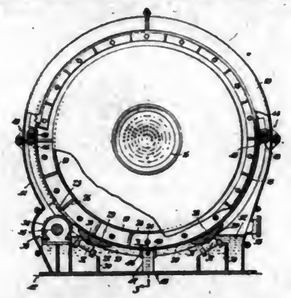
1. A device of the character described, comprising a drum, having partitions therein for separating said drum into a series of compartments, covers for said compartments, means for rotatively mounting said drum, means on said mounting means for preventing rearward motion thereof, and means coacting with said covers and secured to said mounting means to prevent forward movement of said drum only when said cover is not in proper position.



2,447,603
SHOE
Ballard F. Snyder, Spokane, Wash.
Application September 27, 1946, Serial No. 699,889
1 Claim. (Cl. 36—38)

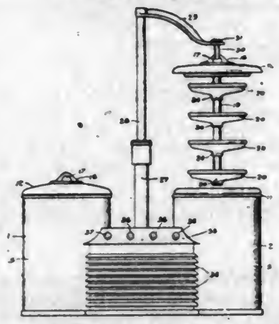
The combination with a shoe, of a ground engaging cushion heel, securing means for the heel comprising a plate bent upon itself on a medial transverse line to form resiliently connected plate sections normally diverging from the bend and one section being rigid with the shoe and the other section rigid with the heel, and the plate positioned with the transverse bend adjacent the

front of the heel, and raised sharpened edges on the heel section about the periphery and terminating in spaced relation to each other at the rearmost portion of the heel section.



2,447,604
FIBER ROLL FORMER
Thomas C. Taggart, Hanover, Pa.
Application July 12, 1944, Serial No. 544,605
10 Claims. (Cl. 19—158)

5. In a roll forming device for wrapping a ribbon of flexible material upon a spool, the combination of a rotatable spool, a rotatable drive wheel adapted to peripherally engage the outer layer of the ribbon being wound upon the spool for rotating the spool and winding the ribbon thereon, means to urge said spool in the direction of said drive wheel for pressure application of the ribbon being wound thereon against said drive wheel, means to release said pressure, means to increase the application of magnitude of said pressure, detent means normally holding said last mentioned means inoperative, and trip means actuated by predetermined size formation of the roll to release said detent means for the application of the additional pressure upon the ribbon being wound.

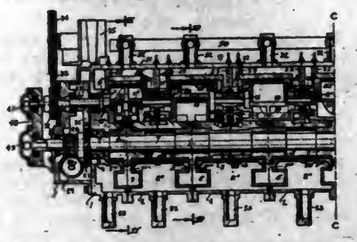


2,447,605
MILL BEARING CONSTRUCTION
Michael Treshow, Pacific Palisades, Calif., assignor to F. L. Smidth & Co., New York, N. Y., a corporation of New Jersey
Application August 24, 1944, Serial No. 550,928
9 Claims. (Cl. 308—73)

1. Apparatus of the type described, which comprises a generally cylindrical shell, a ring member encircling and secured to the shell between the ends thereof and having a smooth peripheral surface, said ring member being provided with radially extending circumferential flanges having opposed smooth surfaces, means beneath the shell engaging the peripheral surface of the ring member to provide the sole support for the shell, separate means remote from the supporting means and engaging the flange surfaces to prevent tilting of the shell, and a casing encircling the shell and enclosing the ring member and both said means, the means for preventing tilting of

the shell being attached at least in part to the casing.

2,447,606
ASSEMBLAGE OF REFRIGERATING UNITS
William E. Wine, Parker, Va.
Application April 4, 1946, Serial No. 659,526
7 Claims. (Cl. 62—89)



1. A refrigerating assembly having a plurality of refrigerating units, each of said units consisting of a container and a set of connected vertically spaced food supporting shelves arranged within the container, and means for selectively raising the food supporting shelves from said containers, said means including a rotatable arm selectively cooperable with the set of shelves of any one of said containers and a hydraulic lift for moving said arm vertically to withdraw the selected set of shelves from its container.

2,447,607
LUBRICANT
John C. Zimmer, Union, and Gordon W. Duncan, Westfield, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 30, 1944, Serial No. 570,786
3 Claims. (Cl. 252—40.5)

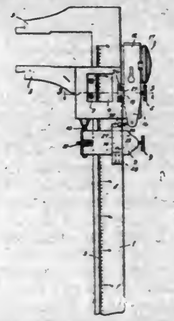
1. An improved lubricating oil composition consisting essentially of a mineral lubricating oil containing from 0.5 to 5.0% by weight based on the total composition of an alkaline earth metallo-organic detergent composition having a tendency to form emulsions and drop out of oil solution in the presence of water, and 0.05 to 4% of an oil soluble hydrophilic agent selected from the group which consists of phenoxy ethanol and phenoxy isopropanol for stabilizing said detergent in solution in said oil.

2,447,608
ROTARY INTERNAL-COMBUSTION ENGINE OF THE ROTARY ABUTMENT TYPE
Frank Berry, Corinth, Miss.
Application May 29, 1944, Serial No. 537,907
12 Claims. (Cl. 123—13)

6. An internal combustion motor having a casing, a compression chamber, a firing chamber adjacent thereto, piston and abutment rotors, a piston and an abutment in each of said chambers, a duct for introduction of fuel gases into said compression chamber, and means for leading compressed gases from said compression chamber into said firing chamber, the improvement which comprises a compression abutment having a pair of closed disc-like ends, an approximately hemicylindrical hollow member between said ends, a fuel gas intake channelway in one of said ends, a fuel discharge port in the other of said ends, inwardly and outwardly of said hemicylindrical hollow member.

2,447,609
PROCESS OF MAKING MARQUETRY INLAY
John T. Breece, New Albany, Ind.
Application April 16, 1945, Serial No. 588,599
2 Claims. (Cl. 41—35)

1. In the process of inlaying a veneered multiply assembly, the step of assembling the plies together with a pressure and heat curable adhesive therebetween, applying to the outer surface of the outer veneer sheet the inlay with similar adhesive therebetween, pressure seating the inlay into the outer veneer and pressing the pressed veneer into the next ply of the assembly while compressing and consolidating the plies accompanied by heating, the inlay having an identical shaped relatively compressible backing, the seating pressure being sufficient to initially compress the backing and sink the inlay material and a portion of the backing into the outer veneer, release of pressure permitting expansion of the backing and rebound of the backing and inlay portion so that the inlay-backing junction substantially coincides with the outer surface of the outer veneer.

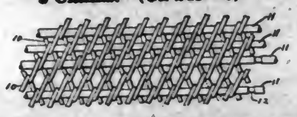


2,447,610
SOLID HALOGEN DERIVATIVES OF POLYMERIZED METHYL PENTADIENE
John D. Calfee, Westfield, and Robert M. Thomas, Union, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 7, 1943, Serial No. 513,294
2 Claims. (Cl. 260—93)

1. In the method of preparing a resinous, noninflammable, hydrocarbon soluble substance by forming a rubbery solid homopolymer having a molecular weight in excess of 20,000 by polymerizing 2-methylpentadiene-1,3 at a temperature between —10° C. and —160° C., by the application thereto of a Friedel-Crafts catalyst dissolved in a non-complex forming halogenated alkane of 1 to 5 carbon atoms per molecule which is liquid at the polymerization temperature, the improvement comprising dissolving the rubbery homopolymer in a solvent selected from the class consisting of benzene and toluene, and adding to this solution a halogen-containing substance selected from the group consisting of chlorine, bromine and hydrogen chloride to saturate at least a portion of the double bonds present in the homopolymer and thereby to form a resinous, hydrocarbon soluble solid substance capable of being formed into films.

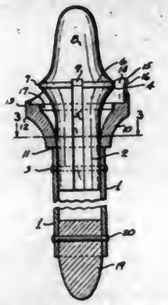
2,447,611
PRODUCTION OF SILOXANE RESINS
William R. Collings, Howard N. Fenn, and Herbert J. Fletcher, Midland, Mich., assignors to Dow Corning Corporation, Midland, Mich., a corporation of Michigan
No Drawing. Application January 21, 1946, Serial No. 642,437
7 Claims. (Cl. 260—46.5)

1. The method of preparing organo-poly-siloxane resins from mixtures containing phenyl and methyl substituted silicon chlorides produced by interaction of silicon tetrachloride with phenyl and methyl Grignard reagents, and in which all of the chlorine substituted silicon atoms are subjected to reaction conditions both with the phenyl and the methyl Grignard reagents whereby phenyl and methyl radicals are coupled with silicon by carbon-silicon linkage, which comprises vaporizing silicon tetrachloride and the low boiling silicon chlorides in which the only organo radicals are methyl radicals from the crude reaction mixture leaving a residue containing the higher boiling silicon chlorides which contain at least one phenyl radical, hydrolyzing the still residue, hydrolyzing methyl silicon trichloride, and copolymerizing the hydrolysis products of said still residue and said methyl silicon trichloride, whereby a bodied resin is obtained.



2,447,612
DIAL INDICATOR MOUNT FOR SLIDE CALIPERS
Leo H. Dowe, St. Louis, Mo.
Application October 25, 1944, Serial No. 560,244
3 Claims. (Cl. 33—147)

2. In a gauge having a stem, a jaw fixed to the stem, a movable jaw member encompassing and

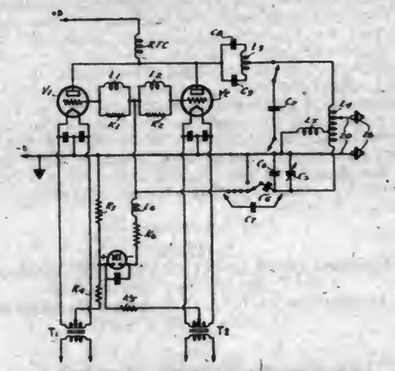


slidably mounted on the stem and a clamping screw threaded in the back of the movable jaw member to clamp said member on the stem, the improvement comprising a removable saddle member for carrying an accessory, adapted to fit on the back of said movable jaw member, said saddle member having a pair of slide plates and a pair of end members, the side plates being so positioned and arranged as to span said movable jaw member, the end members being spaced from each other to pass said clamping screw therebetween, a screw through one of the plates to engage the movable jaw member, a longitudinal shelf on the other plate to accommodate an accessory and a clamping bar along the shelf to hold said accessory in adjusted position on the shelf.

2,447,613
WIRE COIL CONVEYER BELT
Frederick W. Hale, Worcester, Mass., assignor to Ashworth Bros. Inc., Worcester, Mass., a corporation of Massachusetts
Application August 9, 1946, Serial No. 689,625
3 Claims. (Cl. 245—6)

1. In a wire coil conveyor belt, a reenforcing cross rod extending through the interlocked portions of adjacent intermeshed coils and having a longitudinal series of annular grooves providing transversely spaced shouldered abutments, and said grooves being spaced apart to substantially correspond to the pitch of the wire coils.

2,447,614
CLOTHES POLE
Richard J. S. Hoppe, Maplewood, Mo.
Application September 17, 1947, Serial No. 774,651
3 Claims. (Cl. 248—343)

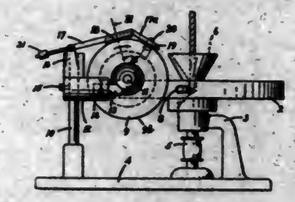


3. A clothes pole adapted to be associated with a clothesline, and comprising a pole having at its upper end a grooved cylindrical member surmounted by a bifurcated member for engagement with said clothesline, portions of said bifurcated member being rigidly secured in the grooves of said cylindrical member, and an element surrounding said cylindrical member and provided with means in registration with the grooves thereof to render said element and said cylindrical member slidable but not rotatable with respect to each other, said element having means for engagement with said clothesline adapted to prevent disengagement of said clothesline from said pole.

2,447,615
CHEMICAL COMPOSITION
Allen R. Jones, Elizabeth, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application December 30, 1944, Serial No. 570,736
8 Claims. (Cl. 44—69)

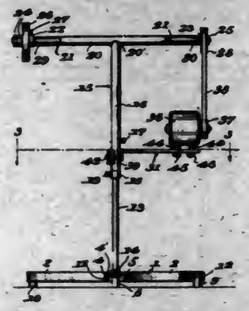
1. A mono-nuclear aromatic hydrocarbon amine stabilized against discoloration during storage by having added thereto about .02% to 0.2% of diethylene triamine.

2,447,616
ELECTRONIC POWER GENERATION
Lester S. Lappin, Camden, and Robert F. Holtz, Merchantville, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application April 7, 1945, Serial No. 587,178
9 Claims. (Cl. 250—36)



1. In apparatus for electronically generating oscillatory power for industrial and like purposes, an electron discharge device having an anode, a cathode and a control grid, coupled in regenerative circuit including inductive reactance and capacitive reactance in parallel, the parallel reactances being coupled at one end to the anode of the device and at the other end by feedback coupling to the control grid of the device, direct current blocking condensers connected in parallel in the coupling between the anode of the device and said one end of said parallel reactances, and means for equalizing the current through the said blocking condensers comprising conductors coupled by mutual inductance in series with the parallel blocking condensers.

2,447,617
ROTARY CUTTER
Sedden C. Nelson, Front Royal, Va., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application June 9, 1945, Serial No. 598,545
3 Claims. (Cl. 164—39)



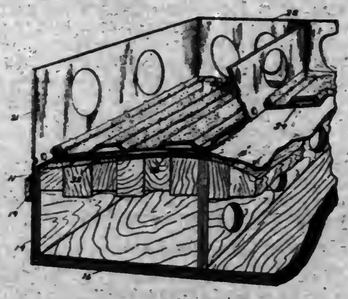
1. Apparatus for cutting continuous filamentary material into discontinuous lengths comprising a rotatable disc having a radial passage for receiving the material and for discharging it radially outwardly from the disc, a rotatable cutting blade arranged to engage the disc periphery to co-operate therewith in effecting cutting of the material, the axis of rotation of the blade being disposed generally transversely

with respect to the axis of rotation of the disc, and means interconnecting the blade with the

disc for rotating the blade during rotation of the disc, said means being the sole means for rotating the blade.

2,447,618
PORTABLE GRINDING STAND
Harlow W. Nicholson, Elwood, Ill.
Refiled for abandoned application Serial No. 688,437, August 5, 1946. This application October 29, 1947, Serial No. 782,859
3 Claims. (Cl. 51—166)

2. In a portable grinding stand, said stand comprising upper and lower detachable sections, said lower section composed of cross members rigidly secured together and supporting a standard centrally thereof and substantially at right angles thereto, the upper section being composed of tubular stock, said stock being rigidly secured together to form a T-shaped member the leg of which telescopically receives the standard of the lower section, in combination with means penetrating said leg and impinging against said standard to prevent angular movement between said sections, said standard having means thereon to support said upper section when said angular movement preventing means is loosened.



2,447,619
SULFURIZED ESTERS OF OXALIC ACID
Dilworth T. Rogers, Summit, and John G. McNab, Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 21, 1946, Serial No. 692,138
2 Claims. (Cl. 260—125)

1. As a new composition of matter a compound of the formula—

where R is a sulfurized unsaturated aliphatic hydrocarbon radical containing at least 6 carbon atoms.

2,447,620
METHOD OF FORMING MOLDS
William W. Singleton and Don E. Dasher, Detroit, Mich., assignors to Bendix Aviation Corporation, Detroit, Mich., a corporation of Delaware
Application August 24, 1945, Serial No. 612,496
1 Claim. (Cl. 76—107)

The method of forming a mold having a surface curved in one or more directions comprising first preparing a box-like frame, including in said frame a flooring of desired contour, covering said flooring with a thin flexible sheet to which sprayed metal may adhere, extending the sides of said frame beyond the level of said flooring, spraying metal within said extended sides to cover said flexible sheet to any desired depth, superimposing upon the sprayed metal a system of conduits for the circulation of cooling fluid, and continuing the spraying of the metal over said conduits to integrate the latter with the resulting metal block.

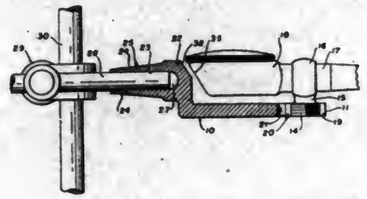
2,447,621
UREA-FORMALDEHYDE MOLDING COMPOSITION
Leonard Smidth, New York, N. Y.
No Drawing. Application September 4, 1943, Serial No. 501,290
4 Claims. (Cl. 260—17.3)

1. A dry free-flowing molding powder comprising a granulated mixture of a fusible resin consisting of a reaction product of urea and formaldehyde as the sole reactants, a cellulose filler, and a minor proportion by weight of a flow promoter comprising a fusible urea-formaldehyde-alcohol condensate, said alcohol condensate imparting to the powder an increased stability during storage and increasing the flow when the powder is subjected to molding by heat and pressure.

2,447,622
ADJUSTABLE THERMAL LIMIT SWITCH
Herman Ulanet, Newark, N. J.
Application January 9, 1946, Serial No. 640,058
1 Claim. (Cl. 200—138)

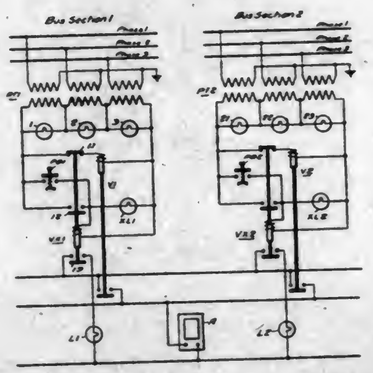
An adjustable thermal limit switch comprising an upper plate, a lower bi-metallic arm, and an intermediate flexible arm disposed in spaced apart superposed relation, the same having fixed

end portions, means to insulate said fixed end portions one from another, said plate having stiffening flanges along its side margins perpendicular to the plane thereof, said flanges including, at the free end portion of said plate, transversely aligned bearing ears, a rotatable transverse shaft journaled in said bearing ears, a cam on said shaft disposed to oppose said flexible arm at a point intermediate its fixed end portion and free end whereby to adjust the relation of said flexible arm to said bi-metallic arm, said flexible arm having an abutment stud affixed thereto in opposition to said cam, means to insulate said abutment stud from flexible arm, the free end portion of said flexible arm having a contact element, the free end of said bi-metallic arm having a contact element opposed to the contact element of said flexible arm, and said flexible arm and said bi-metallic arm being each provided with means for connecting the same in an electrical circuit to be controlled by the switch.



2,447,623
KALEIDOSCOPE
Roscoe E. Zemelman, University City, Mo.
Application February 20, 1946, Serial No. 648,857
7 Claims. (Cl. 88—15)

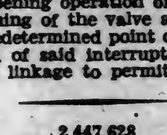
1. A kaleidoscope comprising a tapered outer tube having a transverse wall across its smaller end, said wall being provided with a concentric eye-piece-forming aperture, a pair of spaced disks at the larger end arranged to form a chamber for receiving objects to be viewed, the larger end of said tube being provided on its outer surface with a series of camming bosses, and a removable ring disposed upon the larger end for retaining the disks in place, said ring being interiorly provided with a series of camming projections of size and shape complementary to the first mentioned series of camming bosses for locking engagement with the tube upon relative rotation of the ring and tube.



2,447,624
INDICATOR MOUNTING BRACKET
Carl A. Akert, Chicago, Ill.
Application December 4, 1944, Serial No. 566,569
8 Claims. (Cl. 248—124)

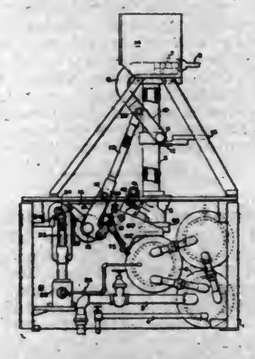
1. An indicator mounting bracket comprising an elongated shank, an upstanding supporting head at one end of said elongated shank to define an offset disposed in parallel spaced relation to said elongated shank for accommodating an indicator casing, and engaging means on said head and shank extremity to enable support of said

shank and an indicator in a variety of rotary and angular positions.



2,447,625
LINE FAULT INDICATING SYSTEM
James S. Astin, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 29, 1945, Serial No. 638,360
2 Claims. (Cl. 177—311)

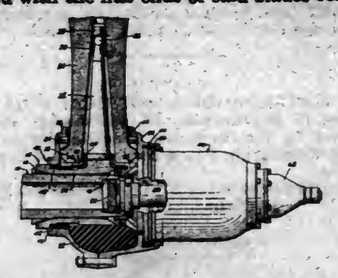
1. In an indicating system, in combination, a set of three-phase power conductors, potential transformers having primary windings connected to said power conductors, a voltage relay having an actuating coil connected to the secondary windings of said transformers to be responsive to a ground on one of said power conductors, an alarm device energized through the contact members of said relay, an auxiliary relay for controlling the operation of said voltage relay, manually operable means for controlling the energization of said auxiliary relay by said potential transformers, and contact members on said auxiliary relay for establishing a holding circuit for the auxiliary relay, said holding circuit being deenergized by the removal of the ground from said power conductor.



2,447,626
β-DIKETONES AND PROCESS FOR PREPARING THEM
Carl T. Bahner, Jefferson City, Tenn.
No Drawing. Application June 13, 1945, Serial No. 599,303
11 Claims. (Cl. 260—590)

7. As new compositions of matter, the substituted diketones having the following structural formula:

wherein R^1 is a radical selected from the group consisting of H, alkyl, and aryl, and R^2 is a radical selected from the group consisting of H and alkyl.



2,447,627
COMPRESSED GAS CIRCUIT INTERRUPTER
Benjamin P. Baker, Turtle Creek, and Raymond H. Leitzel, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 12, 1946, Serial No. 640,826
9 Claims. (Cl. 200—148)

1. In a circuit interrupter of the gas blast type, contact means for establishing an arc, an operating part movable in accordance with contact movement, a valve operable to cause an arc extinguishing blast of gas to extinguish the arc, means normally biasing said valve closed, a linkage operable by the operating part and operable during the opening operation of the interrupter to cause opening of the valve and means operative at a predetermined point during the opening operation of said interrupter to cause collapse of said linkage to permit closing of said valve.

2,447,628
PROPELLER VIBRATION DAMPING MEANS
John G. Baker, Evansville, Wis., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application June 6, 1942, Serial No. 446,041
10 Claims. (Cl. 170—162)

6. An aeronautical propeller having a hub adapted to be mounted for rotation about an axis, a plurality of blades carried by said hub, a connection having a limited freedom of movement between each blade and one portion of said hub, said connection being resilient and flexible circumferentially of, and in opposite directions parallel to, said axis and including means resiliently resisting movement between the hub end of each blade and said hub portion circumferentially about said axis and parallel to said axis, and substantially inelastic friction damping means connected with the hub ends of said blades resisting

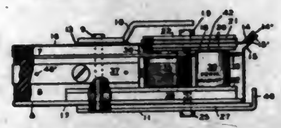
and frictionally damping all movements in both directions parallel to said axis.

2,447,629
APPARATUS FOR FORMING A SECTION OF CASING BELOW CASING ALREADY IN POSITION IN A WELL HOLE
Victor J. Beissinger, Los Angeles, and Glenn D. Johnson, Compton, Calif.; said Beissinger assignor to Richfield Oil Corporation, Los Angeles, Calif., a corporation of Delaware, and said Johnson assignor to Baash-Ross Tool Company, Los Angeles, Calif., a corporation of California
Application May 23, 1944, Serial No. 536,968
11 Claims. (Cl. 166—4)

1. An apparatus for forming sections of casing in a well hole, comprising a mandrel, a set of inner staves and a set of outer staves supported by said mandrel, expanding means interconnecting said mandrel and staves for moving the staves radially upon relative axial movement between said mandrel and staves, and guiding members interconnecting said staves operative for guiding the staves into circumferential alignment on radial expansion of the staves.

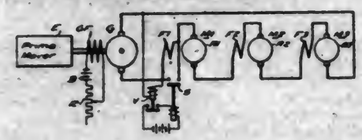
2,447,630
METHOD OF MAKING SELENIUM RECTIFIERS
Wayne E. Blackburn, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
No Drawing. Application November 10, 1943, Serial No. 509,817
12 Claims. (Cl. 175—366)

1. The method of making selenium devices which comprises the steps of coating a conductive



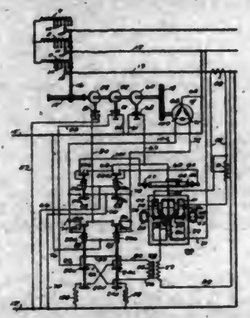
surface with a layer of amorphous selenium; coating the free surface of this amorphous selenium layer with a conductive contact layer and thereafter annealing the selenium.

2,447,631
WATERPROOF ELECTRICAL COIL
Charles H. Braithwaite, Jr., Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 27, 1944, Serial No. 556,064
10 Claims. (Cl. 175—21)



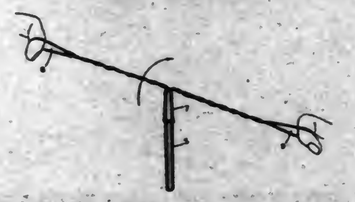
1. Electrical apparatus comprising a multi-turn coil of an insulated conductor having one or more leads extending out of the coil, a heat-softenable barrier disposed within the place where each lead leaves the coil and adherently coating a portion of the adjacent surfaces of the coil and the lead, and an encapsulating insulating covering over the coil, the lead, and the barrier.

2,447,632
MAGNETIC LOCK RELAY
George L. Bush, Flushing, N. Y., assignor to The Teleregister Corporation, New York, N. Y., a corporation of Delaware
Application June 1, 1946, Serial No. 673,873
6 Claims. (Cl. 200—93)



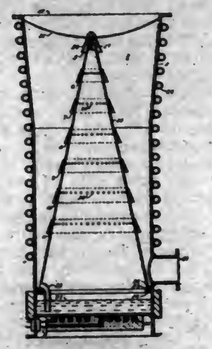
1. A magnetic lock relay comprising a supporting body of insulation, at least one spring strip conductor secured to and extending longitudinally along a side of said body, an armature secured to said strip whereby the strip provides spring supporting and biasing means for the armature, electrical contact structure on one end of said strip and movable by said armature, at least one other spring strip conductor secured to and extending longitudinally along a side of said body and having on one end thereof relatively stationary contact structure complementary to said movable contact structure, a magnetic yoke secured to said body and a permanent magnet extending from said yoke and operative upon said armature, the permanent magnet being formed from a magnetic material characterized by high residual magnetism, the spring tension of the movable contact spring strip being sufficient to prevent the residual magnetism in said magnet from operating the armature when it is in its released position, but insufficient to cause release of the armature when it has been attracted to said permanent magnet, an electromagnet having a core extending from said yoke and so positioned that when an operating current is passed through the electromagnet in one direction flux is set up to aid the permanent magnet and operate the armature and when current is passed in the opposite direction through the electromagnet flux is set up which opposes the residual magnetism of the permanent magnet and releases the armature, the residual magnetism of the permanent magnet maintaining the armature in its operated position upon deenergization of said electromagnet.

2,447,633
ELECTRIC VEHICLE CONTROL SYSTEM
Andrew H. Candee, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 30, 1946, Serial No. 694,061
5 Claims. (Cl. 318—102)



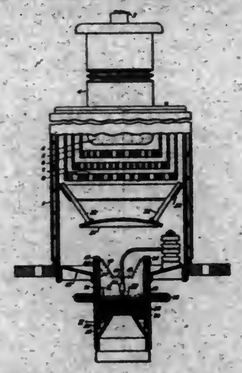
1. In a vehicle control system, in combination, a plurality of motors for propelling the vehicle, a generator for supplying current to the motors, an engine for driving the generator, said motors being connected across said generator in series-circuit relation, switching means for making the field winding of at least one of said motors ineffective during part of the speed range of the vehicle, and speed-responsive means for controlling the operation of said switching means.

2,447,634
MOTOR OPERATED TAP CHANGER
Herbert J. Carlin, East Orange, and James F. Chapman, Madison, N. J., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 14, 1944, Serial No. 530,998
9 Claims. (Cl. 323—55)



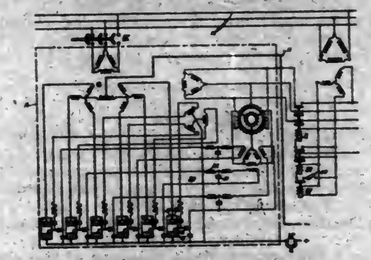
1. In combination, apparatus for controlling an electrical quantity to be regulated, regulating means for regulating said electrical quantity in a series of predetermined regulating steps, control equipment for said regulating means including an induction type circuit controlling relay having a movable disc of conducting material, a magnetic circuit having pole pieces adjacent to the disc for controlling the operation of the disc, and means for energizing the magnetic circuit responsive to the value of said electrical quantity for initiating the operation of said regulating means, and switch controlled reactor means responsive to and effective during the operation of said regulating means through a regulating step for biasing said circuit controlling relay in a direction to oppose continued operation of the regulating means upon the completion of the operation of the regulator through a regulating step.

2,447,635
SHAKEDOWN DEVICE FOR THERMOMETERS
George A. Caswell, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application March 19, 1947, Serial No. 735,633
3 Claims. (Cl. 73—373)



2. In a shake-down device for a self-registering thermometer, a case having an open end for receiving a thermometer, a cap detachably secured to the open end of said case to close the same, said cap having a perforation therein in the extremity of the closed end thereof, and two pieces of cord knotted together to form a continuous piece, the parts of the cord between the knots extending through said perforation with the knots engaging the inside of said cap.

2,447,636
PUMP
August P. Colaiaco and Dwight L. Hopper, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 9, 1946, Serial No. 682,340
4 Claims. (Cl. 230—101)



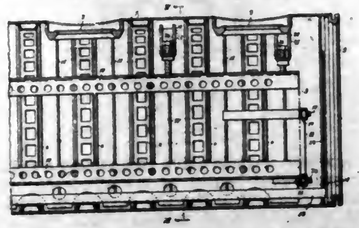
1. A vapor pump comprising a pump casing increasing in cross sectional area from the high-pressure to the low-pressure end, a vapor evolving chamber in the base of said casing, a substantially conical vapor chimney sealed to said casing adjacent said vapor evolving chamber, a plurality of vapor jets fed by said chimney, the jet at the low-pressure end of said pump having a large pumping radius and the jet at the high-pressure end having a low pumping radius.

2,447,637
VAPOR ELECTRIC DEVICE
August P. Colaiaco, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 26, 1947, Serial No. 763,819
8 Claims. (Cl. 250—27.5)

1. A vapor electric valve comprising a substantially evacuated container, an anode secured in insulated relation in the top portion of said container, a plurality of shields about said anode, a cathode dish of less diameter than the container, a pool of cathode liquid in said dish, the top of said dish being elevated various amounts in various directions so that it may be inclined in various directions without spilling the cathode liquid, a baffle of metallic mesh submerged in the cathode liquid, said mesh offering low impedance to normal flow of cathode material but offering high impedance to sudden flow thereof, a baffle rigidly supported between the cathode and the anode, and an annular baffle secured to the container between said first-mentioned baffle and the anode region.

2,447,638
EXCITATION CONTROL SYSTEM FOR VAPOR ELECTRIC DEVICES
Joseph H. Cox, Forest Hills, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 27, 1943, Serial No. 488,637
2 Claims. (Cl. 315—127)

1. An electric current translating system interconnecting two dissimilar electric circuits comprising a plurality of parallel operating converters, each of said converters including a plurality of vapor-electric valves of the make-alive type, a make-alive electrode for each of said valves, a wave distorting network for each of



said converters for periodically applying impulses to the make-alive electrode of the valves thereof, a source of control potential, circuit means connecting said source to each of said wave distorting networks, circuit breaker means in each of said circuit means, and a relay responsive to the potential of said source of control potential for controlling said circuit breaker means for simultaneously controlling each of said circuit means.

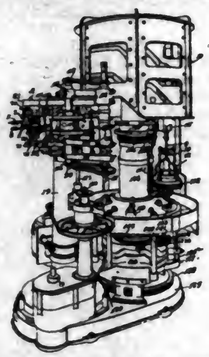
2,447,639

TORPEDO BATTERY COMPARTMENT

Thomas A. Daly, Sharon, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application November 30, 1946, Serial No. 713,258
10 Claims. (Cl. 114—20)

1. A battery compartment for a torpedo for housing and supporting a battery comprising, in combination, a cylindrical sheet metal housing, a plurality of longitudinally spaced ribs secured internally of said housing, a plurality of rib segments secured to said sheet metal housing between said ribs, four longitudinally disposed angles secured to said rib segments, said angles in cross-section defining the corners of a rectangle corresponding in size to the cross-sectional dimension of a battery to be received therein, the center of said rectangle lying in a vertical plane containing the axis of said housing, but being disposed below the said axis, an inverted longitudinally disposed channel member secured to said housing along the bottom thereof and being disposed between the lowermost pair of said four angles to engage and support the said battery along the central bottom longitudinal portion thereof, a forward bulkhead against which the forward extremity of said battery abuts, clamping means arranged in the aft extremity of said compartment for engaging the aft extremity of said battery and imparting a forward bias thereto against said forward bulkhead, and clamping means arranged between the uppermost pair of said four angles for engaging the top side of said battery.



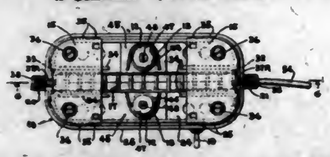
2,447,640

METHOD AND APPARATUS FOR ORIENTING, PEELING, HALVING, AND CORING PEARS

Guy A. Dunn, Oakland, Calif., assignor to California Packing Corporation, San Francisco, Calif., a corporation of New York

Application October 5, 1942, Serial No. 460,812
20 Claims. (Cl. 146—33)

1. In a pear preparation machine of the character described, a feed head including a feed ring into which the stem end of a pear is adapted to be positioned, stop means adapted to be mounted in position to pass into the calyx depression of the pear, means for moving the feed ring to move the pear so that the stop means passes into the calyx end of the pear whereby a reference axis is established longitudinally of the pear, means for gripping the pear from its exterior after the reference axis has been established, and means for moving the feed ring to move the



pear under a calyx end cutting means whereby a reference plane is formed at the calyx end of the pear in a direction transverse to the established reference axis.

2,447,641

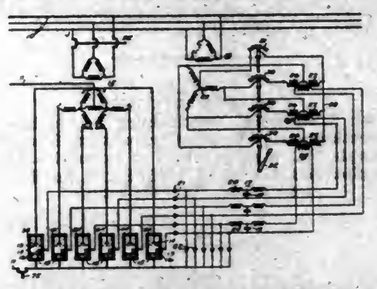
TOASTER

George W. Dunham, Westport, Conn., assignor to Ruth Ralston Dunham, Westport, Conn.

Application June 22, 1944, Serial No. 541,521
2 Claims. (Cl. 99—336)

1. In a bread toaster of the household type, an oven having a horizontally extending toast passage whose cross section is comparatively tall and narrow so as to pass upstanding bread slices edgewise through the toaster, said casing having upstanding end walls which have respectively an inlet and an outlet for said toast passage, said toast passage having an inner heating zone, said zone comprising heaters one on each side of the toast passage, each heater comprising an upstanding post, electric resistance wire wrapped around said post, an upstanding trough-shaped reflector disposed about the outer side of each post remote from the toast passage to focus heat on the bread slices as they pass between said heaters, said toast passage including heat-conserving roofed corridors each relatively long in the direction of toast travel compared to its width, said corridors each extending from its respective inlet or outlet to said heating zone, and a conveyor in the toast passage for conveying said bread slices therethrough.

2,447,642



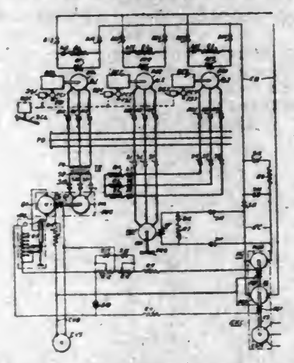
PHASE CONTROL SYSTEM FOR VAPOR ELECTRIC CONVERTERS

John P. Ferguson, Berkeley, Calif., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application May 23, 1944, Serial No. 536,950
7 Claims. (Cl. 323—169)

1. In a control system for a converter having a plurality of pairs of alternately conducting

valves, and a control circuit for each pair of valves, a phase controller comprising a source of polyphase control potential, a neutral connection in said source of control potential, a coupling transformer between said source of control potential and each of said control circuits, two primary windings on each of said coupling transformers, one primary winding on each coupling



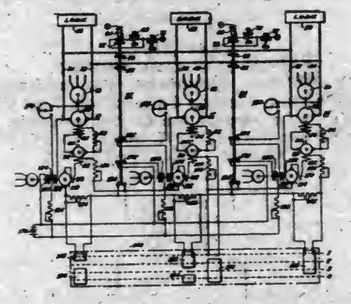
transformer being connected in a polygon-connected group to the source of control potential, the other primary winding of each coupling transformer being connected in star to the source of control potential, the star point of said star-connected group being connected to the neutral connection of said source of control potential, and adjustable impedance means for controlling the current flow in each group of primary windings.

2,447,643

SHIP PROPULSION CONTROL

Erling Frisch, Pittsburgh, and Marion R. Lory, Irwin, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application January 22, 1947, Serial No. 723,760
21 Claims. (Cl. 318—178)



19. An electric control system comprising in combination a plurality of prime movers having speed regulating means and a common master control for operating at substantially the same speed, a corresponding number of alternators each having an armature connected with one of said prime movers respectively to produce a voltage frequency determined by said speed regulating means; a bus, switch means for electrically connecting said individual armatures to said bus, a synchronous drive motor having a motor armature and a field winding, a switching device for electrically connecting said motor armature to said bus, said alternators having field windings respectively for providing them with excitation, direct current supply means connected with said alternator and motor field windings, a plurality of contact means interposed between said current supply means and said respective field windings to control the energization of said windings, said switching device and said contact means being operatively connected to one another and having for each of said alternators a common movable actuating member for controlling the energization and connection to said bus of said drive motor as well as the field energization of said appertaining alternator so that by actuating said member said field windings of said motor and said latter alternator are energized when said motor armature is connected to said bus, frequency-responsive control means having an input circuit electrically connected to said bus and an output circuit connected to said direct current supply means for reducing the energization of said alternator field windings by said current supply means at low values of said frequency, and a contactor connected with said frequency-responsive control means, said contactor being also connected with said switching device and said contact means to be controlled by said movable member upon further actuation of the latter in order to render said frequency-responsive control means ineffective in a late stage of the starting operation of said drive motor.

2,447,644

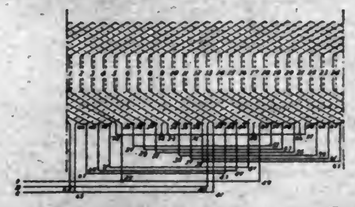
REGULATING SYSTEM

Erling Frisch, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application May 13, 1947, Serial No. 747,782
5 Claims. (Cl. 171—119)

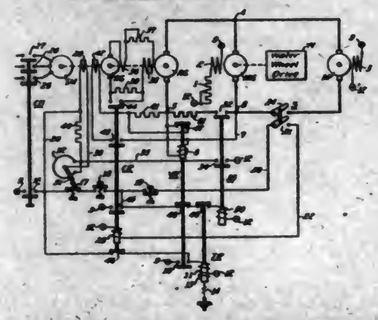
1. In a regulating system for a pair of generators disposed to supply a load, the combination comprising, an excitation control means for each generator disposed to be operated to control the excitation of the associated generator, means responsive to an electrical characteristic of each generator disposed to control the operation of the associated excitation control means, and means disposed for operation to connect the generators in parallel circuit relation to supply the load while effecting the deenergization of one of said means responsive to an electrical characteristic of one of the pair of generators and and connecting the excitation control means in series circuit relation whereby the series connected control means are operated in response to the energization of the other of said means responsive to the electrical characteristic of the other of said pair of parallel connected generators.

2,447,645
LOCKING-BAR MOTOR-FRAME ASSEMBLY
Arthur E. Goodwin, Eggertsville, N. Y., and Leon R. Ludwig, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 15, 1946, Serial No. 690,629
2 Claims. (Cl. 172—36)



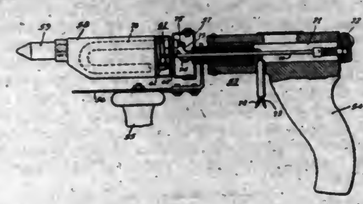
2. A dynamo-electric machine characterized by a stator construction comprising a frame-ring, a stator-core comprising a rigidly held stack of stator-laminations fitting, at a plurality of spaced points about the outer periphery of the stator-laminations, within the inside of the frame-ring, the stator-laminations being spaced from the inside of the frame-ring at other peripheral points, each lamination having a slot, opening into its outer periphery, at each of a plurality of frame-ring-fitting points, two end-plates for pressing the stator-laminations together, each end-plate having a slot, opening into its outer periphery, at points corresponding to the corresponding slots in the stator-laminations, the peripheral end-plate slots being narrower than the peripheral lamination slots, a plurality of locking-bars, each locking-bar having a cross-sectional size fitting in the peripheral lamination slots, and having two grooves fitting in the peripheral slots of the two end-plates, a stator-winding carried by the stator-core, and structural means for securing the stator-core assembly within the frame-ring.

2,447,646
VAPOR ELECTRIC DEVICE
Paul A. Halpine, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 31, 1947, Serial No. 764,995
7 Claims. (Cl. 250—27.5)



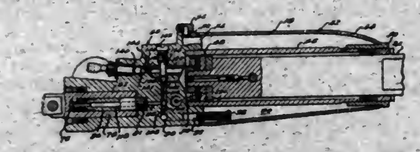
1. A shock resistant vapor electric device comprising a metallic envelope, a plurality of co-operating electrodes, one of which is an anode, said envelope having an opening therein, an anode stem attached to said anode and extending through said opening, a sealing structure between said envelope and said anode stem including a sealing member secured to the envelope about the opening, a second sealing member secured to the anode stem, one of said sealing members having a U-shaped edge, said sealing members being assembled in spaced telescoped relation, a bead of vitreous material filling said U-shaped edge and embedding the edges of both members, and a coating of insulating material on a portion of said sealing members.

2,447,647
MOTOR WINDING
Myron S. Hancock, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 18, 1945, Serial No. 611,407
4 Claims. (Cl. 171—206)



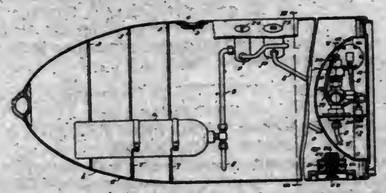
1. A two-pole polyphase dynamo-electric machine having an armature member having the windings of one pole wound electrically progressively and the windings of the other pole wound electrically retrogressively, each of the two windings comprising a plurality of serially connected phase-groups, corresponding phase-groups of the two windings being parallel-connected, and equalizer connections at a plurality of intermediate points.

2,447,648
CURRENT REGULATING GENERATOR AND CONTROL
Walter R. Harris, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application July 5, 1947, Serial No. 759,273
9 Claims. (Cl. 171—119)



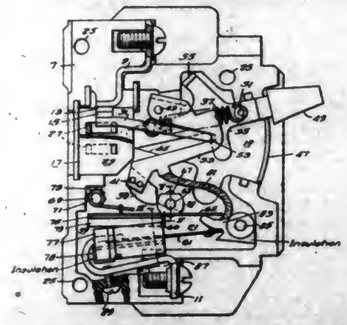
1. In a control for connecting an auxiliary generator in parallel with a main generator connected in a loop circuit with a motor driving a suitable load, in combination, a field winding for the auxiliary generator, a regulating generator, a series field winding, a current limiting resistor, said regulating generator being connected in a loop circuit including the series field winding—for self-energization of the regulating generator—the field winding of the auxiliary generator, and the current limiting resistor, a pilot field winding, and a pattern field winding for the regulating generator, a control relay which in use is caused to operate to initiate the paralleling of the auxiliary generator with the main generator, switching means operable by the operation of said control relay for short-circuiting the current limiting resistor, to thus increase the excitation of the field winding of the auxiliary generator, and for connecting the pilot field winding to said generators to be connected in parallel to thus excite the pilot field winding as a function of the voltage difference between the main generator and the auxiliary generator, relays means responsive to said voltage difference, and means responsive to said relay means for effecting the energization of the pattern field and the connection of the auxiliary generator in parallel with the main generator.

2,447,649
ELECTRIC HEATING APPARATUS AND CONTROL
John W. Harrison, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 24, 1942, Serial No. 459,482
4 Claims. (Cl. 219—21)



1. In an electrically-heated tool for heating metallic materials, the combination of an elongated working head comprising a heavy mass of metal for storing large quantities of heat, an electric heating element for heating said working head to a substantially uniform temperature throughout, said working head having a front end portion for applying heat to said material and a cup-shaped supporting member at the rear end of the head, an electrical circuit connecting said heating element to a source of power and a pair of terminals in said electric circuit; a bimetal thermostat control element in intimate contact with the rear portion of said working head and located between the working head and said supporting member, said thermostatic element operating, with temperature variations, to open and close said pair of terminals in the electric circuit to control the temperature of said working head; a handle having a portion extending in substantial alignment with said working head, said handle having a finger grip at the rear portion and a cup-shaped supporting member at the front end; said first-mentioned cup-shaped member being connected with the second-mentioned cup-shaped member by telescoping the two members together, and means to lock the members in telescoped relation, whereby said elongated working head is assembled in working relation with said handle, with a heat insulating chamber therebetween to stop excessive heat flow from the working head to the handle.

2,447,650
PUMP MECHANISM
Fred C. Haumerson, Racine, Wis., assignor to Walker Manufacturing Company of Wisconsin, Racine, Wis., a corporation of Wisconsin
Application April 17, 1944, Serial No. 531,332
2 Claims. (Cl. 103—40)

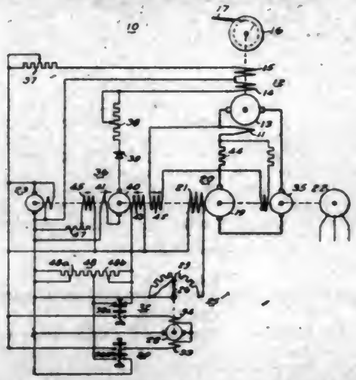


1. In a pumping mechanism for transferring fluid from a first space to a second space, pumping means for effecting said transfer, means including a passage between said spaces through which fluid is caused to flow by said pumping means, spaced inlet and outlet valve seats in said passage and valves therefor, means defining a passage opening into said first-mentioned passage between said seats, and a control member movable through said second-mentioned passage into said first-mentioned passage and engageable with said inlet valve for controlling the position of said inlet valve relative to its seat.

2,447,651
CONTROL MECHANISM
Lawrence D. Jennings and Joseph Naymik, Sharon, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 7, 1946, Serial No. 701,768
14 Claims. (Cl. 114—20)

1. Control apparatus for a test torpedo comprising, in combination, a fluid tight ballast chamber having an opening therein for loading said chamber with ballast fluid, a pressure responsive valve in said ballast chamber through which said ballast fluid is exhausted from said ballast chamber, at least one gas-tight container disposed in said ballast chamber, a normally closed control valve disposed externally of said ballast chamber and communicating therewith, pipe means connecting said gas-tight container with said control valve externally of said chamber, valve means connected in said pipe means internally of said ballast chamber and arranged to be manipulated externally of the ballast chamber, to provide communication with the gas-tight container for effecting filling thereof with gas under pressure from an external source of gas pressure, and control means for operating said control valve so that gas may flow from said gas-tight container through said control valve into said ballast chamber and expel said ballast fluid from said ballast chamber through said pressure responsive valve.

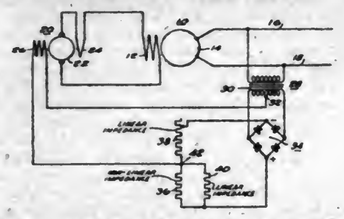
2,447,652
CIRCUIT BREAKER
Oliver S. Jennings, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 30, 1942, Serial No. 463,933
6 Claims. (Cl. 200—88)



2. In a circuit breaker having relatively movable contacts, operating mechanism therefor including a spring biased member releasable to cause automatic opening operation of said contacts, a latch for releasably engaging and restraining said releasable member, electromagnetic means energized in response to the current of the circuit for moving said latch to released position in response to predetermined overload current conditions comprising a U-shaped member of magnetic material having substantially square ends on the legs of the U forming magnetic pole surfaces, and an armature having spaced surfaces for attraction toward said pole surfaces and having a portion between said spaced surfaces projecting at least partially into the space between the ends of the U and providing a shorter air gap than between the square ends of the U and said spaced surfaces when the armature is in its normal unattracted position.

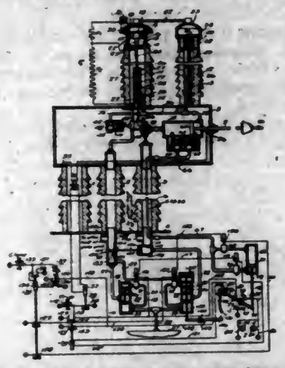
2,447,653
NITRO AMINES AND PROCESS FOR PREPARING SAME
Harold G. Johnson, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland
No Drawing. Application January 8, 1945, Serial No. 571,954
10 Claims. (Cl. 260—518)

8. In the production of diamines the process which comprises causing a reaction in the presence of a basic catalyst between formaldehyde, a 1-nitroalkane containing more than one carbon atom and a primary phenyl amine selected from a class consisting of phenyl amine and phenyl amines which are substituted in the nucleus with substituents which are non-reactive during the following condensation reaction, by heating a mixture thereof, in the proportions of about 1 mole of the nitroalkane to 2 moles of formaldehyde and 2 moles of the phenyl amine, to a temperature ranging from at least about 25° C. to the reflux temperature of the mixture to promote a condensation reaction and then recovering the resulting diamine.



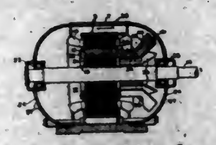
10. As novel compounds, symmetrical 2-nitro-2-alkyl-N,N'-diphenyl - 1,3 - propane diamines in which the phenyl groups are selected from a class consisting of phenyl and phenyl groups substituted with a substituent selected from the group consisting of halogen, alkyl, NO_2, OH and CO_2H.

2,447,654
TORQUE CONTROL SYSTEM FOR ELECTRIC REEL MOTORS
Alonzo F. Kenyon, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 8, 1946, Serial No. 675,341
8 Claims. (Cl. 318—154)



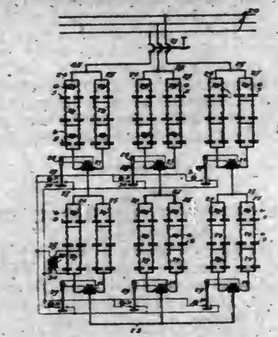
1. A reel system comprising, a reel motor having a field winding and an armature disposed to be energized from a source of electrical energy, a regulating generator normally operable to effect energization of the field winding in accordance with the armature current of the motor, speed adjusting means operable to vary the voltage at which electrical energy is supplied from said source, and control means operable to vary the output of the regulating generator in accordance with predetermined operations of the speed adjusting means to effect changes in the speed of the motor.

2,447,655
REGULATING SYSTEM
Herbert S. Kirschbaum, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 30, 1946, Serial No. 694,066
4 Claims. (Cl. 322—28)



1. In a regulating system for an alternating-current generator disposed to supply a load at a predetermined line voltage, in combination, a self-excited exciter disposed to control the field excitation of the generator, a control field winding for the exciter, and means for connecting the control field winding to be responsive to variations in the line voltage, said means comprising a transformer having a secondary winding connected to be energized in accordance with the line voltage, the secondary winding being provided with a mid-tap, a full-wave rectifying unit connected across the secondary winding to be supplied therefrom, the mid-tap of the secondary winding of the transformer having a potential midway between the potential of the rectified voltage, and a non-linear impedance element and a linear impedance element connected in series circuit relation disposed to be supplied from the rectifying unit, the control field winding being connected between the mid-tap of the secondary winding and a tap intermediate the series-connected linear and non-linear impedance elements to be directionally energized depending upon the relation of the potential of the intermediate tap with respect to the potential of the mid-tap.

2,447,656
COMPRESSED GAS-OPERATED CIRCUIT INTERRUPTER WITH POSITION INDICATOR
Leon R. Ludwig, Forest Hills, and Benjamin P. Baker and James M. Cumming, Turtle Creek, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 24, 1944, Serial No. 537,075
11 Claims. (Cl. 177—311)

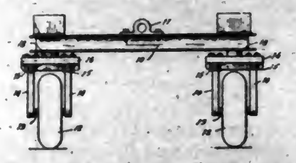


1. In a gas blast circuit interrupter, a disconnect contact, a piston operated in a disconnect cylinder for actuating the disconnect contact, signal means indicating the full open and full closed positions of the disconnect contact, pneumatic means interconnecting the signal means and the disconnect cylinder, valve means for controlling the energization of said pneumatic means to actuate said signal means, and means disposed in said disconnect cylinder engageable by said piston for actuating said valve means.

2,447,657
DIE-CAST SQUIRREL CAGE AND BLOWER
Leon R. Ludwig, Buffalo, and Carl P. Troncatti, Eggertsville, N. Y., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 15, 1946, Serial No. 690,630
2 Claims. (Cl. 172—120)

1. A dynamo-electric machine characterized by a rotor-member including a shaft, a rotor-core member, and a fan comprising a plurality of substantially axial vanes which are approximately parallel to the shaft, at one end of the rotor-core member, an inclined, substantially triangular-sectioned shroud-ring secured to the outer ends of the axial vanes, and a plurality of inclined vanes having their inner ends secured to shroud-ring, the outer face of the shroud-ring being funnel-shaped, with its smaller diameter next to the axial vanes, and the inclined vanes being directed, in the main, at an angle to the shaft, their outer ends having a peripheral diameter greater than the peripheral diameter of the rotor-core, the shroud-ring being located in, and substantially confined to, the bend between the radially outward edges of the axial vanes and the axially inward edges of the inclined vanes.

2,447,658
SHUNT CAPACITOR BANK
Ralph E. Marbury, James B. Owens, and William H. Cuttino, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 12, 1946, Serial No. 696,570
4 Claims. (Cl. 175—294)



4. A capacitor bank adapted to be connected in shunt to an alternating current line, said capacitor bank comprising a plurality of series-connected groups of capacitors, an individual fuse in series with each capacitor, each of said groups of capacitors consisting of two similar parallel-connected branches, and each branch of each group including not more than three sub-groups of capacitors connected in series, each of said sub-groups comprising a plurality of capacitors connected in parallel, a differential current transformer for each group of capacitors, each of said current transformers having two differentially related primary windings, each primary winding being connected to carry the current of one of the two parallel branches of the group of capacitors, each current transformer also having a secondary winding, and a relay for each group of capacitors energized by the secondary winding of the current transformer, whereby the relay responds to any substantial unbalance of the currents in the two parallel branches of the group of capacitors.

2,447,659
TRAILER DOLLY
Ernest C. McDaniel, Denver, Colo.
Application February 28, 1946, Serial No. 650,770
5 Claims. (Cl. 280—33.4)

5. A caster wheel mounting for trailers comprising: a wheel bracket; a caster wheel mounted

eccentrically on said bracket; a pivot shaft extending upwardly from said bracket; bearing devices for rotatably supporting said shaft in a vertical position; a brake disc mounted on said shaft; a stationary plate positioned above said brake disc; means for preventing horizontal rotation of said stationary plate, yet allowing vertical movement thereof; a thrust bearing resting on said stationary plate about said shaft; a pressure plate resting on said bearing; a supporting lug fixed to the upper extremity of said shaft; a horizontal hinge pin carried by said lug to one side of said shaft; a bifurcated yoke tiltably

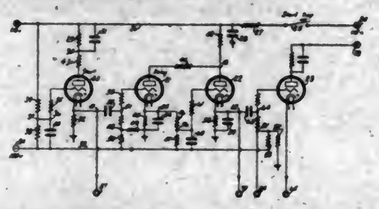
mounted on said pin with its furcations extending to positions on opposite sides of said shaft, and with its joining portion projecting outward to one side of said shaft; a roller carried by said joining portion so as to travel in a circle about said shaft; a cam track maintained stationary in the circle of travel of said roller; a high point on said cam track over which said roller passes to depress the furcations of said yoke; and resilient means for communicating the downward movement of said furcations to said pressure plate to cause the latter to force the stationary plate toward said brake disc to exert a braking action on said shaft.

2,447,660

WEDGE GRIP FOR TENSILE TESTING MACHINES

Julius Miklowitz, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 2, 1945, Serial No. 602,869
9 Claims. (Cl. 73—103)



1. In a test-piece gripping device, for a tensile machine having a stationary member and a movable member movable with reference to the stationary member, in combination, a frame element having a dovetail transverse cut in one end thereof, connecting means for connecting said frame element to one of said relatively movable members of the tensile machine, said frame element being provided with a pair of facing jaws disposed for sliding motion on the facing surfaces of the dovetail, jaw operating means disposed on said connecting means for slidably moving said jaws, whereby the jaws are moved toward each other to grip a test-piece, or away from each other to release the test-piece, depending on the manipulation of said jaw operating means, guide means associated with the frame element and the jaws to prevent any rotary motion of said jaws with reference to the frame element, biasing means for said jaws for biasing the jaws away from each other to thus at all times cause said jaws to be in firm but slidable operative engagement with said frame element, wear resistant elements removably secured in the facing surfaces of said jaws, and a strengthening member surrounding the end of the frame element provided with the dovetail cut, and a second frame element similar to the first frame element, connecting means for connecting said second frame element to the other member of said tensile machine, said second frame element being provided with all the cooperating elements of the first frame element, and means for releasably interconnecting the frame elements so that they are held in operative relation to each other when not connected to the relatively movable members of the tensile machine.

2,447,661

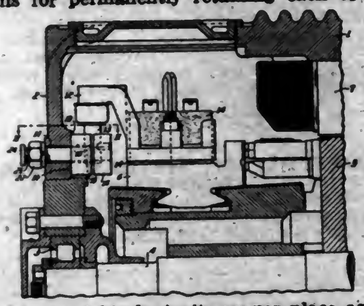
ELECTRON TUBE IMPULSE GENERATOR

Robert E. Mumma and Lawrence D. Kilheffer, Dayton, Ohio, assignors to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland

Application May 26, 1943, Serial No. 488,496
15 Claims. (Cl. 315—230)

1. In combination, means including a plurality of gaseous discharge electron tubes, including a designated tube, connected in an endless operative chain circuit wherein they automatically become conducting one at a time serially in cycles and produce an electric impulse as each tube is rendered conducting; means to start an operation at a selected tube in the endless chain cycle; and automatic means to stop such operation after a selected counted number of cycles measured from the designated tube.

2,447,662



BRUSH HOLDER MOUNTING

John E. Pastoret and John W. Morrow, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application April 19, 1947, Serial No. 742,558
4 Claims. (Cl. 171—323)

1. A brushholder-mounting for an explosion-resistant motor, comprising, in combination: a motor-frame having a flat, accurately machined, brushholder-supporting surface at right angles to the motor-shaft, said frame having a plurality of axially extending holes through said machined surface at various points around the frame; a plurality of underhung brushholders, each brushholder having two support-pins extending radially inwardly from an outer corner of the brushholder-frame; a plurality of pairs of outer and inner support-blocks, each pair having two sets

of approximately semi-cylindrical seats for clampingly embracing the two support-pins of one of said brushholders; each of the outer support-blocks having a flat surface in engagement with the flat machined surface of the motor-frame, and having a hole between its two pin-engaging seats and acting as a continuation of one of the axially extending holes in the motor-frame, and being of a predetermined thickness for accurately spacing the two brushholder-pins from the accurately machined surface of said motor-frame; means for permanently retaining each of said

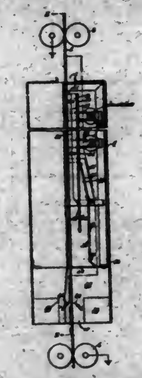
outer support-blocks in its proper place against said machined surface; and a stud carried by each of said inner support-blocks and extending through the corresponding holes in the associated outer support-block and in the motor-frame, with a flame-sealing explosion-resistant clearance within said holes, each stud having a nut threaded on it, to engage the outer surface of the motor-frame, and having means on its outer end for preventing the complete removal of said nut after it has been turned back sufficiently to loosen the clamping-engagement of the associated brushholder.

2,447,663

FLUID SEAL

Frank E. Payne, Glencoe, Ill., assignor to Crane Packing Company, Chicago, Ill., a corporation of Illinois

Substituted for abandoned application Serial No. 493,546, July 5, 1943. This application June 16, 1945, Serial No. 599,804
3 Claims. (Cl. 286—11)



1. In a seal for a pair of relatively rotatable elements, said seal including a radially extending surface on one element, a washer having a radially extending surface in contact with the first-mentioned surface, and a rigid cup-shaped member secured to the other element and having a sliding driving connection with the washer; a flexible resilient sleeve within the cup-shaped member and having one end abutting the washer and the other end abutting the cup-shaped member, and spring means compressed between the said ends for maintaining the first-mentioned sleeve end against the washer, said second-mentioned end having a thin lip adjacent the member subjected to pressure of the fluid to be sealed such that it forms a seal between the sleeve and member, and said sleeve having a section in the form of an extensible bellows to accommodate relative movement between the ends of the sleeve.

2,447,664

ELECTROSTATIC COATING APPARATUS AND METHOD

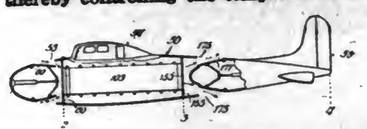
Edward H. R. Pegg, Cranford, N. J., assignor to Westinghouse Electric Elevator Company, Jersey City, N. J., a corporation of Illinois

Application February 1, 1945, Serial No. 575,689
24 Claims. (Cl. 117—93)

4. Apparatus for precipitating particles onto a moving collector, comprising a casing providing a predetermined path through which the collector can be successively conveyed through a plurality of spaced regions along said predetermined path, spraying means in a first of said regions, ionizing means for producing an ionized electrostatic field in a second of said regions, said ionizing means comprising a discharging member in said second region, precipitating means for providing a substantially non-ionizing precipitating electrostatic field in a third of said regions, said precipitating means comprising a field-establishing member in said third region, and insulating means for insulating said members.

24. A method of applying a coating to the surface of elongated electrically conductive sheet material moving in the direction of its length, which comprises establishing an ionized electrostatic field and a distinct precipitating electrostatic field in successive portions of a path of movement of the material, introducing a spray of fine cloud-like particles into the ionized electrostatic field, and moving the material at a high speed, whereby a windage effect is created and substantially all of the charged spray particles are carried from said ionized electrostatic field into said precipitating electrostatic field substantially entirely by the windage action of said material, and are electrically precipitated onto said material through the action of said precipitating electrostatic field.

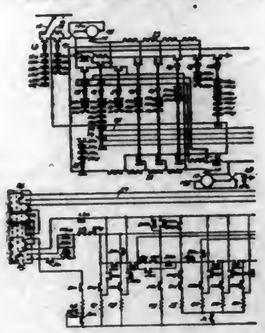
2,447,665



REFRIGERATED PRODUCTS AND METHODS AND APPARATUS FOR PRODUCING SAME

Harry W. Protzeller, Fairmont, Minn., assignor to Tampa Aviation, Inc., Tampa, Fla., a corporation of Florida

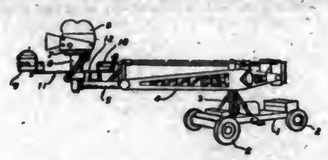
Application April 3, 1942, Serial No. 437,540
20 Claims. (Cl. 62—1)



14. The method of transport-refrigeration of food products which comprises conveying the food products in a traveling carrier at high atmospheric altitudes from a starting point to a

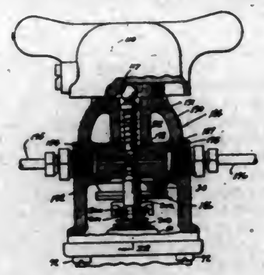
predetermined destination distant therefrom, admitting the atmospheric air at said high altitudes in at least one stream into said carrier, controlling the volume of atmospheric air so admitted and thereby controlling the temperature of the

interior of the carrier, directing said atmospheric air into contact with said food products interiorly of said carrier during transit to refrigerate the same, and dissipating said atmospheric air subsequently to contact with said food products.



2,447,666
DYNAMIC BRAKING SYSTEM FOR SERIES MOTORS
George R. Purifoy, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 7, 1946, Serial No. 667,757
5 Claims. (Cl. 318—381)

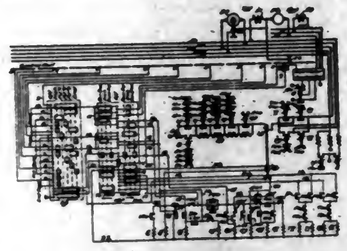
1. In a motor control system, in combination, a direct current motor of the series type for propelling a vehicle, power conductors, switching means for connecting the motor to the power conductors, switching means for establishing dynamic braking connections for the motor, resistance means for controlling the motor current during dynamic braking, resistor-shunting switches for shunting said resistance means, said resistor-shunting switches being operable in sequential relation, field-shunting switches, relay means responsive to the dynamic braking current for controlling the operation of said field-shunting switches, additional relay means responsive to the motor current for controlling the sequential operation of said resistor-shunting switches, and interlocking means on said switches for causing said additional relay means to be recalibrated.



2,447,667
CAMERA CARRIAGE
Victor R. Raby, Los Angeles, Calif.
Application May 7, 1946, Serial No. 667,973
5 Claims. (Cl. 248—183)

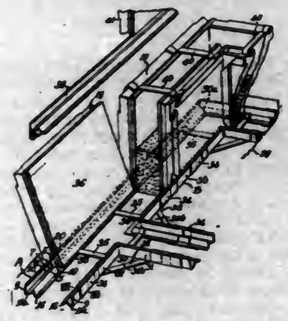
1. In a device for supporting a camera platform in various positions above and below the end of a boom, a shiftable boom, portable means supporting the boom, a camera supporting platform at the distal end of the boom, bracket means connecting the platform with the distal end of the boom, the bracket means comprising an L-shaped element having one leg thereof pivoted to the boom for movement in two directions with

their axes at right angles to one another and another leg connected by pivoted means to the platform, counterpoise means extending from the platform with an adjustable weight thereon.



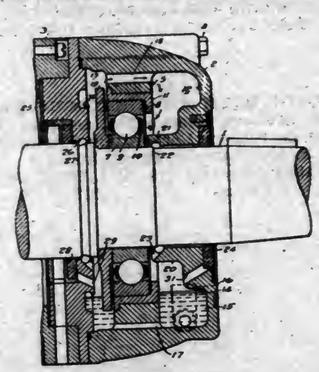
2,447,668
SAFETY CUTOFF SYSTEM FOR FUEL BURNERS
William A. Ray, North Hollywood, Calif.
Application January 2, 1946, Serial No. 638,659
4 Claims. (Cl. 158—117.1)

1. In a fuel supply system having a main burner a main fuel valve, a pilot burner, a shut-off valve for controlling the passage of fuel to the main burner, and means operating in response to the existence of a pilot flame to maintain the shut-off valve open, the shut-off valve when closed preventing passage of fuel through the main valve, a conduit for supplying fuel to a pilot burner, and a reset mechanism for temporarily opening the shut-off valve: the combination therewith of means forming a supplemental valve for controlling the passage of fuel through said conduit, and operated by said reset mechanism, and a master valve for controlling the passage of fuel to said shut-off valve, said conduit being supplied with fuel independently of said master valve.



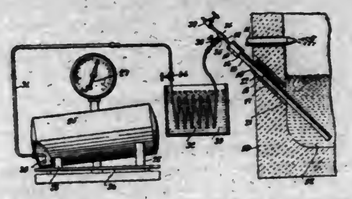
2,447,669
REMOTE-CONTROL SYSTEM
Lynn G. Riley, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 8, 1943, Serial No. 475,216
7 Claims. (Cl. 104—149)

1. In a control system, in combination, a motor for propelling a vehicle between a plurality of predetermined stations, a sectionalized control rail engaged by current collecting means on the vehicle, a power conductor engaged by current collecting means on the vehicle, manually operable control apparatus located remotely from the vehicle for preselecting said stations, additional manually operable control apparatus located remotely from the vehicle for controlling the application of power to said motor through said power conductor, automatically operated resistor shunting means for controlling the acceleration of the motor, and automatically operated control means energized through said preselecting control ap-



paratus and located remotely from the vehicle for automatically controlling the establishing of dynamic braking for the motor when the vehicle is substantially midway between the preselected stations, said resistor shunting means also controlling the deceleration of the motor.

2,447,670
FORM FOR MOLDING CONCRETE IN SITU
Roy William Rumble, Pretoria, Transvaal, Union of South Africa
Application March 17, 1945, Serial No. 583,269
In Union of South Africa March 10, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 10, 1964
17 Claims. (Cl. 25—131)



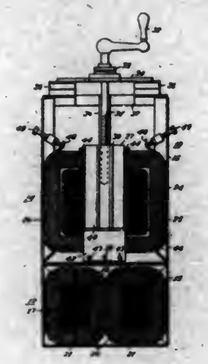
1. Composite structure in connection with building, comprising a number of units comprising edge formations by which they are interengaged with one another edgewise, each pair of interengaging edge formations comprising an external formation and an internal formation arranged for pivotal engagement with one another and in which said edge formations are made of sheet material and the external and internal formations are materially identical in form, said form including a first limb, a short transverse limb at one end of the first limb and forming, with the latter, a pivot element, and another transverse limb at the other end of the first limb and on the same side thereof as the short transverse limb, said other transverse limb being arcuate to a centre in the neighbourhood of the junction of the first limb with the short transverse limb.

2,447,671
HIGH-SPEED BEARING
Raymond W. Schuck, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 13, 1945, Serial No. 628,290
4 Claims. (Cl. 308—187)

1. In combination, a bearing housing, an antifriction bearing in said housing, a rotatable shaft supported in said bearing, oil-throwing means on the shaft within the housing adjacent one side of the bearing, an oil reservoir in the lower part of the housing at the other side of the bearing, means for supplying a limited amount of oil from said oil reservoir to the lower part of the housing adjacent said oil-throwing means, and means for causing oil thrown off said oil-throwing means to be carried into the bearing in the form of a mist.

2,447,672
APPARATUS FOR CHLORIDIZING ALUMINUM-BASE ALLOYS
Albert A. Smith, Jr., Metuchen, and Raymond A. Quadt, Woodbridge, N. J., assignors to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
Application November 20, 1944, Serial No. 564,296
1 Claim. (Cl. 266—34)

Apparatus for refining metal such as an aluminum-magnesium mixture to remove magnesium from the aluminum in the form of magnesium chloride which comprises a furnace for maintaining a molten bath of said metal, means for internally heating said furnace to melt said metal, a tank for liquid chlorine, a temperature controlled chlorine vaporizer, a conduit connecting said tank and vaporizer to carry liquid chlorine from said tank, a valve in said conduit ahead of said vaporizer to control the rate of flow of chlorine into said vaporizer, a duct through a wall of said furnace, the opening of the duct on the outside of said wall being above and the



opening of the duct on the inside of said wall being below the surface of the metal in said furnace, a graphite tube extending through said duct and having its portion within the furnace below the surface of said metal to carry gaseous chlorine into said molten metal, removable sealing means to hold said tube firmly in said duct, and a conduit connecting said vaporizer with said tube to carry gaseous chlorine from said vaporizer to said tube.

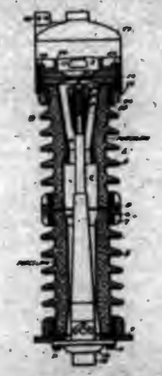
2,447,673

REACTOR WITH MOVABLE CORE MEMBER

Emil F. Steinert, Sharon, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application November 16, 1944, Serial No. 563,768
9 Claims. (Cl. 171—242(777))

2. For use in a transformer-reactor power unit, a reactor comprising, a winding, a pair of substantially C-shaped silicon steel core members having preferred grain orientation positioned in opposed spaced relation on opposite sides of the reactor winding, an elongated core member positioned between the ends of the core members at one end of the reactor and movable longitudinally in and out of the reactor winding, a stationary insert positioned between the core members at the other end, and means biasing the core members against the movable core member and insert.



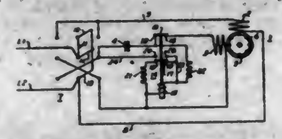
2,447,674

CIRCUIT INTERRUPTER

Albert P. Strom, Forest Hills, and Thomas E. Browne, Jr., Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application January 13, 1945, Serial No. 572,602
20 Claims. (Cl. 200—148)

1. In a circuit interrupter, casing means at least partly composed of insulating material, terminal means at one end of said casing; central electrode means disposed interiorly of the casing means adjacent the other end thereof and connected to said terminal means, counterelectrode means disposed adjacent the said other end of the casing means, a medium disposed within the casing means of relatively high dielectric strength as compared to the dielectric strength of the medium externally of the casing means, and means for providing a substantially uniform voltage gradient exteriorly of and along the casing



means to prevent external flashover between said terminal and counterelectrode means.

2,447,675

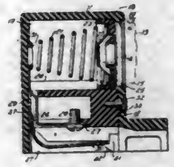
REVERSIBLE SINGLE-PHASE MOTOR

Omar C. Walley, Lima, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application February 24, 1947, Serial No. 730,312
10 Claims. (Cl. 318—207)

1. A self-starting, single-phase induction motor having a main primary winding and an auxiliary primary winding, means for connecting said primary windings to a single-phase supply line, said connecting means including reversing means for reversing the connections of the windings with respect to each other, relay means for controlling the circuit of said auxiliary winding, said relay means having a non-actuated position in which the auxiliary winding circuit is closed and an actuated position in which the auxiliary winding circuit is interrupted, means for energizing the relay means in response to the voltage across the auxiliary winding when the relay means is in non-actuated position, the relay means being adapted to move to actuated position when said voltage exceeds a predetermined value, and means for energizing the relay means from the line voltage through said reversing means when the relay means is in actuated position, the reversing means being adapted to deenergize the relay means upon operation of the reversing means to cause the relay means to return to non-actuated position and reclose the auxiliary winding circuit.

2,447,676



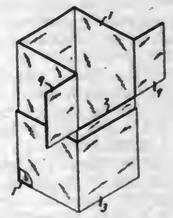
ELECTRICAL RECEPTACLE

Benjamin C. Webster, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a corporation of Connecticut

Application December 12, 1945, Serial No. 634,548
10 Claims. (Cl. 173—328)

9. A lampholder comprising, a hollow housing open at the bottom and having a circular opening

in the front face thereof adjacent the upper end, the inside surface of the closed upper end of the housing being of generally circular shape and having a diameter greater than that of the circular opening, an insulating base member detachably secured within the housing below the circular opening, the upper surface of the base member being grooved to conform to the contour of the upper inside surface of the housing thereby to provide a generally cylindrical channel in the housing back of the circular front opening, a contact assembly positioned in said channel, said as-



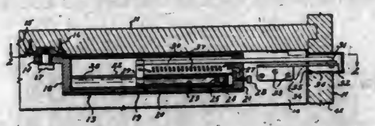
sembly including an insulating cup-shaped follower disposed adjacent the front opening, a metal contact disc carried by said follower and a coil pressure spring interposed between the contact disc and back wall of the housing, said spring functioning to urge the contact disc and follower against the inside front surface of the housing, and a contact terminal carried by the base member and having one end in engagement with the back end of the coil spring and having a binding screw in its other end in an exposed position beneath the base member.

2,447,677

HEAVY-DUTY SHIPPING CARTON

Benjamin M. Williams, St. Louis, Mo., assignor to Gaylord Container Corporation, St. Louis, Mo., a corporation of Maryland

Application June 16, 1947, Serial No. 754,916
2 Claims. (Cl. 229—14)



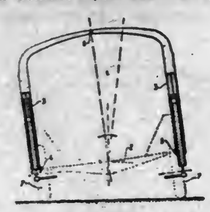
2. In a shipping carton comprising a relatively tall tubular open-ended upright liner and upper and lower slip covers telescoping over the open ends of said liner, the improvement which consists in slitting one side wall of said liner from the top thereof to a point located above said lower slip cover and slitting said side wall substantially from side to side at said point, thereby forming in said wall a hinged door adapted, before the application of said upper slip cover to the upper end of said liner, for horizontal swinging movement outwardly from wall forming position to provide an access opening in said side wall above said lower slip cover and adapted in said wall forming position to be covered by said upper slip cover when the latter is applied to said upper end of said liner.

2,447,678

DOOR CHECK

Samuel T. Alexander, Redondo Beach, Calif., assignor of one-third to Paul Eddy Richardson, Los Angeles, Calif.

Application January 7, 1946, Serial No. 639,532
9 Claims. (Cl. 16—51)



1. A two-way acting door check for a hinge mounted door comprising an extensible unit spring pressed to extended position, means mounted to check a spring pressed extending movement thereof, a pivot adapted pivotally to connect one end of the extensible unit to a door frame within a door opening in said frame, a bracket adapted to be secured to a door hingedly mounted on a side of the door opening, the bracket extending beyond the plane of the door's hinged edge, and a pivot connecting the extending portion of the bracket to the other end of the extensible unit.

2,447,679

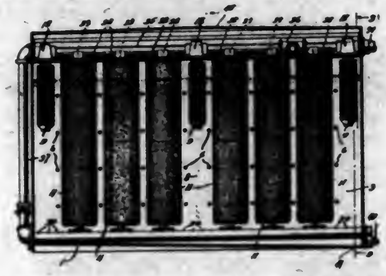
SPRING SUSPENSION FOR MOTORBUSES OR LIKE VEHICLES

Ludovicus Hendrikus Baghuis, Utrecht, Netherlands

Application October 29, 1945, Serial No. 625,129
In the Netherlands March 31, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires March 31, 1962
1 Claim. (Cl. 280—124)

A motorbus comprising in combination a self-supporting car body having double-walled sides, wheels, yokes, horizontal journals on said yokes, springs, guides fixed to said car body between the walls of the sides thereof, a tube slidably mounted in each of said guides and connected to the car body through at least one of said springs, each of said yokes being hinged by one of said journals to one of said tubes and rotatably supporting at least one of said wheels, and said car body being carried by said springs at points situated at a level above the centre of gravity of the car body.

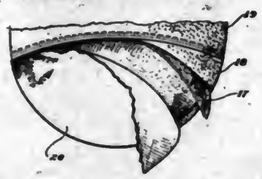
2,447,680



FILTERING SYSTEM

Walter C. Bauer, Chevy Chase, Md., assignor, by mesne assignments, to The Briggs Filtration Company, Bethesda, Md., a corporation of Maryland

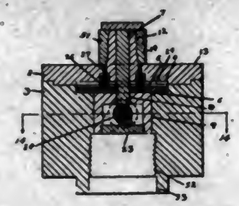
Original application January 28, 1942, Serial No. 428,590. Divided and this application June 21, 1943, Serial No. 491,696
3 Claims. (Cl. 210—184)



1. In an oil clarifier provided with a filtering compartment and a storage compartment, a filter-

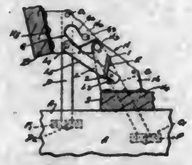
ing element positioned within the filtering compartment, a head upon which said element is mounted, said head being secured to one of the walls of the filtering compartment, a conduit within the head and in communication with the filtering element, a valve aperture in the head communicating with the filtering compartment at one end of the conduit, the valve of said aper-

ture being actuatable by pressure within the filtering compartment, a valve aperture in the head at the opposite end of the conduit and communicating with the shortage compartment, the valve in said aperture being actuable by pressure within the conduit, the filtering element communicating with the conduit intermediate the two apertures.



2,447,681
PROCESS OF STIFFENING SHOE PARTS
Edwin L. Beckwith, Brookline, and Adelbert P. Swett, Westwood, Mass., assignors to Beckwith Manufacturing Company, Dover, N. H., a corporation of New Hampshire
Application July 18, 1944, Serial No. 545,420
8 Claims. (Cl. 12—146)

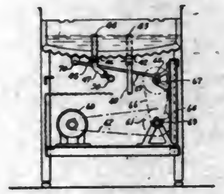
1. The process of stiffening shoe parts which consists in first uniformly distributing a thermosetting resin in pliable uncured condition on a homogeneous textile base within the inner plies of a shoe upper, lasting the upper while maintaining the said plies in dry condition, and then subjecting the upper to external heating causing the resin to liquefy and disseminate throughout all the inner plies and into engagement with the outer plies of the upper and then to harden and thereby convert all of the plies while on the last into a stiff, resilient multi-ply shell.



2,447,682
CHUCK
Carl F. Bockman and Richard Luttich, East Akron, Ohio
Application January 30, 1946, Serial No. 644,386
10 Claims. (Cl. 279—51)

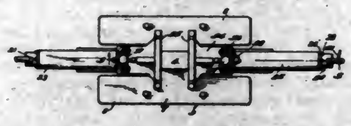
3. A chuck, a lock nut therein, means connected with the lock nut and passing axially through the chuck and extending from the operative face thereof in operative contact with expansible means thereon, a passageway through the lock nut in register with an opening passing radially through the chuck, a stop at one end of said opening, a lock pin in said opening and passing through said lock nut and abutting against said stop, a key head at the other end of the lock

pin and available through the opening, and means on the lock pin for pressure contact with the lock nut to change the relative position of the lock pin and lock nut when said expansible means is to be expanded.



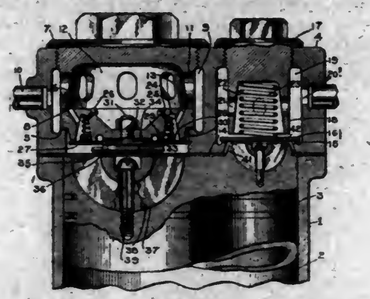
2,447,683
SOFA BED HINGE
Maximilian Reu Bolu, Pasadena, Calif., assignor, by mesne assignments, to The Signal Manufacturing Company, Los Angeles, Calif., a corporation of California
Application December 11, 1944, Serial No. 567,554
3 Claims. (Cl. 5—47)

1. In a sofa hinge the combination of: pivotally connected seat and back plates, said plates being arranged for connection to seat and back structures respectively to releasably hold the back structure in an erect position above the seat structure; the seat plate having a guide provided with a locking arm; a latch bar of U-shaped cross section pivotally connected at one end to the back plate and extending through the guide of the seat plate; means urging the open edge of the U-shaped latch bar into engagement with the locking arm; a notch forming a pair of spaced shoulders in the open edge of the latch bar; a substantially triangular trigger mechanism on the latch bar adapted to latch and unlatch the bar relative to the arm comprising a trigger pivotally positioned within the U-shaped bar, said trigger being pivoted at its base portion with conjoining cam surfaces depending between the shoulders of the latch bar, said base portion having plural stops cooperating with the web of the latch bar to limit the pivotal movement of the trigger; the first of said stops limiting the rearward of the trigger to a position covering the first shoulder of the latch bar and the second stop confining the forward movement of the trigger to a position substantially intermediate the shoulders of the latch bar, the innermost cam surface cooperating with the first shoulder to place said shoulder into engagement with the locking arm, when the plates are moved in one direction relative to each other, and when said second stop portion engages said latch web, said cam surface contacting the locking arm to guide



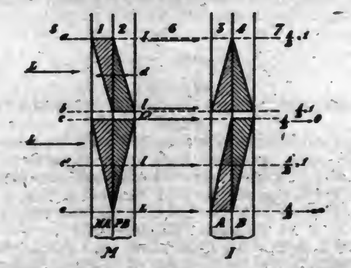
said first shoulder away from the locking arm when the plates are pivoted relative to each other in the same direction; whereby said locking arm takes a position between said second cam surface and said second shoulder, said last-named cam surface of the trigger, upon pivotal movement of the plates in a reverse direction and engagement of said first stop portion of the trigger with the latch bar, forming a guide for the locking arm away from the second shoulder and over the first shoulder to allow the back structure to assume a coplanar relation with the seat structure.

2,447,684
APPARATUS FOR PROCESSING PHOTOGRAPHIC ARTICLES
David C. Brown and Weldon M. Paige, Detroit, Mich.
Application July 26, 1945, Serial No. 607,178
2 Claims. (Cl. 95—89)



1. An apparatus for the treating of work pieces such as photographic prints comprising, an elongated tank having end walls and divided transversely into compartments for containing liquid constituting baths for the work pieces, a support adjacent each end wall, means mounting the tank on the supports including cooperating transversely extending track devices and rollers, some of which are on the ends of the tank and some of which are on the supports and means for oscillating the tank transversely with the rollers functioning on the track devices to agitate the liquid of the baths, there being two track devices at each end of the tank with the track devices spaced laterally from the longitudinal center of the tank and both inclined downwardly toward the center of the tank so that in a stroke of oscillatory movement the leading side edge of the tank is elevated and the trailing side edge of the tank is lowered.

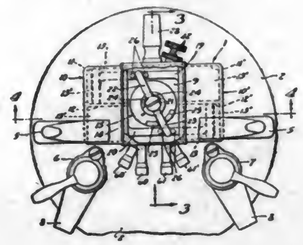
2,447,685
DRILL PRESS VISE WITH SLIDABLE AND SWINGABLE JAWS
Albert D. Chester, Vallejo, Calif.
Application June 20, 1945, Serial No. 600,539
1 Claim. (Cl. 81—33)



A vise of the class described comprising a base including a bar, wings projecting laterally from the center of the bar at each side thereof, longitudinal extensions on the wings spaced from the sides of the bar, said bar having longitudinal grooves at each side and at each end and transverse grooves communicating with said end grooves, a slide bar mounted for longitudinal movement on each end of the base bar, inturned flanges on the slide bars slidably received in said longitudinal side grooves, a threaded guide carried at each end of the base bar in said longitudinal end grooves, each threaded guide being secured by a key positioned in said transverse grooves, a jack screw threaded in each guide and attached to an adjacent slide bar, means for manipulating the screws, and a vise jaw at the inner end of each sliding bar.

2,447,686
COMPRESSOR VALVE MECHANISM
Philip L. Crittenden, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application December 23, 1943, Serial No. 515,365
6 Claims. (Cl. 230—24)

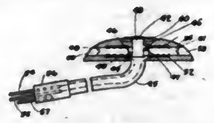
1. In a fluid compressor of the type having a fluid compression chamber, a fluid conducting communication connected to said chamber, and a piston reciprocable in said chamber to effect a flow of fluid through said communication, in combination, a valve having two control positions and operable from one of said positions to the other to control the flow of fluid through said communication, and means for accelerating the action of said valve, said means comprising a permanent magnet carried by said piston and effective while said valve is in one control position to bias said valve toward its other control position.



2,447,687
PROCESS FOR OBTAINING MULTICOLOR PICTURES
Pierre Danlos, Neuilly-sur-Seine, France
Application January 9, 1945, Serial No. 571,972
In France December 20, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires December 20, 1963
4 Claims. (Cl. 95—2)

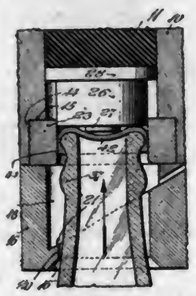
4. In a process for obtaining a multicolor picture on a support coated with at least one silver

halide emulsion, the steps of printing into said emulsion in registered superposition with a plurality of positive part pictures in such manner as to produce a composite negative image representing said plurality of positive part pictures, developing and removing the negative silver image in order to obtain a composite positive silver halide image sensitive to light, differentially exposing the said sensitive image while in register with a differentiating unit formed by the superimposition of the negative of the first component picture to be exposed and of the positives of the remaining of said plurality of component pictures, not to be exposed, and developing and transforming the said first component picture into its elementary colored picture.



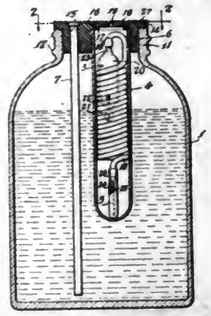
2,447,688
PULSATOR FOR MILKING MACHINES
Laurits Dinesen, Minneapolis, Minn., assignor to Perfection Manufacturing Corporation, Minneapolis, Minn., a corporation of Minnesota
Application February 21, 1945, Serial No. 579,040
10 Claims. (Cl. 31—62)

1. In a pulsator for milking machines, laterally spaced cylinder means, a connected pair of pistons mounted for reciprocating movements in each cylinder means and providing pressure chambers in the cylinder means outwardly of each piston, a body formed with concentric valve seats, concentric valves in contact each with a different one of said valve seats and mounted for independent oscillatory movements about a common axis of rotation, a mechanical driving connection from each pair of pistons to a different valve producing oscillatory movement of that valve under reciprocating movements of the connected pistons, and cooperating ports in the valves and their cooperating valve seats and connecting passages whereby each of the opposite pressure chambers of each cylinder means will be alternately connected to atmospheric pressure and to a source of pressure different than atmospheric pressure, the one being connected to atmospheric pressure while the other is connected to a source of pressure different than atmospheric pressure.



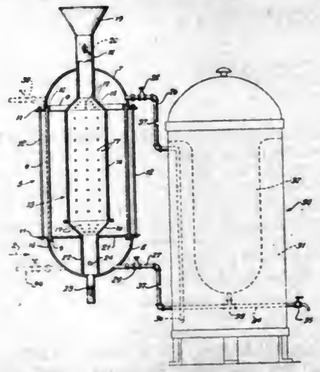
2,447,689
PRESSURE INDICATOR FOR PNEUMATIC TIRES
Norman A. Dysart, Riverside, Calif., assignor of thirty-seven and one-half per cent to Grady L. Fox and thirty-seven and one-half per cent to Charles F. Smith, both of Amarillo, Tex.
Application July 20, 1946, Serial No. 685,020
14 Claims. (Cl. 200—58)

14. In a device for indicating unit pressure existing within the inner tube of a wheel mounted pneumatic tire, the combination of a switch assembly adapted to be mounted on the wheel rim adjacent the inner tube, said switch assembly having a non-resilient body provided with a rounded upper portion to contact the inner tube, a recess in the upper portion of the body, a bowed leaf spring shaped to conform substantially to the upper contact surface of the body and adapted to be received within said recess, the body having a central opening extending into the recess, a reciprocable switch member fixed to the spring between its ends and slidably mounted in the central opening, the switch member extending



into a cavity provided within the body, the resilience of the leaf spring normally acting to move the switch member in one direction and the pressure within the inner tube acting to oppose such movement, high pressure and low pressure electrical contacts each adjustably mounted within the body cavity and adapted to be engaged by said switch member at opposite ends of its travel, said contacts being accessible for adjustment when the body is in operative position on said wheel rim.

2,447,690
METHOD OF FORMING CROWN CAPS
John W. Ekstedt, Union, and Albert F. Pityo, Clifton, N. J.
Application May 11, 1943, Serial No. 486,568
2 Claims. (226—83)

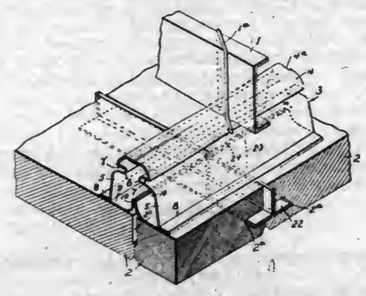


2. The herein described method of forming a blank to apply a cap upon a bottle or the like provided with a bead having a maximum exterior diameter, comprising taking a substantially circular blank formed of thermoplastic material and having a greater diameter than the maximum exterior diameter of the bead and heating such blank so that it may be formed, applying the heated blank to the free end of the bead in substantial concentric relation thereto so that the marginal portion of the blank extends radially beyond the maximum exterior diameter of the bead, effecting a relative movement in a direction axially of the bottle between the bottle and a rigid tubular die having a substantially cylindrical bore which bore has a diameter equal to the maximum exterior diameter of the bead plus substantially one thickness of the blank and causing the blank and bead to enter the bore, and allowing the formed cap to harden and removing the cap from within the bore.

2,447,691
DEVICE FOR PACKAGING AND DISPENSING INTRAVENOUS SOLUTIONS
Newton Evans, Montrose, Calif., assignor to Don Baxter, Inc., Glendale, Calif., a corporation of Nevada
Application February 17, 1947, Serial No. 729,135
7 Claims. (Cl. 128—214)

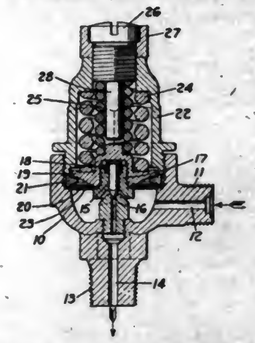
1. A device for packaging and dispensing a sterile solution, which comprises a container for the solution having a neck, a stopper for the container closing said neck, an opening in said stopper, a supplemental container member having its upper end fitting the opening of said stopper and depending from said stopper within said container, and means for dispensing the solution from said container to a recipient, mounted within said supplemental container.

2,447,692
COFFEE-MAKING APPARATUS
Christian Evensen, Melrose Park, Ill.
Application March 25, 1946, Serial No. 656,861
3 Claims. (Cl. 99—289)



1. A coffee making apparatus comprising in combination, a vertically disposed housing comprising a transparent, cylindrical casing open at the ends thereof, and a substantially semi-spherical cap removably positioned at each end of said casing, a jacket positioned concentrically in said housing and adapted to contain coffee grains, said jacket comprising a cylindrical body open at the ends thereof, and a frusto-conical neck portion at each end of said body, said body and said neck portion being perforated, a filler tube connected to the upper of said neck portions and communicating with the interior of said jacket, said tube projecting through the upper end of said housing, a funnel-shaped hopper at the projecting end of said tube, a butterfly valve in said tube adjacent to said hopper, a screen between the lower end of said casing and the adjacent of said caps, a drain tube connected to the lower of said neck portions and communicating with the interior of said jacket, said drain tube passing through said screen and projecting through the lower end of said housing, a further valve in the projecting end of said drain tube, a water inlet pipe and a coffee outlet pipe in the upper and lower of said caps respectively, said pipes communicating with the interior of said housing, and a control valve on each of said pipes.

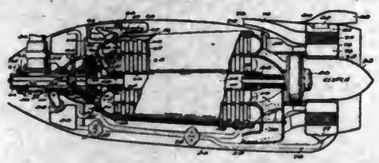
2,447,693
PROCESS FOR THE MANUFACTURE OF ESTERS OF HYDROXY CARBOXYLIC ACIDS
Edward M. Filachione, Philadelphia, and Charles H. Fisher, Abington, Pa., assignors to United States of America as represented by the Secretary of Agriculture
No Drawing. Application December 21, 1945, Serial No. 636,484
3 Claims. (Cl. 260—484)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A process of manufacturing an ester of a hydroxy carboxylic acid comprising heating a mixture containing a hydroxy carboxylic acid selected from the group consisting of glycolic acid and lactic acid and an aliphatic, polyhydric alcohol containing not more than three hydroxyl groups, in the presence of an acid catalyst, removing the water formed during the reaction from the condensation product thus produced, and reacting, in the liquid phase, the said condensation product with an alkenol having not more than 6 carbon atoms in the presence of an acid catalyst at a temperature of about from 100° C. to 150° C.

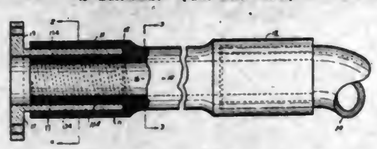
2,447,694
CEILING AND WALL CONSTRUCTION
Harold L. Finch, Davenport, Iowa
Application July 6, 1944, Serial No. 543,643
21 Claims. (Cl. 189—85)

1. In ceiling construction: furring runners each comprising a sheet metal body having a head, side walls having grooves adjacent the head, the grooves extending inwardly of the strip, lateral flanges at the bottom of the side walls, base flanges extending inwardly from the side walls and terminating in upwardly-inwardly turned clip-receiving members.



2,447,695
TERMINAL CHECK FOR MECHANICAL LUBRICATORS
Bengt E. Folke, Mamaroneck, N. Y., assignor to Nathan Manufacturing Company, New York, N. Y., a corporation of New York
Application June 12, 1944, Serial No. 539,935
1 Claim. (Cl. 184—36)

In a terminal check for mechanical lubricators, a casing having a chamber with an inlet and an outlet, a flexible diaphragm forming one of the walls of said chamber, an abutment having a cylindrical extension fastened to said diaphragm, a valve member within said abutment adapted to control said outlet, a spring housing secured to said casing adapted to hold said diaphragm within said casing, said housing having a fixed inner shoulder, a coiled heavy main spring of predetermined tension within the housing disposed between said shoulder and said abutment exerting a relatively high pressure against the abutment to urge said valve member to a position closing said outlet, an auxiliary coiled light spring within the housing disposed within the coils of said main spring and bearing against said abutment, the lower end of said auxiliary spring disposed around said cylindrical extension, and a screw through said housing and bearing against the upper end of said auxiliary spring for adjusting the tension of said auxiliary spring from the exterior of the housing to increase the pressure against said valve member over that exerted by said main spring, said screw having an extension rod projecting into the housing disposed within said auxiliary spring and coaxial with said cylindrical extension for guiding said auxiliary spring substantially throughout its length, said screw adapted to come to a stop exteriorly of the housing leaving a slight clearance between the ends of said extension rod and said cylindrical extension of the abutment to prevent the screw from compressing said auxiliary spring beyond a predetermined tension.

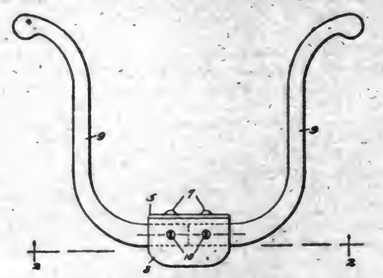


2,447,696
COMBUSTION GAS AND STEAM TURBINE ARRANGEMENT
Archibald Graham Forsyth, Cheam, England, assignor to The Fairey Aviation Company Limited, Hayes, Middlesex, England
Application December 13, 1944, Serial No. 567,988
1 Claim. (Cl. 60—49)

A turbine for use as a power source in aircraft, comprising a rotatable drive shaft, a rotatable hollow cylindrical turbine member operably connected to said drive shaft, turbine blades extending radially inwardly and outwardly from said member, conduit means for directing air through said inwardly extending blades, combustion means utilizing said air after movement through said inwardly extending blades and arranged to direct products of combustion against said outwardly extending blades, an annular water tank surrounding said drive shaft, a water jacket surrounding the area defined by the outwardly extending turbine blades of said hollow member whereby said area is cooled and the water in said jacket is converted to steam, means for injecting steam formed during passage of the water

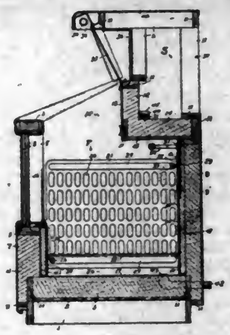
through said jacket against said outwardly extending turbine blades at the point where said products of combustion begin passage through said outwardly extending turbine blades, condensing means receiving the fluids emerging from passage through said outwardly extending blades for condensing water from said steam and products of combustion, and means for forcing water recovered in said condenser to said water tank, whereby a substantially closed water circuit is defined permitting operation of said turbine over considerable periods of time without stopping for replenishment of said water.

2,447,697
RADIATOR CONNECTION HOSE
Orin C. Gotschall, near Salem, Ohio
Application October 23, 1944, Serial No. 559,985
2 Claims. (Cl. 138—56)



1. A connection hose comprising a flexible tubular member of rubber like material having axially extending dual end sections of uniform thickness formed thereon, one inside of the other and spaced apart sufficiently to receive a standard tubular fitting, structural members embedded in said inner sections to lend shape retaining characteristics thereto, said structural members comprising spirally formed springs.

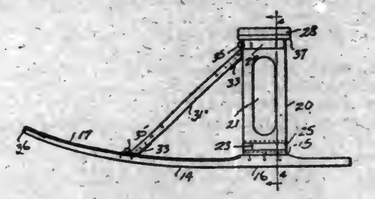
2,447,698
APPLIANCE FOR THE SPINE
Bert Haberer, Oakland, Calif.
Application October 21, 1946, Serial No. 704,549
1 Claim. (Cl. 128—69)



A device for exercising the human body, comprising a body portion of substantially U-shaped form, rounded enlargements fixedly attached to the face of the body portion, the enlargements disposed in spaced relation to each other and adapted to be positioned against the spinal column, spaced handles forwardly and outwardly curved from the body portion, having outwardly flared ends providing a grip, the body portion having a rectangular groove in its upper surface, extending longitudinally of its ends, the bases of

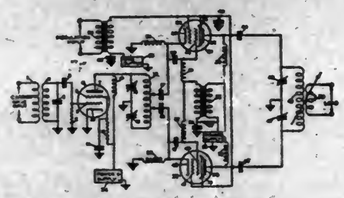
the handles adapted for positioning within the groove, a top piece adapted to be positioned over

said groove, and means for immovably securing said body portion, handles, and top piece in fixed association.



2,447,699
OPEN-TOP REFRIGERATED DISPLAY CASE
Hubert W. Hardin, San Antonio, Tex., assignor to Ed Friedrich, Inc., San Antonio, Tex., a corporation of Texas
Application March 17, 1947, Serial No. 735,082
9 Claims. (Cl. 62—89.6)

1. In a refrigerator of the class described wherein is provided an insulated case having a bottom, end walls, a back wall, a front wall with a transparent window and containing a food chamber: the improvement which comprises a cooling unit fitting within the food chamber and itself comprising plate-coil end walls, intermediate plate-coil partition walls, a bottom, a back wall and a front wall, an auxiliary plate coil on said back wall of the unit and extending a substantial distance above the same; an insulated ceiling extending from the back wall of the case forwardly a substantial distance at a lower level than the top of the front wall of the case, and means for circulating a suitable refrigerant through said plate coils.



2,447,700
SLED
Ray J. Hassman, San Francisco, Calif.
Application July 30, 1945, Serial No. 607,727
1 Claim. (Cl. 280—12)

A device of the character described, comprising a runner having an upwardly curved front end and a raised portion spaced from the front end, an inverted T-shaped bracket secured to the raised portion, an apertured standard having an upper end and a slotted lower end for engaging said bracket, a seat portion detachably secured to the upper end of said standard, and a brace detachably secured at its lower extremity to the

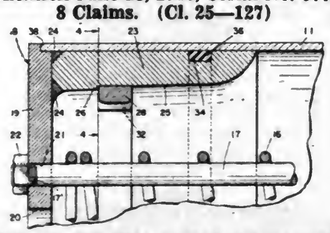
curved end of said runner medially thereof and detachably secured at its upper end to said standard at a point thereon directly below said seat portion.

2,447,701
RADIO SIGNALING CIRCUIT
Donald L. Hings, Ottawa, Ontario, Canada, assignor to Electronic Laboratories, Inc., Indianapolis, Ind., a corporation of Indiana
Application March 27, 1943, Serial No. 480,766
In Canada March 22, 1943
17 Claims. (Cl. 179—171.5)

11. A radio frequency system comprising an amplifying tube having a cathode, a first control element and a plate, a source of carrier wave potentials for exciting the cathode with respect to a point of reference potential, said cathode being grounded through said source of carrier wave potentials, means for applying modulating potentials to the first control element, said amplifying tube having a second control element coupled to the cathode, and means receiving energy from the plate for feeding a portion of the modulated energy to the second control element.

2,447,702
METHOD FOR PRODUCING BENZOLSULFONAMIDO-1,3,4-THIODIAZOLE COMPOUNDS
Oluf Hübner, Klampenborg, near Copenhagen, Denmark, assignor to H. Lundbeck & Co., Kemisk Pharmaceutisk Laboratorium A/S, Copenhagen, Denmark, a firm
No Drawing. Application November 23, 1942, Serial No. 466,598½. In Denmark April 1, 1942
11 Claims. (Cl. 260—239.6)

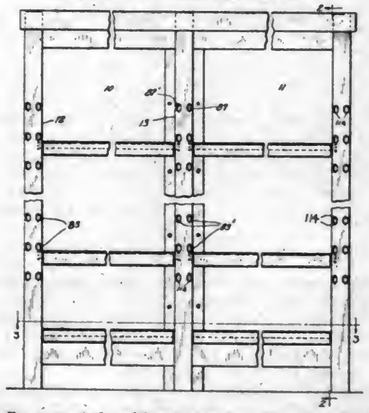
10. In a method of producing p-substituted benzolsulphonamido-1.3.4-thiodiazol compounds, the step in which a compound of the type



in which X is selected from the group consisting of acylamino, nitro, azo, and hydrazid radicals, and Y is halogen, is reacted with a thiosemicar-

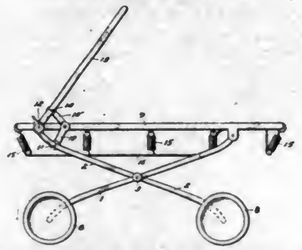
bazone of an aliphatic aldehyde having the formula

$$H_2N.C(SH)=N-N=CH.Z$$



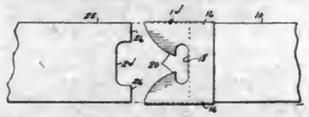
where Z is selected from the group consisting of hydrogen and alkyl radicals, the reaction being carried out in an alkaline medium.

2,447,703
MEANS FOR MOLDING ENDS OF CONCRETE PIPES
Howard H. Jenkins, San Marino, Calif., assignor to American Pipe and Construction Co., a corporation of Delaware
Application June 18, 1946, Serial No. 677,603
8 Claims. (Cl. 25—127)



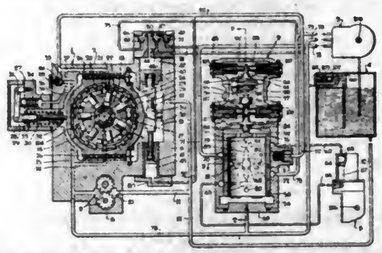
1. Means for molding an end of a concrete pipe or the like to provide a peripheral groove therein spaced from the end of the pipe, comprising a cylindrical form, an end ring adapted to be mounted at the end of said form, said ring having an annular plate portion and a cylindrical band extending therefrom and adapted to be positioned within the end portion of said cylindrical form, and a split ring detachably mounted within said band spaced from said plate portion.

2,447,704
ADJUSTABLE SHELVING CONSTRUCTION
Donald Kline, Aurora, Ill., assignor to Blackstone Manufacturing Co., Inc., Chicago, Ill., a corporation of Illinois
Application February 17, 1945, Serial No. 578,428
6 Claims. (Cl. 211—136)



2. In a metal cabinet construction, a plurality of supporting posts, each post comprising a length of metal shaped to form a hollow post having a cross section forming a substantially closed figure and having a front and oppositely disposed sides adjacent to said front and spaced from each other, at least one series of regularly spaced slots in each post extending from a part of the front of the post around to one side thereof, each slot extending perpendicular to the post length along the front and continuing rearwardly and downwardly at the side of the post, a cabinet section having four corner posts with the four series of slots facing each other, a plurality of rectangular shelves, one shelf being adapted to engage four slots of the four posts, each shelf comprising a shelf portion shaped to fit between the posts and having protruding tubular portions engaging the slots in said posts, each shelf being adapted to be disposed perpendicular to the posts and slid backward and downward with the tubular portions engaging the slots to maintain the same in position, each shelf having rolled edge portions extending along the front and rear edges, said rolled edges extending beyond the shelf proper to form the tubular portions.

2,447,705
FOLDING CARRIAGE FOR CHILDREN
Luis Gelambi Macip, Barcelona, Spain
Application June 22, 1944, Serial No. 541,623
In Spain July 16, 1943
1 Claim. (Cl. 280—41)



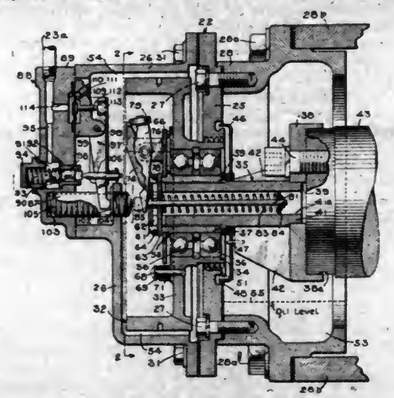
In a folding carriage for children, in combination a frame; a handle; a plurality of stays articulated in the form of sets of shears capable of being closed and opened by movement of said stays, one of the stays of each of said sets of shears being articulated to said frame and the other of the stays of each of said sets of shears being articulated to said handle; and a set of levers pivoted together in the form of a compass and joining said other stays to said frame so that the pivot of said levers coincides with the articulation of said other stays and said handle, in which position the latter may continue to turn until it is completely depressed.

2,447,706
VENETIAN SLAT
John R. Marston, Portsmouth, Va.
Application February 15, 1946, Serial No. 647,698
3 Claims. (Cl. 160—173)

1. A device of the character described, comprising a composite slat having a main body and end pieces and a connector for removably connecting said end pieces to said main body, an elongated slot in said connector to receive control cords for said slat, said body and end pieces being joined in end to end relation, and said end pieces each formed at its joined end with a half slot to conform with the slot in the associated connector, and abutment shoulders on said end pieces adapted to engage the end of the main body within the connector.

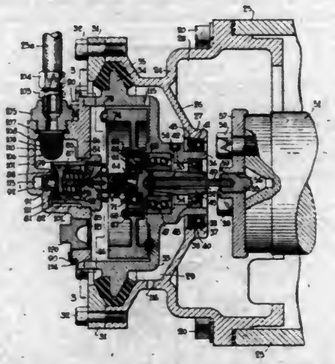
2,447,707
CONTROL APPARATUS FOR A PLURALITY OF MOTORS
Harry C. May, East McKeesport, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application July 31, 1945, Serial No. 607,926
13 Claims. (Cl. 60—97)

1. In a rotary fluid pressure pump having a rotative portion and a non-rotative portion surrounding said rotative portion and movable into eccentric relation therewith, said non-rotative portion being shiftable to increase the degree of said eccentricity and thereby the ouput of said pump, the combination of constant pressure means for shifting said non-rotative portion in a direction for increasing the degree of eccentricity, a cam member having one position for limiting said shifting to a certain low predetermined degree and shiftable to another position to limit said shifting to a certain predetermined higher degree, and a movable abutment positively connected to said constant pressure means responsive to the pressure of fluid delivered by said pump to directly oppose said constant pressure means and counter-balance the same when a certain predetermined pressure of fluid is delivered.



2,447,708
BATHING CAP
Evelyn McCaffrey, Jamaica, N. Y.
Application December 14, 1946, Serial No. 716,328
2 Claims. (Cl. 2—68)

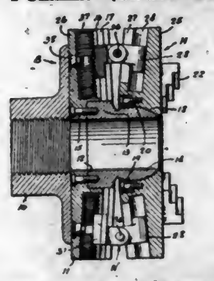
1. A bathing cap comprising a close-fitting cap proper, and a hair-retaining elastic band secured therewithin, said band being attached to opposite sides of the cap proper intermediate the front and the back thereof and extending freely backwardly within the cap proper so as to confine masses of hair therebeneath to closely fit about the back of the head beneath the cap proper to enable said cap proper to be easily placed upon the head of the wearer.



2,447,709
DECELERATION CONTROL APPARATUS
Joseph C. McCune, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application April 30, 1943. Serial No. 485,130
8 Claims. (Cl. 264—1)

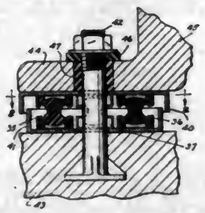
1. A rotary inertia device comprising a rotary element, a fly-wheel rotatably mounted on the rotary element, cooperating means partly on said rotary element and partly on said fly-wheel for unresistingly permitting the rotative movement of the fly-wheel with respect to the rotary element through a predetermined angle and for yieldingly resisting additional rotative movement of

the fly-wheel relative to the rotary element beyond the extremity of unresisted rotative movement of the fly-wheel, in either direction, with respect to the rotary element, and means operatively response only to that portion of the rotative movement of the fly-wheel relative to the rotary element which is yieldingly resisted.



2,447,710
DECELERATION CONTROL APPARATUS
Joseph C. McCune, Edgewood, and George K. Newell, near Pitcairn, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application April 29, 1944, Serial No. 533,284
11 Claims. (Cl. 264—1)

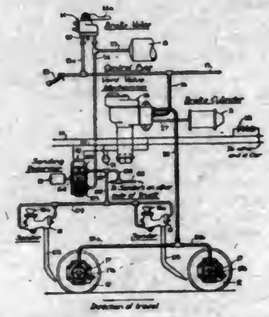
1. A rotary inertia device comprising a rotary element adapted to be rotatably accelerated and decelerated, a fly-wheel, resilient yielding means carried by the fly-wheel, means on said rotary element cooperating with said resilient means in a manner to provide the sole driving connection between the rotary element and the fly-wheel, said resilient yielding means and said means on said rotary element cooperating in a manner characterized by unresisted rotative movement of the fly-wheel with respect to the rotary element



through a predetermined angle and yieldingly resisted rotative movement of the fly-wheel with respect to the rotary element beyond either extremity of the predetermined angle, and means operatively responsive to movement of said resilient yielding means incidental to the yieldingly resisted movement of the fly-wheel with respect to the rotary element.

2,447,711
PRECISION LEVELING CHUCK
Ernest Mikis, San Antonio, Tex.
Application January 16, 1946, Serial No. 641,444
4 Claims. (Cl. 279—16)

3. In a chuck of the character described, a shank for securing said chuck in position in a metal working machine, a circular chuck body carried by said shank and formed with a plurality of passages equiangularly spaced apart, a ball element carried by said chuck body, a jaw holder having a shape corresponding generally to the shape of said chuck body and mounted on said ball element for adjustment with respect to said chuck body, a plurality of work holding jaws adjustably mounted in said jaw holder, said jaw holder being formed with a plurality of tracks corresponding in number and position to the passages in said chuck body, a wedge assembly cooperating with each pair of passage and track, and a screw actuator in said chuck body cooperating with each wedge assembly to actuate the latter.



2,447,712
CUSHIONING DEVICE
Tracy D. Nathan, Cuyahoga Falls, Ohio, assignor of one-third to Theodore S. Rowe, Kent, Ohio, and one-third to James M. W. Chamberlain, Akron, Ohio
Application November 18, 1944, Serial No. 564,028
7 Claims. (Cl. 248—358)

1. A cushioning device comprising a strip of resilient material having spaced arms extending outwardly and upwardly therefrom, and having spaced feet extending outwardly and downwardly therefrom, said arms and feet extending longitudinally of the strip, a channel-shaped retaining member embracing the arms, a second channel-shaped retaining member embracing the feet, said arms and feet cooperating to provide recesses in the top, bottom and side portions of the strip, the distance between the recesses in the side portions of the strip being less than the width of the recesses in the top and bottom portions thereof.

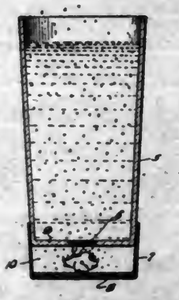
5. A cushioning device comprising a strip of resilient material having a centrally disposed columnar portion, and having portions thereof extending laterally and upwardly from the top portion, and having other portions extending laterally and downwardly from the bottom portion to provide recesses in the top, bottom and sides respectively, and clamping members embracing the extension at the respective ends of the device and extending across such ends and onto the sides thereof and thence inwardly into the side recess.

2,447,713
BRAKE AND SANDING CONTROL APPARATUS
George K. Newell, near Pitcairn, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application March 3, 1945, Serial No. 580,907
23 Claims. (Cl. 291—2)

1. In a vehicle brake and sanding control apparatus, the combination of a valve mechanism having a valve element operative in response to a predetermined variation of a control fluid pressure from one position in which it establishes communication through which fluid under pressure may be supplied to effect application of the brakes to a different position in which the supply of fluid under pressure to effect application of the brakes is cut off and a different communication is established through which fluid under pressure is vented to effect a reduction in the degree of application of the brakes associated with one or more wheels of the vehicle, means responsive to the slipping condition of a vehicle wheel on which the brakes are applied for effecting the predetermined variation of the control fluid pressure for the said valve element, and control means including an operating element connected to and operated by movement of said valve element for effecting a sanding operation in response to movement of the valve element to its said different position.

2,447,714
FOOD GRATER
Lillian Dennis Richards, Washington, D. C.
Application October 27, 1947, Serial No. 782,285
6 Claims. (Cl. 146—180)

1. A grater comprising a body provided with cutters and openings through which material passes, at opposite sides of opposite ends of the body, the companion securing members at opposite ends of the body being securing members carried by said body and movable in unison from

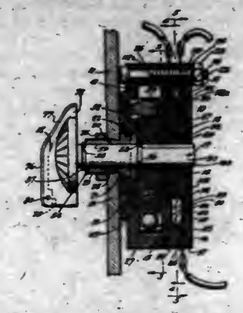


an operative position for gripping opposite side portions of a receptacle and holding the grater in position for use across a receptacle to a folded position against the body.

2,447,715
ESTERS OF DIACYL-GLYCEROPHOSPHORIC ACIDS
William Gordon Rose, Berkeley, Calif., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application June 12, 1947, Serial No. 754,257
13 Claims. (Cl. 260—326)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

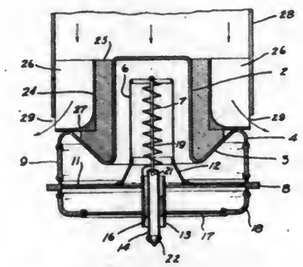
1. A process comprising reacting a diacyl-glycerophosphoryl chloride, wherein the acyl radicals are aliphatic and contain at least 8 carbon atoms, with beta-hydroxyethylphthalimide in the presence of a tertiary amine at a temperature of about from 10° C. to 35° C., subjecting the resulting phthalimidoethyl ester of diacyl-glycero-monochlorophosphoric acid to limited hydrolysis by reaction with water at a temperature not exceeding about 25° C. to form the phthalimidoethyl ester of diacyl-glycerophosphoric acid, and refluxing this last-formed ester with a member selected from the group consisting of hydrazine, hydrazine hydrate, and the mineral acid salts of hydrazine to produce an aminoethyl ester of a diacyl-glycerophosphoric acid.

2,447,716
METHOD AND APPARATUS FOR CARBONATING LIQUIDS USED FOR DRINKING
Charles E. Rowe, Corydon, Ind., assignor of one-third to S. Morris Wilson, Corydon, Ind.
Application May 3, 1946, Serial No. 667,016
3 Claims. (Cl. 62—91.5)



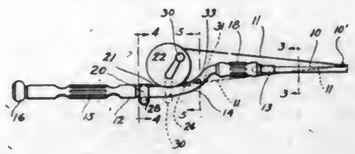
2. An apparatus for carbonating liquids used for drinking purposes, which comprises a drinking vessel having a wall provided with a porous glass disk and a Dry Ice vessel into which the drinking vessel removably fits and forms therewith a chamber closed by the said drinking vessel, said chamber being adapted to receive pieces of Dry Ice for developing the carbon dioxide used for carbonating.

2,447,717
FLUORINATION OF ORGANIC COMPOUNDS
Joseph H. Simons, State College, Pa., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
No Drawing. Application December 7, 1946, Serial No. 714,918
8 Claims. (Cl. 260—539)



1. In a process of producing organic fluorine compounds, the steps which comprise reacting fluorine with a fluorinatable organic compound solute in a substantially inert liquid solvent diluent of the class consisting of pyridine and fluorinated pyridine, and recovering a fluorinated product of said solute.

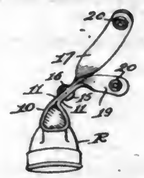
2,447,718
ROTARY SWITCH
Ray R. Simpson, River Forest, Ill., assignor to Simpson Electric Company, Chicago, Ill., a corporation of Illinois
Application October 25, 1946, Serial No. 705,623
4 Claims. (Cl. 200—11)



1. An electric switch member comprising a molded insulating cup-shaped body, a plurality of sheet metal contact members formed of an integral piece of metal projecting radially inwardly through said body and exposed inside said body, a plurality of said contact members being separated from each other at their outer projecting ends which serve as connectors, and others of said contact members being maintained connected by an annular sheet metal body member, a second molded insulating cup-shaped member having imbedded therein a sheet metal annular contact member provided with radially outwardly extending contact tongues, each of said cup-shaped members having a small shallow cylindrical recess centrally located in its cup and provided with a central bore, a rotor comprising a pair of insulating disks located in said smaller recesses and engaging each other, a movable wiping contact finger having an anchoring formation and a finger for engaging the first-mentioned inwardly projecting contacts of the first insulating cup member, and a second finger for engaging the annular contacts of the second-mentioned insulating member, said movable contact member having its anchoring formations confined in a complementary recess between said disks, and means for securing said cup-shaped members together and simultaneously holding said disks together and securing said movable contact to said disks in the recess formed by said two cup-shaped members.

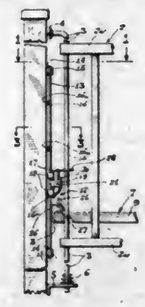
2,447,719
ELECTRON TUBE
Harold E. Sorg, Redwood City, Calif., assignor to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Application January 22, 1945, Serial No. 573,875
8 Claims. (Cl. 250—27.5)

1. An electron tube comprising a sealed-off evacuated envelope, a reentrant metallic external anode forming the upper portion of the tube envelope and having a cylindrical body and an upturned end flange, and a cooler on the anode having a heat conducting core encircling the body and extending into the space between the flange and the body, said cooler having fins extending outwardly from the core and disposed intermediate the flange and the upper end of the anode.



2,447,720
FISH POLE
Bernard C. Thomas, Renton, Wash.
Application March 5, 1946, Serial No. 652,094
2 Claims. (Cl. 43—18)

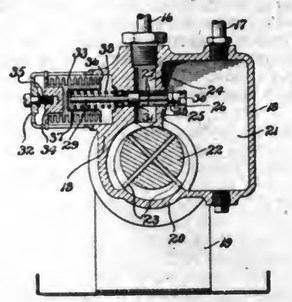
1. A fish pole having grip sections, one of which is in offset relation to the other and is provided with a reel thereon, one of said grip sections having a handle, a second of said grip sections being connected to the first grip section by a neck extended upward from the front end of the first section and secured to the second grip section and having a handle thereon, said neck having a passage therethrough for guiding a line from the reel to a point in advance of the second grip section and maintaining the line below the latter section.



2,447,721
TELEPHONE HANDPIECE SUPPORT
Albert G. Wahl, Los Angeles, Calif.
Application May 20, 1947, Serial No. 749,309
1 Claim. (Cl. 179—157)

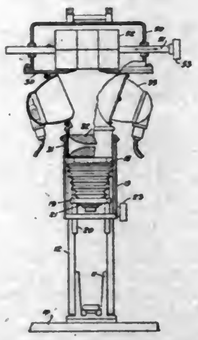
A telephone hand piece support formed in a single piece and comprising an open loop of resilient material adapted to surround the body of the hand piece, a pair of short arms extending at an angle from said loop, readily separable means connecting said arms, twisted curved arms extending from said short arms one of said

twisted arms being substantially shorter than the other and said arms diverging toward their free ends and friction studs seated in the outer end portions of said twisted diverging arms.



2,447,722
CRIB
Charles E. Webb, New London, Wis., assignor to Edison Wood Products, Incorporated, West Orange, N. J., a corporation of New Jersey
Application May 18, 1945, Serial No. 594,384
5 Claims. (Cl. 5—11)

1. In a crib comprising end sections, vertical guide members supported thereby, a movable side panel slidably mounted on said guide members and a mattress frame: an adjustable support for said mattress frame comprising vertical tracks at the corners of said crib adjacent said guide members; a series of catches at intervals along said tracks; slide members engaging said tracks and slidable vertically therealong, said slide members having apertured portions embracing said guide members for rigidifying the latter; means for attaching the corner portions of said mattress frame to said slide members respectively; and latch pawls mounted on said slide members and spring-biased to engage said catches for holding the respective corner portions of said mattress frame at different elevations, said latch pawls being releasable independently of one another to permit individual adjustment of the four corners of said mattress frame.



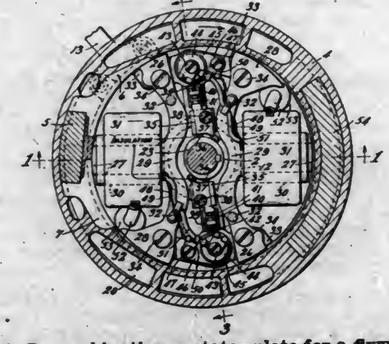
2,447,723
THERMOSTATIC AIR CIRCULATION CONTROL
Harold A. Wheeler, Grand Rapids, Mich., assignor to Raymond J. Scheffler, Grand Rapids, Mich.
Application February 11, 1946, Serial No. 646,859
7 Claims. (Cl. 230—11)

1. In a construction as described, a rotatably mounted fan, a hydraulic motor for driving said fan, a hydraulic pump for driving said motor, a continuous speed motor for driving the pump at a continuous speed, and valve means interposed between said pump and the fan driving motor for controlling the passage of hydraulic fluid from the pump to said motor, combined with temperature actuated means for automatically controlling said

valve means in accordance with the temperatures to which said temperature sensitive means is exposed.

2,447,724
COLOR CONTROL FOR PHOTOGRAPHIC ENLARGERS
Louis L. Weisglass, New York, N. Y., assignor, by mesne assignments, to Simmon Brothers, Inc., Long Island City, N. Y., a corporation of New York
Application September 4, 1945, Serial No. 614,208
3 Claims. (Cl. 88—24)

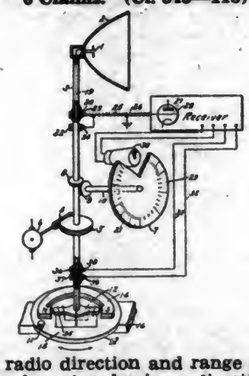
1. A photographic enlarger comprising a supporting structure and a projector assembly, said projector assembly including a support for a photographic negative, an enlarging lens in front of said negative, means to adjust the distance from said lens to said negative for focusing purposes, a condenser behind said negative, a polygonal cylinder, a plurality of bodies reflecting predominantly diffuse light of different colors mounted on the sides of said cylinder, one of these sides facing said condenser and being substantially in its focal point, at least one spotlight illuminating said side, and means under the control of the operator to move selectively one of said bodies into the position occupied by said illuminated side by rotating said polygonal cylinder.



2,447,725
METHOD OF MAKING SILICATE PLASTICS
William H. Adams, Jr., and Hans H. Lebach, Newark, Del., assignors to Haveg Corporation, Newark, Del., a corporation of Delaware
No Drawing. Application April 13, 1943, Serial No. 482,882
7 Claims. (Cl. 106—84)

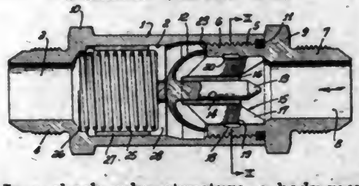
1. In the art of molding, the process which includes mixing an aqueous solution of sodium silicate of not less than about 45% concentration, and having a soda : silica ratio of one or more to 2.4 and a quantity of sodium silicofluoride which is at least sufficient to effect complete neutralization of the soda content of the silicate; forming the article from the plastic composition resulting from said mixture; and gradually elevating the temperature until the article is substantially hard.

2,447,726
LECITHIN COMPOSITION
Wilber J. Allingham, Denver, Colo.
No drawing. Application September 21, 1945, Serial No. 617,931
5 Claims. (Cl. 99—15)



1. A composition of matter consisting of lecithin interpersed and suspended in dry Irish moss gel.

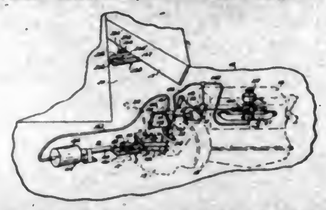
2,447,727
FLYWHEEL MAGNETO
Albert I. Alstrom, Longmeadow, and Allen L. Brownlee, West Springfield, Mass., assignors to Wico Electric Company, West Springfield, Mass., a corporation of Massachusetts
Application September 21, 1945, Serial No. 617,845
5 Claims. (Cl. 171—209)



1. In combination, a stator plate for a flywheel magneto, said plate having a hollow hub adapted to be mounted on that hub of an engine crankcase through and beyond which the engine crankshaft extends, a plurality of coil-bearing core structures fixed to said plate in angularly-spaced relation around the axis of said hub and separated one from another by narrow radial gaps, said core structures being located between two planes transverse to said axis one of which includes the outer end face of said hub and the other of which lies beyond said outer end face, and a breaker mechanism located between two adjacent core structures in one of said radial gaps, said mechanism including a plunger located between said planes and reciprocable in a straight line path lengthwise of said gap, a breaker point carried by said plunger, and a cooperating breaker point carried by said plate.

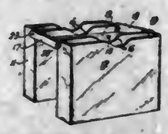
2,447,728
RADIO DIRECTION AND RANGE INDICATOR
Frederick E. Bartholy, Wilkinsburg, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 28, 1942, Serial No. 463,621
6 Claims. (Cl. 343—118)

1. In a radio direction and range finding system, a signal receiver having a directional energy collector rotating in one coordinate of bearing, a dial rotating in synchronism with said collector, markings on said dial corresponding to instantaneous positions of said collector with respect to a fixed point, means at said fixed point for illuminating a portion of said dial, means operable by said receiver for actuating said illuminating means at the instant signal is being received, and means independent of said receiver for limiting the actuation of said illuminating means to a selected signal.



2,447,729
CHECK VALVE
Alex Bertea, Pasadena, Calif.
Application May 5, 1945, Serial No. 592,175
2 Claims. (Cl. 251—144)

1. In a check valve structure, a body member having a longitudinal bore extending therethrough, a valve seat member disposed in said bore comprising an annular seating surface disposed in a plane normal to the longitudinal axis of said bore, a movable valve member comprising a hollow hemisphere disposed with its exterior surface exposed to the down stream side of said valve structure, means for guiding said movable valve member toward and away from said valve seat to cause the movable valve member to make sealing contact with said valve seat along the equator of said hemisphere, and spring means normally urging said movable valve member into engagement with said valve seat.



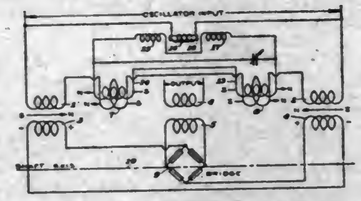
2,447,730
GEAR SHIFTING MECHANISM
Karl B. Britton, Cleveland, Ohio
Application October 18, 1943, Serial No. 506,700
9 Claims. (Cl. 74—472)

1. In an automotive vehicle provided with a change-speed transmission and an internal combustion engine having an intake and a throttle valve, power means for operating said transmission comprising control means including a multi-chambered casing housing a plurality of pressure differential and spring-operated switch-operating members and means for controlling the operation of said members comprising a conduit interconnecting one of the chambers of said casing with the intake, said conduit having incorporated therein a restricting automatically shiftable check valve means and further comprising means, having a fluid transmitting passage therein of relatively small diameter, interconnecting another of

said chambers with the intake, the aforementioned parts of the control means being so constructed and arranged that when the throttle is suddenly opened the aforementioned passage and valve means serve to so control the flow of fluid into two of said compartments as to prevent one of said switch-operating members from being subjected to a certain differential of pressures, the aforementioned parts of the control means being also so constructed and arranged as to so control the flow of fluid from the aforementioned two compartments as to prevent the latter switch-operating member from being subjected to said differential of pressures.

2,447,731
CARDCASE
Achille G. Bureau, Forest Hills, N. Y.
Application March 25, 1947, Serial No. 737,121
6 Claims. (Cl. 206—1)

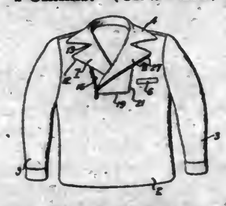
5. A card case comprising a pair of parallel-arranged hollow boxes comprising a bottom and four side members but having an open top, each of said boxes being of a size to hold snugly a deck of playing cards resting on their edges, and a single top cover member pivotally attached to the upper edge of each box which is most remote from the other box, each of said boxes having a pair of oppositely arranged thumb spaces at the upper portion thereof to facilitate the removal of the cards therefrom.



2,447,732
RUBBER-RECLAIMING OIL
Charles H. Campbell, Kent, Ohio, and Robert W. Ostermayer, Clairton, Pa.; said Ostermayer assignor to said Campbell
No Drawing. Application July 16, 1945, Serial No. 605,434
4 Claims. (Cl. 260—718)

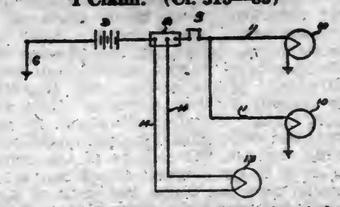
1. The method of digesting scrap rubber for reclaiming by subjecting the scrap rubber in finely divided condition to heat and the pressure of vapors in a closed vessel at a temperature from about 300° F. to 500° F. for from about 7 to 40 hours in contact with about 4% to 18% its weight of an oil composed about 50% to 80% of a cut of crude coke oven light oil boiling more than 60% within the approximate range of 135° C. to 210° C. and containing over 50% of unpolymerized resin-forming unsaturates and about 20% to 80% of a non-resin-forming aliphatic hydrocarbon oil from the distillation of petroleum oil boiling within the approximate range of 200° C. to 280° C.

2,447,733
RUBBER-RECLAIMING OIL
Charles H. Campbell, Kent, Ohio, and Robert W. Ostermayer, Clairton, Pa.; said Ostermayer assignor to said Campbell
No Drawing. Application July 16, 1945, Serial No. 605,435
4 Claims. (Cl. 260—717)



1. The method of digesting scrap rubber for reclaiming by subjecting the scrap rubber in finely divided condition to heat and the pressure of vapors in a closed vessel at a temperature from about 300° F. to 500° F. for from about 7 to 40 hours in contact with about 8% to 30% its weight of an oil composed about 50% to 80% of the pinene cut of turpentine boiling within the approximate range of 150° C. to 170° C., and about 20% to 50% of a non-resin forming aliphatic hydrocarbon oil boiling within the approximate range of 200° C. to 280° C.

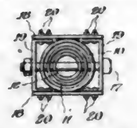
2,447,734
FIELD CONTROL FOR TRANSFORMER TORQUEMETER SIGNAL COILS
Edmund C. Capuzzi, Philadelphia, Pa., assignor to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application September 28, 1946, Serial No. 700,147
3 Claims. (Cl. 323—75)



1. An electrical system comprising a set of inductively associated power input windings, a set of inductively associated output windings, certain of which are stator and the others of which are rotor coils adapted to have relative axial movement, a rotatable shaft upon which the rotor coils are commonly mounted for rotation therewith, condition responsive impedance means mounted on said shaft for rotation therewith and also adapted to have axial movement with said shaft, said impedance means being electrically connected to certain of the windings of each set whereby power is supplied to said impedance means and an output signal voltage is transmitted therefrom in response to a change of condition, one of said sets of windings being divided and arranged so that their magnetic polarities oppose each other, the windings of the other of said sets being so disposed with respect to said divided windings that the input flux of the latter is substantially incapable of inducing a voltage in the output winding, whereby a change in impedance in response to a change of condition is the essential source of output voltage, and means for controlling the fields of the opposed input windings in the region of the output windings so that the net inductive effect of the said magnetic fields on the inductively associated output windings will remain substantially zero with a change in the relative axial position between said output and input windings.

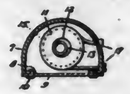
2,447,735
BLOUSE
Emanuel T. Cherin and Benjamin Favorman, San Francisco, Calif.
Application November 29, 1947, Serial No. 788,888
4 Claims. (Cl. 2—115)

1. A slip-over blouse comprising a main body portion; an inner chest covering and lapel forming flap having a bottom and two spaced upright side portions, one of said side portions being secured to said body portion at one side of the center line of said body portion, the opposite side portion being unsecured to said body portion, and the bottom being secured to said body portion across said center line; a mating outer chest covering and lapel forming flap also having a bottom and two spaced upright side portions, one of said side portions of said outer flap being secured to said body portion at the opposite side of said center line, the opposite side portion of said outer flap being adapted to be free of attachment to said body portion in an open position of said outer flap, and the bottom of said outer flap being secured to said body portion across said center line adjacent the bottom of said inner flap; the flaps being adapted to overlap in a closed position to provide a chest covering of at least two thicknesses of material; and openable fastening means for securing said opposite side portion of said outer flap to said body portion adjacent the secured side portion of said inner flap; the attachment of said bottoms of said flaps across said center line controlling the extent of opening thereof to fix the lapel shapes when said flaps are opened.



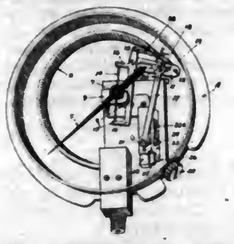
2,447,736
ELECTRIC LIGHTING SYSTEM
W. J. Cheshier and Elton E. Cheshier, Rotan, Tex.
Application July 12, 1946, Serial No. 683,057
1 Claim. (Cl. 315—83)

In a grounded electric circuit, a circuit breaker, a main energy-consuming device in series there-



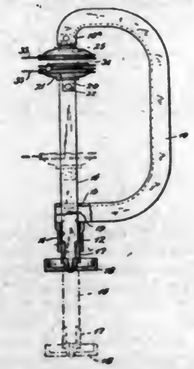
with and connected to ground, said circuit breaker being adapted to break said circuit upon the occurrence of a ground fault between said device and said circuit breaker, an ungrounded auxiliary energy-consuming device, means connecting said second device and said circuit breaker in parallel, and said second device being adapted to be grounded upon the occurrence of the ground fault between said circuit breaker and said first device.

2,447,737
LATCH BOLT FOR TOWING POLES
Edward Carl Christensen, Denmark, Wis.
Application November 22, 1946, Serial No. 711,549
3 Claims. (Cl. 280—33.14)



1. In a device of the type described, the combination of a plurality of telescopically interfitted tubular members, means for connecting the innermost one of said tubular members with a tractor, stop means for limiting the extension movement of said members with respect to each other, and means for connecting the outermost one of said tubular members with a vehicle to be drawn, comprising channel bars embracing said outermost tubular member at opposite sides thereof, transversely extending plates engaging the opposite face portions of said outermost tubular member between the flange portions of said channel bars, and bolts connecting said plates with said channel bars, with the arrangement such that when said last named bolts are tightened said plates have a tight grip on said tubular member.

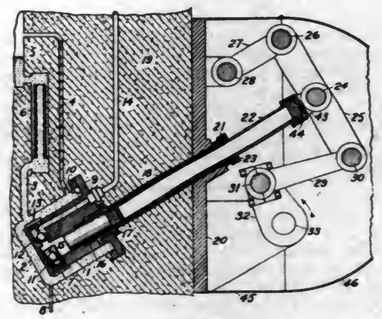
2,447,738
TOILET SEAT
Edison William Conner, Detroit, Mich.
Application August 1, 1945, Serial No. 608,262
1 Claim. (Cl. 219—19)



A sanitary toilet seat comprising a casing composed of an inverted channel having an inwardly directed flange along its edges, a flat plate closing the channel at the bottom, and means passing through the margin of said plate and said flange for removably securing said plate to the channel, a series of centrally apertured insulator discs disposed in spaced relation within the channel, said insulator discs being provided with peripheral grooves, U-bolts having their intermediate portions engaged in the grooves of the insulator discs and having nutted ends passing through a wall of the casing, said U-bolts removably supporting the insulator discs within the casing in a vertical position and in spaced relation to the walls of said casing, and a heating coil strung through the centers of the insulator discs so as to be maintained out of contact with the channel and the plate, the ends of the U-bolts passing through the outer side wall of the casing to provide for lateral adjustment of the insulator discs and tensioning of the heating coil.

2,447,739
PRESSURE GAUGE
Edward J. Courtney, Oaklyn, N. J.
Application November 22, 1944, Serial No. 564,572
7 Claims. (Cl. 73—411)

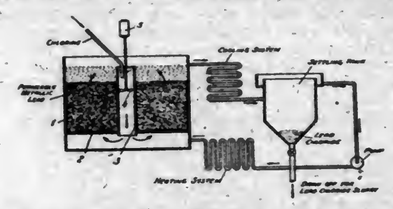
2. In a pressure gauge and its housing, a pointer having a pinion, a rack for rotating the pinion, a Bourdon tube, a floating operating lever one end of which is pivotally connected with the free end of the Bourdon tube and the other end of which is pivotally connected with an end of the rack, and a link one end of which is pivotally connected with the lever intermediate the ends of the latter and thus affords an axis for rocking movement of said lever and the other end of the link being pivotally connected for swinging movement of the link, with a member supported from the housing for positional adjustment, and means for adjusting said member.



2,447,740
TIRE REPAIR CLAMP
John C. Crowley, Willoughby, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application October 8, 1945, Serial No. 620,862
4 Claims. (Cl. 18—18)

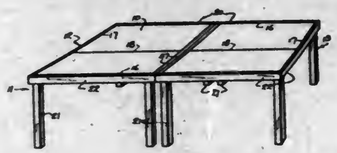
4. A tire repair clamp comprising a substantially C-shaped support, a vulcanizing unit secured to one end of said support, the other end of said support being provided with an opening therethrough aligned with said unit, an internally threaded sleeve carried by said other end of said support in alignment with said opening, an endwise movable elongated member nonrotatably carried by said other end of said support and provided with a vulcanizing unit at its end which is adjacent to said first unit and at its opposite end with an externally threaded sleeve, said member intermediate its ends being freely slidable through said first sleeve and said

opening, and spring means associated with said member intermediate its ends and resisting sliding movement thereof, said sleeves being relatively rotatable wherefore after said member has been quickly slid a distance sufficient to bring said vulcanizing units into predetermined proximity relative rotation between said sleeves imparts slow endwise clamping movement to said member.



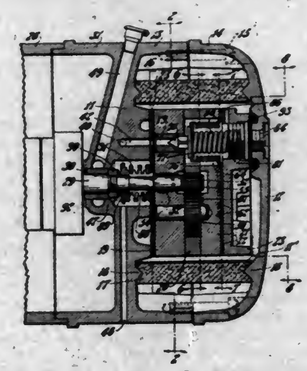
2,447,741
LIQUID OXYGEN PUMP
William Lane De Baufre, Lincoln, Nebr.
Application December 12, 1944, Serial No. 567,871
16 Claims. (Cl. 103—1)

1. Liquid oxygen pump including a vessel, a source of liquid oxygen, an inlet pipe connected to the source below the liquid level therein for admitting liquid oxygen to the vessel, a cover for the vessel, a cylinder attached to the cover and projecting into the vessel so as to be surrounded by liquid oxygen, a suction opening with non-return valve for flow of liquid oxygen from the vessel into the cylinder, a reciprocating plunger within the cylinder, a discharge opening with non-return valve for flow of liquid oxygen from the cylinder, insulation surrounding the vessel to reduce heat leak into the vessel from the surroundings, and an outlet pipe near the highest part of the vessel connected to the source of liquid oxygen above the liquid level therein for continuously discharging oxygen vapor formed by heat leak into the vessel.



2,447,742
MANUFACTURE OF LEAD HALIDES
Harry S. Davidson and Louis J. Gagliano, Glens Falls, N. Y., assignors to Imperial Paper and Color Corporation, Glens Falls, N. Y., a corporation of New York
Application August 3, 1945, Serial No. 608,740
5 Claims. (Cl. 23—97)

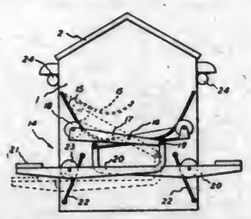
1. The method of making lead chloride which comprises circulating over metallic lead a heated solution of lead chloride acidified with hydrochloric acid to a pH less than 4 with an acid content less than 1% by weight of the solution, introducing chlorine gas into the circulating solution and forming lead chloride by the reaction of chlorine with metallic lead, withdrawing at least part of said acidified chlorine-containing solution from contact with said metallic lead as it becomes substantially saturated with lead chloride, cooling the withdrawn solution and thereby precipitating a substantial amount of lead chloride, separating the precipitated lead chloride from the residual solution, and heating the resid-



ual solution and again circulating it as aforesaid over metallic lead.

2,447,743
GLASS-TOPPED TENNIS TABLE
Walter G. Dieter, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application April 6, 1944, Serial No. 529,708
3 Claims. (Cl. 311—106)

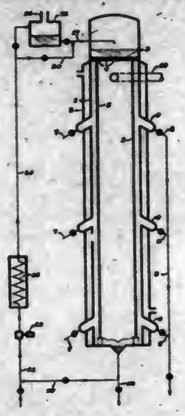
1. A tennis table of the character described, comprising a supporting framework, a slab cut from a rough plate glass blank and carried by said framework, a smooth flat playing surface mechanically ground but unpolished on the top of said blank, and a layer of coloring material on the bottom of the blank.



2,447,744
PUMPING UNIT
Virgil E. Duemler, West Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a corporation of Massachusetts
Application April 1, 1944, Serial No. 529,048
12 Claims. (Cl. 103—42)

1. A fuel supply unit for oil burners, including a casing made up of a pump plate having holes

therethrough, first and second side plates located one on each side of the pump plate for closing said holes, rotary pump elements housed in the holes of the pump plate and between the side plates, aligned openings extending through the first side plate and the pump plate and forming a chamber closed at one end by the second side plate, a disc carrying a bellows, the latter extending into said chamber and closing the other end thereof, a fourth plate between which and the first side plate said disc is located, means for clamping said plates and disc together, a valve seat provided in the second side plate, a valve cooperating with said seat and movable with the bellows, and a spring inside the bellows and between the fourth plate and the valve-engaging part of said bellows.

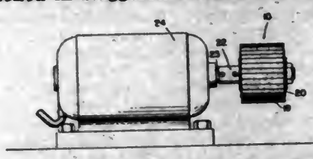


2,447,745
AUTOMATIC CHICKEN FEEDER
Greyburn T. Eidson, Irving, Tex., assignor of one-third to L. N. Moore and one-third to M. A. Phillips, both of Dallas, Tex.
Application December 11, 1946, Serial No. 715,553
3 Claims. (Cl. 119—55)

2. In a chicken feeder including a housing, a feed trough therein, and a door in the said housing providing access to the said trough, means for opening and closing the said door comprising a treadle outwardly of the said door, actuating arms supporting the said treadle, angularly disposed guide means on the said housing, rollers on the said arms for coaction with the said guide means, pivoted levers supported by the said housing and connected with the said arms, and cam means connected with the said door for coaction with the said levers whereby weight applied to the said treadle will open the said door, and whereby the weight of the said door will close the same when weight is removed from the said treadle.

2,447,746
GUIDED FREE FILM DISTILLATION METHOD
Seymour W. Ferris, Mount Holly, N. J., and Edward R. Lamson, Hatboro, and Douglas M. Smith, Norwood, Pa., assignors to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 29, 1945, Serial No. 575,106
4 Claims. (Cl. 202—64)

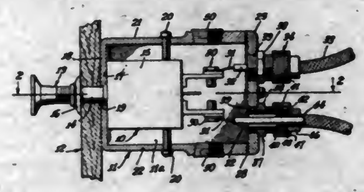
1. The method of effecting evaporative distillation of a distillable substance which comprises heating the distillable substance to a temperature at which at least a portion thereof will vaporize, forming the heated substance into a vertical, downwardly-moving, free-flowing film having two exposed surfaces, each in close proximity to and out of contact with a condensing surface, supporting the film at its vertical edges throughout the length of its downward travel, thereby causing it to continue unbroken throughout the length of its travel, vaporizing at least a portion of the substance from the flowing film,



and condensing the vapors upon the condensing surface.

2,447,747
TEAPOT SPOUT LADLE
Max W. Goldberg, West Bend, Wis., assignor to Modern Equipment Company, Port Washington, Wis., a corporation of Wisconsin
Application February 19, 1945, Serial No. 578,696
2 Claims. (Cl. 22—81)

1. In a ladle, a main upright metal shell portion having upright edges which terminate short of meeting to form a gap in the shell, a teapot spout connected to said upright edges and projecting laterally from the ladle, and a metal plate spanning said gap in the shell and having edges overlapping said upright edges of the main upright shell portion and connected thereto, a lining of refractory material in said ladle covering the inner side of said plate, refractory material in the spout positioned against the outer side of said plate, said plate having a multiplicity of openings therein, and upright spacer strips formed of material which disintegrates with high heat positioned in the adjacent refractory material and against the upright edges of said perforated metal plate.

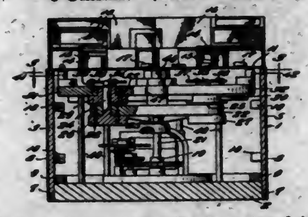


2,447,748
BUFFER
John D. Graham, Santa Ana, Calif.
Application January 4, 1947, Serial No. 720,212
2 Claims. (Cl. 51—190)

1. A buffer in the form of a sleeve adapted to be detachably mounted upon a rotatable drum comprising a plurality of leaves made of flexible, abrasive material, the leaves being arranged in superimposed relation, each leaf having an end positioned in staggered relation with respect to

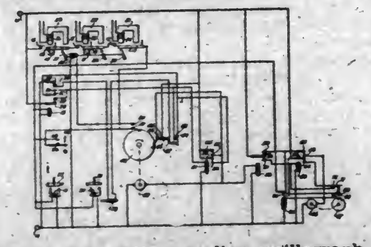
the ends of the other leaves, said ends being secured together so as to form a stepped strip of leaves, the opposite ends of said strip being joined together so as to form a sleeve.

2,447,749
IGNITION SWITCH SHIELD HOUSING
Alfred Hallett, Los Angeles, Calif., assignor, by mesne assignments, to Hallett Manufacturing Company, Inglewood, Calif., a corporation of California
Application June 15, 1942, Serial No. 447,079
4 Claims. (Cl. 200—168)



2. In combination with an ignition switch having its moving parts except an operating plunger housed in a box, and a mounting sleeve reciprocably housing said plunger projecting from an end of said box and provided with a nut threaded thereon, a shield of high conductive properties completely enclosing said box comprising a housing formed with an end wall and a hole in said wall to accommodate said mounting sleeve, said box being positioned in said shield housing with said mounting sleeve extending through said hole and said end of said box abutting against said end wall of said shield housing whereby said mounting sleeve may be passed through a panel and said shield housing and switch mounted on said panel by tightening said nut against said panel on the side thereof opposite said housing, and securing set screws for said box threaded through opposite walls of said shield housing engaging opposite walls of said switch box near the end thereof opposite said mounting sleeve and at right angles to the axis of said sleeve.

2,447,750
DERIVATIVE OF THE ADDUCT OF LEVOPIMARIC ACID AND MALEIC ANHYDRIDE AND METHOD OF PREPARATION THEREOF
George C. Harris, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 4, 1946,
Serial No. 667,496
14 Claims. (Cl. 260—103)

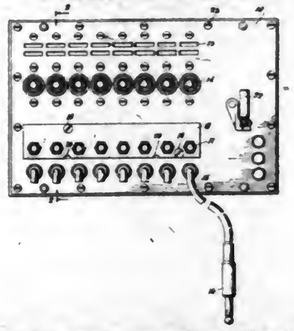


1. A synthetic material characterized by stability to heat at temperatures up to 250° C. and by stability to ultraviolet radiation, said synthetic material being a dicarboxylic acid and having the structural formula of a product theoretically obtained by the Diels-Alder addition of levopimaric acid and a monoester of fumaric acid with an unsubstituted aliphatic monohydric alcohol having less than four carbon atoms assuming the trans configuration of the fumaric ester group remains unchanged.

2,447,751
NOVELTY ROTARY DISPLAY STAND
Byron Haase, Bloomington, Ind.
Application May 4, 1946, Serial No. 667,323
6 Claims. (Cl. 40—126)

1. In a novelty rotary display stand including a housing having a bottom and interconnected side walls, a head surface member forming the top for said housing, a display on said surface member simulating streets leading to open doored building structures, a plurality of capsules containing metal balls disposed on said surface member, a rotatably mounted disk in said housing, means for driving said disk, a plurality of smaller disks rotatably mounted upon said first mentioned disk, means rigidly mounted on said bottom to engage and cause rotation of said smaller disks and permanent magnets supported by said smaller disks directly below said surface member for attracting said metal balls in said capsules for moving them over said surface member and into and out of said building structures.

2,447,752
APPARATUS FOR RECORDING AN OSCILLOGRAPHIC RECORD
Claude M. Hathaway, Denver, Colo.
Original application October 26, 1942, Serial No. 463,380. Divided and this application January 30, 1946, Serial No. 644,286
5 Claims. (Cl. 346—33)



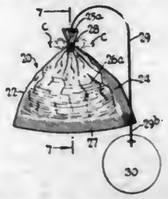
2. In an automatic recording oscillograph, the combination comprising a plurality of relays arranged to be responsive to a condition to be recorded, a plurality of serially connected contacts arranged to be interrupted by the action of any one of said relays, means connected in series with said contacts so as to be de-energized by the interruption of one of said contacts thereby initiating a cycle of operation of said oscillograph, said oscillograph having a record supply magazine containing a roll of record material, and means responsive to a depletion of said record material for short-circuiting said serially connected contacts.

2,447,753

HERMETICALLY SEALED SWITCHBOARD

Reinhard K. Hellmann, Meriden, Conn., assignor to Great American Industries, Inc., Meriden, Conn., a corporation of Delaware

Application July 10, 1945, Serial No. 604,167
8 Claims. (Cl. 179—91)



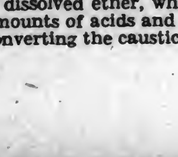
1. A telephone switchboard including in combination a casing formed with a sight opening to the rear of which an indicator unit is positioned, means whereby said unit may be restored to a non-indicating condition, a receiving surface forming a part of said casing, said casing and surface being formed to prevent the entrance of fluid into said casing, terminals within the area of said surface and electrically connected with the interior of said casing, a jack, means for mounting the latter to extend adjacent said surface, means for connecting said jack with said terminals, actuating means manipulatable from the exterior of said casing, and means interposed between said restoring means and actuating means and providing a fluid-tight connection such that the functioning of said actuating means will cause an operation of said shifting means.

2,447,754

MANUFACTURING AND FILLING OF ESSENCE CONTAINING PACKAGES FOR BREWING BEVERAGES

Louis Hirschhorn, Roslyn, N. Y., assignor, by mesne assignments, to National Urn Bag Co., Inc., Long Island City, N. Y., a corporation of New York

Application June 24, 1940, Serial No. 342,053
2 Claims. (Cl. 93—3)



1. The method of manufacturing infusion packages comprising the steps of folding a traveling strip of foraminous sheet material formed of a filter layer base coated on one side with an adhering porous "partially fused" thermosetting plastic lamina along the mid portion throughout the length thereof with the coated lamina side in face to face relation; pressing and heat sealing for permanent adhesion the opposite contiguous edge portions together into a longitudinally extending seam and forming an elongated continuous tubular structure from said strip with said lamina covering the interior surface thereof; cutting successive unit sections off said tubular structure one by one at spaced distances from an open end thereof; pressing and heat sealing for permanent adhesion the contiguous edge portions along the cut of each unit section with said lamina in face to face relation and forming an outwardly extending crossed seam joining with said longitudinal seam to provide a bag structure for the package; filling each unit section bag structure with an essence containing product through the open end thereof; gathering the material at said open end; and pressing and heat sealing for permanent adhesion the gathered material to form a top closure joint.

2,447,755

WASHBOARD ATTACHMENT FOR WASHING MACHINE AGITATORS

Thelma L. Kirkland and Thomas J. Kirkland, San Francisco, Calif.

Application November 9, 1945, Serial No. 627,555
2 Claims. (Cl. 68—92)

1. An attachment for the rotating vertical shaft positioned in the clothes holding chamber of a washing machine; comprising a plate adapted to be horizontally positioned on the top of the shaft, said plate having a raised upper surface defining a clothes scrubbing area, and a pair of arcuate shaped spring arms depending from said plate and adapted to be detachably secured to the shaft.

2,447,756

PROCESS FOR TREATING CELLULOSE ETHERS TO IMPROVE THEIR DISSOLVING PROPERTIES

Leon Lilienfeld, deceased, late of Vienna, Germany, by Antonie Lilienfeld, administratrix, Winchester, Mass., assignor to Lilienfeld Patents Inc., Boston, Mass., a corporation of Massachusetts

No Drawing. Original application July 6, 1938, Serial No. 217,776. Divided and this application July 12, 1944, Serial No. 544,635. In Great Britain July 12, 1937
3 Claims. (Cl. 260—232)

1. A process of transforming a cellulose ether which will not readily dissolve substantially completely in 8–9% aqueous NaOH solution at a temperature not considerably lower than room temperature into a product which will dissolve sufficiently in 8–9% aqueous NaOH solution at the said temperature to give a solution sufficiently concentrated to be suitable for being shaped and coagulated to produce regenerated shaped structures, which process comprises dissolving such ether by maintaining a mixture containing such ether in aqueous caustic alkali solution at a temperature near the freezing point until said ether has substantially completely dissolved and precipitating the desired product from the solution so produced by mixing with a bulk of said solution water in a sufficient amount to act as a precipitant for the dissolved ether, which water is free from such amounts of acids and salts as would be capable of converting the caustic alkali present in said solution into a substance which will not neutralize strong mineral acids, and continuing such mixing until said ether is precipitated out of said solution, separating said precipitated ether from the mother liquor and redissolving same in an aqueous caustic alkali solution at a temperature substantially higher than the temperature at which said first dissolving step was accomplished, the caustic alkali solution used in said second dissolving step being not substantially more concentrated than that used in said first dissolving step.

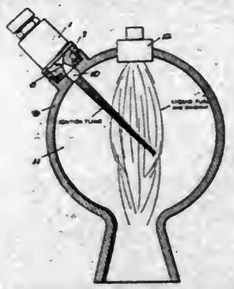
2,447,757

PROCESS FOR TREATING CELLULOSE ETHERS TO IMPROVE THEIR DISSOLVING PROPERTIES

Leon Lilienfeld, deceased, late of Vienna, Germany, by Antonie Lilienfeld, administratrix, Winchester, Mass., assignor to Lilienfeld Patents, Inc., Boston, Mass., a corporation of Massachusetts

No Drawing. Original application July 6, 1938, Serial No. 217,776. Divided and this application July 12, 1944, Serial No. 544,636. In Great Britain July 12, 1937
4 Claims. (Cl. 260—232)

1. A process of transforming a cellulose ether which will not readily dissolve substantially completely in aqueous caustic alkali solution at a temperature not considerably lower than room temperature into a product which will dissolve sufficiently in aqueous caustic alkali solution at the said temperature to give a solution sufficiently concentrated to be suitable for being shaped and coagulated to produce regenerated shaped structures, which process comprises dissolving such ether by maintaining a mixture containing such ether in aqueous caustic alkali solution together at a temperature near the freezing point until said ether has substantially completely dissolved and precipitating the desired product from the solution so produced by mixing together under agitation a bulk of said solution and a precipitant for the dissolved ether, which precipitant is capable of leaving a solution capable of neutralizing strong mineral acids, and which precipitant is selected from the group consisting of alkali carbonate, alkali bicarbonate, carbon dioxide, carbonic acid and mixtures thereof, and continuing such agitation and mixing until said ether is precipitated out of such solution, separating said precipitated ether from the mother liquor and thereafter redissolving same in an aqueous caustic alkali solution at a temperature substantially higher than the temperature at which said first dissolving step was accomplished, and in such redissolving step, using such proportions of the materials as to yield a solution of such cellulose ether of a sufficient concentration therein to be suitable for the direct production therefrom of shaped regenerated artificial structures by coagulation, the aqueous caustic alkali solution used in such second mentioned dissolving step being one which would not, at the temperature used in said second dissolving step, dissolve the initial cellulose ether.



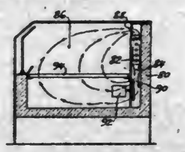
2,447,758

IGNITING DEVICE FOR COMBUSTION CHAMBERS

Isaac Lubbock and Harold James Poole, London, England; said Lubbock assignor to The Asiatic Petroleum Company, Limited, London, England

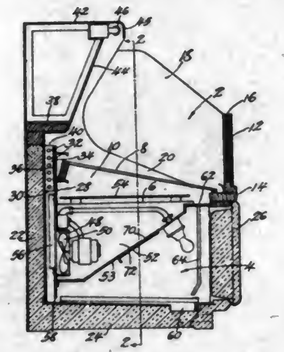
Application November 6, 1942, Serial No. 464,833
In Great Britain November 7, 1941
2 Claims. (Cl. 60—35.6)

1. An ignition device adapted to be secured externally to a combustion chamber in which reacting substances are fed so as to burn under pressure and the wall of which has an orifice, said device having a body constructed internally to form a space communicating with a nozzle which contracts to a throat and then merges into an expanding portion, said expanding portion of the nozzle having its outlet in registry with said orifice, a charge of propellant within said space behind the nozzle throat, the propellant having the characteristics of burning at an increasing rate with pressure, and means for firing said propellant charge, the size and shape of said nozzle throat being so designed that the propellant when ignited will create a pressure within said body not less than substantially twice the maximum pressure reached in the combustion chamber upon ignition of the reacting substances.



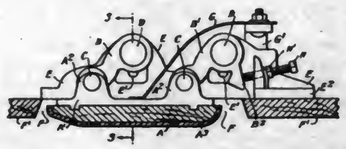
2,447,759

OPEN TOP ACCESS REFRIGERATED DISPLAY CASE



Malcolm D. MacMaster, Yardley, Pa., assignor to C. V. Hill & Company, Inc., a corporation of New Jersey

Application October 20, 1941, Serial No. 415,684
3 Claims. (Cl. 62—89.5)



1. An open self service refrigerated display case having means for maintaining a continuous recirculation of cooled air within the confines of an open topped section thereof with minimum loss of such air or addition of outer air, said case including an element forming the bottom of said open topped section, wall structure extending substantially vertically therefrom to define the sides of said section, a perforate shelf extending transversely of said section and spaced above said bottom to define a chamber, an air duct having an upper air inlet opening extending along one portion of the sides adjacent the plane of the lowest portion of the open top of said section and an air outlet communicating with said chamber, means including a motor-driven fan for insuring a positive downward flow of air through said duct to skim off air from the top of the section and discharge it downwardly to said chamber, said perforate shelf constituting not only a supporting means for goods but also means to distribute air from said chamber upwardly throughout the cross sectional area of said section above said shelf, and means for cooling the air within said section.

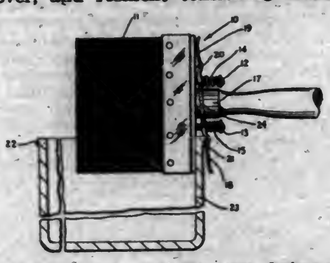
2,447,760
SELF-SERVICE DISPLAY AND STORAGE CASE
Malcolm D. MacMaster, Woodside, Pa., assignor to C. V. Hill & Company, Inc., Trenton, N. J., a corporation of New Jersey
Application December 12, 1945, Serial No. 634,501
5 Claims. (Cl. 62—89.5)

1. A refrigerated display case having means forming a display space which is open at the top for access to customers and closed about the sides and bottom, a perforate support spaced from said bottom and cooperating therewith to form an air chamber, a baffle spaced from one side of said display space and extending from a point below the upper edges of the other sides of said space to a point below said perforate support to form an air circulating passage, a cooling coil located in said passage, means for positively circulating air downward through said passage, over said coil and into said air chamber, and means for directing the air laterally in said air chamber to produce substantially uniform upward flow of air, through said perforate support and display space.

2,447,761
LOOM SHUTTLE SWELL
Samuel Macro, Colne, England
Application January 3, 1946, Serial No. 638,766
In Great Britain January 10, 1945
7 Claims. (Cl. 139—185)

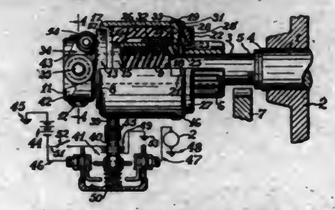
1. A loom shuttle swell unit comprising in combination a stationary support adapted to be mounted on a shuttle box back; a loom shuttle swell; links attaching said loom shuttle swell to said stationary support turnably from an initial position in such a manner as to permit parallel displacement of said loom shuttle swell relative to said stationary support and said shuttle box back; an adjustable stop cooperating with one of said links and capable of imparting a turning movement to said link during adjustment of said stop; and spring means permanently tending to turn said links against the direction of the turning movement imparted by said adjustable stop and pressing said links against the same.

2,447,762
ORGANIC CATION EXCHANGE ADSORBENTS PREPARED FROM SPENT ALKYLATION SULFURIC ACID OR SIMILAR MATERIAL
Stephen J. Macuga, Lansdowne, Frank G. Ciapetta, Drexel Hill, and Randall G. Heiligmann, Yeadon, Pa., assignors to The Atlantic Refining Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application October 20, 1943, Serial No. 507,226
8 Claims. (Cl. 260—94)



5. A process for preparing a solid, water-insoluble cation exchange material, which comprises heating sulfuric acid which has previously been used as a catalyst in the alkylation of isobutane with butylene and which contains at least 10% of sulfuric acid-soluble hydrocarbon polymer at a temperature between 300° F. and 350° F. until gelation occurs, and for a period of time thereafter sufficient to insure substantial completion of the reaction between the acid and the hydrocarbon, freeing the resulting granular solid of excess acid, and thereafter drying it.

2,447,763
PROCESS FOR DETERMINING COLUMBIUM CARBIDE IN STAINLESS STEEL
Walter C. Maurer, McKeesport, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
No Drawing. Application January 22, 1945, Serial No. 574,036
5 Claims. (Cl. 23—230)

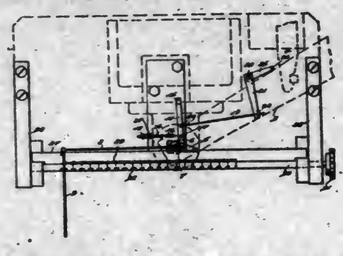


1. The process of determining columbium originally present as columbium carbide in columbium-bearing stainless steels, which comprises dissolving a weighed sample of the steel in sulphuric acid, thus leaving the columbium carbide contained therein in an insoluble residue, filtering the resulting solution, thereby collecting the insoluble residue, removing entrained soluble salts from the said residue, oxidizing the said residue and converting the columbium carbide therein to columbium oxide, treating the columbium oxide with dilute hydrochloric acid in the presence of sulphurous acid, collecting the resulting extracted columbium oxide containing silica from the silicon present in original sample of steel, removing the silica by extraction of the columbium oxide with hydrofluoric acid in the presence of sulphuric acid, collecting the remaining columbium oxide, igniting the said columbium oxide, and weighing the ignited oxide.

2,447,764
PAINTBRUSH SUSPENSION
Henry C. McCain, Compton, Calif., assignor of fifty per cent to Arthur L. Hughes, Walnut Park, Calif.
Application October 26, 1945, Serial No. 624,797
2 Claims. (Cl. 248—360)

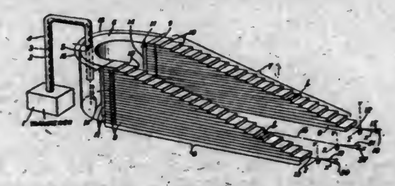
1. In combination with a paint brush having a brush head and handle formed with a cylindrical bearing shank, guide screws adjustably secured in said brush head at the opposite sides of said bearing shank, a collar slidably disposed about said bearing shank being formed with diametrically opposed apertures for receiving said guide screws, integral oppositely extending clamping arms on said collar adapted to clamp over the upper rim of a paint can to hold the paint brush suspended thereover, and resilient tensioning means disposed about said guide screws between said clamping arms and the outer ends of said screws for tensioning said clamping arms.

2,447,765
ENGINE STARTER DRIVE
Donald L. Miller, Pine City, N. Y., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application May 12, 1945, Serial No. 593,398
12 Claims. (Cl. 74—7)



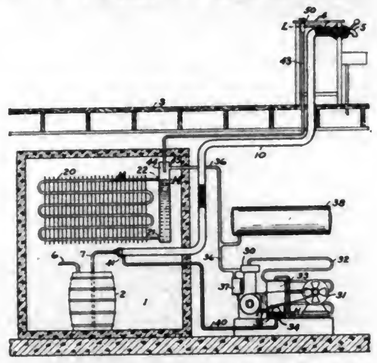
1. In an engine starter, a starting circuit including a motor and a starting switch, a starting drive operated by the motor having a driving member and means including an operating member and a control member actuated by the motor to move the driving member into and out of engagement with an engine member, a clutch between the control member and the driving member, means including a latch mounted on said operating member cooperating with said control member for maintaining the driving member in engaged position, a trip member, and means responsive to opening of the starting switch for moving the trip member into position to intercept and release the latch.

2,447,766
DRIER
John C. Monick, Longview, Wash.
Application March 7, 1947, Serial No. 733,169
2 Claims. (Cl. 34—231)



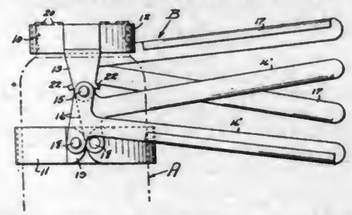
1. In a drier, an open topped cabinet having side and end walls, a cover hingedly mounted over the open top of said cabinet and having an opening therein, a plurality of spaced, parallel horizontally disposed rods positioned within said cabinet adjacent the top thereof and supported by the end walls of the cabinet for supporting articles to be dried, a plurality of spaced frame supports disposed below said rods and secured to the side walls of said cabinet, a plurality of pans arranged longitudinally in said cabinet and supported on said frame for collecting water from the articles being dried, heater units disposed below said drip pans and supported in said cabinet, there being an aperture in one of said end walls for the ingress therethrough of air, and a fan positioned contiguous to said aperture for circulating air through said cabinet and out through the opening in said cover.

2,447,767
INDICATOR FOR IMPACT TESTING MACHINES
William C. Moran, Laurel Springs, N. J., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a corporation of Pennsylvania
Application November 29, 1945, Serial No. 631,593
11 Claims. (Cl. 73—12)



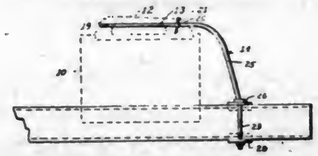
1. In an indicator for impact testers, a pendulum, an indicator arm rotatably mounted, means actuated by said pendulum to cause said arm to begin to move when the pendulum reaches impact position and to thereafter rotate through the same angle as the pendulum swings beyond the point of impact, an indicator suspended from the indicator arm, and a straight line reading scale having equally spaced graduations along which said indicator moves to indicate consumed energy in the breaking of a specimen.

2,447,768
MICROWAVE ANTENNA
George E. Mueller, Jackson Heights, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 22, 1942, Serial No. 451,864
10 Claims. (Cl. 250—33.63)



1. A microwave antenna comprising a plurality of subarrays each comprising a pluraltiy of parallel wave guides having different lengths and end-antenna apertures.

2,447,769
METHOD OF AND MEANS FOR COOLING BEVERAGES
Glenn B. Pringey, Euclid, Ohio, assignor by decree of distribution to Helen P. Pringey
Application September 29, 1944, Serial No. 556,320
3 Claims. (Cl. 62—115)



1. The method of cooling a beverage a supply of which is maintained in an enclosed space remote from the dispensing tap and is connected therewith by a fluid conduit, which consists in maintaining a pool of refrigerant under predetermined pressure in the liquid phase around said conduit substantially all the way from said space to said tap, bleeding refrigerant whether in the liquid or vapor or both phases from said pool at substantially the point of highest elevation thereof, leading the liquid constituents of the refrigerant bled from said first pool to a second pool disposed in said space, maintaining a lower pressure on said second pool than that on said first pool and withdrawing non-liquid refrigerant from above said second pool and from the refrigerant constituents bled from said first pool.

2,447,770
COMBINATION JAR WRENCH AND HOLDER
Charles E. Ratchford, Long Beach, Calif.
Application July 13, 1944, Serial No. 544,683
1 Claim. (Cl. 81—3.36)

An implement of the kind described, comprising a split jar body embracing band, a split jar cap embracing band parallel to and positioned above said body embracing band, a curved laterally extending and depending ear on said cap embracing band at the center thereof opposite to the split ends thereof, an upstanding ear on said body embracing band at the center thereof opposite to the split ends thereof, the ears on said bands being positioned in opposed relation to each other, a plurality of handles separated into pairs and having T-shaped heads on one end thereof, one end of the heads of one pair being pivotally connected to the ear on said body embracing band, one end of the heads of the other pair being pivotally connected to the ear on said embracing band, the other ends of the T-heads pivoted on the ear on the cap embracing band being pivoted to the split ends respectively of the body embracing band, the other ends of the T-heads pivoted on the ear on the body embracing band being pivoted to the split ends respectively of the cap embracing band, said handles being adapted to be grasped in pairs and moved toward each other to cause a torque couple to be applied to the jar and cap to cause the cap and jar to be moved slightly in opposite directions to loosen the cap from the jar.

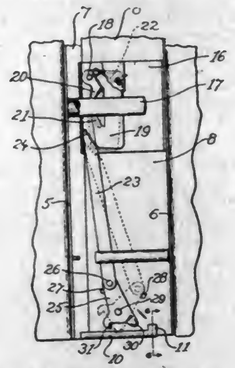
2,447,771
WATER BAG BRACKET
Frank Rogers, Estancia, N. Mex.
Application August 12, 1946, Serial No. 689,908
7 Claims. (Cl. 224—29)

1. A hanger for suspending a water bag in a fixed position on a vehicle, comprising a substantially horizontal arm, means for detachably but firmly securing the water bag to the arm for suspension therefrom, a downwardly directed shank integral with said arm, a foot unit secured to the lower end of said shank, and clamping means including said foot as an element for securely attaching the unit on said fixed portion of the vehicle.

2,447,772
AQUEOUS DISPERSIONS OF BUTADIENE POLYMERS AND TREATMENT OF WOOL THEREWITH
John B. Rust, Montclair, N. J., and Charles W. Pfeifer, Philadelphia, Pa., assignors to Montclair Research Corporation, a corporation of New Jersey
No Drawing. Application July 5, 1945, Serial No. 603,406
5 Claims. (Cl. 260—29.7)

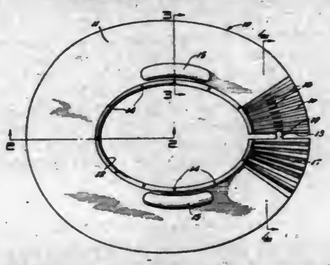
1. A bath for treating wool to give shrinkproofing with substantially normal hand which comprises an aqueous substantially stable emulsion of a synthetic butadiene polymer in amount to give 1 to 25% by weight of polymer deposition on the wool, a non-cationic emulsifying agent, and at least 25% by weight on the polymer of a water-soluble neutral salt of an alkali metal as conditioning electrolyte, the pH of the bath being below 7, the particles of polymer being in completely cross-linked condition the polymer in coagulated condition being crumbly and not millable on a rubber milling machine.

2,447,773
METHOD OF PREPARING POLYVINYL ACETAL KETAL RESINS
Joseph D. Ryan, Toledo, Ohio, and Fred B. Shaw, Jr., Baltimore, Md., assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
No Drawing. Application January 30, 1943, Serial No. 474,180
4 Claims. (Cl. 260—66)



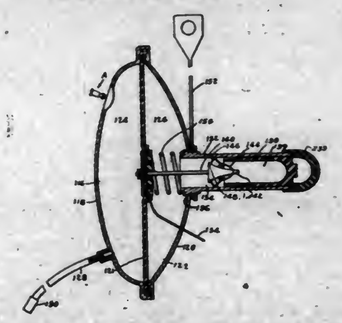
1. The method of preparing a polyvinyl acetal ketal resin, comprising reacting a polyvinyl acetal resin from a saturated aliphatic aldehyde in an anhydrous neutral organic solution and in the presence of an inorganic condensation catalyst of acid reaction with saturated aliphatic monoketone, allowing the reaction to proceed at approximately room temperature, and then recovering the resin product.

2,447,774
THIMBLE
Leonard B. Salisbury, La Crescenta, Calif., assignor, by mesne assignments, of one-half to Sidney Leviton and Bernard Leviton, both of Los Angeles, Calif.
Application November 23, 1946, Serial No. 711,955
5 Claims. (Cl. 223—101)



1. A thimble comprising a tapered substantially cylindrical shell having a closed end, said closed end of the shell having a crescent opening over an annular section of its surface, and said end having a raised rim extending around the edge of said crescent opening.

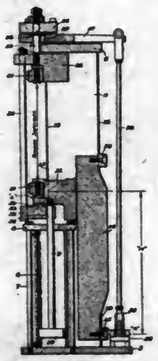
2,447,775
BINDER MECHANISM
John Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts
Application July 15, 1944, Serial No. 545,116
1 Claim. (Cl. 129—13)



In a loose leaf binder construction of the kind employing overlapping parts in the back panel to adjust for binder thickness and a one way spring clutch mounted on the middle portion of one of said overlapping parts, said clutch being adapted to cooperate with a prong carried by the other overlapping part to releasably hold such binder parts in assembled position, the combination of a toggle mechanism mounted on said part carrying the clutch, said toggle mechanism extending from a position of adjacency to the spring clutch outwardly to one end of the binder back and comprising an inner lever having a wedge surface at its inner end formed to engage and release said spring clutch from its cooperating prong when said lever is moved to one of its toggle positions, and an outer lever pivotally connected to the outer end of the first lever and extending to the adjacent end of the binder back said outer lever being pivotally mounted between its ends on the clutch-carrying overlapping part, said outer lever cooperating to move and hold said first lever in clutch release position by toggle action when said outer lever is swung by hand to bring the pivotally connected ends of the levers across their toggle center line, and a mechanical finger mounted on that one of said overlapping parts not carrying the clutch in the back panel, said finger being positioned to engage the outer toggle lever and operate said toggle mechanism to withdraw the first lever from its clutch release position as the prong is drawn free of the spring clutch.

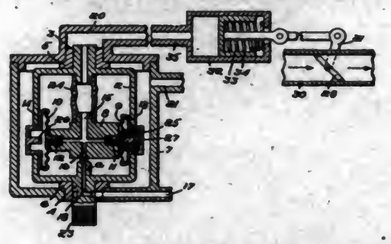
2,447,776
PROTECTIVE VISOR
Robert H. Sherwood, Ketchum, Idaho
Application September 17, 1946, Serial No. 697,480
2 Claims. (Cl. 2—174)

1. A disposable protective visor comprising an oval body of sheet material having a substantially centrally disposed head receiving opening therein and a radial slot extending from the head receiving opening to the periphery of the body, a compressible head band formed integrally with the body adjacent the head receiving opening, the body having radially disposed corrugations adjacent each side edge of the slot and means for holding the corrugations in interfitting adjusted relations whereby the body may be adjusted to fit different sized heads.



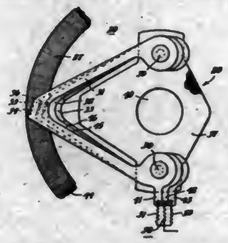
2,447,777
TIRE DEFLATION INDICATOR
Alvin J. Slovack, Houston, Tex.
Application April 26, 1946, Serial No. 665,117
1 Claim. (Cl. 200—58)

In a signaling device for indicating a change in pressure of a pneumatic tire tube, including an air-pressure-actuated means operatively con-



nected to a tire tube for actuating an electric switch, the improvement comprising an electric switch including a stationary and a movable contact, said stationary contact comprising a tubular sleeve of current-conducting material, and a tubular bushing of insulating material, said bushing lining a portion of the inner periphery of said sleeve and merging with an unlined portion thereof to provide an annular shoulder, said movable contact comprising a plunger axially disposed in said sleeve, means operatively connecting said plunger to said pressure-actuated means whereby to reciprocate said plunger axially in said sleeve, said plunger including a head, said head being formed with a substantially radially-directed aperture therein, a radially outwardly-loaded contact spring fixed to said head, said spring including an outwardly-directed portion and a free end, said free end being slidable in said aperture, said plunger and head being normally positioned in said sleeve with said outwardly-directed portion of said spring in engagement with said unlined portion of said sleeve whereby to provide a normally closed switch, and said plunger being movable by said pressure-actuated means in a direction to engage said outwardly-directed portion of said spring with said annular shoulder of said bushing whereby to move said free end of said spring radially inwardly in said aperture and retract said outwardly-directed portion of said spring from engagement with said unlined inner periphery of said sleeve and open said switch.

2,447,778
MULTILOAD RANGE WEIGHING SYSTEM FOR MATERIALS TESTING MACHINES
Alfred Sonntag, Greenwich, Conn., assignor, by mesne assignments, to The Baldwin Locomotive Works, a corporation of Pennsylvania
Original application June 19, 1945, Serial No. 600,320. Divided and this application November 9, 1946, Serial No. 708,982
2 Claims. (Cl. 73—95)



1. A materials testing machine comprising, in combination, a pair of opposed specimen engaging members, load producing mechanism connected to one of said specimen engaging members for loading a specimen, and a multi-load range weighing system connected to the other specimen engaging member including a weighing lever, a set of knife edges spaced apart lengthwise of said lever and a set of knife edge supports spaced apart lengthwise of said lever, one of said sets being connected to said lever for movement therewith and the other set being mounted in a relatively fixed position, and said knife edge supports being spaced apart a different distance than said knife edges whereby relative movement between said lever and supports in a direction lengthwise of the lever allows one or the other of said knife edges to be selectively positioned against a knife edge support thereby to provide different load ranges.

2,447,779
SPEED GOVERNING MECHANISM
John F. Taplin, Westfield, N. J.
Application January 28, 1944, Serial No. 520,006
5 Claims. (Cl. 264—14)

2. The combination with an engine equipped with a throttle valve for controlling its speed, of an automatic governor driven by said engine, and means controlled by said governor for utilizing the fluid pressure drop across said valve to operate the valve itself in governing the speed of the engine.

2,447,780
POTENTIOMETER ASSEMBLY
Orville J. Underwood and Richard S. Feigal, Minneapolis, Minn., assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application May 3, 1947, Serial No. 745,862
13 Claims. (Cl. 201—56)

2. In a potentiometer, a resistance element comprising a plurality of turns of resistance wire, a plurality of contact wiper members each having a wiper arm and a contact tip, means mounting together said contact wiper members as a unit for movement relative to said resistance element and in electrical contact therewith, said wiper arms being connected together at a common point, said contact tips being laterally spaced along said resistance element by a distance which is not equal to any whole number of turns, said contact members having an internal resistance between the point of contact to said resistance element and the point common to the wiper arms which is greater than the resistance of the turns of wire of resistance element between two adjacent contact tips, and means including said contact wiper members for moving each of said contact tips laterally along the resistance element, the value of the portion of said resistance element between one extremity thereof and a common point on the wiper arms being varied by two or more stepped variations as said contact tips move a distance equal to width of one turn of wire exclusive of any resistance variation which occurs when any one or more of said contact tips momentarily short out one or more turns of said resistance element.

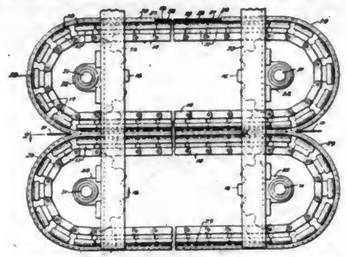
2,447,781
ELECTRIC DISCHARGE TUBE
Nicolaas Warmoltz, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application February 12, 1947, Serial No. 728,108
In the Netherlands July 29, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires July 29, 1964
1 Claim. (Cl. 250—27.5)

An electric discharge tube having a liquid cathode and an ignition electrode constituted by a conducting member surrounded by insulating material which is, in part, immersed in the cathode, and the part of the ignition electrode that is out of the cathode being coated to a short distance from the cathode surface with a non-insulating layer which is conductively connected to the conductor of the striker.

2,447,782
IGNITION SYSTEM
Victor Welge, San Diego, Calif., assignor to Consolidated Vultee Aircraft Corporation, San Diego, Calif., a corporation of Delaware
Application April 21, 1945, Serial No. 589,558
16 Claims. (Cl. 123—148)

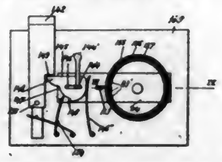
10. An ignition system comprising the combination, with a spark plug having a pair of insulated sparking electrodes, a source of sparking energy and distributor means, of circuit means for supplying sparking power from said source through the distributor means to said plug comprising a pair of insulated electrode connected conductors connecting the electrodes with the distributor means and having substantially identical reactive characteristics with respect to ground throughout the length thereof between the plug and distributor means, and a pair of insulated source connected conductors connecting the source to said distributing means having substantially identical reactive characteristics with respect to ground throughout the length thereof between said source and said distributor means, said source comprising a high tension coil having a grounded center tap, said distributor means comprising a pair of distributor devices each comprising a rotary arm and cooperating stationary contacts, said arms being electrically connected with the opposite sides of said high tension coil through said source connected pair of conductors, said electrode connected pair of conductors being electrically connected to corresponding contacts of said distributing devices, whereby the ignition system comprises a balanced circuit between the power source and said spark plug in which each conductor of said conductor pairs, at any instant, will be at a potential with respect to ground that is equal and opposite to the potential of the other conductor of the pair.

2,447,783
PLUG LOCKING ATTACHMENT FOR EXTENSION CORDS
Richard O. Williams, Los Angeles, Calif., assignor of one-half to Adolph H. Ross, Los Angeles, Calif.
Application December 28, 1944, Serial No. 570,152
1 Claim. (Cl. 173—330)



Means for locking an electric plug in an outlet socket having a retaining plate attached thereto with outwardly projecting lugs, said plug comprising a tubular body having a pair of stepped flanges and provided with end prongs for insertion in said socket, a sleeve endwise slidable in opposite directions on said body and rotatable thereon, a pair of legs extending part way through said sleeve longitudinally thereof upon opposite sides of the same and having right angled outer ends extending out of said sleeve for engaging behind said lugs upon rotation of the sleeve, a ring in said sleeve concealed thereby and connecting said pair of legs at the inner ends thereof and slidably and rotatably mounted on the body, and a coil spring concealed in said sleeve and surrounding said body between one of the flanges thereof and said ring and urging said sleeve endwise in one direction, said sleeve being endwise slidable in the opposite direction in opposition to said spring to move said outer ends of the legs into a position for rotation to engage behind said lugs, the other of said flanges limiting such sliding of said sleeve in said opposite direction, and a nut on said body for engaging said sleeve to limit sliding of the sleeve in said one direction.

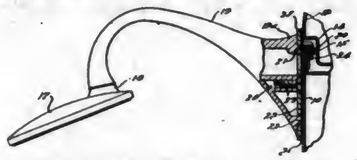
2,447,784
APPARATUS FOR CREPING PAPER
Arthur H. Wood, Adrian, Mich., assignor to Simplex Paper Corporation, Adrian, Mich., a corporation of Michigan
Application June 4, 1945, Serial No. 597,446
6 Claims. (Cl. 154—30)



1. In creping apparatus, a frame, laterally spaced upper and lower endless sprocket chains arranged in parallelism at opposite sides of the frame, upper and lower creping bars secured to and carried by the links of the chains, paper engaging coil springs extending longitudinally of the creping bars, means for mounting the springs on the bars including slides slidably mounted on

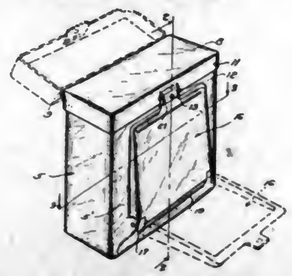
the bars and connected with the coil springs, and cams converging throughout substantially the length of the apparatus and engaged by the slides

and arranged to expand the springs and also to cause the springs to contract gradually and positively to effect a creping of the paper.



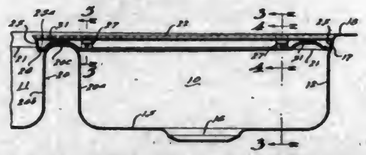
2,447,785
COMBINATION LOCK
Mathieu de Wrangell, Paris, France, assignor to Dévé, Clichy (Seine), France, a French company with limited responsibility
Application August 2, 1938, Serial No. 222,681
In France August 2, 1937
Section 3, Public Law 690, August 8, 1946
Patent expires August 2, 1957
3 Claims. (Cl. 70—310)

1. A combination lock comprising a number of combination discs, a number of locking discs connected with said combination discs respectively, a locking member cooperating with said locking discs and free to move towards the latter when they are in the desired combination position, a bolt separate from said locking member, a movable stop piece cooperating with said bolt to maintain it in its closing position, means for bringing said movable stop piece in a position rendering the opening and closing movements of said bolt free, and operative only after moving said locking member towards said locking discs in the combination position, and means for maintaining the first said means in said position corresponding to the free movement of said bolt in order to allow the free movement of said bolt to subsist in spite of the back movement of said locking member to its initial locking position and of the mixing up of the combination discs.



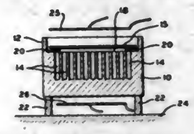
2,447,786
REARVIEW MIRROR
James W. Anderson, Jr., Detroit, Mich., assignor to Monarch Governor Company, Detroit, Mich., a corporation of Michigan
Application January 26, 1946, Serial No. 643,684
4 Claims. (Cl. 248—226)

1. A mirror assembly for a vehicle body having a body panel and a door panel terminating in juxtaposed upright edges, a mirror supporting arm, a clamping member secured to the inner end of the arm and having a clamping portion adapted to embrace one of said edges, said member having a tongue projecting beyond the clamping portion in substantially the plane of the mem-



ber and adapted to overlie and engage the other of said edges when the door is closed.

2,447,787
COMBINATION CIGARETTE AND MATCH CASE
Orda Q. Atkinson, Lake Worth, Fla.
Application September 20, 1945, Serial No. 617,606
1 Claim. (Cl. 206—38)

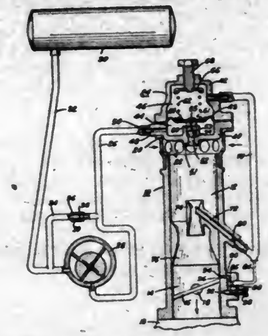


A device of the character described for supporting a package of cigarettes comprising a case open at its upper end, a closure cover for said open hinged to the case, a spring for moving the cover to open position, said case having the major portion of its front wall formed open, a book match holder associated with the case and adapted to normally cover the opening in said wall, hinge means between the holder and the case for permitting said holder to swing to open position, a spring for urging the swinging of the holder, an extension carried by the holder to be engaged by the cover and means carried by both the cover and the holder for interengagement to normally retain the cover and holder in closed position simultaneously.

2,447,788
DRAINBOARD AND TUB CONSTRUCTION
Albert P. Ball, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application May 6, 1944, Serial No. 534,488
5 Claims. (Cl. 4—187)

1. A combination sink or laundry tray unit or the like comprising two sumps separated by a double wall partition, each sump having upright side and end walls terminating in a rim and offset below the rim to provide a step or ledge extending around the sides and end of the sump, and a drainboard adapted to be positioned to cover either sump with one end thereof resting upon the end wall step, the opposite end of the drainboard having a notched or recessed portion to receive the upper edge of the partition at points intermediate the side wall steps or ledges and position the drainboard so as to drain into the uncovered sump.

2,447,789
EVAPORATING CRUCIBLE FOR COATING APPARATUS
Edgar E. Barr, North Woburn, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application March 23, 1945, Serial No. 584,450
2 Claims. (Cl. 219—19)

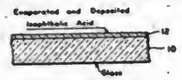


1. In an evaporation apparatus, the combination comprising a crucible comprising, in combination, a substantially cylindrical body member comprising readily heat-conducting material, means providing a multiplicity of cavities extending into but not through said body member from the upper surface thereof, screen means positioned adjacent said cells and preventing the escape therefrom of particles greater than a predetermined size, and means providing a plurality of filament elements positioned closely adjacent said crucible and adapted to emit radiant heat, one of said filaments being positioned above said body member and another being positioned below said body member.

2,447,790
BIREFRINGENT SOLID FILM COMPRISING INTIMATE MIXTURE OF MINUTE PARTICLES OF ISOPHTHALIC ACID AND TEREPHTHALIC ACID AND METHOD OF MANUFACTURE
Edgar E. Barr, North Woburn, and Cutler D. West, Cambridge, Mass., assignors to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application April 11, 1945, Serial No. 587,684
5 Claims. (Cl. 88—65)

1. As a new product, an optical element comprising in combination means providing a supporting surface and a substantially uniform solid film adhering to said surface, said film comprising an intimate mixture of minute particles of isophthalic acid and terephthalic acid, the particles being present in said film in oriented condition whereby said film exhibits an X-ray diffraction pattern characteristic of a fibrous structure with the fibre axis at a predetermined angle to said supporting surface, said particles being oriented with a corresponding optical direction thereof in substantial parallelism with said fibre axis, said film being optically isotropic for light incident thereon in a direction parallel to said fibre axis and being birefringent for light incident thereon at angles to said fibre axis.

2,447,791
CARBURETOR
Frederik Barfod, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application August 25, 1943, Serial No. 499,987
3 Claims. (Cl. 261—69)

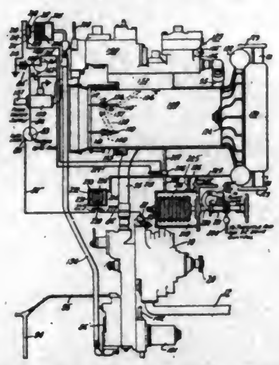


1. In a fuel supply system for an internal combustion engine: a downdraft induction passage having a plurality of circumferentially arranged air inlets in the upper end thereof; a throttle valve adjacent the opposite end of said induction passage; a plurality of venturis anterior to the throttle valve; a nozzle unit disposed adjacent the upper end of the induction passage and having a chamber therein; a diaphragm separating the chamber into a fuel compartment and an air compartment; a discharge nozzle connected with the fuel compartments so positioned that fuel discharged therefrom receives the impact of the air entering the induction passage from the air inlets; a fuel control valve connected with the diaphragm and controlling the discharge passage of the nozzle anterior to the discharge end thereof, said discharge end being unobstructed posterior to the valve; an engine driven means for supplying fuel at substantially a constant pressure; a conduit connecting said means with the fuel chamber; a metering jet system in said conduit anterior to the fuel chamber, the diaphragm being urged in a direction tending to open the fuel valve by pressure of fuel in said fuel chamber; a spring disposed in the air chamber and urging the diaphragm in a direction tending to close the fuel valve with a force substantially equal to the full pressure of said means; means for manually adjusting the tension of the spring; means including a conduit for connecting the air chamber with the small venturi; a restriction in the last mentioned conduit; means for connecting said air chamber with the induction pasage adjacent to and on opposite sides of the leading edge of the throttle valve; a restriction of fixed size in the connection adjacent to and anterior to the throttle valve; and an adjustable restriction in the connection posterior to the throttle valve.

2,447,792
BIREFRINGENT SOLID FILM OF EVAPORATED AND DEPOSITED ISOPHTHALIC ACID
Elkan R. Blout, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application March 24, 1945, Serial No. 584,591
6 Claims. (Cl. 88—65)

1. As a new product, a light-transmitting, solid film comprising isophthalic acid, the molecules

of which form planar, optically anisotropic groupings and are oriented in substantial planar parallelism with the surfaces of the film, whereby



the film is optically isotropic for light normally incident thereon and birefringent for light obliquely incident thereon, the optic axis of said film being disposed perpendicularly to the film surface.

2,447,793

AUXILIARY CHARGE REGULATING DEVICE

Jay A. Bolt, Ann Arbor, Mich., and Robert W. Moore, South Bend, Ind., assignors to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware

Application May 22, 1947, Serial No. 749,716
7 Claims. (Cl. 123—119)

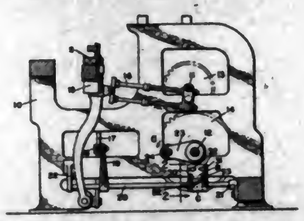
1. In a fuel feeding system for an engine, in combination, a device for supplying a primary fuel to the engine, a derichment valve operatively associated with said device for obtaining a predetermined fuel-air ratio when an antidetonant is to be injected with the primary fuel, an auxiliary charge injection system for metering the antidetonant, said auxiliary charging system including a flow passage having a metering orifice therein, a regulating valve upstream of said orifice for maintaining a metering head across said orifice, a derichment valve control valve, and means for rendering said latter valve responsive to the drop across said regulating valve.

2,447,794

HYDROCARBON PEROXIDES

Philip D. Brewer, Long Beach, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California

No drawing. Application January 30, 1945, Serial No. 575,356
8 Claims. (Cl. 260—610)



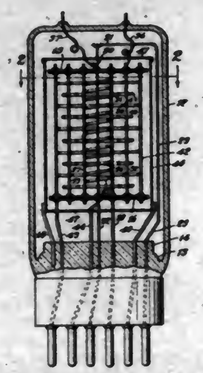
1. A process for the production of paraffin hydrocarbon peroxides which comprises contacting a normally non-gaseous paraffin hydrocarbon in the liquid phase with a gas containing free oxygen at temperatures between about 225° F. and about 300° F. at pressures sufficient to maintain said liquid phase in the presence of an amount of from 0.5 to 5.0% by weight of a basically reacting compound of an alkaline earth metal maintaining at all times the presence of the basically reacting agent to an acid number not exceeding about 21 mg. KOH/g. to produce an oxidate containing between about 5% and about 30% of said paraffin hydrocarbon peroxide and separating the partially spent basically reacting agent from the oxidate.

2,447,795

PICKING CAM AND MOUNTING THEREFOR

Benjamin W. Brouwer, Auburn, and Victor F. Sepavich, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts

Application May 29, 1947, Serial No. 751,206
8 Claims. (Cl. 139—147)



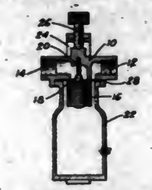
1. In a loom provided with a picking shaft, a picking cam on said shaft comprising a cam shoe and spaced end plates rigid with respect thereto secured to the shaft, and a bearing for the shaft between said end plates and secured to the loom.

2,447,796

GRID STRUCTURE FOR ELECTRON DISCHARGE TUBES

William H. Bussey, Chicago, Ill., assignor to Robert L. Kahn, trustee, Glencoe, Ill.

Application May 17, 1947, Serial No. 748,811
8 Claims. (Cl. 250—27.5)



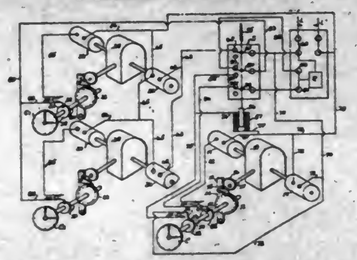
1. A vacuum tube comprising an evacuated envelope, a thermionic cathode, a pair of twin control electrodes, a pair of twin anode electrodes, the two twins of each pair having interleaved portions whereby a pair of twins are spatially displaced from each other to provide electrically distinct structures with the interleaved portions of a pair of twins forming a symmetrical pattern of alternating twin electrode portions when projected on the cathode.

2,447,797

EDGE FILTER

Parker G. Cox, Detroit, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware

Application April 22, 1943, Serial No. 483,987
7 Claims. (Cl. 210—165)



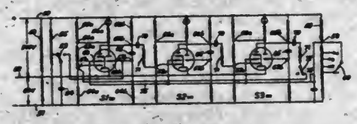
1. In an edge type filtering element, a plurality of stacked washers each having a relatively large central aperture, the central apertures of the washers which make up the stack being in register to provide a central passage extending through the stack, lugs on said washers projecting into the passage, a stem received in said passage adapted to support the element, and a retaining member for said washeres having a portion adapted to be removably clipped on the stem, said portion being provided with flanges extending longitudinally of the stack and adapted to engage the lugs of the washers and hold the latter against rotation relative to each other, said retaining member being adapted to secure the stack of washers in substantial axial relationship relative to the stem.

2,447,798

CLOCK CONTROL MECHANISM

Henry N. Deane, Gardner, Mass., assignor to Simplex Time Recorder Co., Gardner, Mass., a corporation of Massachusetts

Application October 7, 1944, Serial No. 557,651
3 Claims. (Cl. 58—35)



1. A synchronous clock system comprising a control clock, a plurality of secondary clocks, a normally-operating low-speed motor and a normally-inoperative high-speed motor effective to drive each secondary clock, a normally-operating low-speed motor and a normally-inoperative high-speed motor effective to drive the control clock, differential connections between the low-speed and high-speed motors in each clock, means in said control clock to render the low-speed motors in the secondary clocks inoperative and the associated high speed motors operative just prior to a selected time in each hour for the purpose of correcting the time shown by each secondary clock, means in each secondary clock to stop said high-speed motors when each secondary clock has advanced to indicate said selected time, means in said control clock to start said low-speed motors in said secondary clocks when said control clock thereafter indicates the selected time, a reset device effective to render the high-speed motors in both the control and the secondary clocks all operative to drive said clocks at above normal speed after a current interruption and until the stored interruption interval has been made up in said control clock and in said secondary clocks by said high-speed motors, and means to cause the low-speed motors in all of said clocks to operate simultaneously and cumulatively with said high-speed motors during resetting and under the control of said reset device.

2,447,799

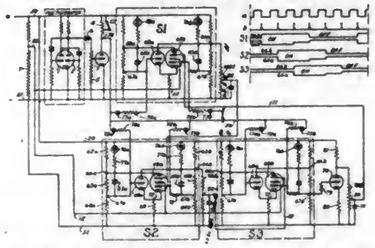
SEQUENTIAL ELECTRONIC COMMUTATOR WITH SUPPLEMENTARY GRID CONTROL

Arthur H. Dickinson, Greenwich, Conn., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application April 5, 1945, Serial No. 586,774
1 Claim. (Cl. 250—27)

An electronic commutator or the like, comprising a plurality of electronic trigger circuits, each including a pair of electronic tubes, a first one of which includes an anode, cathode, and current controlling electrode and the second of which includes an anode, cathode, current controlling electrode and a supplemental electrode, means coupling the anode of the first tube of each pair to the current controlling electrode of the second tube of the pair so that with the first tube non-conductive it maintains the second tube conductive to establish a stable state of the trigger circuit, self-dissipating reactance means coupling the anode of the second tube to the current controlling electrode of the first tube so that with the second tube non-conductive the first tube is conductive to define an unstable state of the trigger circuit from which it returns to the stable state after a chosen time interval, means coupling the output of one of the trigger circuits to the input of the next trigger circuit so that upon return of the former trigger circuit from unstable to stable state it applies a tripping pulse to the next trigger circuit to reverse it from stable to unstable state for a chosen time interval, a common source of biasing potential for the supplemental electrodes of the plurality of trigger circuits, and adjustable means common to the plurality of trigger circuits for transmitting a variable proportion of the biasing potential to said supplemental electrodes so as to regulate the durations of the unstable intervals of said trigger circuits.

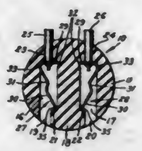
2,447,800



SEQUENTIAL ELECTRONIC COMMUTATOR WITH SUPPLEMENTARY GRID CONTROL

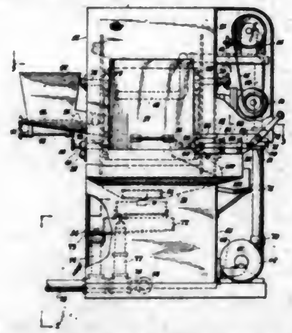
Arthur H. Dickinson, Greenwich, Conn., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application April 10, 1945, Serial No. 587,581
7 Claims. (Cl. 250—27)



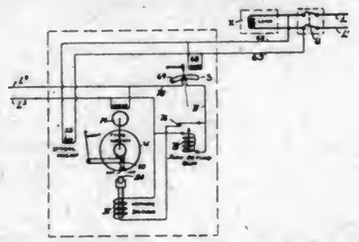
1. An electrical system including a pair of sequentially related electronic trigger circuits, each having a pair of impedance branches cross-coupled to sustain the circuit in either of two,

alternative electrical states and selectively conditionable for reversal from either state to the other in response to an applied pulse, means for coupling the preceding one of the circuits to only a single conditioning portion of the following circuit to act through this portion to con-



dition the following circuit selectively for reversal from one state to the other or vice versa depending on the state of the preceding circuit, and means for applying a pulse to the following circuit to reverse it selectively from either state to the other in accordance with the selective conditioning of this following circuit.

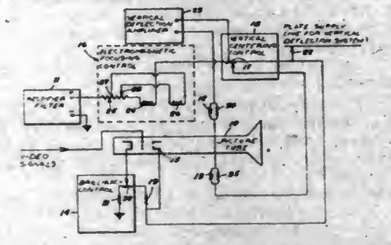
2,447,801
SOCKET FOR FLUORESCENT LAMPS
Edwin G. Gaynor, Fairfield, Conn.
Application June 20, 1946, Serial No. 677,960
7 Claims. (Cl. 173—328)



1. In a fluorescent lamp socket, a resilient one-piece body having a pair of contact pin receiving entrances opening through an edge and a side thereof, said entrances in the form of parallel slots where they open through said side and extend inwardly from said edge, said body having a pair of chambers therein spaced and separated by a portion of the body and communicating one with each of said entrances, said chambers extending in said body beyond the inner ends of said entrances and laterally of said entrances toward one another but inwardly of said edge whereby inwardly facing shoulders are formed, said body having passages for lead wires extending from the inner ends of the respective chambers out through the edge of the body opposite the edge through which the entrances open, a contact element in each of said chambers and each comprising a connector arm disposed against the inner end of its chamber and a substantially diagonal piece extending from the outer end of the connector arm and having its free end above said shoulder whereby the latter prevents casual movement of the contact element out of the chamber, each of said diagonal portions partly exposed in said slot-like portions of the respective entrances and in such portions adapted to be engaged on their outer sides by the contact pins of a fluorescent lamp and pressed toward one another whereby their free ends are pressed against said dividing part of the resilient body and the resiliency of said part assists in putting a continual tension on the contacts while they are engaged by the terminals of the lamp, and said diagonal pieces depressed toward one another in said exposed portions thereby providing shoulders partly overlapping the lamp terminals when the latter are fully home.

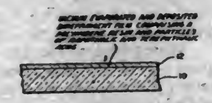
2,447,802
TUMBLING MACHINE
Charles Hirsch, New York, N. Y., assignor to American Wheelabrator & Equipment Corporation, a corporation of Delaware
Application August 22, 1945, Serial No. 612,081
11 Claims. (Cl. 51—163)

1. A tumbling machine comprising, in combination, an endless movable belt curved to form a trough adapted to hold parts to be tumbled, the belt having a closed section for supporting parts resting thereon and an open section permitting parts to pass therethrough; and means for feeding parts from the closed towards the open section.



2,447,803
TAPE TIME-RECORDER WITH DIFFERENTIATED RECORDS
Harold E. Hobby, Gardner, Mass., assignor to Simplex Time Recorder Co., Gardner, Mass., a corporation of Massachusetts
Application October 24, 1945, Serial No. 624,216
3 Claims. (Cl. 346—33)

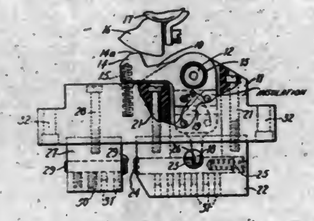
1. In a time recorder, a printing device including a hammer and having two different symbols, an electrical load device, a main switch for the load device, electro-magnetic means operated upon the closing of the main switch for positioning said symbols to present a given symbol in printing position, means to present the other symbol in printing position upon the opening of the main switch, an electro-magnetic hammer-operating solenoid for actuating said hammer, a mercury tube switch for controlling said solenoid to cause a printing operation to take place, means connected in the main switch circuit for actuating



said mercury tube switch immediately after said main switch is closed, and a relatively slowly operating electromagnetic relay in parallel with said hammer operating solenoid for opening the circuit of said solenoid as a hammer blow is struck.

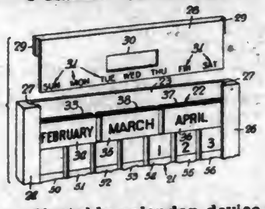
2,447,804
ELECTRON BEAM FOCUSING CIRCUIT
Paul F. G. Holst, Mount Healthy, Ohio
Application August 14, 1947, Serial No. 768,659
8 Claims. (Cl. 315—31)

1. A circuit for producing in an electronic-beam tube a magneto-static focusing field having a wide range of controlled intensities, said circuit having a relatively level characteristic of ampere-turns as abscissae plotted against voltage drops as ordinates comprising: a first magnetic field winding, a resistor in series with said first winding, a second magnetic field winding having one terminal permanently conductively connected to a tap on said resistor and another terminal provided with adjustable control means conductively contacting said resistor on either side of said tap, the series combination of the sub-combination of said first winding and a portion of said resistor and the parallel sub-combination of said second winding and the remaining portion of said resistor between said tap and said other terminal being adapted to be coupled to a source of electrical energy, whereby said windings produce aiding magnetic fields when said other terminal is connected to one side of said tap and opposing magnetic fields when said other terminal is connected to the other side of said tap.



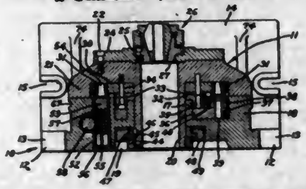
2,447,805
COMPOSITE RESINOUS SHEET OF BIREFRINGENT MATERIAL AND METHOD OF MAKING THE SAME
Mark Hyman, Jr., Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application April 11, 1945, Serial No. 587,685
8 Claims. (Cl. 88—65)

1. As a new product, an optical element comprising in combination means providing a supporting surface and a substantially uniform solid film adhering to said surface, said film comprising an intimate mixture of an evaporatable polyindene resin and minute particles of isophthalic acid, the particles of said acid being present in said film in oriented condition whereby said film exhibits an X-ray diffraction pattern characteristic of a fibrous structure with the fiber axis at a predetermined angle to said supporting surface, said particles being oriented with a corresponding optical direction thereof in substantial parallelism with said fiber axis, said film being optically isotropic for light incident thereon in a direction parallel to said fiber axis and being birefringement for light incident thereon at angles to said fiber axis.



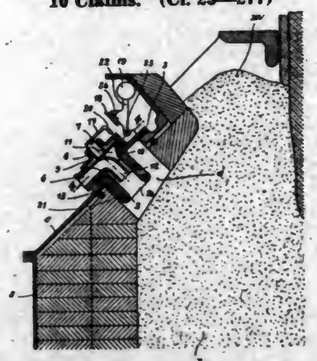
6. In the process of forming a transparent optical element, the steps comprising evaporating an intimate mixture comprising substantially one part of a polyindene resin and five parts of isophthalic acid in the form of minute particles, in a vacuum and at a temperature of from 285° to 335° C., and causing the resulting vapor to deposit on a supporting surface of transparent sheet material in the form of an intimate mixture of minute particles with a corresponding optical direction oriented in substantial parallelism and perpendicular to a surface of the optical element, the resultant material deposited having a maximum birefringence of at least 0.30.

2,447,806
CAM OPERATED CIRCUIT BREAKER
Clair D. Lake, Binghamton, and Michael Fiehl, Endicott, N. Y., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application October 11, 1946, Serial No. 702,756
3 Claims. (Cl. 200—153)



1. A circuit controlling device comprising a relatively stationary contact, a contact movable toward the stationary contact into engagement therewith, a spring urging the movable contact into engagement with the stationary contact, a rotatable cam, a pivoted follower for the cam, said follower having a first portion engaged with the movable contact so as to have play between them and a second portion engaged with the cam so as to restrain movement of the movable contact toward the stationary contact while bearing against the operating face of the cam, a second spring urging the said second portion toward the said cam and the said first portion to take up play between it and the said movable contact, the said cam having an abrupt drop for releasing the follower to allow the movable contact to move into engagement with the stationary contact under influence of the first mentioned spring, the said second portion of the follower being shaped to so coact with the cam at its drop shoulder as to produce a graduated release of the follower from the operating face of the cam thereby delaying the action of the second said spring for taking up of the said play between the said first portion and the movable contact until it has fully engaged the said stationary contact to compensate for rebounding of the said contacts.

2,447,807
CALENDAR HAVING FOLDING, ADJUSTABLE DATE ELEMENTS SLIDABLY RECEIVABLE IN SUPPORTING FRAME
Harvey Lathrop, Forest Hills, N. Y.
Application April 10, 1945, Serial No. 587,515
4 Claims. (Cl. 40—119)



4. In an adjustable calendar device, a pair of date-indicating elements each of which comprises a series of hingedly-connected rigid sections, the sections of one of said elements bearing different month markings thereon, the sections of the other of said elements bearing calendar-type columns of integers, there being one column on each section, the hinges of each of said elements being of such character that any section may be folded back to lie flatwise against its adjacent section, whereby the doubling-under of selected sections of each element will form two adjusted flat units of reduced length, one unit displaying on its exposed face only a selected group of month markings, the other unit displaying on its exposed face only a selected group of seven adjacent columnar markings, a common supporting frame having opposed grooves adapted to snugly accommodate said adjusted flat units in side-by-side relation, and a removable shield adapted to overlie the accommodated unit bearing month markings and provided with an aperture revealing only one of said month markings, said shield bearing a row of symbols designating the seven days of the week and arranged in alignment, respectively, with said seven exposed columnar markings.

2,447,808
INDEXING DEVICE
Newman M. Marsilius, Trumbull, Conn.
Application November 4, 1944, Serial No. 561,962
2 Claims. (Cl. 90—56)

1. In an indexing device, a base including inner and outer concentric annular walls extending from one side thereof and having an annular recess in its opposite side, a ring mounted for turning movement on said base and located between said walls, a turret including a centering post having bearing in said inner annular wall and an outer short annular wall concentric with said post and resting on the outer end of the outer annular wall of the base, an annular locking plate rigid with said turret between said post and short wall and having a series of sockets opening toward the base, an annular ratchet rigid with said turret about said post and located between said locking plate and said ring, a pawl on said ring adapted to turn said ratchet and thus said turret relative to the base on manual turning of the ring on the base, a lever extending to the outer side of the base and connected with said ring, a plunger in said base, a spring normally tending to project said plunger into one of the sockets of the locking plate to lock the turret against turning movement relative to the base, said post at its inner end extending into said annular recess in the base, means in said recess and adapted to be manually actuated to force inwardly on said post to force the turret toward the base and rigidly clamp the short wall of the turret against the outer end of the outer annular wall of the base, and a hand lever extending to the outer side of the base and connected to operate said means.

2,447,809
ELECTROTHERMIC GAS PRODUCER
Paul Louis Joseph Miguet and Marcel Paul Perron, Saint-Julien-de-Maurienne, France; vested in the Attorney General of the United States
Application September 1, 1942, Serial No. 456,950
In France May 21, 1941
10 Claims. (Cl. 23—277)

1. In an electric furnace having a furnace space open to the atmosphere, an electrode centrally entering the furnace space through such opening and occupying a major portion of the cross section of the opening, a plurality of upwardly extending gas collector openings through the furnace wall surrounding the electrode, fittings on such openings having gas connections to a collector pipe and a port opening to the exterior of the furnace, said gas collector openings being flared downwardly through the wall and closures on said ports operable from the exterior, whereby poking tools may be inserted into said furnace space from the exterior.

2,447,810
RESINOUS MATERIAL CONTAINING MALEODINITRILE
David T. Mowry, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 24, 1944, Serial No. 546,431
5 Claims. (Cl. 260—78.5)

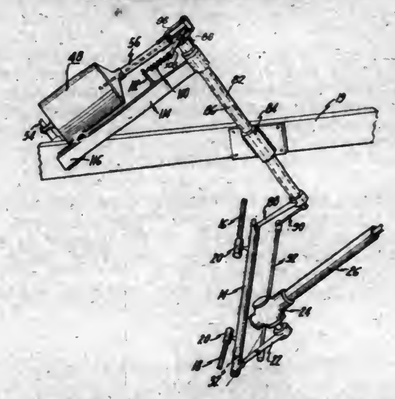
1. The process which comprises forming a polymerizable mixture consisting of a $CH_2{:}C<$ substituted aromatic hydrocarbon selected from the group consisting of styrene, alpha-methylstyrene and alpha,para-dimethylstyrene, together with maleodinitrile, said mixture containing between 0.5% and 50% by weight of said maleodinitrile and then heating said mixture to a polymerizing temperature to form an interpolymer.

2,447,811
RESINOUS INTERPOLYMERS CONTAINING 1,2-DICYANO-1-CHLOROETHYLENE
David T. Mowry, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 24, 1944, Serial No. 546,432
6 Claims. (Cl. 260—78.5)

1. The process which comprises forming a polymerizable mixture of a $CH_2{:}C<$ substituted aromatic hydrocarbon selected from the group consisting of styrene, alpha-methylstyrene and alpha, paradimethylstyrene, together with 1,2-dicyano-1-chloroethylene, said mixture containing between 0.5% and 50% by weight of said 1,2-dicyano-1-chloroethylene the balance thereof being said $CH_2{=}C<$ substituted aromatic hydrocarbon and then heating said mixture to a polymerizing temperature to form an interpolymer.

2,447,812
POLYMERIC MATERIAL CONTAINING 1,2-DICYANO-1-METHYLETHYLENE
David T. Mowry, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 24, 1944, Serial No. 546,433
4 Claims. (Cl. 260—78.5)

1. The process which comprises forming a polymerizable mixture consisting of a $CH_2{:}C<$ substituted aromatic hydrocarbon selected from the group consisting of styrene, alpha-methylstyrene and alpha,paradimethylstyrene, together with 1,2-dicyano-1-methylethylene, said mixture containing between 0.5% and 50% by weight of said 1,2-dicyano-1-methylethylene and then heating said mixture to a polymerizing temperature to form an interpolymer.



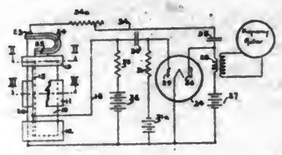
2,447,813
RESINOUS INTERPOLYMER CONTAINING 1,2-DICYANO-1-PHENYLETHYLENE
David T. Mowry, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 24, 1944, Serial No. 546,434
5 Claims. (Cl. 260—78.5)

1. The process which comprises forming a polymerizable mixture consisting of a $CH_2{:}C<$ substituted aromatic hydrocarbon selected from the group consisting of styrene, alpha-methylstyrene and alpha,paradimethylstyrene, together with 1,2-dicyano-1-phenylethylene, said mixture containing between 0.5% and 50% by weight of said 1,2-dicyano-1-phenylethylene and then heating said mixture to a polymerizing temperature to form an interpolymer.

2,447,814
SYNTHESIZING VITAMINS IN STILLAGE
Arthur F. Novak, Louisville, Ky., assignor to Joseph E. Seagram & Sons, Inc., Shively, Ky., a corporation of Indiana
No Drawing. Application November 11, 1943, Serial No. 509,935
6 Claims. (Cl. 195—42)

1. In the method of enriching stillage, the steps which comprise: inoculating with bacteria of the genus Aerobacter capable of synthesizing components of vitamin B-complex, a stillage produced by distilling off volatile products of fermentation from a fermented carbohydrate mash, and fermenting the inoculated stillage.

2,447,815
FLUID PRESSURE CONTROLLED POWER STEERING MECHANISM
Harold W. Price, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application June 22, 1944, Serial No. 541,484
5 Claims. (Cl. 180—79.2)

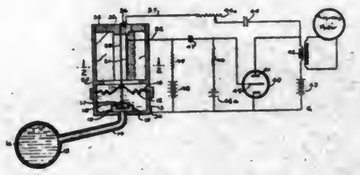


5. In an automotive vehicle provided with a source of suction and with wheels by which the vehicle is steered, means for moving the wheels for steering either manually or by suction or both said means including a steering wheel, a steering knuckle connected to each of the aforementioned wheels, a pitman arm, a three-part tie rod mechanism interconnecting the steering knuckles, yieldable means interconnecting one end of the pitman arm with a portion of the tie rod mechanism and power means for actuating the latter mechanism to effect a steering movement of said wheels said power means including a pressure differential operated motor comprising a cylinder and a power element, follow-up valve means, including two relatively movable parts, for controlling the operation of said motor, and force transmitting means, including a link operably connected to one part of the valve means and directly connected to the pitman arm intermediate its ends, and further including a crank member connected to a portion of the tie rod mechanism and operably connected to the other part of said two-part valve means, said force transmitting means serving to interconnect the two relatively movable parts of the valve means, the power element of the motor, the pitman arm and the tie rod mechanism.

2,447,816
TEMPERATURE RESPONSIVE VARIABLE FREQUENCY OSCILLATOR
Frank Rieber, New York, N. Y., assignor to Interval Instruments, Inc., New York, N. Y., a corporation of New York
Application January 29, 1944, Serial No. 520,198
11 Claims. (Cl. 250—36)

1. A device of the character described, comprising a wire, means for maintaining said wire

taut, including a temperature responsive element for varying the tension of said wire in accordance with temperature changes, terminals connected to the ends of said wire by which current may be led through said wire, an electrode parallel to and closely adjacent to, but insulated



from said wire, a terminal connected to said electrode, and a magnet having its poles disposed in position to establish magnetic lines of force symmetrical about said wire and transverse to the plane defined by said wire and said electrode.

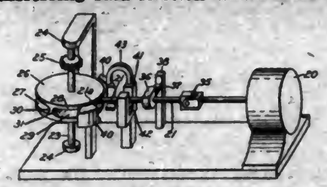
2,447,817

TEMPERATURE OR PRESSURE RESPONSIVE VARIABLE FREQUENCY OSCILLATOR

Frank Rieber, New York, N. Y., assignor to Interval Instruments, Inc., New York, N. Y., a corporation of New York

Application January 29, 1944, Serial No. 520,199
10 Claims. (Cl. 250—36)

1. In a telegauge, in combination, a chamber having a diaphragm subjected to pressure variations, a magnet, a wire attached to said diaphragm and stretched transverse to the field of said magnet and symmetrically disposed with regard to the field thereof, an oscillator, an electrode parallel to said wire and in the plane of vibration thereof of substantially the same length as the vibrating portion of the wire, connected to said oscillator to determine the frequency thereof by the changes in capacity between said electrode and said wire and means for imposing a potential between said electrode and said wire, and means for feeding current through said wire from said oscillator.



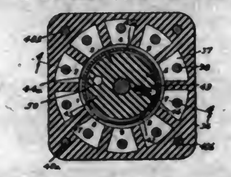
2,447,818

PERIODIC REVERSING DRIVE

Frank Rieber, New York, N. Y., assignor to Interval Instruments, Inc., a corporation of New York

Application January 11, 1945, Serial No. 572,368
15 Claims. (Cl. 74—71)

1. A device for converting between rotary and oscillatory power comprising, a shaft adapted to rotate continuously in the same direction a friction wheel of magnetic material, an oscillating member having a pair of friction surfaces on diametrically opposite sides of said friction wheel and composed of magnetic material, means for magnetizing said wheel and said surfaces with opposite magnetic polarity, and magnetic means for transferring said friction wheel from one of



said surfaces to the other after a predetermined amount of movement.

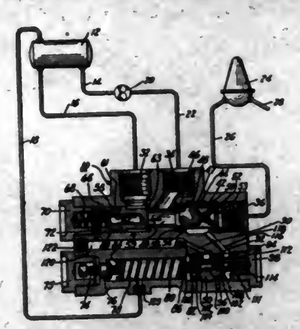
2,447,819

COMMUTATOR

Robert I. Roth, Hawthorne, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York

Application July 11, 1945, Serial No. 604,484
2 Claims. (Cl. 200—8)

1. A commutator comprising a round, turnable brush carrier constructed along a portion of its periphery with a substantially completely enclosed internal, arcuate channel, a ring of contact segments surrounding the carrier, a flexible, single-piece plate brush having a curvature approximating the curvature of the channel and fitting at the rear into the channel, the forward integral portion of the brush extending outwardly past an end of the channel and terminating in an integral wiping tip bent radially, whereby the tip wipes the segments with equal facility when the carrier turns in either direction, the wiping resistance, owing to the curvature of the brush and its confinement in said channel imparting a thrust lengthwise of the brush whereby tendency of the brush to shift radially of its length, relative to the carrier, is avoided, and a spring-pressed plunger mounted on the brush carrier so as to releasably engage its outer end in a hole in the rear portion of the brush for releasably pinning the brush to the carrier to retain it in fixed position on the carrier and to take up the aforesaid thrust.



2,447,820

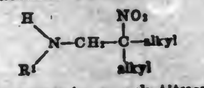
REGULATING VALVE

Harold B. Schultz, South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware

Application September 3, 1943, Serial No. 501,080
4 Claims. (Cl. 137—153)

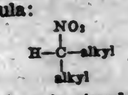
1. A regulator valve for a hydraulic system comprising a body member having an inlet, return and outlet, a first valve means normally arranged to close communication between the inlet and outlet, a second valve means normally seated and subjected to inlet pressure on one side tending to unseat the valve and outlet pressure on the other side tending to seat said valve, a drain in the body for returning to the system the outlet fluid pressure acting on said second valve, control means comprising a first ball valve normally held on its seat by an adjusting mechanism for varying the pressure required to unseat said first ball valve, said first ball valve being unseated in response to a predetermined outlet pressure acting on said second valve means for creating a differential pressure across said last named valve to move the same in response to inlet pres-

sure to connect the inlet and return, a second ball valve normally unseated when said first ball valve is seated and vice versa, said second ball valve being arranged to seat to cut off the pressure from the outlet port acting on second valve means when said first ball valve is unseated for releasing the outlet pressure acting on said second valve means to the drain.



2,447,821

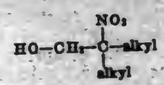
PROCESS FOR MAKING NITROALKYL-CYCLIC AMINES



Murray Senkus, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland

No Drawing. Application February 26, 1945, Serial No. 579,896
8 Claims. (Cl. 260—563)

2. In the production of nitro amines having the following structural formula:



wherein R^1 represents a substituent group selected from a class consisting of cycloalkyl and 1-methyl-3,5-dioxacyclohexyl the process which comprises reacting, under conditions forming a homogeneous mixture, substantially equimolecular proportions of formaldehyde, an amine having the formula $R^1—N=H_2$ and a nitroalkane having the formula:

allowing the mixture to stand until the resulting reaction is substantially completed and recovering the said nitro amine.

4. The process of claim 2 wherein the formaldehyde and the nitroalkane in the reaction mixture are derived from the decomposition in the mixture of a nitroalcohol having the structural formula:

2,447,822

5-NITROTETRAHYDRO - 1,3 - OXAZINES AND METHOD FOR PREPARING THEM

Murray Senkus, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland

No Drawing. Application February 25, 1946, Serial No. 650,134
12 Claims. (Cl. 260—244)

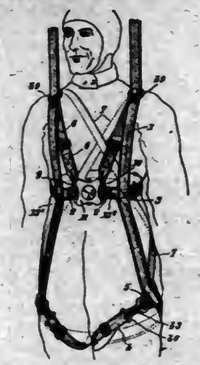
1. A process for the preparation of 5-nitrotetrahydro-1,3-oxazines, which comprises bringing a primary amine into reaction with a nitroparaffin having a nitro group attached to a primary carbon atom, in the presence of formaldehyde, the latter being employed in a ratio of at least two moles to one mole of nitroparaffin and one mole of primary amine, and separating and recovering the 5-nitrotetrahydro-1,3-oxazines thus formed.

2,447,823

PRODUCTION OF N-SUBSTITUTED FURFURYLAMINES

Everet F. Smith, Terre Haute, Ind., assignor to Commercial Solvents Corporation, Terre Haute, Ind., a corporation of Maryland

No Drawing. Application February 9, 1946, Serial No. 646,723
6 Claims. (Cl. 260—345)

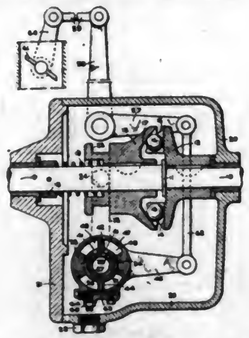


1. A process for producing secondary amines which comprises reacting a monofurfurylamine with a ketone and hydrogen in the presence of a metal chromite hydrogenation catalyst.

2,447,824

QUICK RELEASABLE PARACHUTE HARNESS

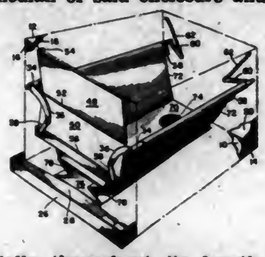
René Tauty, Clichy, France; vested in the Attorney General of the United States



Application February 10, 1940, Serial No. 318,343
In France February 10, 1939
2 Claims. (Cl. 244—151)

1. A parachute harness which comprises, in combination, a sling strap for supporting the wearer in seated position therein, body encircling means and thigh straps on each side fixed to said sling strap for holding said sling strap in proper position on the wearer's body, said body encircling means including a catch at the front of the body, each of said thigh straps including a fastening means, said fastening means comprising an unbiased latch member movable between locking and unlocking positions, a Bowden cable connected to said member, said catch including a part movable to release the catch, and means operatively connecting said cable to said part,

said means being constructed and arranged to move said cable only when said part moves in latch-releasing direction.



2,447,825
PRESSURE FLUID SERVOMOTOR
Frank John Tippen, Coventry, England, assignor to Leonard Pelham Lee, Stratford-on-Avon, England
Application June 30, 1943, Serial No. 492,887
In Great Britain February 6, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires February 6, 1962
9 Claims. (Cl. 121—38)

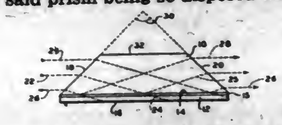
1. A device of the character described, incorporating a hollow ported pivot, the passage through which is divided by a transverse partition into separate inlet and discharge chambers for pressure liquid, the inlet chamber having two angularly spaced ports in its wall, and the discharge chamber having a discharge port in its wall, a primary lever and a secondary lever mounted for movement about a common axis formed by said pivot, the primary lever having a primary tubular ported extension mounted on and surrounding said pivot, and an externally projecting vane arranged longitudinally, said primary extension having a pair of inlet ports one on each side of the vane, said inlet ports cooperating with the ports in the wall of the inlet chamber of the pivot, said primary extension also having a pair of discharge ports one on each side of the vane for cooperating with the discharge port in the wall of the discharge chamber of the pivot, the secondary lever having a tubular extension disposed around said primary tubular ported extension, both tubular extensions having vanes extending across the annular space between them, said pivot being connected to a source of pressure fluid, the primary tubular extension acting as a valve controlling the passage of fluid from the pivot to the space between the vanes.

2,447,826
POULTRY NEST
Magnus Torie, Seattle, Wash.
Application August 2, 1946, Serial No. 688,113
12 Claims. (Cl. 119—47)

1. A poultry nest, comprising: means forming an enclosure having an opening, extensible closure means mounted above said opening to close the same, a bell-crank pivotally mounted in said enclosure on each side of said opening and including a first and a second arm, the first arm of each bell-crank being connected with the lower portion of said closure means to impart closing motion thereto, said second arm of each bell-crank comprising a ledge positioned to each side of the median of said enclosure and extending

substantially throughout its length from the opening to the opposite end, and means normally biasing said closure means to the retracted position.

2,447,827
AUTOMATIC SHUTOFF DEVICE FOR OIL WELLS
George F. Turechek, Los Angeles, Calif., assignor to Lane-Wells Company, Los Angeles, Calif., a corporation of Delaware
Application March 30, 1942, Serial No. 436,734
8 Claims. (Cl. 166—2)

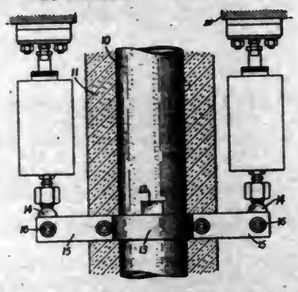


1. An automatic shut-off device for oil wells, comprising: a valve structure including a valve member movable from an open to a closed position in the direction of flow of fluids through the valve structure; a latch means having a first position holding said valve member open and rotatable to a second position to release said valve; a combined torque and compression spring for urging said latch means into said first position and for urging said valve to its closed position when said latch means is moved to its second position; and reaction means disposed in the flow stream of fluid passing through said valve structure and acted upon by said flow stream to turn said latch means from said first to said second position.

2,447,828
LIGHT-POLARIZING PRISM
Cutler D. West, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application February 17, 1945, Serial No. 578,463
3 Claims. (Cl. 88—65)

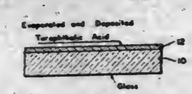
1. A light-polarizing device comprising, in combination, a prism comprising transparent, optically isotropic material, said prism having an entrance face and an exit face, each of said faces

making with a third face an angle less than 90°, and a layer of birefringent material in optical contact with said third face of said prism, said layer having the optical properties of a basal section of a uniaxial crystal, the refractive index of said prism and the higher refractive index of said birefringent layer being substantially equal, said entrance and exit faces making with each other an angle greater than 60°, the three said faces of said prism being so disposed with respect



to each other that light propagated in a direction substantially parallel to said third face and entering said prism through said entrance face will be directed against the interface between said third face and said birefringent layer at angles of incidence greater than the critical angle for the light component for which the refractive indices of said prism and said birefringent layer do not match and means providing a light-absorbing coating on the outer surface of said birefringent layer.

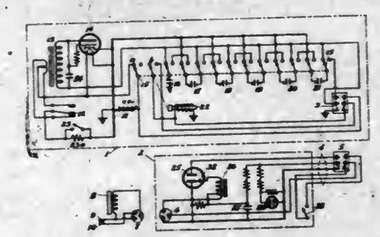
2,447,829
GERMANIUM-HELIUM ALLOYS AND RECTIFIERS MADE THEREFROM
Randall M. Whaley, West Lafayette, Ind., assignor to Purdue Research Foundation, Lafayette, Ind., a corporation of Indiana
Application August 14, 1946. Serial No. 690,545
14 Claims. (Cl. 175—366)



2. An alloy comprising germanium impregnated with helium, the alloy being characterized by exhibiting the electrical property of high resistance to current flow in one direction therethrough and low resistance to current flow in the other direction therethrough.

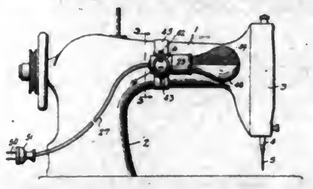
2,447,830
SUPPORT DEVICE
Joseph Kaye Wood, New York, N. Y., assignor to General Spring Corporation, New York, N. Y., a corporation of New York
Application March 27, 1943, Serial No. 480,747
10 Claims. (Cl. 248—54)

1. A device for supporting a thermally insulated member of a heated plant apparatus from a frame member which is normally at a substantially different temperature which comprises lugs attached to said members respectively, said lugs being arranged side-by-side with communicating holes transversely therethrough, a bolt extending through the holes in said lugs, said bolt being formed with cross-sectional shape relative to the cross-sectional shape of said hole within said lug on at least one of said members such that the bolt is supported substantially only along a line contact.



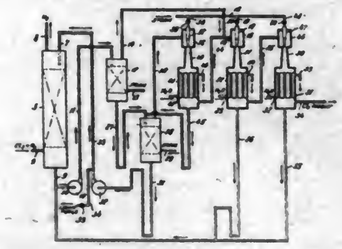
2,447,831
EVAPORATED AND DEPOSITED BIREFRINGENT FILM COMPRISING AROMATIC COMPOUND, THE MOLECULES OF WHICH CONTAIN PLANAR GROUPINGS
Robert B. Woodward, Cambridge, Mass., assignor to Polaroid Corporation, Cambridge, Mass., a corporation of Delaware
Application March 3, 1945, Serial No. 580,817
5 Claims. (Cl. 88—65)

1. As a new product, a light-transmitting, solid film comprising terephthalic acid, the molecules of which are oriented in substantial planar parallelism with the surfaces of said film, said film being optically isotropic for light normally incident thereon and exhibiting substantial birefringence for light obliquely incident thereon.



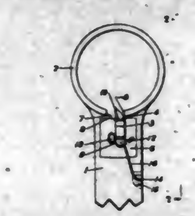
3. In a process of forming a birefringent element, the steps comprising evaporating terephthalic acid, and causing the resulting vapor to deposit on a supporting surface, said steps being carried out in a vacuum.

2,447,832
PHOTOGRAPHIC FLASH APPARATUS
Irving J. Abend and Mack Slepoff, New York, N. Y.
Application July 27, 1946, Serial No. 686,703
3 Claims. (Cl. 315—237)



1. In a flash-bulb igniting apparatus, a battery of relatively low-voltage, voltage-amplifying means connected to the battery, a plurality of parallel-connected condensers connected to the output of the voltage-amplifying means, a gas-filled flash bulb, switch means for discharging the condensers and flashing the bulb, voltage control means consisting of a resistance for restricting voltage out-put from amplifying means to the condensers and switch means for by-passing said resistance to allow maximum voltage to reach the condensers from the voltage amplifying means.

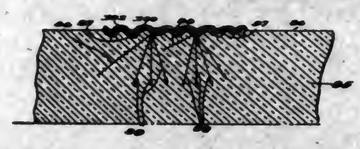
2,447,833
ATTACHABLE LIGHT FOR SEWING MACHINES
John Auer, East Norwalk, Conn.
Application March 7, 1944, Serial No. 525,410
2 Claims. (Cl. 240—2.14)



1. A lighting device of the character described comprising a body of insulating material including a base member shaped at one end to substantially fit a side of a sewing machine arm and provided with chambers at its opposite end for receptacle contacts, receptacle contacts mounted in said chambers, a cap member having chambers aligned with the first chambers to enclose the contacts, said members being each provided with slots leading to said chambers in alignment with the contacts for entrance of the contact blades of an attachment plug cap and a lamp socket, means for connecting lead wires from a source of current supply with the contacts in the chambers, an attachment plug cap connected to said wires for plugging into an outlet receptacle in a house wiring system, and a flexible band detachably connected with the body at one end adapted to embrace the arm to secure the device thereto.

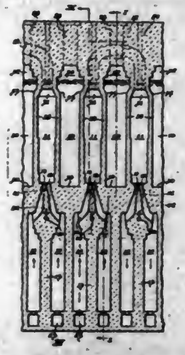
2,447,834
CONCENTRATION OF CHLORINE
Frederick R. Balcar, Stamford, Conn., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application April 15, 1944, Serial No. 531,267
8 Claims. (Cl. 23—219)

8. The method of recovering chlorine from a mixture of gases in which chlorine is the major constituent most readily soluble in water, which comprises washing the gas mixture with an aqueous medium from the class consisting of water and dilute solutions of chlorine in water under such conditions as to dissolve only a portion of the chlorine therein, withdrawing an effluent gas mixture containing the undissolved chlorine, subjecting the resulting chlorine solution to successive chlorine vaporization operations at successively reduced pressures below atmospheric pressure, adding steam to the solution in the final vaporization operation in an amount sufficient to maintain the temperature of the solution during such vaporization operation at substantially the temperature of the solution entering said vaporization operation, the final vaporization operation being conducted under a pressure sufficiently high that the aqueous medium leaving said operation will contain a relatively small amount of chlorine compared to the amount of chlorine contained in the aqueous medium resulting from said washing operation, returning the aqueous medium leaving said final vaporization operation to the washing operation and there using it as the aqueous medium to wash further amounts of the original gas mixture, and reacting the undissolved chlorine in the withdrawn effluent gas mixture with a material capable of forming a hypochlorite.



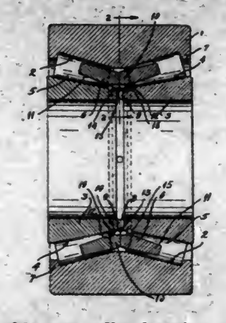
2,447,835
ROCKING INNER-JAW END WRENCH
Jonathan H. Beard, Beaumont, Tex.
Application May 26, 1947, Serial No. 750,590
5 Claims. (Cl. 81—92)

1. An end wrench comprising a handle having a ring formed on one end thereof adapted to encircle a polygonal fastening device, a pawl pivotally mounted on one side of the ring adjacent the handle, the pawl being fulcrumed intermediate its ends and having a tooth-like end portion adapted when in an operative position to extend inwardly toward the center of the ring to engage the fastening device and having a bifurcated end portion including a pair of jaws adapted to straddle the adjacent portion of the handle, the handle having a flattened portion adjacent the ring, the ring and the adjacent portion of the handle having a notch formed therein adapted to receive the pawl, one side of the notch being straight and parallel to the center line of the handle, the arrangement being such that the pawl may be rocked back and forth in the notch, the straight side of the notch being adapted to limit rotation of the pawl in one direction, a pair of grooves formed in the handle on opposite sides thereof adapted to be engaged by the ends of the jaws to retain the pawl in engagement with the handle, the grooves being curved and the arrangement being such that the ends of the jaws slide in the grooves as the pawl is rocked in the notch, and means for yieldably maintaining the pawl in engagement with the straight side of the notch.



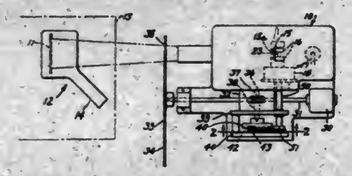
2,447,836
PRECISION IMAGES AND METHODS OF PRODUCING THEM
Allan R. A. Beeber, Highland Park, David D. Jacobus, Glen Ridge, and Carl W. Keuffel, Bernardsville, N. J., assignors to Keuffel & Esser Company, Hoboken, N. J., a corporation of New Jersey
Application April 2, 1942, Serial No. 437,438
30 Claims. (Cl. 95—5)

1. The method for producing precision images on a base, comprising the steps of applying a thin film of an organic resinous light sensitive resist soluble in organic solvents directly on the surface of the base, exposing the resist to light through a master having a pattern of said precision image, forming a resist image by removing with an organic solvent portions of the resist to expose the base according to the pattern,



molecularly depositing an opaque film on the resist image, and selectively removing the residual resist and its overlaid opaque film without removing the opaque film applied directly to the base.

2,447,837
COKING CHAMBER WITH ENLARGED UPPER PORTION
Joseph Becker, Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc., a corporation of Delaware
Application November 8, 1944, Serial No. 562,442
11 Claims. (Cl. 202—138)



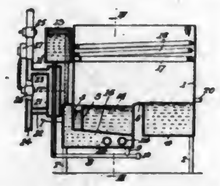
1. In a horizontal coke-oven battery, in combination: a series of alternate heating-walls and horizontal coking-chambers arranged laterally of each other in a row, each of said heating-walls having vertical combustion-flues therein that terminate at their upper parts below the tops of said coking-chambers; side-walls for each of said coking-chambers formed by the opposite surfaces of two adjacent heating-walls, said side walls being continuously vertically disposed throughout substantially that portion of their full height adjacent their heating flues, to provide therebetween a coking chamber space of substantially the same effective transverse width for uniform coking, and above the upper termini of said vertical heating-flues, the said opposite surfaces of said adjacent heating-walls being offset further apart from the longitudinal central vertical planes of their associated coking-chambers than are the lower said surface-portions thereby providing over-hanging upper coking-chamber gas-offtake free space portions that are of substantially greater effective transverse width than the narrower coking-chamber portions therebeneath, the chamber space of said upper coking-chamber portions being substantially unobstructed between said adjacent side-walls and the effective free-cross-sectional area in a horizontal plane of the gas-off-take free-space of said portions at the top level for levelled coal charges being substantially greater, transversely of the coking chambers, than that of the coal-charge space of the coking chamber portions beneath the topmost parts of said combustion flues; and gas off-take means from the gas off-take free-space of the coking-chamber tops.

2,447,838
UNIT HANDLED DOUBLE ROW ROLLER BEARING
Albert L. Bergstrom and Harold D. Stover, Canton, Ohio, assignors to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application May 17, 1947, Serial No. 748,766
10 Claims. (Cl. 308—214)

1. A double row roller bearing comprising two axially spaced circular series of rollers, a single outer bearing member for both series of rollers, two inner bearing members, one for each series of rollers, and two spacing cages, one for the rollers of each series, said spacing cages comprising annular members interposed between the two series of rollers and each having spacing arms extending between adjacent rollers, said outer bearing member having internal peripheral ribs overlapping the outer ends of both series of rollers, and each of said inner bearing members having an external peripheral rib overlapping the inner ends of the rollers cooperating therewith, the whole forming a self-contained unit assembly.

2,447,839
DRIVE MECHANISM FOR THE INTERMITTENT MOVEMENT IN A TELEVISION MOTION-PICTURE PROJECTOR
Frank J. Bingley, Philadelphia, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application September 11, 1945, Serial No. 615,671
5 Claims. (Cl. 88—18.3)

4. In a motion picture projector for use in television broadcast systems, film pull-down means, an intermittent movement coupled to said film pull-down means and effective to op-



erate said means so as to move successive film frames intermittently into position to be projected for scanning, said movement including a continuously rotating element and a film-actuating member discontinuously operated thereby upon completion of each revolution of said continuously rotating element, a substantially constant speed prime mover, and variable speed apparatus coupling said prime mover to said continuously rotating element and so driving said element that successive complete revolutions thereof occur at alternately greater and lesser velocities.

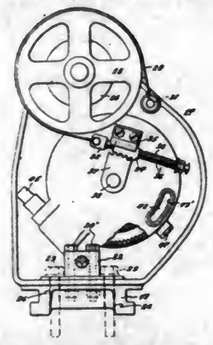
2,447,840

VAPOR PHASE DEGREASING APPARATUS, INCLUDING TEMPERATURE CONTROL OF VAPOR CONDENSERS

Marcel C. Boss, Westfield, N. J., assignor to Mabor Company, Inc., Clark Township, Union County, N. J., a corporation of New Jersey

Application June 18, 1946, Serial No. 677,560
In France November 19, 1938
Section 1, Public Law 690, August 8, 1946
Patent expires November 19, 1958
2 Claims. (Cl. 202—170)

1. Apparatus of the character described comprising, a vessel for containing solvent, a jacket for containing heating fluid on the exterior of said vessel, means in said jacket for heating the fluid, means for circulating the heated fluid, means for circulating a temperature affecting fluid at a portion of the vessel above the solvent, and means for transferring heat from the jacket fluid to said temperature affecting fluid, said last named means including conduits for circulating said temperature affecting fluid in contact with a portion of the means for circulating the heated jacket fluid, and thermostatic means for regulating the amount of said temperature affecting fluid that is brought into contact with said portion of the means for circulating the heated jacket fluid.



2,447,841

TAPING HEAD FOR CABLE INSULATING MACHINES

Carl O. Bruestle, Rahway, N. J., assignor to Syncro Machine Company, Perth Amboy, N. J., a corporation of New Jersey

Original application October 20, 1945, Serial No. 623,542. Divided and this application August 14, 1947, Serial No. 768,635
4 Claims. (Cl. 57—3)

1. In a cable wrapping machine, a taping head including a support, a shaft journaled on said support, a tape reel and a brake drum secured to said shaft, a brake band cooperating with said brake drum and having one end anchored on said support, and means for applying and releasing the brake, said last means including a spring loaded segmental gear, a slidably mounted rack

engaging said gear, and means interconnecting said rack with said member.

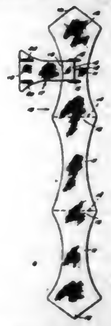
2,447,842

BACK-PRESSURE CHECK VALVE

Jarrett L. Cameron, Orangefield, and Frank J. Malloy, Orange, Tex., assignors to Levingston Shipbuilding Company, Orange, Tex., a corporation of Texas

Application February 8, 1945, Serial No. 576,780
12 Claims. (Cl. 137—152)

1. A check valve for a connection axially of a hollow well drill stem or the like including a tubular valve casing; a closure element adapted to cooperate with a valve seat within the casing; detent means for initially holding the closure element away from its seat but capable of responding to a predetermined velocity of fluid through the valve casing from above to release the closure element; and actuating means capable of responding subsequently to a predetermined velocity of fluid in the opposite direction to move the closure element into engagement with its seat.



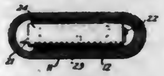
2,447,843

TIE

Helen Cramp Cookman, New York, N. Y., assignor to Mary Ellen Cookman, New York, N. Y.

Application December 17, 1946, Serial No. 716,820
8 Claims. (Cl. 2—151)

1. A bow-forming piece for a bow tie, comprising a strip folded on itself to form a bow of superposed folds, the portion of the strip forming the top fold being apertured intermediate its ends; and a knot-forming band stitched to said strip adjacent the aperture and extending laterally therefrom, said band being apertured



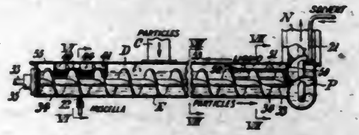
near its free end and being positioned for wrapping around the folded strip to bring the apertures of the band and strip into proximate alignment to receive and be retained in position by arms of a supporting device.

2,447,844

SNAKE BITE KIT

Robert K. Cutter, Berkeley, Calif., assignor to Cutter Laboratories, Berkeley, Calif., a corporation of California

Application November 30, 1944, Serial No. 565,937
5 Claims. (Cl. 206—63.2)



1. A pair of telescopically disposed compressible resilient tubular members having opposed closed ends, said members together forming a container for accommodating the accessory equipment of a snake bite outfit and each forming a suction device for the removal of venom from a snake bite or incision.

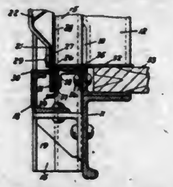
2,447,845

APPARATUS FOR SOLVENT EXTRACTION

Clarence F. Dinley, Detroit, Mich., assignor to Detroit Rex Products Company, Detroit, Mich., a corporation of Michigan

Application July 24, 1943, Serial No. 495,986
12 Claims. (Cl. 23—270)

1. In apparatus for counterflow liquid solvent extraction of oleaginous matter from divided material, the combination of a horizontal extraction trough with a transversely rounded bottom, a coacting rotary feed screw with its threads moving in contact with the trough bottom, for advancing the particles to be treated in said trough; an inlet through which solvent is introduced into the trough at the discharge end of the screw; a strainer box mounted in said trough above the screw at its other end, and a finely meshed resilient strainer fabric attached at the bottom of said box and curved over the top of said screw and arranged to be in contact with the screw thread; and an outlet for discharge of miscella from the interior of said strainer box.



2. In apparatus for counterflow liquid solvent extraction of oleaginous matter from divided material, the combination of a closed horizontal extraction trough having a top opening, a transversely rounded bottom and flat sides; a coacting rotary feed screw with a thread moving in contact with the trough bottom, for advancing the particles to be treated in said trough; means for introducing particles to be treated into said trough near one end thereof; lateral enlargements of the trough between its said end and said particle-introducing means; means for supplying solvent into the other end of said trough; a strainer box mounted in said trough above the screw and having side extensions into said lateral trough enlargements, and a finely meshed resilient strainer fabric attached at the bottom of said box and curved over the top of said screw and arranged to be in contact with the screw thread; means constructed and arranged for adjusting said strainer box with said strainer both up and down and transversely relative to said screw to vary the contact pressure of the fabric; and separately adjustable overflow outlet means located in said side enlargements for discharge of liquid from said side extensions of said strainer box and for maintaining a definite liquid level.

2,447,846

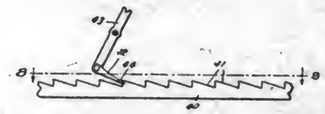
CAR DOOR

Frank Ditchfield, Cleveland, Ohio, assignor to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio

Application September 25, 1944, Serial No. 555,684
4 Claims. (Cl. 20—22)

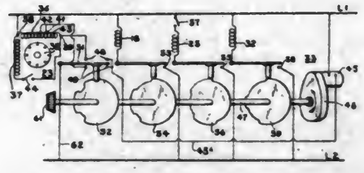
1. In a railway house car having a door opening in a wall thereof and a floor, a track secured to said car below said door opening, a door slidably mounted on said track, the lower portion of said door lying behind said track, and a threshold plate secured to said floor in said door opening, said threshold plate having a flange extending downwardly below said door opening in outwardly spaced relation to said floor and contiguous to the inner face of said door when the latter is closed and a lip extending outwardly from said flange, said lip extending across and adjacent to the lower edge of said door when the door is closed, for the purpose set forth.

2,447,847



COMPENSATED STEP-BY-STEP MECHANISM

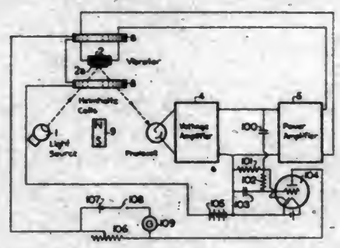
Willis Robert Dresser, Long Hill, Conn.



Application October 3, 1946, Serial No. 700,895
3 Claims. (Cl. 74—575)

1. In combination, a rack having teeth and a driving pawl successively engaging said teeth at

a point spaced above their respective bases for feeding said rack step-by-step, said pawl having an inclined tooth engaging surface, said teeth being narrower than said pawl and being variously set with respect to their bases to engage said inclined surface at different selected points, whereby different selected individual increments of movement are obtained.

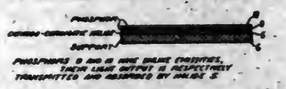


2,447,848
CLEANING AND CENTRIFUGING APPARATUS
Hilbert E. Edwards, Mansfield, Ohio, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 9, 1945, Serial No. 621,275
3 Claims. (Cl. 68—12)

1. In apparatus for cleaning fabrics and for centrifuging cleaning fluid therefrom, the combination of means for cleaning the fabrics, means for centrifuging cleaning fluid from the fabrics, a motor for driving, alternatively, the cleaning means and the centrifuging means, said motor having first and second circuits energized for effecting, respectively, relatively low and high torque operation of the motor, a control mechanism movable to one station for connecting said cleaning means to the motor, said control mechanism being movable to second and third stations for connecting said centrifuging means to the motor, said centrifuging means being accelerated by the motor when the control mechanism is disposed in its second station and driven by the motor for a centrifuging operation when the control mechanism is disposed in its third station, means controlled by the control mechanism and responsive to movement thereof to said second station for energizing said second circuit and means controlled by the control mechanism and responsive to movement thereof to said first and third stations for energizing said first circuit.

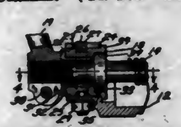
2,447,849
MAGNETOMETER
Charles H. Fay, Houston, Tex., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application December 26, 1944, Serial No. 569,819
3 Claims. (Cl. 175—183)

1. A system for magnetic field measurements, comprising a coil, means pivoting said coil for oscillation in said field, a light source, a photo-electric element, optical means carried by the coil for varying the illumination of the photo-electric element by the light source proportionally to the oscillation of the coil, amplifier means energized by the output of the photo-electric element, rectifier means in circuit with the amplifier means for rectifying a portion of the output current of said amplifier means, Helmholtz coil means energized by the direct current output of said rectifier means for neutralizing the magnetic field in which the pivoted coil oscillates, said Helmholtz coil means being disposed in planes parallel with the axis of oscillation of said pivoted coil on either side thereof, means in circuit with the amplifier



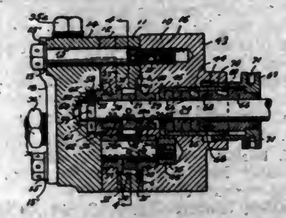
means and the pivoted coil for passing through said pivoted coil the non-rectified portion of the output current of said amplifier means, and indicator means in the Helmholtz coil circuit for indicating a current value capable of producing a neutralizing field necessary for just maintaining the pivoted coil in oscillation by the reaction of the current passed therethrough with the resultant of the magnetic field under measurement with the neutralizing field produced by the Helmholtz coil means.

2,447,850
CAP CONSTRUCTION
Samuel Feldman, Brooklyn, N. Y., assignor to Felport Incorporated, New York, N. Y., a corporation of New York
Application April 28, 1947, Serial No. 744,300
3 Claims. (Cl. 2—197)



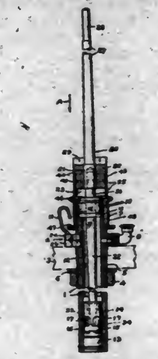
2. A cap comprising a crown adapted to receive the head of the wearer and having the rearward marginal portion folded back upon itself to form a channel extending through the folded portion of the crown, said crown having notches formed therein along opposite sides thereof, a visor secured to the forward end of said crown, a headband having its forward portion secured to the forward portion of said crown, with its unsecured opposite end portions extending across said notches and into said channel from opposite ends thereof so as to overlap each other inside the channel, and stud and socket means carried jointly by said overlapping ends of the head band for securing them releasably together, the headband size being adjustable by varying the degree of overlap of said headband ends, whereby said overlapping ends of the headband are normally concealed from view inside said channel, and whereby they may be withdrawn from either end of the channel into one of said notches for adjustment of their overlap.

2,447,851
LUMINESCENT SCREEN INDICATING CHANGES IN IMAGE FORMATION
Gorton B. Fonda, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application July 24, 1944. Serial No. 546,338
8 Claims. (Cl. 250—164)



1. A cathode ray tube comprising the combination of a glass envelope having a window, means for projecting cathode rays on said window, a film coating the ray-receiving surface of said screen, said film consisting of a mixture of a fluorescent sulfide and a cathodo-chromatic alkali halide.

2,447,852
BEARING STRUCTURE
Elmer G. Gartin, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania
Application January 27, 1943, Serial No. 473,664
12 Claims. (Cl. 308—22)

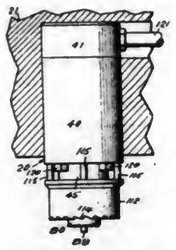


8. In a bearing structure, the combination with a rotatable member to be journaled, of a stationary supporting structure having coaxial stepped bores extending therethrough, said rotatable member extending through said bores and having an enlarged portion within the larger one of said bores, a bearing member arranged between the shoulder at the junction of said bores and one end of said enlarged portion, a bearing sleeve fitting within the larger one of said bores and having an end surface engageable by the opposite end of said enlarged portion, a groove in the outer periphery of said bearing sleeve, an opening in the wall of the larger one of said bores opposite said groove, and means including a clamping member fitting within said groove and extending through said opening for holding said bearing sleeve in a fixed position relative to said supporting structure.

2,447,853
OIL PUMP
Jerome D. Gleitz, Euclid, Ohio, assignor to The Marquette Metal Products Company, Cleveland, Ohio, a corporation of Ohio
Application January 19, 1943, Serial No. 472,861
3 Claims. (Cl. 308—15)

2. In a rotary type pump having a drive shaft, a housing comprising a plurality of metal sections in face to face stacked relationship, a bearing receiving opening in one of said sections and having a counterbored portion, a tubular bearing supporting the shaft and fitting tightly into said opening and extending into said counterbored portion to define an annular recess with said counterbored portion, an annular section-aligning member having an axially extending annular flange fitting tightly in said recess and having a central portion axially abutting said tubular bearing, said annular member bridging two of the housing sections in a manner to align those sections, said shaft extending from the bearing member through the annular member, and a collar detachably engaging the shaft and having one face positioned to abut said annular member on the face thereof opposite from the annular flange.

2,447,854
SPINDLE FOR TEXTILE MILL USE
Herbert Gleitz, Euclid, and Charles E. Miller, East Cleveland, Ohio, assignors to The Marquette Metal Products Company, Cleveland, Ohio, a corporation of Ohio
Application May 9, 1945, Serial No. 592,868
6 Claims. (Cl. 57—135)

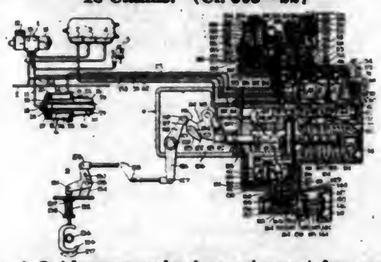


1. A textile mill spindle blade comprising two metal sections each of decreased diameter toward one end, the opposite end of one of the sections having a socket and the opposite end of the other section occupying the socket, and held thereby through permanent stress in the metal of the wall of the socket.

2,447,855
CAP DIE
Carl W. Goodwin, Plainfield, N. J., and Kenneth R. Allen, Ridgewood, N. Y., assignors to American Seal-Kap Corporation of Delaware, Wilmington, Del., a corporation of Delaware
Application October 29, 1946, Serial No. 706,318
12 Claims. (Cl. 93—1.3)

1. A die for forming paper caps or the like having a central depressed diaphragm portion and a peripheral inverted container rim housing, said die comprising upper and lower die members mounted for relative forming and return movements and including upper and lower diaphragm forming members, conforming to the depressed cap diaphragm, a lower draw ring conforming to the inside surface of the peripheral rim housing and an upper pressure ring conforming to the top wall of said rim housing, said upper and

lower die members each having a shell forming a compressed air cylinder, pistons in said cylinders to move vertically against the air pressure therein, means mounting said upper diaphragm forming member to move with said upper piston, means mounting said upper pressure ring to move with said upper die shell, means mounting said lower diaphragm forming member and said lower draw ring to move with said lower die piston at least in the final forming stage, said upper piston having an effective area



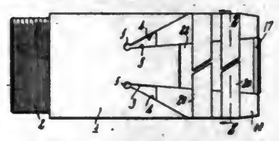
less than that of said lower piston whereby the upper diaphragm forming member first cups the blank to form the depressed cap diaphragm and is then retracted against the air pressure in the upper shell cylinder while the upper shell feeds the upper pressure ring against the cap blank, and the lower diaphragm forming member and lower draw ring are then retracted against the air pressure in the lower shell cylinder by the pressure of the upper pressure ring in the final forming stage.

2,447,856
CHRISTMAS CARD DISPLAY DEVICE SIMULATING A TREE
Clarence H. Hazelton, Upper Darby, Pa.
Application June 14, 1945, Serial No. 599,467
4 Claims. (Cl. 40—124)

1. A display device for simulating a Christmas tree, comprising a platform, pedestal means for supporting said platform, a plurality of pyramidal shaped members supported by said platform and arranged in assembled condition to form an elongated tree-shaped body, means connecting the upper ends of said members together, sheets respectively arranged in face contact with said members and held by said connecting means, strips arranged respectively against said sheets and held by said connecting means at the upper ends, and means engaging the lower ends of said strips to flex said strips against said sheets, whereby cards inserted under the margins of said sheets and under said strips are frictionally held and can be arranged to give the decorative effect of a Christmas tree.

2,447,857
LOAD COMPENSATING FLUID PRESSURE BRAKE EQUIPMENT
Ellis E. Hewitt, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application May 21, 1947, Serial No. 749,572
18 Claims. (Cl. 303—22)

1. A fluid pressure brake equipment for a vehicle comprising in combination, a brake pipe, brake cylinder means having two pressure chambers and operative to provide a braking force on said vehicle in accordance with the pressure of fluid in said chambers, brake controlling means operative upon a reduction in pressure in said brake pipe to supply fluid under pressure to one of said chambers, and control means comprising valve means operative upon a reduction in brake pipe pressure to supply fluid under pressure to the other of said chambers, and means operative a chosen interval of time after said operation of said control means, to cut off the supply of fluid under pressure to said other chamber and to open a fluid pressure release communication therefrom.

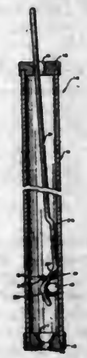


2,447,858
VALVE SEAT ASSEMBLY
Joseph H. Hoern, Birmingham, Mich., assignor to Eaton Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application October 31, 1945, Serial No. 625,847
4 Claims. (Cl. 123—188)

1. In combination with an internal combustion engine having one or more valve ports in the cylinder block thereof, a valve seat insert for each of said ports comprising a ring having a plurality of external annular ribs and a split ring assembled in interlocking relation with the other ring having a plurality of internal ribs corresponding to the ribs on the other ring and a plurality of circumferential locking grooves, said split ring being received by a recess in the cylinder block in press fit relationship and held therein by the action of the grooves cooperating therewith against the annular wall of the recess.

2,447,859
STOCK PUSHER
John M. Ingalls, Windsor, Vt., assignor to Cone Automatic Machine Company, Inc., Windsor, Vt., a corporation of Vermont
Application January 10, 1946, Serial No. 640,172
5 Claims. (Cl. 279—60)

3. A device of the class described, comprising parts including a sleeve through which stock may extend, said sleeve having a portion of its full thickness adjacent to one end cut away on surfaces non-parallel to the axis of said sleeve, another of said parts comprising a stock-engaging segment having faces complemental to said

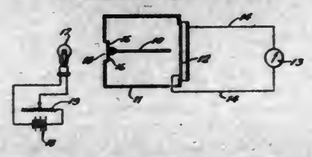


surfaces and substantially filling the cut away portion of said sleeve, said sleeve and segment having registering peripheral grooves, and a split spring ring surrounding said sleeve and segment and lying in said grooves and of less width than certain of said grooves.

2,447,860
METHOD OF DISPERSING KERATIN PROTEINS AND THE COMPOSITION RESULTING THEREFROM
Chase B. Jones and Dale K. Mecham, Berkeley, Calif., assignors to United States of America as represented by the Secretary of Agriculture
No Drawing. Application November 7, 1944, Serial No. 562,326
6 Claims. (Cl. 106—155)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

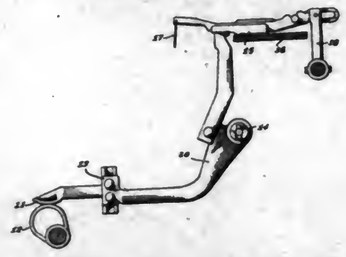
1. The process comprising dispersing feathers in an essentially neutral aqueous solution containing monoethylene thioglycol and guanidine hydrochloride at a temperature of about 40° C.

2,447,861
OIL THIEF
Arthur J. Junge, St. Louis, Mo.
Application February 21, 1947, Serial No. 730,118
3 Claims. (Cl. 137—18)



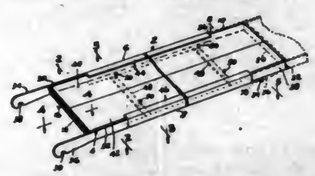
1. In an oil thief, an elongated barrel having a first aperture at one end thereof, a ball for closing said first aperture, a trigger arm carried in said barrel and extending through a second aperture in the other end of said barrel through which liquid is passed having a suspension eye at one end thereof adapted to receive a suspending line, a retainer at the other end of said trigger arm, and a stop against which said trigger arm is movable to position said retainer to hold said ball out of engagement with said first aperture while said device is lowered to a bottom of a tank of liquids, said trigger arm being further operable to release said ball to close said first aperture and thereby entrap a sample of liquids in said barrel upon a slackening of the suspending line.

2,447,862
HANGER FOR BROOMS, TOOLS, AND THE LIKE
Joseph A. Kane, Philadelphia, Pa.
Application December 31, 1946, Serial No. 719,530
1 Claim. (Cl. 248—360)



A hanger of the kind described comprising a cylindrical handle having a mortise directly in the outer end thereof terminating in a mouth opening only at and contained entirely within the extreme terminal of said handle, a loop shaped hanger loosely mounted in said mortise for free longitudinal sliding movements to permit its retraction and projection by gravity according to the position of said handle, and a pin fixed directly in the handle and projecting across said mortise and through said hanger to provide the only connection between the handle and hanger.

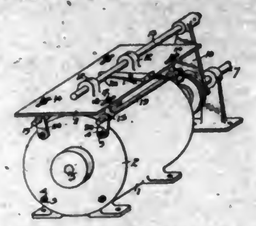
2,447,863
VIBRATION INDICATING APPARATUS
Earle L. Kent, Elkhart, Ind., and Robert C. Treseder, Dayton, Ohio; said Kent assignor to C. G. Conn, Ltd., Elkhart, Ind., a corporation of Indiana
Application May 9, 1944, Serial No. 534,832
2 Claims. (Cl. 177—351)



1. Vibration indicating apparatus comprising a casing, a vibratory member in the casing, a photo-sensitive voltage generating device mounted in the casing at one side of the vibratory member and parallel to the plane of vibration thereof, the casing having an opening therein adjacent the other side of the member and which is blocked by the member in its neutral position and variably opened as the member moves away from its neutral position to admit light to said device, and means to indicate a function of the voltage generated by the device.

2,447,864
PIVOT MOUNTING FOR LOOMS AND THE LIKE
Robert A. Littlejohn, Danville, Va., assignor to Dan River Mills, Incorporated, a corporation of Virginia
Application September 6, 1946, Serial No. 695,199
5 Claims. (Cl. 139—1)

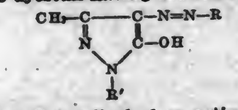
1. A supporting member adapted as a pivot mounting in loom construction comprising a cylindrical body portion forming a bearing surface to accommodate pivoting motion of a loom element, a collar portion adjustably associated with said body portion for positioning said loom element on said body portion, and means for attaching said body portion and collar portion to a loom frame and for locking said collar portion in adjusted relation with respect to said body portion.



2,447,865
EXTENSIBLE PLANK OR THE LIKE
Lewis Clef McClintock, Palmdale, Calif., assignor to Doris M. Brown, Pittsburgh, Pa.
Application October 4, 1945, Serial No. 620,226
5 Claims. (Cl. 304—38)

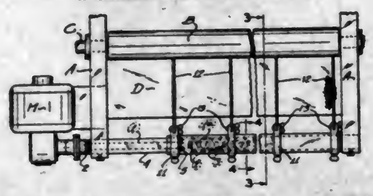
1. In an extensible plank of the class described comprising, a pair of side channels, a pair of end headers one of which being connected to the respective ends of said side channels and having a pair of boards laid tightly in the space provided by said pair of channels and said headers, a front end header and a rear end header in said extensible plank, a cross rod member at the underside of said rear end header extending partially from the sides thereof, and a pair of locking extension members provided at and extending from said front end header, for providing male and female ends for said extensible plank.

2,447,866
SHIFTER ARRANGEMENT
Edward O. Merline, Detroit, Mich., assignor to Norman L. Boxwell, Detroit, Mich.
Application September 28, 1945, Serial No. 619,223
8 Claims. (Cl. 192—.02)



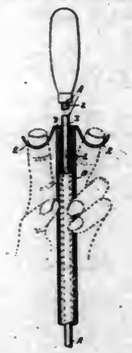
1. A shifter arrangement including a baseplate having aligned bearings thereon, a rod supported for axial movement in the bearings, means for moving the rod axially, members carried by the baseplate for attachment to opposite ends of a motor for supporting the baseplate and holding

the rod parallel with the motor shaft, and a yoke fixed on the rod.



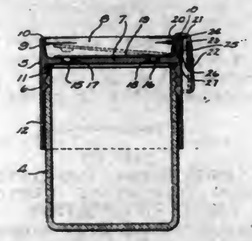
2,447,867
AZO DYESTUFFS OF THE PYRAZOLONE SERIES
Abby Ware Nies, Bound Brook, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 9, 1944, Serial No. 553,458
5 Claims. (Cl. 260—162)

1. An azo dyestuff having the formula:



in which R is the radical of an active methylene coupling component selected from the group consisting of acylacetic arylides, aroyl acetonitriles, and 5-pyrazolones unsubstituted on the 2-nitrogen, and R' is a sulfonated phenyl radical, the azo linkage being directly joined to the carbon atom of said active methylene group.

2,447,868
INK AGITATOR
Douglas Ortleb, St. Louis, Mo.
Application May 9, 1945, Serial No. 592,836
1 Claim. (Cl. 101—364)

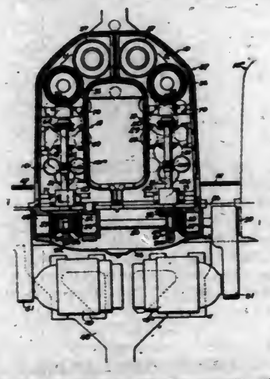


An agitator for an ink fountain comprising a shaft and means connected at one end thereof for driving the same, the opposite end of said shaft and for a considerable portion of its length being of enlarged diameter, to form a shaft having a reduced portion and an enlarged portion, screw threads formed on the enlarged portions of said shaft, a substantially square shaped tubing for enclosing said reduced portion, a substantially square shaped tubing of larger diameter for enclosing said enlarged portion and mounted for longitudinal movement on said first tubing, a plurality of members mounted in space relation on said larger tubing, agitator blades carried by each of said members, and means within said movable tubing for engaging the threaded portion of said shaft to reverse the movement of said movable tubing and its supported blades.

2,447,869
CLEANER ROD GUIDE FOR GUN BARRELS
Herbert F. Pearson, Menomonee Falls, and Leonard T. Bentzien, Milwaukee, Wis.
Application April 12, 1945, Serial No. 587,950
1 Claim. (Cl. 16—2)

A cleaner rod guide for rifle barrels, comprising a tubular section, the outer face thereof being adapted to snugly fit within a gun barrel and the inner face to snugly fit over a cleaner rod, a radially extended supporting portion surrounding the upper edge of the tubular section, said supporting portion terminating in a pair of diametrically opposite bowed wing-like members extending radially therefrom and having the convex side of said bowed members directly below the said supporting portion, whereby the wing-like members serve as finger grips between the guide and gun barrel, while the other hand of the operator reciprocates a cleaning rod.

2,447,870
DRINKING CONTAINER AND JAR CLOSURE FITTING
Bernard H. Polcyn, Milwaukee, Wis.
Application July 1, 1944, Serial No. 543,119
1 Claim. (Cl. 65—13)



In a device of the described class, a drinking cup attachment for a jar, said attachment comprising a cap provided with a drinking well having a ported bottom and a rim with an external recess, valve means controlling deliveries from the jar to the cap, in combination with a valve operating lever having a portion looped over the said rim in loose pivotal relation thereto, and resilient means in the looper portion of the lever seated in the recess and adapted to urge the lever toward valve closing position, said lever having a depending handle portion in a position to be grasped by the hand used for lifting the jar.

2,447,871
SWITCH MECHANISM
Arthur L. Riche, Freeport, Ill., assignor to First Industrial Corporation, Wilmington, Del., a corporation of Delaware
Application August 14, 1944, Serial No. 549,354
4 Claims. (Cl. 200—67)

1. In an electric switch, a stationary contact, a movable contact, a resilient contact arm having one end anchored at a fixed point and carrying said movable contact, an actuator oscillatable about an axis at one side of said resilient arm, snap action means for oscillating said actuator in either direction, means including a post on said actuator for striking said arm for positively opening and holding open said contacts upon movement of the actuator in one direction, and means including a second post in spaced relation with the first post on said actuator to engage said arm upon movement of the actuator in the opposite direction for closing said contacts and for pressing upon the arm close to said movable contact for positively retaining it in closed contact position.

2,447,872
PRINTING UNIT AND DRIVE MECHANISM THEREFOR
Joseph A. Riggs, Hinsdale, Emory W. Worthington, Chicago, and Christopher Verne Knell, Glen Ellyn, Ill., assignors to The Goss Printing Press Company, Chicago, Ill., a corporation of Illinois
Application January 12, 1945, Serial No. 572,568
13 Claims. (Cl. 101—216)

1. In a rotary type printing unit, the combination of a pair of spaced side frames of arch form, each side frame comprising a pair of upright columnar portions joined at their upper ends by an arch portion, a pair of printing couples having their opposite ends journaled in said side frames, each couple including a printing cylinder and a coacting impression cylinder disposed with the ends of the printing cylinders journaled in the upper ends of the columnar portions of said side frames and with the ends of the impression cylinders journaled in the arch portions of said side frames, a drive mechanism including a horizontal drive shaft extending

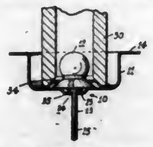
substantially along the lower end of one of said side frames, means including a pair of vertical shafts extending upward along the columnar portions of said one of said side frames for drivingly connecting said horizontal shaft to respective ones of said printing cylinders, means for drivingly connecting each of said printing cylinders to its companion impression cylinder, means for rotatably supporting said vertical shafts on said columnar portions of said side frames, a set of ink transferring rollers arranged below each of said printing cylinders and in transferring relation therewith, ink supplying mechanisms for feeding ink to respective sets of said ink transferring rollers, said ink transferring rollers having shafts journaled in said columnar portions generally along said vertical shafts and having driving connection with the latter.

2,447,873

PREPARATION OF ORGANOHALOGENOSILANES

Eugene G. Rochow, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

No Drawing. Application June 28, 1946, Serial No. 680,071
10 Claims. (Cl. 260—448.2)



1. The method of preparing organohalogenosilanes containing a hydrogen attached directly to the silicon atom which method comprises effecting reaction at a temperature of from 200° to 500° C. between a hydrocarbon halide in the vapor state and the silicon component of a mass comprising silicon and a preformed halide of copper.

2,447,874

ELECTRICAL TERMINAL CONNECTOR

Anthony G. Rosa, Lyndhurst, N. J.

Application October 17, 1944, Serial No. 559,093
2 Claims. (Cl. 250—27.5)

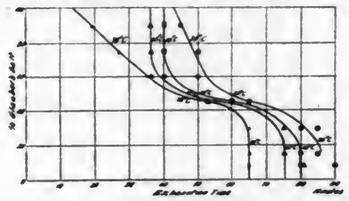
2. In a device, as claimed in claim 1, and wherein the inside diameter of the inner ridge at the bottom of the cup-shaped member conforms in size to the diameter of the bottom edge of the cone-shaped bottom of the electrode, and the inside diameter of the outer ridge at the bottom of the cup-shaped member conforms in size to the diameter of the cone-shaped portion of the pin.

2,447,875

MATERNITY PANTIE

Pauline E. Rosenblatt, Cleveland, Ohio

Application August 24, 1946, Serial No. 692,752
1 Claim. (Cl. 2—224)



A maternity pantie comprising a front panel of knitted material having outside edges extending in upwardly converging lines and two arcuate bottom edges converging at their adjacent ends downwardly, longitudinally stretchable strips of knitted material secured in stretched condition and slightly spaced from each other to the unstretched arcuate bottom edges of said front panel, a back panel having a re-enforced, nonstrechable top edge, a crotch member extended between the front and rear panels and connected with the central portions of said front and rear panels and the opposed side edges of said longitudinally stretchable strips, a longitudinally stretchable, folded top strip of knitted material secured in stretched condition to the unstretched top edge of said front panel, yielding strips connecting the ends of said top strip with the ends of the re-enforced top edge of said back panel, and strip-like means connecting the lower ends of the front panel adjacent the ends of the longitudinally stretchable strips to the adjacent edges of the rear panel.

2,447,876

AQUEOUS DISPERSIONS OF BUTADIENE POLYMERS AND TREATMENT OF WOOL THEREWITH

John B. Rust, Montclair, N. J., assignor to Montclair Research Corporation, a corporation of New Jersey

Application April 3, 1945, Serial No. 586,293
5 Claims. (Cl. 260—29.7)

1. A bath for treating wool to give shrinkproofing with substantially normal hand which comprises an aqueous substantially stable emulsion of a synthetic butadiene polymer of 100% polymerization, in amount to give 1 to 25% by weight of polymer deposition on the wool, and a soap alone as the essential emulsifying agent, the soap being an alkali metal salt of a fatty acid containing at least 10 carbon atoms, and at least 25% by weight on the polymer of a water-soluble neutral salt of an alkali metal as conditioning electrolyte, the pH of the bath being below 7.

2,447,877

WOOL SHRINKPROOFING BATHS CONTAINING BUTADIENE COPOLYMERS AND THEIR UTILIZATION

John B. Rust, Montclair, N. J., assignor to Montclair Research Corporation, a corporation of New Jersey

No Drawing. Application August 28, 1945, Serial No. 613,200
8 Claims. (Cl. 260—29.7)

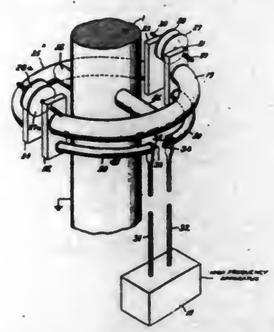
1. A bath for treating wool to give shrinkproofing with substantially normal hand which comprises an aqueous substantially stable emulsion containing a synthetic copolymer of 100% polymerization, of butadiene 1.3 and from 10 to 80% by weight in the copolymer of a 2, methyl butadiene 1.3 selected from the group consisting of isoprene and 2,3 dimethyl butadiene 1.3, in amount to give 1 to 25% by weight of copolymer deposition on the wool, a non-cationic emulsifying agent, and at least 25% by weight on the copolymer of a water-soluble neutral salt of an alkali metal as conditioning electrolyte, the pH of the bath being below 7.

2,447,878

WOOL SHRINKPROOFING BATHS CONTAINING BUTADIENE COPOLYMERS AND THEIR UTILIZATION

John B. Rust, Montclair, N. J., assignor to Montclair Research Corporation, a corporation of New Jersey

No Drawing. Application August 28, 1945, Serial No. 613,201
10 Claims. (Cl. 260—29.7)



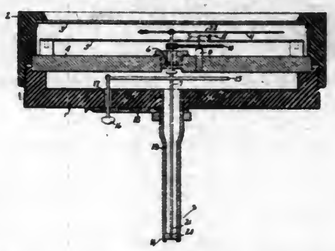
1. A bath suitable for shrinkproofing wool while retaining substantially normal hand which comprises an aqueous substantially stable emulsion containing a synthetic copolymer of 100% polymerization, of butadiene 1.3 and from 10 to 60% by weight in the copolymer of a benzene containing an unsaturated side chain of two carbon atoms selected from the group consisting of styrene, α,ρ-dimethyl styrene, dichlorostyrene, and phenyl-acetylene, in amount to give 1 to 25% by weight of copolymer deposition on the wool, a non-cationic emulsifying agent, and at least 25% by weight on the copolymer of a water-soluble neutral salt of an alkali metal as conditioning electrolyte, the pH of the bath being below 7.

2,447,879

ANTENNA

Marvel W. Scheldorf, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application November 19, 1945, Serial No. 629,665
8 Claims. (Cl. 250—33.53)



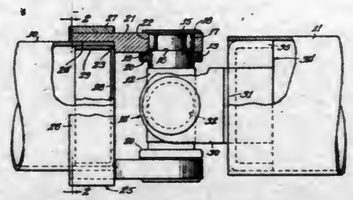
1. A high frequency antenna element comprising a pair of closely spaced, open, arcuate conductors similarly oriented in substantially parallel planes and connected together at their corresponding ends, a third arcuate conductor also lying in a substantially parallel plane and having one of its ends in spaced relation with and capacitively coupled to one of the connected ends of said pair of conductors, and means coupled to one of said pair of conductors for supplying high frequency energy to said antenna, said pair of conductors and said third conductor conjointly forming an arcuate antenna element having an effective electrical length substantially equal to a full wavelength at said high frequency.

2,447,880

MAGNETOMETER

John D. Seaver, Marblehead, Mass., assignor to General Electric Company, a corporation of New York

Application August 24, 1945, Serial No. 612,366
5 Claims. (Cl. 175—183)



1. A magnetometer comprising a pivoted shaft, a pointer on said shaft, a scale with which said pointer cooperates, a spring for rotatively biasing the shaft toward a zero pointer scale indicating position, and a permanent magnet armature on the shaft less than $\frac{1}{16}$ inch in diameter and polarized in a direction at right angles to the shaft and made of an alloy or silver, manganese, and aluminum having a coercive force of the order of 6700 oersteds and a maximum permeability of the order of 1.11.

2,447,881

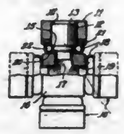
UNIVERSAL JOINT

Archibald A. Warner, Rockford, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois

Application May 1, 1944, Serial No. 533,583
13 Claims. (Cl. 64—1)

1. An elongated shaft and a yoke for a joint at the end of said shaft, said yoke including spaced metal strips each having a shoulder on one of its faces, said strips being positioned longitudinally of the shaft with the shoulders abutting the end of the shaft; and means engaging said shaft and strips and retaining said shaft and strips pressed together and thereby said shaft and yoke in assembled relationship, the portions of said retaining means engaging said strips and shaft having a noncircular contour coinciding with the contour of the engaged surfaces of the shaft and strips.

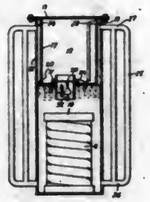
2,447,882



UNIVERSAL JOINT

Archibald A. Warner, Rockford, Ill., assignor to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois

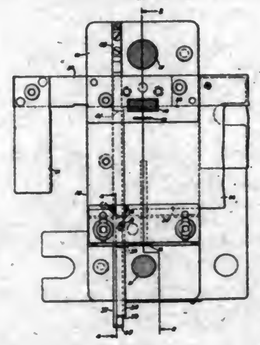
Application May 1, 1944, Serial No. 533,585
10 Claims. (Cl. 64—17)



1. A universal joint comprising a pair of yokes; the arms of each yoke being provided with

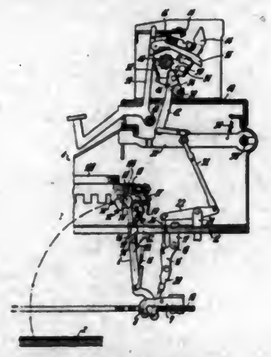
aligned bores; plugs fixed in said bores and projecting toward each other; an oscillatory center member; sockets in said center member aligned with said plugs; stampings having stub portions

anchored in said sockets and cup-shaped portions surrounding the inner portions of said plugs; and a plurality of anti-friction members in each of the cupped portions of said stampings and engaged by the inner portions of said plugs.



2,447,883
ELECTRICAL INDUCTION APPARATUS
Lawrence C. Whitman, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application March 30, 1944, Serial No. 528,716
9 Claims. (Cl. 174—17)

1. An electric induction apparatus including an enclosing casing, partition means providing a chamber within said casing and in the vicinity of the top of said casing, said partition means providing side walls of said chamber spaced from the side walls of said casing, a dielectric liquid within said casing and having a no load level below the top of said casing so that upon heating said liquid may expand into the space between the side walls of said chamber and said casing, gas in said chamber, means providing an opening between said casing and chamber in the vicinity of the full load level of said liquid, and means for returning said liquid from said chamber to said casing when the liquid level in the casing falls below said full load level after rising above it.

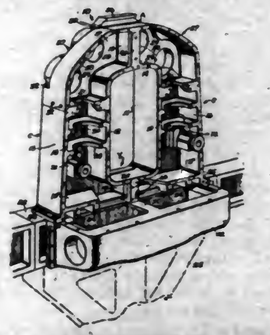


2,447,884
MATERIAL WORKING APPARATUS
Charles E. Willous, West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 9, 1946, Serial No. 660,687
7 Claims. (Cl. 164—59)

7. In an apparatus having a forming tool and a shearing tool movable to successively form portions of a material, advanced intermittently in a given path, and to shear the portions from the material, and a stationary stop to locate the material relative to the tools subsequent to the first number of operations, an auxiliary stop mounted for movement transversely of the path of the material, means for use in moving the auxiliary stop to locate a portion of a slightly greater length than that required for the first forming operation beneath the forming tool, another auxiliary stop mounted for movement transversely of the path of the material, means for use in moving

the second auxiliary stop to locate the material for the second forming operation and for the first shearing operation to trim the excess portion from the leading end of the material, and separate means to normally urge the auxiliary stops out of the path of the material.

2,447,885
TYPE BAR MECHANISM FOR TYPEWRITING MACHINES
Elmer L. Wise, Bridgeport, Conn., assignor to Underwood Corporation, a corporation of Delaware
Application December 4, 1944, Serial No. 566,425
10 Claims. (Cl. 197—37)

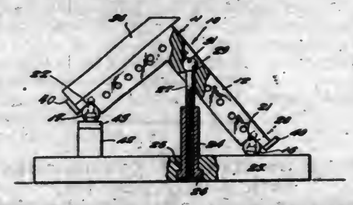


9. In a typewriting machine, a type bar, a type head shiftably mounted on the bar, types carried by said head and arranged to be shifted respectively into and out of operative positions by the shifting movements of said head, a member mounted on said bar and having a part engaging said head and arranged to yield as the head is shifted from one position to another for yieldingly holding the head in operative position on the bar and cooperating means respectively on the member and bar and interfittable by manipulation of the member for holding the member removably in place on the bar.

2,447,886
POWER HAMMER
Robert Worth, Nutley, N. J., assignor to Homelite Corporation, East Port Chester, Conn., a corporation of Connecticut
Application October 11, 1945, Serial No. 621,798
10 Claims. (Cl. 125—33)

1. A power hammer comprising a cylinder closed at both ends and acting as a ram, guide means for removably supporting the cylinder for reciprocal movement, a double-ended piston slidably disposed within said cylinder, a rotary crank, a constant speed motor driving said crank, and connecting means between said crank and said piston, whereby rotary motion of the crank is transmitted to said piston to reciprocate the same.

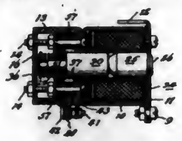
2,447,887
PRINTING PRESS FRAME
Emory W. Worthington, Chicago, Ill., assignor to The Goss Printing Press Company, Chicago, Ill., a corporation of Illinois
Application January 12, 1945, Serial No. 572,567
11 Claims. (Cl. 101—216)



1. A shell type side frame for a rotary printing press unit comprising spaced upright columnar portions of channel-shaped cross section joined at their lower ends by an integral transverse reenforcing yoke and at their tops by an integral arch, said channel-shaped columnar portions having walls, the outwardly presented edges of which lie substantially in the same plane for housing the drive mechanism for rotary printing press elements, means recessed between the walls of said channel-shaped portions for journaled mounting of said drive mechanism, and a removable cover structure adapted to engage said outwardly presented edges and sealingly close the open outer sides of said columnar portions to constitute the latter oiltight housings for said drive mechanisms.

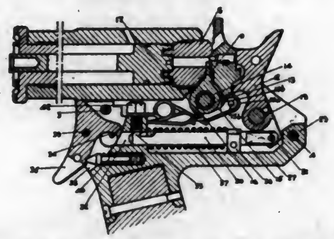
2,447,888
THERMOMETER
Albert J. Young, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application September 7, 1944, Serial No. 553,077
8 Claims. (Cl. 73—371)

4. In a registering thermometer, a bulb joined to a stem provided with a capillary bore, said bulb communicating with said bore, said bore comprising an indicating portion of uniform cross section throughout its length and a connecting portion of gradually enlarging cross section from its junction with said indicating portion to its opening into said bulb, a thermosensitive liquid such as mercury contained in said bulb, and a fiber mounted in said connecting bore portion and extending approximately to said junction, said fiber having a cross section slightly smaller than the cross section of said bore whereby said fiber serves as a constriction to break the liquid column and thereby hold it in its maximum registering position.



2,447,889
SINE ANGLE PLATE
Carl Adler, Wickliffe, Ohio
Application January 31, 1945, Serial No. 575,402
3 Claims. (Cl. 33—174)

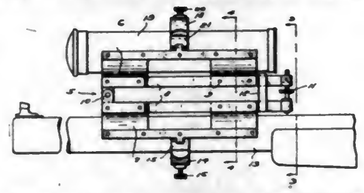
3. In a device of the kind described an L-shaped plate, the terminals of each end of which are provided with rabbeted seats, rolls fixedly mounted on each of said seats, a base plate upon which the L-shaped plate is mounted, one face of said L-shaped plate being formed with a countersunk opening therethrough, said base plate being formed with a countersunk opening therethrough,



and adjustable means comprising a link having threaded telescopically associated parts engageable through said openings for fixing the plates together.

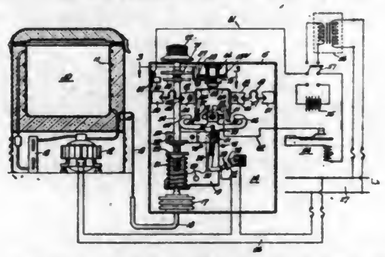
2,447,890
ELECTROMAGNETIC MECHANISM
Alphonse V. Alvino, Newark, N. J., assignor to Bendix Aviation Corporation, Bendix, N. J., a corporation of Delaware
Application December 3, 1942, Serial No. 467,777
6 Claims. (Cl. 200—111)

2. In a solenoid switch, a cup-shaped shell of magnetic material, a solenoid coil therein, a cup-shaped shell of non-conducting material, said latter shell having straight-edged plane surfaces on several sides thereof, a pair of terminal screws carried by the second-named shell and having heads engageable with one of said plane surfaces, and means for attaching the coil ends to said terminal screws, said coil ends being led through spaced-apart apertures in said first-named shell.



2,447,891
PIVOTED BREECH BLOCK PISTOL WITH A THREE-PRONGED BIASING SPRING
John Basil Arrowsmith, Aston, Birmingham, England, assignor to Accles & Shelvoke Limited, Aston, Birmingham, England
Application November 23, 1944, Serial No. 564,783
In Great Britain November 23, 1943
9 Claims. (Cl. 42—34)

1. In a pistol, an extractor, a breech block, an extractor-operating pawl rotatably mounted on said breech block, and a one-piece spring comprising at least three prongs, one of which loads the extractor, a second of which loads the breech block, and a third of which loads the extractor-operating pawl.

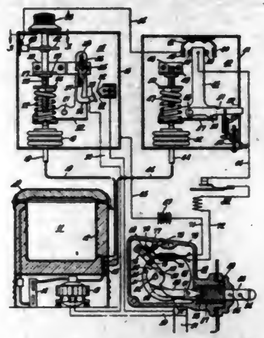


2,447,892
FLASHLIGHT ATTACHMENT FOR FIREARMS
Doyle D. Baliff, Gary, Ind.
Application March 7, 1946, Serial No. 652,503
1 Claim. (Cl. 240—6.41)

Means for supporting a flashlight on the barrel of a firearm comprising a pair of channel members arranged parallel back to back in opposed relation, one member for straddling the barrel and the other for straddling a flashlight, said members having a pair of longitudinal central flanges extending along the backs thereof in a common plane with said members and in spaced apart relation with rear ends extending beyond rear ends of said members, said flanges being pivoted together at front ends thereof for tilting of one member relative to the other, an adjusting screw connecting the rear ends of the flanges

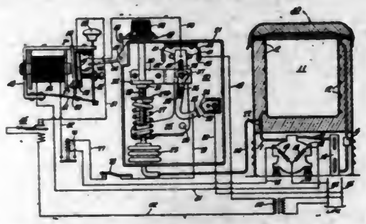
for tilting said one member, a pair of guides on the rear end of one flange straddling the rear end of the other flange forwardly of said screw and to guide said one member in tilting movement thereof, and clamps for securing said members to said barrel and flashlight respectively.

2,447,893
ALARM SYSTEM FOR ELECTRIC REFRIGERATORS
John J. Bauman, Abington, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 30, 1944, Serial No. 551,977
29 Claims. (Cl. 62—2)



1. A controlling and indicating apparatus for a refrigerator, comprising thermal-responsive means arranged for actuation according to the temperature within a compartment of said refrigerator, switch means operable by said first-named means and adapted to control the operation of said refrigerator, electrical indicating means, and additional switch means operable by said first-named means in response to predetermined excessively high and low temperatures within said compartment, said last-named switch means being arranged to control said indicating means so as to give an indication of excessively high or low temperature.

2,447,894
ELECTRIC REFRIGERATOR ALARM SYSTEM
John J. Bauman, Abington, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 30, 1944, Serial No. 551,978
19 Claims. (Cl. 62—4)



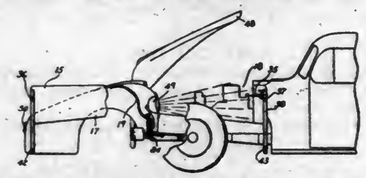
1. In an apparatus for indicating excessively high or low temperature within a refrigerated area, switch means operable in response to predetermined excessively high and low tempera-

tures within said area, indicating means operable by said switch means, additional switch means for rendering said indicating means in-

operative, and means for automatically actuating said additional switch means in predetermined timed relation to the refrigerating cycle to render said indicating means operative.

2,447,895
ALARM SYSTEM FOR ELECTRIC REFRIGERATORS
John J. Bauman, Abington, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application October 28, 1944, Serial No. 560,845
17 Claims. (Cl. 62—2)

17. In an apparatus for indicating excessively high or low temperature within a refrigerated area, switch means operable in response to predetermined excessively high and low temperatures within said area, indicating means operable by said switch means, and means for rendering said indicating means temporarily inoperative, and for rendering said indicating means operative in accordance with the commencement of a refrigerating cycle.



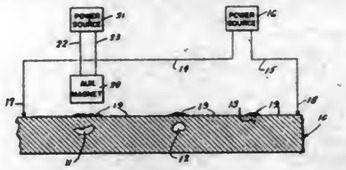
2,447,896
HIGH-TEMPERATURE TURBINE
William Charles Clarke, Jr., Dundalk, Md., assignor to Armco Steel Corporation, a corporation of Ohio
No Drawing. Application February 1, 1946, Serial No. 645,015
3 Claims. (Cl. 253—77)

1. Turbine parts of austenitic stainless steel, with any ferrite only in traces, comprising 12% to 22% chromium, 10% to 21% nickel, 0.10% to 2% manganese, 2% to 4% molybdenum, 2% to 4% copper, 0.15% to 0.75% titanium, 0.20% to 1.10% columbium, 0.01% to 0.15% carbon, and remainder iron, characterized by resistance to fatigue and creep and by resistance to attack by corrosive gases under conditions of high temperatures.

2,447,897
HIGH-TEMPERATURE STAINLESS STEEL
William Charles Clarke, Jr., Dundalk, Md., assignor to Armco Steel Corporation, a corporation of Ohio
No Drawing. Application May 23, 1946, Serial No. 671,905
7 Claims. (Cl. 75—128)

1. Hot workable chromium-nickel stainless steel, essentially consisting of 12% to 22% chromium, 10% to 21% nickel, 0.10% to 2% manganese, 2% to 4% molybdenum and 2% to 4% copper, 0.01% to 0.15% carbon, 0.15% to 0.75% titanium, 0.20% to 1.10% columbium and the remainder substantially all iron, said steel being substantially fully austenitic and susceptible to precipitation and critical dispersion of a finely divided precipitate, including columbium and titanium from solution to enhance load-carrying capacity for high temperature duty.

2,447,898
AUTOMOBILE FENDER CONSTRUCTION
Louis Colaner, Sr., Freehold, N. J.
Application March 20, 1947, Serial No. 736,039
2 Claims. (Cl. 280—152)



2. In an automobile having a frame structure, an engine hood, wheel fenders at the sides of the hood and forwardly directed headlights on the fenders, said fenders being separate from the hood and said hood being hinged at one end enabling it to be raised independently of the fenders, vertical pivot means mounting the forward ends of the fenders on the forward end at opposite sides of the frame structure and at the outer edge thereof enabling them to be swung outwardly and forwardly into substantially completely reversed relation with the headlights carried thereby directed inwardly toward engine parts normally covered by the hood, means for securing the rearward ends of the fenders in normal position at the sides of the hood, said means being so constructed and arranged as to permit quick release thereof, said vertical pivot means being so constructed and arranged as to be readily separable to permit quick removal of a fender from the frame structure, and electrical connections to the headlights including couplings disconnectable for enabling quick complete separation of a removed fender.

2,447,899
METHOD AND MEANS FOR DETECTING FLAWS IN MAGNETIZABLE OBJECTS
Grant W. Coon, Chicago, Ill., assignor to Magnaflux Corporation, Chicago, Ill., a corporation of Delaware
Application March 27, 1944, Serial No. 528,202
10 Claims. (Cl. 175—183)

1. The method of testing a magnetizable body for surface and sub-surface defects which in-

cludes magnetizing the body by passing a relatively heavy electric magnetizing current through said body, dusting the body with paramagnetic particles, and subjecting the particles to the influence of a relatively weak auxiliary magnetic field, the main magnetic field of the magnetized object being non-pulsating and unidirectional, and the auxiliary magnetic field being a periodically reversing pulsating field.

7. Means for agitating paramagnetic particles

disposed on the surface of a magnetized object comprising a magnetizing coil, a pair of power supply conductors arranged to be connected to a source of alternating current, rectifier means, means for connecting said coil to said power supply conductors through said rectifier means, a switch means for reversing the direction of current flow through said coil, and means for periodically operating said switch means to reverse the direction of current flow through said coil.

2,447,900

HOSE COUPLING

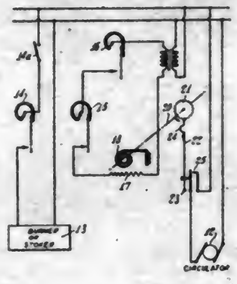
Charles H. Crawley, Cleveland, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio

Application June 27, 1944, Serial No. 542,283

9 Claims. (Cl. 285—75)

1. A hose coupling comprising in combination a nipple having a substantially spherically shaped enlargement adjacent the end thereof adapted to enter the hose end to be coupled, and a hose engaging nut having an internally tapered threaded part with an open end into which the hose may enter, an apertured closed end freely and closely engaging the nipple remote from said enlargement, said closed end sloping toward and paralleling said enlargement and joining said internally tapered threaded part, said internally tapered threaded part having threads of minimum pitch diameter adjacent said closed end and of maximum pitch diameter adjacent said open end, said maximum pitch diameter being substantially smaller than the external diameter of the hose at its point of greatest enlargement adjacent the enlargement of said nipple when the hose is coupled.

2,447,901



HEATING SYSTEM

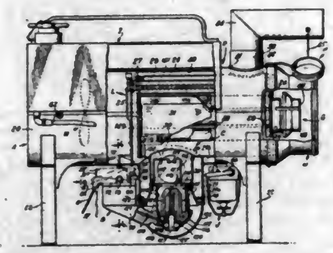
Ralph W. De Lancey, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a corporation of Connecticut

Application May 14, 1942, Serial No. 442,943

5 Claims. (Cl. 236—9)

3. A heating system including a furnace, a motor operated circulator for securing forced circulation of heating medium, means to fire the furnace when it is below a predetermined high temperature to maintain it at substantially said high temperature, and means to control the operation of the circulator comprising a thermostat in the space to be heated, a normally closed thermostat in the furnace independent of the first mentioned means and in series with the first thermo-

stat and adapted to open when the furnace temperature is below a predetermined lower temperature, and a thermal motor having a heater in series with the thermostats and effective to provide a predetermined delay in starting the circulator after the thermostats close the circuit and in stopping the circulator after the circuit has been opened by one of the thermostats.



2,447,902

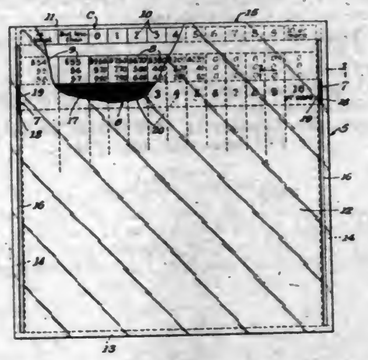
FUEL CONTROL FOR HOT-AIR HEATERS

Ralph W. De Lancey, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a corporation of Connecticut

Application November 13, 1943, Serial No. 510,183

19 Claims. (Cl. 126—110)

19. In combination, a blower, a gravity fed, liquid fuel fired burner operated by forced draft from the blower and having a combustion chamber formed by a wall adapted to be heated by the burning fuel, means forming a down draft air passageway about the wall and normally cooled by the draft air, a hot air heater operatively connected with the combustion chamber and supplied with ventilating air by the blower, and means normally preventing overheating of the burner comprising a bimetallic thermostat in the air passageway and normally kept cool by the air therein, a fuel supply valve controlled by said thermostat, the thermostat being closely adjacent the combustion chamber wall so as to be subject to radiant heat therefrom and effective on overheating to close said valve.



2,447,903

CARDHOLDER WITH SLIDE

Dwan G. Dimit, Sierra Madre, Calif.

Application April 23, 1947, Serial No. 743,267

5 Claims. (Cl. 235—89)

1. A device of the character described comprising a transparent flat open-ended envelope having parallel slots adjacent the closed sides thereof, a slide within the envelope and having ends extending through said slots, and a manipulating handle on each of said ends.

2,447,904

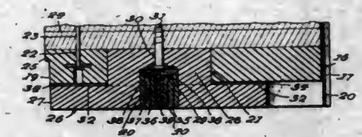
HOSE SUPPORTER

Sinon J. Falsey, New Haven, Conn.

Application June 30, 1945, Serial No. 602,571

4 Claims. (Cl. 24—263)

4. In a garment supporter, clasp means comprising a socket wedge member having a pair of laterally spaced downwardly converging channel grooves at its forward side and a pair of vertically spaced horizontal slots in its upper end portion, an insert wedge member having downwardly converging side edges and wedgingly engageable in a downward direction with said socket wedge member with a portion of the garment therebetween, and a suspension tape member, for connection to a supporting garment spaced upwardly from the garment to be supported, secured at its lower end to the upper end of said insert wedge member and slidably engaged betweeh its upper and lower ends from front to rear through the lower of said slots of said socket wedge member and from rear to front through the upper of said slots, said point of securing of said tape to said insert wedge member being above its point of sliding engagement with the lower of said slots in the engaged relation of said members, whereby upward pull on the upper end of said tape member exerts a downward pull on its lower end and a downward wedging force on said insert wedge member.



2,447,905

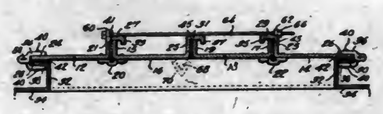
ROTATABLE RUBBER HEEL

Benjamin Gilowitz, Bronx, N. Y., assignor of twelve and one-half per cent to Irving Skrilow, and twelve and one-half per cent to Abraham Levin, both of New York, N. Y.

Application May 7, 1947, Serial No. 746,465

1 Claim. (Cl. 36—35)

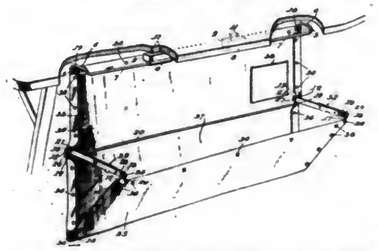
A shoe heel comprising a body for attachment to a leather heel, a rotatively adjustable heel section contacting with the lower side of said body, and a screw extending centrally through said rotatively adjustable heel section for detachably mounting the latter, the upper side of said rotatively adjustable heel section having smooth radial areas to which cement will not adhere tenaciously, the remaining upper areas of said rotatively adjustable heel section and the areas of said body in contact with said remaining upper areas being relatively rough to permit cement to readily adhere thereto, whereby if said rotatively adjustable heel section be cemented to said body, it will possess radial areas not cemented to said body, to facilitate insertion of a tool for prying off said heel section when desired.



2,447,906

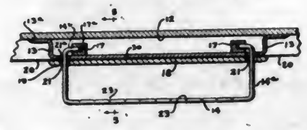
HATCH COVER

Eugene Groppell, New Orleans, La.



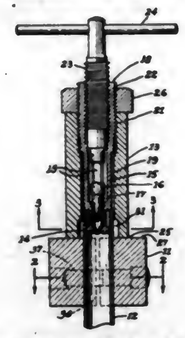
Application August 1, 1946, Serial No. 687,732

9 Claims. (Cl. 114—201)



4. A hatch cover for a hatchway having a coaming therearound, comprising a pair of closure units adapted to asume normal closed positions with their inner edges adjacent each other and with said panels lying in a common plane over said coaming, the inner edges of said units having upstanding flanges arranged parallel to each other when said units are in normal closed position, a sealing gasket between said flanges, a plurality of hinges pivotally connecting the remote edges of said units to said coaming, each hinge comprising relatively movable parts connected respectively to said coaming and the adjacent unit and provided with elongated apertures, a pin arranged in the apertures of each hinge, each unit comprising a pair of panels having adjacent edges arranged parallel to said remote edges of said units, hinge means connecting said adjacent edges of each unit and providing limited movement of such edges toward and away from each other, sealing gaskets arranged between said adjacent edges, and means engaging the remote panels of said units for moving said panels toward each other into clamping engagement with said sealing gaskets.

2,447,907
IRONING-BOARD ATTACHMENT
Clara May Henderson, Burlington, Iowa
Application August 17, 1945, Serial No. 610,995
3 Claims. (Cl. 38—111)

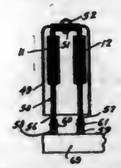


1. In an ironing-board attachment, a frame structure to hang from an ironing-board, said frame struncture including two vertical rods having return bends at their upper ends, and a horizontal pivot rod connecting the terminals of said return bends; bearing means for mounting said pivot rod under one longitudinal edge of an ironing-board to allow said frame structure to be folded onto said board, said return bends being adapted to embrace said edge of the board when said frame structure is folded onto the latter, and pocket-forming means connected with said frame structure to hold a sheet or the like while it is being pressed upon the board.

2,447,908
FOLDING CLOTHES RACK FOR AUTOMOBILES
Paul F. Hoots, New Orleans, La.
Application December 10, 1945, Serial No. 633,943
8 Claims. (Cl. 224—42.1)

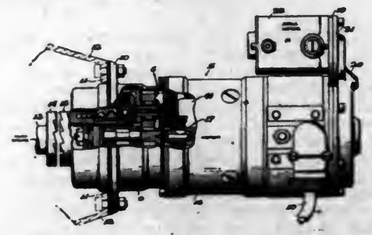
6. For use with an automobile having a roof and an upholstery covering spaced below the roof, a folding clothes rack comprising a casing having a bottom wall, side walls, and means on the side walls for attachment of the casing to the automobile roof with the bottom wall in a substantially horizontal plane, said side walls being of substantially the depth of the space between the automobile roof and upholstery covering to enable the covering to extend beneath said bottom wall, said bottom wall having a slot completely therethrough composed of a longitudinal portion and arm portions at substantially right angles to the longitudinal portion, one end of one arm portion connecting with one end of the longitudinal portion and one end of the other arm portion connecting with the other end of the longitudinal portion, bearings in the casing adjacent the other ends of the arm portions, a garment hanger support bar, arms each connected at one end with an end of said support bar and having their other ends pivoted in said bearings in position to swing into and out of the casing through the slot arm portions, said arms being of substantially the same length as the slot arm portions to align said bar for swinging movement into and out of the longitudinal slot portion, and yieldable detent means in the casing in line with the longitudinal slot portion to encounter and latch the support bar in an upper position within the casing.

2,447,909
TOOL FOR BEADING OR EXPANDING METALLIC TUBE ENDS
Fred Hunziker, Cleveland, Ohio, assignor to The Weatherhead Company, Cleveland, Ohio, a corporation of Ohio
Application January 31, 1946, Serial No. 644,481
4 Claims. (Cl. 153—80)



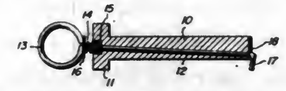
4. An expanding tool comprising tube engaging means including a block having a mouth at one end adapted to fit around the end of the tubing to be expanded and a plurality of collet fingers extending toward said mouth with bulbs at the end of said fingers, said tube engaging means having an internally threaded portion substantially concentric with said mouth, and a rotatable rod with a conical-tip and a threaded shank fitting in said internal thread, whereby the rotation of said rod serves to force said conical-tip against said collet bulbs to expand the latter and to expand the tubing.

2,447,910
LANDING POSITION INDICATOR FOR AIRCRAFT
Basil L. Hurst, Clarendon, Tex.
Application March 20, 1946, Serial No. 655,687
1 Claim. (Cl. 200—52)



A circuit closing device comprising an upright, a structure attaching clamp on the upright, a vertically movable stop on the upright having one end portion protruding beyond one side of the upright, an elongated feeler rod having its upper end pivotally secured to the upright and trailing below the lower end of the upright, a tension spring having one end secured to the stop and its other end to a medial point of the rod, an elongated spring contact arm provided with a spring contact member at one end adapted to be engaged by the rod when the rod strikes a structure at its free end and is moved toward said spring arm, said spring arm being attached to the upright and having its contact end normally spaced from the said rod.

2,447,911
MAGNETIC FIELD GAUGE
Morris L. Mages and Grant W. Coon, Chicago, Ill., assignors to Magnaflux Corporation, Chicago, Ill., a corporation of Delaware
Application July 20, 1945, Serial No. 606,200
1 Claim. (Cl. 175—183)



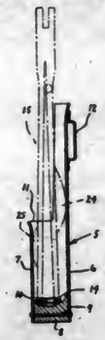
A magnetic field gauge pick-up head comprising a laminated U-shaped paramagnetic core, at least one inductance coil mounted on said core, and paramagnetic boots mounted on the lower ends of the legs of said core, said boots having portions thereof extending between laminations whereby better magnetic contact is maintained between said boots and said legs.

2,447,912
SCAVENGING MEANS FOR AIRCRAFT ENGINES
Romeo M. Nardone, Teaneck, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application March 21, 1944, Serial No. 527,422
7 Claims. (Cl. 123—179)

1. In combination, an aircraft engine starter including a jaw clutch member, a motor having an armature shaft, and a gear reduction train between the said shaft and said clutch member, an auxiliary motor carried by said starter, and including a drive shaft having a pinion at one end, a reduction gear train in driving relation to said pinion, an internally threaded sleeve included as the last element of said gear train, a clutch member having a thread in operative engagement with the threads of said sleeve, jaw teeth on said clutch member, and complemental teeth on said armature shaft.

2,447,913
HITCH PIN
Silas Elvin Robison, Waldron, Mich.
Application January 4, 1946, Serial No. 638,989
1 Claim. (Cl. 85—7)

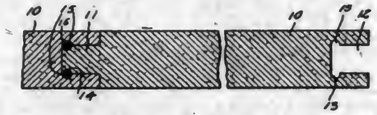
A hitch pin comprising a shank having a socket in one end and provided at its other end with a transverse groove, the shank having a passage extending diagonally therethrough from the bottom of the socket to the bottom of the groove, the passage communicating with the groove at a point between one side of the longitudinal axis of the shank and a side of the shank, a stem extending through the passage, socket and groove and provided at one end with a latching bit shorter than the thickness of the shank and having an included angle with relation to the longitudinal axis of the shank of less than 90 degrees to form a hook, the bit being located at the grooved end of the shank and the stem being adapted to be moved longitudinally and then turned with relation to the shank to arrange the bit in an outwardly or an inwardly extending position with relation to said side of the shank, a portion of the bit being located in the groove when the bit is in outwardly extending position and the entire bit being located in the groove when the bit is in inwardly extending position, a grip on the other end of the stem providing means by which the stem may be moved as stated with relation to the shank, and a coil spring sleeved on the stem between the grip and the bottom of the socket adapted to constantly urge the stem in a direction to hold the bit in the groove.



2,447,914
PROCESS FOR MAKING ALKALI CELLULOSE
Andreas Ruperti, Arlesheim, near Basel, Switzerland, assignor to Ciba Limited, a Swiss firm
No Drawing. Application June 20, 1944, Serial No. 541,285. In Switzerland July 2, 1943
8 Claims. (Cl. 260—233)

1. Process for the manufacture of alkali cellulose of low water and alkali content suitable for the production of cellulose ethers by contacting cellulose at a temperature of 60–90° C. for ½ to 20 seconds with a concentrated aqueous solution of caustic alkali of a concentration at which the solution is still liquid at room temperature, and squeezing out the excess alkaline solution from the resultant soaked cellulose when wetting is complete and before complete swelling has taken place.

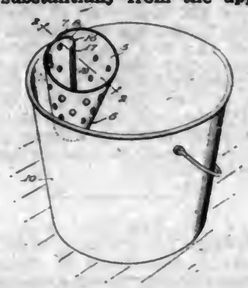
2,447,915
STAPLING KIT
Thomas M. Sisk, Clovis, Calif.
Application August 8, 1946, Serial No. 689,286
3 Claims. (Cl. 224—45)



3. In combination a stapling kit comprising a container adapted to hold a quantity of staples in a horizontal position on the bottom thereof, body attaching means for the container, and staple lifting tongs including a pair of resilient legs, protuberances on the legs to compress the legs by engagement of the protuberances with the opposed sides of the container upon insertion of the tongs therein, grooves in the lower outer sides of the legs for snapping between the sides of a staple to seat the staple in the grooves, and

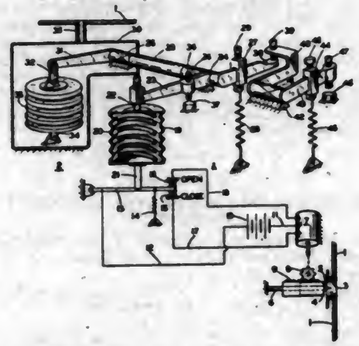
a spreader carried by the tongs to spread the legs into gripping engagement with the staple, said

legs being split longitudinally at their lower ends to provide a pair of resilient fingers to adjust themselves to the taper of the sides of the staple.



2,447,916
BUILDING WALL
John W. Staggers, Washington, D. C.
Application February 11, 1944, Serial No. 521,983
3 Claims. (Cl. 72—107)

1. In a wall construction, a joint, said joint being composed of a pair of connectable elements, one formed with a groove and the other with an interfitting rib, the grooved element being formed with opposed undercut channels at the inner end of its groove, said rib being formed with channels at its free end, a cement deposit for the groove, the opposed channels of the elements being located to receive portions of the cement when the rib is forced into the groove and the cement is dispersed thereby, the outer side wall portions of the channels of the rib being shorter than the opposed sidewall portions to define the free end of the rib as of less cross-sectional area than the portion inwardly of the channels.

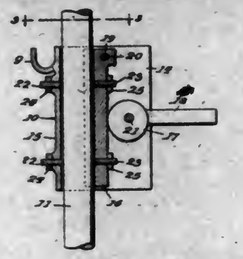


2,447,917
SPIRALLY CONTRACTABLE MOP WRINGING ATTACHMENT FOR SCRUB BUCKETS
Edwin A. Strattman, New Orleans, La.
Application March 22, 1946, Serial No. 656,417
3 Claims. (Cl. 15—263)

1. A mop wringer comprising a one-piece resilient perforated sheet curved into the form of a frusto-conical sleeve, the ends of said sheet being overlapped and slidably contacting with each other to impart continuity to the side wall of said frusto-conical sleeve, said overlapped ends of said resilient sheet being free from attachment to each other to permit spiral contraction of said sleeve and to allow said sleeve to be self-expanding to normal diameter after contraction, and means for anchoring the outer end only of said resilient sheet to a bucket side wall to contractably support said frusto-conical sleeve with its larger end disposed upwardly for reception of a handle-carried mop, the inner end of said resilient sheet having an inward return bend providing it with an integral hook disposed at the side wall of said frusto-conical sleeve and extending substantially from the upper to the

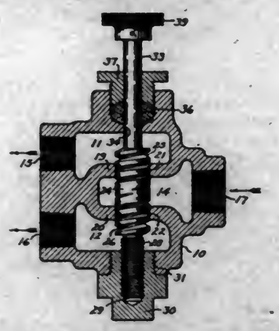
lower end of said sleeve to temporarily connect said inner end of said resilient sheet with the mop while rotating the latter in a direction to contract said sleeve.

2,447,918
AIRCRAFT CABIN PRESSURE REGULATOR
Walter Dorwin Teague, Jr., Alpine, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application July 23, 1945, Serial No. 606,509
11 Claims. (Cl. 98—1.5)



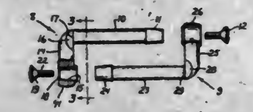
1. A mechanism for controlling the pressure within a supercharged aircraft cabin, comprising a cabin pressure responsive means, atmospheric pressure responsive means, an air outlet valve for said cabin, a motor for positioning said valve, control means for said motor operatively connected to said cabin pressure responsive means, means for movably supporting the cabin pressure responsive means, means operably connecting said atmospheric pressure responsive means to said supporting means for adjusting the position of said cabin pressure responsive means to change the datum thereof, spring means, and a mechanism for transmitting force from said spring means to said supporting means and arranged to vary the rate of operation of said datum changing means.

2,447,919
ADJUSTABLE SUPPORT
Austin F. Teigen, Moorhead, Minn.
Application September 10, 1946, Serial No. 695,954
3 Claims. (Cl. 248—352)



2. An adjustable support comprising a slide

having two spaced parallel vertical side plates and a bight portion integral with one vertical edge of said side plates and extending from the upper to the lower ends thereof, the other vertical edge of each of said side plates being free, a vertically elongated block disposed slidably between said side plates and extending substantially from the upper to the lower ends thereof, said block being spaced inwardly from said bight portion for coaction with the latter in frictionally gripping a vertical supporting member, the upper end of said block having a slot extending from one of



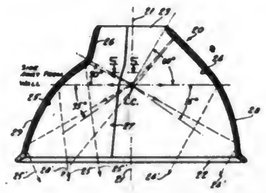
said side plates to the other, a block-suspending bolt extending loosely through said slot and extending also through the upper ends of said side plates, whereby said block is loosely suspended for movement toward and from said bight portion, and an eccentric mounted between said side plates and located between the upper and lower ends thereof, said eccentric contacting with the side of said block remote from said bight portion for forcing said block toward said bight portion and having an operating handle projecting beyond said free vertical edges of said side plates.

2,447,920
FLOW-PROPORTIONING VALVE
Charles M. Terry, Decatur, Ill., assignor to A. W. Cash Company, Decatur, Ill., a corporation of Delaware
Application July 3, 1946, Serial No. 681,343
7 Claims. (Cl. 138—43)

5. A flow-proportioning valve comprising a hollow casing shaped to provide two spaced end chambers and an intermediate chamber between the end chambers, the casing including two partition walls separating the intermediate chamber from the respective end chambers, the two walls having aligned cylindrical openings therethrough, a valve member extending through the openings and having cylindrical portions which fit the openings closely, each of the said cylindrical portions having a helical groove extending therearound to form a passage for fluid flow, each groove extending along a helix of constant lead, the depth of one groove increasing gradually in one direction and the depth of the other groove increasing gradually in the other direction, and means to shift the valve member axially and thereby adjust the relative resistance to flow through the respective openings.

2,447,921
PARACHUTE SHROUD LINK
Albert Thomas, Munhall, Pa.
Application March 22, 1946, Serial No. 656,496
1 Claim. (Cl. 24—265)

A detachable link for connecting the shroud lines of a parchute to the harness, comprising a substantially identical pair of rigid angular elements each having a short leg and a long leg substantially at right angles to each other, the short leg of each element having a slightly tapered elongated bore adjacent its end and parallel to the long leg of the element, the end portion of the long leg of each element being also tapered slightly along an enlongated section at the same angle and having the same dimensions as the tapered bore, said tapered bores and end portions being sloped in a direction so that said elements are adapted to be assembled with the tapered end portion of each long leg extending into and securely wedged into the tapered bore of each short leg, the said tapered portions extending substantially through the said tapered bores but terminating within said bores and adjacent the smaller ends thereof, and a headed screw, threaded axially into the end of each said long leg with its head engaging the bored end of the mating short leg adjacent the smaller end of the bore therethrough, to maintain the wedged engagement of the long legs within their respective tapered bores.

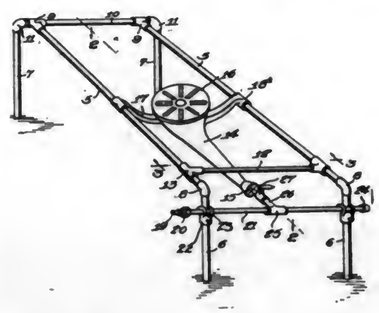


2,447,922
EXPLOSION-PROOF LIGHTING EQUIPMENT
Davis H. Tuck, Redding Ridge, Conn., assignor to Holophane Company, Inc., New York, N. Y., a corporation of Delaware
Application July 12, 1944, Serial No. 544,568
4 Claims. (Cl. 240—11.2)

4. A lighting fixture for use in hazardous locations, comprising an electric light source having an enclosing envelope, a substantially gas tight housing for the light source, a light transmitting liquid receptacle opening into the housing and carbon tetrachloride in the receptacle, whereby carbon tetrachloride vapors may mix with the air in the housing, a portion of the housing being

light transmitting so that the contents of the receptacle are visible therethrough from beneath the fixture.

2,447,923
LIGHTING SYSTEM AND LIGHTING UNITS FOR USE THEREIN
Davis H. Tuck, Redding Ridge, Conn., assignor to Holophane Company, Inc., New York, N. Y., a corporation of Delaware
Application August 26, 1944, Serial No. 551,323
12 Claims. (Cl. 240—9)



1. Means for lighting the marginal portions of a work area extending along a wall line comprising a row of lighting fixtures parallel with the wall each having a light source and a reflector, each reflector having a portion with a vertical axis and of uniform profile throughout substantially 120° each side of a vertical plane through the axis normal to the wall line and a portion with the same axis and an uniform but more concentrating profile throughout substantially 60° each side of said vertical normal plane, each portion reflecting light across the axis, all the reflectors being oriented with the more concentrating profiles away from the wall line so that the fixtures spread light more from the vertical in regions away from the wall line than regions toward the wall line.

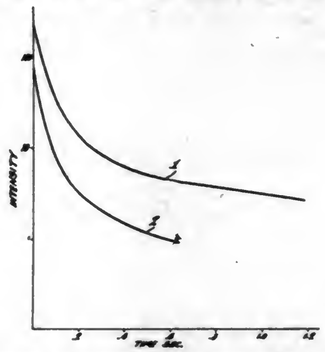
2,447,924
COSTUMER
John A. Vitale, Olean, N. Y.
Application March 4, 1946, Serial No. 651,831
5 Claims. (Cl. 211—177)

4. A costumer comprising a weighted base, a solid stem and a hollow standard having diametrically opposed holes, supporting hooks having inwardly bent upper ends mounted within the opposed holes at the upper portion of the standard, and wedge means movable within the hollow standard and engaging the upper bent ends of the hooks for clamping the hooks to said standard.

2,447,925
GAS BURNER SUPPORTING STAND
George Vorbusch, New Orleans, La.
Application October 2, 1945, Serial No. 619,779
2 Claims. (Cl. 126—40)

1. A stand for gas burner service comprising a rectangular frame formed of parallel side rods and parallel end rods extending normal to the side rods, supporting legs for the frame depending from corner zones at opposite ends of the frame, the legs at the rear end of the frame being spaced a greater distance apart than those of the front end to form a stabilizing support for the frame, a gas supply pipe supported on the front legs, and a gas burner having a neck portion in communication with the gas supply pipe with its burner zone located below the top plane of the frame and intermediate and spaced from the side rods, means being removably carried by such side rods and in transverse alinement with the burner zone for movably supporting the burner in such position.

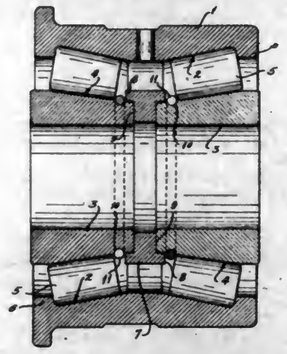
2,447,926
ANTIKNOCK MOTOR FUEL
Sol B. Wiczer, Washington, D. C.
No Drawing. Application July 21, 1943,
Serial No. 495,649
2 Claims. (Cl. 44—69)



1. A gasoline containing, in small but sufficient quantity to improve the anti-knock quality thereof, a compound of the formula

$$(R)_3Pb—R'—Pb—(R)_3$$

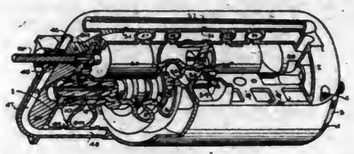
wherein R is an alkyl radical selected from the group consisting of methyl and ethyl and R' is an alkylene radical selected from the group consisting of methylene and ethylene.



2,447,927
LUMINESCENT ZINC FLUORIDE
Ferd E. Williams, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application October 17, 1945, Serial No. 622,823
2 Claims. (Cl. 252—301.6)

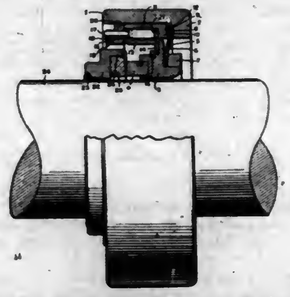
2. A phosphor consisting of zinc fluoride and columbium activator in the ratio of 0.0008 to 0.03

gram mole of columbium to one gram mole of zinc fluoride.



2,447,928
UNIT HANDLED DOUBLE ROW ROLLER BEARING
Albert L. Bergstrom, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio
Application May 19, 1947, Serial No. 749,005
7 Claims. (Cl. 308—214)

1. A double row taper roller bearing comprising two axially spaced circular series of rollers, a single outer bearing member for said series of rollers, separate inner bearing members for said series of rollers, said outer bearing member having integral internal peripheral thrust ribs overlapping the outer ends of said series of rollers, and a separate external peripheral retaining rib mounted on each of said inner bearing members against axial movement relative thereto in overlapping relation to the inner ends of the rollers cooperating therewith, thereby making a self-contained unit of said rollers and outer and inner bearing members.

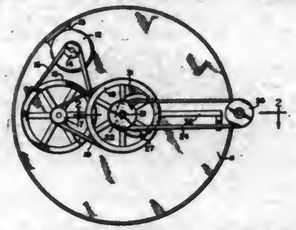


2,447,929
MULTISTAGE ROTARY FLUID POWER DEVICE OF THE ROTARY ABUTMENT TYPE
Frank Berry, Corinth, Miss.
Application May 29, 1944, Serial No. 537,908
8 Claims. (Cl. 123—13)

4. A fluid power device comprising a shaft, annular cylinders of progressively different cubic capacities arranged in axial alignment about the shaft, pistons mounted on the shaft and in said cylinders, an abutment rotor parallel to the shaft and having recesses therein to clear the pistons

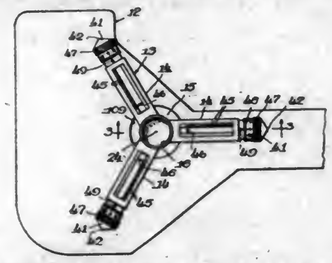
as they pass the abutment rotor, and a passageway between adjacent cylinders, said passageway being of progressively varying cross sectional area throughout its length.

2,447,930
HIGH-SPEED OIL SEAL
John Leo Biggs, Chicago, Ill., assignor to Gits Bros. Mfg. Co., Chicago, Ill., a corporation of Illinois
Application February 15, 1947, Serial No. 728,915
4 Claims. (Cl. 286—11)



1. In a seal comprising a hollow ring-like body having a sealing element carrier housed therein, said carrier having an annular sealing element disposed to bear forwardly in an axial direction, a ring-like hanger surrounding said carrier and attached thereto, said hanger having a forwardly extending wall and a radial flange thereon projecting toward the wall of said body, an axially extending pin projecting forwardly from said flange, a retaining means projecting radially inward from said body on the forward side of said flange and having an aperture to slidably receive said pin, and means bearing axially on said flange and normally urging said hanger in a forward direction.

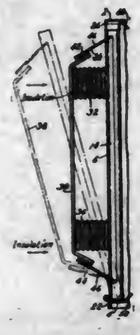
2,447,931
MECHANICAL MOVEMENT DEVICE
Russell W. Carter, Des Moines, Iowa, assignor of thirty per cent to Wheelock and Cummins, Inc., Des Moines, Iowa, a corporation of Iowa
Application October 17, 1946, Serial No. 703,792
4 Claims. (Cl. 74—82)



1. A mechanical motion device comprising a rotating prime mover, a first shaft, means for transmitting the motion of the prime mover to rotate said first shaft continuously in one direction, said means including a master pulley, a second shaft, a trackway mounted eccentrically with respect to said second shaft and rotated by said master pulley, a pulley secured to said second shaft, an idler pulley journalled on said first shaft, a belt connecting said last two pulleys,

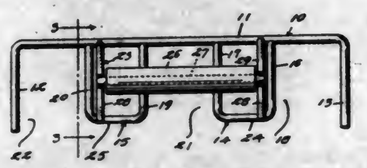
and means for connecting said eccentric track-

way to said belt to reciprocate the belt and oscillate said second shaft.



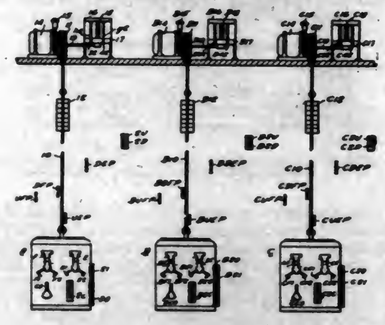
2,447,932
CENTERIMETER
Richard H. Colwill, Chicago, Ill.
Application April 9, 1945, Serial No. 587,350
1 Claim. (Cl. 33—191)

A centerimeter comprising, a hub having a frusto-conical well at its mid-point, and at least three independently extensible and retractable leg locating means adapted to locate the said well concentrically with respect to an opening, the said locating means including, an outer sleeve secured to the said hub and provided with diametrically opposed slotted portions, one of said slotted portions provided with a calibrated scale of measurement, a threaded stud secured concentrically to the said outer sleeve, an inner sleeve rotatably engaging the said threaded stud, an intermediate sleeve mounted between the said outer and inner sleeves and provided with an indicator marking cooperating with the said calibrated scale, a locating pin element secured to the said intermediate sleeve and slidably operative in the other of said slotted portions in the said outer sleeve, and a cap element secured to one end of said inner sleeve and provided with a calibrated scale of measurement positioned at right angles to the said first mentioned scale and cooperating with an indicator demarcation on the adjacent end of said intermediate sleeve, the said conical well having its apex in the geometric plane of the top surface of the said opening.



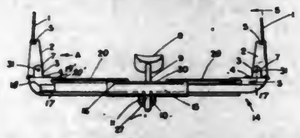
2,447,933
IONIZING MEANS FOR ELECTROSTATIC DUST-PRECIPITATION APPARATUS
Ira R. Cummings, deceased, late of Cranford, N. J., by Margaret F. Cummings, executrix, Cranford, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application January 15, 1947, Serial No. 722,133
6 Claims. (Cl. 183—7)

1. An electrostatic ionizing means of a type described, comprising, in structural combination, an outer support having opposite sides, an elongated rod-electrode, means attached to one end of said rod-electrode for swingably securing said rod-electrode to one of said sides, whereby said rod-electrode may be swung, means for releasably attaching the other end of said rod to the other of said sides, insulator means carried by said rod-



electrode, a framework, comprising arms, carried by said insulator means, said framework being swingable with said rod-electrode, an ionizing wire carried by said arms in discharging relation to said rod-electrode, said outer frame and said arms being so constructed and arranged that said arms and ionizing wire clear said outer frame when said rod-electrode is swung.

2,447,934
BOTTLE CARRIER
Frank P. Doppelheuer, Connellsville, Pa., assignor of one-half to James D. Doppelheuer, Connellsville, Pa.
Application April 15, 1946, Serial No. 662,184
4 Claims. (Cl. 224—45)

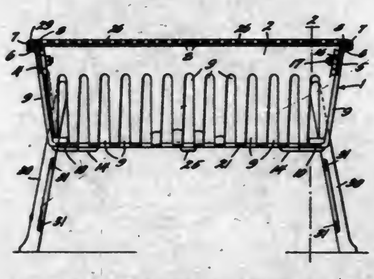


1. A bottle carrier comprising a U-shaped member having a substantially long bight and relatively short legs with the legs upwardly bowed, a pair of reversely disposed U-shaped members disposed between the legs of said first member and having the legs thereof upwardly bowed and the ends of the legs thereof fixed to the bight of said first member intermediate the length thereof, an inverted U-shaped bail fixed to the bight of said first member and extending upwardly and inwardly therefrom, and a pair of bracing bars fixed between said bail and the bights of said pair of U-shaped members, the legs of said bail being longer than said bracing bars to thereby provide for disposing the legs of said first and said pair of U-shaped members on an angle to the horizontal inclined downwardly toward the bight of said first member whereby the legs of said first and said pair of U-shaped members will be inclined to the horizontal with said long bight lowermost.

2,447,935
CONTROL SYSTEM
William F. Eames, Westfield, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 10, 1946, Serial No. 668,661
20 Claims. (Cl. 187—29)

1. In an elevator control system for a plurality of cars operable past a plurality of floors, a stop call device at each floor for storing calls for service and for causing a car to stop at that floor, means for dividing the floors into a plurality of zones each including a plurality of floors, a timer for each zone responsive to one or more stop call devices in that zone remaining unanswered for a predetermined total length of time for indicating a service demand therein, and means responsive to operation of a timer when a service demand exists in its zone for conditioning the operating means of a car to answer the calls stored on the stop call devices in the service demand zone before answering calls in other zones.

2,447,936
TRIAL FRAME HAVING PIVOTED TEMPLE CONNECTIONS
Charles A. Ellis, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application May 14, 1945, Serial No. 593,596
4 Claims. (Cl. 88—20)

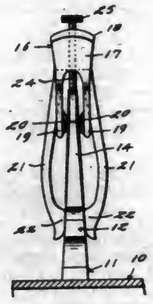


1. In a trial frame, the combination of a front for receiving trial lenses and means for supporting said front on the head of a wearer, said means comprising a housing member pivotally connected to the front for pivotal movement about a vertically disposed axis, a temple pivotally connected to the housing member for movement about a pivot disposed adjacent said axis and in substantially normal relation thereto, said temple having a surface portion in sliding engagement with an adjacent surface of the housing member, a resilient member overlying the opposed surface of the temple and extending in a direction longitudinally of the temple, said resilient member having one end portion secured adjacent the pivot, and having an angularly disposed portion spaced from said end portion for frictionally engaging in substantially line contact the adjacent surface portion of the temple, and the housing member having portions shaped to overlyingly engage portions of the resilient member and retain said angularly disposed portions of the resilient member in positive frictional line contact engagement with said adjacent surface portion of the temple.

2,447,937
METHOD OF LAYING SUBMERGED PIPE
Reuben H. Ellis, Alexandria, and Martin A. Milling, Anderson, Ind.
Application February 28, 1947, Serial No. 731,593
7 Claims. (Cl. 61—72)

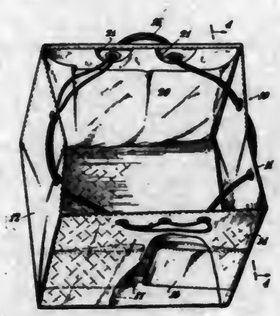
1. A method of forming a submerged siphon and like structure comprising excavating a trench across a river bed, sinking a floatable conduit in the trench, and of a length sufficient to at least terminate at the river banks, permanently weighting the sunken conduit by application of concrete and the like thereover, coffer damming the ends of the conduit, removing the water therefrom and in the coffer dams, inserting pipe into at least one end of the conduit until the pipe is co-extensive with the conduit and projects beyond the same at both ends thereof, and finally filling the space between the pipe and conduit with suitable material such as concrete for further ballasting, reenforcement and the like.

2,447,938
SUPPORT FOR PORTABLE FIRE BASKETS
Morris H. Garfunkle, Newark, N. J.
Application March 24, 1944, Serial No. 527,935
8 Claims. (Cl. 248—165)



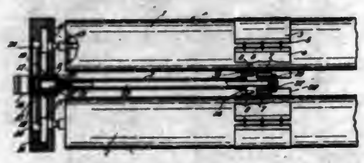
1. A portable fire basket including opposed front and rear walls and opposed end walls, the walls of at least one of said pairs of opposed walls including a plurality of upright, spaced apart bars having slots therebetween, and legs for supporting said basket, the upper end of each of said legs entering a slot between two of said bars and engaging the walls defining said slot to support said basket above a hearth or other surface.

2,447,939
ADJUSTABLE MUTE
Frederick Gosparlin, Glendale, Calif.
Application July 8, 1946, Serial No. 681,840
2 Claims. (Cl. 84—310)



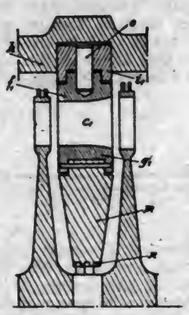
1. An adjustable mute for a high-bridged musical instrument comprising, an upper body section, an oppositely-disposed pair of tone-controlling

arms depending downwardly from each end portion of said body section for engaging the bridge at points above the waistline thereof, a pair of oppositely-disposed supporting arms depending downwardly from said body section intermediate said pair of tone-controlling arms and adapted



to support the mute at points below the waistline of the bridge, resilient pads on the adjacent surfaces of each of the pairs of tone-controlling arms which are engageable with the bridge, and means adjustably carried by said body section adapted to be moved towards and away from the upper side of the bridge.

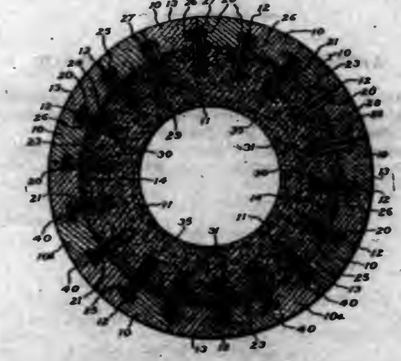
2,447,940
WATERPROOF FOLDABLE HANDBAG FOR BABY ACCESSORIES
Inez Holland, Rockville Centre, N. Y.
Application September 27, 1946, Serial No. 699,837
2 Claims. (Cl. 150—34)



1. A bag for infants' garments and accessories, comprising a plurality of rectangular flexible panels united along their edges to provide a structure which may be collapsed into substantially flat form or opened into substantially hexahedron shape; bottle-receiving loops disposed at opposite edges of one of said panels, a single hinge-like strap for securing said loops to the said panel, said loops extending toward each other and of such size that when each receives a bottle, said bottles are secured in spaced relationship to each other; and a relatively large open-mouthed envelope of waterproof material disposed internally of said bag and secured therein only by engagement of an upper edge with an upper edge of one of said panels.

2,447,941
AERIAL BOMB, PYROTECHNIC DEVICE, AND THE LIKE
Jack Imber and Hugh Charles Hebard, Greenford, England
Application April 6, 1944, Serial No. 529,786
In Great Britain May 31, 1943
3 Claims. (Cl. 102—7.2)

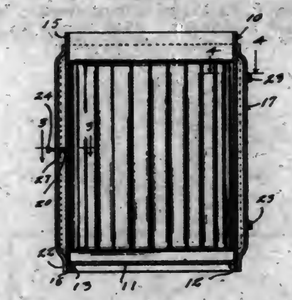
3. An assembly of projectiles provided at their ends with fuze housings, comprising a central rod, an end cover, a housing mounted centrally within said end cover and in which said rod is fixed, means carried by said rod for detachably connecting the projectiles thereto, a plate fixed to said end cover and having sockets engageable by the fuze housings on the projectiles for locating the ends of the latter relatively to said end cover, a delay action ignition device situated centrally of said end cover, flash tubes connecting said ignition device with the fuze housings on the projectiles, a propellant charge in said housing in the end cover and connected to said flash tubes, and means actuated by explosion of said charge to disconnect the projectiles from said central rod.



2,447,942
TURBINE DISTRIBUTOR AND NOZZLE
Roger Jean Imbert, Paris, and Gilbert Mission, Bagneux, France, assignors to Société Rateau (Société Anonyme), Paris, France, a company of France
Application November 1, 1945, Serial No. 626,104
In France December 5, 1944
7 Claims. (Cl. 253—78)

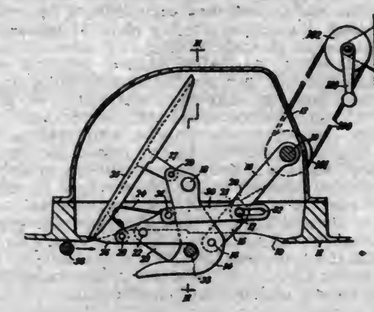
5. In a turbo-machine adapted to operate at high temperatures and having a stator and at least one wheel rotatably mounted in said stator, the provision of a stationary distributor cooperating with said wheel and comprising an external and an internal ring coaxially disposed with reference to said wheel, the said external ring being mounted in a circular groove of said stator with a peripheral play allowing the radial expansion of said ring, guiding means radially disposed in said stator for centering said ring in said stator with respect to said wheel and for ensuring the radial expansion of said ring in

said play, a system of blades arranged between said internal and said external ring, means for securing rigidly said blades to only one of said rings, and means providing a radial fitting with a peripheral play between said blades and said other ring, said fitting comprising, on said ring and on the blades, planes at right angles with the axis of said wheel and adapted to be applied one against the other by fluid pressure.



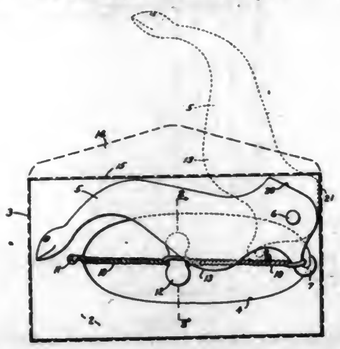
2,447,943
PULPSTONE
George N. Jeppson, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application October 30, 1945, Serial No. 625,523
7 Claims. (Cl. 51—206)

1. A pulpstone or the like comprising a concrete center of annular shape, a plurality of blocks of bonded abrasive material on the outside of said center to form an abrasive annulus, each block having an outer abrading surface, an inner surface adjacent the center, and a plurality of faces between said surfaces, each block having a pocket in each of two faces forming a seat at the bottom thereof, there being a groove in the block extending from each pocket to the inner surface of the block, a bar across the inner surface of the block extending between said grooves, a sleeve against each end of the bar and extending into the concrete center, bolts in the sleeves and extending beyond the sleeves and into the pockets, and means on each end of the bolts both in the pockets and embedded in the concrete, said means holding the bolts in tension and the sleeves under compression, and that portion of the blocks radially inward of the seats being under compression derived from the bolts and exerted against the seats.



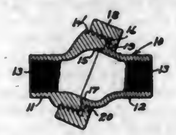
2,447,944
GARBAGE CAN COVER
Nolan L. Johnson and James D'Andrea, Piqua, Ohio
Application October 8, 1945, Serial No. 620,856
1 Claim. (Cl. 220—1)

A receptacle, a cover therefor comprising a pair of semi-cylindrical members, means hingedly securing said members together, a spring-pressed latch member carried by the inner side of one member, a keeper carried by the inner side of the other member, and a latch releasing member loosely carried by said other member, each member having each end inwardly offset to provide peripheral portions adapted to snugly engage the



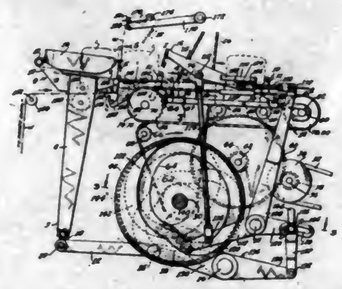
exterior of the receptacle adjacent the ends of the latter.

2,447,945
MOORING GEAR FOR FLYING BOATS
Henry Knowler, Isle-of-Wight, England, assignor to Saunders-Roe Limited, East Cowes, Isle-of-Wight, England
Application November 1, 1945, Serial No. 626,007
In Great Britain May 5, 1944
7 Claims. (Cl. 114—230)



1. In a flying boat, the combination with a forwardly facing mooring hook pivotally mounted on the boat for movement about a transverse axis and normally projecting beneath the keel thereof, said hook serving to engage a mooring cable stretched under the water, of a spring loaded catch fitted to the hook and adapted to be pushed aside by the cable to allow the same to enter the hook and thereafter to be returned by its spring to prevent disengagement of the cable from the hook, a pivoted operating lever, manually operable means for rotating said lever about its pivot to disengage said cable from the hook, a first link coupling said lever to said catch and serving, on initial rotation of said lever, to displace said catch into position to allow the cable to leave the hook, said first link being coupled to said lever by a connection arranged to impart positive movement to said first link when said lever is rotated, but permitting said first link to move in relation to said lever when the catch is pushed aside by a cable entering the hook, and a second link coupling said lever to hook and serving, on initial rotation of the lever, to effect upward and rearward pivotal movement of the hook in relation to the keel into a position permitting the cable to become disengaged from the hook both by forward and by aft movement of the boat in relation to the cable.

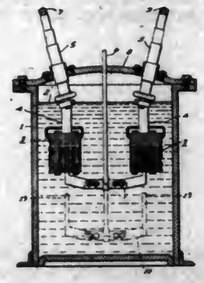
2,447,946
RATTLER
James L. La Forge, Caruthersville, Mo.
Application December 5, 1946, Serial No. 714,199
3 Claims. (Cl. 46—118)



1. A rattler comprising a plate having an opening, a figured member pivotally mounted at one end on said plate in parallelism therewith, an elastic band motor comprising two parallel strands extending across said opening said strands attached at one end to said plate and attached at the other end to said member adjacent its pivotal mounting, a sound producing element positioned between said strands within said opening, said element when manually rotated twisting said strands together and placing said member under operative tension, said plate adapted to be positioned in an envelope with said member depressed against said operative tension and retained in such depressed position by the folded flap of the envelope until said member is suddenly projected in a pivotal manner out of the envelope by virtue of the tension of said motor when the envelope is opened along the line of its folded flap, whereupon said element is rapidly rotated to create a sound against the inner surfaces of the envelope by the untwisting of said strands, when the envelope is opened along the line of its folded flap.

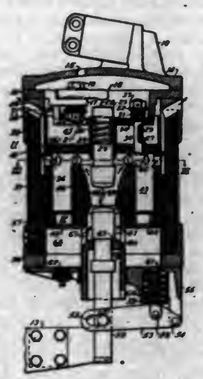
2,447,947
VARIABLE UNION
George K. Larson, Smethport, and August A. Larson, Johnsonburg, Pa.
Application June 24, 1947, Serial No. 756,760
1 Claim. (Cl. 285—122)

In a universal pipe union, the combination, which comprises, an internally threaded female sleeve having an enlarged portion at the end the face of which is positioned at an angle in relation to the axis thereof, said enlarged portion having threads on the outer surface with the axis of the threads perpendicular to the face and having an annular recess in the face with a beveled surface, the inner end of the opening in said enlarged portion meeting the face thereof at a right angle, a complementary internally threaded male sleeve having an enlarged end with the face thereof positioned at an angle in relation to the axis thereof, and having an annular flange around the outer surface flush with the face and a beveled lip extending from the face and positioned in the annular recess of the female sleeve with a ground joint fit when the parts are assembled, the inner end of the opening in the enlarged portion of the sleeve meeting the said face at a right angle, and a coupling nut having internal threads to correspond with the threads of the enlarged end of the female sleeve and an internal annular flange positioned to clamp the flange of the male sleeve against the face of the enlarged end of the female sleeve, said enlarged end of the male sleeve having a straight portion of sufficient length to accommodate the nut with the nut unscrewed from the threads of the enlarged end of the female sleeve wherein the outer face of the nut is positioned behind the face of the enlarged end of the male sleeve, in the unscrewed position.



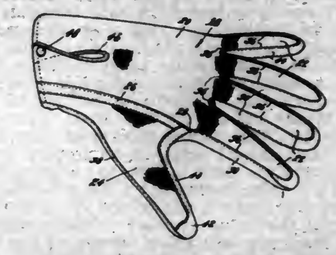
2,447,948
ARTICLE INFEED MECHANISM FOR WRAPPING MACHINES
Charles W. Lea, Valley Stream, N. Y., assignor to American Machine and Foundry Company, a corporation of New Jersey
Application May 9, 1944, Serial No. 534,768
15 Claims. (Cl. 93—2)

1. In a wrapping machine having an article lifter table constructed and arranged to move an article from a receiving station to a delivery station, and means for positioning a wrapper in the path of travel of said article adjacent said receiving station, an article support, an article guide, a device for engaging and moving an article along said guide and positioning said article on said support in close proximity to said wrapper, means for moving said device out of engagement with said positioned article and means operative after said article has been positioned on said support closely adjacent said wrapper for moving said article against said wrapper and onto said lifter table.



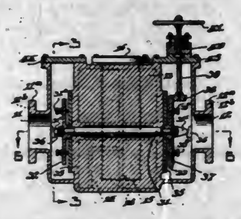
2,447,949
CIRCUIT INTERRUPTER
Winthrop M. Leeds, Wilkinsburg, and Benjamin P. Baker, Turtle Creek, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Original application September 17, 1942, Serial No. 458,660, now Patent No. 2,385,008, September 18, 1945. Divided and this application January 27, 1945, Serial No. 574,856
21 Claims. (Cl. 200—150)

1. In a circuit interrupter, means at least partly of insulating material defining an elongated substantially closed arcing chamber, means for establishing an arc axially within said chamber, means defining a pair of opposed flow passages on substantially the same plane leading into the chamber laterally thereof, means other than the aforesaid arc for positively forcing fluid



through the flow passages and into engagement with the arc, and means defining a vent passage leading out of the chamber and disposed substantially at right angles to the direction of entrance of the flow passages and also in a plane substantially parallel to the plane of the flow passages.

2,447,950
CIRCUIT INTERRUPTER
Winthrop M. Leeds, Forest Hills, and James M. Cumming, Turtle Creek, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 3, 1945, Serial No. 586,354
15 Claims. (Cl. 200—150)



1. In a circuit interrupter, means for establishing an arc, piston means movable in an operative direction to force fluid toward the arc to facilitate the extinction thereof, means biasing the piston means in said operative direction, means defining an orifice carried by the piston means through which the arc is drawn, means for establishing a second arc, and means responsive to the pressure created by the second arc to assist in moving the piston means in the operative direction.

2,447,951
GLOVE
Edward C. Lindfelt, Des Moines, Iowa
Application May 22, 1946, Serial No. 671,556
8 Claims. (Cl. 2—159)

1. In a glove of the class described, a relatively non-elastic palm, and a back portion of elastic material, said back portion covering substantially the whole back of the hand and the back of the thumb, said elastic material being stretchable in a direction longitudinally of the hand, and a reinforcing member of relatively non-elastic material leading from the palm of the forefinger to the wrist, dividing the elastic material on the back of the hand and thumb into separate portions.

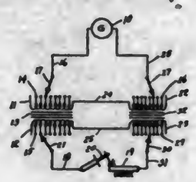
2,447,952
STRAINER
George L. MacNeill, Pennside, Pa.
Application July 4, 1944, Serial No. 543,461
6 Claims. (Cl. 210—168)

1. A liquid strainer unit of the character described comprising: a unit casing having a main inlet and a main outlet opening arranged in the opposite end walls thereof; a vertically extending wall centrally located within the casing in axial alignment with said main inlet and outlet openings and arranged to form a common dividing wall between two similar juxtaposed chambers each having a front wall section spacedly positioned adjacent to said main inlet opening which wall section is provided with a chamber inlet port, and a rear wall section spacedly positioned adjacent to said main outlet opening which wall section is provided with a chamber outlet port; a strainer element removably seated in each of said chambers between the inlet and outlet ports thereof so as to effect straining of the liquid flowing through the chambers; a disc-like valve member arranged to be rotatably seated against said front wall sections of the chambers in overlapping relationship with respect to the two chamber inlet ports, which member is provided with an aperture adapted to be brought into registry with one or the other of said inlet ports by rotary movement of the valve member; a disc-like valve member arranged to be rotatably seated against said rear wall sections of the chambers in over-

lapping relationship with respect to the two chamber outlet ports, which member is provided with an aperture adapted to be brought into registry with one or the other of said outlet ports by rotary movement of the valve member; a shaft rotatably mounted in said centrally extending wall within the casing on the ends of which shaft the valve members are concentrically supported in such manner as to maintain them in said seated relationship with the apertures thereof positioned in alignment relative to each other; means connecting the shaft and valve members to effect rotary movement thereof in unison; and means adapted to impart rotary movement to the shaft so that the aligned apertures of the valve members will effect opening of the inlet and outlet ports of one of said chambers while the valve member portions opposite to said apertures will effect closing of the inlet and outlet ports of the other chamber.

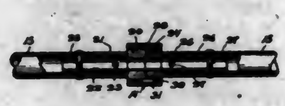
2,447,953
HAIR BRUSHING DEVICE
Giuseppe Maniglia, New York, N. Y.
Application August 15, 1947, Serial No. 768,862
7 Claims. (Cl. 132—85.1)

1. The combination of a hair brush having a head therefor, and said head carrying adjacent to said brush a member, having a serrated edge constituting a scraper for therewith cleaning the surface of the hair simultaneously with the brushing of the hair.



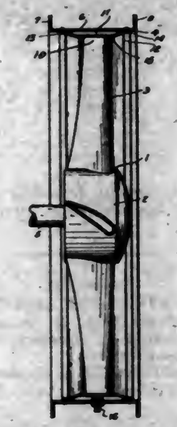
2,447,954
SHOE INSERT
Edward C. Meldman, Milwaukee, Wis.
Application December 7, 1946, Serial No. 714,753
1 Claim. (Cl. 36—71)

An addition to the standard shoe for stabilizing the foot comprising a base portion terminating short of the front of the foot in a curved lobe, and having a curved lobe under the longitudinal arch at one side, a built up portion transversely arcuate in cross section with a convexity extending longitudinally thereof, and an upward flange at the other side adapted to engage about the outer edge of the foot.



2,447,955
ARC WELDING SYSTEM
Raymond A. Millholland and Wilbur F. Sully, Indianapolis, Ind.
Application September 20, 1944, Serial No. 554,895
4 Claims. (Cl. 315—277)

1. A method of controlling a single phase alternating arc suitable for welding and like purposes comprising electrically connecting in series the primary windings of two transformers and connecting such connected windings across a source of single phase alternating current of constant potential, connecting in series the secondary windings of the transformers, the primaries and secondaries each being proportioned to the other so that the primary voltages are unequally divided between them in predetermined ratio and the resultant secondary voltages are

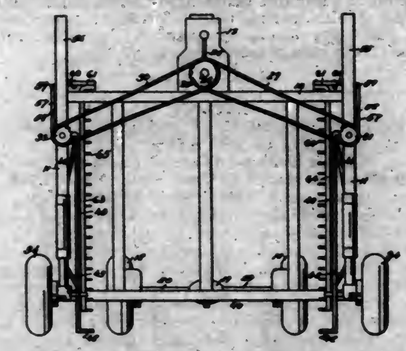


unequally divided between them in another predetermined ratio, and utilizing a third conductor in the secondary circuit only for work preheating purposes and interposing the third conductor between one of the secondaries and the work.

2,447,956
MEANS FOR CONNECTING SEPARATED PARTS OF A BICYCLE FRAME
Howard Morders, Bethesda, Md.
Application May 25, 1944, Serial No. 537,261
1 Claim. (Cl. 287—116)

Means for connecting separated parts of a bicycle frame composed of hollow cross bars having end sections terminating in spaced relation, said means comprising a union joint for detachably connecting the ends of the cross bars together, said union joint comprising two joint members each comprising an enlarged mating head, and a body portion of an external diameter substantially equal to the external diameter of the frame cross bars, one of the enlarged mating heads being at one end of each of the body portions thereby providing a shoulder between the head and the body portion, and a reduced neck at the other end of each of the body portions of an external diameter substantially equal to the internal diameter of the frame cross bars thereby providing a second shoulder on the joint member, means for securing the reduced neck of one joint member within the cross bar end section of one separated bicycle part with said second shoulder of the joint member abutting the end of the cross bar, similar means for securing the other joint member to the cross bar of the other separated bicycle frame part, one of said mating heads being male, the other mating head being female, an external thread about one of the mating heads, a corresponding threaded nut extending from over the other mating head, said nut having an internal flange extending behind the shoulder between the head and body portion, whereby when said nut is tightened over said thread, said heads are drawn into and held in firm mating relation to thereby hold the separated bicycle frame cross bars in rigid axial alignment, and when said nut is released from said thread, the bicycle frame cross bars are separated into two detached parts.

2,447,957
SEAL FOR FANS
Robert D. Moore, Kansas City, Mo., assignor to The Moore Company, Kansas City, Mo., a corporation of Missouri
Application December 29, 1945, Serial No. 638,189
4 Claims. (Cl. 230—120)



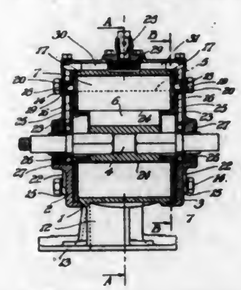
1. In combination with a fan having blades rotatable within an annular air control member encircling the fan blades at the tips thereof, space closing means carried by the control member in encircling relation with the fan and in initial contact with the tips of said blades, said space closing means being composed of an easily tractable material for sufficient displacement by the fan blades to permit free rotation of the fan and having low elasticity to maintain said displaced position for substantially closing the space between the tips of the fan blades and the control member.

2,447,958
VARIABLE PITCH V-TYPE PULLEY
William M. Mueller, Denver, and John E. Heckethorn, Littleton, Colo., assignors to The Gates Rubber Company, Denver, Colo., a corporation of Colorado
Application December 26, 1946, Serial No. 718,418
3 Claims. (Cl. 74—230.17)

1. A pulley comprising, in combination, a tubular cylindrical hub having its outer surface provided with flat top threads, machined to form a cylindrical surface providing a bearing area, two annular flanged members secured to the hub, one being positioned near an end of the hub, means for securing the last named flanged member against accidental movement relative to the hub, the other annular flanged member having a cylindrical, tubular sleeve extending outwardly and provided on its inner surface with a length of thread to engage with the threads on the hub, the sleeve being provided with a plurality of longitudinal, angularly spaced slots, a split locking ring enclosing the sleeve, and means comprising a screw for forcing the locking ring against the outer surface of the split sleeve and the inner surface of the sleeve against the flat outer edge of the threads on the hub.

2,447,959
LOADING AND TRANSPORTING DEVICE
Ben Phillips and Merle Phillips, Planada, Calif.
Application February 28, 1947, Serial No. 731,602
2 Claims. (Cl. 214—65)

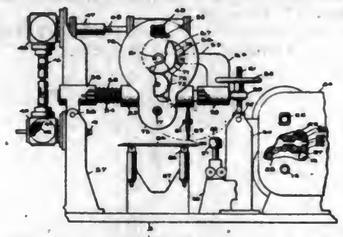
1. An apparatus of the character described comprising a frame, drive wheels and dirigible wheels mounted upon the frame, means carried by the frame for carrying a plurality of trays, means carried on the frame for selectively picking up and depositing a single tray with relation to the ground, said means including crankshafts carried by the frame, cranks upon the crankshafts, pick-up arms having tray engaging feet carried by the cranks, means for retaining said feet at a constant distance from the ground while engaging and disengaging the feet with the trays, means for individually supporting trays stacked in the apparatus while the feet are engaging and disengaging with the single tray, means for releasing said last-mentioned means when said single tray is moved vertically, a source of power carried on the frame and suitable transmissions and gear shifting mechanisms for transferring power to the drive wheels and the pick-up and deposit and supporting means.



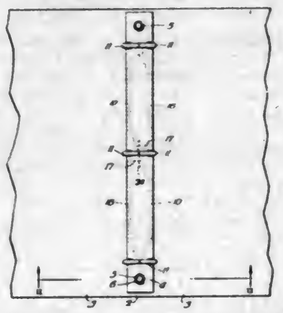
2,447,960
MUFFLER REMOVER
Denton T. Ricketts, Max O. Huffman, and John D. Schmunk, Findlay, Ohio
Application May 7, 1948, Serial No. 25,668
6 Claims. (Cl. 219—21)

1. A muffler joint expansion heater comprising a pair of jaws movably connected together and

having recesses for enveloping a muffler joint and closing upon the joint, a pair of lining shields spaced from and conforming substantially to the shape of the jaws, each of said jaws having a slot therein, a lug carried by each of said shields and received by the slots in said jaws, the free end portions of said lugs being clinched over the jaws, each shield having a flange engaging the jaws for maintaining said lining shields in spaced relation to said jaws, and a pair of electric heating units conforming substantially to the shape of said shields and being held thereagainst, said lining shields having polished reflecting surfaces for reflecting the heat from the heating units onto the muffler joint.



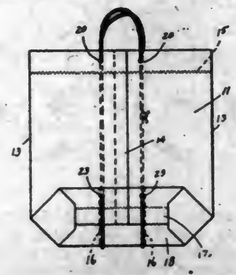
2,447,961
ROTARY BLOWER, COMPRESSOR, AND EXHAUSTER
John Rodway, Lincoln, England
Application March 2, 1944, Serial No. 524,718
In Great Britain April 29, 1943
2 Claims. (Cl. 230—152)



1. A rotary blower or exhauster, comprising a casing constituting a stator having fluid inlet and outlet ports, a rotor mounted eccentrically within said stator, a plurality of vanes mounted to slide radially in said rotor and contacting the walls of the stator, sealing plates disposed respectively at the ends of said rotor and having apertures therein concentric with the stator, means for maintaining said sealing plates in yieldable contact with the end edges of said vanes, and cam rings each mounted concentrically within the stator casing and having a cylindrical portion extending into the respective end of the rotor and engaging beneath the inner edges of the vanes and an outer flanged portion whose surface makes contact with one end wall of the stator and whose periphery rotatably engages the edge of said concentric aperture in the adjacent sealing plate.

2,447,962
CUTOFF MACHINE
Franz G. Schwalbe, Toledo, Ohio, assignor, by mesne assignments, to Toledo Engineering Company, Inc., Toledo, Ohio, a corporation of Ohio
Application May 31, 1943, Serial No. 489,115
3 Claims. (Cl. 49—48)

1. A cut-off machine for horizontally-continuously-traveling strip stock, comprising a marking tool, bracket means providing a support for the tool, a horizontal shaft, planetary gearing actuated by the shaft rotation, a housing for and rotated by the gearing, said housing including an arm, and an additional shaft protruding from the arm of the housing and connected to be actuated from the gearing at a transmission rate to revolve the bracket means one-to-one relatively to the rotation of the housing and to hold an approximately horizontal direction for the bracket means toward the tool in a vertical plane from the strip stock.



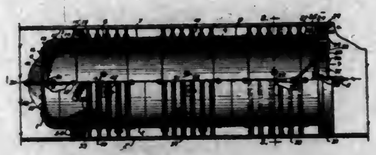
2,447,963
LOOSE-LEAF BINDER
Samuel Segal, New York, N. Y., assignor to Wilson-Jones Company, Chicago, Ill., a corporation of Massachusetts
Application February 21, 1944, Serial No. 523,244
3 Claims. (Cl. 129—24)

2. In a loose leaf binder, a cover plate, a three ring mechanism in said cover plate comprising two companion rockable frames oppositely disposed on one side of the transverse center of said cover plate and two other companion rockable frames oppositely disposed on the other side of said center, the center ring being formed by mating ring sections provided on the ends of two diagonally disposed frames, said diagonally disposed frames each having a groove in one edge, a rod positioned in said groove, said other two diagonally disposed frames each having a stub section provided with a bifurcated end, said bifurcated ends straddling said oppositely disposed frames and said rod.

2,447,964
CORD HANDLED BAG
Richard O. Slindee, Indianapolis, Ind., assignor to Lydia Duebener, St. Paul, Minn.
Application March 23, 1946, Serial No. 656,605
1 Claim. (Cl. 229—54)

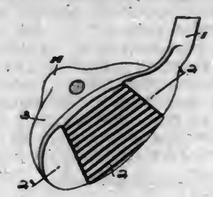
A cord handled and content sustaining collapsible paper shopping bag comprising in combination a collapsible paper bag with lapping sides and ends, the bottom lapping said sides, the side between the bottom and the other lapped side and where so bottom lapped having a return lapping portion, the bag near the top having a pair of spaced apertures in each of the sides, these apertures in the opposite sides registering when the bag is collapsed, the sides spaced from the bottom and less distant than the width of the bottom from the junctions of the sides and bag bottom, each having a pair of spaced apertures, the bottom and said side return portion adjacent the junction thereof, also each having a corresponding pair of spaced apertures, the last mentioned spaced pair of apertures being equidistant from the junction of the bottom and the return side

portion and disposed closer to that junction than the middle of the bag bottom, the last mentioned four pairs of spaced apertures being juxtapositioned to and registered with each other when the bag is collapsed, and a single cord passable alternately and oppositely through successive apertures from the top of the bag to the bottom thereof and return, the bottom included apertures insuring cord spacing, guiding and maintenance when the bag is opened and erected, the cord near the top of the bag on the same side of the bag providing a handle loop at that side.



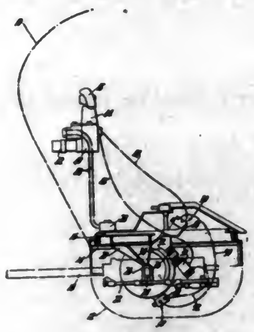
2,447,965
RAZOR BLADE HOLDER
William M. Sparr, Looneyville, W. Va.
Application November 27, 1945, Serial No. 631,107
3 Claims. (Cl. 30—330)

1. A razor blade holder comprising two cooperating jaws for holding a blade therebetween, one of said jaws having spaced tubular bearings and the other jaw having an intermediate tubular bearing fitting between the spaced bearings, a handle having a tubular sleeve within said bearings, means connecting the intermediate bearing to said sleeve, a rod rotatably extending through said sleeve and bearings, means connecting said rod to one of said spaced bearings, means on said handle to rotate said rod and open said jaw having spaced bearings, and means to secure said jaws in closed position.



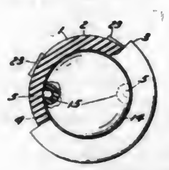
2,447,966
EXPANDIBLE FLUID ACTUATED PIPE-CLEANING APPARATUS
Dishman K. Stephens, Kansas City, Mo., assignor to Panhandle Eastern Pipe Line Company, Kansas City, Mo., a corporation of Delaware
Application January 23, 1947, Serial No. 723,708
10 Claims. (Cl. 15—104.06)

3. In a pipe cleaning apparatus adapted to be moved by motive fluid through a pipe to be cleaned, an elongated tubular body consisting of a plurality of flexible expandable tubular sections coaxially arranged, spaced non-expandable rings telescoped in adjacent portions of the tubular sections and having sealing engagement therewith, means securing the sections to the rings whereby expansion of the sections is confined to the portions thereof between said rings, non-expandable end members secured to the ends of said tubular body, means connecting the end members for maintaining the relative spacing therebetween, a



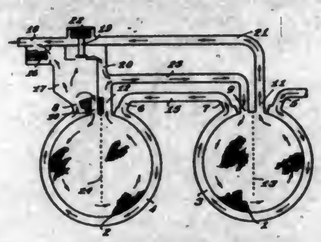
resilient member mounted on the rear end member and having a flange adapted to be expanded into substantially sealing engagement with the pipe by the motive fluid for maintaining differential pressure between the respective ends of said apparatus, said differential pressure effecting expansion of the tubular sections between the rings, and circumferential rows of arcuate brushes on the tubular sections between said rings adapted for uniform circumferential engagement with the interior of the pipe for cleaning same.

2,447,967
GOLF CLUB
William Ridgely Stone, Washington, D. C.
Application September 16, 1944, Serial No. 554,492
1 Claim. (Cl. 273—77)



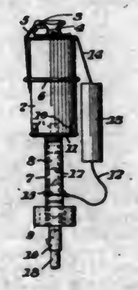
A golf clubhead comprising a metal shank having an opening for insertion of the end of a shaft, a metal blade formed as an integral continuation of the shank, the forward striking face of said blade being inclined rearwardly and upwardly to provide loft, with the upper part of the blade and the juncture thereof with the shank lying to the rear of the forward edge of the shank, and a shock-absorbing body of heat-curable plastic material cured against and in intimate contact with the back of said blade and anchored on rearward projections therefrom so that said body is protected against impact with the ball and forms with said blade and shank an integral clubhead, said body projecting rearwardly from the blade beyond its upper edge and being shaped to form with said blade a clubhead having substantial bulk behind the blade, said blade being thinner and of substantially less weight than the blade of a clubhead of the iron type having the same loft and substantially the same striking face dimensions, and the weight of said body being approximately equal to the difference in weight between said blades so that the total weight of said clubheads is approximately equal.

2,447,968
HYDRAULIC STOP FOR GUN MOUNT SYSTEMS
John C. Trotter, Williamsville, N. Y., assignor to Bell Aircraft Corporation, Buffalo, N. Y.
Application June 18, 1943, Serial No. 491,335
8 Claims. (Cl. 89—41)



1. In a gun aiming hydraulic power supply system for stopping the movement of a gun at predetermined limits including a fluid circuit, a normally open circuit interruption valve comprising a housing having a fluid passageway therethrough in normally open series communication with the fluid circuit, a valve seat disposed intermediately of said passageway, a valve disposed within said passageway and adapted to move between seated and unseated positions to alternately close and open said valve device for controlled fluid passage purposes, a spring tending to bias said valve toward seated position, and push rod means extending from exteriorly of said housing into said fluid passageway portion to register in abutting relation with said valve for forcibly unseating the latter against the action of said spring, said push rod being arranged to be actuated by the gun upon its arrival at a predetermined position, whereby the fluid to said motor will be interrupted by the actuated valve.

2,447,969
ELECTRIC SWITCH
Frederick Von Voigtlander, Ann Arbor, Mich., assignor, by mesne assignments, to Sperti Faraday Inc., a corporation of Ohio
Application January 8, 1947, Serial No. 720,801
4 Claims. (Cl. 200—159)



2. An electric switch insulation body, an annular series of relatively yieldable spring fingers embracing the body connected by a rim over an end of the body, an insulation disk against the rim, and holding means extending thru the disk and clear of the rim into the body for assembling the fingers with the body.

2,447,970
APPARATUS FOR COOLING OR ATTEMPERATING OIL OR OTHER LIQUID
Robert J. Wareing, Birmingham, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
Application May 1, 1944, Serial No. 533,492
In Great Britain May 28, 1940
1 Claim. (Cl. 257—2)

A cooling device of the kind described, comprising cooling matrices providing a two-stage cooler, each comprising a plurality of thin-walled metal tubes disposed in honeycomb formation within a suitable casing having an external jacket, each of said matrices and said jackets having an inlet and an outlet, connections whereby hot fluid entering the inlet of one of said jackets flows through both jackets in series to the first-stage matrix inlet, a conduit connecting the first-stage matrix outlet to the second-stage matrix inlet, an outlet conduit for fluid leaving the second-stage matrix outlet, a by-pass conduit connecting the inlets of said matrices, a temperature-controlled valve in said by-pass conduit, thermostatic means operative upon sufficient rise in the temperature of fluid flowing through said outlet conduit, to cause said valve to reduce flow of fluid through said by-pass, a second by-pass conduit connecting the first-stage matrix inlet with the second-stage matrix outlet conduit, and a pressure-controlled valve normally closing said second by-pass conduit but arranged to open the same upon development of sufficient fluid pressure in that portion of said conduit between said pressure-controlled valve and said first-stage matrix inlet.

2,447,971
TREE SUSPENSION GRENADE DEVICE
Carl R. Weinert, West View, Pa., assignor to Federal Laboratories, Inc., Pittsburgh, Pa., a corporation of Delaware
Application July 25, 1945, Serial No. 606,907
13 Claims. (Cl. 102—65.2)

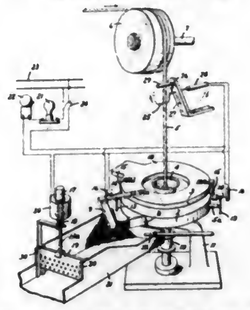
13. A tree suspension grenade device, comprising a grenade and firing mechanism therefor, an adapter releasably connected to the grenade, an extensible cord connected adjacent one end to the grenade and adjacent the other end to the adapter, and a ring on the grenade adapted to hold said firing mechanism in inoperative position but movable into contact with the releasable connection upon launching the device to separate the grenade and adapter and release said firing mechanism to cause firing of the grenade, whereby the cord is extended and may be entangled in a tree.

2,447,972
TARGET BALLOON
Carl R. Weinert, West View, Pa., assignor to Federal Laboratories, Inc., Pittsburgh, Pa., a corporation of Delaware
Application April 7, 1947, Serial No. 739,984
3 Claims. (Cl. 102—37.1)

1. A target balloon adapted to be carried in folded condition by an airplane and to expand when dropped therefrom to present a target, said balloon, when expanded, having a substantially closed top and an open bottom, said balloon comprising a shaft, a smoke grenade connected to the lower end of the shaft, said grenade having a firing mechanism and a safety lever for controlling the grenade firing mechanism, ribs pivoted at one end to the shaft and connected at their other ends to the lower edge of the balloon at circumferentially spaced points, means for limiting the opening movement of the ribs, a rib spreader connected to the shaft, means for confining the lower ends of the folded ribs and the lower edge of the folded balloon and said safety lever, said confining means opposing the tendency of the rib spreader to spread the ribs, and means for releasing said confining means after the balloon is dropped from the airplane, whereby the rib spreader acts to spread the ribs initially and the safety lever is released so as to cause the grenade to emit smoke.

2,447,973
COATED ANODE FOR ELECTRON DISCHARGE DEVICES
Paul D. Williams, Palo Alto, Calif., assignor to Eitel-McCullough, Inc., San Bruno, Calif., a corporation of California
Original application April 6, 1946, Serial No. 660,263. Divided and this application April 21, 1947, Serial No. 742,773
1 Claim. (Cl. 250—27.5)

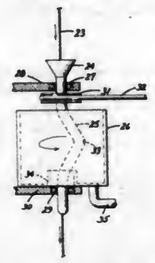
An anode for an electron tube, comprising a metallic body, and a surface layer comprising an intimate admixture of zirconium carbide and uncombined zirconium bonded together and to the anode body.



2,447,974
NITROSULFONES
Gerard Dunstan Buckley, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application August 14, 1945, Serial No. 610,884. In Great Britain August 31, 1944
4 Claims. (Cl. 260—607)

1. A process for the manufacture of nitrosulphones which comprises mixing in the presence of a strong basic substance a nitroparaffin of the formula $RR'CHNO_2$ wherein R and R' are respectively selected from the group consisting of hydrogen and alkyl radicals, and a sulphone of the formula $R^2SO_2R^3$ wherein R^2 is selected from the group consisting of alkyl radicals, alkylene radicals, and alkyl halide radicals, and wherein R^3 is selected from the group consisting of alkylene radicals having an ethylenic double bond in a position α-β to the sulphone group, alkyl bromide radicals having the bromine radical in a position β to the sulphone group, and alkyl chlorides having the chlorine atom in a position β to the sulphone group.

2,447,975
PREPARATION OF ACETAL BODIES FROM POLYHYDRIC ALCOHOLS
Willard J. Croxall, Bryn Athyn, and Harry T. Neher, Bristol, Pa., assignors to Röhm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application January 30, 1948, Serial No. 5,494
9 Claims. (Cl. 260—338)

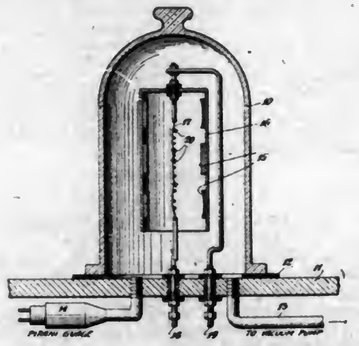


8. A process for preparing acetaldehyde acetal bodies which comprises reacting between 10° and 90° C. in the presence of mercury oxide and a boron trifluoride catalyst a vinyl ester of the formula $RCOOCH{=}CH_2$, wherein R is an alkyl group of one to three carbon atoms, and a glycol having more than three atoms separating its alcoholic hydroxyl groups, destroying the boron trifluoride catalyst in the reaction mixture, and separating therefrom resinous acetal bodies.

2,447,976
CUTTING APPARATUS
Dale M. Curtis, Nitro, W. Va., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application May 7, 1946, Serial No. 667,869
4 Claims. (Cl. 164—38)

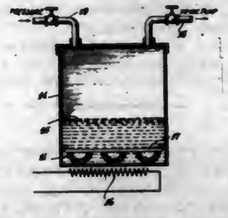
1. In combination with a device for cutting continuous filaments into discontinuous lengths comprising a rotating member having a radial passage for discharging the filamentary material outwardly therefrom, a cutting member to which the rotating member presents the outwardly extending material to be cut, means for feeding continuous filamentary material to the passage in the rotating member, and means for delivering the cut fibers to a subsequent stage of handling; a movable element positioned along the path of the material on its way to the subsequent stage, means for moving the element across the path thereby detaining the cut material therealong, and means positioned a predetermined distance radially from the rotating member for detecting filament ends of excessive length extending outwardly therefrom and for initiating operation of the moving means.

2,447,977
MEANS FOR CONDITIONING FILAMENTARY MATERIAL
Horace P. Fry, Jr., Swarthmore, Richard W. Stanley, Drexel Hill, and Henry J. McDermott, Prospect Park, Pa., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application April 24, 1945, Serial No. 590,078
5 Claims. (Cl. 34—58)



1. Means for conditioning continuously traveling liquid-laden filamentary material of indefinite length comprising means for continuously advancing the material in a predetermined path, a guide which at least partially surrounds succeeding portions of the material disposed in the path of the material and toward which the material advances in a substantially straight undeviating path and away from which the material proceeds in a substantially straight undeviating path, means for continuously moving the guide transversely of the direction of travel of the material in a path having a maximum limit on either side of the path of the material traveling through the guide to shake excess liquid off the material as it travels through the guide, and a guard at least partially surrounding the guide and terminating at its lower end in a collecting gutter for collecting the liquid shaken off the material.

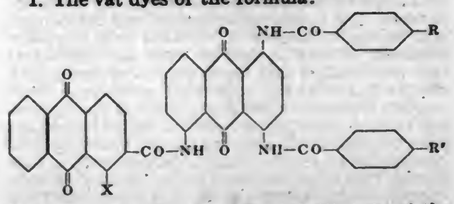
2,447,978
ADVERTISING STAND WITH REMOVABLE DISPLAY PANELS
Donald S. Hall, Cincinnati, Ohio, assignor to The Gruen Watch Company, Cincinnati, Ohio, a corporation of Ohio
Application April 13, 1944, Serial No. 530,830
1 Claim. (Cl. 40—64)



An advertising display stand comprising a frame member, an advertising support flap disposed on the rear of said frame, said flap being open on one edge thereof and having a series of fingerhold cut-out portions formed lineally in said open edge, date indicia associated with each of said cut-out portions, a plurality of advertising sheets normally disposed between the flap and the frame, certain of said sheets having a projecting portion formed on the side edge thereof, each of said projections being disposed beneath a particular cut-out portion on the flap whereby each of said sheets may be manipulated from the cut-out portions of the flap independently of the others and in accordance with the date indicia on the flap.

2,447,979
COPPER BASE ALLOY FOR METAL EVAPORATION
Franz R. Hensel and Earl I. Larsen, Indianapolis, Ind., assignors to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application July 6, 1944, Serial No. 543,634
2 Claims. (Cl. 75—153)

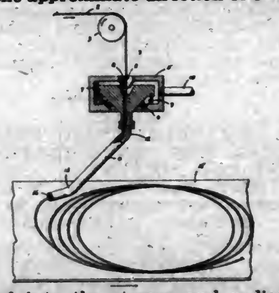
1. An alloy loop for metal evaporation formed of an alloy composed of .001 to 1% lithium, .25 to 20% of a metal selected from the group consisting of platinum and palladium and the balance copper.



2,447,980
METHOD OF MAKING POROUS BEARING SURFACES
Franz R. Hensel, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application January 29, 1945, Serial No. 575,159
4 Claims. (Cl. 29—149.5)

1. The method of providing a porous bearing surface comprising forming a bearing overlay metal with a backing of ferrous metal and a facing of an alloy of metal selected from the group consisting of copper, silver, gold, aluminum, platinum and palladium and a low boiling metal selected from the group consisting of zinc and cadmium, rolling said overlay metal into a sheet metal body, then heating the body to the vaporization temperature of the low boiling metal but below the melting point of the alloy to remove an appreciable percentage of said low boiling metal from said facing and leave a bearing facing layer of fine porous structure.

2,447,981
ANTHRAQUINONE VAT DYESTUFFS
Francis Irving and Alistair Livingston, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application October 9, 1946, Serial No. 702,092. In Great Britain October 18, 1945
2 Claims. (Cl. 260—368)

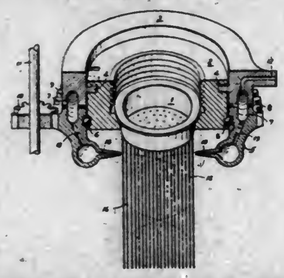


1. The vat dyes of the formula:

wherein R and R' stand for substituents of the group consisting of —H, —SO_2CH_3, —OCH_3, and —CH_3 and wherein X stands for a substituent of the group consisting of —NO_2 and —NH_2.

2,447,982
METHOD AND APPARATUS FOR HANDLING CONTINUOUS YARNS AND THE LIKE
Frederick W. Koster, Wallingford, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application April 17, 1945, Serial No. 588,835
7 Claims. (Cl. 242—1)

1. The method of depositing a strand of substantially continuous length comprising conveying it in a laterally enclosed fluid stream, and discharging, above a receiving surface, the fluid with the material at an angle to that plane which contains the approximate direction of entrance of



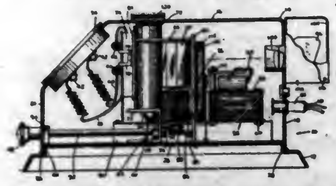
the strand into the stream and radiates from such direction to the position of discharge so that the strand discharge portion of the stream rotates about a portion thereof adjacent the strand entrance, thereby laying the strand on the surface in coiled form.

2,447,983
SHRINKABLE CONTAINER CLOSURE
John W. Little, Scarsdale, N. Y., assignor, by mesne assignments, to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application May 25, 1944, Serial No. 537,219
6 Claims. (Cl. 215—38)

5. As an article of manufacture, a shrinkable container closure comprising a short hollow section of a seamless, transversely stretched tubing formed of a thermoplastic resin composition comprising a thermosetting resin in a thermoplastic state, said closure being characterized by a condition of instability toward heat whereby it shrinks to a substantial extent transversely when heated.

2,447,984
APPARATUS FOR SPINNING ARTIFICIAL STAPLE FIBERS
Alvin Lodge, Detroit, Mich., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application February 22, 1944, Serial No. 523,392
4 Claims. (Cl. 18—8)

1. Apparatus for the production of artificial filaments having weakened sections at spaced



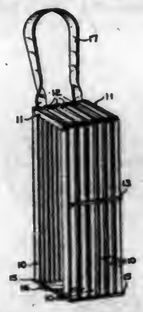
points along the length thereof which comprises means for extruding a plurality of filaments in the form of a bundle, fluid delivery means disposed outside the bundle of filaments for directing a stream of fluid inwardly against at least some of the filaments comprising the bundle, and means for moving said fluid delivery means to effect movement of the fluid stream circumferentially about said bundle.

2,447,985

DEVICE FOR DETERMINING PHOTOELECTRICALLY THE CONCENTRATION OF A SOLUTE IN A SOLVENT

Morris Mass, New York, N. Y.

Application June 25, 1945, Serial No. 601,502
12 Claims. (Cl. 250—41.5)



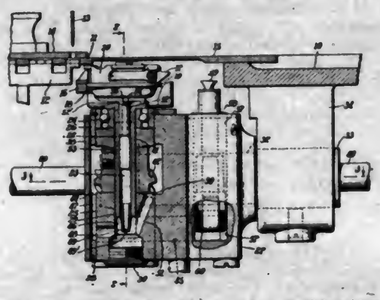
1. In a colorimeter, a photo-electric cell, a specimen container, a light valve for controlling the passage of light rays from a source of light to the photoelectric cell, said cell, container and valve mounted as a unit on a support, a base having a floor, said unit carried in position on said floor, a shaft for operating the light valve and mounted for operation in said unit and accessible on the exterior of the colorimeter, a cover having a top, end and side walls and open at the bottom for mounting the cover on the base to house in the cover the said unit and form a compartment therefor closed on all sides thereof, one end wall of said cover having a light condensing lens in position to be aligned with the elements mounted in said unit upon arranging the cover on the base and a compartment for housing therein a source of light, said compartment mounted on said cover on the exterior thereof adjacent the said lens with the source of light in alignment with the lens and separate from the first mentioned compartment for the said unit formed upon mounting the cover on the base.

2,447,986

DEVELOPING RACK

Herman Millman, Brooklyn, N. Y.

Application June 23, 1945, Serial No. 601,215
1 Claim. (Cl. 95—100)



In a holder for photographic film having a plurality of opposed aligned laterally spaced vertical channel members with the free ends of their arms directed toward each other for receiving between the arms of each aligned pair of channel members a strip of film, means at the top ends of said channel members closing the space between adjacent channel members and providing a smooth top surface for guiding strips of film into the space between the arms of each aligned pair of channel members, comprising horizontal channel members at the top ends of said first-mentioned channel members, said horizontal channel members having their free arms directed downwards and overlapping and secured to the top ends of adjacent arms of aligned pairs of said first-mentioned channel members and their intermediate arms extended across and closing the space between said adjacent arms of said aligned pairs of said first-mentioned channel members.

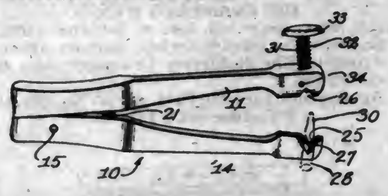
2,447,987

LUBRICATING MEANS FOR SEWING-MACHINE LOOP TAKERS

Frank Parry, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey

Application June 12, 1945, Serial No. 599,058
7 Claims. (Cl. 112—256)

1. A sewing machine having in combination, a work-support, a vertically disposed tubular hook-shaft journaled in a housing located below said work-support, a driving shaft located below said work-support and passing through said housing, gears operatively connecting said shafts, a loop-taker carried by the upper end of said hook-shaft and having a raceway, a constant level auxiliary reservoir formed in said housing and located at the lower end of said hook-shaft and into which the lower end of the hook-shaft extends, a main reservoir, means including said gears for supplying oil from said main reservoir to said constant level auxiliary reservoir when the hook-shaft is rotated, and a sleeve member formed with a bore having the shape of an inverted truncated cone carried at the lower end of said hook-shaft for elevating oil from said auxiliary reservoir to the raceway in the hook when the machine is operated.



2,447,988

AMPOULE NECK CUTTER

Louis A. Pierson, Meriden, Conn.

Application January 3, 1946, Serial No. 638,828
5 Claims. (Cl. 49—52)

1. An ampoule neck cutter tool comprising a pair of levers pivoted together adjacent one end, yieldable means normally urging their other ends apart, recessed jaws formed on said other ends, the recesses in said jaws being of such size as to receive and loosely hold an ampoule neck therebetween when said jaws are squeezed together, a plunger reciprocably extending through one of said jaws into the recess therein, yieldable means normally urging said plunger away from the recess, thumb receiving means on said plunger for pressing said plunger against said yieldable means and into said recess, and a diamond hard glass cutting point provided on the plunger end within said recess, said first and second mentioned yieldable means being so constructed and arranged that by pressing on said thumb receiving means, the jaws are first squeezed together and thereafter upon continued pressing, the cutter point is moved further into the recess, whereby when an ampoule neck is held in the recesses between the pressed together jaws, the pressed-in plunger will cause its point to cut the ampoule neck as the ampoule neck is rotated.

2,447,989

ZIPPED-IN UNDERARM GUSSET

William T. Previdi, Allendale, N. J.

Application January 15, 1947, Serial No. 722,163
1 Claim. (Cl. 2—125)

An upper garment having a body part and arm enclosing sleeves on the opposite sides thereof, each sleeve having a fixed connection with the side of the body part and an underarm gusset approximately oval in shape secured at its outer edges to the body part and the sleeve and providing a flexible joint under the sleeve for the same, a row of slide fastener hooks secured to the one outer edge of the gusset, a row of mating slide fastener hooks secured to the other outer edge of the gusset, and a slide fastener closure engaged with hooks of both rows to couple and uncouple the rows of hooks, the gusset having a fold line midway of its outer edges, and the slide fastener connecting each sleeve to said body part so that the sleeve will have a limited upward and outward movement when the rows of hooks are fully coupled on each other and allowing said gusset to increase said freedom of movement when said hooks are fully uncoupled on each other.

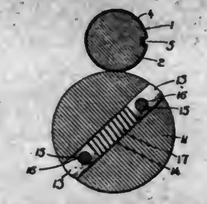
2,447,990

WINDOW GUIDE FOR VEHICLE BODIES

John H. Roethel, Detroit, Mich., assignor to Marvel Equipment Corporation, Detroit, Mich., a corporation of Michigan

Application September 17, 1943, Serial No. 502,779
3 Claims. (Cl. 296—44.5)

1. A guide for a window panel shiftable into and out of a window well, comprising an upright guide having a guide flange extending in the direction of the plane of the panel within the well, said flange being return bent to provide parallel flange portions, a roller mounted on the lower edge of the panel at one side of the plane



thereof, said roller having spaced flexible disk-like portions embracing said flange portions and at least one thereof having rolling engagement with a surface at one side of the flange.

2,447,991

RESILIENT BEARER FOR OFFSET PRESSES

Laszlo M. Stempel, New York, N. Y., assignor, by mesne assignments, to R. Hoe & Co., Inc., New York, N. Y., a corporation of New York

Application June 13, 1946, Serial No. 676,516
9 Claims. (Cl. 101—217)

1. In a printing couple including a cylinder having a gap in the surface thereof, the combination of rigid concentric bearer means for said cylinder, and resilient means associated with the other cylinder of said couple for exerting radial pressure against said bearer means over a restricted arc in axial alignment with the gap when said gap is at the impression point.

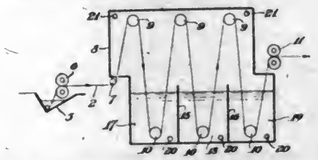
2,447,992

EXTENSIBLE SUPPORTING POST FOR CLOTHESLINES

Stanley P. Turek, La Grange, Ill., assignor to Modern-Aire Mfg. Corporation, Chicago, Ill., a corporation of Illinois

Application March 8, 1946, Serial No. 652,894
4 Claims. (Cl. 248—353)

1. An extensible post for vertical support comprising a tube, a pipe slidingly fitted within the tube, the tube being formed intermediately of its



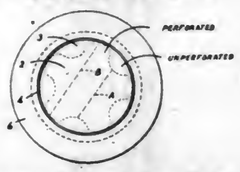
ends with a transverse slot extending arcuately through more than 180° to expose the pipe therewithin at one point, and a friction lock in the general form of an elongated plate having an opening through which the interfitted pipe and tube may extend when the plate is opposite the slot, the plate being extended laterally of the tube outwardly away from the slot and there being a high point medially in the lower edge of the slot providing a fulcrum whereon the plate at a point adjacent one of its ends is free to rock through a limited distance, and the plate being formed to the inside of its opening with an acute-angled gripping point adjacent the fulcrum whereby to engage the pipe with a high degree of friction when the plate is in its normal down position.

2,447,993

PROCESS FOR DYEING TEXTILE FIBERS WITH VAT DYES

Nicholas R. Vieira, Charlotte, N. C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

Application February 22, 1945, Serial No. 579,266
2 Claims. (Cl. 8—34)



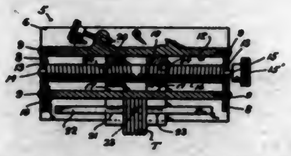
1. In a continuous process for dyeing textile fibers with vat dyes, the steps which comprise padding the fiber with the unreduced vat dye in pigment form, immediately passing the fiber padded with the color into a closed chamber containing steam and an alkaline solution of a reducing agent maintained at boiling temperature and capable of completely reducing the vat dye, and alternately subjecting the fiber padded with color to the action of the alkaline solution of the reducing agent and to the action of the steam to effect reduction and development of the color on the fiber, the time of exposure to steam exceeding the time of immersion in the alkaline reducing solution, said development treatment being continued until substantially all of the color has been fixed in the fiber, said treatment in the alkaline treating solution and steam being carried out in the absence of air.

2,447,994

SPINNERET

Dan B. Wicker, Dunbar, W. Va., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware

Application December 8, 1945, Serial No. 633,661
4 Claims. (Cl. 18—8)



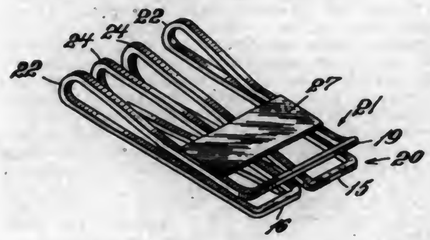
1. A spinneret for use in the production of artificial filaments, said spinneret having a total orifice area throughout which the orifices are disposed in uniformly spaced-apart relation and which is defined by a crenated periphery, the dimension of the orifice area between opposed inwardly extending portions of the periphery being less than 4.5 inches, and the dimension between opposed outwardly extending portions of the periphery being at least 3 inches.

2,447,995

DIE CLAMPING MEANS

Jacob Anon, deceased, late of Bellaire, Ohio, by Hattie Anon, administratrix, Bellaire, Ohio, assignor to The Goldpress Company, Inc., Bellaire, Ohio

Application June 20, 1946, Serial No. 678,031
2 Claims. (Cl. 101—28)



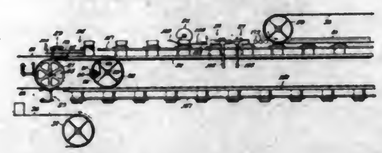
1. In combination with the stamping head of a goldpress stamping machine, a screw having right and left hand threads rotatably mounted in the head, a knob on one end of the screw, opposed clamping blocks threaded on the screw and having guide slots therein, a fin formed on the head and seated in the guide slots of the clamping blocks type blocks having their body portions removably resting against the lower surface of the fin and inner surface of the rear wall of the head, a substantially rectangular clamping bar seated and forwardly and rearwardly slidable in other slots formed in the clamping blocks and bearing against the type blocks secured between the clamping blocks, and a thumb-screw threadedly disposed in the stamping head with its inner end jamming the clamping bar against the aforesaid type blocks.

2,447,996

MONEY CLIP

Leon J. Biagi, Rumford, R. I., assignor to Swank, Inc., a corporation of Delaware

Application March 25, 1946, Serial No. 656,829
3 Claims. (Cl. 24—81)



1. A money clip comprising a common jaw having four laterally spaced longitudinally extending wire members, a resilient jaw on one side thereof comprising two of said wire members folded upon themselves at one end of the common jaw, and a resilient jaw on the other side thereof comprising the other two wire members folded in the other direction upon themselves, at the same end of the common jaw, both of said jaws extending substantially the full length of said common jaw and providing entrance mouths facing in the same direction.

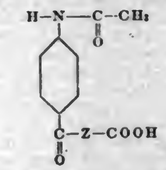
2,447,997

APPARATUS FOR SEALING CONTAINERS

Thomas F. Cass, Jr., Wayne, and Douglas Kirk, Chicago, Ill., and Francis W. Lanigan, Lincoln, Mass., assignors, by direct and mesne assignments, to Container Corporation of America, Chicago, Ill., a corporation of Delaware

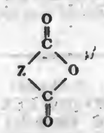
Application April 23, 1943, Serial No. 484,306
7 Claims. (Cl. 93—6)

1. A carton sealing machine especially adapted for closing and top sealing a series of filled cartons having integral top flaps coated with a thermoplastic composition and adapted to be overlapped to form top closures therefor, comprising an endless chain conveyor, means for driving said conveyor continuously in a predetermined direction, a plurality of carton pocket means mounted on said conveyor at evenly spaced intervals, each of said pocket means being adapted to receive a carton in upright position and to grip the same just below its top edges, means for inserting cartons into said pocket means as the latter pass a carton supply position, means for folding said top flaps to form carton closures as said cartons travel in said pocket means, an endless metal belt mounted to travel with its lower reach in contact with the uppermost of said folded top flaps, means for driving said belt at approximately the same speed as said chain conveyor, means for heating the lower reach of said belt and exerting downward pressure thereon sufficiently to cause said thermoplastic composition to flow into the cracks and crevices between and adjacent said flaps, a second endless metal belt mounted to travel with its lower reach in contact with the tops of the cartons emerging from contact with said first-mentioned belt, means for driving said second belt at approximately the same speed as said chain conveyor, means for cooling the lower reach of said second belt and exerting downward pressure thereon, and means for removing sealed cartons from said pocket means.



2,447,998

PREPARATION OF SUBSTITUTED ACYLANILIDES

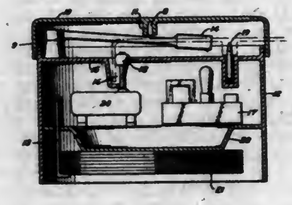


Richard C. Clapp and John Krapcho, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application September 18, 1945, Serial No. 617,180
4 Claims. (Cl. 260—518)

1. A method of preparing compounds having the formula

in which Z is a $(CH_2)_n$ radical where n is a small whole number from 2 to 6 which comprises mixing acetanilide with a compound having the formula



in which Z is as defined above, in the presence of a Friedel-Crafts catalyst and carbon disulfide.

2,447,999

PORTABLE PHONOGRAPH

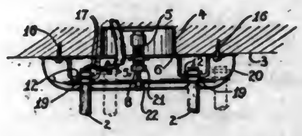
Louis C. Kalff and August N. Legras, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee

Application January 29, 1943, Serial No. 474,001
In the Netherlands March 11, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires March 11, 1961
5 Claims. (Cl. 274—2)

1. A phonograph, comprising in combination, a case, a combination cover and turntable member removably associated with said case, a flange on said member whereby to fit it concentrically over said case during service as cover, a centric hub on said member for mounting it rotatably in said case during service as turntable, a top plate in said case, a spindle eccentrically mounted in said top plate for supporting said hub, a channel in said top plate and extending through said case wherein to accommodate said flange in its eccentric position, and a drive member extending into said channel to act on said flange.

2,448,000

MANUFACTURE OF ALKALINE EARTH METALS



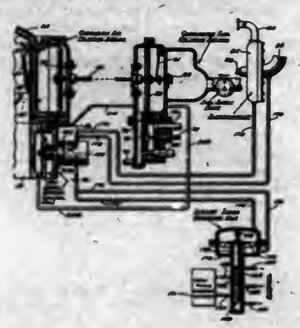
Frank R. Kemmer, Louisville, Ky., assignor to Reynolds Metals Company, a corporation of Delaware

No Drawing. Application December 29, 1944, Serial No. 570,456
2 Claims. (Cl. 75—67)

1. In making an alkaline earth metal, the method which comprises mixing oxide of the alkaline earth metal to be made with aluminum as reducing agent and a mixture consisting of aluminum nitride, carbide and oxide in the proportion of 0.5 to 10 parts by weight of the nitride, 0.1 to 1 part of the carbide, and 10 to 50 parts of the oxide for 100 parts of total weight of the said mixture and aluminum, heating the whole mixed mass to furnace temperature of at least approximately 2000° F., to cause reduction of the alkaline earth metal oxide to free alkaline earth metal, and distilling in vacuo and condensing the said

metal, the mixture of aluminum nitride, carbide, and oxide serving during the heating as a moderator of the activity of the aluminum as reducing agent.

2,448,001
LIGHTING FIXTURE
René G. Maurette, Beverly, Mass., assignor to Sylvania Electric Products, Inc., Salem, Mass., a corporation of Massachusetts
Application September 7, 1946, Serial No. 695,411
1 Claim. (Cl. 248—343)



A support adapted for application to an attaching surface comprising a one piece continuous metallic strap being flat for the major portion of its length and having a pair of U-shaped portions extending down from its flat portion adjacent the ends thereof, an enlarged aperture in corresponding side walls of said U-shaped sections, relatively narrow apertures in the bottom wall of the U-shaped portions connecting with the other apertures, a pair of fixture stem members having at least one nut at their upper end and secured in a fixture at their other ends, whereby by lateral movement of the fixture while in an elevated position both stems are inserted in the support laterally and simultaneously, additional nuts on said stems engaging the bottom face of said U-shaped portions and coacting with the other nuts to secure the fixture to the support to secure it to the attaching surface.

2,448,002
METHOD OF MAKING PROLAMINES
Leslie O. G. Pearce, Hammond, Ind., assignor to American Maize-Products Company, a corporation of Maine
No Drawing. Application December 4, 1945, Serial No. 632,795
7 Claims. (Cl. 260—123)

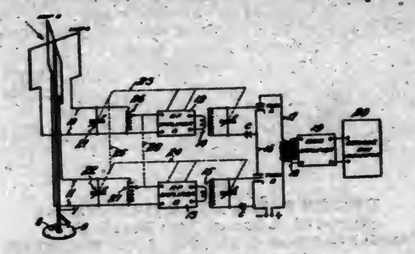
1. In separating prolamines, the method which comprises subjecting a cereal protein containing the prolamines to hot acid hydrolysis and then maintaining the resulting insoluble products of the hydrolysis in contact with an alkali metal alkali in aqueous solution until the prolamines dissolve as an alkali metal complex, warming the said complex with an aqueous solution of a soluble calcium compound in proportion at least approximately equivalent to the prolamines present in the complex, this warming converting the complex to a soluble prolamine calcium complex, and then filtering the mixture to separate the prolamine calcium complex from any undissolved protein present.

2,448,003
IGNITION CONTROL
Perry W. Pratt, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application October 27, 1945, Serial No. 625,078
8 Claims. (Cl. 123—117)

1. In an aircraft engine having a supercharger and an ignition system, a device for advancing and retarding the timing of said ignition system, means for subjecting said device to the pressure rise across said supercharger in a sense such as

to advance said timing, and means for subjecting said device to the pressure rise across said supercharger in the opposite sense so as to retard said timing.

2,448,004
AQUEOUS WOOL TREATING BATHS COMPRISING CHLOROPRENE METHACRYLATE COPOLYMERS
John B. Rust, East Hanover, N. J., assignor to Montclair Research Corporation, a corporation of New Jersey
No Drawing. Original application March 26, 1946, Serial No. 657,335. Divided and this application April 17, 1947, Serial No. 742,199
6 Claims. (Cl. 260—29.7)



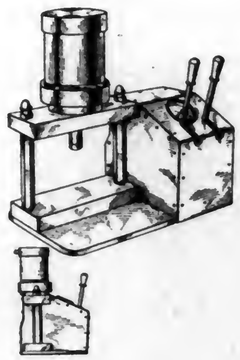
1. A bath for treating wool to give shrinkproofing with substantially normal hand which comprises an aqueous substantially stable emulsion of a synthetic copolymer of 100% polymerization of chloroprene and an alkyl methacrylate, the alkyl group having from 1 to 4 carbon atoms, the latter being from 5% to 50% by weight of the copolymers, the copolymers being present in an amount to give from 1 to 25% by weight on the wool, the emulsion containing a non-cationic emulsifying agent and at least 25% by weight on the copolymer present of a water-soluble neutral salt of an alkali metal as a conditioning electrolyte, the pH of the bath being below 7.

2,448,005
AQUEOUS WOOL TREATING BATHS COMPRISING CHLOROPRENE COPOLYMERS
John B. Rust, East Hanover, N. J., assignor to Montclair Research Corporation, a corporation of New Jersey
No Drawing. Original application March 26, 1946, Serial No. 657,335. Divided and this application April 17, 1947, Serial No. 742,200
6 Claims. (Cl. 260—29.7)

1. A bath for treating wool to give shrinkproofing with substantially normal hand which comprises an aqueous substantially stable emulsion containing a copolymer of 100% polymerization of chloroprene and an amount of from 5% to 60% by weight of the copolymer of a compound selected from the group consisting of an alkyl acrylate, the alkyl group containing not more than 4 carbon atoms, styrene, dimethyl styrene, dichloro styrene, acrylonitrile, and methacrylonitrile, the copolymer being present in the emulsion in an amount to give from 1 to 25% by weight of copolymer deposition on the wool, the emulsion containing a non-cationic emulsifying agent and at least 25% by weight on the copolymer of a water-soluble neutral salt of an alkali metal as a conditioning electrolyte, the pH of the bath being below 7.

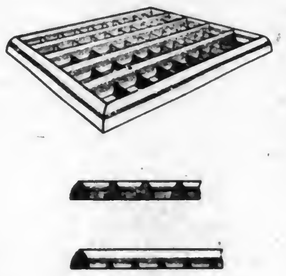
2,448,006
RADIO DIRECTION FINDER
Alfred R. Starr, New York, N. Y.
Application December 29, 1942, Serial No. 470,522
17 Claims. (Cl. 343—123)

1. In a direction finder, the combination of two crossed loop antennas, a radio frequency amplifier for each of said loop antennas, thermionic devices having input circuits connected with said amplifiers and output circuits connected in series relation, said thermionic devices being severally biased to normally prevent current flow in said output circuits and an indicating device con-



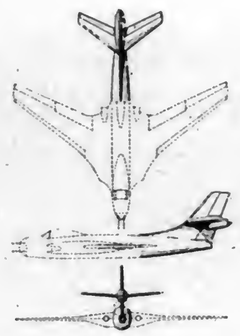
nected with the output circuits of said thermionic devices.

DESIGNS



AUGUST 24, 1948

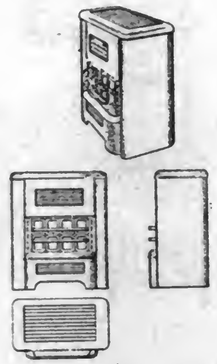
150,670
DESIGN FOR A HYDRAULIC PRESS
Albert M. Ashman, Seal Beach, Calif.
Application March 23, 1946, Serial No. 127,832
Term of patent 14 years
(Cl. D63—1)



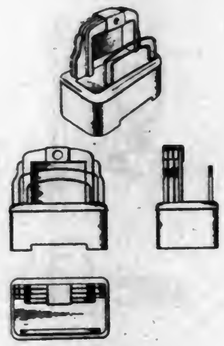
The ornamental design for a hydraulic press, as shown and described.

150,671
DESIGN FOR A DOOR MAT
Clarence E. Bauer, Norwalk, Conn., assignor to Danbury Rubber Co., Inc., Danbury, Conn., a corporation of Connecticut
Application April 2, 1947, Serial No. 138,113
Term of patent 14 years
(Cl. D9—6)

The ornamental design for a door mat, as shown.

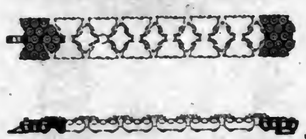


150,672
DESIGN FOR AN AIRPLANE
Derwood A. Beck, Seville, Ohio, assignor to Goodyear Aircraft Corporation, Akron, Ohio, a corporation of Delaware
Application October 8, 1946, Serial No. 133,830
Term of patent 14 years
(Cl. D71—1)



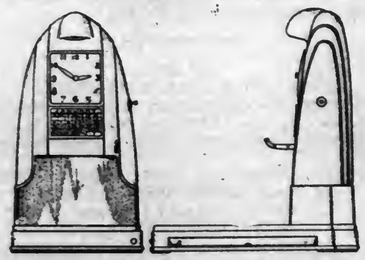
The ornamental design for an airplane, as shown and described.

150,673
DESIGN FOR A CASING FOR A SPACE HEATER
Aloysius W. Becker, Chicago, Ill., assignor to Dearborn Stove Company, Chicago, Ill., a corporation of Illinois
Application April 10, 1947, Serial No. 138,273
Term of patent 3½ years
(Cl. D81—10)



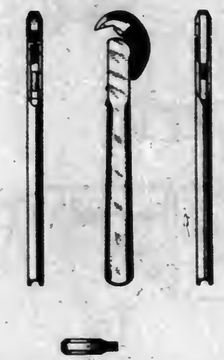
The ornamental design for a casing for a space heater, substantially as shown.

150,674
DESIGN FOR A CASING FOR A SPACE HEATER
Aloysius W. Becker, Chicago, Ill., assignor to Dearborn Stove Company, Chicago, Ill., a corporation of Illinois
Application April 10, 1947, Serial No. 138,274
Term of patent 3½ years
(Cl. D81—10)



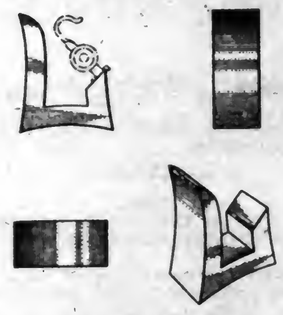
The ornamental design for a casing for a space heater, substantially as shown.

150,675
DESIGN FOR A LINK BRACELET
Herman Begoff, Chicago, Ill.
Application November 28, 1947, Serial No. 152,842
Term of patent 3½ years
(Cl. D45—4)



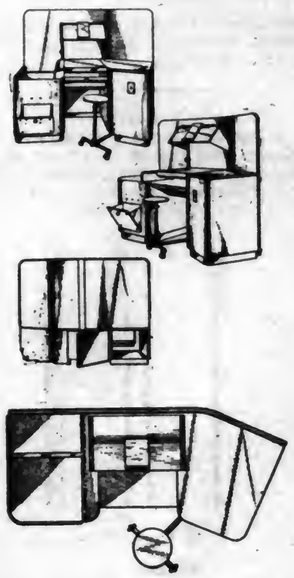
The ornamental design for a link bracelet, as shown and described.

150,676
DESIGN FOR A COMBINED ILLUMINABLE CLOCK, TELEPHONE STAND, AND CALENDAR
Mary J. Brusseau, Detroit, Mich.
Application November 22, 1946, Serial No. 135,021
Term of patent 14 years
(Cl. D42—7)



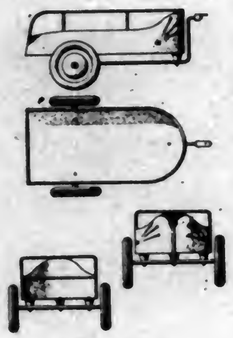
The ornamental design for a combined illuminable clock, telephone stand, and calendar, as shown and described.

150,677
DESIGN FOR A WRENCH
Francis J. Carnelli, New York, N. Y.
Application April 15, 1947, Serial No. 138,425
Term of patent 14 years
(Cl. D54—16)



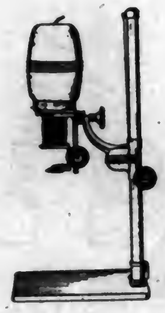
The ornamental design for a wrench, as shown.

150,678
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application January 6, 1948, Serial No. 143,547
Term of patent 7 years
(Cl. D45—9)



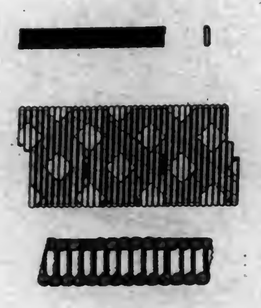
The ornamental design for an earring or similar article, substantially as shown.

150,679
DESIGN FOR A RACKING TABLE
Walter Clifford Cunningham, Horsham, England, assignor to The National Marking Machine Company, Cincinnati, Ohio, a corporation of Ohio
Application January 27, 1947, Serial No. 136,459
In Great Britain August 13, 1946
Term of patent 14 years
(Cl. D33—14)



The ornamental design for a racking table, as shown.

150,680
DESIGN FOR A TRAILER
William M. Dawson, Dallas, Tex.
Application November 29, 1946, Serial No. 135,166
Term of patent 3½ years
(Cl. D14—3)



The ornamental design for a trailer, substantially as shown.

150,681
DESIGN FOR A PHOTOGRAPHIC ENLARGER
Albert Drucker, Chicago, Ill., assignor to Burke & James, Inc., Chicago, Ill., a corporation of Illinois
Application November 22, 1946, Serial No. 135,013
Term of patent 14 years
(Cl. D61—1)

The ornamental design for a photographic enlarger, substantially as shown and described.

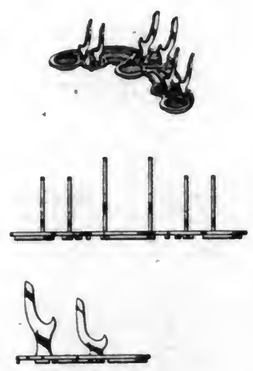
150,682
DESIGN FOR AN EXTENSIBLE BAND FOR WATCH BRACELET OR ANALOGOUS ARTICLE
Hans J. Duester, Chicago, Ill., assignor to John Major and Hans J. Duester, both of Chicago, Ill.
Application May 12, 1947, Serial No. 138,985
Term of patent 14 years
(Cl. D45—4)

The ornamental design for an extensible band for watch bracelet or analogous article, as shown.

150,683
DESIGN FOR A CHAIR
Charles Eames, West Los Angeles, Calif., assignor to Evans Products Company, Detroit, Mich., a corporation of Delaware
Application March 27, 1947, Serial No. 137,926
Term of patent 14 years
(Cl. D15—1)

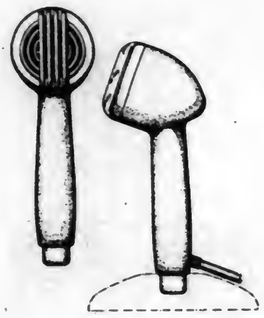
The ornamental design for a chair, as shown.

150,684
DESIGN FOR A TILT-BACK CHAIR
Charles Eames, West Los Angeles, Calif., assignor to Evans Products Company, Detroit, Mich., a corporation of Delaware
Application March 27, 1947, Serial No. 137,928
Term of patent 14 years
(Cl. D15—1)



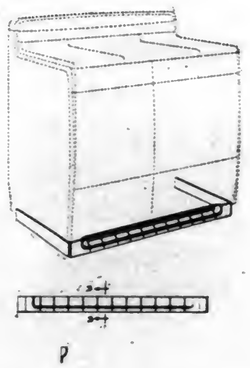
The ornamental design for a tilt-back chair, as shown.

150,685
DESIGN FOR A CHAIR
Charles Eames, West Los Angeles, Calif., assignor to Evans Products Company, Detroit, Mich., a corporation of Delaware
Application March 27, 1947, Serial No. 137,929
Term of patent 14 years
(Cl. D15—1)



The ornamental design for a chair, as shown.

150,686
DESIGN FOR A COMBINED CUP AND SAUCER DISPLAY STAND
Jack P. Faeder, Beverly Hills, Calif.
Application October 20, 1947, Serial No. 142,037
Term of patent 14 years
(Cl. D80—9)

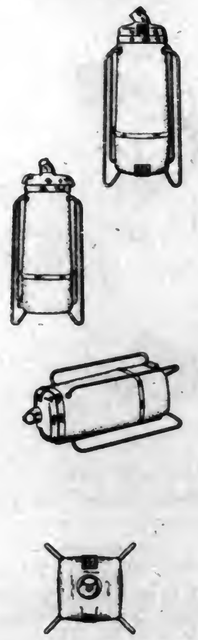


The ornamental design for a combined cup and saucer display stand, as shown.

150,687
DESIGN FOR A MICROPHONE OR THE LIKE
Joseph B. Federico, New Baltimore, Mich., assignor to The Astatic Corporation, Conneaut, Ohio, a corporation of Ohio
Application December 12, 1946, Serial No. 135,452
Term of patent 7 years
(Cl. D26—14)

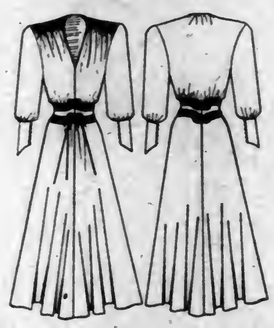
The ornamental design for a microphone or the like, as shown and described.

150,688
DESIGN FOR A GAS COOKSTOVE
Montgomery Ferar, Detroit, Mich., assignor to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application April 11, 1947, Serial No. 138,316
Term of patent 7 years
(Cl. D81—4)



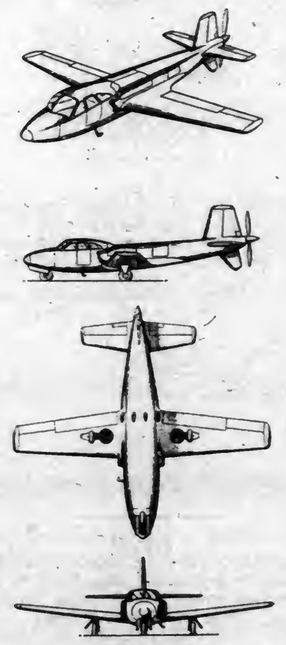
The ornamental design for a gas cookstove, substantially as shown and described.

150,689
DESIGN FOR A KNIFE
Howard L. Fischer, St. Paul, Minn.
Application May 1, 1947, Serial No. 138,738
Term of patent 14 years
(Cl. D22—3)



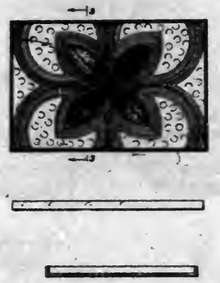
The ornamental design for a knife, as shown.

150,690
DESIGN FOR A VACUUM CLEANER
Gordon W. Florian, Bridgeport, Conn., assignor to Air-Way Electric Appliance Corporation, Toledo, Ohio, a corporation of Delaware
Application May 25, 1948, Serial No. 146,560
Term of patent 14 years
(Cl. D9—2)



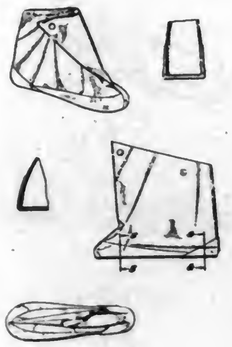
The ornamental design for a vacuum cleaner, as shown.

150,691
DESIGN FOR A NEGLIGEE
Violet Giovagnoni, New York, N. Y.
Application January 13, 1948, Serial No. 143,715
Term of patent 7 years
(Cl. D3—26)



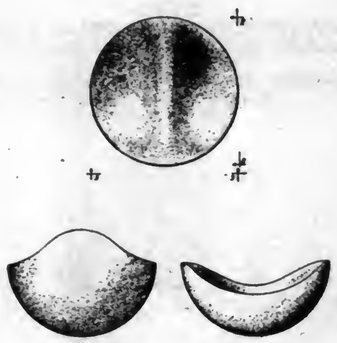
The ornamental design for a negligee, substantially as shown.

150,692
DESIGN FOR AN AIRPLANE
Charles S. Glasgow, Los Angeles, and Carlos C. Wood, West Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.
Application October 22, 1946, Serial No. 134,170
Term of patent 14 years
(Cl. D71—1)



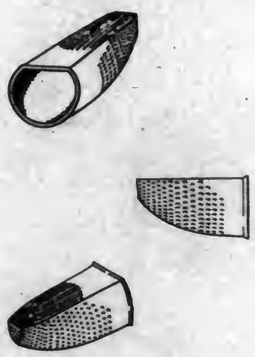
The ornamental design for an airplane, substantially as shown.

150,693
DESIGN FOR A TRAY OR SIMILAR ARTICLE
Samuel Guzman and Herbert Rappaport, New York, N. Y.
Application May 17, 1946, Serial No. 129,773
Term of patent 14 years
(Cl. D44—14)



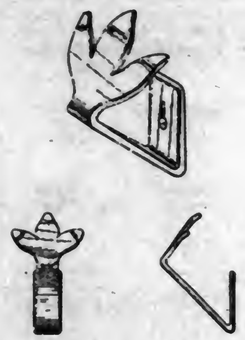
The ornamental design for a tray or similar article, as shown.

150,694
DESIGN FOR AN OVERSHOE
Rena Bell Hardman, Los Angeles, Calif.
Application June 7, 1948, Serial No. 146,814
Term of patent 14 years
(Cl. D7—4)



The ornamental design for an overshoe, as shown.

150,695
DESIGN FOR A CAKE OF SOAP
Edward F. Haskell, New York, N. Y.
Application July 23, 1946, Serial No. 131,866
Term of patent 7 years
(Cl. D73—1)



The ornamental design for a cake of soap, as shown.

150,696
DESIGN FOR A FINGER-SHAPED THIMBLE
Claude M. Howser, Santa Barbara, Calif., assignor to California Thimble Corporation, a corporation of California
Application December 16, 1946, Serial No. 135,560
Term of patent 14 years
(Cl. D3—19)

The ornamental design for a finger-shaped thimble, as shown.

150,697
DESIGN FOR A PIN-UP HAT TREE
Beatrice Judd, Richmond, Va.
Application January 24, 1947, Serial No. 136,357
Term of patent 7 years
(Cl. D17—12)

The ornamental design for a pin-up hat tree, as shown.

150,698
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 141,687
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,699
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 1, 1947, Serial No. 142,265
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,700
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 1, 1947, Serial No. 142,266
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,701
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 1, 1947, Serial No. 142,268
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown.

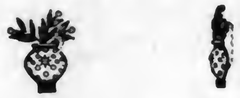
150,702
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 1, 1947, Serial No. 142,270
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,703
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 7, 1947, Serial No. 142,393
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,704
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 10, 1947, Serial No. 142,427
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

150,705
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 10, 1947, Serial No. 142,428
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,706
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 10, 1947, Serial No. 142,429
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,707
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 10, 1947, Serial No. 142,430
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar, article, substantially as shown.

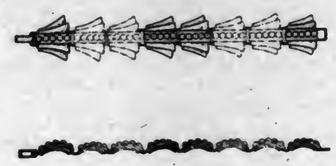
150,708
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 10, 1947, Serial No. 142,432
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,709
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 10, 1947, Serial No. 142,435
Term of patent 7 years
(Cl. D45—19)

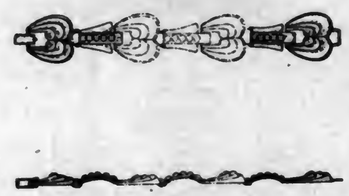
The ornamental design for a brooch or similar article, substantially as shown.

150,710
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 10, 1947, Serial No. 142,436
Term of patent 7 years
(Cl. D45—9)



The ornamental design for an earring or similar article, substantially as shown.

150,711
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application November 13, 1947, Serial No. 142,508
Term of patent 7 years
(Cl. D45—19)

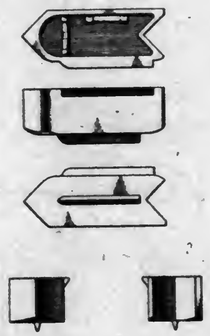


The ornamental design for a brooch or similar article, substantially as shown.

150,712
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 2, 1948, Serial No. 143,509
Term of patent 7 years
(Cl. D45—4)

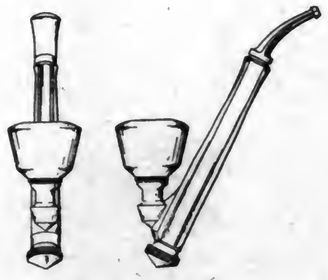
The ornamental design for a bracelet or similar article, substantially as shown and described.

150,713
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 2, 1948, Serial No. 143,513
Term of patent 7 years
(Cl. D45—4)



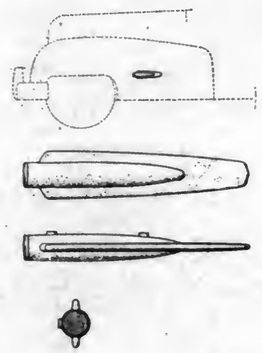
The ornamental design for a bracelet or similar article, substantially as shown and described.

150,714
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 2, 1948, Serial No. 143,514
Term of patent 7 years
(Cl. D45—16)



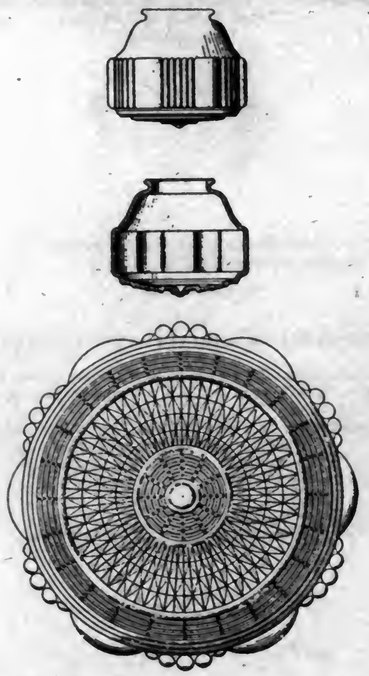
The ornamental design for a necklace or similar article, substantially as shown and described.

150,715
DESIGN FOR A MORTAR AND CEMENT FINISHING TOOL
Theodore T. King, Grand Prairie, Tex., assignor of forty-nine per cent to J. C. Young, Grand Prairie, Tex.
Application March 12, 1947. Serial No. 137,561
Term of patent 14 years
(Cl. D93—4)



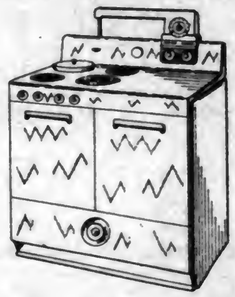
The ornamental design for a mortar and cement finishing tool, as shown.

150,716
DESIGN FOR A HANG-TYPE SMOKER'S PIPE
Kurt F. J. Kirsten, Seattle, Wash.
Application July 1, 1946, Serial No. 131,252
Term of patent 14 years
(Cl. D85—8)



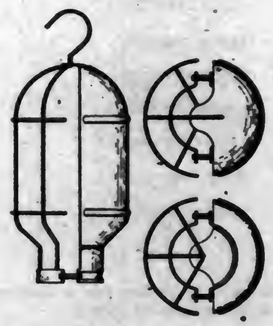
The ornamental design for a hang-type smoker's pipe, as shown.

150,717
DESIGN FOR A VEHICLE ORNAMENT OR THE LIKE
George C. Knight, Detroit, Mich.
Application June 4, 1947, Serial No. 139,445
Term of patent 3½ years
(Cl. D14—18)



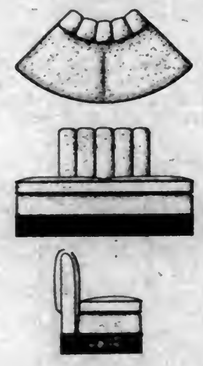
The ornamental design for a vehicle ornament or the like, as shown and described.

150,718
DESIGN FOR AN ILLUMINATOR GLOBE
Irving Levin, New York, N. Y.
Application September 15, 1947, Serial No. 141,412
Term of patent 14 years
(Cl. D48—16)



The ornamental design for an illuminator globe as shown.

150,719
DESIGN FOR AN ELECTRIC RANGE
Raymond Loewy, New York, N. Y., assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application March 21, 1947, Serial No. 137,799
Term of patent 7 years
(Cl. D81—4)



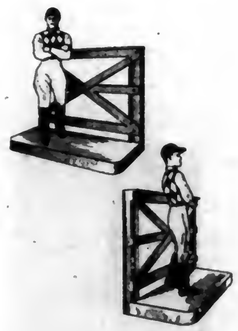
The ornamental design for an electric range, as shown and described.

150,720
DESIGN FOR A TROUBLE LIGHT GUARD
Morris Meltzer, Detroit, Mich.
Application April 1, 1946, Serial No. 128,161
Term of patent 14 years
(Cl. D48—24)

The ornamental design for a trouble light guard, substantially as shown.

150,721
DESIGN FOR AN UPHOLSTERED CHAIR
James J. Modarelli, Berea, Ohio, assignor to The San Hygene Upholstery Company, Akron, Ohio, a corporation of Ohio
Application February 13, 1947, Serial No. 136,879
Term of patent 3½ years
(Cl. D15—11)

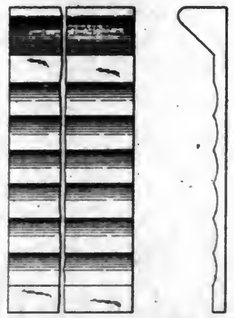
The ornamental design for an upholstered chair, as shown.



150,722
DESIGN FOR A CABINET
Rey William Neville, Trinity, N. C., assignor to Tomlinson of High Point, High Point, N. C., a corporation of North Carolina
Application March 7, 1947, Serial No. 137,441
Term of patent 3½ years
(Cl. D32—19)

The ornamental design for a cabinet, substantially as shown and described.

150,723
DESIGN FOR A BOOK END
John Ferdinand Oberwinder, St. Louis, Mo., assignor to Glenmore Distilleries Company, Louisville, Ky., a corporation of Delaware
Application March 4, 1947, Serial No. 137,334
Term of patent 3½ years
(Cl. D33—1)

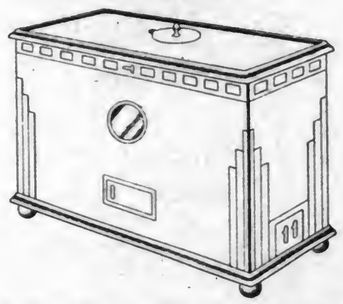


The ornamental design for a book end, as shown.

150,724
DESIGN FOR A BOOK END
John Ferdinand Oberwinder, St. Louis, Mo., assignor to Glenmore Distilleries Company, Louisville, Ky., a corporation of Delaware
Application March 4, 1947, Serial No. 137,335
Term of patent 3½ years
(Cl. D33—1)

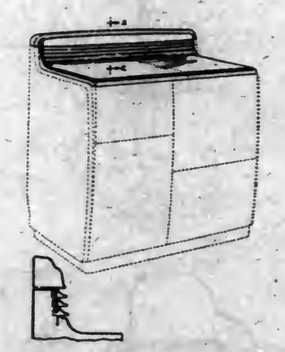
The ornamental design for a book end, as shown.

150,725
DESIGN FOR A BILLBOARD FRAME MOLDING
Roger W. Olmsted, San Mateo, Calif.
Application March 18, 1946, Serial No. 127,636
Term of patent 14 years
(Cl. D13—6)



The ornamental design for a billboard frame molding, substantially as shown.

150,726
DESIGN FOR A RING
Thomas Vincent Phelan, Trenton, N. J.
Application July 18, 1947, Serial No. 140,363
Term of patent 14 years
(Cl. D45—10)



The ornamental design for a ring, as shown.

150,727
DESIGN FOR A GAS HEATER
Charles P. Price, Boston, Mass.
Application August 12, 1947, Serial No. 140,834
Term of patent 14 years
(Cl. D81—10)

The ornamental design for a gas heater, as shown.

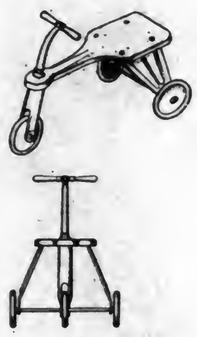
150,728
DESIGN FOR A GAS COOKSTOVE
Herbert M. Reeves, Kankakee, Ill., and Montgomery Ferar, Detroit, Mich., assignors to Florence Stove Company, Gardner, Mass., a corporation of Massachusetts
Application April 11, 1947, Serial No. 138,315
Term of patent 7 years
(Cl. D81—4)

The ornamental design for a gas cookstove, substantially as shown and described.

150,729
DESIGN FOR A SHOE
Jacob Sandler, New York, N. Y.
Application May 22, 1948, Serial No. 146,536
Term of patent 7 years
(Cl. D7—7)

The ornamental design for a shoe, substantially as shown.

150,730
DESIGN FOR A SHOE
Jacob Sandler, New York, N. Y.
Application May 22, 1948, Serial No. 146,537
Term of patent 7 years
(Cl. D7—7)

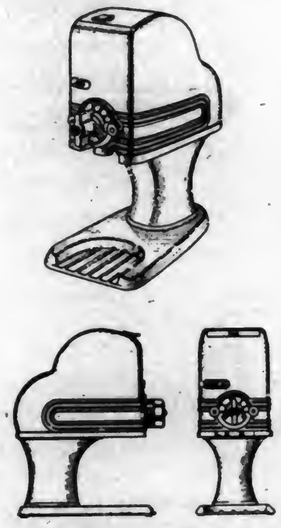


The ornamental design for a shoe substantially as shown.

150,731
DESIGN FOR A SHOE
Jacob Sandler, New York, N. Y.
Application May 22, 1948, Serial No. 146,538
Term of patent 7 years
(Cl. D7—7)

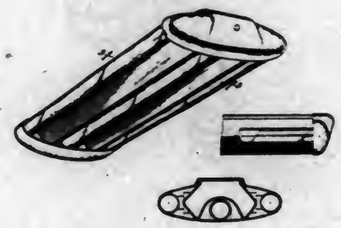
The ornamental design for a shoe, substantially as shown.

150,732
DESIGN FOR A KIDDIE CAR
Joseph L. Schilling, Kearny, N. J.
Application May 31, 1946, Serial No. 130,240
Term of patent 3½ years
(Cl. D34—15)



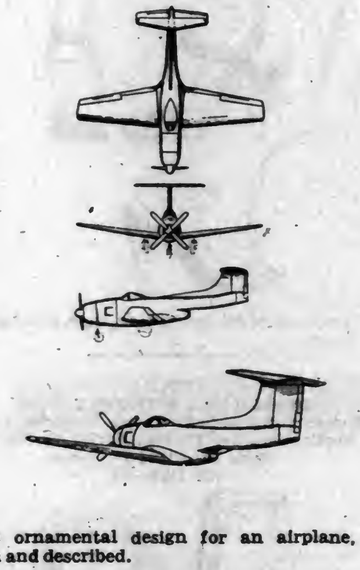
The ornamental design for a kiddie car, substantially as shown.

150,733
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Henry Schreiner, Brooklyn, N. Y.
Application August 22, 1946, Serial No. 132,736
Term of patent 3½ years
(Cl. D45—19)



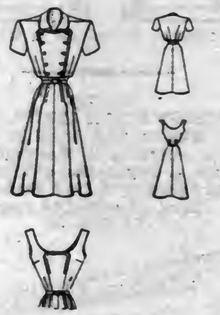
The ornamental design for a brooch or similar article, as shown.

150,734
DESIGN FOR A COFFEE MILL
Richard L. Schuhmann, Louisville, Ky., assignor to American Duplex Company, Louisville, Ky., a corporation of Kentucky
Application November 6, 1946, Serial No. 134,551
Term of patent 3½ years
(Cl. D55—1)



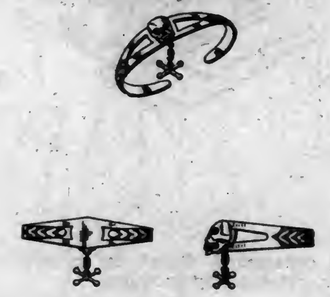
The ornamental design for a coffee mill, substantially as shown and described.

150,735
DESIGN FOR AN ELECTRIC LIGHTING FIXTURE
Martin W. Schwartz and Max J. Marks, Chicago, Ill.
Application November 12, 1946, Serial No. 134,710
Term of patent 14 years
(Cl. D48—23)



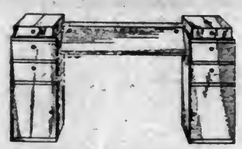
The ornamental design for an electric lighting fixture, as shown.

150,736
DESIGN FOR AN AIRPLANE
Frederick I. Steele, Columbus, Ohio, assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application July 26, 1946, Serial No. 131,977
Term of patent 7 years
(Cl. D71—1)



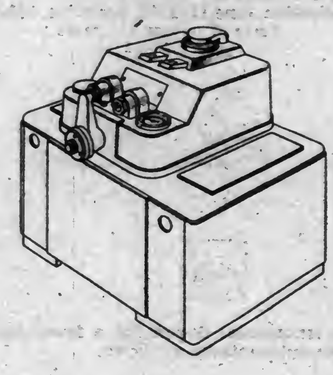
The ornamental design for an airplane, as shown and described.

150,737
DESIGN FOR A DRESS ENSEMBLE
John Friedrich Strassner, New York, N. Y.
Application March 17, 1947, Serial No. 137,648
Term of patent 3½ years
(Cl. D3—26)



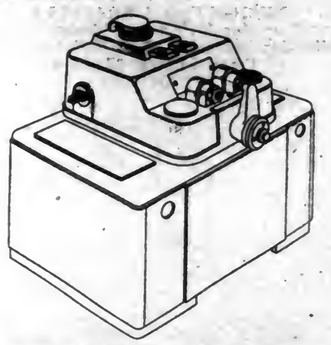
The ornamental design for a dress ensemble, substantially as shown.

150,738
DESIGN FOR A BRACELET
Theodore F. Strub, Chicago, Ill.
Application March 27, 1947, Serial No. 137,952
Term of patent 14 years
(Cl. D45—4)



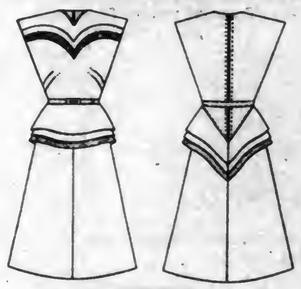
The ornamental design for a bracelet, as shown.

150,739
DESIGN FOR A VANITY
Clytie Ann Thomson, Roanoke, Va.
Application February 10, 1947, Serial No. 136,810
Term of patent 3½ years
(Cl. D33—6)

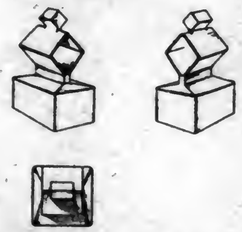


The ornamental design for a vanity, as shown and described.

150,740
DESIGN FOR A SPARK PLUG CLEANER
Fenick A. Vogel, West Caldwell, N. J., assignor to The Oiljak Manufacturing Co., Inc., Montclair, N. J., a corporation of New Jersey
Application October 2, 1946, Serial No. 133,692
Term of patent 3½ years
(Cl. D49—1)



150,740—Continued

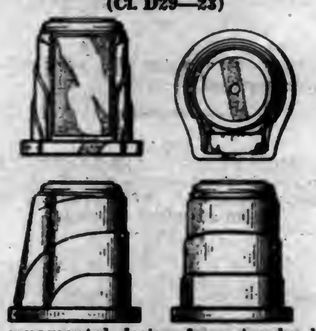


The ornamental design for a spark plug cleaner, substantially as shown.

150,741
DESIGN FOR A DRESS
Ann Waite, New York, N. Y.
Application April 23, 1947, Serial No. 138,562
Term of patent 3½ years
(Cl. D3—26)

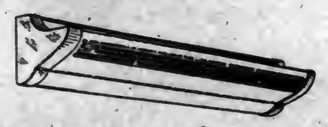
The ornamental design for a dress, substantially as shown.

150,742
DESIGN FOR A FENCE POST TOP MEMBER
William A. Webster, Los Angeles, Calif., assignor to Southern California Fence Co., a corporation of California
Application June 11, 1946, Serial No. 130,636
Term of patent 3½ years
(Cl. D28—1)



The ornamental design for a fence post top member, substantially as shown.

150,743
DESIGN FOR A SHOE
Adolph Wertheim, New York, N. Y., assignor to Setroy Inc., New York, N. Y.
Application May 10, 1948, Serial No. 146,265
Term of patent 3½ years
(Cl. D7—7)



The ornamental design for a shoe, substantially as shown.

150,744
DESIGN FOR A TROPHY BASE
Dewayne Kenneth Williams, Anaheim, Calif.
Application May 22, 1947, Serial No. 139,211
Term of patent 3½ years
(Cl. D29—23)

The ornamental design for a trophy base, as shown.

150,745
DESIGN FOR A LUMINAIRE
Frederic C. Winkler and David T. Beggs, Cleveland, Ohio, assignors to Westinghouse Electric Corporation, a corporation of Pennsylvania
Application February 5, 1947, Serial No. 136,704
Term of patent 14 years
(Cl. D48—4)

The ornamental design for a luminaire, as shown.

Patents expiring: Patent Numbers 1,820,900 to 1,821,915, inclusive, issued September 1, 1931, expire September 1, 1948

Condition of Applications Under Examination at Close of Business Aug. 13, 1948

Total number of patent applications awaiting action, 156,004. Date of oldest new application, August 13, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. GOLDBERG, A. J., Closure Operators; Fences; Gates; Planters; Plows; Harrows and Diggers; Plant Husbandry; Scattering Unloaders; Baths, Closets, Sinks, and Spittoons; Sewerage.	1-30-47	12-20-46	2848
2. HERRMANN, D., Fishing, Trapping and Vermin Destroying; Presses; Tobacco; Textile Wringers	12-27-46	7-15-46	3109
3. MARMELSTEIN, N., Metal Founding and Treatment; Metallurgy (Process and Apparatus)	10-20-47	10-24-47	1459
4. BISHOP, WALTER C., Conveyors; Hoists; Handling Apparatus; Excavating; Elevators; Fire Escapes; Ladders; Scaffolds; Pneumatic Dispatch; Store Service; Mining, Quarrying, and Ice Harvesting.	1-16-47	1-24-47	3900
5. ROBINSON, C. W., Harvesters; Bee Culture; Dairy; Knotters; Animal Husbandry; Butchering	12-21-46	8-10-46	1573
6. SURLE, H., Carbon Chemistry (part)	9-11-47	7-14-47	1874
7. HANLIN, GEORGE, Optics; Photographic Apparatus	8-22-47	7-21-47	1709
8. LEWIS, R. O., (Acting), Furniture; Racks and Cabinets	11-9-46	7-9-46	4400
9. BENSON, R. B., Pumps and Fans; Fluid and Fluid-Current Motors	5-8-47	10-3-46	2255
10. ANDRUS, L. M., Radiant Energy (part, e. g., Portable Radio Sets, Radio Accessories, Detectors, Oscillation Generators, Wave Meters, Tuners); Music; Modulators; Piezo-electric Crystals.	11-8-47	10-6-47	1772
11. BENHAM, E. V., Boots, Shoes, and Leggings, Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	12-10-47	11-17-47	737
12. SPINTMAN, S., Machine Elements (part); Engine Starters; Motor Control with Clutch or Brake; Transmission with Clutch or Brake.	9-23-47	8-29-46	2130
13. BEALL, T. E., Gear Cutting, Milling, Planing, Metal Working (part); Needle and Pin Making; Turning	9-20-46	8-26-46	2482
14. FREEHOF, H. B., Metal Working (Bending; Sheet-Metal; Wire; Misc. Processes); Wire Fabrics; Farriery	11-8-47	8-19-47	1360
15. HENKIN, B., Plastics; Plastic Block and Earthenware Apparatus; Glass	5-14-47	1-10-47	2130
16. LOVEWELL, N. N., Television; Telephony	9-11-47	6-5-47	1542
17. HABECKER, LEON B., Paper Manufactures; Typewriters; Printing; Type Casting and Setting; Sheet Material Associating or Folding; Sheet or Web Feeding.	2-5-47	9-10-46	2112
18. KURZ, J. A., Motors, Expansible-Chamber Type; Power Plants; Speed Responsive Devices; Rotary Internal-Combustion Engines.	5-27-47	8-28-46	1973
19. PATRICK, P. L., Liquid and Gaseous Fuel Burners; Stoves and Furnaces	6-18-47	11-7-46	1922
20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Undertaking; Bread, Pastry, and Confection Making; Bank Protection; Safes; Tents, Canopies, Umbrellas and Canes.	2-17-47	11-14-46	2002
21. MADER, R. C., Textiles	9-2-47	7-23-47	1231
22. CARPENTER, B. H., Aeronautics; Firearms; Ordnance	9-22-47	10-5-46	1736
23. LEWIS, J. B., Cash Registers; Calculators and Counters; Education	2-27-47	7-24-46	1262
24. LUSBY, CHARLES, Apparel; Apparel Apparatus; Package and Article Carriers; Sewing Machines	8-12-47	7-28-47	2635
25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors; Distillation.	11-4-47	1-13-47	1761
26. YOUNG, R. R., Electricity—Generation and Motive Power	11-14-47	11-16-46	1326
27. JAMES, S., Brushing, Scrubbing; Fluid Treatment of Textiles (Apparatus); Liquid Treatment of Solids; General Cleaning; Ironing; Brush, Broom and Mop Making.	5-13-47	11-23-46	3414
28. SOLYOM, H. L., Heating; Internal-Combustion Engines (part); Cylinders; Pistons	6-17-47	8-2-47	1109
29. SKLARIN, J. B., Baggage; Cloth, Leather, and Rubber Receptacles; Button Making; Woodworking; Tools	1-27-47	12-6-46	3192
30. BISHOFF, A., Automatic Temperature and Humidity Regulation; Thermostats and Humidostats; Heating Systems; Ammunition and Explosive Devices.	11-13-47	6-9-47	1364
31. DUNCOMBE, C. S., Mineral Oils; Carbocyclic or Acyclic Carbon Compounds (part)—e. g., Ketones, Aldehydes, Ethers, Hydroxy Compounds, Hydrocarbons, Halogenated Hydrocarbons.	11-26-47	11-24-47	2182
32. LESH, KARL R., Gas and Liquid Contact Apparatus; Heat Exchange; Gas Separation; Agitating; Wells; Earth Boring.	2-17-47	9-9-46	3221
33. KAUFFMAN, H. E., Bridges; Hydraulic and Earth Engineering; Building Structures; Roads and Pavements	10-11-46	8-7-46	3496
34. SAPERSTEIN, S., Electricity—Transmission to Vehicles; Railways; Track Sanders; Signals and Indicators	11-9-46	8-5-46	1532
35. BROMLEY, E. D., Card and Sign Exhibiting; Dispensing; Filling and Closing Portable Receptacles; Ammunition and Explosive Charge Making.	4-17-47	9-20-46	3274
36. McFADYEN, A. D., Automatic Weighers; Measuring and Testing; Force Measuring	11-4-46	8-8-46	1968
37. WEAVER, M. E., Electricity, Circuit Makers and Breakers	10-25-47	2-4-47	1457
38. ARNOLD, D., Coating Processes and Apparatus; Coating or Plastic Compositions (part); Rubber	3-3-47	4-1-47	1960
39. WHITNEY, F. I., Fluid-Pressure Regulators; Valves; Water Distribution	12-16-46	7-25-46	2080
40. DRUMMOND, E. J., Receptacles (part); Packages	7-23-47	10-11-46	3216
41. HERTZ, M., Check-controlled Apparatus; Coin Handling; Article Dispensing Cabinets; Deposit Receptacles; Buckles, Buttons, Clasps.	10-8-46	8-8-46	2345
42. MARANS, H., Telegraphy (part); Electric Signaling; Electricity, Voltage Magnitude and Phase Control Systems; Variable Transformer and Reactor Structure.	11-1-47	9-29-47	1184
43. STONE, I. G., Medicines, Poisons and Cosmetics; Explosive Compositions; Sugar and Starch; Bleaching and Dyeing; Fluid Treatment of Textiles; Hides, Skins and Leathers.	8-21-47	9-18-47	1386
44. HARVEY, L. P., Refrigeration; Preserving	8-13-46	7-22-46	1119
45. MANTER, W. B., Shafting and Flexible Shaft Couplings; Wheels, Tires, Axles and Wheel Substitutes; Lubrication; Bearings and Guides; Belt and Sprocket Gearing; Spring Devices; Land Vehicles (part); Spring Weight and Horsepower Motors.	1-25-47	8-31-46	2040
46. MUSHAKE, W. I., Concentrating Evaporators; Fluid Sprinkling, Spraying and Diffusing; Fire Extinguishers; Liquid Heaters and Vaporizers; Kitchen and Table Articles.	1-13-47	7-19-46	1906

Condition of Applications Under Examination—Continued

Total number of patent applications awaiting action, 156,004. Date of oldest new application, August 13, 1946; date of oldest amended application, April 16, 1946.

PATENT EXAMINING DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
47. KANOF, WM. J., Motor Vehicles; Land Vehicles (part); Fluid Pressure Brakes	10-20-47	4-28-47	2208
48. BERNSTEIN, S., Electricity, General Applications; Electric Igniters	11-24-47	1-29-47	1579
49. SHEFFIELD, E. L., Drying and Gas or Vapor Contact with Solids; Ventilation; Liquid Separation or Purification.	7-29-47	5-10-47	1565
50. LEVIN, SAMUEL, Synthetic Resins	11-15-57	6-2-47	2242
51. FRIEDMAN, M. H., Radiant Energy (part, e. g., Radio Transmission and Reception, Transmitters, Receivers, Antennae); Radiant Energy Communications.	11-13-47	5-3-47	1824
52. KNOTTS, M. K., Supports; Chucks; Joint Packing; Pipe and Rod Joints or Couplings; Tool-Handle Fastenings; Pipes and Tubular Conduits.	8-8-47	11-12-46	3878
53. BRINDISI, M. V., Label Pasting and Paper Hanging; Book Making; Manifolding; Printed Matter, Stationery; Paper Files and Binders; Cutlery; Closures, Partitions and Panels, Flexible and Portable.	2-24-47	7-19-46	3716
54. STRACHAN, O. W., Electric Lamp and Discharge Devices, Systems, Structure, Manufacture and Repair; Light Sensitive Circuits; Ray Energy Applications.	11-20-47	4-26-47	1792
55. BOWEN, S. T., Artificial Body Members; Dentistry; Surgery; Toilet	6-13-47	5-12-47	1984
56. COCKERILL, S., Electrical and Wave Energy Chemistry; Paper Making; Heating and Illuminating Gas	10-11-47	9-11-47	1057
57. MILLER, A. B. Cutting and Punching; Bolt, Nut, Rivet, Nail, Screw, Chain, and Horseshoe Making; Driven and Screw Fastenings; Nut and Bolt Locks; Jewelry; Toys.	3-12-47	8-2-46	3500
58. DOWELL, E. F., Abrading; Food Apparatus; Bottles and Jars; Stone Working; Making Metal Tools and Implements.	12-17-46	10-24-46	2113
59. SHEPARD, P. W., Chemistry; Fertilizers; Gas, Heating and Illuminating; Heterocyclic Compounds (part)	6-27-47	2-28-47	1990
60. GLASS, R. L., Electricity—Heating; Welding; Furnaces; Battery Charging and Discharging; Consumable Electrode Lamp and Discharge Devices; Resistances and Rheostats; Prime Mover Dynamo Plants.	12-12-47	3-28-47	1455
61. LANNAN, J., Winding and Reeling; Pushing and Pulling; Horology; Time-Controlling Apparatus; Railway Mail Delivery; Boats, Buoys, Ships and Marine Propulsion.	11-20-46	6-7-46	3568
62. PUGH, E. C., Games; Tables; Amusement and Exercising Devices; Mechanical Guns and Projectors	3-26-47	9-12-46	2035
63. WINKELSTEIN, A. H., Fermentation; Foods and Beverages; Heterocyclic Compounds (part); Oils and Fats.	9-8-47	7-3-47	1496
64. NASH, P. M., Compositions—Coating or Plastic (part); Fuel and Miscellaneous	1-10-48	1-2-48	1672
65. McDERMOTT, F. P., Batteries; Electrical Conductors, Conduits, Insulators and Connectors; Illumination	11-14-47	5-16-47	2043
66. LISANN, I., Geometrical Instruments	2-10-47	4-16-46	2134
67. KRAFFT, C. P., Laminated Fabrics; Photographic Processes and Products; Ornamentation	6-5-47	4-3-47	2119
68. BERMAN, H., Brakes, Boring and Drilling; Clutches and Power Stop Control	12-8-47	6-9-47	1496
69. GALVIN, D. J., Electricity—Wave Transmission, Repeaters and Relays (e. g., Amplifiers), Galvanometers and Meters; Acoustics, Sound Recording; Recorders.	4-2-47	10-3-46	1757
DESIGNS: BREHM, G. L.	12-2-46	1-2-48	7869

Total number of trade-mark applications awaiting action (including renewals and republications), 41,519. Date of oldest new application, Aug. 5, 1947; date of oldest amended application, Feb. 4, 1948.

TRADE-MARK EXAMINING DIVISIONS, EXAMINERS AND TRADE-MARK CLASSES UNDER EXAMINATION	Oldest new application and oldest action by applicant awaiting Office action		Applications awaiting action
	New	Amended	
1. BARBOUR, H. E., Classes 1, 4, 5, 6 (part), 12, 31, 44	11-15-47	3-23-48	3062
2. KASCHUB, H. E., Classes 2, 15, 30, 33, 36, 46, 50	9-2-47	3-20-48	5418
3. SUMMERS, G. S., Classes 13, 21, 23, 26	8-5-47	3-26-48	4577
4. BARR, E., Classes 3, 7, 39, 40, 41, 42, 43	9-10-47	2-4-48	4439
5. RACKNOR, M., Classes 8, 17, 20, 24, 25, 32, 37, 38, 45, 47, 48, 49	9-26-47	3-13-48	3364
6. STERBA, J. R., Classes 6 (part), 9, 10, 11, 14, 22, 27, 28, 29, 34, 35	11-7-47	5-15-48	3332
7. KEYS, O. M., Classes 16, 19, 55	8-15-47	3-20-48	2209

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Abril Corporation (Gt. Britain) Limited, London, England. Liquid, semi-liquid, or solid non-drying adhesives, etc. Serial No. 510,224, Aug. 31. Class 5.

Acme Visible Records, Inc., Chicago, Ill. Visible record card index systems. Serial No. 541,760, Aug. 31. Class 37.

Acree, Edward H., Schooley's Mountain, N. J. Preparation for treatment of ivy, sumac, and oak poisoning, etc. Serial No. 540,758, Aug. 31. Class 6.

American Crossarm & Conduit Company, Chicago, Ill. Wooden crossarms. Serial No. 539,378, Aug. 31. Class 12.

American Finish & Chemical Co., Chelsea, Mass. Oil for waterproofing leather. Serial No. 549,405, Aug. 31. Class 4.

American Fixture and Mfg. Co., St. Louis, Mo. Furniture. Serial No. 536,862, Aug. 31. Class 32.

American Fork and Hoe Company, The, Cleveland, Ohio. Tools. Serial No. 527,606, Aug. 31. Class 23.

American School Press Association, Inc., State College, Pa. Periodical publication. Serial No. 522,150, Aug. 31. Class 38.

American Wine Company, St. Louis, Mo. Sparkling wines and still wines. Serial No. 527,810, Aug. 31. Class 47.

American Woolen Company, New York, N. Y. Blankets. Serial No. 510,467, Aug. 31. Class 42.

Ames Company, Inc., Elkhart, Ind. Sulfadiazine buffered with sodium citrate. Serial No. 547,416, Aug. 31. Class 6.

Ames Company, Inc., Elkhart, Ind. Sulfaguanidine buffered with sodium citrate. Serial No. 547,417, Aug. 31. Class 6.

Ames Company, Inc., Elkhart, Ind. Sulfathiazole buffered with sodium citrate. Serial No. 547,418, Aug. 31. Class 6.

Anabolic Food Products, Inc., Glendale, Calif. Medicinal preparations. Serial No. 509,489, Aug. 31. Class 6.

Anabolic Food Products, Inc., Glendale, Calif. Vitamin and mineral preparations. Serial No. 515,526, Aug. 31. Class 6.

Ardsley Curtain Co., Inc., New York, N. Y. Window curtains. Serial No. 538,591, Aug. 31. Class 42.

Armour and Company, Chicago, Ill. Bi-monthly publication. Serial No. 527,498, Aug. 31. Class 38.

Atkins, Harry, Chicago, Ill. Fur skins. Serial No. 493,423, Aug. 31. Class 1.

Attapulgus Clay Company, Wilmington, Del., and Philadelphia, Pa. Finely divided fuller's earth. Serial No. 539,388, Aug. 31. Class 1.

Aunt Martha's Studios: *See*—
Modern Handcraft, Inc.

Automatic Recording Safe Company, The, Chicago, Ill. Portable savings banks. Serial No. 532,198, Aug. 31. Class 22.

Avalon Dairies, Inc., Nashville, Tenn. Cheese spread. Serial No 522,848, Aug. 31. Class 46.

Avco Manufacturing Corporation, Cincinnati, Ohio. Laundry washing machines. Serial No. 526,666, Aug. 31. Class 24.

Ayerst, McKenna & Harrison Limited, New York and Rouses Point N. Y. Anterior hypophyseal gonadotrophic factor and growth complex. Serial No. 537,866, Aug. 31. Class 6.

Berry, R. G., Corporation, Columbus, Ohio. Shoulder pads. Serial No. 549,610, Aug. 31. Class 40.

Bedford Products, Inc., Dunkirk, N. Y. Marmalade, jellies, jams, etc. Serial No. 522,148, Aug. 31. Class 46.

Bemis Bro. Bag Company, St. Louis, Mo. House-organ magazine. Serial No. 526,846, Aug. 31. Class 38.

Bemis Bro. Bag Company, St. Louis, Mo. Coated fabrics. Serial No. 526,891, Aug. 31. Class 42.

Beneficial Industrial Loan Corporation, Wilmington, Del. Services rendered in the small loan, instalment loan, and instalment credit business. Serial No. 527,268, Aug. 31. Class 55.

Beneficial Industrial Loan Corporation, Wilmington, Del. Services rendered in the small loan, instalment loan, and instalment credit business. Serial No. 527,273, Aug. 31. Class 55.

Benson & Hedges, New York, N. Y. Smoking tobacco. Serial No. 541,636, Aug. 31. Class 17.

Berkley Company, The, Philadelphia, Pa. Neckties and cravats. Serial No. 532,548, Aug. 31. Class 39.

Best Foods, Inc., The, New York, N. Y. Shoe polishes. Serial No. 530,710, Aug. 31. Class 4.

Blumenthal, Sidney, & Co., Inc., New York, N. Y. Pile fabrics in the piece. Serial No. 530,283, Aug. 31. Class 42.

Blumenthal, Sidney, & Co., Inc., New York, N. Y. Pile fabrics in the piece. Serial No. 530,284, Aug. 31. Class 42.

Blumenthal, Sidney, & Co., Inc., New York, N. Y. Pile fabrics in the piece. Serial No. 530,285, Aug. 31. Class 42.

Blumenthal, Sidney, & Co., Inc., New York, N. Y. Pile fabrics in the piece. Serial No. 530,286, Aug. 31. Class 42.

Bonide, Inc., Bay Shore, N. Y. Grinding and lapping abrasive pastes. Serial No. 544,972, Aug. 31. Class 4.

Boosey & Hawkes Limited, London, England. Electrical sound recording and sound reproducing instruments. Serial No. 520,376, Aug. 31. Class 21.

Breon, George A., & Company, Kansas City, Mo. Protein preparation. Serial No. 547,610, Aug. 31. Class 6.

Burgess-Manning Company, Libertyville, Ill. Acoustically treated booths. Serial No. 527,800, Aug. 31. Class 32.

Burma-Vita Company, Minneapolis, Minn. Shaving cream. Serial No. 537,411, Aug. 31. Class 4.

Carey Salt Company, The, Hutchinson, Kans. Water softener salt. Serial No. 537,148, Aug. 31. Class 6.

Carpenter Steel Company, The, Reading, Pa. Steel in the form of wire, strips, bars, etc. Serial No. 524,776, Aug. 31. Class 14.

Carrel, Ltd., Chicago, Ill. Cosmetics preparations. Serial No. 505,732, Aug. 31. Class 6.

Carrollton Manufacturing Company, Carrollton, Ohio. Stainless steel cooking, kitchen, household, etc., ware. Serial No. 531,311, Aug. 31. Class 13.

Castleton China Incorporated, New York, N. Y. China tableware and china art. Serial No. 526,973, Aug. 31. Class 30.

Central Ohio Supply Co., The, Columbus, Ohio. Powdered jell-producing base. Serial No. 517,963, Aug. 31. Class 46.

Char-Lite Manufacturing Company, The, St. Louis, Mo. Charcoal briquettes. Serial No. 527,162, Aug. 31. Class 1.

Clair's Mfg. Co., Los Angeles, Calif. Garment shoulder pads and hem facings. Serial No. 549,229, Aug. 31. Class 40.

Clear Spring Distilling Co., The, Clermont, Ky. Whiskey. Serial No. 512,158, Aug. 31. Class 49.

Cohen, Isidor H., New York, N. Y. Cotton, rayon and woolen fabrics in the piece. Serial No. 507,461, Aug. 31. Class 42.

Columbia Ribbon & Carbon Manufacturing Company, Inc., Glen Cove, N. Y. Blank and preprinted lithographic paper plates or mats, etc. Serial No. 488,509, Aug. 31. Class 37.

Consolidated Cosmetics, Chicago, Ill. Toilet soap and laundry soap. Serial No. 555,161, Aug. 31. Class 4.

Conti Products Corporation, Brooklyn, N. Y. Hair tonic. Serial No. 540,779, Aug. 31. Class 6.

Preparation for the treatment of coughs, bronchitis, phthisis, etc. Martin H. Smith Co. 501,961, Aug. 31; Serial No. 539,096, published June 1, 1948.
Preparation for the treatment of coughs, colds, and other respiratory affections, etc. Martin H. Smith Co. 501,960, Aug. 31; Serial No. 539,095, published June 1, 1948.
Preparation useful in the treatment and prevention of disorders of the gastro-intestinal tract, an amebacide. Sharp & Dohme, Incorporated. 501,964, Aug. 31; Serial No. 541,344, published June 1, 1948.
Product for deodorizing and perfuming interior spaces. Adco, Inc. 501,894, Aug. 31; Serial No. 510,636, published Mar. 2, 1948.
Proteolytic enzymes. Enzyco, Incorporated. 501,959, Aug. 31; Serial No. 538,506, published June 1, 1948.
Radiopaque diagnostic preparation. Davies, Rose & Company, Limited. 248,070, renewed Oct. 16, 1948. O. G. Aug. 31.
Remedy for chronic weaknesses and complaints peculiar to females. R. V. Pierce. 58,414, Dec. 11, 1906. Republished Aug. 31.
Remedy for colds and headaches. Otis Clapp & Son, Inc. 193,093, Jan. 6, 1925. Republished Aug. 31.
Remedy for coughs, bronchitis, laryngitis, etc. R. V. Pierce. 57,518, Nov. 13, 1906. Republished Aug. 31.
Remedy for headache and neuralgia. B. C. Remedy Company. 98,564, July 21, 1914. Republished Aug. 31.
Remedy for ringworm, itch, and parasitic skin diseases. Shuptrine Co. 111,299, July 4, 1916. Republished Aug. 31.
Remedies for the cure of diseases. Brown Manufacturing Co. 48,909, Jan. 16, 1906. Republished Aug. 31.
Repellent and soothing wound dressing, Fly. American Turpentine & Tar Company, Ltd. 292,497, Mar. 15, 1932. Republished Aug. 31.
Salt, Heat resistant crystalline sodium. Spick Products Company. 440,404, Aug. 31; Serial No. 506,269, published June 1, 1948.
Salve, Medicinal. Camthol Company. 199,788, June 16, 1925. Republished Aug. 31.
Shampoo, scalp oil, dandruff ointment, etc. Hall, Thralls & Co. 174,368, Oct. 16, 1923. Republished Aug. 31.
Sizing compounds and softening and plasticizing agents, Textile. E. F. Houghton & Co. 501,963, Aug. 31; Serial No. 539,704, published June 1, 1948.
Softening and leveling agent. Geigy Company, Inc. 440,392, Aug. 31; Serial No. 501,660, published June 1, 1948.
Suppositories, Medicinal. H. S. Wellcome. 67,607, Feb. 11, 1908. Republished Aug. 31.
Suppository, Rectal. Otis Clapp & Son, Inc. 193,811, Jan. 6, 1925. Republished Aug. 31.
Suppository, Rectal. Otis Clapp & Son, Inc. 193,814, Jan. 6, 1925. Republished Aug. 31.
Suppository, Vaginal. Otis Clapp & Son, Inc. 193,808, Jan. 6, 1925. Republished Aug. 31.
Tablet made of saccharin, Sweetening. Otis Clapp & Son, Inc. 345,001, Apr. 13, 1937. Republished Aug. 31.
Talcum powder, perfume, toilet water, etc. Citizens' Wholesale Supply Company. 89,338, Dec. 10, 1912. Republished Aug. 31.
Therapeutic vaginal jellies. Ortho Pharmaceutical Corporation. 440,382, Aug. 31; Serial No. 488,544, published Nov. 12, 1946.
Toilet preparations. Madam C. J. Walker Manufacturing Co. 153,556, May 21, 1922. Republished Aug. 31.
Tonic and dandruff treatment, Hair. Otis Clapp & Son, Inc. 193,816, Jan. 6, 1925. Republished Aug. 31.
Tonic for the blood. World's Dispensary Medical Association. 123,007, Oct. 1, 1918. Republished Aug. 31.
Tonic, Hair. Pinaud Incorporated. 248,171–3, renewed Oct. 16, 1948. O. G. Aug. 31.
Vitamin A and/or D composition, Dry. Collett-Week-Nibecker, Inc. 501,907, Aug. 31; Serial No. 527,003, published June 1, 1948.
Vitamin supplements, Liquid. Ray Ewing Company. 501,954, Aug. 31; Serial No. 537,674, published June 1, 1948.
Vitamin tablets. Rexall Drug Company. 501,956, Aug. 31; Serial No. 537,938, published June 1, 1948.

CLASS 7

Rope and cable, Manila. Edwin H. Fitler Company. 241,907, May 8, 1928. Republished Aug. 31.
Rope and cable, Manila. Edwin H. Fitler Company. 243,340, June 19, 1928. Republished Aug. 31.
Rope and cable, Manila. Edwin H. Fitler Company. 245,001, Aug. 7, 1928. Republished Aug. 31.
Rope of vegetable fiber. Columbian Rope Company. 244,234, July 17, 1928. Republished Aug. 31.
Rope, twine, and cordage. Columbian Rope Company. 239,527, Mar. 6, 1928. Republished Aug. 31.

CLASS 8

Holders, cigarette holders, cigar cases, etc., Cigar. Wm. Filene's Sons Company. 267,826, Mar. 4, 1930. Republished Aug. 31.

CLASS 10

Fertilizer. Florida Favorite Fertilizer Co. 364,264, Jan. 24, 1939. Republished Aug. 31.
Fertilizers. Wulchet Fertilizer Company. 116,023, Mar. 27, 1917. Republished Aug. 31.
Fertilizers. Wulchet Products, Inc. 344,806, Apr. 6, 1937. Republished Aug. 31.

CLASS 11

Fluid for fountain pens, Writing. Blackwell-Wielandy Book and Stationery Company. 239,099, Feb. 21, 1928. Republished Aug. 31.
Ink, rubber stamp ink, stamp pads, etc., Marking. Markrite Manufacturing Co., Inc. 382,747, Nov. 12, 1940. Republished Aug. 31.

CLASS 12

Asbestos in loose form, Prepared. Keasbey & Mattison Company. 440,406, Aug. 31; Serial No. 510,180, published June 1, 1948.
Board and lumber, Composite. MacAndrews & Forbes Company. 229,491, June 28, 1927. Republished Aug. 31.
Board, Fiber composition. Insulate Company. 322,084, Feb. 26, 1935. Republished Aug. 31.
Buildings, Prefabricated frame. Timber Structures, Inc. 501,945, Aug. 31; Serial No. 535,773, published June 1, 1948.
Cement, Portland. Alpha Portland Cement Company. 70,500, Sept. 8, 1908. Republished Aug. 31.
Coating composition, Weatherproof. Pittsburgh Corning Corporation. 440,389, Aug. 31; Serial No. 499,653, published June 1, 1948.
Gypsum and wall plaster, Calcined. United States Gypsum Company. 160,709, Oct. 24, 1922. Republished Aug. 31.
Gypsum and wall plasters, Calcined. United States Gypsum Company. 172,143, Aug. 21, 1923. Republished Aug. 31.
Gypsum, Calcined. United States Gypsum Company. 121,148, Apr. 9, 1918. Republished Aug. 31.
Gypsum, plaster of Paris, wall plaster, gauging plaster, Calcined. United States Gypsum Company. 167,733, May 8, 1923. Republished Aug. 31.
Lumber. Anderson-Tully Company. 155,922, June 13, 1922. Republished Aug. 31.
Metal parts for suspended acoustical ceiling suspension system. W. J. Haertel. 501,927, Aug. 31; Serial No. 531,912, published June 1, 1948.
Plaster. United States Gypsum Company. 255,568, Apr. 23, 1929. Republished Aug. 31.
Plaster. United States Gypsum Company. 267,902, Mar. 4, 1930. Republished Aug. 31.
Plasters, Calcined gypsum wall. Samson Plaster Board Company. 186,147, July 1, 1924. Republished Aug. 31.
Plasters, Calcined gypsum wall. United States Gypsum Company. 172,927, Sept. 11, 1923. Republished Aug. 31.
Covering, Plastic wall. United States Gypsum Company. 187,560, Aug. 5, 1924. Republished Aug. 31.
Plywood, asphalt fiber boards, and planks, etc. A. C. Fischer. 425,691, Dec. 3, 1946. Republished Aug. 31.
Posts, wood cross arms, wood conduit, etc., Wood fence. Southern Wood Preserving Company. 138,710, Jan. 4, 1921. Republished Aug. 31.
Stucco and plaster. United States Gypsum Company. 269,253, Apr. 1, 1930. Republished Aug. 31.
Tile, Gypsum. United States Gypsum Company. 101,890, Jan. 12, 1915. Republished Aug. 31.
Windows and window units. Foley's Mill and Cabinet Works. 501,941, Aug. 31; Serial No. 534,264, published June 1, 1948.

CLASS 13

Bowls, refrigerator dishes, vegetable insets, etc., Stainless steel. Vollarth Co. 293,178, Apr. 12, 1932. Republished Aug. 31.
Links for chains, Metal. Thomas Laughlin Co. 135,477, Oct. 12, 1920. Republished Aug. 31.
Nails used in metal foundries, Moder's. Fowler Nail Co. 133,130, July 13, 1920. Republished Aug. 31.
Tent and awning hardware, etc. Astrup Company. 164,376, Feb. 20, 1923. Republished Aug. 31.
Tubing made from steel. Certified Gauge & Instrument Corp. 416,891, Oct. 2, 1945. Republished Aug. 31.
Valves, angle valves, check valves, etc., Globe. American Chain & Cable Company, Inc. 373,895, Dec. 26, 1939. Republished Aug. 31.
Washers, screws, lock nuts, etc., Lock. Illinois Tool Works. 328,399, Sept. 24, 1935. Republished Aug. 31.

CLASS 14

Alloy similar in appearance to silver and/or white gold, etc., Tarnish and corrosion resisting metal. Krementz & Company. 296,814, Aug. 23, 1932. Republished Aug. 31.
Alloy steels, Cast and wrought. Universal-Cyclops Steel Corporation. 501,951, Aug. 31; Serial No. 537,105, published June 1, 1948.
Alloys, Heat resistant iron and steel. Aktiebolaget Kanthal. 440,390, Aug. 31; Serial No. 499,983, published Dec. 9, 1947.
Aluminum and aluminum base alloys. Aluminum Cooking Utensil Company. 440,398, Aug. 31; Serial No. 505,379, published June 1, 1948.
Castings, Iron and semi-steel. Wisconsin Foundry & Machine Company. 501,948, Aug. 31; Serial No. 536,327, published May 25, 1948.
Device for the prevention of rail creepage. American Brake Shoe Company. 501,968, Aug. 31; Serial No. 544,961, published May 25, 1948.
Forgings of nonferrous metal, Rod. Mueller Brass Company. 238,661, Feb. 14, 1928. Republished Aug. 31.
Rods, Welding. Welding Service, Inc. 325,100, July 11, 1935. Republished Aug. 31.
Sheets, Steel. Empire Steel Corporation. 501,942, Aug. 31; Serial No. 534,758, published May 25, 1948.
Steel. Carpenter Steel Company. 440,428, Aug. 31; Serial No. 524,767, published May 25, 1948.
Steel. Carpenter Steel Company. 440,429, Aug. 31; Serial No. 524,771, published May 25, 1948.
Steels having a tungsten content. Indiana Steel Products Company. 349,401, Aug. 24, 1937. Republished Aug. 31.
Wire, Bare or uncovered composition. Bridgeport Brass Company. 69,987–8, re-renewed July 21, 1948. O. G. Aug. 31.
Wire, ferrous metal sheets, and ferrous metal rods, Ferrous metal. American Chain & Cable Company, Inc. 374,494, Jan. 9, 1940. Republished Aug. 31.
Wire, Stapling. Chicago Steel & Wire Company. 241,836, renewed May 8, 1948. O. G. Aug. 31.

CLASS 15

Fuels, Hydrocarbon. Lubrizol Corporation. 327,796, Sept. 3, 1935. Republished Aug. 31.
Fuels, Hydrocarbon motor. Pure Oil Company. 243,164, renewed June 12, 1948. O. G. Aug. 31.
Gasoline. Continental Oil Company. 419,247, Feb. 5, 1946. Republished Aug. 31.
Gasoline, motor-fuel oils, naptha, etc. Continental Oil Company. 270,389, May 6, 1930. Republished Aug. 31.
Grease, Lubricating. Continental Oil Company. 283,570, June 2, 1931. Republished Aug. 31.
Grease, Lubricating. Continental Oil Company. 283,572, June 2, 1931. Republished Aug. 31.
Grease, Lubricating. Continental Oil Company. 283,573, June 2, 1931. Republished Aug. 31.
Kerosene, benzine distillate, and lubricating oils and greases. Pure Oil Company. 243,822, renewed July 3, 1948. O. G. Aug. 31.
Lubricants. A. C. Buzby. 69,330, June 9, 1908. Republished Aug. 31.
Oil for cutting fluids and coolants, Base. D. A. Stuart & Co. 188,993, Sept. 9, 1924. Republished Aug. 31.
Oil, Lubricating. Continental Oil Company. 283,569, June 2, 1931. Republished Aug. 31.
Oil, Lubricating. Continental Oil Company. 283,571, June 2, 1931. Republished Aug. 31.
Oil, Lubricating. Continental Oil Company. 283,574, June 2, 1931. Republished Aug. 31.
Oil, Lubricating. Continental Oil Company. 284,311, June 23, 1931. Republished Aug. 31.
Oil, Lubricating. Continental Oil Company. 285,216, July 21, 1931. Republished Aug. 31.
Oil, Lubricating. Continental Oil Company. 358,864, July 26, 1938. Republished Aug. 31.
Oils, Lubricating. The Graphite Oil Products Corporation. 252,602, Feb. 12, 1929. Republished Aug. 31.
Oils, Lubricating. A. W. Harris Oil Co. 98,146, July 7, 1914. Republished Aug. 31.
Oils, Lubricating. A. W. Harris Oil Co. 98,870, Aug. 4, 1914. Republished Aug. 31.
Oils, Lubricating. Lubrizol Corporation. 371,616, Oct. 3, 1939. Republished Aug. 31.
Oils and greases, Lubricating. A. W. Harris Oil Company. 154,962, May 16, 1922. Republished Aug. 31.
Oils and greases, Lubricating. U. S. Mill Supply Co. 70,520, re-renewed Oct. 6, 1948. O. G. Aug. 31.
Oils and lubricating compounds, Lubricating. A. W. Harris. 59,851, Jan. 22, 1907. Republished Aug. 31.

CLASS 16

Enamel and varnish, Quick-drying. Smith-Alsop Paint and Varnish Company. 244,902, July 31, 1928. Republished Aug. 31.
Enamel-paint, Opaque. United States Gutta Percha Paint Company. 71,082, re-renewed Oct. 27, 1948. O. G. Aug. 31.
Lacquers. Cleveland Varnish Company. 238,357, Feb. 7, 1928. Republished Aug. 31.
Paint, Ready-mixed asphalt. Red Spot Paint & Varnish Co., Inc. 249,975, renewed Nov. 27, 1948. O. G. Aug. 31.
Paints, fillers for wood, paint and varnish remover, etc., Dry and ready-mixed. Red Spot Paint & Varnish Co. 249,840, renewed Nov. 20, 1948. O. G. Aug. 31.
Paints, varnish stains, paint enamel, etc., Floor. H. L. Greenbaum. 234,365, Oct. 25, 1927. Republished Aug. 31.

CLASS 17

Cigars. New Illinois Athletic Club. 70,023, July 21, 1908. Republished Aug. 31.
Snuff. Kingdom of Italy. 210,820–1, renewed Mar. 23, 1946. O. G. Aug. 31.

CLASS 19

Brakes and clutches for vehicles. Trenton Rubber Manufacturing Company. 74,491, July 13, 1909. Republished Aug. 31.
Brakes and parts thereof and brake-operating mechanisms and parts thereof. American Cable Company, Inc. 269,605, Apr. 15, 1930. Republished Aug. 31.
Elevating-trucks. Lewis-Shephard Company. 119,194, Oct. 30, 1917. Republished Aug. 31.
Elevating-trucks, Industrial. Lewis-Shepard Company. 119,331, Nov. 13, 1917. Republished Aug. 31.
Mine cars, cargo trucks, and pipe trucks. Madsen Iron Works. 500,154, May 4, 1948. New certificate. O. G. Aug. 31.
Tank vehicles. Butler Manufacturing Company. 314,851, July 10, 1934. Republished Aug. 31.
Trailers adapted for off the highway use, Tractor-drawn cargo. M-R-S Manufacturing Company. 501,974, Aug. 31; Serial No. 528,298.

CLASS 20

Fabrics, Table covering and trimming. Columbus Coated Fabrics Corporation. 330,987, Dec. 24, 1935. Republished Aug. 31.
Linoleum and felt-base floor coverings, both piece goods and rugs. Armstrong Cork Company. 231,720, Aug. 23, 1927. Republished Aug. 31.
Oilcloth. Columbus-Union Oil Cloth Co. 125,035, Apr. 8, 1919. Republished Aug. 31.
Oilcloth. Columbus-Union Oil Cloth Company. 264,836, Dec. 10, 1929. Republished Aug. 31.
Oiled cloth with paper or fiber backing. Columbus Coated Fabrics Corporation. 317,892, Oct. 9, 1934. Republished Aug. 31.

CLASS 21

Heating elements and parts thereof, Electric. Edwin L. Wiegand Company. 440,435–6, Aug. 31; Serial Nos. 525,732–3.
Magnets, Permanent. Indiana Steel Products Company. 381,103, Sept. 10, 1940. Republished Aug. 31.
Motors, Electric. Lincoln Electric Company. 240,429, Mar. 27, 1928. Republished Aug. 31.
Signalling system and apparatus, Electrical. Autocall Company. 379,827, July 30, 1940. Republished Aug. 31.
Switches, Mercury. Engineering Products Corporation. 326,685, July 30, 1935. Republished Aug. 31.
Wire, Insulated. Bridgeport Brass Company. 69,985–6, re-renewed July 21, 1948. O. G. Aug. 31.

CLASS 22

Baseball bats. Wilson-Western Sporting Goods Company. 219,081, Oct. 12, 1926. Republished Aug. 31.
Baseball gloves. Wilson-Western Sporting Goods Company. 246,782, Sept. 11, 1928. Republished Aug. 31.
Baseballs, baseball gloves, baseball bats, etc. Stern Brothers. 249,261, renewed Nov. 13, 1948. O. G. Aug. 31.
Decoys and decoys for other wild fowl and water fowl, Duck. Animal Trap Company of America. 440,426, Aug. 31; Serial No. 524,588, published Nov. 25, 1947.
Decoys, Duck. F. L. Hudson. 440,391, Aug. 31; Serial No. 500,474, published Nov. 25, 1947.
Footballs. Thos. E. Wilson & Co. 208,574, Feb. 2, 1926. Republished Aug. 31.

Footballs, football pads, helmets. Wilson-Western Sporting Goods Company. 261,909, Sept. 24, 1929. Republished Aug. 31.
Golf clubs. Thos. E. Wilson & Co. 195,422, Feb. 24, 1925. Republished Aug. 31.
Playing cards, chess, checkers, etc. Abercrombie & Fitch Company. 240,425, Mar. 27, 1928. Republished Aug. 31.

CLASS 23

Augers, drills, chisels, etc. Forest City Bit & Tool Co. 156,673, July 11, 1922. Republished Aug. 31.
Bean preparing instruments, String. G. N. Coughlan Co. 351,475, Nov. 2, 1937. Republished Aug. 31.
Brushes. Osborn Manufacturing Company. 418,222, Dec. 11, 1945. Republished Aug. 31.
Buckets, Grease. Bennett Pumps Corporation. 206,703, Dec. 8, 1925. Republished Aug. 31.
C-clamps, strap clamps, lathe dogs, etc. J. H. Williams Co. 381,837, Oct. 8, 1940. Republished Aug. 31.
Compressors, Air. Service Station Equipment Company. 242,759, June 5, 1928. Republished Aug. 31.
Compressors, Air, vacuum pumps, vacuum heating pumps, etc. Nash Engineering Company. 242,294, May 22, 1928. Republished Aug. 31.
Couplings, Flexible shaft. Farrel-Birmingham Company, Incorporated. 321,091, Jan. 15, 1935. Republished Aug. 31.
Cutting machine, Abrasive. American Chain & Cable Company, Inc. 390,941, Oct. 14, 1941. Republished Aug. 31.
Elevating and conveying apparatus. Screw Conveyor Corporation. 383,166, Nov. 26, 1940. Republished Aug. 31.
Elevating and conveying apparatus. Screw Conveyor Corporation. 392,216, Dec. 16, 1941. Republished Aug. 31.
Embroidering machines and looms and their attachments, etc. Anciens Etablissments R. Cornely & Cie., Societe Anonyme. 241,744, renewed May 8, 1948. O. G. Aug. 31.
Gear generating machines. Farrel-Birmingham Company, Incorporated. 420,220, Apr. 2, 1946. Republished Aug. 31.
Hoists and parts thereof, etc. American Chain & Cable Company, Inc. 373,896, Dec. 26, 1939. Republished Aug. 31.
Lathes, milling-machines, grinding machines, etc. Illinois Tool Works. 118,664, Sept. 25, 1917. Republished Aug. 31.
Lawn mowers. American Chain & Cable Company, Inc. 424,878, Oct. 29, 1946. Republished Aug. 31.
Lawn mowers. American Chain & Cable Company, Inc. 428,063, Mar. 11, 1947. Republished Aug. 31.
Lawn mowers. American Chain & Cable Company, Inc. 429,532, May 6, 1947. Republished Aug. 31.
Lift and service rack, Combination automatic mechanical. Service Station Equipment Company. 243,589, June 26, 1928. Republished Aug. 31.
Pins, feed guides, registry apparatus, etc., Gage. A. L. Megill. 243,712, renewed June 26, 1948. O. G. Aug. 31.
Reels for hose pipes. Service Station Equipment Company. 242,801, June 5, 1928. Republished Aug. 31.
Sprayers and parts thereof, Hand-operated portable. Hudson Manufacturing Co. 232,873, Sept. 20, 1927. Republished Aug. 31.
Sprayers and parts thereof, Hand-operated portable. Hudson Manufacturing Co. 232,943, Sept. 20, 1927. Republished Aug. 31.
Tackle blocks and parts therefor. Western Block Co. 246,219, Sept. 4, 1928. Republished Aug. 31.
Tools, Cutting. Illinois Tool Works. 356,041, Apr. 12, 1938. Republished Aug. 31.
Vending machines. V. V. Kunkel. 385,331, Feb. 25, 1941. Republished Aug. 31.
Woodworking machines. American Saw Mill Machinery Company. 231,213, Aug. 16, 1927. Republished Aug. 31.

CLASS 24

Clothes driers, balcony cloth driers, yard clothes driers, etc. Hill Clothes Dryer Company. 175,918, Nov. 13, 1923. Republished Aug. 31.
Dry cleaning apparatus. Butler Manufacturing Company. 375,588, Feb. 20, 1940. Republished Aug. 31.
Laundry washing machines. Grinnell Washing Machine Company. 115,328, Feb. 6, 1917. Republished Aug. 31.
Washing machines. Federal Enterprises, Inc. 96,003, Mar. 31, 1914. Canceled Aug. 3, 1948. O. G. Aug. 31.

CLASS 25

Locks, Combination. Sargent & Breenleaf, Inc. 217,644, Sept. 7, 1926. Republished Aug. 31.

Banking services. Anglo California National Bank of San Francisco. 501,969, Aug. 31; Serial No. 527,233, published June 1, 1948.
Trucking and hauling. Aero Mayflower Transit Company. 501,970–1, Aug. 31; Serial Nos. 527,610–11, published June 1, 1948.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 31ST DAY OF AUGUST, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Coons, Curtis C., assignor to The Hoover Company, North Canton, Ohio. Continuous absorption refrigerating system. Re. 23,032, Aug. 31.

Hoover Company, The, assignee: *See*—
Coons, Curtis C.

Kearney, James R., Corporation, assignee: *See*—
Tallman, Oscar F.

Rawlins, Herbert L., Edgewood, and J. M. Wallace, East McKeesport, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. Re. 23,033, Aug. 31.

Schroeder, Walter H., Los Angeles, Calif. Kite. Re. 23,034, Aug. 31.

Stock, Harry, Minneapolis, Minn. Suction nozzle. Re. 23,035, Aug. 31.

Tallman, Oscar F., assignor to James R. Kearney Corporation, St. Louis, Mo. Earth anchor. Re. 23,036, Aug. 31.

Wallace, James M.: *See*—
Rawlins, Herbert L., and Wallace.

Westinghouse Electric Corporation, assignee: *See*—
Rawlins, Herbert L., and Wallace.

LIST OF DESIGN PATENTEES

Albanese, Arthur, assignor to Marvel Jewelry Mfg. Company, Providence, R. I. Expansible watch bracelet or similar article. 150,746, Aug. 31.

Berlin, Frederick H., Jr., New York, N. Y. Tray. 150,747, Aug. 31.

Bingman, Robert E., assignor to Mechanical Handling Systems, Inc., Detroit, Mich. Control column. 150,748, Aug. 31.

Blecher, Boris, Philadelphia, Pa. Condiment shaker. 150,749, Aug. 31.

Boyco, Inc., assignee: *See*—
Nelson, Adolph J.

Bozoti, Joseph, Parma, Ohio. Soap dish. 150,750, Aug. 31.

Bozoti, Joseph, Parma, Ohio. Wall bracket. 150,751, Aug. 31.

Bozoti, Joseph, Parma, Ohio. Combined drinking glass and toothbrush holder. 150,752, Aug. 31.

Carr, Elmer P., Buffalo, N. Y. Test mount for miniature engines. 150,753, Aug. 31.

Cavin, William L., assignor of one-half to F. H. King, Terrel, Tex. Tire. 150,754, Aug. 31.

Cerasoli, Felix A., Seattle, Wash. Tricycle. 150,755, Aug. 31.

Chernow, Michael, New York, N. Y. Earring or similar article. 150,756, Aug. 31.

Coro, Inc., assignee: *See*—
Katz, Adolph.

Cunningham, Walter C., Horsham, England, assignor to The National Marking Machine Company, Cincinnati, Ohio. Marking table. 150,757, Aug. 31.

Deere Manufacturing Co., assignee: *See*—
Dreyfuss, Henry.

De Reamer, William J., Crown Point, assignor to Mapes Consolidated Manufacturing Company, Griffith, Ind. Pack for fragile articles. 150,758, Aug. 31.

Dinges, Wilton C., assignor to Emeco Corporation, Baltimore, Md. Chair. 150,759, Aug. 31.

Dreyfuss, Henry, New York, N. Y., assignor to Deere Manufacturing Co. Radiator grille and enclosure structure. 150,760, Aug. 31.

Emeco Corporation, assignee: *See*—
Dinges, Wilton C.

Gardner, Archibald M., Los Angeles, Calif. Soap dish. 150,761, Aug. 31.

General Motors Corporation, assignee: *See*—
Hulyk, Myron.

Golden, Harry, New York, N. Y. End plate for bicycle pedals. 150,762, Aug. 31.

Golden, Harry, New York, N. Y. Bicycle and automobile jewel and support. 150,763, Aug. 31.

Golden, Harry, New York, N. Y. Fender flap for bicycles. 150,764, Aug. 31.

Greenhouse, David, assignee: *See*—
Hoffschmidt, Edward.

Greenlaw, Harvey K.: *See*—
Harman, Hugh, McGirl, and Greenlaw.

Harman, Hugh, Beverly Hills, C. F. McGirl, Van Nuys, and H. K. Greenlaw, Los Angeles, Calif. Bicycle. 150,765, Aug. 31.

Hilenski, Ferdinand A., Salem, Mass. Float for bar soap or the like. 150,766, Aug. 31.

Hoffschmidt, Edward, assignor to David Greenhouse, Brooklyn, N. Y. Brooch or similar article. 150,767, Aug. 31.

Hoshafian, Lucy, New York, N. Y. Dress. 150,768, Aug. 31.

Hulyk, Myron, assignor to General Motors Corporation, Detroit, Mich. Outside door handle or similar article for an automotive vehicle. 150,769, Aug. 31.

Hulyk, Myron, assignor to General Motors Corporation, Detroit, Mich. Outside door handle or similar article for an automotive vehicle. 150,770, Aug. 31.

Iskyan, John A., Forest Hills, N. Y. Bathroom fixture. 150,771, Aug. 31.

Jahn, Walter K., Beverly Hills, assignor to New Plastic Corporation, Los Angeles, Calif. Combined napkin and coaster tray. 150,772, Aug. 31.

Johnson, Bertie J., San Luis Obispo, Calif. Lady's emblematic cap. 150,773, Aug. 31.

K. & S. Corp., assignee: *See*—
Sklaar, Richard.

Kamb, Francis D.: *See*—
Meteyer, Victor S., and Kamb.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 150,774, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,775, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,776, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,777, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 150,778, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,779, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,780, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,781, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,782, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,783, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,784, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,785, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 150,786, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,787, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 150,788, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,789, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Bracelet or similar article. 150,790, Aug. 31.

Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 150,791, Aug. 31.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 150,792, Aug. 31.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Bracelet or similar article. 150,793, Aug. 31.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 150,794, Aug. 31.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Necklace or similar article. 150,795, Aug. 31.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Jewelry finding. 150,796, Aug. 31.
King, Frank H., assignee: *See*—
Cavin, William L.
Lane, David, Philadelphia, Pa. Pipette support. 150,797, Aug. 31.
Liolich, Samuel N., Detroit, Mich. Putter head. 150,798, Aug. 31.
Livers, Carlos B., North Hollywood, assignor to Variety Development and Engineering Company, Los Angeles, Calif. Electric motor. 150,799, Aug. 31.
Magnus, John, Jr., Hazleton, Pa. Socket screw driver. 150,800, Aug. 31.
Mapes Consolidated Manufacturing Company, assignee: *See*—
De Reamer, William J.
Marvel Jewelry Mfg. Company, assignee: *See*—
Albanese, Arthur.
McGirl, Charles F.: *See*—
Harman, Hugh, McGirl, and Greenlaw.
Mechanical Handling Systems, Inc., assignee: *See*—
Bingman, Robert E.
Melerowitz, Wolf E., Providence, R. I. Picture-containing bracelet or similar article. 150,801, Aug. 31.
Meteyer, Victor S., and F. D. Kamb, Irondequoit, N. Y. Antirattler for window sashes. 150,802, Aug. 31.
Minor, Robert B., Richmond, Va. Pay roll calculator. 150,803, Aug. 31.
National Marking Machine Company, The, assignee: *See*—
Cunningham, Walter C.
Nelson, Adolph J., Oak Park, assignor to Boyco, Inc., Chicago, Ill. Clock. 150,804, Aug. 31.
New Plastic Corporation, assignee: *See*—
Jahn, Walter K.
Packard Motor Car Company, assignee: *See*—
Pietsch, Theodore W.
Pauly, Bernard M., Springfield, Ohio. Bat. 150,805, Aug. 31.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 150,806, Aug. 31.
Philippe, Alfred, Scarsdale, assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y. Necklace or similar article. 150,807, Aug. 31.
Pietsch, Theodore W., Royal Oak, assignor to Packard Motor Car Company, Detroit, Mich. Vehicle hood ornament or similar article. 150,808, Aug. 31.
Powers Manufacturing Company, assignee: *See*—
Powers, Richard E.
Powers, Richard E., assignor to Powers Manufacturing Company, Los Angeles, Calif. Stapling device. 150,809, Aug. 31.
Rubin, Herbert, New York, N. Y. Bottle. 150,810, Aug. 31.
Satin, H. A. & Co., assignee: *See*—
Satin, Marvin.
Satin, Marvin, assignor to H. A. Satin & Co., Chicago, Ill. Dress. 150,811, Aug. 31.
Satin, Marvin, assignor to H. A. Satin & Co., Chicago, Ill. Dress. 150,812, Aug. 31.
Sklaar, Richard, Lynbrook, N. Y., assignor, by mesne assignments, to K. & S. Corp., Baltimore, Md. Garment hanger or the like. 150,813, Aug. 31.
Smith, Charles S., Arlington, Va. Carton. 150,814, Aug. 31.
Standard Molding Corporation, assignee: *See*—
Stigler, Robert G.
Stigler, Robert G., assignor to Standard Molding Corporation, Dayton, Ohio. Bottle carrier. 150,815, Aug. 31.
Swanson, Carl E., Chicago, Ill. Lighting device for locks or the like. 150,816, Aug. 31.
Taylor, Raymond R., Brooklyn, Mich. Tricycle. 150,817, Aug. 31.

Trafari, Krussman & Fishel, Inc., assignee: *See*—
Philippe, Alfred.
Variety Development and Engineering Company, assignee: *See*—
Livers, Carlos B.
Zion, Bernard, New York, N. Y. Dial telephone lock. 150,819, Aug. 31.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 31ST DAY OF AUGUST, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott Laboratories, assignee: *See*—
Helgren, Fred J.
Abel, Franklin W., Franklin, Ind. Pavement slab connector. 2,448,134, Aug. 31.
Abrams, Joseph, Brooklyn, assignor to Louis Saffer Co., Inc., New York, N. Y. Garmentmaking apparatus. 2,448,287, Aug. 31.
Ackerman, Max, Brooklyn, N. Y., assignor to Handi-Bag Co. Lady's handbag. 2,448,404, Aug. 31.
Adams, Harold B., Mission, Kans. Circuit interrupter indicator. 2,448,166, Aug. 31.
Adams, James F., Wilmington, Del., assignor to Allied Chemical & Dye Corporation. Xanthone-DDT insecticide. 2,448,405, Aug. 31.
Adams, William C., Cincinnati, Ohio. Knitting machine. 2,448,344, Aug. 31.
Adelson, David E.: *See*—
Evans, Theodore W., and Adelson.
Africano, Alfred, Cumberland, Md., assignor to the United States of America, as represented by the Secretary of War. Powder tester. 2,448,203, Aug. 31.
Agriculture, United States of America, as represented by the Secretary of, assignee: *See*—
Eskew, Roderick K.
Reid, John D., and Daul.
Air Reduction Company, Incorporated, assignee: *See*—
Duvall, Samuel.
Hughey, Howard G.
Miller, Hoke S.
Aktiebolaget Elecktrolux, assignee: *See*—
Karlstrom, Fredrik J. R.
Alk, Abraham, Paterson, N. J. Hand press. 2,448,288, Aug. 31.
All American Aviation, Inc., assignee: *See*—
Boyer, Talor M., and Gottschall.
Allen, Herbert W., Fresno, Calif. Telescope stand. 2,448,406, Aug. 31.
Allied Chemical & Dye Corporation, assignee: *See*—
Adams, James F.
Stebbins, John D.
American Brake Shoe Company, assignee: *See*—
Mantle, Burr W.
American Enka Corporation, assignee: *See*—
Gonsalves, Victor E.
American Gas Machine Company, assignee: *See*—
Rasmussen, Sophus.
American Steel and Wire Company of New Jersey, The, assignee: *See*—
Robbins, David S.
American Tool Head Corporation, assignee: *See*—
Girard, Ernest.
American Viscose Corporation, assignee: *See*—
Kennedy, Edgar S.
Ames, Millard E., Jr., Germantown, and D. E. Sunstein, Elkins Park, assignors to Philco Corporation, Philadelphia, Pa. Saw-tooth generator with automatic amplitude control. 2,448,069, Aug. 31.
Ampro Corporation, assignee: *See*—
Ciszki, Irving.
Anderson, Bert E., Los Angeles, Calif. Orifice exchanger. 2,448,071, Aug. 31.
Anderson, Chester W., Grand Haven, Mich. Bottle carrier. 2,448,204, Aug. 31.
Anderson, Cleophas E., assignor to Thermo Electric Manufacturing Company, Dubuque, Iowa. Temperature control apparatus. 2,448,289, Aug. 31.
Anderson, Edmund A.: *See*—
Boyle, Edward J., and Anderson.
Anderson, Harold P., Mountain View, Calif., assignor, by mesne assignments, to The Permanente Metals Corporation. Producing magnesium powder by cold rolling and grinding. 2,448,243, Aug. 31.
Animal Trap Company of America, assignee: *See*—
Cootes, Harold E., and Graybill.
Antalek, John J., assignor to The Rauland Corporation, Chicago, Ill. Condenser. 2,448,407, Aug. 31.
Ardell, Edgar, Middletown, assignor to Standard-Knapp Corporation, Portland, Conn. Belt loading machine. 2,448,072, Aug. 31.
Armour and Company, assignee: *See*—
Potts, Ralph H.
Arnold, Orlan M., Troy, N. Y. Illuminated display device. 2,448,244, Aug. 31.
Aronson, Charles N., Niagara Falls, N. Y. Drive for automobiles and the like. 2,448,345, Aug. 31.
Art Metal Construction Company, assignee: *See*—
Johnson, John A.
Ashton, Charles E., Stockton, Calif. Water shutoff for oil wells. 2,448,205, Aug. 31.
Atlas Powder Company, assignee: *See*—
Reager, William F.
Attorney General of the United States: *See*—
Wolf, Julius.
Atwell, Harold V., Beacon, assignor, by mesne assignments, to The Texas Company, New York, N. Y. Production of synthesis gas. 2,448,290, Aug. 31.
Auchter, Richard J.: *See*—
Craig, Kenneth A., and Auchter.
Automatic Electric Laboratories, Inc., assignee: *See*—
Graybill, Kenneth W.
Avakian, Souren, Oreland, assignor to The National Drug Company, Philadelphia, Pa. Para-([N]-dialkyl pyrryl)-benzoates. 2,448,408, Aug. 31.
Ayres, Waldemar A., Kew Gardens Hills, N. Y., assignor to The Sperry Corporation. Self-controlled projectile. 2,448,007, Aug. 31.
Baak, Albert E., Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Flap control device responsive to airspeed. 2,448,167, Aug. 31.
Bailey, George B., Long Beach, assignor to The Hays Corporation, Michigan City, Ind. Gas analyzer. 2,448,206, Aug. 31.
Baker, Robert M., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Controlled induction heating. 2,448,008, Aug. 31.
Baker, Robert M., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Inductive heating of longitudinally moving metal strip. 2,448,009, Aug. 31.
Baker, Robert M., Pittsburgh, G. R. Monroe, Sharon, and R. D. Reed, Clark, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Transverse flux induction heating furnace structure. 2,448,010, Aug. 31.
Baker, Robert M., Pittsburgh, and G. W. Penney, Wilkinsburg, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Method and apparatus for induction heating of metal strips. 2,448,011, Aug. 31.
Baker, Robert M., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Induced heating of continuously moving metal strip with pulsating magnetic flux. 2,448,012, Aug. 31.
Bakewell, Harding F., San Marino, Calif. Grinding fixture. 2,448,245, Aug. 31.
Baldwin Locomotive Works, The, assignee: *See*—
Staples, Dana R., and Stamm.
Balton, Charles A., Buffalo, N. Y. Engine starter clutch. 2,448,291, Aug. 31.
Banister, Roland S., Kokomo, Ind. Wrench kit. 2,448,168, Aug. 31.
Barber, Howard M., Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I. Geared adjustment means. 2,448,292, Aug. 31.
Barker, Robert S., Oakland, and L. N. Whitehill, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Alkenyl esters of alkenoxy-substituted carboxylic acids and polymers thereof. 2,448,246, Aug. 31.
Barnes, Harry M., Summit, assignor to General Foods Corporation, Hoboken, N. J. Glyceride oxidation inhibited by 5-pentadecyl resorcinol. 2,448,207, Aug. 31.
Barnes, Harry M., Florham Park, assignor to General Foods Corporation, Hoboken, N. J. Stabilizing organic materials and product of said process. 2,448,208, Aug. 31.
Barnes, Wallace A., Cleveland, Ohio, assignor to The Langenau Manufacturing Company. Spring latch mechanism. 2,448,400, Aug. 31.
Bassett, Charles H., assignor to Crane Co., Chicago, Ill. Manufacturing valves. 2,448,483, Aug. 31.
Baugh, Raymond N., Bridgeport, and R. F. Wycinowski, Fairfield, Conn. Tipup for ice fishing. 2,448,346, Aug. 31.
Baumgartner, Walter, Bellflower, Calif. Calculating device. 2,448,410, Aug. 31.
Beach, Fred S. and Rose B., Charlotte, Mich. Consumption register for meters. 2,448,411, Aug. 31.
Beach, Rose B.: *See*—
Beach, Fred S. and R. B.
Beam, Vilynn O., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Electronic apparatus. 2,448,504, Aug. 31.
Becker, Bernard M., and J. McAfee, Riverside, assignors to Universal Oil Products Company, Chicago, Ill. Separation of suspended solids from fluids. 2,448,135, Aug. 31.
Beech Aircraft Corporation, assignee: *See*—
Earhart, Harold W.

Beeh, Louis, Long Meadow, Mass., assignor to Bulova Watch Company, Inc., New York, N. Y. Hydraulic pump control. 2,448,347, Aug. 31.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Gans, Albert G., and Hasley.
Gillespie, Rollin W.
Mason, Warren P.

Bellwood, Carl R., Ridgefield, assignor to The Cravenette Company, U. S. A., Hoboken, N. J. Treatment of textiles with acyloxy-substituted aromatic acid salts. 2,448,247, Aug. 31.

Belmont Radio Corporation, assignee: *See*—
Olesky, Anthony P.

Bendix, Vincent, Flemington, N. J., assignor to Helicopters, Inc. Mechanism for controlling helicopters with coaxial rotors. 2,448,073, Aug. 31.

Bennett, James B., Los Angeles, and J. J. McCarter, Alhambra, Calif., assignors, by mesne assignments, to Thermoid Company. Rubber wheel. 2,448,248, Aug. 31.

Bent, Henry E., Columbia, Mo. Heaters, stoves, and burners, particularly adapted for use in making field laboratory tests. 2,448,412, Aug. 31.

Berini, Clarence J., Detroit, Mich. Door lock. 2,448,293, Aug. 31.

Bethlehem Steel Company, assignee: *See*—
Davidson, Harvey E.

Bishop, Lewis, Arcadia, Fla. Lawn mower. 2,448,074, Aug. 31.

Björklund, Gustaf E., Stockholm, Sweden. Dental handpiece. 2,448,348, Aug. 31.

Black, Harry L., Moncton, New Brunswick, Canada, assignor to General Railway Signal Company, Rochester, N. Y. Track circuits with battery charging or depolarizing means. 2,448,349, Aug. 31.

Black, William A., et al.: *See*—
Maxson, William L., McLaren, Black, and Fry.

Blanchard, Francis W., Snyder, assignor to Hewitt Rubber Corporation, Buffalo, N. Y. Breakable building form. 2,448,294, Aug. 31.

Bliss, E. W., Company, assignee: *See*—
Rode, Fredrich J., and Hatch.

Bonham, Walter R., Palo Alto, Calif. Variable-speed transmission. 2,448,249, Aug. 31.

Borg, George W., Corporation, The, assignee: *See*—
McCaslin, James F., and Fink.

Borg-Warner Corporation, assignee: *See*—
Rockwell, Edward A.

Borghesi, Harold, Union City, N. J. Base for stands. 2,448,413, Aug. 31.

Bortner, William A., Baltimore, assignor to The Glenn L. Martin Company, Middle River, Md. Retractable sponson. 2,448,075, Aug. 31.

Bourdeaux, Joseph O.: *See*—
Holan, Leif A., and Bourdeaux.

Boyer, Taylor M., and C. R. Gottschall, assignors to All American Aviation, Inc., Wilmington, Del. Arresting unit for aircraft landing system. 2,448,209, Aug. 31.

Boyle, Edward J., and E. A. Anderson, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y. Zinc-titanium-cadmium alloys. 2,448,169, Aug. 31.

Bradley, Rose I., Seattle, Wash. Bib and safety jacket. 2,448,076, Aug. 31.

Branick, Charles E., Fargo, N. Dak. Apparatus for lifting and supporting rim-equipped tires. 2,448,414, Aug. 31.

Branscome, Garnett E.: *See*—
Lueberry, Bolling B., and Branscome.

Bratton, Samuel M., assignor to The Pusey & Jones Corporation, Wilmington, Del. Press arrangement. 2,448,295, Aug. 31.

British Plaster Board Limited, The, assignee: *See*—
Haddon, Cuthbert L.

Brooks, Richard E.: *See*—
Gresham, William F., and Brooks.

Brooks, Tony P., and B. K. Wyatt, Little Rock, Ark., assignors to Pittsburgh Plate Glass Company, Allegheny County, Pa. Mirror hanger. 2,448,077, Aug. 31.

Brown, Andrew C.: *See*—
Hallett, Ernest G., and Brown.

Brown, Cecil L., Chattanooga, Tenn. Ladder bracket. 2,448,350, Aug. 31.

Brown, Clyde A., assignor to The Dole Valve Company, Chicago, Ill. Mixer valve and control. 2,448,170, Aug. 31.

Brown, Curtis, Martinton, and W. F. Parke, Chicago, Ill. Electric hammer. 2,448,210, Aug. 31.

Brown Instrument Company, The, assignee: *See*—
Vollrath, Joseph P.
Wild, Rudolf F.

Brown, Percy F., Greece, assignor to James Cunningham, Son & Company, Rochester, N. Y. Reciprocating tedder attachment for power mower sickle bars. 2,448,078, Aug. 31.

Brown, Walter E.: *See*—
Crowther, Cecil R., and Brown.

Brush, Abbott P., Greenwich, Conn. Tapped fastener. 2,448,351, Aug. 31.

Buc, Saul R., and J. H. Ford, assignors to The Upjohn Company, Kalamazoo, Mich. Preparation of β-aminopropionitrile. 2,448,013, Aug. 31.

Buckendale, Lawrence R., assignor to The Timken-Detroit Axle Company, Detroit, Mich. Dual engine vehicle cooling system. 2,448,014, Aug. 31.

Buell Engineering Company, Incorporated, assignee: *See*—
Dohrmann, Henry C.

Bulova Watch Company, Inc., assignee: *See*—
Beeh, Louis.

Bunten, Oliver J., Cambridge, Mass. Door lock bolt. 2,448,415, Aug. 31.

Burk, Robert E., Cleveland Heights, assignor to The Standard Oil Company, Cleveland, Ohio. Cracking of hydrocarbons. 2,448,015, Aug. 31.

Bush, A. G., assignee: *See*—
Criner, Harry J.

Bush, Burton T., Inc., assignee: *See*—
Peppel, William J.

Busignies, Henri G., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Instrument landing system. 2,448,016, Aug. 31.

Busignies, Henri G., Forest Hills, and N. Marchand, New York, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Antenna system. 2,448,017, Aug. 31.

Byrkit, Gordon D.: *See*—
Lincoln, Bert H., and Byrkit.

Bywater, William, Limited, assignee: *See*—
Kingston, William H.

Caesar, Philip D., Wenonah, and A. N. Sachanen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Alkylation of thiophene. 2,448,211, Aug. 31.

Callahan, Clarence H., and W. Languirand, New Bedford, Mass., assignors to Textile Research Co. Loom protector rod actuating mechanism. 2,448,250, Aug. 31.

Campbell, Edmund M., assignor to Mine Safety Appliances Company, Pittsburgh, Pa. First-aid kit. 2,448,171, Aug. 31.

Campbell, Erwin A.: *See*—
Woolslayer, Homer J., Campbell, and Jenkins.

Campbell, Julian A., Long Beach, Calif. Liquid level control. 2,448,251, Aug. 31.

Carlin, Benson, New York, N. Y., assignor to Sperry Products, Inc., Hoboken, N. J. Piezoelectric crystal mounting means. 2,448,352, Aug. 31.

Carrie, Thomas G., Montreal, Quebec, Canada. Connecting rod assembly for internal-combustion engines. 2,448,079, Aug. 31.

Carter, Robert E., Mount Holly Springs, assignor to C. H. Masland & Sons, Carlisle, Pa. Removable game pocket. 2,448,416, Aug. 31.

Cary, Raymond J., Jr., Long Beach, Calif., assignor to the United States of America as represented by the Secretary of War. Tunable inductance. 2,448,296, Aug. 31.

Case, J. I., Company, assignee: *See*—
Rutter, Alvah E.

Cavalcanti, Benjamin A. D., Rio de Janeiro, Brazil. Altimetric-stereo-corrector. 2,448,484, Aug. 31.

Cavanagh, John R.: *See*—
Meno, Stanley J., and Cavanagh.

Cecchini, Angelo, Astoria, Long Island, N. Y. Electric stove with utensil retaining means. 2,448,417, Aug. 31

Celanese Corporation of America, assignee: *See*—
Creamer, Robert M.

Chain Belt Company, assignee: *See*—
Longenecker, Charles I.

Chappuis, John A., Neuchatel, Switzerland. Stamping press for precision work. 2,448,136, Aug. 31.

Chernack, Abel E., deceased, Elmwood, Conn., M. Chernack, executrix. Hose. 2,448,485, Aug. 31.

Chernack, Mary, executrix: *See*—
Chernack, Abel E.

Chester, Milton A., Wichita, Kans. Hardness tester. 2,448,486, Aug. 31.

Christensen, Niels C., Salt Lake City, Utah. Liquid rotor spray mechanism. 2,448,297, Aug. 31.

Christofferson, Ernest L.: *See*—
Skanen, William, and Christofferson.

Chubb, Melvin F., Joplin, Mo., assignor to The Eagle-Picher Company, Cincinnati, Ohio. Product and method of making fused litharge particles coated with red lead. 2,448,353, Aug. 31.

Ciba Limited, assignee: *See*—
Sallmann, Richard, and Graenacher.

Ciba Products Corporation, assignee: *See*—
Widmer, Gustav, and Fisch.

Cintron, Ezequiel B., New York, N. Y. Machine for cutting men's heels. 2,448,354, Aug. 31.

Ciski, Irving, Schiller Park, assignor to Ampro Corporation, Chicago, Ill. Cam follower construction. 2,448,355, Aug. 31.

Clark, Trevor H., assignor to Federal Telephone and Radio Corporation, New York, N. Y. Sensing antenna coupling. 2,448,018, Aug. 31.

Clasquin, Ledru A.: *See*—
Schebler, Carl L., Douglas, and Clasquin.

Cleveland Graphite Bronze Company, The, assignee: *See*—
Kavanagh, Thomas J.

Cleveland, Samuel M., Merion, Pa. Mechanical pencil with step-by-step feed. 2,448,356, Aug. 31.

Cobbs, Everett R., Beloit, Ohio. Automatic light for cabinets. 2,448,080, Aug. 31.

Cody, William A., Clay Center, Kans. Picture hanger. 2,448,137, Aug. 31.

Columbia Records Inc., assignee: *See*—
Hinckley, Frank C.

Combustion Engineering Company, Inc., assignee: *See*—
Kruse, John R.

Connecticut Variable Gear Corporation, The, assignee: *See*—
Morgan, Porter S.

Continental Can Company, Inc., assignee: *See*—
Pearson, Paul E., and Treff.

Continental Oil Company, assignee: *See*—
Zurcher, Paul.

Conway, Woodville B., Escondido, Calif. Automatic ammunition feed for firearms. 2,448,081, Aug. 31.

Cootes, Harold E., Detroit, Mich., and H. R. Graybill, Manheim, assignors to Animal Trap Company of America, Lititz, Pa. Chemical gun trap. 2,448,418, Aug. 31.

Cordrey, Hancil: *See*—
Duvall, Walter J., and Cordrey.

Cornthwaite, William R., Wilmington, Del., and A. A. Elston, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of peracid solutions. 2,448,252, Aug. 31.

Cottrell, C. B., & Sons Company, assignee: *See*—
Barber, Howard M.

Coulter, Andrew F., Wilkinsburg, assignor to F. Schaefer, Pittsburgh, Pa. Adjustable dead lever guide. 2,448,419, Aug. 31.

Courtauids, Limited, assignee: *See*—
MacGregor, James H.

Couse, Kibbey W., Newark, N. J. Aircraft service power truck. 2,448,172, Aug. 31.

Cowan, Frank V., Chicago, Ill. Hollow article and method of making same. 2,448,173, Aug. 31.

Craig, Kenneth A., and R. J. Auchter, Appleton, assignors to Paper Patents Company, Neenah, Wis. Panel facing. 2,448,357, Aug. 31.

Crane Co., assignee: *See*—
Bassett, Charles H.

Cravenette Company, U. S. A., The, assignee: *See*—
Bellwood, Carl R.

Creamer, Robert M., Cumberland, Md., assignor to Celanese Corporation of America. Recovery of water-soluble cellulose esters. 2,448,082, Aug. 31.

Criner, Harry J., assignor of one-half to A. G. Bush, Davenport, Iowa. Clothes rack. 2,448,253, Aug. 31.

Crompton & Knowles Loom Works, assignee: *See*—
Turner, Richard G.

Crowther, Cecil R., Pennside, and W. E. Brown, Reiffton, assignors to Reading Air Chutes, Inc., West Reading, Pa. Parachute device adapted to be launched from an aircraft or the like. 2,448,254, Aug. 31.

Cunningham, James, Son & Company, assignee: *See*—
Brown, Percy F.

Curtis, John C., Claremont, N. H., assignor to Joy Manufacturing Company. Grinding apparatus. 2,448,019, Aug. 31

Curtiss, George E., Jr., Penn Wynne, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Latching device. 2,448,083, Aug. 31.

Cutler-Hammer, Inc., assignee: *See*—
Elliot, William H.
Krieger, Alvin W.

Daane, Adrian H.: *See*—
Wilhelm, Harley A., and Daane.

Dangelmajer, Charles, Nutley, assignor to Resistoflex Corporation, Belleville, N. J. Plasticized polyvinyl alcohol compositions. 2,448,358, Aug. 31.

Darnell, Richard C., Champaign, Ill. Device for hidden explosive mines. 2,448,020, Aug. 31.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Car-end buffer. 2,448,138, Aug. 31.

Dath, George E., Mokena, assignor to W. H. Miner, Inc., Chicago, Ill. Friction shock absorbing mechanism for railway draft riggings. 2,448,139, Aug. 31.

Daul, George C.: *See*—
Reid, John D., and Daul.

Davidson, Harvey E., Tulsa, Okla., assignor to Bethlehem Steel Company. Exhaust spark arrester. 2,448,420, Aug. 31.

Davis, Elmer M., St. Paul, Minn., assignor to Swift & Company, Chicago, Ill. Poultry shackle. 2,448,421, Aug. 31.

Davis, Neville R., Bisham, assignor to Sun-Vic Controls Limited, London, England. Electronic relay arrangement. 2,448,422, Aug. 31.

Davis, Valter V., Tuscaloosa, Ala. Scanning camera. 2,448,084, Aug. 31.

Davis, William L., Jr.: *See*—
Quady, John C., and Davis.

Davison Chemical Corporation, The, assignee: *See*—
Shoeld, Mark.

Davison, Edward D., Waukegan, Ill. Switch box holder. 2,448,359, Aug. 31.

De Benedictis, Aldo, and D. B. Luten, Jr., Berkeley, assignors to Shell Development Company, San Francisco, Calif. Catalysts for use in production of chlorine. 2,448,255, Aug. 31.

De Boisblanc, Deslonde R., Bartlesville, Okla., assignor to Phillips Petroleum Company. Detonation meter. 2,448,323, Aug. 31.

De Filgué, Vladimir, Paris, France. Reciprocating converter. 2,448,298, Aug. 31.

De Grasia, Joseph, Washington, D. C. Protective hood. 2,448,021, Aug. 31.

De Lano, Ralph B., Jr.: *See*—
Firestone, Floyd A., and De Lano.

De Saussure Equipment Company, assignee: *See*—
De Saussure, William P.

De Saussure, James P., assignee: *See*—
De Saussure, William P.

De Saussure, William P., Englewood, assignor of one-half to himself and one-half to J. P. De Saussure, Montclair, N. J., copartners doing business under the name and style of De Saussure Equipment Company, New York, N. Y. Folding table. 2,448,360, Aug. 31.

Dewey, Clarence L., assignor to C. E. Taylor and H. E. Lerner, copartners, doing business as Taylor Sales Engineering Company, Elkhart, Ind. Floating filter. 2,448,212, Aug. 31.

Di Bonaventura, Marino, Southbridge, Mass. Retinoscope for determining refractive errors of the eye. 2,448,140, Aug. 31.

Dickson, Ross O., Mexico City, Mexico. Dental template. 2,448,085, Aug. 31.

Distillers Company, Limited, The, assignee: *See*—
Stanley, Herbert M., Salt, and Williams.

Divco Corporation, assignee: *See*—
Nash, Carl B.

Dodge, Floyd L., assignor to The Wade Tool Co., Waltham, Mass. Collet seal. 2,448,423, Aug. 31.

Dohrmann, Henry C., Jersey City, N. J., assignor to Buell Engineering Company, Incorporated, New York, N. Y. Dust collector. 2,448,424, Aug. 31.

Dolan, Charles H., II, Old Greenwich, Conn. Electric plug. 2,448,086, Aug. 31.

Dole Valve Company, The, assignee: *See*—
Brown, Clyde A.

Doonan, Everett R., Wichita, Kans. Locking screw. 2,448,213, Aug. 31.

Dorne, Arthur, Mineola, N. Y., assignor to United States of America as represented by the Secretary of War. Beam intensity control. 2,448,299, Aug. 31.

Douglas, Frank: *See*—
Schebler, Carl L., Douglas, and Clasquin.

Dow Chemical Company, The, assignee: *See*—
Heusted, George B., and Bauman.
Irons, Carroll R., and Sanford.
Kagy, John F., and McPherson.

Drew, Robest D.: *See*—
Payne, John W., Hornberg, and Drew.

Driggs, Anna P., Colfax, Calif. Bunny-cat. 2,448,087, Aug. 31.

Driggs, Anna P., Colfax, Calif. Bunny-cat. 2,448,088, Aug. 31.

Dudrick, Stanley F., Nanticoke, Pa. Tool guide. 2,448,361, Aug. 31.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Cornthwaite, William R., and Elston.
Flodin, Nestor W.
Gilbert, Harvey N.
Gresham, William F., and Brooks.
Larson, Alfred T.
Spraks, Chiles E., Libby, and Trepagnier.

Duriron Company, Inc., The, assignee: *See*—
Jacobsen, Oystein.

Duvall, Samuel, Highland Park, Mich., assignor to Air Reduction Company, Incorporated. Torch cutting machine. 2,448,089, Aug. 31.

Duvall, Walter J., and H. Cordrey, Chula Vista, Calif. Beating and mixing device. 2,448,174, Aug. 31.

Eaddy, Ernest J., Spartanburg, S. C. Loom battery filling truck. 2,448,300, Aug. 31.

Eagle-Picher Company, The, assignee: *See*—
Chubb, Melvin F.

Earhart, Harold W., assignor to Beech Aircraft Corporation, Wichita, Kans. Aircraft beam chord construction. 2,448,362, Aug. 31.

Eastman Kodak Company, assignee: *See*—
Smith, William F., and Trivelli.

Edison, Thomas A., Incorporated, assignee: *See*—
Postal, Robert H.

Electric Wheel Corporation, assignee: *See*—
Richey, Clarence B.

Elliot, William H., Shorewood, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electronic motor control for printing presses and the like. 2,448,256, Aug. 31.

Elston, Arthur A.: *See*—
Cornthwaite, William R., and Elston.

Emerson Electric Mfg. Co., The, assignee: *See*—
Schebler, Carl L., Douglas, and Clasquin.

Encel, Karl, Swampscott, Mass. Making shoes with upwardly deflected soles. 2,448,301, Aug. 31.

Ensley, Fern E.: *See*—
Loudenslager, Oscar W., Gardner, and Ensley.

Eskew, Roderick K., Glenside, Pa., assignor to the United States of America as represented by the Secretary of Agriculture. Extraction of rutin. 2,448,175, Aug. 31.

Evans, Louis P., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Converting hydrocarbon gases. 2,448,257, Aug. 31.

Evans, Theodore W., Oakland, and D. B. Adelson, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Convertible alkyd resins. 2,448,258, Aug. 31.

Eyerkuss, Leslie L., Belleville, N. J. Toy highway traffic signal light. 2,448,302, Aug. 31.

Farrel-Birmingham. Company, Incorporated, assignee: *See*—
Schnuck, Carl F.

Farrell, Anna E., Seattle, Wash. Shoulder bolster and lingerie support. 2,447,141, Aug. 31.

Federal Telecommunication Laboratories, Inc., assignee: *See*—
Libby, Lester L.

Federal Telephone and Radio Corporation, assignee: *See*—
Busignies, Henri G.
Clark, Trevor H.
Grieg, Donald D.
Labin, Emile, and Grieg.
Marchand, Nathan.
Silver, Martin, Segerstrom, and Reade.
Smith, Archibald D., Jr., and Guthman.

Feine, August, & Sons, Co., assignee: *See*—
Jung, Earl A.

Fell, Raymond E., and J. W. Miller, assignors to Motor Wheel Corporation, Lansing, Mich. Vaporizing type burner with resistance igniter. 2,448,142, Aug. 31.

Field, Oscar S., and S. N. Wight, assignors to General Railway Signal Company, Rochester, N. Y. Selective signaling system. 2,448,487, Aug. 31.

Filo, Frank C.: *See*—
Marcus, Arthur P., and Filo.

Finch, Harry D., El Cerrito, assignor ot Shell Development Company, San Francisco, Calif. Unsaturated esters of substituted adipic acid and their production. 2,448,259, Aug. 31.

Fink, Jean: *See*—
McCaslin, James F., and Fink.

Finlay, Walter L.: *See*—
Schilling, Albert A., and Finlay.

Firestone, Floyd A., Ann Arbor, Mich., and R. B. De Lano, Jr., New York, N. Y., assignors to Sperry Products, Inc., Hoboken, N. J. Time marks for the sweep of cathode ray tubes. 2,448,363, Aug. 31.

Fix, Eugene J., Philadelphia, Pa. Fuse. 2,448,022, Aug. 31.

Flodin, Nestor W., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polyvinyl ethers. 2,448,260, Aug. 31.

Folland, Donald F., East Hempstead, and J. Lyman, Huntington, assignors to The Sperry Corporation. Flight indicator. 2,448,028, Aug. 31.

Ford Instrument Company, Inc., assignee: *See*—
Newell, William H., and McKenney.

Ford, Jared H.: *See*—
Buc, Saul R., and Ford.

Fors, Manford C., Salinas, Calif. Hopper gate. 2,448,303, Aug. 31.

Francis, Charles B., Pittsburgh, Pa. Utilization of ferrous sulfate solutions in the manufacture of ferric alums. 2,448,425, Aug. 31.

Frazier, John W.: *See*—
Heintz, Ralph M., and Frazier.

Fry, Macon, et al.: *See*—
Maxson, William L., McLaren, Black, and Fry.

Fuhrman, Robert C., assignor to The Parker Appliance Company, Cleveland, Ohio. Antiseize and sealing composition. 2,448,090, Aug. 31.

Funk, Truman B., assignor, by mesne assignments, to Truck-Man, Inc., Jackson, Mich. Motorized lift truck. 2,448,176, Aug. 31.

Gabel, John, Chicago, Ill. Supporting device. 2,448,304, Aug. 31.

Galloway, Clarence T., Pittsford, assignor to Gleason Works, Rochester, N. Y. Gear cutting machine. 2,448,426, Aug. 31.

Ganz, Albert G., New York, and A. D. Hasley, New Rochelle, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Pulse generator. 2,448,364, Aug. 31.

Gardner, Arthur T., Kansas City, Mo. Granulating machine. 2,448,214, Aug. 31.

Gardner, Fred W., Winter Park, Fla. Lawn mower. 2,448,091, Aug. 31.

Gardner, Royal C.: *See*—
Loudenslager, Oscar W., Gardner, and Ensley.

Gaugler, Richard S., assignor to General Motors Corporation, Dayton, Ohio. Capillary heat transfer device for refrigerating apparatus. 2,448,261, Aug. 31.

Gavin, Malcolm R., Wembley, and V. A. Heathcote, Fulham, London, England, assignors, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. Variable-frequency oscillator system. 2,448,177, Aug. 31.

General Electric Company, assignee: *See*—
Goss, James H.
Hiehle, Michael E.
Livingston, Orrin W., and Moyer.
Martin, Harold M.
Powell, Alric H.
Pyle, James J.

General Foods Corporation, assignee: *See*—
Barnes, Harry M.

General Mills, Inc., assignee: *See*—
Jakobsen, Jakob L.

General Motors Corporation, assignee: *See*—
Gaugler, Richard S.
Kunsog, Theodore W.
Pearce, George C.

General Railway Signal Company, assignee: *See*—
Black, Harry L.
Field, Oscar S., and Wight.

George, Edgar J., Jacksonville, Fla. Electrical cooking device. 2,448,215, Aug. 31.

Gibson, James D., Bartlesville, Okla., assignor to Phillips Petroleum Company. Dehydrofluorination process. 2,448,092, Aug. 31.

Gilbert, Harvey N., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Metal cleaning. 2,448,262, Aug. 31.

Gilbert, Joseph A., San Francisco, Calif., assignor to Moore Business Forms, Inc. Carbon interleaved record assembly. 2,448,143, Aug. 31.

Gillespie, Rollin W., New Providence, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Projector and receiver of supersonic frequencies. 2,448,365, Aug. 31.

Girard, Ernest, Central Falls, assignor to American Tool Head Corporation, Providence, R. I. Bolt pointing machine. 2,448,305, Aug. 31.

Girdler Corporation, The, assignee: *See*—
Miller, Bruce D.

Gittings, Lewis D., Anniston, Ala., assignor to Monsanto Chemical Company, St. Louis, Mo. Penetrating oil compositions. 2,448,093, Aug. 31.

Gleason Works, assignee: *See*—
Galloway, Clarence T.

Gledhill, Edward, New York, N. Y. Bandage. 2,448,366, Aug. 31.

Global Spark Plug Co., assignee: *See*—
Replogle, Delbert E.

Glowacki, Matthew P., Chicago, Ill. Sanding tool. 2,448,178, Aug. 31.

Gokey, John L., Columbus, Ohio. Self-dumping wheelbarrow. 2,448,216, Aug. 31.

Golden, William T., U. S. Navy. Machine gun firing rate control mechanism. 2,448,024, Aug. 31.

Gonsalves, Victor E., Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C. Thread guide. 2,448,217, Aug. 31.

Goodrich, B. F., Company, The, assignee: *See*—
Olson, Frederick F., and MacDonald.

Goodyear Aircraft Corporation, assignee: *See*—
Loudenslager, Oscar W., Gardner, and Ensley.
Mayne, Robert.
Peterson, Maurits P. H.

Gordon, Benjamin, New York, N. Y. Knee pad dolly. 2,448,427, Aug. 31.

Goss, James H., Essex, Mass., assignor to General Electric Company. Decelerometer. 2,448,367, Aug. 31.

Gottlieb, Louis, Philadelphia, Pa. Discharge manifold for beverage dispensing apparatus. 2,448,306, Aug. 24.

Gottschall, Clarence R.: *See*—
Boyer, Taylor M., and Gottschall.

Grabau, William C., Brighton, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Self-synchronous controlled motor system. 2,448,025, Aug. 31.

Gradolph, William F., Jr.: *See*—
Williams, Lynn A., Marshall, and Gradolph.

Grant, Harry C., Jr., New York, and A. W. Uhl, Inwood, N. Y., assignors to Specialties Development Corporation, Bloomfield, N. J. Electrical detecting circuit and device for testing the same. 2,448,026, Aug. 31.

Gray, G. A., Company, The, assignee: *See*—
Walter, John M.

Graybill, Hershey R.: *See*—
Cootes, Harold E., and Graybill.

Graybill, Kenneth W., Elmhurst, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Intercommunicating telephone system. 2,448,428, Aug. 31.

Greenberg, Bernard, New York, N. Y. Necktie. 2,448,307, Aug. 31.

Gregg, George F., Yakima, Wash. Tuning key. 2,448,308. Aug. 31.

Gresham, William F., and R. E. Brooks, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Organic acid synthesis. 2,448,368, Aug. 31.

Grieco, Rocco F., Millburn, N. J. Threading tool grinding fixture. 2,448,309, Aug. 31.

Grieg, Donald D.: *See*—
Labin, Emile, and Grieg.

Grieg, Donald D., Forest Hills, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Static reducing pulse receiver. 2,448,027, Aug. 31.

Gross, Thomas A. O., Waltham, assignor to Raytheon Manufacturing Company, Newton, Mass. Electrical system. 2,448,028, Aug. 31.

Gruetjen, Frederick A., assignor to A. O. Smith Corporation, Milwaukee, Wis. Press for propeller blade sections. 2,448,179, Aug. 31.

Gulf Oil Corporation, assignee: *See*—
Pellettere, Joseph A.

Guthier, Ervin H., Santa Ana, Calif. Dehydrator apparatus. 2,448,144, Aug. 31.

Gutzwiller, Ernst, Basel, assignor to Sandoz Ltd., Fribourg, Switzerland. Dyestuffs of the anthraquinone series. 2,448,094, Aug. 31.

Haddon, Cuthbert L., Newark-on-Trent, assignor to The British Plaster Board Limited, Wallasey, England. Manufacture of plaster of Paris. 2,448,218, Aug. 31.

Haensel, Vladimir: *See*—
Thomas, Charles L., and Haensel.

Hallett, Ernest G., West Footscray, and A. C. Brown, Footscray, Victoria, Australia. Signal type torque indicating wrench. 2,448,095, Aug. 31.

Handi-Bag Co., assignee: *See*—
Ackerman, Max.

Hannon, Lucile, Memphis, Tenn. Finger waving device. 2,448,263, Aug. 31.

Hansen, Ernest C., New Orleans, La. Clothesline. 2,448,310, Aug. 31.

Hardin, Carl E., assignee, et al.: *See*—
Hardin, George P.

Hardin, Carlton B., assignee, et al.: *See*—
Hardin, George P.

Hardin, George P., assignor of one-third to C. B. Hardin and one-third to C. E. Hardin, Atlanta, Ga. Liquid float circuit breaker. 2,448,096, Aug. 31.

Hasley, Andrew D.: *See*—
Ganz, Albert G., and Hasley.

Hatch, Meredith R.: *See*—
Rode, Fredrich J., and Hatch.

Hawthorne, Charles W., Connesautville, Pa., assignor to Morgan Construction Company, Worcester, Mass. Cobblebundler. 2,448,097, Aug. 31.

Hays Corporation, The, assignee: *See*—
Bailey, George B.

Hazeltine Research, Inc., assignee: *See*—
Gavin, Malcolm R., and Heathcote.

Heathcote, Vincent A.: *See*—
Gavin, Malcolm, and Heathcote.

Heintz, Ralph M., Cleveland, and J. W. Frazier, Shaker Heights, assignors to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Engine bearing construction. 2,448,369, Aug. 31.

Helgren, Fred J., Waukegan, Ill., assignor to Abbott Laboratories. Medicinal composition. 2,448,180, Aug. 31.

Helicopters, Inc., assignee: *See*—
Bendix, Vincent.

Henderson, Donald S., U. S. Navy, and A. N. Sachanen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Sulfonation of aromatic compounds in presence of acetonitrile. 2,448,370, Aug. 31.

Henry, Guy J., Chicago, Ill. Pressure relief valve. 2,448,429, Aug. 31.

Hepinstall Steel Works, Inc., assignee: *See*—
Wallace, John J.

Heusted, George B., and W. C. Bauman, assignors to The Dow Chemical Company, Midland, Mich. Preparing phenolsulfonic acid-formaldehyde ion exchange agents. 2,448,029, Aug. 31.

Hewitt, George W.: *See*—
Penney, Gaylord W., and Hewitt.

Hewitt Rubber Corporation, assignee: *See*—
Blanchard, Francis W.

Hickok, W. O., Mfg. Co., assignee: *See*—
Thompson, Robert J.

Hiehle, Michael E., Syracuse, N. Y., assignor to General Electric Company. Circuit making and breaking in response to power failure. 2,448,371, Aug. 31.

Hill, George E., Washington Suburbs, Prince Georges County, Md. Tow bar. 2,448,311, Aug. 31.

Hinckley, Frank C., Stratford, Conn., assignor to Columbia Records Inc. Manufacture of phonograph records. 2,448,030, Aug. 31.

Hirsch, Richard V., South Gate, Calif. Shearer, 2,448,219, Aug. 31.

Hirschler, Alfred E., Drexel Hill, assignor to Sun Oil Company, Philadelphia, Pa. Purification of naphthenic hydrocarbons. 2,448,488, Aug. 31.

Hirschler, Alfred E., Drexel Hill, assignor to Sun Oil Company, Philadelphia, Pa. Separation of aromatic hydrocarbons by selective adsorption in silica gel. 2,448,489, Aug. 31.

Hobourn, Percival L., Leamington, Spa, and W. H. Joy, Coventry, England. Bobbin carrier for braiding machines. 2,448,312, Aug. 31.

Holan, Leif A., and J. O. Bourdeaux, Minneapolis, Minn., said Bordeaux assignor of one-sixth to said Holan. Internal-combustion engine. 2,448,430, Aug. 31.

Holm, Walter P. T., assignor to Vibra Co. Soc. de Resp. Ltda., Buenos Aires, Argentina. Electric alarm device. 2,448,181, Aug. 31.

Holterhoff, August, Weehauken, N. J. Producing moiré designs. 2,448,145, Aug. 31.

Hornber, Charles V.: *See*—
Payne, John W., Hornberg, and Drew.

Horsley, Caperton B., Stamford, Conn., assignor to Ultrasonic Corporation, Boston, Mass. Treatment by compression waves. 2,448,372, Aug. 31.

Houdry Process Corporation, assignee: *See*—
Bose, Frank W., Jr.

Hubbert, Robert, Grosse Pointe, Mich. Adjustable shoe trees. 2,448,431, Aug. 31.

Hughes, Curtis, Forest, Tex. Automobile tire. 2,448,313, Aug. 31.

Hughey, Howard G., Fanwood, N. J., assignor to Air Reduction Company, Incorporated. Thermochemically cutting metals. 2,448,098, Aug. 31.

Huning, Ruth, Cleveland, Ohio. System of threading needles. 2,448,432, Aug. 31.

Hurst, Gilchrist L., South Weymouth, Mass. Apparatus for loading, stowing and unloading vessels. 2,448,373, Aug. 31.

Indge, Herbert S., Westboro, assignor to Norton Company, Worcester, Mass. Cam lapping machine. 2,448,146, Aug. 31.

International Nickel Company, Inc., assignee: *See*—
Renzoni, Louis S.

Irons, Carroll B., and C. E. Sanford, assignors to The Dow Chemical Company, Midland, Mich. Making wrinkle-free film. 2,448,433, Aug. 31.

Jack & Heintz Precision Industries, Inc., assignee *See*—
Heintz, Ralph M., and Frazier.

Jacobsen, Oystein, Montgomery County, assignor to The Duriron Company, Inc., Dayton, Ohio. Fabricating packing glands. 2,448,147, Aug. 31.

Jakobsen, Jakob L., Minneapolis, Minn., assignor to General Mills, Inc. Process for producing nonbreak oil. 2,448,434, Aug. 31.

James Manufacturing Company, assignee: *See*—
Petraske, Harry O.

Jenkins, Cecil: *See*—
Woolslayer, Homer J., Campbell, and Jenkins.

Jenkins, Maurice, London, England. Change-over system for cinematographic projectors. 2,448,220, Aug. 31.

Johnson, Bror A.: *See*—
Olson, Robert V., and Johnson.

Johnson, Hugh B., Falls Church, Va., and L. L. Werner, Washington, D. C. Hermetically sealed joint. 2,448,031, Aug. 31.

Johnson, John A., assignor to Art Metal Construction Company, Jamestown, N. Y. Paper file. 2,448,435, Aug. 31.

Jones, Charles Y., Carlisle, Pa. Global wheel. 2,448,222, Aug. 31.

Jones, Earle A., Electra, Tex. Trailer hitch. 2,448,436, Aug. 31.

Jones, M. Brian, assignee: *See*—
Thompson, Boyd S.

Jones, Oscar V., Dallas, Tex. Linked jaw pipe wrench with adjustable link pivot. 2,448,221, Aug. 31.

Joy Manufacturing Company, assignee: *See*—
Curtis, John C.
Simmons, Leon E.

Joy, William H.: *See*—
Hobourn, Precival L., and Joy.

Jung, Earl A., assignor to August Feine & Sons Co., Buffalo, N. Y. Steel stairway. 2,448,264, Aug. 31.

Kagy, John F., and R. R. McPherson, Long Beach, Calif., assignors to The Dow Chemical Company, Midland, Mich. Protection of crops by soil fumigation. 2,448,265, Aug. 31.

Kalfen, Zoltan, Chicago, Ill. Electrically heated tool. 2,448,182, Aug. 31.

Kaplan, Abraham, New York, N. Y. Dental appliance. 2,448,437, Aug. 31.

Karlström, Fredrik J. R., assignor to Aktiebolaget Electrolux, Stockholm, Sweden. Dishwasher having deflecting recesses in the walls thereof. 2,448,490, Aug. 31.

Kaser, Robert A., Chicago, Ill. Cylinder construction. 2,448,266, Aug. 31.

Kassovic, Stephen, La Salle, Ill. Toothpick shaker. 2,448,099, Aug. 31.

Kavanagh, Thomas J., Cleveland Heights, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio. Apparatus for checking the external diameters of annular objects. 2,448,314, Aug. 31.

Kearfott Company, Inc., assignee: *See*—
Kent, Henry J.

Keasbey & Mattison Company, assignee: *See*—
Miller, Lewis B., and Selpt.

Kellogg, M. W., Company, The, assignee: *See*—
Rubin, Louis C.

Kennedy, Edgar S., Wayne, Pa., assignor to American Viscose Corporation, Wilmington, Del. Textile fabric. 2,448,032, Aug. 31.

Kent, Henry J., Teaneck, N. J., assignor to Kearfott Company, Inc., New York, N. Y. Dual speed synchro unit. 2,448,374, Aug. 31.

Kessler, Jack, Brooklyn, N. Y. Pajama. 2,448,438, Aug. 31.

Kimberlin, Charles N., Jr., and J. A. Pierce, Baton Rouge, La., assignors to Standard Oil Development Company. Preparing an inorganic hydrogel. 2,448,439, Aug. 31.

King, Elmer I., Jeannette, Pa., assignor to The L. S. Starrett Company, Athol, Mass. Mechanic's square. 2,448,440, Aug. 31.

Kingston, William H., Drighlington, Bradford, assignor of one-half to William Bywater Limited, Leeds, England. Felting machine. 2,448,441, Aug. 31.

Kirschbaum, Herbert S., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Regulating system. 2,448,442, Aug. 31.

Kistinger, John: *See*—
Wasko, Bernard, and Kistinger.

Koppel, Ernst R., Chicago, Ill., assignor to A. O. Smith Corporation, Milwaukee, Wis. Dairy water heater. 2,448,183, Aug. 31.

Krake, Foster, assignor to Sporting Specialties Company, Coloma, Mich. Boat trailer and the like. 2,448,443, Aug. 31.

Krieger, Alvin W., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electric switch. 2,448,444, Aug. 31.

Kruck, Ralph E., Bladdell Point, Conn. Lip rouge dispenser applicator. 2,448,033, Aug. 31.

Krupp, Charles E., Evanston, Ill., and W. R. Peterson, Lowell, Ind. Weed puller. 2,448,445, Aug. 31.

Kruse, John R., Maplewood, N. J., assignor to Combustion Engineering Company, Inc., New York, N. Y. Grinding tool for refacing the sealing surfaces of header access holes. 2,448,100, Aug. 31.

Kunzog, Theodore W., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich. Combination restrictor and heat exchanger. 2,448,315, Aug. 31.

Labin, Emile, New York, and D. D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J. Electrical pulse measuring system. 2,448,034, Aug. 31.

Laclede-Christy Clay Products Company, assignee: *See*— McKelvey, John H., and Rogers.

Lakota, Stanley J.: *See*— Strobel, Charles K., and Lakota.

Lambach, Frits, Tenafly, N. J. Warp knitting machine. 2,448,035, Aug. 31.

Landmeier, Edwin W., Lakeside Park, Ky. Fuse clamp. 2,448,267, Aug. 31.

Langenau Manufacturing Company, The, assignee: *See*— Barnes, Wallace A.

Languirand, William: *See*— Callahan, Clarence H., and Languirand.

Lantz, Henri—assignor to Societe Chimique de la Grande Paroisse (Azote & Produits Chimiques), Paris, France. Low-temperature distillation of fuels by direct contact with reheated distillate vapors. 2,448,223, Aug. 31.

La Pointe, Peter, Brooklyn, N. Y. Vertical air current type potato separating machine. 2,448,446, Aug. 31.

La Porte, B., Limited, assignee: *See*— Slater, Victor W., and Wood.

Larkin, William J., Lynnfield, assignor to National Company, Inc., Malden, Mass. Terminal connector for electrical conductors. 2,448,268, Aug. 31.

Larson, Alfred T., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of carboxylic acids. 2,448,375, Aug. 31.

Latham, Allen, Jr., Jamaica Plain, assignor to Arthur D. Little, Inc., Cambridge, Mass. Air separating system and process. 2,448,491, Aug. 31.

Lau, Herbert C., Oak Park, assignor to Signode Steel Strapping Company, Chicago, Ill. Skid. 2,448,447, Aug. 31.

Lawson, Robert H., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine for turning the platform covers of platform shoes. 2,448,101, Aug. 31.

Lawson, Robert H., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Platform cover turning machine. 2,448,102, Aug. 31.

Le Fevre, Ralph A., Rochester, N. Y. Tobacco pouch. 2,448,376, Aug. 31.

Lemmon, Norman E., Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill. Preparing oil-soluble sulfonates. 2,448,184, Aug. 31.

Lerner, Harry E., assignee, et al.: *See*— Dewey, Clarence L.

Lesavoy, I. Lawrence, Allentown, Pa. System for finishing plastic sheets. 2,448,316, Aug. 31.

Levin, Ezra, Champaign, Ill. Vitamin extraction from sunflower seed. 2,448,185, Aug. 31.

Libby, James W., Jr.: *See*— Spraks, Chiles E., Libby, and Trepagnier.

Libby, Lester L., East Orange, N. J., assignor to Federal Telecommunication Laboratories, Inc., New York, N. Y. Simulating impedance system. 2,448,036, Aug. 31.

Lightolier Company, assignee: *See*— Moser, Carl.

Lincoln, Bert H., Ponca City, and G. D. Byrkit, Niagara Falls, N. Y., assignors, by mesne assignments, to The Lubri-Zol Development Corporation, Cleveland, Ohio. Lubricating compositions. 2,448,037, Aug. 31.

Linden, John F., Toronto, Ontario, Canada. Eraser tipped pencil. 2,448,103, Aug. 31.

Lindner, Frieda M., Union, N. J. Folding camping furniture. 2,448,377, Aug. 31.

Lineberry, Bolling B., and G. E. Branscome, Hampton, Va. Infant's crib. 2,448,317, Aug. 31.

Little, Arthur D., Inc., assignee: *See*— Latham, Allen, Jr.

Livingston, Orrin W., and E. E. Moyer, Scotia, N. Y., assignors to General Electric Company. Grid-to-cathode capacitor construction. 2,448,378, Aug. 31.

Longenecker, Charles I., Wauwatosa, assignor to Chain Belt Company, Milwaukee, Wis. Differential concrete pump. 2,448,104, Aug. 31.

Loudenslager, Oscar W., R. C. Gardner, and F. E. Ensley, assignors to Goodyear Aircraft Corporation, Akron, Ohio. Balloon suspension patch. 2,448,269, Aug. 31.

Low, John J., Los Angeles, Calif. Spring suspension for vehicles. 2,448,224, Aug. 31.

Lowry, Hubert E., Lawndale, Calif. Fish bowl lamp shade. 2,448,318, Aug. 31.

Lubri-Zol Development Corporation, The, assignee: *See*— Lincoln, Bert H., and Byrkit.

Luten, Daniel E., Jr.: *See*— De Benedictis, Aldo, and Luten.

Lykken, Henry G. and W. H., Minneapolis, Minn. Disintegrator and vortical classifier for solids. 2,448,038, Aug. 31.

Lykken, William H.: *See*— Lykken, Henry G. and W. H.

Lynch, Ralph D., Los Angeles, Calif. Cigarette holder. 2,448,105, Aug. 31.

Lynn, William E., Bristol, Pa. Vehicle-arresting apparatus. 2,448,039, Aug. 31.

MacDonald, Frank J.: *See*— Olson, Frederick F., and MacDonald.

MacGregor, James H., Bocking, Braintree, assignor to Courtaulds Limited, London, England. Dyeing of textile fibers containing nitrogen. 2,448,448, Aug. 31.

Mahnke, Kurt, Forest Hills, and J. W. York, Irwin, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Control system for variable-speed alternating-current motors. 2,448,040, Aug. 31.

Malloy, Richard, Columbus, Ind. Mailbox. 2,448,225, Aug. 31.

Mannerbrink, Ivan W., and N. J. L. Sandström, Goteborg, Sweden, assignors to SKF Industries, Inc., Philadelphia, Pa. Thread checking apparatus. 2,448,106, Aug. 31.

Manning, Maxwell & Moore, Incorporated, assignee: *See*— Turner, Jacob L.

Mantle, Burr W., Pittsford, assignor to American Brake Shoe Company, New York, N. Y. Compressor system. 2,448,379, Aug. 31.

Maranville, Edna H., Wichita, Kans. Pie-cake carrier. 2,448,319, Aug. 31.

Marchand, Nathan: *See*— Busignies, Henri G., and Marchand.

Marchand, Nathan, assignor to Federal Telephone and Radio Corporation, New York, N. Y. Direction finder. 2,448,041, Aug. 31.

Marcus, Arthur P., Cleveland Heights, and F. C. Filo, assignors to The Markepp Co., Inc., Cleveland, Ohio. Selector switch for phonograph circuit. 2,448,380, Aug. 31.

Marisic, Milton M., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Heat-treatment of plural oxide gels. 2,448,270, Aug. 31.

Markepp Co., Inc., The, assignee: *See*— Marcus, Arthur P., and Filo.

Marsden, Horace E., Snaresbrook, London, England. Moistening device for offset presses. 2,448,226, Aug. 31.

Marshall, William A., Jr.: *See*— Williams, Lynn A., Marshall, and Gradolph.

Martin, Glenn L., Company, The, assignee: *See*— Bortner, William A. Turnbull, William J.

Martin, Harold M., Schenectady, N. Y., assignor to General Electric Company. Dynamoelectric machine. 2,448,381, Aug. 31.

Masland, C. H., & Sons, assignee: *See*— Carter, Robert E. Masland, Charles H., 2d.

Masland, Charles H., 2d, assignor to C. H. Masland & Sons, Carlisle, Pa. Coat. 2,448,449, Aug. 31.

Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Silencer. 2,448,382, Aug. 31.

Mathaus, Lillian W., Atlanta, Ga. Multibladed knife. 2,448,383, Aug. 31.

Mathieson Chemical Corporation, The, assignee: *See*— McIntosh, William J.

Mattimore, John D., and F. C. Smith, Louisville, Ky., assignors to Tube Turns, Inc. Method and apparatus for making welded pipe joints. 2,448,107, Aug. 31.

Maxson, W. L., Corporation, The, assignee: *See*— Maxson, William L., McLaren, Black, and Fry.

Maxson, William L., West Orange, N. J., P. J. McLaren, New York, N. Y., and W. A. Black, Montclair, and M. Fry, Harrington Park, N. J., assignors, by mesne assignments, to The W. L. Maxson Corporation, New York, N. Y. Aiming mechanism. 2,448,450, Aug. 31.

Mayne, Robert, assignor to Goodyear Aircraft Corporation, Akron, Ohio. Method and apparatus for centrifugally forming of sheet thermoplastics. 2,448,492, Aug. 31.

McAfee, Jerry: *See*— Becker, Bernard M., and McAfee.

McCaleb, Jonathan H., Amite, La. Variable capacity rotary pump. 2,448,108, Aug. 31.

McCan, Malcolm E., Kokomo, Ind. Iron holder. 2,448,227, Aug. 31.

McCarter, John J.: *See*— Bennett, James B., and McCarter.

McCaslin, James F., Cleveland, Ohio, and J. Fink, Delavan, Wis., said Fink assignor to The George W. Borg Corporation, Chicago, Ill. Delay booster arming mechanism. 2,448,228, Aug. 31.

McClintock, Cecil V., Whittier, assignor to Pacific Clay Products, Los Angeles, Calif. Vitrified clay pipe joint. 2,448,271, Aug. 31.

McDowell, Clarence M., Toledo, Ohio. Peeling machine including endless transversely deformable abrading belts. 2,448,229, Aug. 31.

McIntosh, William J., Rahway, N. J., assignor to The Mathieson Chemical Corporation. Shellac bleaching. 2,448,320, Aug. 31.

McKelvey, John H., and J. W. Rogers, Kirkwood, assignors to Laclede-Christy Clay Products Company, St. Louis, Mo. Glass furnace and operation. 2,448,451, Aug. 31.

McKenney, Henry F.: *See*— Newell, William H., and McKenney.

McLaren, Peter J., et al.: *See*— Maxson, William L., McLaren, Black, and Fry.

McPherson, Robert R.: *See*— Keacy, John F., and McPherson.

Meinzinger, Dale, Detroit, Mich. Handgrip for fishing lines. 2,448,384, Aug. 31.

Mellor Bromley & Co., Limited, assignee: *See*— Shortland, Arthur.

Meno, Stanley J., and J. R. Cavanagh, Toronto, Ontario, Canada. Multiple life light bulb. 2,448,493, Aug. 31.

Merrifield, Harold E., Stemmers Run, Md. Apparatus for electric generator current control and voltage regulation. 2,448,068, Aug. 31.

Metropolitan Device Corporation, assignee: *See*— Rypinski, Albert B.

Michael, Jack, Cleveland, Ohio. Furring strips and channels and connecting structure. 2,448,109, Aug. 31.

Michels, John P., assignor of thirty-three and one-third per cent to O. L. Powers and thirty-three and one-third per cent to L. R. Schmuck, Battle Creek, Mich. Deburring tool. 2,448,385, Aug. 31.

Miller, Bruce De H., assignor to The Girdler Corporation, Louisville, Ky. Mixing apparatus. 2,448,042, Aug. 31.

Miller, Edwin A., Fairfield, Conn. Mechanism for precision switches. 2,448,230, Aug. 31.

Miller, Hoke S., Stamford, Conn., assignor to Air Reduction Company, Incorporated, New York, N. Y. Method of preparing vinyl chloride and catalyst therefor. 2,448,110, Aug. 31.

Miller, John W.: *See*— Fell, Raymond E., and Miller.

Miller, John W., and W. G. Smith, assignors to Motor Wheel Corporation, Lansing, Mich. Pilot structure for pot type burners. 2,448,148, Aug. 31.

Miller, Lewis B., Ambler, and W. R. Seipt, North Wales, assignors to Keasbey & Mattison Company, Ambler, Pa. Heat insulation. 2,448,186, Aug. 31.

Mine Safety Appliances Company, assignee: *See*— Campbell, Edmund M.

Miner, W. H., Inc., assignee: *See*— Dath, George E.

Mining Engineering Company Limited, assignee: *See*— Nyborg, Tage G.

Minneapolis-Honeywell Regulator Company, assignee: *See*— Bank, Albert E. Beam, Vilyan O. Rosche, John O. Wilson, John M.

Minneapolis-Moline Power Implement, assignee: *See*— Ronning, Martin.

Molloy, James F., Oakland, Calif. Toilet flushing assembly. 2,448,231, Aug. 31.

Monroe, Gordon R.: *See*— Baker, Robert M., Monroe, and Reed.

Monsanto Chemical Company, assignee: *See*— Gittings, Lewis D.

Moo, Gothard T., Cranston, assignor to Weskenson Corporation, Providence, R. I. Mechanical transmission. 2,448,386, Aug. 31.

Moomjian, Harry A., Los Angeles, Calif. Coffee brewing control. 2,448,149, Aug. 31.

Moore Business Forms, Inc., assignee: *See*— Gilbert, Joseph A.

Moore, Lee C., Corporation, assignee: *See*— Woolslayer, Homer J., Campbell, and Jenkins.

Morelock, Oliver J., Short Hills, assignors to Weston Electrical Instrument Corporation, Newark, N. J. Test socket. 2,448,452, Aug. 31.

Morgan Construction Company, assignee: *See*— Hawthorne, Charles W.

Morgan, Porter S., Westport, assignor to The Connecticut Worm and Wheel unidirectional transmission gearing. 2,448,187, Aug. 31.

Morrison, Joseph L., Lincolnwood, Ill. Liquid cooling system. 2,448,453, Aug. 31.

Morrison, Montford, Upper Montclair, N. J. Crystal beat-frequency oscillator. 2,448,188, Aug. 31.

Morrone, John A., Jersey City, N. J. Surgical clamp. 2,448,321, Aug. 31.

Moser, Carl, Larchmont, assignor to Lightolier Company, New York, N. Y. Lighting equipment. 2,448,494, Aug. 31.

Mossberg Pressed Steel Corporation, assignee: *See*— Olson, Robert V., and Johnson.

Motor Wheel Corporation, assignee: *See*— Fell, Raymond E., and Miller. Miller, John W., and Smith.

Mott, Carl W., La Grange, assignor to F. M. Muench, Wilmette, Ill. Nursing bottle holder. 2,448,189, Aug. 31.

Moyer, Elmo E.: *See*— Livingston, Orrin W., and Moyer.

Muecke, Edward, Linden, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Joining and finishing the seam-margin edges of fabric plies. 2,448,495, Aug. 31.

Muench, Frances M., assignee: *See*— Mott, Carl W.

Muffly, Glenn, Springfield, Ohio. Refrigerating system. 2,448,454, Aug. 31.

Mulholland, James R., University Heights, Ohio. Ring and traveler for twister frames. 2,448,150, Aug. 31.

Murray, Alan E., Wilmington, Del. Laminated pile-fabric shoe sole. 2,448,455, Aug. 31.

Muse, William P., Odin, Ill. Extensible pipe union. 2,448,232, Aug. 31.

Myers, F. E., & Bro., Company, assignee: *See*— Spreng, Warren M.

Nash, Carl B., assignor to Divco Corporation, Detroit, Mich. Fuel feeding apparatus for internal-combustion engines. 2,448,043, Aug. 31.

National Company, Inc., assignee: *See*— Larkin, William J.

National Drug Company, The, assignee: *See* — Avakian, Souren.

National Folding Box Company, Incorporated, assignee: *See*— Tennent, Charles B., Sr.

Newell, William H., New York, and H. F. McKenney, Flushing, assignors to Ford Instrument Company, Inc., Long Island City, N. Y. Electric motor follow-up system. 2,448,387, Aug. 31.

New Jersey Zinc Company, The, assignee: *See*— Boyle, Edward J., and Anderson.

Nicolai, Arduo L., New York, N. Y. Method and apparatus for measuring constituents of gases. 2,448,111, Aug. 31.

Niskanen, William, and E. L. Christofferson, Minneapolis, Minn. Support for containers. 2,448,456, Aug. 31.

Noel, Guy E., assignor to Noel Manufacturing Company, Muncie, Ind. Simulated baseball box score game. 2,448,151, Aug. 31.

Noel Manufacturing Company, assignee: *See*— Noel, Guy E.

Norton Company, assignee: *See*— Indge, Herbert S. Silven, Herbert A.

Nugent, Frederick V., Abington, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Shoe sole attaching. 2,448,112, Aug. 31.

Nyborg, Tage G., assignor to The Mining Engineering Company, Limited, Worcester, England. Rotary intersecting vane engine and compressor. 2,448,233, Aug. 31.

Olafson, Alvin O., St. Paul, Minn. Traffic actuated signal controller. 2,448,113, Aug. 13.

Olesky, Anthony P., Chicago, Ill., assignor to Belmont Radio Corporation. Magnetic-core inductance device. 2,448,190, Aug. 31.

Olson, Frederick F., Sudbury, and Frank J. MacDonald, Brookline, Mass., assignors to The B. F. Goodrich Company, New York, N. Y. Method for making heat-molded articles containing fabric reinforcements. 2,448,114, Aug. 31.

Olson, Robert V., and B. A. Johnson, Attleboro, Mass., assignors to Mossberg Pressed Steel Corporation. Cop holder. 2,448,457, Aug. 31.

Opotow, Nathan, New York, N. Y. Dental flask. 2,448,115, Aug. 31.

Ovrebo, Paul J., Dayton, Ohio. High radio frequency wattmeter. 2,448,044, Aug. 31.

Owens-Corning Fiberglas Corporation, assignee: *See*— Swann, Carl C.

Ozanich, Joseph A., Detroit, Mich. Electromagnetic sewing machine. 2,448,458, Aug. 31.

Pacific Clay Products, assignee: *See*— McClintock, Cecil V.

Palm, George H., assignor to Stewart-Warner Corporation, Chicago, Ill. Piston actuated air motor valve mechanism. 2,448,459, Aug. 31.

Pandele, Charles L., Grand Rapids, Mich. Garment hanger. 2,448,234, Aug. 31.

Paper Patents Company, assignee: *See*— Craig, Kenneth A., and Auchter.

Parke, William F.: *See*— Brown, Curtis, and Parke.

Parker Appliance Company, the, assignee: *See*— Fuhrman, Robert C.

Patton, Alva R., Fort Collins, Colo. Controlling potato chip color. 2,448,152, Aug. 31.

Patzer, Raymond C., assignee: *See*— Woditsch, Frank J.

Payne, John W., Woodbury, C. V. Hornberg, Wenonah, and R. D. Drew, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Method and apparatus for separation of vapors from a contact mass. 2,448,272, Aug. 31.

Pearce, George C., assignor to General Motors Corporation, Dayton, Ohio. Control. 2,448,273, Aug. 31.

Pearson, Paul E., and A. Treff, Chicago, Ill., assignors to Continental Can Company, Inc., New York, N. Y. Can end treating machine. 2,448,116, Aug. 31.

Pearson, Paul E., and A. Treff, Chicago, Ill., assignors to Continental Can Company, Inc., New York, N. Y. Electrolytic can treating machine. 2,448,117, Aug. 31.

Pegg, Edward H. R., Cranford, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electrical cleaning means. 2,448,045, Aug. 31.

Pellettere, Joseph A., assignor to Gulf Oil Corporation, Pittsburgh, Pa. Pulsation absorber. 2,448,118, Aug. 31.

Penney, Gaylord W.: *See*—
Baker, Robert M., and Penney.

Penney, Gaylord W., Wilkinsburg, and G. W. Hewitt, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Precipitator. 2,448,046, Aug. 31.

Peppel, William J., Lodi, N. J., assignor to Burton T. Bush, Inc., New York, N. Y. Preparation of unsaturated alcohols. 2,448,047, Aug. 31.

Permanente Metals Corporation, assignee: *See*—
Anderson, Harold P.

Peterson, Clarence F., Filer, Idaho. Boat trailer. 2,448,119, Aug. 31.

Peterson, Mauritz P. H., assignor to Goodyear Aircraft Corporation, Akron, Ohio. Female jig for centrifugal formation of sheet thermoplastics. 2,448,274, Aug. 31.

Peterson, William R., assignee: *See*—
Krupp, Charles E., and Peterson.

Petrake, Harry O., assignor to James Manufacturing Company, Fort Atkinson, Wis. Automatic cleaning device for battery brooders. 2,448,120, Aug. 31.

Phileo Corporation, assignee: *See*—
Ames, Millard E., Jr., and Sunstein.
Curtiss, George E., Jr.
Sunstein, David E.

Phillips Petroleum Company, assignee: *See*—
de Boisblanc, Deslode R.
Gibson, James D.
Piety, Raymond G.

Pierce, Jerry A., and C. N. Kimberlin, Jr., Baton Rouge, La., assignors to Standard Oil Development Company. Producing an inorganic hydrogel. 2,448,460, Aug. 31.

Piety, Raymond G., Bartlesville, Okla., assignor to Phillips Petroleum Company. Detonation meter. 2,448,322, Aug. 31.

Pike, Robert D., Pittsburgh, Pa. Separation of chlorides from potassium carbonate. 2,448,191, Aug. 31.

Pittsburgh Plate Glass Company, assignee: *See*—
Brooks, Tony P., and Wyatt.

Plummer, Percy W., Winnipeg, Manitoba, Canada. Electric heating device and method of making the same. 2,448,388, Aug. 31.

Pool, Carl W., Wilmington, Calif. Pipe handling apparatus. 2,448,324, Aug. 31.

Poorman, Charles B., Jr., Schuylkill Haven, Pa. Recreation apparatus. 2,448,325, Aug. 31.

Porter, Carl W., Alexandria, Va. Rain and sprayproof ventilator. 2,448,048, Aug. 31.

Porter, Henry H., Silver Spring, Md., assignor to United States of America, as represented by the Secretary of War. Arming device. 2,448,121, Aug. 31.

Postal, Robert H., New York, N. Y., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Plural systems of sequentially responsive instruments. 2,448,461, Aug. 31.

Potts, Ralph H., La Grange, assignor to Armour and Company, Chicago, Ill. Nitrile-producing method. 2,448,275, Aug. 31.

Poux, Noel J., Meadville, Pa., assignor to Talon, Inc. Slider for slide fasteners. 2,448,192, Aug. 31.

Powell, Alric H., Yeadon, Pa., assignor to General Electric Company. Fuse unit. 2,448,389, Aug. 31.

Powers, Otto L., assignee, et al.: *See*—
Michela, John P.

Pugh, Edward U., Garfield, N. J. Rocking horse. 2,448,390, Aug. 31.

Pusey & Jones Corporation, The, assignee: *See*—
Bratton, Samuel M.

Pyle, James J., Pittsfield, Mass., assignor to General Electric Company. Alkenyl silane interpolymers. 2,448,391, Aug. 31.

Quady, John C., Pasadena Hills, and W. L. Davis, Jr., Normandy, Mo. Convertible type aircraft. 2,448,392, Aug. 31.

Radio Corporation of America, assignee: *See*—
Weiner, James R.

Rafton Engineering Corporation, assignee: *See*—
Rafton, Harold R.

Rafton, Harold R., Andover, Mass., assignor to Rafton Engineering Corporation. Machine for impacting pigments against a rotating disk element. 2,448,049, Aug. 31.

Randolph, Emmett A., La Grange, Tex. Typewriter page end indicator. 2,448,050, Aug. 31.

Rasmussen, Sophus, assignor to American Gas Machine Company, Albert Lea, Minn. Method and apparatus for removing lead containing ingredients from hydrocarbon fuels. 2,448,235, Aug. 31.

Rauland Corporation, The, assignee: *See*—
Antalek, John J.
Szegho, Constantin S.

Ray, Frederick A., Reseda, Calif. Offset bit shank. 2,448,276, Aug. 31.

Raytheon Manufacturing Company, assignee: *See*—
Gross, Thomas A. O.

Reading Air Chutes, Inc., assignee: *See*—
Crowther, Cecil R., and Brown.

Reager, William F., Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del. Annealed shell. 2,448,496, Aug. 31.

Recker, Gerald J., Hopkinton, Iowa. Farm wagon unloading device. 2,448,122, Aug. 31.

Reed, Richard D.: *See*—
Baker, Robert M., Monroe, and Reed.

Reich, Gustave T., Philadelphia, Pa. Production of carbon. 2,448,051, Aug. 31.

Reid, John D., and G. C. Daul, New Orleans, La., assignors to the United States of America as represented by the Secretary of Agriculture. Making cotton textiles water-absorbent and rot-resistant. 2,448,153, Aug. 31.

Remington Arms Company, Inc., assignee: *See*—
Reynolds, Warren S.
Schilling, Albert A., and Finlay.

Renier, William S., Milwaukee, Wis. Apparatus for forming and preheating slugs of moldable material. 2,448,277, Aug. 31.

Renzoni, Louis S., Port Colborne, Ontario, Canada, assignor to International Nickel Company, Inc., New York, N. Y. Corrosion resistant steel and equipment. 2,448,462, Aug. 31.

Replogle, Delbert E., Ridgewood, assignor to Global Spark Plug Co., Paterson, N. J. Spark plug. 2,448,193, Aug. 31.

Resistoflex Corporation, assignee: *See*—
Dangelmajer, Charles.

Reynolds, Warren S., Stratford, assignor to Remington Arms Company, Inc., Bridgeport, Conn. Trimming machine. 2,448,393, Aug. 31.

Rheem Manufacturing Company, assignee: *See*—
Stehl, Howard V.

Richerzhagen, Werner, East Detroit, Mich. Garment hanger. 2,448,394, Aug. 31.

Richey, Clarence B., assignor to Electric Wheel Company, Quincy, Ill. Circular saw attachment for tractors. 2,448,123, Aug. 31.

Richmond, Henry H., Guelph, Ontario, and M. Tomiuk, Strathmore, Quebec, Canada, assignors to United States Rubber Company, New York, N. Y. Use of symmetrical xenyltriazenes in making gas expanded organic plastics. 2,448,154, Aug. 31.

Richmond, Henry H., Guelph, Ontario, Canada, assignor to United States Rubber Company, New York, N. Y. 1,3-bis(o-xenyl) triazene. 2,448,155, Aug. 31.

Robbins, David S., Hamden, Conn., assignor to The American Steel and Wire Company of New Jersey. Method of making braided slings. 2,448,463, Aug. 31.

Roberts, Llewellyn M., Northfield, Vancouver Island, British Columbia, Canada. Heating attachment for lamps. 2,448,326, Aug. 31.

Roberts, Ralph, Eastport, Md. Active material for alkaline cells and method of preparing same. 2,448,052, Aug. 31.

Robertshaw-Fulton Controls Company, assignee: *See*—
Strobel, Charles K., and Lakota.

Rockwell, Edward A., West Hartford, Conn. Pressure fluid operated pressure intensifying mechanism. 2,448,464, Aug. 31.

Rockwell, Edward A., Cleveland, Ohio. Pressure fluid follow-up servomotor. 2,448,465, Aug. 31.

Rockwell, Edward A., Cleveland, Ohio. Follow-up pressure fluid servomotor. 2,448,466, Aug. 31.

Rockwell, Edward A., Cleveland, Ohio, assignor by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Power intensifier two stage uniform flow. 2,448,467, Aug. 31.

Rode, Fredrich J., and M. R. Hatch, Toledo, Ohio, assignors to E. W. Bliss Company, Brooklyn, N. Y. Double-slide mechanism and double-action drawing press. 2,448,327, Aug. 31.

Rogers, John W.: *See*—
McKelvey, John H., and Rogers.

Ronning, Martin, St. Louis Park, assignor to Minneapolis-Moline Power Implement Company, Minneapolis, Minn. Power transmission coupling. 2,448,278, Aug. 31.

Rosche, John O., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Flame electrode control device. 2,448,497, Aug. 31.

Rose, Frank W., Jr., Media, Pa., assignor to Houdry Process Corporation, Wilmington, Del. Cyclic sulfones of conjugated dienes. 2,448,053, Aug. 31.

Ross, Andrew F., assignor to Safety Steering Stabilizer Company, Pittsburgh, Pa. Steering stabilizer. 2,448,468, Aug. 31.

Roy, Edwin J., Baton Rouge, La. Drum lifting attachment for crane trucks. 2,448,124, Aug. 31.

Rubin, Louis C., West Caldwell, assignor to The M. W. Kellogg Company, Jersey City, N. J. Synthesis of organic compounds. 2,448,279, Aug. 31.

Russell, Austin, Elsinore, Calif. Power-driven sweeping machine. 2,448,328, Aug. 31.

Rutter, Alvah E., Rockford, Ill., assignor to J. I. Case Company, Racine, Wis. Disk plow and caster wheel. 2,448,469, Aug. 31.

Rypinski, Albert B., Laureiton, assignor to Metropolitan Device Corporation, Brooklyn, N. Y. Latch-trip type circuit breaker. 2,448,470, Aug. 31.

SKF Industries, Inc., assignee: *See*—
Mannerbrink, Ivan W. and Sandstrom.

Sachanen, Alexander N.: *See*—
Caesar, Philip D., and Sachanen.
Henderson, Donald S., and Sachanen.

Safety Steering Stabilizer Company, assignee: *See*—
Ross, Andrew F.

Saffer, Louis, Co., Inc., assignee: *See*—
Abrams, Joseph.

St. Thomas, William H., assignor to E. J. Wilkins Company, Gloversville, N. Y. Key assembly. 2,448,332, Aug. 31.

Sallmann, Richard, Gelterkinden, and C. Graenacher, Riehen, Switzerland, assignors to Ciba Limited. Amide derivatives and process of making same. 2,448,125, Aug. 31.

Salt, Francis E.: *See*—
Stanley, Herbert M., Salt and Williams.

Sandoz Ltd., assignee: *See*—
Gutzwiller, Ernst.

Sandstrom, Nils J. L.: *See*—
Mannerbrink, Ivan W. and Sandstrom.

Sanford, Charles E.: *See*—
Irons, Carroll R., and Sanford.

Sargent, Edmund L., and R. C. Wilson, Jr., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Insulating gel. 2,448,280, Aug. 31.

Saurer, Curt, Cleveland, assignor to The Ohio Rubber Company, Willoughby, Ohio. Vibration dampener. 2,448,281, Aug. 31.

Schaefer, Frederic, assignee: *See*—
Coulter, Andrew F.

Schaetzly, William F., Louisville, Ky. Swing joint. 2,448,395, Aug. 31.

Schebler, Carl L., St. Louis, F. Douglas, Brentwood, and L. A. Ciasquin, Riverview Gardens, assignors to The Emerson Electric Mfg. Co., St. Louis, Mo. Refrigerated electrode. 2,448,396, Aug. 31.

Schermuly, Alfred J.: *See*—
Schermuly, Conrad D., A. J. and C.

Schermuly, Charles: *See*—
Schermuly, Conrad D., A. J. and C.

Schermuly, Conrad D., A. J. and C. Parkgate, Newdigate, England. Illuminating flare. 2,448,471, Aug. 31.

Schilling, Albert A., Stratford, and W. L. Finlay, Fairfield, assignors to Remington Arms Company, Inc., Bridgeport, Conn. Corrosion resistant coated steel. 2,448,397, Aug. 31.

Schmerling, Louis, Riverside, assignor to Universal Oil Products Company, Chicago, Ill. Treatment of bicycloparaffins. 2,448,156, Aug. 31.

Schmitt, John A., Milwaukee, Wis. Garment hanger. 2,448,282, Aug. 31.

Schmuck, L. R., assignee, et al.: *See*—
Michela, John P.

Schneider, Max S., Chicago, Ill. Portable filter. 2,448,157, Aug. 31.

Schneiderman, Eli, Irvington, and D. Tamburi, Newark, N. J. Guard means for fluorescent lights. 2,448,236. Aug. 31.

Schnell, Steve, Kirkwood, assignor to Wagner Electric Corporation, St. Louis, Mo. Compounding master cylinder. 2,448,194, Aug. 31.

Schnuck, Carl F., New Haven, assignor to Farrel-Birmingham Company, Incorporated, Ansonia, Conn. Cane mill. 2,448,195, Aug. 31.

Schott, Lawrence, Detroit, Mich. Water atomizing arrangement. 2,448,472, Aug. 31.

Schwartz, Elvin, Houston, Tex. Safety latch attachment for wallets. 2,448,398, Aug. 31.

Schwinn, Frank W., Chicago, Ill. Electric brazing metal parts. 2,448,329, Aug. 31.

Sears, Roebuck, and Co., assignee: *See*—
Shee, Parke B.

Seckel, Friedrich W., New York, N. Y. Convertible top for automobiles or the like. 2,448,054, Aug. 31.

Seipt, Willard R.: *See*—
Miller, Lewis B., and Seipt.

Shaw, Vincent G., Pittsburgh, Pa., assignor to Sperry Products, Inc., Hoboken, N. J. Supersonic inspection. 2,448,399, Aug. 31.

Shee, Parke B., Oak Park, assignor to Sears, Roebuck and Co., Chicago, Ill. Cream separator drive. 2,448,196. Aug. 31.

Shell Development Company, assignee: *See*—
Barker, Robert S., and Whitehill.
De Benedictis, Aldo, and Luten.
Evans, Theodore W., and Adelson.
Finch, Harry de V.

Shoeld, Mark, assignor to The Davison Chemical Corporation, Baltimore, Md. Granulated superphosphate manufacture. 2,448,126, Aug. 31.

Shortland, Arthur, assignor to Mellor Bromley & Co., Limited, Leicester, England. Mechanism for feeding yarn in circular weft knitting machines. 2,448,498, Aug. 31.

Shrewsbury, Robert S., Dunedin, Fla. Compensating means for indicators on positioning devices. 2,448,473, Aug. 31.

Signode Steel Strapping Company, assignee: *See*—
Lau, Herbert C.

Silven, Herbert A., assignor to Norton Company, Worcester, Mass. Cylindrical grinding machine. 2,448,283, Aug. 31.

Silver, Martin, Bronx, N. Y., C. A. Segerstrom, Jr., Teaneck, N. J., and R. B. Reade, Riverdale, assignors to Federal Telephone and Radio Corporation, New York, N. Y. Wobbled frequency carrier wave communication system. 2,448,055, Aug. 31.

Simmons, Leon E., Claremont, N. H., assignor to Joy Manufacturing Company. Cuttings conveying means. 2,448,056, Aug. 31.

Simmons, Leon E., Claremont, N. H., assignor to Joy Manufacturing Company. Cuttings conveying mechanism. 2,448,057, Aug. 31.

Sinclair Refining Company, assignee: *See*—
Watson, Kenneth M.

Singer Manufacturing Company, The, assignee: *See*—
Muecke, Edward.
Turner, Edgar P.

Skinner, Emory M., Augusta, Kans., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Alkylation. 2,448,400, Aug. 31.

Slater, Victor W., Luton, and W. S. Wood, Harpenden, assignors to B. La Porte Limited, Luton, Bedfordshire, England. Manufacturing of sodium percarbonate. 2,448,058, Aug. 31.

Smith, A. O., Corporation, assignee: *See*—
Gruetjen, Frederick A.
Koppel, Ernst R.

Smith, Archibald D., Jr., Amityville, and H. E. Guthman, Brooklyn, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J. Oscillograph trace control system. 2,448,059, Aug. 31.

Smith, Waldo G.: *See*—
Miller, John W., and Smith.

Smith, William F., and A. P. H. Trivelli, assignors to Eastman Kodak Company, Rochester, N. Y. Photographic emulsions sensitized with salts of metals of group VIII of the periodic arrangement of the elements. 2,448,060, Aug. 31.

Societe Chimique de la Grande Parosse (Azote & Produits Chimiques), assignee: *See*—
Lantz, Henri.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Evans, Louis P.
Henderson, Donald S., and Sachanen.
Marisic, Milton M.
Payne, John W., Hornberg, and Drew.
Sargent, Edmund L., and Wilson.
Skinner, Emory M.

Sole, George, Traverse City, Mich. Baby's play pen. 2,448,237, Aug. 31.

Sparks, Chiles E., Wilmington, Del., J. W. Libby, Jr., St. Matthews, Ky., and J. H. Trepagnier, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Green tetrakisazo dyes. 2,448,158, Aug. 31.

Specialties Development Corporation, assignee: *See*—
Grant, Harry C., Jr., and Uhl.

Sperry Corporation, The, assignee: *See*—
Ayres, Waldemar A.
Folland, Donald F., and Lyman.

Sperry Products, Inc., assignee: *See*—
Carlin, Benson.
Firestone, Floyd A., and De Lano.
Shaw, Vincent G.

Spersel Company, assignee: *See*—
Spersel, Peter J.

Spersel, Peter J., assignor to Spersel Company, Minneapolis, Minn. Hinge construction for toilet seats. 2,448,330, Aug. 31.

Sporting Specialties Company, assignee: *See*—
Krake, Foster.

Spreng, Warren M., assignor to The F. E. Myers & Bro., Company, Ashland, Ohio. Spray gun. 2,448,159, Aug. 31.

Staab, Alvin W., and O. A. Wanden, Milwaukee, Wis. Repair jig for automatic record changers. 2,448,331, Aug. 31.

Stamm, John J.: *See*—
Staples, Dana R., and Stamm.

Standard-Knapp Corporation, assignee: *See*—
Ardell, Edgar.

Standard Oil Company, assignee: *See*—
Lemmon, Norman E.

Standard Oil Company, The, assignee: *See*—
Burk, Robert E.

Standard Oil Development Company, assignee: *See*—
Kimberlin, Charles N., Jr., and Pierce.
Pierce, Jerry A., and Kimberlin.

Stanley, Herbert M., Tadworth, F. E. Salt, Banstead, and J. F. Williams, Tunbridge Wells, England, assignors to The Distillers Company, Limited, Edinburgh, Scotland. Removing halogen from coumarone indene polymers. 2,448,127, Aug. 31.

Staples, Dana R., Ridley Park, and J. J. Stamm, Chester Heights, Pa., assignors to The Baldwin Locomotive Works. Control system for engine generator units. 2,448,284, Aug. 31.

Starrett, L. S., Company, The, assignee: *See*—
King, Elmer I.
Stebbins, John D., assignor to Allied Chemical & Dye Corporation, New York, N. Y. Flashing. 2,448,474, Aug. 31.
Stehl, Howard V., Woodlawn, Md., assignor to Rheem Manufacturing Company, New York, N. Y. Mounting for bail handles. 2,448,238, Aug. 31.
Stenz, Bernard F., New York, N. Y. Valance. 2,448,061, Aug. 31.
Stewart-Warner Corporation, assignee: *See*—
Palm, George H.
Williams, Lynn A., Jr., Marshall, and Gradolph.
Stoltz, Glenn E., Pittsburgh, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Transverse flux induction heating apparatus. 2,448,062, Aug. 31.
Stone, Edward, San Francisco, Calif. Carton having integrally formed cushioning means. 2,448,401, Aug. 31.
Story, Carl W., San Francisco, Calif. Tiltable track for motor vehicles or the like. 2,448,197, Aug. 31.
Strobel, Charles K., and S. J. Lakota, Pittsburgh, Pa., assignors to Robertshaw-Fulton Controls Company. Safety control apparatus for fuel burners. 2,448,475, Aug. 31.
Submarine Signal Company, assignee: *See*—
Grabau, William C.
Sun Oil Company, assignee: *See*—
Hirschler, Alfred E.
Sunstein, David E.: *See*—
Ames, Millard E., Jr., and Sunstein.
Sunstein, David E., Elkins Park, assignor to Philco Corporation, Philadelphia, Pa. Saw-tooth generator with automatic amplitude control. 2,448,070, Aug. 31.
Sun-Vic Controls Limited, assignee: *See*—
Davis, Neville R.
Swann, Carl C., Kingsport, Tenn., assignor to Owens-Corning Fiberglas Corporation. Method of producing strands of intertwisted glass fibers. 2,448,499, Aug. 31.
Swift & Company, assignee: *See*—
Davis, Elmer M.
Szegho, Constantin S., assignor to The Rauland Corporation, Chicago, Ill. Cathode-ray projector tube. 2,448,476, Aug. 31.
Talon, Inc., assignee: *See*—
Poux, Noel J.
Tamburi, Daniel: *See*—
Schneiderman, Eli, and Tamburi.
Taylor, Charles E., assignee, et al.: *See*—
Dewey, Clarence L.
Taylor Sales Engineering Company, assignee, et al.: *See*—
Dewey, Clarence L.
Tennent, Charles B., Sr., South Richmond, Va., assignor, by mesne assignments, to National Folding Box Company, Incorporated. Machine for making containers. 2,448,198, Aug. 31.
Texas Company, The, assignee: *See*—
Atwell, Harold V.
Textile Research Co., assignee: *See*—
Callahan, Clarence H., and Languirand.
Themo Electric Manufacturing Company, assignee: *See*—
Anderson, Cleophas E.
Thermoid Company, assignee: *See*—
Bennett, James B., and McCarter.
Thomas, Charles L., Winnetka, and Vladimir Haensel, Clarendon Hills, assignors to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbons. 2,448,160, Aug. 31.
Thompson, Boyd S., assignor of one-half to M. Brian Jones, Houston, Tex. Hot wire clamp. 2,448,402, Aug. 31.
Thompson, Robert J., assignor to The W. O. Hickok Mfg. Co., Harrisburg, Pa. Pen control mechanism for paper ruling machine. 2,448,285, Aug 31.
Thys and Miller, assignee: *See*—
Thys, Edouard.
Thys, Edouard, assignor to Thys and Miller, Sacramento, Calif. Machine for stripping hops from vines. 2,448,063, Aug. 31.
Timken-Detroit Axle Company, The, assignee: *See*—
Buckendale, Lawrence R.
Tomiuk, Markian: *See*—
Richmond, Henry H., and Tomiuk.
Trageser, Albert H., Manhassett, assignor to Trageser Copper Works, Inc., Maspeth, Long Island, N. Y. Water heater. 2,448,128, Aug. 31.
Trageser Copper Works, Inc., assignee: *See*—
Trageser, Albert H.
Treff, Alfred: *See*—
Pearson, Paul E., and Treff.
Trepagnier, Joheph H.: *See*—
Spraks, Chiles E., Libby, and Trepagnier.
Truck-Man, Inc., assignee: *See*—
Funk, Truman B.
Tube Tum Inc., assignee: *See*—
Mattimore, John D., and Smith.
Turnbull, William J., Towson, assignor to The Glenn L. Martin Company, Middle River, Md. Vehicle control unit. 2,448,129, Aug. 31.
Turner, Edgar P., Fanwood, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Bearing assembly for dynamoelectric machines. 2,448,500, Aug. 31.
Turner, Jacob L., Norwell, Mass., assignor to Manning, Maxwell & Moore, Incorporated, New York, N. Y. Apparatus for maintaining optimum conditions in gaseous mediums. 2,448,403, Aug. 31.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Thread control for automatic looms. 2,448,161, Aug. 31.
Tyszer, Howard J., Caldwell, assignor to Ferris Laboratories, Boonton, N. J. Electrical alternating current generator. 2,448,501, Aug. 31.
Ultrasonic Corporation, assignee: *See*—
Horsley, Caperton B.
United Merchants & Manufacturers, Inc., assignee: *See*—
Whewell, Robert.
United Shoe Machinery Corporation, assignee: *See*—
Lawson, Robert H.
Nugent, Frederick V.
United States of America, as represented by the Secretary of War, assignee: *See*—
Porter, Henry H.
United States Atomic Energy Commission, United States of America as represented by the, assignee: *See*—
Wilhelm, Harley A., and Daane.
United States Rubber Company, assignee: *See*—
Richmond, Henry H.
Universal Oil Products Company, assignee: *See*—
Becker, Bernard M., and McAfee.
Schmerling, Louis.
Thomas, Charles L., and Haensel.
Upjohn Company, The, assignee: *See*—
Buc, Saul R., and Ford.
Urberuaga, Eustaquio Echeverria, Bilbao, Spain. Automatic lock for doors, windows, and the like. 2,448,239, Aug. 31.
Van Rosen, Robert, New York, N. Y. Dispenser. 2,448,180, Aug. 31.
Vibra Co. Soc. de Resp. Ltda., assignee: *See*—
Holm, Walter P. T.
Voland and Sons, Inc., assignee: *See*—
Wasko, Bernard, and Kistinger.
Vollrath, Joseph P., North Wales, assignor to The Brown Instrument Company, Philadelphia, Pa. Control system for blast furnace air. 2,448,199, Aug. 31.
Wade Tool Co., The, assignee: *See*—
Dodge, Floyd L.
Wagner Electric Corporation, assignee: *See*—
Schnell, Steve.
Wallace, Daisy T.: *See*—
Wallace, Edward E.
Wallace, Edward E., Cleveland Heights, Ohio, deceased; D. T. Wallace, administratrix. Retractiable landing gear for aircraft. 2,448,064, Aug. 31.
Wallace, John J., assignor to Hepinstall Steel Works, Inc., New Orleans, La. Accommodation ladder for ships. 2,448,335, Aug. 31.
Walter, John M., assignor to The G. A. Gray Company, Cincinnati, Ohio. Planer. 2,448,200, Aug. 31.
Walters, George A., Nemacolin, Pa. Trolley line clamp. 2,448,333, Aug. 31.
Walworth, Harvey A., Muskegon, Mich. Electric lamp attachment for caps. 2,448,240, Aug. 31.
Wanden, Oscar A.: *See*—
Staab, Alvin W., and Wanden.
War, United States of America, as represented by the Secretary of, assignee: *See*—
Africano, Alfred.
Cary, Raymond J., Jr.
Dorne, Arthur.
Wasko, Bernard, Philadelphia, and J. Kistinger, assignors to Voland and Sons, Inc., New Rochelle, N. Y. Magnetic dampener for measuring instruments. 2,448,477, Aug. 31.
Watson, Kenneth M., Madison, Wis., assignor to Sinclair Refining Company, New York, N. Y. Pyrolytic conversion of hydrocarbons. 2,448,334, Aug. 31.
Weiner, James R., Brooklyn, N. Y., assignor to Radio Corporation of America. Frequency shift keyer. 2,448,336, Aug. 31.
Werner, Le Roy L.: *See*—
Johnson, Hugh B., and Werner.
Weskenson Corporation, assignee: *See*—
Moo, Gothard T.
Westinghouse Electric Corporation, assignee: *See*—
Baker, Robert M.
Kirschbaum, Herbert S.
Mahnke, Kurt, and York.
Pegg, Edward H. R.
Penney, Gaylord W., and Hewitt.
Stoltz, Glenn E.
Weston Electrical Instrument Corporation: *See*—
Morelock, Oliver J.
Wettlaufer, William L., Buffalo, N. Y. Therapeutic exercise table. 2,448,162, Aug. 31.
Whewell, Robert, New Bedford, Mass., assignor to United Merchants & Manufacturers, Inc., Wilmington, Del. Producing fabric having pick-and-pick pattern effects. 2,448,201, Aug. 31.
White, Robert, assignor to Williams & Wilson Limited, Montreal, Quebec, Canada. Paper roll heading machine. 2,448,478, Aug. 31.

Whitehill, Lynwood N.: *See*—
Barker, Robert S., and Whitehill.
Whitfield, William R., Ames, Iowa. Nest structure. 2,448,202, Aug. 31.
Wickenden, Leonard, Manhasset, N. Y. Activated carbon products. 2,448,337, Aug. 31.
Widmer, Gustav, Basel, and W. Fisch, Binningen, Switzerland, assignors to Ciba Products Corporation, Hoboken, N. J. Aminotriazine-aldehyde condensation products with linolenic acid monoglyceride and making same. 2,448,338, Aug. 31.
Wieland, Louis A., Pittsburgh, Pa. Hacksaw. 2,448,286, Aug. 31.
Wight, Sedgwick N.: *See*—
Field, Oscar S., and Wight.
Wild, Rudolf E., Philadelphia County, assignor to The Brown Instrument Company, Philadelphia, Pa. Electrical harmonic rebalancing apparatus. 2,448,065, Aug. 31.
Wilhelm, Harley A., and A. H. Daane, Ames, Iowa, assignors to the United States of America as represented by the United States Atomic Energy Commission. Uranium monocarbide and preparation. 2,448,479, Aug. 31.
Wilkins, E. J., Company, assignee: *See*—
St. Thomas, William H.
Willett, Arthur, Jr., Bay City, Mich. Brake pedal lock. 2,448,480, Aug. 31.
Williams, Alexander M., Watertown, S. Dak. Electrical plug. 2,448,339, Aug. 31.
Williams, Curtiss, Washington, D. C. Lawn mower. 2,448,241, Aug. 31.
Williams, Jacob O., San Bernardino, Calif. Electric flood signal. 2,448,340, Aug. 31.
Williams, James F.: *See*—
Stanley, Herbert M., Salt, and Williams.
Williams, Lynn A., Jr., Northfield, W. A. Marshall, Jr., Chicago, and W. F. Gradolph, Jr., Oak Park, assignors to Stewart-Warner Corporation, Chicago, Ill. Carbureting apparatus. 2,448,131, Aug. 31.
Williams, Lynn A., Jr., Indianapolis, Ind., assignor to Stewart-Warner Corporation, Chicago, Ill. Heater exhaust system. 2,448,132, Aug. 31.
Williams & Wilson Limited, assignee: *See*—
White, Robert.
Wilson, Harry, U. S. Army. Pickup parachute harness. 2,448,066, Aug. 31.
Wilson, John M., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control device. 2,448,502, Aug. 31.
Wilson, John M., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control device. 2,448,503, Aug. 31.
Wilson, Meredith C., Berkley, Mass. Closure for collapsible tubes. 2,448,163, Aug. 31.
Wilson, Paul B., assignor to H. D. Wolgamot, Portland, Oreg. Plastic bobbin. 2,448,242, Aug. 31.
Wilson, Robert C., Jr.: *See*—
Sargent, Edmund L., and Wilson.
Wise, Charles H., Philadelphia, Pa. Window shade spring adjusting bracket. 2,448,481, Aug. 31.
Woditsch, Frank J., St. Clair Shores, assignor of one-half to R. C. Patzer, Detroit, Mich. Pin tooth gearing. 2,448,164, Aug. 31.
Wolff, Julius, Amstenrade, Netherlands; vested in the Attorney General of the United States. Device for the manufacture of artificial sausage skins. 2,448,667, Aug. 31.
Wolgamot, Harold D., assignee: *See*—
Wilson, Paul B.
Woolslayer, Homer J., E. A. Campbell, and C. Jenkins, Tulsa, Okla., assignors, by mesne assignments, to Lee C. Moore Corporatioon, Pittsburgh, Pa. Chain coupling. 2,448,482, Aug. 31.
Wright-Batchelder Corporation, assignee: *See*—
Wright, Wallace C.
Wright, Wallace C., Brookfield, N. H., assignor to Wright-Batchelder Corporation, Boston, Mass. Preformed welt. 2,448,165, Aug. 31.
Wyatt, Ben K.: *See*—
Brooks, Tony P., and Wyatt.
Wycinowski, Robert F.: *See*—
Baugh, Raymond N.
Yeomans, Lucien I., assignor to Lucien I. Yeomans, Inc., Chicago, Ill. Bearing for rotary shafts. 2,448,341, Aug. 31.
Yeomans, Lucien I., Inc., assignee: *See*—
Yeomans, Lucien I.
Yorgiadis, Alexander J., Greenwich, Conn., assignor, by mesne assignments, to The Baldwin Locomotive Works. Bending fixture. 2,448,133, Aug. 31.
York, James M.: *See*—
Mahnke, Kurt, and York.
Zagar, Frank G., Euclid, Ohio. Broach holder. 2,448,342, Aug. 31.
Zandmer, Solis M., Los Angeles, Calif. Projectile. 2,448,343, Aug. 31.
Zurcher, Paul, assignor to Continental Oil Company, Ponca City, Okla. Paint containing an alkyd resin and a halogenated amine. 2,448,505, Aug. 31.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 31ST DAY OF AUGUST, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Anchor, earth. O. F. Tallman. Re. 23,036, Aug. 31.
Circuit interrupter. H. L. Rawlings and J. M. Wallace. Re. 23,033, Aug. 31.
Kite. W. H. Schroeder. Re. 23,034, Aug. 31.
Refrigerating system, continuous absorption. C. C. Coons. Re. 23,032, Aug. 31.
Suction nozzle. H. Stock. Re. 23,035, Aug. 31.

LIST OF DESIGN INVENTIONS

Antirattler for window sashes. V. S. Meteyer and F. D. Kamb. 150,802, Aug. 31.
Bat. B. M. Pauly. 150,805, Aug. 31.
Bicycle. H. Harman, C. F. McGirl, and H. K. Greenlaw. 150,765, Aug. 31.
Bicycle and automobile jewel and support. H. Golden. 150,763, Aug. 31.
Bottle. H. Rubin. 150,810, Aug. 31.
Bracelet or similar article. A. Katz. 150,790, Aug. 31.
Bracelet or similar article. A. Katz. 150,793, Aug. 31.
Bracelet or similar article, Expansible watch. A. Albanese. 150,746, Aug. 31.
Bracelet or similar article, Picture-containing. W. E. Meterowitz. 150,801, Aug. 31.
Bracket, Wall. J. Bozoti. 150,751, Aug. 31.
Brooch or similar article. E. Hoffschmidt. 150,767, Aug. 31.
Brooch or similar article. A. Katz. 150,777, Aug. 31.
Brooch or similar article. A. Katz. 150,781–5, Aug. 31.
Brooch or similar article. A. Katz. 150,787, Aug. 31.
Brooch or similar article. A. Katz. 150,789, Aug. 31.
Brooch or similar article. A. Katz. 150,791, Aug. 31.
Calculator, Pay roll. R. B. Minor. 150,803, Aug. 31.
Cap, Lady's emblematic. B. J. Johnson. 150,773, Aug. 31.
Carrier, Bottle. R. G. Stigler. 150,815, Aug. 31.
Carton. C. S. Smith. 150,814, Aug. 31.
Chair. W. C. Dinges. 150,759, Aug. 31.
Clock. A. J. Nelson. 150,804, Aug. 31.
Control column. R. E. Bingman. 150,748, Aug. 31.
Dress. L. Hoshafian. 150,768, Aug. 31.
Dress. M. Satin. 150,811–2, Aug. 31.
Dish, Soap. J. Bozoti. 150,750, Aug. 31.
Dish, Soap. A. M. Gardner. 150,761, Aug. 31.
Earring or similar article. M. Chernow. 150,756, Aug. 31.
Earring or similar article. A. Katz. 150,775–6, Aug. 31.
Earring or similar article. A. Katz. 150,779–80, Aug. 31.
Earring or similar article. A. Katz. 150,786, Aug. 31.
Fixture, Bathroom. J. A. Iskyan. 150,771, Aug. 31.
Flap for bicycles, Fender. H. Golden. 150,764, Aug. 31.
Float for bar soap or the like. F. A. Hilenski. 150,766, Aug. 31.
Glass and toothbrush holder, Combined drinking. J. Bozoti. 150,752, Aug. 31.
Grille and enclosure structure, Radiator. H. Dreyfuss. 150,760, Aug. 31.
Handle or similar article for an automotive vehicle, Outside door. M. Hulyk. 150,769–70, Aug. 31.
Hanger or the like, Garment. R. Sklaar. 150,813, Aug. 31.
Jewelry finding. A. Katz. 150,796, Aug. 31.
Lighting device for locks or the like. C. E. Swanson. 150,816, Aug. 31.
Lock, Dial telephone. B. Zion. 150,819, Aug. 31.
Motor, Electric. C. B. Livers. 150,799, Aug. 31.
Napkin and coaster tray, Combined. W. K. Jahn. 150,772, Aug. 31.
Necklace or similar article. A. Katz. 150,774, Aug. 31.
Necklace or similar article. A. Katz. 150,778, Aug. 31.
Necklace or similar article. A. Katz. 150,788, Aug. 31.
Necklace or similar article. A. Katz. 150,792, Aug. 31.
Necklace or similar article. A. Katz. 150,794–5, Aug. 31.
Necklace or similar article. A. Philippe. 150,806–7, Aug. 31.
Ornament or similar article, Vehicle hood. T. W. Pietsch. 150,808, Aug. 31.
Pack for fragile articles. W. J. De Reamer. 150,758, Aug. 31.
Plate for bicycle pedals, End. H. Golden. 150,762, Aug. 31.
Putter head. S. N. Liolich. 150,798, Aug. 31.
Screw driver, Socket. J. Magnus, Jr. 150,800, Aug. 31.
Shaker, Condiment. B. Blecher. 150,749, Aug. 31.
Stapling device. R. E. Powers. 150,809, Aug. 31.
Support, Pipette. D. Lane. 150,797, Aug. 31.
Table, Marking. W. C. Cunningham. 150,757, Aug. 31.
Test mount for miniature engines. E. P. Carr. 150,753, Aug. 31.
Tire. W. L. Cavin. 150,754, Aug. 31.
Tray. F. H. Berlin, Jr. 150,747, Aug. 31.
Tricycle. F. A. Cerasoli. 150,755, Aug. 31.
Tricycle. R. R. Taylor. 150,817, Aug. 31.
Tricycle. E. A. Totz. 150,818, Aug. 31.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 31ST DAY OF AUGUST, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Absorber, Pulsation. J. A. Pellettera. 2,448,118, Aug. 31.
Acid synthesis, Organic. W. F. Gresham and R. E. Brooks. 2,448,368, Aug. 31.
Active material for alkaline cells and preparing same. R. Roberts. 2,448,052, Aug. 31.
Aiming mechanism. W. L. Maxson, P. J. McLaren, W. A. Black, and M. Fry. 2,448,450, Aug. 31.
Air separating system and process. A. Latham, Jr. 2,448,491, Aug. 31.
Aircraft, Convertible type. J. C. Quady and W. L. Davis, Jr. 2,448,392, Aug. 31.
Alarm device, Electric. W. P. T. Holm. 2,448,181, Aug. 31.
Alcohol compositions, Plasticized polyvinyl. C. Dangelmajer. 2,448,358, Aug. 31.
Alcohols, Preparation of unsaturated. W. J. Peppel. 2,448,047, Aug. 31.
Alkenyl esters of alkenoxy-substituted carboxylic acids and polymers thereof. R. S. Barker and L. N. Whitehill. 2,448,246, Aug. 31.
Alkenyl silane interpolymers. J. J. Pyle. 2,448,391, Aug. 31.
Alkyd resins, Convertible. T. W. Evans and D. E. Adelson. 2,448,258, Aug. 31.
Alloys, Zinc-titanium-cadmium. E. J. Boyle and E. A. Anderson. 2,448,169, Aug. 31.
Alkylation. E. M. Skinner. 2,448,400, Aug. 31.
Alkylation of thiophene. P. D. Caesar and A. N. Sachanen. 2,448,211, Aug. 31.
Altimetric-stereo-corrector. B. A. D. Cavalcanti. 2,448,484, Aug. 31.
Amide derivatives and making same. R. Sallmann and C. Graenacher. 2,448,125, Aug. 31.
Aminotriazine-aldehyde condensation products with linolenic acid monoglyceride and making same. G. Widmer and W. Fisch. 2,448,338, Aug. 31.
Ammunition feed for firearms, Automatic. W. B. Conway. 2,448,061, Aug. 31.
Analyzer, Gas. G. B. Bailey. 2,448,206, Aug. 31.
Antenna system. H. G. Busignies and N. Marchand. 2,448,017, Aug. 31.
Antiseize and sealing composition. R. C. Fuhrman. 2,448,090, Aug. 31.
Apparatus for checking the external diameters of annular objects. T. J. Kavanagh. 2,448,314, Aug. 31.
Apparatus for electric generator current control and voltage regulation. H. E. Merrifield. 2,448,068, Aug. 31.
Apparatus for forming and preheating slugs of moldable material. W. S. Renier. 2,448,277, Aug. 31.
Apparatus for lifting and supporting rim-equipped tires. C. E. Branick. 2,448,414, Aug. 31.
Apparatus for loading, stowing, and unloading vessels. G. L. Hurst. 2,448,373, Aug. 31.
Apparatus for maintaining optimum conditions in gaseous mediums. J. L. Turner. 2,448,403, Aug. 31.
Applicator, Lip rouge dispenser. R. E. Kruck. 2,448,033, Aug. 31.
Arming device. H. H. Porter. 2,448,121, Aug. 31.
Arming mechanism, Delay booster. J. F. McCaslin and J. Fink. 2,448,228, Aug. 31.
Arrester, Exhaust spark. H. E. Davidson. 2,448,420, Aug. 31.
Articles containing fabric reinforcements, Making heat-molded. F. F. Olson and F. J. MacDonald. 2,448,114, Aug. 31.
β-aminopropionitrile, Preparation of. S. R. Buc and J. H. Ford. 2,448,013, Aug. 31.
Bandage. E. Gledhill. 2,448,366, Aug. 31.
Bar: *See*—
  Tow bar.
Base for stands. H. Borghesi. 2,448,413, Aug. 31.
Beam, chord construction, Aircraft. H. W. Earhart. 2,448,362, Aug. 31.
Beam intensity control. A. Dorne. 2,448,299, Aug. 31.
Bearing assembly for dynamoelectric machines. E. P. Turner. 2,448,500, Aug. 31.
Bearing for rotary shafts. L. I. Yeomans. 2,448,341, Aug. 31.
Beating and mixing device. W. J. Duvall and H. Cordrey. 2,448,174, Aug. 31.
Bending fixture. A. J. Yorgiadis. 2,448,133, Aug. 31.
Beverage dispensing apparatus, Discharge manifold for. L. Gottlieb. 2,448,306, Aug. 31.
Bib and safety jacket. R. I. Bradley. 2,448,076, Aug. 31.
Bicycloparaffins, Treatment of. L. Schmerling. 2,448,156, Aug. 31.
Bobbin carrier for braiding machines. P. L. Hobourn and W. H. Joy. 2,448,312, Aug. 31.
Bobbin, Plastic. P. B. Wilson. 2,448,242, Aug. 31.
Bolster and lingerie support, Shoulder. A. E. Farrell. 2,448,141, Aug. 31.
Bolt: *See*—
  Door lock bolt.
Bolt pointing machine. E. Girard. 2,448,305, Aug. 31.
Bottle carrier. C. W. Anderson. 2,448,204, Aug. 31.
Bracket: *See*—
  Ladder bracket.
  Window shade spring adjusting bracket.
Brake pedal lock. A. Willett, Jr. 2,448,480, Aug. 31.
Brewing control, Coffee. H. A. Moomjian. 2,448,149, Aug. 31.
Broach holder. F. G. Zagar. 2,448,342, Aug. 31.
Buffer, Car-end. G. E. Dath. 2,448,138, Aug. 31.
Building form, Breakable. F. W. Blanchard. 2,448,294, Aug. 31.
Bundler, Cobble. C. W. Hawthorne. 2,448,097, Aug. 31.
Bunny-cat. A. P. Driggs. 2,448,087–8, Aug. 31.
Burner with resistance igniter, Vaporizing type. R. E. Fell and J. W. Miller. 2,448,142, Aug. 31.
Calculating device. W. Baumgartner. 2,448,410, Aug. 31.
Cam follower construction. I. Cisski. 2,448,355, Aug. 31.
Cam lapping machine. H. S. Indge. 2,448,146, Aug. 31.
Camera, Scanning. W. V. Davis. 2,448,084, Aug. 31.
Can end treating machine. P. E. Pearson and A. Treff. 2,448,116, Aug. 31.
Can treating machine, Electrolytic. P. E. Pearson and A. Treff. 2,448,117, Aug. 31.
Cane mill. C. F. Schnuck. 2,448,195, Aug. 31.
Capacitor construction, Grid-to-cathode. O. W. Livingston and E. E. Moyer. 2,448,378, Aug. 31.
Carbon products, Activated. L. Wickenden. 2,448,337, Aug. 31.
Carbon, Production of. G. T. Reich. 2,448,051, Aug. 31.
Carboxylic acids, Preparation of. A. T. Larson. 2,448,375, Aug. 31.
Carbureting apparatus. L. A. Williams, Jr., W. A. Marshall, Jr., and W. F. Gradolph, Jr. 2,448,131, Aug. 31.
Carrier: *See*—
  Bottle carrier.
  Pie-cake carrier.
Carton having integrally formed cushioning means. E. Stone. 2,448,401, Aug. 31.
Catalysts for use in production of chlorine. A. de Benedictis and D. B. Luten. 2,448,255, Aug. 31.
Cathode-ray projector tube. C. S. Szegho. 2,448,476, Aug. 31.
Chain coupling. H. J. Woolslayer, E. A. Campbell, and C. Jenkins. 2,448,482, Aug. 31.
Change-over system for cinematographic projectors. M. Jenkins. 2,448,220, Aug. 31.
Chemical gun trap. H. E. Cootes and H. R. Graybill. 2,448,418, Aug. 31.
Chlorides from potassium carbonate, Separation of. R. D. Pike. 2,448,191, Aug. 31.
Cigarette holder. R. D. Lynch. 2,448,105, Aug. 31.
Circuit and device for testing the same, Electrical detecting. H. C. Grant, Jr., and A. W. Uhl. 2,448,026, Aug. 31.
Circuit breaker, Latch-trip type. A. B. Rypinski. 2,448,470, Aug. 31.
Circuit breaker, Liquid float. G. P. Hardin. 2,448,096, Aug. 31.
Circuit interrupter indicator. H. B. Adams. 2,448,166, Aug. 31.
Circuit making and breaking in response to power failure. M. E. Hieble. 2,448,371, Aug. 31.
Circuits with battery charging or depolarizing means, Track. H. L. Black. 2,448,349, Aug. 31.
Clamp: *See*—
  Fuse clamp.
  Hot wire clamp.
  Surgical clamp.
  Trolley line clamp.
Classifier for solids, Disintegrator and vortical. H. G. and W. H. Lykken. 2,448,038, Aug. 31.
Cleaning device for battery brooders, Automatic. H. O. Petraske. 2,448,120, Aug. 31.
Cleaning means, Electrical. E. H. R. Pegg. 2,448,045, Aug. 31.
Closure for collapsible tubes. M. C. Wilson. 2,448,163, Aug. 31.
Clothesline. E. C. Hansen. 2,448,310, Aug. 31.
Clothes rack. H. J. Criner. 2,448,253, Aug. 31.
Clutch: *See*—
  Engine starter clutch.
Coat. C. H. Masland, 2d. 2,448,449, Aug. 31.
Communication system, Wobbled frequency carrier wave. M. Silver, C. A. Segerstrom, Jr., and R. B. Reade. 2,448,055, Aug. 31.
Compensating means for indicators on positioning devices. R. S. Shrewsbury. 2,448,473, Aug. 31.
Compressor system. B. W. Mantle. 2,448,379, Aug. 31.
Condenser. J. J. Antalek. 2,448,407, Aug. 31.

Connector: *See*—
Pavement slab connector.
Connector for electrical conductors, Terminal. W. J. Larkin. 2,448,268, Aug. 31.
Constituents of gases, Method and apparatus for measuring. A. L. Nicolai. 2,448,111, Aug. 31.
Control. G. C. Pearce. 2,448,273, Aug. 31.
Control device. J. M. Wilson. 2,448,502–3, Aug. 31.
Control device responsive to airspeed, Flap. A. E. Baak. 2,448,167, Aug. 31.
Control for printing presses and the like, Electronic motor. W. H. Elliot. 2,448,256, Aug. 31.
Control mechanism, Machine gun firing rate. W. T. Golden. 2,448,024, Aug. 31.
Control system for blast furnace air. J. P. Vollrath. 2,448,199, Aug. 31.
Control system for engine generator units. D. R. Staples and J. J. Stamm. 2,448,284, Aug. 31.
Control system for variable-speed alternating-current motors. K. Mahnke and J. W. York. 2,448,040, Aug. 31.
Control system, Oscillograph trace. A. D. Smith, Jr., and H. E. Guthman. 2,448,059, Aug. 31.
Control unit, Vehicle. W. J. Turnbull. 2,448,129, Aug. 31.
Converter, Reciprocating. V. de Fligué. 2,448,298, Aug. 31.
Cooking device, Electrical. E. J. George. 2,448,215, Aug. 31.
Cooling system, Dual engine vehicle. L. R. Buckendale. 2,448,014, Aug. 31.
Cooling system, Liquid. J. I. Morrison. 2,448,453, Aug. 31.
Cop holder. R. V. Olson and B. A. Johnson. 2,448,457, Aug. 31.
Corrosion resistant steel and equipment. L. S. Renzoni. 2,448,462, Aug. 31.
Cotton textiles water-absorbent and rot-resistant, Making. J. D. Reid and G. C. Daul. 2,448,153, Aug. 31.
Coupling: *See*—
Chain coupling. Sensing antenna coupling.
Power transmission coupling.
Crib, Infant's. B. B. Lineberry and G. E. Branscome. 2,448,317, Aug. 31.
Crops by soil fumigation, Protection of. J. F. Kagy and R. R. McPherson. 2,448,265, Aug. 31.
Crystal mounting means, Piezoelectric. B. Carlin. 2,448,352, Aug. 31.
Cutting machine, Gear. C. T. Galloway. 2,448,426, Aug. 31.
Cuttings conveying means. L. E. Simmons. 2,448,056, Aug. 31.
Cuttings conveying mechanism. L. E. Simmons. 2,448,057, Aug. 31.
Cylinder, Compounding master. S. Schnell. 2,448,194, Aug. 31.
Cylinder construction. R. A. Kaser. 2,448,266, Aug. 31.
Dairy water heater. E. R. Koppel. 2,448,183, Aug. 31.
Dampener for measuring instruments, Magnetic. B. Wasko and J. Kistinger. 2,448,477, Aug. 31.
Dampener, Vibration. C. Saurer. 2,448,281, Aug. 31.
Deburring tool. J. P. Michela. 2,448,385, Aug. 31.
Decelerometer. J. H. Goss. 2,448,367, Aug. 31.
Dehydrator apparatus. E. H. Guthier. 2,448,144, Aug. 31.
Dehydrofluorination process. J. D. Gibson. 2,448,092, Aug. 31.
Dental appliance. A. Kaplan. 2,448,437, Aug. 31.
Dental handpiece. G. E. Björklund. 2,448,348, Aug. 31.
Designs, Producing moiré. A. Holterhoff. 2,448,145, Aug. 31.
Detonation meter. D. R. de Boisblanc. 2,448,323, Aug. 31.
Detonation meter. R. G. Piety. 2,448,322, Aug. 31.
Device for hidden explosive mines. R. C. Darnell. 2,448,020, Aug. 31.
Device for the manufacture of artificial sausage skins. J. Wolff. 2,448,067, Aug. 31.
Differential concrete pump. C. I. Longenecker. 2,448,104, Aug. 31.
Dishwasher having deflecting recesses in the wall thereof. F. J. R. Karlström. 2,448,490, Aug. 31.
Disk plow and caster wheel. A. E. Rutter. 2,448,469, Aug. 31.
Dispenser. R. Van Rosen. 2,448,130, Aug. 31.
Display device, Illuminated. O. M. Arnold. 2,448,244, Aug. 31.
Distillation of fuels by direct contact with reheated distillate vapors, Low-temperature. H. Lantz. 2,448,223, Aug. 31.
Door lock. C. J. Berini. 2,448,293, Aug. 31.
Door lock bolt. O. J. Bunten. 2,448,415, Aug. 31.
Double-slide mechanism and double-action drawing press. F. J. Rode and M. R. Hatch. 2,448,327, Aug. 31.
Drive for automobiles and the like. C. N. Aronson. 2,448,345, Aug. 31.
Dust collector. H. C. Dohrmann. 2,448,424, Aug. 31.
Dyeing of textile fibres containing nitrogen. J. H. MacGregor. 2,448,448, Aug. 31.
Dyes, Green tetrakisazo. C. E. Sparks, J. W. Libby, Jr., and J. H. Trepagnier. 2,448,158, Aug. 31.
Dyestuffs of the anthraquinone series. E. Gutzwiller. 2,448,094, Aug. 31.
Dynamoelectric machine. H. M. Martin. 2,448,381, Aug. 31.
Electric brazing metal parts. F. W. Schwinn. 2,448,329, Aug. 31.
Electric flood signal. J. O. Williams. 2,448,340, Aug. 31.
Electric lamp attachment for caps. H. A. Walworth. 2,448,240, Aug. 31.
Electric motor follow-up system. W. H. Newell and H. F. McKenney. 2,448,387, Aug. 31.
Electric plug. C. H. Dolan, II. 2,448,086, Aug. 31.
Electric stove with utensil retaining means. A. Cecchini. 2,448,417, Aug. 31.
Electric switch. A. W. Krieger. 2,448,444, Aug. 31.
Electrical alternating current generator. H. J. Tyzzer. 2,448,501, Aug. 31.
Electrical harmonic rebalancing apparatus. R. F. Wild. 2,448,065, Aug. 31.
Electrical plug. A. M. Williams. 2,448,339, Aug. 31.
Electrical system. T. A. O. Gross. 2,448,028, Aug. 31.
Electrically heated tool. Z. Kalfen. 2,448,182, Aug. 31.
Electrode, Refrigerated. C. L. Schebler, F. Douglas, and L. A. Clasquin. 2,448,306, Aug. 31.
Electronic apparatus. V. O. Beam. 2,448,504, Aug. 31.
Electronic relay arrangement. N. R. Davis. 2,448,422, Aug. 31.
Emulsions sensitized with salts of metals of group VIII of the periodic arrangement of the elements, Photographic. W. F. Smith and A. P. H. Trivelli. 2,448,060, Aug. 31.
Engine: *See*—
Internal-combustion engine.
Engine and compressor, Rotary intersecting vane. T. G. Nyborg. 2,448,233, Aug. 31.
Engine bearing construction. R. M. Heintz and J. W. Frazier. 2,448,369, Aug. 31.
Engine starter clutch. C. A. Balton. 2,448,291, Aug. 31.
Esters of substituted adipic acid and their production, Unsaturated. H. D. Finch. 2,448,259, Aug. 31.
Esters, Recovery of water-soluble cellulose. R. M. Creamer. 2,448,082, Aug. 31.
Fabric: *See*—
Textile fabric.
Fabric having pick-and-pick pattern effects, Producing. R. Whewell. 2,448,201, Aug. 31.
Facing, Panel. K. A. Craig and R. J. Auchter. 2,448,357, Aug. 31.
Fastener: *See*—
Tapped fastener.
Feeding apparatus for internal-combustion engines, Fuel. C. B. Nash. 2,448,043, Aug. 31.
Felting machine. W. H. Kingston. 2,448,441, Aug. 31.
File, Paper. J. A. Johnson. 2,448,435, Aug. 31.
Film, Making wrinkle-free. C. R. Irons and C. E. Sanford. 2,448,433, Aug. 31.
Filter: *See*—
Floating filter. Portable filter.
Finder, Direction. N. Marchand. 2,448,041, Aug. 31.
Finger waving device. L. Hannon. 2,448,263, Aug. 31.
Fixture, Grinding. H. F. Bakewell. 2,448,245, Aug. 31.
Flame electrode control device. J. O. Rosche. 2,448,497, Aug. 31.
Flare, Illuminating. C. D., A. J., and C. Schermuly. 2,448,471, Aug. 31.
Flashing. J. D. Stebbins. 2,448,474, Aug. 31.
Flask, Dental. N. Opotow. 2,448,115, Aug. 31.
Flight indicator. D. F. Folland and J. Lyman. 2,448,023, Aug. 31.
Floating filter. C. L. Dewey. 2,448,212, Aug. 31.
Folding table. W. P. De Saussure. 2,448,360, Aug. 31.
Friction shock absorbing mechanism for railway draft riggings. G. E. Dath. 2,448,139, Aug. 31.
Furnace structure, Transverse flux induction heating. R. M. Baker, G. R. Monroe, and R. R. Reed. 2,448,010, Aug. 31.
Furniture, Folding camping. F. M. Lindner. 2,448,377, Aug. 31.
Fuse. E. J. Fix. 2,448,022, Aug. 31.
Fuse clamp. E. W. Landmeier. 2,448,267, Aug. 31.
Fuse unit. A. H. Powell. 2,448,389, Aug. 31.
Game pocket, Removable. R. E. Carter. 2,448,416, Aug. 31.
Game, Simulated baseball box score. G. E. Noel. 2,448,151, Aug. 31.
Garment hanger. C. L. Pandele. 2,448,234, Aug. 31.
Garment hanger. W. Richerzhagen. 2,448,394, Aug. 31.
Garment hanger. J. A. Schmitt. 2,448,282, Aug. 31.
Garment-making apparatus. J. Abrams. 2,448,287, Aug. 31.
Gases, Converting hydrocarbon. L. P. Evans. 2,448,257, Aug. 31.
Gate: *See*—
Hopper gate.
Geared adjustment means. H. M. Barber. 2,448,292, Aug. 31.
Gel, Insulating. E. L. Sargent and R. C. Wilson, Jr. 2,448,290, Aug. 31.
Generator: *See*—
Electrical alternating current generator. Pulse generator.
Generator with automatic amplitude control, Saw-tooth. M. E. Ames, Jr., and D. E. Sunstein. 2,448,069, Aug. 31.

Generator with automatic amplitude control, Saw-tooth. D. E. Sunstein. 2,448,070, Aug. 31.
Gear for aircraft, Retractable landing. E. E. Wallace. 2,448,064, Aug. 31.
Gearing, Pin tooth. F. J. Woditsch. 2,448,164, Aug. 31.
Glands, Fabricating packing. O. Jacobsen. 2,448,147, Aug. 31.
Glass furnace and operation. J. H. McKelvey and J. W. Rogers. 2,448,451, Aug. 31.
Global wheel. C. Y. Jones. 2,448,222, Aug. 31.
Glyceride oxidation inhibited by 5-pentadecyl resorcinol. H. M. Barnes. 2,448,207, Aug. 31.
Granulating machine. A. T. Gardner. 2,448,214, Aug. 31.
Grinding apparatus. J. C. Curtis. 2,448,019, Aug. 31.
Grinding fixture, Threading tool. R. F. Grieco. 2,448,309, Aug. 31.
Grinding machine, Cylindrical. H. A. Silven. 2,448,283, Aug. 31.
Guard means for fluorescent lights. E. Schneiderman and D. Tamburi. 2,448,236, Aug. 31.
Guide, Adjustable dead lever. A. F. Coulter. 2,448,419, Aug. 31.
Guide, Thread. V. E. Gonsalves. 2,448,217, Aug. 31.
Guide, Tool. S. F. Dudrick. 2,448,361, Aug. 31.
Gun, Spray. W. M. Spreng. 2,448,159, Aug. 31.
Hacksaw. L. A. Wieland. 2,448,286, Aug. 31.
Halogen from coumarone indene polymers, Removing. H. M. Stanley, F. E. Salt, and J. F. Williams. 2,448,127, Aug. 31.
Hammer, Electric. C. Brown and W. F. Parke. 2,448,210, Aug. 31.
Handbag, Lady's. M. Ackerman. 2,448,404, Aug. 31.
Handgrip for fishing lines. D. Meinzinger. 2,448,384, Aug. 31.
Hand press. A. Alk. 2,448,288, Aug. 31.
Hanger: *See*—
Garment hanger. Picture hanger.
Mirror hanger.
Harness, Pickup parachute. H. Wilson. 2,448,066, Aug. 31.
Heat transfer device for refrigerating apparatus. Capillary. R. S. Gaugler. 2,448,261, Aug. 31.
Heat-treatment of plural oxide gels. M. M. Marisic. 2,448,270, Aug. 31.
Heater: *See*—
Dairy water heater. Water heater.
Heater exhaust system. L. A. Williams, Jr. 2,448,132, Aug. 31.
Heater, stove, and burner, particularly adapted for use in making field laboratory tests. H. E. Bent. 2,448,412, Aug. 31.
Heating apparatus, Transverse flux induction. G. E. Stoltz. 2,448,062, Aug. 31.
Heating attachment for lamps. L. M. Roberts. 2,448,326, Aug. 31.
Heating device and making the same, Electric. P. W. Plummer. 2,448,388, Aug. 31.
Heating of continuously moving metal strip with pulsating magnetic flux, Induced. R. M. Baker. 2,448,012, Aug. 31.
Hermetically sealed joint. H. B. Johnson and L. L. Werner. 2,448,031, Aug. 31.
Hinge construction for toilet seats. P. J. Sperzel. 2,448,330, Aug. 31.
Hitch, Trailer. E. A. Jones. 2,448,436, Aug. 31.
Holder: *See*—
Broach holder. Iron holder.
Cigarette holder. Nursing bottle holder.
Cop holder. Switch box holder.
Hollow article and making same. F. V. Cowan. 2,448,173, Aug. 31.
Hood, Protective. J. De Grazia. 2,448,021, Aug. 31.
Hopper gate. M. C. Fors. 2,448,303, Aug. 31.
Hose. A. E. Chernack. 2,448,485, Aug. 31.
Hot wire clamp. B. S. Thompson. 2,448,402, Aug. 31.
Hydrocarbons, Cracking of. R. E. Burk. 2,448,015, Aug. 31.
Hydrocarbons, Treatment of. C. L. Thomas and V. Haensel. 2,448,160, Aug. 31.
Hydrogel, Producing an inorganic. J. A. Pierce and C. N. Kimberlin, Jr. 2,448,460, Aug. 31.
Impedance system, Simulating. L. L. Libby. 2,448,036, Aug. 31.
Indicator: *See*—
Circuit interrupter indicator. Typewriter page end indicator.
Flight indicator.
Inductance device, Magnetic-core. A. P. Olesky. 2,448,190, Aug. 31.
Induction heating, Controlled. R. M. Baker. 2,448,008, Aug. 31.
Induction heating of metal strips, Method and apparatus for. R. M. Baker and G. W. Penney. 2,448,011, Aug. 31.
Inductive heating of longitudinally moving metal strip. R. M. Baker. 2,448,009, Aug. 31.
Inorganic hydrogel, Preparing an. C. N. Kimberlin, Jr. and J. A. Pierce. 2,448,439, Aug. 31.
Insecticide, Xanthone-DDT. J. F. Adams. 2,448,405, Aug. 31.
Inspection, Supersonic. V. G. Shaw. 2,448,399, Aug. 31.
Instrument landing system. H. G. Busignies. 2,448,016, Aug. 31.

Insulation, Heat. L. B. Miller and W. R. Seipt. 2,448,186, Aug. 31.
Intensifying mechanism, Pressure fluid operated pressure. E. A. Rockwell. 2,448,464, Aug. 31.
Internal-combustion engine. L. A. Holan and J. O. Bourdeaux. 2,448,430, Aug. 31.
Iron holder. M. E. McCan. 2,448,227, Aug. 31.
Jig for automatic record changers, Repair. A. W. Staab and O. A. Wanden. 2,448,331, Aug. 31.
Jig for centrifugal formation of sheet thermoplastics, Female. M. P. H. Peterson. 2,448,274, Aug. 31.
Joining and finishing the seam-margin edges of fabric piles. E. Muecke. 2,448,495, Aug. 31.
Joint: *See*—
Hermetically sealed joint. Vitrified clay pipe joint.
Swing joint.
Joints, Method and apparatus for making welded pipe. J. D. Mattimore and F. C. Smith. 2,448,107, Aug. 31.
Key assembly. W. H. St. Thomas. 2,448,332, Aug. 31.
Key, Tuning. G. F. Gregg. 2,448,308, Aug. 31.
Keyer, Frequency shift. J. R. Weiner. 2,448,336, Aug. 31.
Kit, First-aid. E. M. Campbell. 2,448,171, Aug. 31.
Kit, Wrench. R. S. Banister. 2,448,168, Aug. 31.
Knee pad dolly. B. Gordon. 2,448,427, Aug. 31.
Knife, Multibladed. L. W. Mathaus. 2,448,383, Aug. 31.
Knitting machine. W. C. Adams. 2,448,344, Aug. 31.
Knitting machine, Warp. F. Lambach. 2,448,035, Aug. 31.
Ladder bracket. C. L. Brown. 2,448,350, Aug. 31.
Ladder for ships, Accommodation. J. J. Wallace. 2,448,335, Aug. 31.
Latch attachment for wallets, Safety. E. Schwartz. 2,448,398, Aug. 31.
Latch mechanism, Spring. W. A. Barnes. 2,448,409, Aug. 31.
Latching device. G. E. Curtiss, Jr. 2,448,083, Aug. 31.
Lawn mower. L. Bishop. 2,448,074, Aug. 31.
Lawn mower F. W. Gardner. 2,448,091, Aug. 31.
Lawn mower. C. Williams. 2,448,241, Aug. 31.
Lead containing ingredients from hydrocarbon fuels, Method and apparatus for removing. S. Rasmussen. 2,448,235, Aug. 31.
Level control, Liquid. J. A. Campbell. 2,448,251, Aug. 31.
Lifting attachment for crane trucks, Drum. E. J. Roy. 2,448,124, Aug. 31.
Light bulb, Multiple life. S. J. Meno and J. R. Cavanagh. 2,448,493, Aug. 31.
Light for cabinets, Automatic. E. R. Cobbs. 2,448,080, Aug. 31.
Lighting equipment. C. Moser. 2,448,494, Aug. 31.
Loading machine, Belt. E. Ardell. 2,448,072, Aug. 31.
Lock: *See*—
Brake pedal lock. Door lock.
Lock for doors, windows, and the like, Automatic. E. E. Urberuaga. 2,448,239, Aug. 31.
Lubricating compositions. B. H. Lincoln and G. D. Byrkit. 2,448,037, Aug. 31.
Machine for cutting men's heels. E. B. Cintron. 2,448,354, Aug. 31.
Machine for impacting pigments against a rotating disk element. H. R. Rafton. 2,448,049, Aug. 31.
Machine for making containers. C. B. Tennent, Sr. 2,448,198, Aug 31.
Machine for stripping hops from vines. E. Thys. 2,448,063, Aug. 31.
Machine for turning the platform covers of platform shoes. R. H. Lawson. 2,448,101, Aug. 31.
Magnesium powder by cold rolling and grinding, Producing. H. P. Anderson. 2,448,243, Aug. 31.
Mailbox. R. Malloy. 2,448,225, Aug. 31.
Mechanism for controlling helicopters with coaxial rotors. V. Bendix. 2,448,078, Aug. 31.
Mechanism for feeding yarn in circular weft knitting machines. A. Shortland. 2,448,498, Aug. 31.
Mechanism for precision switches. E. A. Miller. 2,448,230, Aug. 31.
Medicinal composition. F. J. Helgren. 2,448,180, Aug. 31.
Metal cleaning. H. N. Gilbert. 2,448,262, Aug. 31.
Meter: *See*—
Detonation meter.
Mill: *See*—
Cane mill.
Mirror hanger. T. P. Brooks and B. K. Wyatt. 2,448,077, Aug. 31.
Mixing apparatus. B. De H. Miller. 2,448,042, Aug. 31.
Moiré designs, Producing. A. Holterhoff. 2,448,145, Aug. 31.
Moistening device for offset presses. H. E. Marsden. 2,448,226, Aug. 31.
Motor system, Self-synchronous controlled. W. C. Grabau. 2,448,025, Aug. 31.
Mounting for bail handles. H. V. Stehl. 2,448,238, Aug. 31.
Naphthenic hydrocarbons, Purification of. A. E. Hirschler. 2,448,488, Aug. 31.
Necktie. B. Greenberg. 2,448,307, Aug. 31.
Nest structure. W. R. Whitfield. 2,448,202, Aug. 31.
Nitrile-producing method. R. H. Potts. 2,448,275, Aug. 31.
Nursing bottle holder. C. W. Mott. 2,448,189, Aug. 31.
Oil compositions, Penetrating. L. D. Gittings. 2,448,093, Aug. 31.

Oil, Producing nonbreak. J. L. Jakobsen. 2,448,434, Aug. 31.
Oil-soluble sulfonates, Preparing. N. B. Lemmon. 2,448,184, Aug. 31.
1,3-bis(o-xenyl) triazene. H. H. Richmond. 2,448,155, Aug. 31.
Organic materials and product of said process, Stabilizing H. M. Barnes. 2,448,203, Aug. 31.
Orifice exchanger. B. E. Anderson. 2,448,071, Aug. 31.
Oscillator, Crystal beat-frequency. M. Morrison. 2,448,188, Aug. 31.
Oscillator system, Variable-frequency. M. R. Gavin and V. A. Heathcote. 2,448,177, Aug. 31.
Paint containing an alkyd resin and a halogenated amine. P. Zurcher. 2,448,505, Aug. 31.
Pajamas. J. Kessler. 2,448,438, Aug. 31.
Paper roll heading machine. R. White. 2,448,478, Aug. 31.
Parachute device adapted to be launched from an aircraft or the like. C. R. Crowther and W. E. Brown. 2,448,254, Aug. 31.
Para - ([N] - dialkyl pyrryl)benzoates. S. Avakian. 2,448,408, Aug. 31.
Patch, Balloon suspension. O. W. Loudenslager, R. C. Gardner, and F. E. Ensley. 2,448,269, Aug. 31.
Pavement slab connector F. W. Abel. 2,448,134, Aug. 31.
Peeling machine including endless transversely deformable abrading belts. C. M. McDowell. 2,448,229, Aug. 31.
Pen, Baby's play. G. Sole. 2,448,237, Aug. 31.
Pen control mechanism for paper ruling machine. R. J. Thompson. 2,448,285, Aug. 31.
Pencil, Eraser tipped. J. F. Linden. 2,448,103, Aug. 31.
Pencil with step-by-step feed, Mechanical. S. M. Cleveland. 2,448,356, Aug. 31.
Peracid solutions, Preparation of. W. R. Cornthwaite and A. A. Elston. 2,448,252, Aug. 31.
Phenolsulfonic acid-formaldehyde ion exchange agents, Preparing. G. B. Heustad and W. C. Bauman. 2,448,029, Aug. 31.
Picture hanger. W. A. Cody 2,448,137, Aug. 31.
Pie-cake carrier. E. H. Maranville. 2,448,319, Aug. 31.
Pilot structure for pot type burners. J. W. Miller and W. G. Smith. 2,448,148, Aug. 31.
Pipe handling apparatus. C. W. Pool. 2,448,324, Aug. 31.
Pipe union, Extensible. W. P. Muse. 2,448,232, Aug. 31.
Piston actuated air motor valve mechanism. G. H. Palm. 2,448,459, Aug. 31.
Planer. J. M. Walter. 2,448,200, Aug. 31.
Plaster of Paris, Manufacture of. C. L. Haddon. 2,448,218, Aug. 31.
Plastic sheets, System for finishing. I. L. Lesavoy. 2,448,316, Aug. 31.
Platform cover turning machine. R. H. Lawson. 2,448,102, Aug. 31.
Plug: *See*—
Electric plug. Spark plug.
Electrical plug.
Plural systems of sequentialy responsive instruments. R. H. Postal. 2,448,461, Aug. 31.
Polyvinyl ethers. N. W. Flodin. 2,448, 260, Aug. 31.
Portable filter. M. S. Schneider. 2,448,157, Aug. 31.
Potato chip color, Controlling. A. R. Patton. 2,448,152, Aug. 31.
Potato separating machine, Vertical air curent type. P. La Pointe. 2,448,446, Aug. 31.
Pouch, Tobacco. R. A. Le Fevre. 2,448,376, Aug. 31.
Power intensifier, two stage uniform flow. E. A. Rockwell. 2,448,467, Aug. 31.
Power transmission coupling. M. Ronning. 2,448,278, Aug. 31.
Precipitator. G. W. Penney and G. W. Hewitt. 2,448,046, Aug. 31.
Press: *See*—
Hand press.
Press arrangement. S. M. Bratton. 2,448,295, Aug. 31.
Press for precision work, Stamping. J. A. Chappuis. 2,448,136, Aug. 31.
Press for propeller blade sections. F. A. Gruetjen. 2,448,179, Aug. 31.
Pressure relief valve. G. J. Henry. 2,448,429, Aug. 31.
Product and method of making fused litharge particles coated with red lead. M. F. Chubb. 2,448,353, Aug. 31.
Projectile. S. M. Zandmer. 2,448,343, Aug. 31.
Projectile, Self-controlled. W. A. Ayres. 2,448,007, Aug. 31.
Projector and receiver of supersonic frequencies. R. W. Gillespie. 2,448,365, Aug. 31.
Puller: *See*—
Weed puller.
Pulse generator. A. G. Gans and A. D. Hasley. 2,448,364, Aug. 31.
Pulse measuring system, Electrical. B. Labin and D. D. Grieg. 2,448,084, Aug. 31.
Pulse receiver, Static reducing. D. D. Grieg. 2,448,027, Aug. 31.
Pump: *See*—
Differential concrete pump. Variable capacity rotary pump.
Pump control, Hydraulic. L. Beeh. 2,448,347, Aug. 31.
Pyrolytic conversion of hydrocarbons. K. M. Watson. 2,448,334, Aug. 31.
Rack: *See*—
Clothes rack.
Rain and sprayproof ventilator. C. W. Porter. 2,448,048, Aug. 31.
Reciprocating converter. V. de Fligué. 2,448,298, Aug. 31.
Record assembly, Carbon interleaved. J. A. Gilbert. 2,448,143, Aug. 31.
Records, Manufacture of phonograph. F. C. Hinckley. 2,448,030, Aug. 31.
Recreation apparatus. C. B. Poorman, Jr. 2,448,325, Aug. 31.
Refrigerating system. G. Muffly. 2,448,454, Aug. 31.
Register for meters, Consumption. F. S. and R. B. Beach. 2,448,411, Aug. 31.
Regulating system. H. S. Kirschbaum. 2,448,442, Aug. 31.
Restrictor and heat exchanger, Combination. T. W. Kunzog. 2,448,315, Aug. 31.
Retinoscope for determining refractive errors of the eye. M. Di Bonaventura. 2,448,140, Aug. 31.
Ring and traveler for twister frames. J. R. Mulholland. 2,448,150, Aug. 31.
Rocking horse. E. U. Pugh. 2,448,390, Aug. 31.
Rod actuating mechanism, Loom protector. C. H. Callahan and W. Languirand. 2,448,250, Aug. 31.
Rod assembly for internal-combustion engines, Connecting. T. G. Carrie. 2,448,079, Aug. 31.
Rubber wheel. J. B. Bennett and J. J. McCarter. 2,448,248, Aug. 31.
Rutin, Extraction of. R. K. Eskew. 2,448,175, Aug. 31.
Safety control apparatus for fuel burners. C. K. Strobel and S. J. Lakota. 2,448,475, Aug. 31.
Sanding tool. M. P. Glowacki. 2,448,178, Aug. 31.
Saw attachment for tractors, Circular. C. B. Richey. 2,448,123, Aug. 31.
Screw, Locking. E. R. Doonan. 2,448,213, Aug. 31.
Seal, Collet. F. L. Dodge. 2,448,423, Aug. 31.
Sensing antenna coupling. T. H. Clark. 2,448,018, Aug. 31.
Separation of aromatic hydrocarbons by selective adsorption in silica gel. A. E. Hirschler. 2,448,489, Aug. 31.
Separator drive, Cream. P. B. Shee. 2,448,196, Aug. 31.
Servomotor, Pressure fluid follow-up. E. A. Rockwell. 2,448,465, Aug. 31.
Servomotor, Follow-up pressure fluid. E. A. Rockwell. 2,448,466, Aug. 31.
Sewing machine, Electromagnetic. J. A. Ozanich. 2,448,458, Aug. 31.
Shackle, Poultry. E. M. Davis. 2,448,421, Aug. 31.
Shade, Fish bowl lamp. H. E. Lowry. 2,448,318, Aug. 31.
Shaker, Toothpick. S. Kassovic. 2,448,099, Aug. 31.
Shank, Offset bit. F. A. Ray. 2,448,276, Aug. 31.
Shearer. R. V. Hirsch. 2,448,219, Aug. 31.
Shell, Annealed. W. F. Reager. 2,448,496, Aug. 31.
Shellac bleaching. W. J. McIntoch. 2,448,320, Aug. 31.
Sheet thermoplastics, Method and apparatus for centrifugally forming of. R. Mayne. 2,448,492, Aug. 31.
Shoe sole attaching. F. V. Nugent. 2,448,112, Aug. 31.
Shoe sole, Laminated pile-fabric. A. E. Murray. 2,448,455, Aug. 31.
Shoe tree, Adjustable. R. Hubbert. 2,448,431, Aug. 31.
Shoes with upwardly deflected sole, Making. K. Engel. 2,448,301, Aug. 31.
Signal: *See*—
Electric flood signal.
Signal controller, Traffic actuated. A. O. Olafson. 2,448,113, Aug. 31.
Signal light, Toy highway traffic. L. L. Eyerkuss. 2,448,202, Aug. 31.
Signal type torque indicating wrench. E. G. Hallett and A. C. Brown. 2,448,095, Aug. 31.
Signaling system, Selective. O. S. Field and S. N. Wight. 2,448,487, Aug. 31.
Silencer. W. P. Mason. 2,448,382, Aug. 31.
Skid. H. C. Lau. 2,448,447, Aug. 31.
Slider for slide fasteners. N. J. Poux. 2,448,192, Aug. 31.
Slings, Making braided. D. S. Robbins. 2,448,463, Aug. 31.
Socket, Test. O. J. Morelock. 2,448,452, Aug. 31.
Sodium percarbonate, The manufacturing of. V. W. Slater and W. S. Wood. 2,448,058, Aug. 31.
Solids from fluids, Separation of suspended. B. M. Becker and J. McAfee. 2,448,135, Aug. 31.
Spark plug. D. E. Replogle. 2,448,193, Aug. 31.
Speed synchro unit, Dual. H. J. Kent. 2,448,374, Aug. 31.
Sponson, Retractable. W. A. Bortner. 2,448,075, Aug. 31.
Spray mechanism, Liquid rotor. N. C. Christensen. 2,448,297, Aug. 31.
Spring suspension for vehicles. J. J. Low. 2,448,224, Aug. 31.
Square, Mechanic's. E. L King. 2,448,440, Aug. 31.
Stabiliser, Steering. A. F. Ross. 2,448,468, Aug. 31.
Stairway, Steel. E. A. Jung. 2,448,264, Aug. 31.
Stand: *See*—
Telescope stand.
Steel, Corrosion resistant coated. A. A. Schilling and W. L. Finlay. 2,448,397, Aug. 31.

Strands of intertwisted glass fibers, Producing. C. C. Swann. 2,448,490, Aug. 31.
Strips and channels and connecting structure, Furring. J. Michael. 2,448,109, Aug. 31.
Sulfonation of aromatic compounds in presence of acetonitrile. D. S. Henderson and A. N. Sachanen. 2,448,370, Aug. 31.
Sulfones of conjugated dienes, Cyclic. F. W. Rose, Jr. 2,448,053, Aug. 31.
Superphosphate manufacture, Granulated. M. Shoeld. 2,448,126, Aug. 31.
Support for containers. W. Niskanen and E. L. Christoferson. 2,448,456, Aug. 31.
Supporting device. J. Gabel. 2,448,304, Aug. 31.
Surgical clamp. J. A. Morrone. 2,448,321, Aug. 31.
Sweeping machine, Power-driven. A. Russell. 2,448,328, Aug. 31.
Swing joint. W. F. Schaetzly. 2,448,395, Aug. 31.
Switch: *See*—
Electric switch.
Switch box holder. E. D. Davison. 2,448,359, Aug. 31.
Switch for phonograph circuit, Selector. A. P. Marcus and F. C. Filo. 2,448,380, Aug. 31.
Symmetrical xenyltriazenes in making gas expanded organic plastics, Use of. H. H. Richmond and M. Tomiuk. 2,448,154, Aug. 31.
Synthesis gas, Production of. H. V. Atwell. 2,448,290, Aug. 31.
Synthesis of organic compounds. L. C. Rubin. 2,448,279, Aug. 31.
System of threading needles. R. Huning. 2,448,432, Aug. 31.
Table: *See*—
Folding table. Therapeutic exercise table.
Tapped fastener. A. P. Brush. 2,448,351, Aug. 31.
Tedder attachment for power mower sickle bars, Reciprocating. P. F. Brown. 2,448,078, Aug. 31.
Telephone system, Intercommunicating. K. W. Graybill. 2,448,428, Aug. 31.
Telescope stand. H. W. Allen. 2,448,406, Aug. 31.
Temperature control apparatus. C. E. Anderson. 2,448,289, Aug. 31.
Template, Dental. R. O. Dickson. 2,448,085, Aug. 31.
Tester, Hardness. M. A. Chester. 2,448,486, Aug. 31.
Tester, Powder. A. Africano. 2,448,203, Aug. 31.
Textile fabric. E. S. Kennedy. 2,448,032, Aug. 31.
Textiles with acyloxy-substituted aromatic acid salts, Treatment of. C. R. Bellwood. 2,448,247, Aug. 31.
Therapeutic exercise table. W. Wettlaufer. 2,448,162, Aug. 31.
Metals, Thermochemically cutting. H. G. Hughey. 2,448,098, Aug. 31.
Thread checking apparatus. I. W. Mannerbrink and N. J. L. Sandström. 2,448,106, Aug. 31.
Thread control for automatic looms. R. G. Turner. 2,448,161, Aug. 31.
Time marks for the sweep of cathode ray tubes. F. A. Firestone and R. B. De Lano, Jr. 2,448,363, Aug. 31.
Tipup for ice fishing. R. N. Baugh and R. F. Wycinowski. 2,448,346, Aug. 31.
Tire, Automobile. C. Hughes. 2,448,313, Aug. 31.
Toilet flushing assembly. J. F. Molloy. 2,448,231, Aug. 31.
Tool: *See*—
Debutting tool. Sanding tool.
Electrically heated tool.
Tool for refacing the sealing surfaces of header access holes, Grinding. J. R. Kruse. 2,448,100, Aug. 31.
Top for automobiles or the like, Convertible. F. W. Seckel. 2,448,054, Aug. 31.
Torch cutting machine. S. Duvall. 2,448,089, Aug. 31.
Tow bar. G. E. Hill. 2,448,311, Aug. 31.
Track for motor vehicles or the like, Tiltable. C. W. Story. 2,448,197, Aug. 31.
Trailer and the like, Boat. F. Krake. 2,448,443, Aug. 31.
Trailer, Boat. C. F. Peterson. 2,448,119, Aug. 31.
Transmission gearing, Worm and wheel unidirectional. P. S. Morgan. 2,448,187, Aug. 31.
Transmission, Mechanical. G. T. Moo. 2,448,386, Aug. 31.
Transmission, Variable-speed. W. R. Bonham. 2,448,249, Aug. 31.
Trap: *See*—
Chemical gun trap.
Treatment by compression waves. C. B. Horsley. 2,448,372, Aug. 31.
Trimming machine. W. S. Reynolds. 2,448,393, Aug. 31.
Trolley line clamp. G. A. Walters. 2,448,333, Aug. 31.
Truck, Aircraft service power. K. W. Couse. 2,448,172, Aug. 31.
Truck, Loom battery filling. E. J. Eaddy. 2,448,300, Aug. 31.
Truck, Motorized lift. T. B. Funk. 2,448,176, Aug. 31.
Tube: *See*—
Cathode-ray projector tube.
Tunable inductance. R. J. Cary, Jr. 2,448,296, Aug. 31.
Typewriter page end indicator. E. A. Randolph. 2,448,050, Aug. 31.
Unit for aircraft landing system, Arresting. T. M. Boyer and C. R. Gottschall. 2,448,209, Aug. 31.
Uranium monocarbide and preparation. H. A. Wilhelm and A. H. Daane. 2,448,479, Aug. 31.
Utilization of ferrous sulfate solutions in the manufacture of ferric alums. C. B. Francis. 2,448,425, Aug. 31.
Valance. B. F. Stenz. 2,448,061, Aug. 31.
Valve: *See*—
Pressure relief valve.
Valve and control, Mixer. C. A. Brown. 2,448,170, Aug. 31.
Valves, Manufacturing. C. H. Bassett. 2,448,483, Aug. 31.
Vapors from a contact mass, Method and apparatus for separation of. J. W. Payne, C. V. Hornberg, and R. D. Drew. 2,448,272, Aug. 31.
Variable capacity rotary pump. J. H. McCaleb. 2,448,103, Aug. 31.
Vehicle-arresting apparatus. W. E. Lynn. 2,448,039, Aug. 31.
Ventilator, Rain and sprayproof. C. W. Porter. 2,448,048, Aug. 31.
Vinyl chloride and catalyst therefor, Preparing. H. S. Miller. 2,448,110, Aug. 31.
Vitamin extraction from sunflower seed. E. Levin. 2,448,185, Aug. 31.
Vitrified clay pipe joint. C. V. McClintock. 2,448,271, Aug. 31.
Wagon unloading device, Farm. G. J. Recker. 2,448,122, Aug. 31.
Water atomizing arrangement. L. Schott. 2,448,472, Aug. 31.
Water heater. A. H. Trageser. 2,448,128, Aug. 31.
Water shutoff for oil wells. C. E. Ashton. 2,448,205, Aug. 31.
Wattmeter, High radio frequency. P. J. Ovrebo. 2,448,044, Aug. 31.
Weed puller. C. E. Krupp and W. R. Peterson. 2,448,445, Aug. 31.
Welt, Preformed. W. C. Wright. 2,448,165, Aug. 31.
Wheel: *See*—
Disk plow and caster wheel. Global wheel.
Rubber wheel.
Wheelbarrow, Self-dumping. J. L. Gokey. 2,448,216, Aug. 31.
Window shade spring adjusting bracket. C. H. Wise. 2,448,481, Aug. 31.
Wrench: *See*—
Signal type torque indicating wrench.
Wrench with adjustable link pivot, Linked jaw pipe. O. V. Jones. 2,448,221; Aug. 31.

CLASSIFICATION OF PATENTS

ISSUED AUGUST 31, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

2— 49: 2,448,076

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

GIAMBALVO *v.* DETRICK ET AL.

No. 5426. Decided May 4, 1948

[168 F.2d 116; 77 USPQ 582]

1. INTERFERENCE—PATENT AND APPLICATION—COPENDING—BURDEN OF PROOF—PREPONDERANCE OF EVIDENCE ONLY.

Where the interference was declared between the patent of D et al. and the application of G which was copending with the D et al. application and at the time the patent was issued, *Held* that the applicant has the burden of establishing priority by a preponderance of the evidence only, so far as the matter depends upon evidence.

2. SAME—CLAIMS COPIED FROM PATENT—INTERPRETATION.

Held that the counts having originated with the patentee any uncertainty as to the meaning of terms of the counts must be determined in the light of the patent disclosure.

3. SAME—SAME—RIGHT TO MAKE—INHERENCY.

Where certain terms of the counts are not used in appellant's application, but it is claimed that the process described in his application inherently produces the effects set forth, *Held* that we are not convinced that the requisite subject matter to support the counts is inherent in appellant's application.

4. SAME—PRIORITY—PROCESS FOR PREPARING PHTHALOCYANINE.

Held that appellant is not entitled to make the counts, because of lack of disclosure, and that the decision of the Board of Interference Examiners awarding priority to appellees, is affirmed.

APPEAL from the Patent Office. Interference No. 81,444.

AFFIRMED.

Byerly, Townsend & Watson (*Ralph M. Watson* of counsel) for Giambalvo.

Cullen G. Frey (*C. H. Biesterfeld* of counsel) for Detrick.

GARRETT, *P. J.*:

This is an appeal from the decision of the Board of Interference Examiners of the United States Patent Office awarding priority to appellees in an interference proceeding involving two counts which read as follows:

1. In a process for preparing phthalocyanine pigments in an extremely finely divided form, the step which comprises drowning an acid solution of the phthalocyanine color in water which is in a state of turbulent flow and in which no laminar flow exists.

2. A copper phthalocyanine pigment which has been precipitated by the process of count 1 which when ground in a paint vehicle is very dark or jet in mass tone, redder, brighter and stronger than the same color when precipitated from acid solution by conventional drowning methods.

[1] The joint application of Detrick et al., Serial No. 320,418, was filed February 23, 1940, and matured into Patent No. 2,334,812, dated November 23, 1943. The application of Giambalvo, Serial No. 342,114, was filed June 24, 1940, and, therefore, was copending with that of Detrick et al. for about fifteen months and at the time the patent was issued to the latter. So, while the interference was declared between the patent and the application of Giambalvo, the latter had the burden of establishing priority by a preponderance of the evidence only, so far as the matter depends upon evidence.

The counts originated with Detrick et al. and were copied into the application of Giambalvo February 25, 1944, about three months after the patent was issued, with a request for an interference. This was duly declared March 27, 1944. Preliminary statements were duly filed by the respective parties which, when opened, disclosed that Giambalvo claimed conception and reduction to practice as early as January 13, 1939, while the earliest date claimed by Detrick et al. for any inventive element was during April 1939, reduction to practice being alleged during July 1939.

During the motion period, specifically on June 2, 1944, Detrick et al. moved to dissolve the interference, alleging:

1. The party Giambalvo does not have the right to make the counts of this interference because these counts define an invention that is neither disclosed nor suggested in his application Serial No. 342,114; and

2. The counts of this interference are not patentable to the party Giambalvo, the counts being limited to a process and a product neither of which have been described in his application Serial No. 342,114 and therefore cannot be made as claims in that application.

The Primary Examiner denied the motion to dissolve in a decision rendered September 25, 1944, and adhered thereto in a second decision rendered October 27, 1944, upon a request for reconsideration.

Detrick et al. thereafter gave notice, in conformity with the provisions of Patent Office Rule 154(*e*) that nonpatentability of the counts to Giambalvo again would be urged "as a basis for the decision upon priority of invention as more particularly provided for by rule 130 of the Patent Office Rules of Practice, * * * "; that their Patent 2,334,812 and the record of its prosecution before the Primary Examiner, together with twelve other listed patents, would be relied upon "for the purpose of construing the issue of the interference," and that pages 73 and 77 of Principles of Chemical Engineering by Walker, Lewis and McAdams, referred to in the Detrick et al. patent, would be relied upon at final hearing for the purpose of construing the issue.

Following the final decision of the Primary Examiner denying the motion of Detrick et al. to dissolve,

Vol. 613 • No. 5 Tuesday, August 31, 1948 Price $16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

testimony was taken in an effort to establish reduction to practice by Giambalvo, in the early part of 1939. Detrick et al. took no testimony and were limited to their filing date of February 23, 1940, for all elements of the invention. The Board of Interference Examiners held that Giambalvo failed to prove reduction to practice, but, prior to passing upon that, held that he had no right to make the counts, thus reversing the decision of the Primary Examiner, and, this being treated as a question ancillary to priority, priority was awarded to Detrick et al. upon that ground.

So, the matter comes before us with a decision adverse to Giambalvo upon two grounds, viz., (*a*) his right to make the counts and (*b*) conception and reduction to practice.

It is obvious that we need not concern ourselves relative to the second ground unless it be found that the Board erred as to the first ground. In other words, if Giambalvo failed to disclose the invention and is unable to make the counts for that reason, he cannot be awarded any date—not even his filing date—for conception and reduction to practice.

[2] Extensive briefs have been filed before us on behalf of the respective parties, the invention actually claimed originally in their applications being partially reviewed and much history of the art being recited, but the principal issue, while somewhat technical in character, does not seem to us to present any particularly difficult questions when the counts are properly interpreted. Having originated with Detrick et al. any uncertainty as to the meaning of terms of the counts must, under the familiar rule, be determined in the light of the patent disclosure.

It is noted that count 1 is directed to a "drowning" step, and count 2 defines a product produced by the process of count 1, which product is said to have a color that is "redder, brighter and stronger than the same color when precipitated from acid solution by conventional drowning methods." There is some evidence, in the form of an affidavit by an employee of the assignee of Detrick et al., that the superiority—assuming it to be superior—in color of the pigments produced by the process involved in the interference is due to a particular physical form and not to the matter of purity.

In explanation of the "significance of this term 'drowning'," the brief for Giambalvo states (page references to record omitted):

> A crude phthalocyanine pigment is made by causing a metal, such as copper, to react with organic material * * *. This crude pigment is then refined. Impurities are removed by the action of solvents * * *. The pigment is dissolved in a solvent such as sulphuric acid and pure pigment is then precipitated out of that solution * * *. When the pigment is dissolved in this acid solution, it is not essential that all of the impurities in the crude pigment shall have been previously removed. Such impurities as are not precipitated out of the acid solution with the pigment may be present and pure pigment will then be obtained on precipitation * * *.
>
> It is a characteristic of the phthalocyanine pigments that they are soluble in strong acids such as sulphuric acid but they are not soluble in water. When a solution of phthalocyanine pigment in a strong acid such as concentrated sulphuric acid is mixed with a large excess of water, the pigment is precipitated out of solution in the form of crystals. It is this type of precipitation which is referred to by the term "drowning" * * * and constitutes the step in the manufacture of phthalocyanine pigments to which count 1 is addressed. After the pigment has been precipitated, it is removed from the liquid by filtration.

Subsequently the brief states:

> The old batch method differs from the method of count 1 in that the latter entails drowning the acid solution of pigment in "water which is in a state of turbulent flow and in which no laminar flow exists," as a result of which the pigment is prepared "in an extremely finely divided form" * * *.

The brief for Giambalvo states that the decision in the case depends upon the answers to two questions, the first of which is:

> (a) Is drowning of an acid solution of phthalocyanine pigment in water which is in a state of "turbulent flow" inherent in the process described in appellant's application.

The second question relates to the Giambalvo's matter of reduction to practice, and has no bearing upon the matter of his right to make the counts.

It is noted that the question posed is whether the process of the count is inherent in the process described in Giambalvo's application. The brief on his behalf before us states (page references omitted):

> It has long been known, as pointed out by appellees' patent * * *, that the properties of a phthalocyanine pigment are dependent in large measure upon the particle size of the pigment. The tinctorial strength and brilliance is increased as the size of the individual pigment crystals is decreased. The size of the pigment crystals is decreased as the speed of precipitation of a phthalocyanine crystal is increased * * *.

In the course of its decision, the Board said:

> Since Giambalvo makes no reference in his specification to particle size, turbulent flow and the qualities specified in count 2, he must rely upon inherency in the disclosure for support as to these features.

It is obvious from the question posed in the brief for Giambalvo that he concedes that he relies upon inherency for support of essential features of the counts. We hereinafter refer to this matter again. Just at this point we think it proper to consider the "turbulent flow" and lack of "laminar flow" features of count 1, supra.

[3] Those terms were not used in the Giambalvo application. They originated with Detrick et al. and are defined in their patent specification as follows:

> By turbulent flow as used in this specification and claims we refer to that motion of a liquid such as is induced upon it in flowing through a pipe at a velocity greater than its critical velocity and which is characterized by the presence of innumerable eddy currents, as distinguished from the straight line or laminar flow where the liquid although induced to rotate under agitation in currents still flows for an appreciable time without interruption.

The definition of critical velocity adopted by Detrick et al. was taken from Principles of Chemical Engineering, supra, page 75, and is stated in the specification as "the velocity at which the type of motion changes from straight to turbulent flow."

That the phrase "turbulent flow" is used in count 1 as having the technical meaning so stated is, in effect, agreed to by Giambalvo, and it is claimed for him that such is inherent in the process described in his specification, although he made no reference therein to "turbulent flow" nor does his specification define "turbulent flow."

Detrick et al. teach that turbulent flow, in the sense used in their specification, may be created in different ways and Giambalvo's application teaches the feeding of the acid solution and a precipitating liquid (the "drowning" liquid such as water, etc.) simultaneously "into an enclosed region of relatively limited volume, while maintaining the region under conditions of intense agitation," and mentions "an ordinary centrifugal pump," as an example of a "suitable enclosed region." This is one of the instrumentalities named by Detrick et al.

From our study of the record we are convinced that if Giambalvo up to the time the patent was issued to Detrick et al., or their assignee, had any actual knowledge of turbulent flow as used in the patent he failed to disclose it. It is not reasonable to suppose that he had any consciousness of it in January 1939, when he claims to have reduced the invention to practice, else he would have described it in his application. No one reading his specification, not even one skilled in the art, would, in our opinion, obtain any impression that turbulent flow was an agency in his process. Agitation—intense agitation—is recited, but that is not turbulent flow. The Primary Examiner, who denied the motion to dissolve, himself said:

> * * * Turbulent motion is not necessarily produced when a liquid is caused to rotate under agitation. Depending upon the particular conditions agitation may induce laminar flow or turbulent flow or both types of flow, each at different portions of the liquid.

The Primary Examiner concluded, however, apparently largely because of the shortness of time required for passage of the liquid through the pump, that drowning must take place "in a region of turbulent flow."

Of course, it is not intended to suggest that Giambalvo would not be entitled to make the counts if the requisite features were found to be inherent in his application whether he was conscious of that fact or not. In the view which we take of the case it is unnecessary to go into that question.

We are not convinced that the requisite subject matter to support the counts is inherent in Giambalvo's application.

The Board seems to have been of opinion that if it had been shown that Giambalvo introduced the acid solution into the pump directly in the region of the turbulent flow which apparently would have been created in his centrifugal pump, he would have been entitled to make the counts, but it said:

> * * * If the acid solution is introduced into the water at a point in the inlet where the turbulent flow does not exist or where there is some laminar flow, then the resulting process would not be within the terms of the counts, and this is the crux of the matter. Examination of the Giambalvo specification fails to reveal how the acid solution is delivered to the inlet end of the pump. There is no drawing or description of this feature and it would be speculation to assume that the acid solution is fed directly into the pump in the region of turbulent flow. No good reason is seen for assuming any operation other than a mixing of liquids prior to entry into the region of intense agitation, in the absence of a contrary disclosure, and this type of mixing fails to satisfy the terms of count 1 in this regard. It is, therefore, concluded that the necessary inherency is lacking in the Giambalvo specification as to the process of count 1. Since count 2 calls for the pigment which has been precipitated by the process of count 1, it follows that the invention of count 2 is likewise not inherent in the Giambalvo disclosure.

In the case of *In re Draeger et al.*, 32 CCPA (Patents) 1217, 150 F.2d 572, 66 USPQ 247, 581 O. G. 7, this court said (citing numerous cases in point):

> Inherency does not mean that a thing might be done, or that it might happen, as in the instant case, 1 out of 20 odd times; but it must be disclosed, if inherency is claimed, that the thing will necessarily happen.

In view of our conclusion that Giambalvo is not entitled to make the counts because of lack of disclosure, it is unnecessary to discuss the matter of reduction to practice.

The decision of the Board of Interference Examiners is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE LINDENBLAD

No. 5438. Decided May 4, 1948

[— F.2d —; 77 USPQ 604]

1. APPEAL TO COURT—RECORD—REFERENCE CITED BY BOARD BUT NOT IN RECORD—EFFECT THEREOF.
   Where the decision of the Board of Appeals cited a reference in support of a statement made therein, but that reference was not included in the record brought before us, *Held* that the statement of the Board as to what it shows is accepted as correct.
2. SAME—REASONS OF APPEAL—ISSUES—BRIEFS.
   Where the only ground of rejection specifically discussed in appellant's brief is that set forth in the final decision of the Primary Examiner, and where that decision differs from the one set forth in his statement to the Board, which was affirmed, the final decision being a rejection upon M in view of G and L and the statement being, M in view of G and L or B, *Held* that this court is loathe to dispose of cases on technicalities and will not do so when the pleadings are such as to enable us properly to consider the merits, and *Held* that the appellant's brief, although meagre, is sufficient to justify consideration of at least the ground of rejection affirmed by the Board.
3. SAME—SAME—SAME—SAME.
   Though in appellant's brief there are a number of questions which the brief states neither the Primary Examiner nor the Board answered, we do not find where they were requested to answer such questions, nor do we hold that it would have been incumbent upon them to answer had the request been made.
4. PATENTABILITY—RADIO RELAYING STATION.
   Certain claims for a radio relaying station comprising a high lift-slow speed airplane *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 425,824.

AFFIRMED.

Harry Tunick and *Charles H. Brown* (*Conder C. Henry* of counsel) for Lindenblad.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

GARRETT, *P. J.*:

Appellant seeks review and reversal of the decision of the Board of Appeals of the United States Patent Office in so far as it affirmed the Examiner's rejection of eleven of the claims in appellant's application for patent for alleged "Improvement in Radio Relaying System." Seven claims stand allowed. The appealed claims are numbered 1, 2, 3, 4, 8, 10, 13, 14, 15, 20 and 21.

Claims 10, 14 and 20 were submitted in the brief for appellant as representative claims, and we here reproduce them.

10. A radio relaying station comprising a high lift-slow speed airplane for use at a distance of 35,000 feet and higher above the earth's surface, said station having mounted on said airplane a directive antenna for receiving signals and an omnidirectional antenna for broadcasting said signals over a wide area.

14. A radio relaying system comprising a transmitting station mounted on the earth's surface, and a pair of spaced aircraft repeater stations located above the earth's surface and located at different distances from said transmitting station, means at said transmitting station for radiating ultra short waves of the order of one meter and less, a directive antenna on that one aircraft repeater station which is located nearest said transmitting station for receiving said waves, an omnidirectional antenna on said last aircraft for radiating waves having the same modulations as the received waves, and means in said last aircraft for automatically transferring energy between said two antennas, said other aircraft also having a directive antenna for receiving the waves radiated by said first aircraft and an omnidirectional antenna for re-radiating waves.

20. A television radio relaying system comprising a transmitting station located substantially on the earth's surface for radiating ultra short waves, a relay station located at a relatively great distance above the earth's surface and suspended in the air, said relay station having an antenna for receiving television signals transmitted from the earth station, a radio receiver in said relay station coupled to said antenna, and transmitting apparatus also located on said relay station and coupled to the output of said receiver, and a multi-directional antenna located on said relay station for relaying the television signals received by said relay station, said last antenna being so constructed and arranged as to service an extremely wide area many miles in diameter, below said suspended relay station, said relay station having automatic relaying apparatus.

Those quoted are the only claims discussed in the brief for appellant before us, and we are of opinion that if claim 10 should be held allowable it would logically follow that all the appealed claims should be allowed, and that unless claim 10 be found allowable no one of the other appealed claims should be allowed. Consequently there is no necessity for analyzing the claims other than those quoted.

It may be stated that claim 20, supra, is the only claim which specifically mentions television. The others, however, seemingly are broad enough to cover that art.

As is discernible from the quoted claims the application relates to a radio relaying system in which high lift-slow speed airplanes are employed in transmitting and relaying programs; "particularly," says the brief for appellant, "an aircraft mounted radio system which utilizes radio waves of such high frequencies that they are known as direct-line or line-of-sight radio waves."

The brief for appellant states in substance that he has conceived the idea of broadcasting from the stratosphere by means of a plane flying continuously in that part of the space above the earth and that the conception includes point-to-point relaying from plane to plane in the stratosphere. It is said that by going into the stratosphere an extremely high antenna location is provided which effectively increases the radiated power to such an extent that wide broadcast coverage is secured with radio transmitters of small rating. The general idea, as we understand it, is that by utilizing, as carriers of relay stations, planes flying through the stratosphere, television and other programs may be transmitted over long distances, no objects such as high buildings, hills, mountains, etc., being in the paths of transmission.

One figure of the drawings discloses two airplanes represented as being about seven miles above the surface of the earth and from 400 to 600 miles apart. Paths of transmission from stations near the surface of the earth to the planes and from plane to plane and from plane to earth are indicated. The number of planes in the stratosphere, of course, may be determined as desired to cover a particular line. The specification suggests that the airplane relay station located in the stratosphere can "service an area of a diameter of about 500 miles."

It is taught that in operation short wave radio signals are transmitted from a transmitter located near the earth's surface to a relay station on a plane. From there they may be transmitted to a receiving station near the ground or to a relay station on another plane from which they may be transmitted to the earth or to another plane.

A second figure of the drawings shows a form of mechanism which can be employed on the airplanes for relaying the programs, and it is explained in the specification.

The system is described in the brief of the Solicitor for the Patent Office as follows (numerals identifying certain features being deleted as indicated by asterisks):

> A transmitter A located near the earth's surface transmits its short-wave radio signals, which are said in one claim, claim 20, to be "television signals," to a complete relay station B, which is mounted upon a high-lift, slow-speed airplane flying at an altitude of about seven miles. The airplane has a directional antenna * * * for receiving from the transmitter, and a non-directional or omnidirectional antenna * * * for rebroadcasting the received signals to a receiver upon the ground. The airplane also has a second directive antenna * * * for retransmitting the received signals to a second relay station C similarly placed upon another airplane. * * *

In rejecting the claims the Primary Examiner cited the following patents as references: Blackmore, 806,052, November 28, 1905; Morris, 1,624,966, April 19, 1927; Goldsmith, 2,155,821, April 25, 1939; Luck, 2,252,083, August 12, 1941.

[1] Those were also listed, and each was referred to, in the decision of the Board, and in a second decision rendered in response to a request for reconsideration the Board also cited a British patent, No. 120,788, November 28, 1918, in support of the Board's statement that "captive barrage balloons have been used [for radio transmitters] up to 15,000 feet and higher above the earth with contemplated use as high as 30,000 feet * * * which is of the same order as that stressed by appellant * * *."

The British patent was not included in the record brought before us but the statement of the Board as to what it shows, of course, is accepted as correct. *In re Pirani and Nitschke*, 22 CCPA (Patents) 1002, 75 F.2d 223, 24 USPQ 411, 457 O. G. 246.

The patent to Blackmore is for a high-frequency receiver designed for use in wireless telegraphy. The specification states that it "may be suspended at high altitudes by means of balloons or other devices." It is taught that the high frequency currents actuate apparatus which will operate a second transmitter of electrical waves and that this overcomes or obviates the difficulty in transmitting waves or rays over long distances occasioned by the curvature of the earth. The patent mentions "high altitudes" but gives no specific altitude in terms of measurement such as feet or miles.

The Morris patent shows a system wherein ships traveling across an ocean over which it is desired to transmit a message are supplied with radio equipment employed as repeating or relaying stations. It teaches the communication of one "land" station with another "land" station by passing the message through intervening ships having radio repeating apparatus of the proper type.

The features of the Goldsmith patent regarded as pertinent are recited in the brief of the Solicitor for the Patent Office as follows (page references omitted):

> * * * It discloses in Fig. 13 * * * a relay station which may be used in a system useful with short wave and ultra-short wave channels where intermediate relay stations are employed * * *. The relay includes a directional receiving antenna for receiving from the initial transmitter with appropriate apparatus for rebroadcasting from a nondirectional antenna. There is also a second directional transmitting antenna. The relay station includes suitable demodulating and modulating apparatus, as well as power amplifiers. Switching apparatus is also provided * * *. Fig. 9 * * * is said * * * to show "a typical concatenation of relay stations A, B, C, D, E, and F which are so associated that communications may be established between any two of such stations." As practical applications of the system are mentioned communication "to or from the aircraft * * * with automotive police vehicle" * * * "with railroad trains" * * *, and "with river and harbor craft" * * *.

The Luck patent recites that it relates to a radio system designed especially for controlling the traffic of aircraft in the vicinity of an airport. It appears to have been cited for its disclosure of a system embracing a beacon transmitter located on the ground which transmits signals to a receiver on an aircraft which receiver controls, through mechanism, a transmitter on the aircraft that sends signals to a receiver at the airport.

The Primary Examiner rejected all of the appealed claims, (1) "as not patentably distinguishing over the disclosure of the patent to Morris in view of a specific relay shown in Goldsmith and the relay shown in Luck or Blackmore on a specific form of dirigible craft" and (2) "as met in the relay system shown in Luck or Blackmore in view of the relay system shown in Goldsmith." The Board expressly affirmed both grounds of rejection.

The brief for appellant discusses each of the cited patents except the British patent no copy of which was included in the record. To that the brief makes no reference. As has been stated the Board's statement of what that patent shows is accepted as correct, and that seems to cover the feature of height from the earth's surface, assuming without holding that altitude may have some bearing upon the issue.

Of the Blackmore patent the brief says in substance, that the signals which are received by the receiver are reproduced at points near the earth's surface; that it can only serve a small and limited area; and that the great weight of the cable of the captive balloon precludes attainment of the high altitudes contemplated by appellant "and set forth in the claims."

We observe that appealed claim 10, supra, is the only claim of the application before us which definitely specifies height from the earth's surface—35,000 feet. Claim 14, supra, specifies "above the earth's surface" and claim 20, the only claim specific to television recites "a relatively great distance above the earth's surface."

It is asserted in the brief that the Goldsmith patent is a ground type of relay station, emphasis being placed upon the word "ground"; that it makes no suggestion of how to overcome the "insurmountable difficulties" involved in attempting its use for nation-wide or wide area television "broadcasting on ultra short radio waves," and that there is no suggestion in it that the features disclosed by Goldsmith may be included in a television system. Indeed the brief says:

> * * * As a matter of fact, the very contrary is true. On page 6 of the Goldsmith patent, column 1, the patentee enumerates the applications of his concept. Of the five items enumerated, not one even remotely hints at television as a possible application.

Considering appellant's claims without reference to his specification, no one of them except claim No. 20, seems to us to remotely hint at television as a possible application of appellant's concept, but they were not rejected on that ground, nor do we think that the Goldsmith patent should be cast aside as a reference for that reason. We note that the brief for appellant concedes that "Certain aspects of Goldsmith's system may serve a useful function in a television system such as was conceived by appellant." Goldsmith's application is not limited to a ground system, although it does not specify an aerial system.

With respect to the Luck patent it is insisted that it does not involve relaying; that it does not involve the transmission of information received from another station, and that it merely furnishes information as to its identity, bearing and altitude with respect to an airport. It is said (identifying numerals being omitted):

> * * * The signal from the rotating beacon at the airport is utilized to start a pulse generator * * * on the aircraft, and the output of this pulse generator * * * is keyed by the altitude and identifying signals from the aircraft keyer * * * to thereby actuate the transmitter * * * to send out a pulse having a certain phase relation relative to the airport beacon signal. * * *

One definition of "relay" given in Webster's New International Dictionary is

> 3. *Elec.* An electromagnetic device by which the opening or closing of one circuit produces a corresponding opening or closing of another, more powerful one. * * *

As we understand the Luck device it has a relay feature, as was specifically held by the Primary Examiner, who said, "Luck and Blackmore each disclose a radio relay station mounted on an aircraft." The applicability of the Luck patent as a reference here may be conceded to be limited but it is, we think a proper reference for the purpose for which it was cited.

It is contended that the Morris patent employs ships instead of aircraft as carriers of the relay mechanisms; that the problem of covering the ocean with broadcast information "does not arise" (meaning, we suppose, in the Morris operation), and that because the Morris stations are ambulatory the re-

ceived and transmitted signals may fade in and out and reproduction be anything but satisfactory.

It is not supposed that appellant's airplanes will stand still in the stratosphere. The specification in fact depicts them as being in movement—"flying above the weather." Therefore they must be ambulatory.

Appellant's brief discusses two other patents which seem to have been cited during the prosecution of the application but subsequently withdrawn or abandoned as references. They require no notice by us.

[2] The brief for appellant quotes and very briefly discusses a paragraph hereinafter quoted from the final decision of the Primary Examiner, and this is, in fact, the only ground of rejection which is specifically discussed by appellant.

It is pointed out in the brief of the Solicitor for the Patent Office that the ground so quoted and discussed "is not exactly either one of the two grounds specified by the Examiner * * * in his *statement*, both of which were specifically affirmed by the Board of Appeals," [Italics supplied] and it is suggested that technically the case is left in a situation "where appellant has argued neither of the two outstanding grounds of rejection." It is further suggested that failure to argue even one ground of rejection "would seem to leave the case in the same situation as if no reason of appeal had been presented as to that ground," and that this court "apparently could not reverse the decision of the Board of Appeals" without reversing its own holdings "in numerous similar cases," citing *In re Boyce*, 32 CCPA (Patents) 718, 144 F.2d 896, 63 USPQ 80, 568 O. G. 568.

The brief of the Solicitor for the Patent Office, however, concedes that the ground of rejection quoted by appellant from the Primary Examiner's final decision is "somewhat like" the first ground of rejection recited in the statement following the appeal to the Board, the chief difference being that the Blackmore patent was included in the first ground of the statement but not in the quotation from the final decision.

We observe that the statement following the appeal to the Board was not signed by the same individual who signed the final decision, and we note also that a third individual signed what evidently is a reply to a brief submitted before the Board by appellant. So, first and last, at least three Primary Examiners appear to have considered the case.

The paragraph from the final decision, rendered December 12, 1944, quoted in the brief of appellant before us reads:

> Claims 1, 2, 3, 4, 6, 8, 10, 11, 13, 14, 15, 20 and 21 are rejected as not patentably distinguishing over the combination shown in Morris of a relay station on a dirigible craft in view of specific relay shown in Goldsmith and the relay shown in Luck on a specific form of dirigible craft.
> * * *

The ground of rejection recited in the Primary Examiner's statement following the appeal to the Board, dated July 6, 1945 reads:

> Claims 1, 2, 3, 4, 8, 10, 13, 14, 15, 20 and 21 are finally rejected as not patentably distinguishing over the disclosure of the patent to Morris in view of a specific relay shown in Goldsmith and the relay shown in Luck or Blackmore on a specific form of dirigible craft.

Obviously the only difference between the two holdings is that the Primary Examiner who prepared the statement added to the first ground of rejection the Blackmore patent which the Primary Examiner who rendered the decision from which the appeal to the Board was taken had cited in his second ground of rejection.

This court is loath to dispose of cases on technicalities and will not do so when the pleadings are such as to enable us properly to consider the merits. We think appellant's reasons of appeal are sufficient to bring the merits before us here, and that appellant's brief, although meagre, is sufficient to justify consideration of at least the first ground of rejection.

Further we think sufficient has been said to indicate clearly our belief that the first ground of rejection was properly applied. As we view the case, we would be of opinion, were the matter before us in that form, that the claims should be rejected on the ground stated in the final decision of the Examiner without reference to the Blackmore patent.

Taking claim 10 which we have hereinbefore discussed as being representative, it seems obvious to us that the Goldsmith patent discloses everything covered by that claim except that it does not show the relay mechanism mounted on an airplane. The relay station of Luck is mounted on an airplane. So far as operation is concerned, we find nothing of record to indicate that a system which will work at the earth's surface will not also work when elevated above that surface. It is a fair assumption of course that modifications would be required to meet the conditions resulting from the type of carrier used in conveying the relay station and it is quite possible that the allowed claims in this case cover modifications essential when an airplane is used as a carrier. We do not, however, attempt to construe the allowed claims because they are of no interest here.

[3] In appellant's brief there are a number of questions which the brief states neither the Primary Examiner nor the Board answered. We do not find where they were requested to answer such questions, nor do we hold that it would have been incumbent upon them to answer had the request been made.

The patent to Morris is not included as one of the references in the second ground of rejection. It is questionable whether the discussion in appellant's brief is sufficiently definite to justify consideration of that ground—certainly nothing is presented which would justify its reversal.

The decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, J., was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE HUNTER

No. 5441. Decided May 4, 1948. Petition for rehearing denied June 1, 1948

[166 F.2d 1066; 77 USPQ 610]

1. PATENTABILITY—EVIDENCE OF—LETTER OF COMMENDATION.
   Where appellant relies upon certain letters commendatory of appellant's arrangement but they are not sworn to, *Held* that they do not constitute evidence which could be considered under the rules of practice of the Patent Office, nor can they be accepted as evidence here.
2. SAME—INVENTION—UTILITY.
   The fact that an arrangement has utility does not mean that its development resulted from the exercise of the inventive faculty.
3. SAME—COMPOSING MACHINE ELEMENT.
   Certain claims for a composing machine *Held* properly rejected as non-inventive over the prior art cited.

APPEAL from the Patent Office. Serial No. 511,020.

AFFIRMED.

Watson, Bristol, Johnson & Leavenworth (*David A. Woodcock* and *Norman N. Schuttler* of counsel) for Hunter.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

GARRETT, *P. J.*:

Appellant here seeks review and reversal of the decision of the Board of Appeals of the United States Patent Office sustaining the rejection by the Primary Examiner of the seven claims, numbered 1 to 7 inclusive, of appellant's application for patent entitled "Composing Machine Elements and Method for Distinguishing Fonts."

More specifically appellant's alleged invention relates to an arrangement whereby the operator of a linotype or similar machine may distinguish by means of colors between the matrices, belonging in different fonts, by the use of which matrices type for printing is cast or molded line by line. The matrices are of metal—usually brass. One edge of each matrix is a "reading," or "reference," edge, visible to the operator of the machine when the matrices are in line, and the opposite edge is indented with a die for the formation of a letter or character. Upon the reading edge there is stamped a letter or other character corresponding to the die on the opposite edge. The fonts are usually kept in magazines within which the matrices for each letter or character are arranged in separated partitioned channels. The machine may have from two to eight magazines carrying matrices for different styles of type—plain-faced, italics, bold-faced, etc.—attached, and other magazines may be conveniently available for substitution by the operator.

The machine is equipped with a keyboard resembling that of a typewriter showing letters, figures, punctuation marks, etc. In operation the mechanic, or "type-setter," touches the key upon which the desired letter or character is depicted, and the matrix falls into place in a container called an assembler or assembly box. It is necessary to adjust the matrices for each line by proper spacing between the words so that the lines will be of uniform lengths and even at both ends adjacent the "rules" which separate the columns. It sometimes happens that an unusual character not carried in one of the regular magazines is desired and in such event the operator may insert it by hand.

From each line of matrices a solid line of type is cast with molten metal. If there be an error in the line, the entire line must be reset and recast in order to make the necessary correction.

It not infrequently happens that different styles of type are used in the same line. For example, one word in a line may be of script and all the other words of plain type. In such cases in distributing the matrices after the line of type has been cast errors sometimes occur and a matrix will be returned to the wrong font or the matrices may become mixed in other ways with which those skilled in the printing art are familiar.

It is desirable that the operator of a machine may be able readily to detect a matrix from a wrong font at the time the matrices are being set in line so that it may be corrected before the line of type is cast; also it is desirable that the matrices may readily be identified as to font as they are being redistributed to the magazines. Appellant teaches the doing of this by applying different colors on the reading, or reference, edges of the matrices belonging to the different fonts. The claims do not designate any particular color for any particular style of type, but the specification gives illustrations, such, for example, as using light orange for italics, light green for pica, etc. It is noted that the specification states:

> The term "color" is used herein to include white, black and grey as well as what are more strictly colors.

All of the appealed claims are product claims, and No. 1 is representative. It reads as follows:

> 1. In a composing machine having a plurality of magazines each containing a different font of elements having reference faces adapted to be exposed when a line of said elements is composed, the combination of one font of elements having a uniform color upon the reference face of its said elements, with a second font of elements having a different uniform color upon the reference face of its said elements.

So far as we can discern, there are no limitations in any of the other claims which require separate consideration. In other words, all seven claims stand or fall together.

The following patents were cited as references by the Examiner and treated as such by the Board: Dodge, 786,199, March 28, 1905; Clarke, 965,155, July 26, 1910; Hill, 1,466,437, August 28, 1923; Shinohara, 1,657,437, January 24, 1928; Barker, 1,929,383, October 3, 1933.

In his rejection of October 21, 1944, which was declared to be final, the Examiner based his rejection "on the patent to Hill in view of the patents to Clarke and Shinohara." Thereafter appellant filed certain affidavits and exhibits relating to utility and an argumentative letter in which the patent to Dodge was referred to. The Examiner responded thereto in an "advisory action" in which, after discussing the Dodge patent and citing the Barker patent, he asserted:

The proposed argument, affidavits and exhibits are not considered to place the application in condition for allowance and thus are not properly responsive to the final rejection of Oct. 21, 1944, and have not been entered.

Subsequently counsel for appellant requested the entry of the documents so alluded to, and while there is no specific statement that they were entered, we assume that they were because "affidavits and exhibits" are referred to as having been presented in the statement of the Examiner following the appeal to the Board, and "affidavits" are referred to in the latter's decision.

It is noted that the statement following the appeal to the Board was signed by a different individual from the one before whom the application was prosecuted, and in the statement, after reciting rejection of the claims "as unpatentable over the disclosures of the patents to Hill, Clarke and Shinohara," it is said:

The claims also are considered to be unpatentable over Dodge and the patent to Barker, cited in the advisory action given after the final rejection. The applicant has waived any right to resume the prosecution of the application before the Primary Examiner resulting from the addition of the latter reference to the record.

The Board approved both rejections.

The patent to Hill (which appears to have been assigned to the assignee of the application here involved, and which expired several years ago) discloses a process (the claims are process claims) in which the reading or reference edge, visible to the operator, of a brass matrix is "dark or black" and has on it, at a designated point, an indented letter or other character that may be filled with "a lighter colored or white pigment." Evidently "lighter colored" means lighter than the "black or dark" surface portion of the edge of the matrix. The light colored or whitened letter or character identifies the letter or character on the opposite edge of the matrix fashioned to receive the molten metal which forms the type.

The patent of Shinohara relates to type for printing which is made of glass. It recites that "the classification of types with reference to the style of characters may be made by imparting simply different colorations to the material composing the printing types."

The Clarke patent relates to matrix plates for forming printing type, the plates being distinguishable by having their surfaces differently colored. The colors however are not on the "reading," or "reference," edge of the matrix, as in the Hill patent and in the involved application, but on one of the sides of the plate. Apparently the color would not be visible to the operator after the matrices fall into line in the assembly box and hence the colors would not be of aid in determining the font in which a matrix standing in line belongs, but, obviously, it would be of aid where the matrices are handled manually.

The Dodge patent which, it is noted, was issued in 1905 and which shows on its face that it was assigned to Mergenthaler Linotype Company, a pioneer in the field sometimes loosely referred to as the "type-setting" field, discloses a matrix having in its lower end what is described as a font distinguishing notch, and in the front edge, which is visible to the operator, a transverse notch, or transverse notches, "having a distinctive location for each face of a given size"; that is, according to the specification, "six-point matrices carrying a light-face character will have the notch in a different location from other six-point matrices carrying black faces, italics, or characters of other styles."

The Barker patent does not relate to the printing art, but to a filing or index system in which are used cards that have tabs to which distinctive colors are applied, and it is taught, in substance, as recited in the brief of the Solicitor for the Patent Office, that:

• • • The tabs are so arranged that similar cards have similarly colored tabs and the colored tabs may be used both as an indication of the location of a desired card as well as an indication of the misfiling of a card. • • •

The question here is whether having before him the art which has been described it required exercise of the inventive faculty on the part of appellant to evolve the color arrangement shown in the application and hereinbefore described.

[1] Appellant relied below and here relies strongly upon certain letters introduced as exhibits and certain affidavits presented after the final rejection of the claims by the Primary Examiner.

The letters referred to appear to be from persons engaged in, or having some knowledge of, the work carried on in the composing rooms of different newspapers. They are commendatory of appellant's arrangement, and we have no reason to doubt the good faith of the writers, but unhappily for appellant they are not sworn to and did not constitute evidence which could be considered under the rules of practice of the Patent Office, nor can they be accepted as evidence here.

There are two affidavits. One is by Mr. Clifford Yewdall the secretary-treasurer of Matrix Contrast Corporation, the assignee of the involved application and of the Hill patent, supra. He states that he had read the letters referred to and that they "are typical of the satisfaction which users have found in the Hunter invention as a final solution to a long experienced difficulty." This, of course, cannot make evidence of letters not sworn to.

Mr. Yewdall testified further, in effect, that he was familiar with the Hill patent which was at one time involved in litigation (See *Matrix Contrast Corporation et al.* v. *Kellar*, 34 F.2d 510) and the Clarke patent and stated "neither I nor anyone else, so far as I know, ever got any suggestion from the Hill and Clarke patents for solving the font difficulty in the manner which the Hunter application has now taught." Mr. Yewdall is not shown to have had any part in developing the arrangement. Mr. Hunter is the applicant and there is no affidavit by him.

The only other affidavit is a joint one made by two gentlemen who had had over twenty years' experience in printing during which time, they stated, they had been familiar with the operation of multiple line casting machines using several different fonts of matrices or "mats." At the time of testifying one of them, Mr. Arthur H. Weiss, was general foreman and the other, Mr. George Kirchner, was chief machinist in the employ of the New York Post.

Their testimony was highly commendatory of appellant's arrangement. Among other things they said:

This is the first effective means we have ever known for preventing mistakes in mixing mats from different fonts, and it has practically eliminated trouble from that source. • • •

They pointed out in effect the difficulties and loss of time resulting from mixing fonts, and stated:

The new colored matrices save eyestrain for the operators as well as enabling errors in font to be quickly seen and corrected in the assembler, even when dealing with small type. This colored matrix invention has been needed to solve this difficulty ever since we became acquainted with multiple magazine line casting machines, and certainly for more than twenty years, without anyone previously having devised this cure, so far as we know.

The affidavit bears upon the utility of appellant's arrangement, but not upon commercial success. There is in fact no evidence as to the extent to which appellant's plan has been exploited commercially.

The Board did not question the matter of utility but upon the contrary said:

• • • We concede, as did the Examiner, that the use of appellant's idea probably results in less font errors, and while the use of such an idea may be ingenious, we do not think it amounts to invention over the references such as Shinohara or Clarke, which are in the same general art as appellant's, and other common uses of colors to detect and reduce errors in filing such as shown by Barker. • • •

[2] The fact that the arrangement has utility, however, does not mean that its development resulted from the exercise of the inventive faculty.

[3] The only change required in the Hill patent to produce one form of appellant's arrangement is to apply, say, red, pink, orange or other colored pigment instead of white to the character on the reading, or reference, edge of the matrix—the edge visible to the operator when the matrices are in line. The only modification of the Clarke patent required for the same purpose is to apply the colors shown by Clarke to the edge of the matrix instead of upon its side. The Shinohara patent shows the use of coloration to distinguish classes of type. It seems quite clear to us that even if the Dodge and Barker patents were disregarded (and we do not hold that they should be) it is obvious that there is no invention in appellant's plan over the other art cited.

The decision of the Board is therefore affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE PELZER

No. 5458. Decided June 1, 1948

[168 F.2d 537; 78 USPQ 66]

PATENTABILITY—PROCESS OF MANUFACTURING GASOLINE FROM HIGHER BOILING PETROLEUM OILS.

Certain claims to an improvement in the manufacture of gasoline from higher boiling petroleum oils *Held* properly rejected on the prior art.

APPEAL from the Patent Office. Serial No. 337,127.

AFFIRMED.

Pennie, Edmonds, Morton & Barrows (*Louis D. Forward* and *Clarence M. Fisher* of counsel) for Pelzer.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

GARRETT, *P. J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the rejection by the Primary Examiner of four claims numbered, respectively, 1, 2, 5, and 6 in appellant's application for patent relating to the manufacture of gasoline. Three claims stand allowed.

In the brief for appellant before us it is stated, in substance, that "the ruling with respect to claim 1 will be determinative with respect to claims 2 and 5," and that, for the purposes of this appeal, "it should be sufficient to consider only claims 1 and 6." Claims 1 and 6 read as follows:

1. In the manufacture of gasoline from higher boiling petroleum oils, the improvement which comprises mixing a small proportion of a finely divided argillaceous material with a high boiling petroleum distillate stock, heating this mixture to and at a high cracking temperature approximating 950°–1100° F. while flowing as a stream at a velocity sufficient to maintain said material in suspension in said stock for a period of time sufficient to convert a substantial part of said stock into hydrocarbons within the gasoline boiling range, thereafter separating the resulting hot products into a composite vapor fraction including the gasoline hydrocarbons and a substantially dry cokey residual material comprising the residue of substantially all of said argillaceous material, and recovering gasoline from said composite vapor fraction.

6. In the manufacture of gasoline from higher boiling petroleum oils, the improvement which comprises mixing with a high boiling petroleum distillate stock a small amount of a finely divided synthetic active catalyst comprising silica and alumina, heating this mixture to and at a temperature approximating 950° F. while flowing as a stream at a velocity sufficient to maintain said catalyst in suspension in said stock for a period of time sufficient to convert a substantial part of said stock into hydrocarbons within the gasoline boiling range, thereafter in a coke separating zone maintained at a temperature not substantially exceeding 825° F. separating the hot products of said heating into a composite vapor fraction including the gasoline hydrocarbons and a substantially dry cokey residual material comprising the residue of substantially all of said catalyst, and recovering gasoline from said composite vapor fraction.

The following patents were cited as references: Stratford, 2,091,892, August 31, 1937; Houdry, 2,141,185, December 27, 1938; deFlorez, 2,323,206, June 29, 1943.

All the appealed claims are process claims and a drawing explained in the specification of the application discloses an apparatus with which the process may be carried out. The references also embrace drawings, the apparatus disclosed by the deFlorez patent resembling that disclosed by appellant in a number of respects.

As may be visualized from the claims hereinbefore quoted, appellant's process embraces mixing a small proportion of a finely divided synthetic active catalyst made of silica and alumina with a high boiling petroleum distillate stock. The mixture while flowing as a stream at a described velocity is heated to and at a high cracking temperature approximating 950°–1100° F. Thereafter the hot products are separated (claim 6, supra, states in a coke separating zone maintained at a temperature not substantially exceeding 825° F.) into a com-

posite vapor fraction including the gasoline hydrocarbons and a substantially dry cokey residual material comprising the residue of substantially all of the catalysts, and finally recovering the gasoline from the vapor fraction.

In the Stratford patent oils are treated for cracking purposes in the presence of clay, a slurry of clay in oil being fed from a tank through one pipe into another pipe where it mixes with a high boiling petroleum distillate stock. The mixture is passed through another coil in which the cracking operation is carried out at a temperature "from about 750° F. to 1,000° F., although higher cracking temperatures may also be used." The mixture of cracked hydrocarbons and clay passes from the cracking coil into a soaking drum. Tar is obtained as a residual liquid product, while the naphtha and gas oil are passed as an overhead vapor product into a fractionating zone in which the gas oil is separated from the naphtha.

The Houdry patent, apparently, was cited solely for its disclosure of the use, in the reforming of naphtha, of a catalyst which "is essentially a blend of silica and alumina with as little extraneous material as possible," and it may be said at this point that it is not questioned by appellant that silica-alumina materials have long been recognized in the art as cracking catalysts, and the applicability of Houdry as a reference on that particular feature is not in issue.

In the deFlorez patent petroleum distillate stock is taken from a fractionating tower and pumped through a pipe into a heating coil contained within a heater. There a slurry containing a solid catalytic material is admitted to the coil and mixed with the oil. The mixture is heated to and at a temperature of about 1000° in the heater. After the heating the hot products are separated in a coke separating chamber into a composite vapor fraction including gasoline hydrocarbons and a substantially dry cokey residual material. The vapor fraction passes out through a pipe. Gasoline is recovered from the composite vapor fraction.

The Examiner discussed the appealed claims separately in his statement following the appeal to the Board and rejected each of them upon the deFlorez patent and also on the Stratford patent. Both the Examiner and the Board seem to have considered the deFlorez patent the better reference and the Board affirmed the rejection on it, stating that the Stratford patent was regarded as cumulative.

It is conceded, of course, that appellant has made an invention. That is evidenced by the allowance of three claims. Those claims obviously must have been found by the Examiner who allowed them distinguishable in a patentable sense from the prior art, but this was not found to be true as to the appealed claims, and, as is pointed out in the brief of the Solicitor for the Patent Office, in effect, appellant's elaborate brief before us fails to specify limitations in the appealed claims which do distinguish them in a patentable sense from the prior art.

In discussing claim 1, for example, appellant refers to limitations which, while they may be present in his process, are not defined in that claim. So far as the limitations or steps actually defined in that claim are concerned, we think it was correctly held that they are not patentable over the references.

It does not seem to be questioned by appellant that the first step of claim 1, that is "mixing a small proportion of a finely divided argillaceous material with a high boiling petroleum distillate stock" is taught by deFlorez.

With respect to the second step, that is the heating of the mixture, it appears that the deFlorez patent defines alternative methods of operation. In one of those no catalyst comes into contact outside the reaction chamber with the oil to be cracked. This, apparently, would not meet the limitation in claim 1, but in another method, as is conceded by appellant, the slurry of catalyst in its carrier liquid is introduced to the heating coil and this does meet the limitation, or at least claim 1 is not deemed to be patentable over that disclosure.

The degree of temperature stated in claim 1 specifies 950°–1100° F., while deFlorez specifies "about 1000°." Stratford gives a range "from about 750° F. to 1000° F." or higher.

With respect to the time of heating, or "heating rates," claim 1 does not specify any particular rate, but merely requires heating "for a period of time sufficient to convert a substantial part of said stock into hydrocarbons within the gasoline boiling range." There is nothing in this general statement which distinguishes this step from that of deFlorez or from that defined by Stratford.

The step of separating the hot products into a composite vapor fraction including the gasoline hydrocarbons and a substantially dry cokey residual material, defined in the claim, obviously is shown by the deFlorez patent, the separation taking place after the conversion by heating, and the residual material being a "solid coke-like material."

The sixth and last step—"recovering gasoline from said composite vapor fraction"—is disclosed by deFlorez as "fractionating the vapors and condensate * * * to form gasoline * * *."

The only difference between claim 1 and claim 6 that is emphasized by appellant is that the latter specifies maintaining the temperature in the coke separating zone at "not substantially exceeding. 825° F."

As has been indicated, the Stratford patent teaches that the temperature at which the cracking is carried out may vary from about 750° to 1000° F. or higher. There is no specific teaching, however, as to the degree of temperature maintained in the separator wherein the naphtha and gas oil are separated from the tar, nor do we find any specific degree taught by deFlorez, but we are not persuaded that "not substantially exceeding 825° F." presents a critical standard.

The Examiner held that it "appears to be merely an optimum temperature and not a critical one."

The Board's discussion of claim 6 reads:

As to claim 6, it is urged that the 825° F. temperature is a critical limitation as shown by Examples 1 and 2. We do not regard the showing by these examples as establishing that there is a sharp demarcation between the temperature which gives lessened gasoline production when a high temperature prevails in receptacle 14 and for enhanced gasoline production when a lower temperature prevails. The transition may well be gradual, as is implied by the wording of the claim—"not substantially exceeding 825° F." Moreover, it would appear to be well within the skill of the routine investigator in testing the various temperatures that could prevail in deFlorez's chamber 28 to notice that the gasoline yields varied at the temperatures involved.

In arguing the question along with the other question hereinbefore discussed the brief for appellant urges that appellant has obtained results superior to the results obtainable by the prior art processes. That may be true. It is possible that the features responsible for such results may be found in the allowed claims, but whatever the situation in that regard the appealed claims must be tested in the light of the prior art by the steps defined in the claims.

We are not convinced that the Board erred in its holding and its decision is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE STRECKERT ET AL.

No. 5429. Decided May 4, 1948

[167 F.2d 1010; 77 USPQ 592]

1. PATENTABILITY—METHOD—COMBINING PRIOR ART FEATURES.

Although no single reference anticipates any of the claims and a comparatively large number of references have been used in making the rejection, *Held* that, if the features claimed are all old, and if there was no invention in combining them in a single process or product, it is not material that a number of references are used in rejecting the appealed claims.

2. SAME—SAME—SAME.

Where the prior art disclosures are designed to accomplish the same general purpose as appellants' process, namely, the preservation of foods and the prevention of chemical or bacterial decomposition, *Held* that it is natural to suppose that the combination of several of the preserving steps, disclosed by the references in a single process, would result in more effective preservation than would be obtained by any one of the prior art steps, and *Held* that it is within the province of the skilled worker in the art to employ old preserving steps in any sequence which he deems proper.

3. SAME—PRODUCTS RESULTING FROM PROCESS—UNPATENTABLE WHERE PROCESS IS UNPATENTABLE.

Where the products claimed are merely those which necessarily result from the use of appellants' process, *Held* that since the process claims are unpatentable, the product claims too are unpatentable.

4. PATENTABILITY—METHOD OF PRESERVING MEAT AND PRODUCT THEREOF.

Certain claims to a method of preserving meat and the products thereof *Held* unpatentable as defining nothing more than an obvious selection of the prior art disclosures.

APPEAL from the Patent Office. Serial No. 431,858.

AFFIRMED.

Towson Price for Streckert et al.

W. W. Cochran (*J. Schimmel* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all the claims in appellants' application for a patent for an alleged invention relating to a method of preserving meat and the product thereof.

Claims 9, 12, and 20 are sufficiently representative of the appealed claims. They read:

9. The method of preserving hams comprising smoking at a temperature higher than 158° F., treating the surface of said hams with ultra-violet radiation to kill bacteria while allowing them to cool to below 70° F., dipping said hams while still under said radiation in sterilized melted wax containing about .2% sodium benzoate for about one minute, cooling, redipping for about one-half minute, cooling for at least one hour, and wrapping.

12. Smoked ham freed from surface bacteria by ultra-violet radiations, dipped in melted wax while still protected by said radiation, and cooled.

20. The method of preserving fresh hams comprising enclosing in stockinets, thoroughly cooking, moving said cooked hams directly to a room equipped with bactericidal ultra-violet radiation-generators, so that they are protected and maintained sterile under such radiation, while allowing said cooked hams to cool to below 70° F., heating microcrystalline wax to a temperature of at least 212° F., adding about .2% sodium benzoate, dipping said hams, while still protected by said ultra-violet radiation, in said benzoated wax, and cooling, whereby the microcrystalline wax, reinforced by the stockinet, maintains a durable protective coating over the cooked sterile ham, and makes it possible to keep it even though unrefrigerated, without the development of fissions in the protective coating, in an edible condition free from spoilage, for a long period of time.

The references relied on are: Hopkins, 1,098,575, June 2, 1914; Bridgeman et al., 1,943,468, January 16, 1934; Stone, 2,021,137, November 19, 1935; Kronquest, 2,117,180, May 10, 1938; Australian Patent, 105,701, November 1, 1938; McKee, 2,137,898, November 22, 1938; James, 2,169,081, August 8, 1939; Musher, 2,198,209, April 23, 1940; Kellermann, 2,262,238, November 11, 1941; Warth et al., 2,306,576, December 29, 1942; McHugh, Article "Sterilizing with Light," June 1938, Scientific American.

The process disclosed by appellants' application comprises smoking or cooking meat in a stockinet at a temperature above 158° F., thus precooking the meat, cooling it to a temperature below 70° F. under ultra-violet radiation, applying lecithin to the fat sides of the meat to prevent rancidity of the fat, melting wax and adding 0.2% sodium benzoate to it to form a bath into which the meat is dipped, in order to form a protective coating, and thereafter cooling the meat.

The patent to Hopkins discloses the use of a coating of paraffin and lard which is applied to smoked hams for the purpose of preserving them.

The patents to Stone and Bridgeman et al. disclose the use of wax coatings containing a benzoate. The patentees Bridgeman et al. apply such a coating to foods as a preservative, whereas the patentee Stone coats articles, such as straws and paper cups, to prevent the growth of micro-organisms on them.

The patent to Kronquest discloses the use of a microcrystalline wax as a coating for a beverage container.

The Australian patent discloses the coating of cured meat which is wrapped in a light porous fab-

ric, with wax containing antioxidants or "fungicides and/or bactericides."

The patent to McKee discloses the smoking of hams under conditions which raise the inside temperature of the hams to 156° F. and 164° F.

The patent to James and the McHugh article disclose the treatment of meat with "ultra-violet light" in order to kill bacteria.

The patentee Musher discloses the treatment of smoked fatty meats with lecithin to prevent rancidity, and the patentee suggests immersing the meat in gelatin to form a surface coating.

The patent to Warth et al. discloses food containers lined with various wax compositions.

The rejection of the appealed claims was based on the ground that appellants have merely used a number of steps, each of which is old individually, without producing any new or unexpected result. Counsel for appellants, in their brief, list fifteen steps, various groupings of which are included in the seventeen claims here on appeal.

It is clear that none of the individual steps relied on is novel or patentable per se. The steps are old individually, as shown by the references, except that in one or two instances the exact times, temperatures, or proportions of ingredients claimed by appellants are not disclosed in the references. Such differences as there are in those respects, however, have not been shown to be critical.

[1] Counsel for appellants point out that no single reference anticipates any of the claims and that a comparatively large number of references have been used in making the rejection. However, if the features claimed are all old, and if there was no invention in combining them in a single process or product, it is not material that a number of references are used in rejecting the appealed claims.

[2] The various prior art disclosures, relied on by the Patent Office tribunals, are designed to accomplish the same general purpose as appellants' process; namely, the preservation of foods and the prevention of chemical or bacterial decomposition. It is natural to suppose that the combination of several of the preserving steps, disclosed by the references in a single process, would result in more effective preservation than would be obtained by any one of the prior art steps. However, it is within the province of the skilled worker in the art to employ old preserving steps in any sequence which he deems proper.

[3], [4] In the instant case, no affidavits have been submitted as to comparative tests between appellants' process or product and those of the references. In appellants' application certain examples are given of results obtained by the use of certain combinations of steps. Those examples, which are relied on by counsel for appellants, have been carefully considered, but we are of opinion that they fail to show any critical differences resulting from the particular sequences of steps recited in the appealed claims, and that those claims cover nothing more than an obvious selection of the prior art disclosures.

Certain of the appealed claims are drawn to products, but the products claimed are merely those which necessarily result from the use of appellants' processes. Accordingly, the product claims are unpatentable for the same reasons assigned in rejecting the process claims.

For the reasons stated, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE CHAPLIN

No. 5435. Decided May 4, 1948

[168 F.2d 85; 77 USPQ 601]

1. APPEAL TO COURT—ISSUES—EFFECT OF GENERAL AFFIRMANCE.
   Although the Board did not pass upon the Examiner's rejection of certain claims as being vague, indefinite, and functional, it entered a general affirmance of the Primary Examiner's decision, *Held* therefore, that that issue is before us for consideration.
2. PATENTABILITY — APPARATUS — FUNCTIONAL — "BEING ARRANGED".
   Where the appealed claim states that "said transfer die being arranged to carry an article in a horizontal position from the forming die to the drying die," *Held* that, since the claim does not call for any structure to carry an article as stated, the claim is merely functional and not patentable.
3. APPLICATION—DISCLOSURE—REFERENCE TO PRIOR ART MECHANISM — AMENDMENT INSERTING SPECIFIC PATENTS NOT NEW MATTER.
   Where appellant's application stated that "suitable mechanism is provided for driving the various parts of the machine in desired synchronism," and that "these mechanisms are not shown as they are well known in the art," *Held* that appellant was entitled to amend his application by citing and making a part thereof certain patents referred to in the record, provided they disclose mechanism, old in the art, which would carry out appellant's alleged invention.
4. PATENTABILITY—PULP MOLDING METHOD AND MACHINE.
   Certain claims to a pulp molding machine *Held* properly rejected as functional, and certain claims to a pulp molding apparatus *Held* improperly rejected, and the cause remanded so that the issues as to the latter claims may be properly determined.

APPEAL from the Patent Office. Serial No. 441,100.

MODIFIED AND REMANDED.

E. W. Marshall (*Munson H. Lane* of counsel) for Chaplin.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all the claims, Nos. 15 to 24, inclusive, in appellant's application for a patent for an alleged invention relating to a method and a machine for forming molded pulp articles.

Claims 15 to 18, inclusive, relate to the method; whereas claims 19 to 24, inclusive, relate to the apparatus.

Claim 15 is illustrative of the method claims. It reads:

The herein described method of forming molded pulp articles which comprises suction forming an article in one position, inverting the formed article and bringing it into a substantially horizontal position of rest, raising the article vertically, moving the article laterally while maintaining it in its inverted horizontal position into axial alinement with a temporarily stationary drying die, then lowering the article vertically toward the drying die and depositing the article onto the drying die.

Claim 19 is illustrative of the article claims. It reads:

A pulp molding machine comprising a pulp tank, a carrier mounted to rotate about a horizontal axis above the tank, a forming die on the carrier arranged to pass through the tank to a horizontal position above the tank, a horizontal drying die mounted to rotate about a vertical axis in a circular path laterally spaced from said carrier, and a transfer die mounted to move vertically toward and away from the forming die and the drying dies and to move horizontally across the space between the forming die and the drying die, said transfer die being arranged to carry an article in a horizontal position from the forming die to the drying die.

In his decision, the Primary Examiner rejected all the claims in appellant's application on the ground that the specification did not comply with sec. 4888, R. S. (U. S. C., Title 35, sec. 33) which provides that:

Before any inventor or discoverer shall receive a patent for his invention or discovery, he shall make application therefor in writing, to the Commissioner of Patents, and shall file in the Patent Office a written description of the same, and of the manner and process of making, constructing, compounding, and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art or science to which it appertains, or with which it is most nearly connected, to make, construct, compound, and use the same; and in case of a machine, he shall explain the principle thereof, and the best mode in which has has contemplated applying that principle, so as to distinguish it from other inventions; and he shall particularly point out and distinctly claim the part, improvement, or combination which he claims as his invention or discovery. The specification and claim shall be signed by the inventor. No plant patent shall be declared invalid on the ground of noncompliance with this section if the description is made as complete as is reasonably possible.

The Examiner further rejected claims 15 to 18, inclusive, as reciting the function of the machine disclosed by the application, and claims 19 to 24, inclusive, were rejected as vague, indefinite, and functional. Thereafter appellant moved to amend his application by citing certain patents which, it was claimed, disclosed the prior art referred to in his application. The amendment was rejected by the Primary Examiner on the ground that it involved new matter.

Claims 15 to 18, inclusive, were further rejected by the Primary Examiner on the patent to Randall, No. 2,257,573, issued September 30, 1941.

On appeal, the Board of Appeals reversed the Primary Examiner's holding that claims 19 and 20 were not patentable over the patent to Randall. It is, therefore, unnecessary that we consider that issue.

The Board further reversed the Primary Examiner's decision in which it was held that claims 15 to 18, inclusive, called for merely the function of the machine set forth in appellant's application. The Board, however, affirmed the Primary Examiner's holding that all the claims were unpatentable because of the failure of appellant to set out in his original application the patents hereinbefore referred to.

[1] Although the Board did not pass upon the Examiner's rejection of claims 19 to 24, inclusive, as being vague, indefinite, and functional, it entered a general affirmance of the Primary Examiner's decision, except as hereinbefore stated, and, therefore, that issue is before us for consideration.

It will be observed that the questions presented are, namely: (1) whether claims 19 to 24, inclusive, are unpatentable because they are vague, indefinite, and functional and (2) whether all of the claims are unpatentable on the ground that appellant was not entitled to amend his application by including therein the patents hereinbefore referred to.

[2] Claim 19, which is representative of claims 20 to 24, inclusive, states that "* * * said transfer die being arranged to carry an article in a horizontal position from the forming die to the drying die." The quoted portion of that claim merely calls for a transfer die "being arranged" in a certain manner and does not call for any structure to carry an article in a "horizontal position from the forming die to the drying die." It is obvious, therefore, that those claims are merely functional and are not patentable. See *Application of Ballman et al.*, 57 App. D. C. 146, 18 F.2d 188, 361 O. G. 428.

The next question for our consideration is whether appellant was entitled, in view of the statements contained in his application, to amend his application by inserting therein the patents hereinbefore referred to.

[3] It appears from appellant's application that "Suitable mechanism is provided for driving the various parts of the machine in desired synchronism. These mechanisms are not shown as they are well known in the art." It is obvious from the quoted excerpt that appellant relied upon the prior art for suitable mechanism for driving the various parts of his apparatus in the desired synchronism. It is true that the prior art referred to should have been cited in appellant's application and that his application is inartificially drawn. However, appellant's application not only implies that there is prior art, but specifically states that the prior art discloses the mechanism necessary for driving the parts of his machine in the desired synchronism and that, by his proposed amendment, he was merely attempting to disclose what he claimed to be old in the prior art.

The Solicitor for the Patent Office, in his attempt to support the Board of Appeals, relied upon the cases of *General Railway Signal Co.* v. *Thullen*, 32 App. D. C. 575, 142 O. G. 1116; *In re Mraz*, 36 App. D. C. 435, 164 O. G. 978; *In re Georg Stauber*, 18 CCPA (Patents) 774, 45 F.2d 661, 7 USPQ 258, 403 O. G. 245; and *Marconi Wireless Telegraph Company of America* v. *United States*, 320 U. S. 1, 34, 556 O. G. 339.

In the case of *General Railway Signal Co.* v. *Thullen*, supra, it appears that a party Townshend referred generally to transformers and that his reference to transformers was not sufficient reference to a particular kind of transformer. We quote from the decision of the court in that case:

No one of the several kinds of transformers is a part of the device or combination of the issue. The reference to transformers in general has nothing to do with their windings. While it is said the construction is in many respects

like transformers—no particular kind of which is mentioned—these respects are then specifically limited to their methods of insulation, which, it is said, are not illustrated because not novel and no claim is made for them. In view of this reference to transformers generally, and the limited nature of the reference to their insulation, we must hold that the description is insufficient for the purpose contended.

In the case of *In re Mraz*, supra, it was held that the courts look with disfavor upon any attempt to enlarge the scope of a patent application which would enable the patentee to appropriate other inventions made prior to an amendment filed by the applicant. In its decision, the court quoted rule 70 of the Rules of Practice of the United States Patent Office. That rule provides in substance that amendments to the drawings or specifications and additions thereto cannot be made where the amendments involve a departure from the original appplication as filed.

In the case of *In re Georg Stauber*, supra, the Solicitor for the Patent Office relies upon the following excerpt from our opinion in that case:

If the appellant had desired to do so, he might have cited and referred in his application to such patents, or to any other patents, and, by such reference, have made them a part of his application. This he did not do, and, therefore, they cannot be considered now.

Considering that excerpt apart from the context of the opinion, it supports the contention of the Solicitor that if prior patents are not referred to in appellant's original application, they cannot thereafter be referred to by amendment. However in that case it appears that the Patent Office gave appellant several opportunities to amplify his application but that appellant failed and refused to do so; that when the quoted excerpt is considered in the light of our opinion in that case, it is clear that although appellant was given the opportunity to amend his application, he refused to do so; and that on review in this court, we could not consider any amendment which might at that time be suggested.

In the Marconi case, supra, relied upon by the Solicitor for the Patent Office, it was held that certain amendments which merely made explicit that which was implicit in the application were proper. The Court there stated:

We think that Stone's original application sufficiently disclosed the desirability that the anteman circuits in transmitter and receiver be resonant to the same frequency as the closed circuits, as he expressly recommended in his patent. But in any event it is plain that no departure from or improper addition to the specifications was involved in the 1902 amendments, which merely made explicit what was already implicit. *Hobbs* v. *Beach*, 180 U. S. 383, 395–7.

There is no departure from any of the decisions hereinbefore referred to, to hold that appellant was entitled to amend his application, in view of the quoted statements therein contained, by citing and making a part thereof certain prior art expired patents which disclosed mechanism proper to be considered in carrying out his alleged invention. In so holding, it should be understood that we have not examined the prior art patents which appellant attempted to include by amendment in his original application, and the question of whether the disclosures in those patents are sufficient to make appellant's application comply with section 4888 R. S., supra, is not, of course, determined.

[4] We are of opinion, for the reasons hereinbefore stated, that claims 19 to 24, inclusive, were properly rejected by the tribunals of the Patent Office, and that appellant is entitled to amend his application by inserting therein the patents referred to in the record, provided they disclose the mechanism, old in the art, which would carry out appellant's alleged invention. See *Loom Co.* v. *Higgins*, 105 U. S. 580, where it is stated, among other things, that appellant "may begin at the point where his invention begins, and describe what he has made that is new, and what it replaces of the old. That which is common and well known is as if it were written out in the patent and delineated in the drawings."

For the reasons stated, the decision of the Board of Appeals is modified, being affirmed as to claims 19 to 24, inclusive, and reversed as to claims 15 to 18, inclusive, and the cause is remanded so that the issues as to the latter claims may be properly determined.

MODIFIED AND REMANDED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE JENNINGS

No. 5448. Decided May 4, 1948

[167 F.2d 1014; 77 USPQ 613]

1. DOUBLE PATENTING—SPECIES—PATENTABLE DISTINCTION NECESSARY.
   Where appellant has obtained a patent containing generic claims and claims limited to each of three species and now seeks to obtain a second patent containing claims to additional species, which were disclosed but not claimed in the patent, *Held* that, since the prior art discloses the equivalency of the species claimed in the application on appeal and those claimed in the patent, the appealed claims do not define an invention which is patentable over that defined in the claims of appellant's patent.
2. SAME—SAME—SAME.
   It is well settled that two patents to the same inventor cannot properly be granted when only one inventive concept is present.
3. PATENTABILITY—FREEZING CONTAINER.
   Certain claims for a freezing container having a rubber grid treated with sulfuric acid to provide a surface which prevents ice formed therein from adhering thereto *Held* drawn to the same inventive concept as the claims of appellant's patent, and *Held* that they were properly rejected on the ground of double patenting.

APPEAL from the Patent Office. Serial No. 464,641.

AFFIRMED.

Barnes, Kisselle, Laughlin & Raisch (*John M. Kisselle* and *Stephen W. Blore* of counsel) for Jennings.

W. W. Cochran (*H. S. Miller* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting claims 1, 2, 5, 6, 7, 8, 9, and 15 in appellant's application for a patent for an invention for a freezing container.

Claims 3 and 4 were allowed by the Primary Examiner.

Claims 1 and 6, which are typical of the appealed claims, read:

1. As a new article of manufacture, a sharp-freezing container for substances to be frozen, and partitions for dividing the container into a plurality of ice cube molds, said partitions being formed of resilient, easily distortable rubber the external surfaces of which comprise the reaction product of rubber and a compound of the sulphur group.

6. As a new article of manufacture, a sharp-freezing container for substances to be frozen, and partitions for dividing the container into a plurality of ice cube molds, said partitions being formed of resilient, easily distortable rubber, the surface of which is a reaction product of rubber treated by immersion for five minutes in a liquid mixture containing about 80% sulphuric acid.

The references relied on are: Brill et al., 2,102,456, December 14, 1937; Jennings, 2,303,938, December 1, 1942.

Appellant's application discloses a refrigerator ice tray having a grid for dividing the interior of the tray into a number of separate compartments for the molding of ice cubes. The grid is formed of resilient, easily distortable rubber, and its surfaces are reacted with a suitable preparation which prevents the ice from adhering to them. As called for by the appealed claims, this preparation may be a compound of the sulphur group or, specifically, sulphuric acid.

The patent to Jennings, appellant's patent, which was granted on an application copending with that involved in this appeal, discloses an ice tray grid identical in construction with that disclosed in the appealed application and states that the surfaces of the grid may be reacted with various halogens or with sulphuric acid. That patent, therefore, contains a full disclosure of everything set forth in the appealed claims.

The patent to Brill et al. discloses that rubber articles may be given slippery smooth surfaces by reacting them with various substances, including halogens and sulphuric acid.

The appealed claims were rejected on the ground that their allowance would involve double patenting in view of appellant's patent. Some of the claims of that patent cover, broadly, refrigerator ice tray grids made of rubber and having their exposed surfaces treated to render them smooth and frictionless; other claims state that the treating agent is a halogen, and still others recite this agent as chlorine, bromine, and iodine respectively. Appellant's patent thus contains generic claims and claims limited to each of three species and, in accordance with Patent Office Rule 41, claims drawn to sulphur compounds or to sulphuric acid could not have been allowed in the patent in addition to the claims to the three elected species.

It is stated in the brief of counsel for appellant that claims to the use of sulphur compounds and sulphuric acid were originally included in the application on which the patent to Jennings was granted, but were divided out and included in the appealed application.

[1] The situation presented, therefore, is that appellant has obtained a patent containing generic claims and claims limited to each of three elected species and now seeks to obtain a second patent containing claims to additional species which were disclosed, but not claimed, in the patent.

It was held by the Patent Office tribunals that there is no patentable difference between the elected species, claimed in the patent, which involve three members of the halogen group, and the species of the present claims involving sulphur compounds broadly, or sulphuric acid specifically. The equivalence of halogens and sulphuric acid as agents for rendering the surface of rubber slippery and smooth was fully disclosed in the patent to Brill et al. which was issued more than two years before the application for the patent to Jennings was filed. In view of the disclosure in the Brill et al. patent there could be no invention in the substitution of sulphuric acid for a halogen in the treatment of a rubber grid for a refrigerator ice tray. Clearly, therefore, the appealed claims do not define an invention which is patentable over that defined in the claims of appellant's patent.

Counsel for appellant argue, however, that, under the circumstances of this case, appellant is entitled to the allowance of the appealed claims even if they are not patentable over the claims of his patent. Counsel point out that since their original application, on which the Jennings patent was granted, which disclosed more than three species, it was not possible for them to obtain specific claims on each species in that patent and hence, if claims to the present species cannot be allowed in another patent, no specific protection can be obtained on them.

[2] It is well settled that two patents to the same inventor cannot properly be granted when only one inventive concept is present. As was said in the case of *In re Ward*, 32 CCPA (Patents) 1238, 150 F.2d 436, 66 USPQ 317, 581 O. G. 355:

It is axiomatic, however, that if two patents are to be granted there must be two inventions present * * *.

Similar holdings were made in *In re John W. Swen*, 18 CCPA (Patents) 935, 46 F.2d 572, 8 USPQ 342, 407 O. G. 295; *In re Barge*, 25 CCPA (Patents) 1058, 96 F.2d 314, 37 USPQ 546, 496 O. G. 270; and *In re Christmann et al.*, 29 CCPA (Patents) 1037, 128 F.2d 596, 53 USPQ 634, 543 O. G. 3. In the case of *In re Barge*, supra, it was stated, with citation of authorities, that it is proper to consider prior art in determining whether two inventions are present.

[3] It is clear in the instant case that there is no patentable distinction between rubber grids, the surfaces of which have been made relatively frictionless by treatment with a halogen, and similar grids, the surfaces of which have been made relatively frictionless by treatment with sulphuric acid.

Owing to the fact that the appealed claims are drawn to the same inventive concept as the claims of appellant's patent, they were properly rejected on the ground of double patenting.

For the reasons stated, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE MIDDLETON

No. 5449. Decided May 4, 1948

[167 F.2d 1012; 77 USPQ 615]

1. PATENTABILITY—PROCESS—FUNCTION OF APPARATUS.
   Where the application does not suggest any way in which the steps claimed can be carried out except by the use of the apparatus disclosed, and where the apparatus disclosed will inherently carry out the steps set forth in the appealed claims, and the application does not disclose any other use to which the apparatus may be put, *Held* that the appealed claims are drawn to the mere function of the particular apparatus disclosed.
2. SAME—SAME—SAME.
   It is well settled that a process which is the mere function of an apparatus is not patentable.
3. SAME—SAME—SAME.
   A process which cannot be carried out apart from a particular apparatus is the mere function of that apparatus.
4. SAME—SAME—SAME—CHEMICAL PROCESS.
   Where counsel for appellant contends that the processes claimed involve chemical action and therefore cannot be merely the function of the apparatus, *Held* that, although the reaction may be a chemical one, the reaction is not distinguishable from the function of the machine disclosed.

APPEAL from the Patent Office. Serial No. 422,362.

AFFIRMED.

Oswald G. Hayes and *Robert F. Davis* for Middleton.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the rejection by the Primary Examiner of claims 17, 18, and 19 in appellant's application for a patent for an invention for a method of introducing reactants to a chemical process. Claim 16 of the application was allowed by the Board.

Claim 17, which is typical of the three rejected claims, reads:

> In an alkylation process which includes reaction of an olefin with an isoparaffin in the presence of a liquid acid catalyst; the method of admixing fresh catalyst and fresh reactants with a stream of reaction mixture which comprises adding fresh catalyst to said stream and injecting the same as a plurality of parallel fine catalyst mixture streams longitudinally of a substantially cylindrical mixing zone maintained substantially full of liquid, withdrawing a fluid mixture from the end of said mixing zone toward which said catalyst mixture streams are directed, inducing cyclic flow of fluids in said mixing zone to cause fluids to flow longitudinally along the axis thereof from said end of said mixing zone toward said catalyst mixture streams and return flow along an annular path surrounding said flow toward said streams, injecting fresh reactants as a plurality of fine reactant streams into said return flow and rotating the points of injection of said reactant streams about the axis of said mixing zone; whereby said fresh reactants are dispersed uniformly through a stream of reaction mixture in which fresh catalyst has been uniformly distributed.

The appealed claims were rejected by the Examiner, first, as being drawn to an exhausted combination of an alkylation process and a mixing process, and, second, as involving nothing more than the function of the apparatus disclosed in appellant's application. The former rejection was reversed by the Board, leaving as the only issue to be considered here the question as to whether the appealed claims define merely the function of appellant's apparatus.

Appellant's application relates to the reaction of an olefin and an isoparaffin in the presence of a catalyst, and discloses a cylindrical chamber containing two opposed nozzles, one of which is fixed, while the other is mounted for rotation about an axis coinciding with that of the chamber. The fixed nozzle is supplied with a mixture of catalyst and reaction materials, while fresh reactants are supplied to the rotatably mounted nozzle. The fixed nozzle is provided with a plurality of openings which direct jets of liquid longitudinally of the cylindrical chamber. The rotatable nozzle comprises a number of radial blades, each of which has a plurality of tangentially directed orifices, through which the fresh reactants are fed into the cylindrical chamber. The reaction effect of the reactants will cause the nozzle to rotate, and the application states that additional rotating means may be provided if desired.

[1] It is evident that the processes defined by claims 17, 18, and 19 are intimately related to the particular apparatus disclosed. That apparatus will inherently carry out the steps set forth in the appealed claims, and the application does not disclose any other use to which the apparatus may be put. Conversely, the application does not suggest any way in which the steps claimed can be carried out except by the use of the apparatus disclosed.

[2], [3] It is well settled that a process which is the mere function of an apparatus is not patentable, and that a process which cannot be carried out apart from a particular apparatus is the mere function of that apparatus. See *In re Weston*, 17 App. D. C. 431, 94 O. G. 1786; *In re Ernst et al.*, 21 CCPA (Patents) 1235, 71 F.2d 169, 22 USPQ 28, 449 O. G. 507; *In re Wadman*, 25 CCPA (Patents) 936, 94 F.2d 993, 36 USPQ 542, 492 O. G. 482, and authorities therein cited.

Counsel for appellant argue that it would be possible to perform the claimed processes by means of apparatus other than that disclosed in appellant's application, or even by hand and, in their brief they suggest modified forms of apparatus which, they allege, could be used for this purpose. The fact that appellant's application did not mention hand operation and did not suggest any modified form of apparatus, indicates that the modifications in question had not been thought of at the time the application was filed or were not thought to have any substantial value. It is clear that it would be impracticable to carry out the processes of the appealed claims by hand, and, although we have carefully considered the modifications suggested by counsel for appellant, we are of opinion that it has not been disclosed that the claimed processes could be satisfactorily carried out by any apparatus differing substantially from that disclosed in appellant's application. It follows that the appealed claims are drawn to the mere function of the apparatus disclosed in appellant's application and were properly rejected for the reason stated.

[4] Counsel for appellant contend that the processes claimed here involve chemical action and, therefore, cannot be merely the function of the apparatus. We disagree with that argument. See *In re Charles P. Watson*, 18 CCPA (Patents) 712, 715, 44 F.2d 868, 7 USPQ 113, 402 O. G. 3, and cases therein cited.

Although the reaction involved may be a chemical one, the reaction is not distinguishable from the function of the machine disclosed in appellant's application, even though that machine, if used in some other manner, might function differently. In their request for reconsideration by the Board of Appeals, counsel for appellant said:

> There was not, then, and is not now, any attempt on the part of the applicant to cover any other process for which the apparatus disclosed in the drawings could be used. Such apparatus might conceivably be used for mixing liquid fuel and air, the softening of water, the preparation of esters, the manufacture of soaps, or any one of numerous other chemical processes.

For the reasons stated, the decision of the Board of Appeals is affirmed.

AFFIRMED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

U. S. Court of Customs and Patent Appeals

IN RE GOLDBERG

No. 5459. Decided May 4, 1948

[168 F.2d 88; 77 USPQ 625]

1. PATENTABILITY—INVENTION—AXIAL VS. TRANSVERSE MOVEMENT.
   When the difference between the appealed claims and the reference disclosure is that in the former the machine tool is moved axially of the work, whereas in the reference device the tool is moved transversely of its axis, *Held* that this difference is not a patentable distinction.
2. SAME—SAME—CHANGING NUMBER OF PARTS.
   The mere use of two separate elements for performing functions which in the prior art have been performed by a single element does not ordinarily amount to invention.
3. SAME—SAME—FUNCTIONAL EXPRESSIONS.
   Where the claim contains the statement that the compressed air in the cylinder which moves the tool head is "adapted to be further compressed upon engagement of the tool with the work," *Held* that is a purely functional expression, and hence, cannot render the claims patentable.
4. SAME—DRILLING MACHINE.
   Certain claims for a drilling machine in which the dashpot mechanism will "retard and then arrest" the movement of the tool head *Held* patentable, since neither of the patents cited against them shows an arrangement in which the dashpot mechanism serves to arrest the movement of the tool head.
5. SAME—SAME.
   Certain claims to a drilling machine including pneumatic means for moving the drill axially toward and from the work *Held* properly rejected as unpatentable over the prior art.

APPEAL from the Patent Office. Serial No. 523,648.

MODIFIED.

Smith, Olsen & Baird (*Glen E. Smith* and *Stephen W. Blore* of counsel) for Goldberg.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the rejection by the Primary Examiner of claims 7, 12, 14 to 19, inclusive, 21, 22, 24, 25, 27, and 28 in appellant's application for a patent for an invention relating to a drilling machine. Claim 20 was allowed by the Primary Examiner, and claims 23 and 29 were allowed by the Board of Appeals.

Counsel for appellant moved to dismiss the appeal as to claim 18. The motion will be granted.

Claims 7, 14, 17, 21, and 27, which are representative of the appealed claims are as follows:

> 7. The combination in a machine of the class described, of a rotatable tool, means for rotating said tool, means for moving said tool axially, and means for gradually trapping a quantity of liquid to control the axial movement of said tool.
>
> 14. The combination in a machine of the class described, of a rotatable tool, a pressure platen carrying said tool, means for rotating said tool, means for moving said pressure platen and said tool along the axis of the tool toward and from the work, dashpot mechanism occupying normally an inoperative position, means actuated by the movement of said pressure platen for operating said dashpot mechanism to effect a progressively increasing retardation of the movement of said pressure platen when said tool reaches a predetermined position, and means operated by said pressure platen upon movement thereof away from said work for restoring said dashpot mechanism to said inoperative position.
>
> 17. The combination in a machine of the class described, of a cylinder block, a pressure platen slidably mounted in said block, a rotatable tool carried by said pressure platen, said block having a cylinder formed therein, a piston mounted in said cylinder and connected to said pressure platen, means for admitting compressed air to said cylinder to move said pressure platen and said tool along the axis of said tool toward the work, dashpot mechanism carried by said cylinder block, an actuating member associated with said dashpot mechanism, and means carried by said pressure platen for operating said actuating member to cause said dashpot mechanism to retard and then arrest the movement of said pressure platen when said tool reaches the end of its stroke.
>
> 21. The combination in a machine of the class described, of a rotatable tool, means for rotating said tool, compressed air operated means for moving said tool with a yielding pressure axially toward the work and through the work, additional means for automatically retarding and then arresting said axial movement of said tool after a predetermined movement thereof through the work, and compressed air operated means for retracting said tool from the work and for normally holding it in a retracted position.
>
> 27. The combination in a machine of the class described, of a rotatable tool, means for rotating said tool, means for moving said tool with a yielding pressure, and means for automatically effecting a gradual and progressively increasing retardation of the axial movement of said tool after a predetermined movement thereof.

The references relied on are: Hunt, 1,812,533, June 30, 1931; Dumser et al., 1,942,414, January 9, 1934; Sawyer, 1,977,490, October 16, 1934; Kingsbury, 1,998,873, April 23, 1935.

Appellant's application discloses a drilling machine in which the drill is moved axially toward and from the work by pneumatic means including a piston and cylinder. A constantly applied low air pressure is supplied to one side of the piston which

tends to move the drill away from the work, and movement of the drill toward the work is effected by applying a higher air pressure to the opposite side of the piston. In order to retard the axial movement of the drill as it is about to emerge from the work, a dashpot, that is, a piston and a cylinder, is provided which comprises a well containing a liquid and having an upwardly flared wall and a cylindrical plunger which is movable downwardly into the well. The plunger is moved downwardly at the appropriate time by a member connected with the head on which the drill is mounted and, as the plunger moves into the well, the passage of liquid upwardly around the plunger is gradually restricted so that an increasing resistance is offered to the movement of the plunger and hence to the movement of the drill head. When the plunger reaches the portion of the well having the same diameter as that of the plunger, the movement of the plunger, and hence of the drill head, is arrested.

The patent to Dumser et al. discloses a milling machine in which a tool is mounted on a head which is movable toward and from the work by a pneumatic piston and cylinder. When the tool is about to encounter the work, a rod, which is movable with the tool head, engages the top of a piston which is mounted in a cylinder containing a body of liquid. The piston is urged toward the top of the cylinder by a coil spring which is compressed between the bottom of the piston and the bottom of the cylinder. As the rod, movable with the tool head, engages the top of the piston, the piston is forced downwardly against the action of the spring and the liquid is forced from the cylinder into a closed reservoir, where it is maintained under pressure. The passage between the cylinder and reservoir is restricted, so that the liquid in the cylinder offers a high resistance to the movement of the tool head, resulting in a much slower movement of the head and tool. In the patentees' disclosure, the movement of the tool head is transverse to the action on which the tool rotates.

The patents to Kingsbury and Hunt were cited to show that it was old in the art to move the drill head axially of the drill, instead of transversely thereof, as in the Dumser et al. device.

The patent to Sawyer discloses a drill mounted on a head which is movable toward and from the work by a hydraulic piston and cylinder. When the tool is to be moved toward the work, liquid under high pressure is applied to the upper side of the piston. The space in the cylinder below the piston is full of liquid and, as the piston moves downwardly, the liquid is forced out. During the period before the drill reaches the work, the escape pipe from the lower end of the cylinder is wide open. When the drill engages the work, a valve in the escape pipe is closed and the liquid is forced to pass through a restricted by-pass pipe around the valve. As a result, the piston and the drill head move more slowly. When the drill is about to emerge from the work, a rod movable with the drill head trips a valve in the by-pass pipe, which restricts the passage through that pipe, thus further reducing the speed of the tool.

[1] Claims 7 and 12 were rejected on the disclosure in the patent to Dumser et al. Those claims provide that the machine tool is moved axially of the work, whereas in the Dumser et al. device, the tool is moved transversely of its axis, but this difference is clearly not a patentable distinction, since it depends merely upon whether the tool is a drill or a milling cutter. The patent to Hunt shows it to be old to move the drill axially toward and from the work.

It is urged by counsel for appellant that the patent to Dumser et al. does not disclose means for gradually trapping liquid to control the movement of the tool. However, in the patentees' device the liquid escaping from the cylinder passes gradually into a closed chamber, which is a trap within the ordinary meaning of that term, and this action may properly be called a gradual trapping. It is not necessary that the opening into the trap shall be gradually closed, as is the case in appellant's device. Claims 7 and 12, therefore, were properly rejected on the disclosure in the patent to Dumser et al.

Claim 14 was also rejected on the disclosure in the Dumser et al. patent. That claim is generally similar to claims 7 and 12. Claim 14 calls for dashpot mechanism, but the piston and cylinder arrangement of the Dumser et al. patent clearly responds to the language of claim 14. Claim 14 also provides that the dashpot mechanism effects a progressively increasing retardation of the movement of the tool head (pressure patent). That result is inherent in the operation of the Dumser et al. device, since the coil spring beneath the piston will be progressively compressed as the tool head moves downwardly and will, therefore, exert a progressively increasing resistance to such movement. Counsel for appellant argues that the spring in the Dumser et al. patent offers a small resistance as compared with the liquid beneath the piston. However, claim 14 is silent as to both the amount of resistance offered and the rate at which the retardation of the tool head increases, and, accordingly, does not distinguish in those respects from the disclosure in the Dumser et al. device. Claim 14, therefore, was properly rejected on the patent to Dumser et al.

Counsel for appellant alleges that the patent to Dumser et al. does not disclose a dashpot mechanism "because there is no trapping of any fluid." As pointed out in connection with claim 7, the feeding of liquid from the cylinder in the disclosure in the patent to Dumser et al. into the closed chamber is considered a trapping. No authority has been cited which would justify a holding that the trapping of liquid is a necessary feature of dashpot mechanisms.

[2] Claim 15 is similar to claim 14 and is unpatentable over the disclosure in the patent to Dumser et al. for reasons similar to those stated in connection with claim 14. It is contended by counsel for appellant that the rejection of that claim on the patent to Dumser et al. involves a double recitation of the spring as both a means for effecting progressively increasing retardation and a means for restoring the dashpot mechanism. However, the claim does not positively recite a means for progressively increasing retardation. Moreover, the mere use of two separate elements for performing functions which in the prior art have been performed by a single element, does not ordinarily amount to invention.

[3] Claim 16 is also similar to claim 14 and was similarly rejected on the patent to Dumser et al. That claim contains the statement that the compressed air in the cylinder which moves the tool head is "adapted to be further compressed upon engagement of the tool with the work." This is a purely functional expression and hence cannot render the claim patentable. See *General Electric Co. v. Wabash Appliance Corp. et al.*, 304 U. S. 364, 491 O. G. 463. Moreover, the air in the pneumatic cylinder, disclosed in the patent to Dumser et al., is necessarily further compressed when the tool engages the work, since a greater force must be applied by the piston for moving the tool through the work. We are of opinion that claim 16 was properly rejected on the patent to Dumser et al.

[4] Claims 17 and 19 call for an arrangement in which the dashpot mechanism will "retard and then arrest" the movement of the tool head. Those claims have been rejected on either the patent to Dumser et al. or the patent to Sawyer. However, neither of those patents shows an arrangement in which the dashpot mechanism serves to arrest the movement of the tool head. We are of opinion, therefore, that claims 17 and 19 are patentable over the references cited against them.

Claims 21 and 22 have been rejected as unpatentable over the disclosure in the patent to Sawyer. Those claims call for pneumatic operation whereas Sawyer's tool head is moved hydraulically. That arrangement, we think, is merely a matter of choice. Pneumatic operation of tool heads is old, as shown, for example, in the patent to Hunt, and that type of operation could readily be used in the patentee Sawyer's system without the exercise of invention. Although those claims call broadly for means for automatically retarding and then arresting the movement of the tool, they do not state that such means is a dashpot mechanism, or that it is a single means. The language used is broad enough to cover an arrangement in which one means retards the movement and another arrests it. We are of opinion that the addition to the disclosure in the patent to Sawyer of some means for automatically arresting the tool movement at a desired point would not involve invention. Claims 21 and 22, therefore, were properly rejected on the patent to Sawyer.

Claims 24 and 25 are similar to claims 21 and 22, although they contain the additional statement that the air in the cylinder increases in pressure when the tool encounters the work. A similar limitation is called for in claim 16. For reasons hereinbefore stated in our discussion of claim 16, we hold that the references to increased pressure called for by claims 24 and 25, do not render those claims patentable.

Claims 27 and 28 were rejected on the disclosure in the patent to Dumser et al. Those claims are similar to claim 14 and, for the reasons hereinbefore stated in connection with claim 14, we are of opinion that claims 27 and 28 were properly rejected.

The appeal, as to claim 18, is dismissed.

[5] For the reasons hereinbefore stated, the decision of the Board of Appeals is modified, being affirmed as to claims 7, 12, 14, 15, 16, 21, 22, 24, 25, 27, and 28, and reversed as to claims 17 and 19.

MODIFIED.

By reason of illness, O'CONNELL, J., was not present at the argument of this case and did not participate in the decision.

NOTICES

Cancellation Notice

Carl Cannon, his assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Handy & Harman, Inc., 82 Fulton St., New York 7, N. Y., to effect the cancellation of trade-mark registration of Carl Cannon, 6309 Yale Ave., Chicago, Ill., No. 256,286, dated May 14, 1929, and the notice of such proceeding sent by registered mail to the said Cannon at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Cannon, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

JOE E. DANIELS,
Assistant Commissioner of Patents.

Aug. 10, 1948.

Disclaimers

2,155,458.—*William J. Wilkinson*, Eastchester, N. Y. METHOD OF AND APPARATUS FOR PRINTING. Patent dated April 25, 1939. Disclaimer filed July 29, 1948, by the inventor and the assignee, *Michle Printing Press and Manufacturing Company.*

Hereby enter this disclaimer of claims 1 to 10 inclusive, and claims 12, 15, and 16 of said patent.

2,200,532.—*Varley Sherman Bond*, Quincy, Ill. BACTERIAL INOCULANT FOR LEGUMINOUS PLANTS. Patent dated May 14, 1940. Disclaimer filed July 27, 1948, by the assignee, *Kalo Inoculant Company.*

Hereby enters this disclaimer to claims 1 to 8 inclusive and claims 13 and 14 of said patent.

2,413,108.—*William B. Latchford*, Rochester, and *Lynn C. Holmes*, Fairport, N. Y. RECORDING AND REPRODUCING HEAD FOR MAGNETIC RECORDING. Patent dated Dec. 24, 1946. Disclaimer filed July 23, 1948, by the assignee, *Stromberg-Carlson Company.*

Hereby enters this disclaimer to claim 1 of said patent.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,434,212. CORKSCREW WITH POINT PROTECTOR. Patented Jan. 6, 1948. An all-purpose opener comprises a rigid sheet-metal member with a screw driver at one end, a bottle-cap opener and can puncturer at other end, and a central cut-out portion which receives a corkscrew. The end of the cut-out has a split edge forming a pocket for the pointed end of the corkscrew, and a leaf spring holds corkscrew in position. (Owner) Gaspar L. Ippolito. Address correspondence to Benill Company, 250 West 57th St., New York 19, N. Y. Groups 33—73; 40. Reg. No. 9,869.

Pat. 2,442,194. GAME BOARD. Patented May 25, 1948. This game table has a circular turntable of different colors surrounded by a flange to retain a marble thereon as turntable is rotated. Outwardly of the flange are three circles, the central circle narrow and designated as the starting ring. The inner and outer rings correspond in color to the segments of the turntable. The circles are divided into sections, each with a row of peg holes. Each player places a peg in the hole of the starting ring within his particular section of the board. As each player in turn rotates the turntable, a marble located thereon stops on one of the colored segments, and the player moves his play peg into the first hole on his section of the board of the corresponding color. The player who first succeeds in moving his play peg into the outer hole of the outer ring wins the game. May be played by various other rules. (Owner) Thomas Briscoe, Route 1, Box 166, Coupeville, Wash. Group 39—41. Reg. No. 9,870.

Pat. 2,437,017. AIR OR WATER ATTACHMENT FOR DENTAL ENGINES. Patented Mar. 2, 1948. A flexible conduit for attachment to dental engines is used to direct cooling fluid to a point adjacent drilling tool to reduce friction heat and flush tooth cavity during drilling operations. Engine has a plurality of hinged extension rods connected to a hand piece which carries the tool. Portions of these rods are hollow to receive the flexible conduit before and after it has been curved around a hinged joint between the rods. Conduit emerging from last rod is curved to clear last hinged joint and pulley on top of hand piece, with lower end of conduit secured to side of hand piece. A valve is provided in hand piece to control supply of fluid to point adjacent tool, and a second valve is provided for shutting off flow of fluid to hand piece. (Owner) Robert E. Cunningham. Address correspondence to John Sivley Rhodes, 1st Federal Savings & Loan Ass'n Bldg., Jackson, Miss. Group 39—17. Reg. No. 9,871.

Pat. 2,442,047. ANTIDRIP POURING SPOUT. Patented May 25, 1948. A pouring spout for pitchers, chemical and pharmaceutical ware, etc., to prevent dripping therefrom. A groove of generally triangular cross-section extends along the bottom of the spout, and a sharp crested dam extends across the outer end of the groove, the inner face of the dam extending smoothly into the groove and its outer face being undercut from the dam crest in the normally upright position of the spout. This tends to carry the final portion of liquid outwardly and away from the discharge or outer face of the dam. (Owner) R. J. Kemper, 1237 Oak St., San Carlos, Calif. Groups 32—21—62; 40. Reg. No. 9,872.

Pat. 2,364,293. CHAMFERING TOOL. Patented Dec. 5, 1944. Tool in a single pass and return through a workpiece will chamfer both edges of a single hole, or each of a series of aligned holes. A flat bit of tool automatically retracts radially into an elongated longitudinal opening in arbor after completion of chamfering operation and returns to chamfering position as tool emerges from hole. Spring means normally maintain bit outwardly so that a longitudinal edge portion of bit protrudes alongside arbor in chamfering position. Bit is formed with a dull "safe" longitudinal edge and a chamfering cutting edge at each end. The "safe" edge contacts the finished chamfered edge of hole to terminate the cutting action, and slide inwardly on such surface to retract bit into arbor. Either end of bit will tilt inwardly so that it will enter and emerge at an angle from hole in workpiece to minimise chances of scoring hole. (Owner) Fred Hotchner, 2905½ South Western Avenue, Los Angeles 7, Calif. Group 35—41—43. Reg. No. 9,873.

Pat. 2,443,124. FISH LURE. Patented June 8, 1948. Fish lure has both a wobbling and spinning action as it is pulled through the water. The nose end of the elongated body is beveled and provided with a swivel connection for attachment of the fishing line. A hook is attached to the tail end. The body tapers from its nose to its tail, and a spiral flange extends from near the head to the tail. The beveled end causes the lure to have a wobbling action, and the flange causes the body to spin about the swivel connection. May be made of wood, aluminum, or the like. (Owner) George W. Sullivan, 501 West Main St., Hamilton, Mont. Groups 25—99; 34—41; 39—49; 40. Reg. No. 9,874.

Pat. 2,442,870. COPYHOLDER. Patented June 8, 1948. A copy line-guide for typewritten sheets, books, etc. A pair of metal or plastic elongated hinged plates have a passage along one side to lie over and under the edges of typewritten or printed sheets and grip them. A line bar extends through passage and out over the sheet to be copied and is slidable along the passage to hold it in adjusted position on the copy. (Owner) Grace Flynn, 7306 Park Ave., North Bergen, N. J. Groups 35—72; 39—81; 40. Reg. No. 9,875.

Pat. 2,442,404. SNOW BIKE. Patented June 1, 1948. Coasting device having conventional adjustable bicycle seat, steering post, and handle bars is supported on four runners. Bicycle frame is forked at back, ends of fork being pivotally attached to upstanding flanges of runners. Front of frame is welded to tubular member enclosing steering post. Steering post is attached for pivotal motion on the horizontal bar of an inverted U-shaped fork, the ends of which are pivotally attached to runners as at rear. A brake wheel having teeth adapted to bite into snow or ice is rotatably mounted on a brake arm located

on horizontal bar near base of steering post. Brake arm is held by a coiled spring and controlled by a pedal on which the instep portion of one foot may be placed as rider's feet rest on the horizontal bar of front U-fork. (Owner) Newton F. Foner, 5859 Nicholson St., Pittsburgh 17, Pa. Group 39—43—49. Reg. No. 9,876.

Pat. 2,441,826. CIGARETTE CASE WITH FLEXIBLE TONGUE. Patented May 11, 1948. This case features a package-holding tongue which is hinged to the body of the case so that the pack assumes a position convenient for the removal of individual cigarettes without releasing the pack. The body of the case has an upstanding flange with a latch arrangement that cooperates with that of a fitted hinged top. When reversed, and the case partly open, the package is tilted to discharge one or more cigarettes. (Owner) Rolla E. Mudd, Stronghurst, Ill. Groups 31—12; 39—72; 40. Reg. No. 9,877.

Pat. 2,442,604. MECHANISM FOR STRAIGHTENING AUTOMOBILE FENDERS. Patented June 1, 1948. Fenders are straightened (without removal from an automobile) by this apparatus which is adapted for use in a confined space where it is difficult to deliver hammer blows. The mechanism consists of a rockable dolly structure supported on an I-beam by a slidable anchor block with which a hydraulic ram is associated. The dolly is placed in the desired position and supported on the vehicle by an anchoring chain. When the hydraulic cylinder is energized, the dolly is rocked back and forth to straighten dents in the fender. Easily collapsed for storage. (Co-owner) John Melvin Johnson, 1417 South 2nd St., Lindsborg, Kans. Group 35—69. Reg. No. 9,878.

Des. Pat. 147,904. DESIGN FOR A SET OF CHESSMEN. Patented Nov. 18, 1947. The chessmen shown in this patent are essentially of cylindrical shape and are modern in design. (Owner) Louis R. Hirschel, 500 Montgomery St., Brooklyn, N. Y. Groups 39—41; 40. Reg. No. 9,879.

Pat. 2,442,241. SEWAGE TREATMENT PROCESS. Patented May 25, 1948. This sewage-treating process contemplates fully utilising the characteristics and constituents of sewage itself to eliminate or reduce the use of expensive, commercial chemicals and other treatment media. Basically, this is accomplished by treating sludge (obtained by treating raw sewage in a grit chamber in the usual way) to anaerobic digestion at 90° F., for approximately 20 days. A portion of the sludge which has been completely digested is withdrawn and mechanically agitated and aerated to a nitrate value of 300 parts per million to form an inoculum. This inoculum is used to treat incoming sewage so that the sewage is eventually rendered suitable for direct disposal into streams, etc. (Co-owner) John E. Koruzo, 428 Parkway Drive, N. E., Atlanta 5, Ga. Group 28—71—72—73. Reg. No. 9,880.

Pat. 1,865,484. OPENING AND CLOSING DEVICE FOR COLLAPSIBLE TUBES. Patented July 5, 1932. A separate closing device, replacing the ordinary screw top, may be screwed into the discharge nozzle of a conventional collapsible tube of tooth paste or the like after the seal of the tube has been broken. Device comprises a spring-actuated sealing means within a hollow body. Sealing means consists of a part arranged to be displaced from normal position by pressure on tube pushing contents upward and to be automatically returned when pressure is released. A locking means is provided to protect tube against accidental pressure. (Owner) William L. Roos. Address correspondence to Lucke & Lucke, 12 East 41st St., New York 17, N. Y. Group 34—92. Reg. No. 9,881.

Pat. 2,188,191. HERMETICALLY SEALED AUTOMATIC CLOSURE FOR COLLAPSIBLE TUBES AND THE LIKE. Patented Jan. 23, 1940. The discharge portion of this tube consists of a pair of resilient flattened walls which engage each other, opening upon application of pressure to a conventional collapsible body portion. When pressure is released, the opening automatically returns to its former position. The body of the tube and the discharge opening are integral. The resilient portion is enclosed by a hermetically sealed covering which may be easily severed by bending so that the tube is ready for use. Several other features are included in the patent. (Owner) William L. Roos. Address correspondence to Lucke & Lucke, 12 East 41st St., New York 17, N. Y. Group 34—92. Reg. No. 9,882.

Pat. 2,430,995. END-SEALED THERMOPLASTIC CONTAINER BODY. Patented Nov. 18, 1947. An ampoule or other container for medicaments is made to permit sterilization or aseptic treatment and yet have an hermetically sealed end which is easily severed by bending. Upon severing, the flattened areas of the closure serve as the self-closing closure described in Patent 2,188,191 (Reg. No. 9,882). A modification allows for the enclosure of one ampoule within another (the outer containing medicament complementary to that of the inner) with the openings mutually superposed relative to each other. Other modifications provided. (Owner) William L. Roos. Address correspondence to Lucke & Lucke, 12 East 41st St., New York 17, N. Y. Groups 28—31; 34—92; 39—81. Reg. No. 9,883.

Pat. 2,441,058. ANIMAL BED AND SCRATCHER. Patented May 4, 1948. A pair of rectangular plates are spaced horizontally one above the other by four posts, the lower plate serving as a platform for the device and the upper plate as the base of a basket that is used as a bed for an animal. A fiber- and steel-bristle brush is arranged horizontally under the basket so that the head and back of an animal walking between the posts contact the bristles for scratching purposes. A second brush is vertically mounted on one of the posts. A scratching post having a rough or bark-covered surface is provided for cats, with a catnip mouse attached. The device may be readily taken apart for cleaning. (Owner) Sylvia Carwile, P. O. Box 174, Harrison, N. Y. Groups 25—52—99; 40. Reg. No. 9,884.

Pat. 2,435,799. EDGE FINDER. Patented Feb. 10, 1948. A precision edge-finding device for use by machinists operating a jig bore, milling machine, or other machine having an adjustable table. Comprises a bar with a depending arm and a groove at the intersection to allow the device to be set in place upon the work which is resting on an accurately adjusted table. A lug marked with cross lines to designate its center extends downwardly from the bar and engages the outer end face of the work. The work is clamped to the table and the edge finder placed on the work and moved until the center of the lug is in alinement with the center of the shaft of the jig bore. (Owner) Worth P. Rizor, 349 North Ash, Wichita 7, Kans. Group 35—69. Reg. No. 9,885.

BULLETIN OF DECISIONS OF PATENT OFFICE ON TRADE-MARKS

RENDERED DURING JULY, 1948

THE DU-ALL MFG. CO. *v.* EDWIN B. LIVINGSTON, Cancellation No. 4768.

In a decision rendered July 1, 1948 (169 Ms. Dec. 863, 78 USPQ 49), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the petition of Du-All Mfg. Co., of Geneva, Ohio, to cancel the trade-mark registration of Edwin B. Livingston, of Kansas City, Mo., No. 420,217, disclosing the mark "DU-ALL" for cleaning compounds for linoleum, tile, rubber, cork, woodwork, and painted walls. Petitioner relied upon its prior registration, renewed, No. 165,769, of the trade-mark "Du-All" for polishes and dressings in liquid and paste form for furniture, automobiles, and other painted and varnished surfaces, for automobile tops and leather, and for re-oiling mops, as well as two other registrations of the mark "Du-All" which were not considered pertinent by the Examiner of Interferences, and therefore were not considered on this appeal.

In response to respondent's objections to the petition it was held that the petition advised Livingston of the grounds upon which Du-All relied, and it is clear that such allegations were so understood by Livingston since the answer to the petition for cancellation sets out material specifically controverting each of these points.

In response to Livingston's contention that there is no proof of use of its mark by Du-All, it was held that Du-All presented its prior registration above referred to, the issuance of which was admitted by the answer, which was accepted by the Examiner, and which upon its face showed that it had been renewed, so that in the absence of any showing to the contrary this registration was therefore a sufficient prima facie showing of ownership by Du-All extending from date of registration to the date of hearing and must presume use, and the testimony taken by Livingston does not negative this prima facie showing of use.

In response to Livingston's criticism of the action of the Examiner of Interferences in permitting Du-All to file a brief before the Examiner and to submit a copy of its registration at the time of final hearing, it was held that this appears to be a matter within the discretion of the Examiner and should not be disturbed.

After noting that the Examiner has found that the goods of both parties are primarily used in restoring or renewing surfaces on furniture, woodwork and the like, it was held that in that respect they are substantially identical, and the fact that they differ in composition or effect the same result in a different way does not alter their essential characteristics as surface restoring agents, so that the goods possess the same descriptive properties, and the marks of the parties being identical the petition for cancellation was properly sustained.

EX PARTE ILLINOIS CANNING CO., Serial No. 44,212.

In a decision rendered July 2, 1948 (169 Ms. Dec. 868, 78 USPQ 87), *Assistant Commissioner Daniels* reconsidered the original decision (611 O. G. 1021, 77 USPQ 325) in the light of petitioner's arguments and request for further amendment, but upon such reconsideration the original decision was adhered to.

STANDARD LABORATORIES, INC., *v.* I. J. FRIEDLAND (B-B HEADACHE POWDER CO., ASSIGNEE, SUBSTITUTED), Opposition No. 24,947.

In a decision rendered July 2, 1948 (169 Ms. Dec. 871, 78 USPQ 88), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the opposition of Standard Laboratories, Inc., of New York, N. Y., to the application of I. J. Friedland (B-B Headache Powder Co., assignee, substituted), of Atlanta, Ga., for registration, under the Trade-Mark Act of 1905, of a mark comprising the letters "B-B" pictured in a diamond as a trade-mark for a preparation for the relief of simple headache, neuralgia, head colds, minor muscular pains, and as a sedative in simple nervousness. Opposer relied upon its ownership and prior use of the trade-mark "B.B.B." applied to certain medicinal preparations and as evidence submitted registration thereof, No. 62,680 (renewed), registered by a predecessor for a remedy for the alleviation and cure of blood diseases.

In response to applicant's contention that opposer has failed to prove ownership or use of its mark it was held that the certified copies of the Patent Office records of the original registration and of various assignments submitted by opposer must be considered adequate to prove ownership of the registration and such registration is prima facie proof of ownership of the mark and use must be presumed.

In response to applicant's contention that opposer has failed to show that the goods have the same descriptive properties, it was held that the description appearing in opposer's registration is sufficient to indicate the general character of the preparation and to include goods of the general character of those now appearing upon the labels submitted with the notice of opposition, so that the Examiner of Interferences was right in ruling that the goods of

the respective parties have the same descriptive properties.

It was held that comparison of the marks indicates their obvious similarity, so that in view of the similarity of the marks the Examiner of Interferences was clearly correct in finding that likelihood of confusion would result from the concurrent use of the marks of the parties upon the goods involved.

THE GRAND UNION COMPANY *v.* BERNARD RICKENBACK, Opposition No. 25,242.

In a decision rendered July 2, 1948 (169 Ms. Dec. 869, 78 USPQ 90), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the opposition of The Grand Union Company, of New York, N. Y., to the application of Bernard Rickenback, of New York, N. Y., for registration of a mark comprising the notation "Eastern Union" as a trade-mark for canned and bottled apple juice for food purposes under the Trade-Mark Act of 1905.

After noting that the parties have stipulated that the only questions for determination are whether or not the goods of the parties possess the same descriptive properties and whether or not applicant's mark is confusingly similar to opposer's mark and name, opposer having alleged the use of "GRAND UNION" as a trade-mark for a large number of grocery products, of which the Examiner of Interferences referred to canned fruits and vegetables, canned grapefruit juice and pineapple juice and canned tomato juice, it was held that the goods of the parties possess the same descriptive properties.

It was held that the Examiner was right in ruling that when the here involved marks are considered in their entireties the resemblances therebetween rather than the differences predominate to the extent that confusion in trade would be reasonably likely when applied concurrently to the goods of the parties and that any doubt should be resolved against the newcomer.

EX PARTE THE ARIDOR COMPANY, Serial No. 465,498.

In a decision rendered July 7, 1948 (169 Ms. Dec. 878, 78 USPQ 91), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to The Aridor Company, of Chicago, Ill., a mark consisting of the words "FLIP SEAL," as a trade-mark under the act of February 20, 1905, for closure caps for glass food containers, in view of the prior registration, No. 321,721, of the word "TRIP-SEAL," for caps covering and/or sealing closure structures for openings of metallic barrels, containers and cans for storing bulk liquids, the word "SEAL" having been disclaimed in the application and in the reference.

It was held that the goods must be considered to be of the same descriptive properties and to have the same essential characteristics, since the details of construction cannot be material so far as similarity of the goods is concerned nor does the fact that they may ordinarily be used on containers for different products remove the essential similarity of these caps as closures for containers and there is no reason to conclude that the marketing methods involving containers on which the caps are used or other marketing methods may not change at any time.

It was held that "FLIP SEAL" and "TRIP-SEAL" are considered similar in both sound and appearance and to some extent in meaning so that the Examiner of Trade-Marks was right in concluding on the record presented that the marks are confusingly similar when considered as a whole.

KENSINGTON STEEL COMPANY *v.* ALLOY RODS COMPANY, Opposition No. 25,081.

In a decision rendered July 7, 1948 (169 Ms. Dec. 875, 78 USPQ 92), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of Kensington Steel Company, of Chicago, Ill., to the application of Alloy Rods Company, of York, Pa., to register the word "ARCALOY" as a trade-mark, under the act of February 20, 1905, for electrodes for arc welding stainless and alloy steels. Opposer relied upon prior use and ownership of the trade-mark "Oroloy," for manganese and steel castings, and as evidence of its ownership and use opposer introduced its registration of this word under the Trade-Mark Act of 1905 for the products stated above, registered prior to the filing date of the application opposed.

It was held that the nature of the good specified in the registration and the application here involved is such that there appears to be an inherent relationship in their character sufficient to support the conclusion reached by the Examiner of Trade-Mark Interferences that they are goods of the same descriptive properties.

It was further held that the Examiner of Interferences reached the right conclusion as to the similarity of the marks involved.

EX PARTE INVEX, INC., Serial No. 499,057.

In a decision rendered July 13, 1948 (169 Ms. Dec. 883, 78 USPQ 129), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register to Invex, Inc., of Gainesville, Fla., the word "ELECTROCRAFT" as a trade-mark for sets of parts for boys and girls to assemble and use in making electrical, chemical, and magnetic experiments including a variety of magnetic parts, a variety of chemicals, a variety of electrical parts, a variety of materials, and a manual of instruction, on the ground of descriptiveness.

After noting that there are certain informalities which had not been corrected prior to the appeal, it was held to be proper to consider the appeal on

the merits, since such informalities appear to be of a minor nature and can, if necessary, be corrected before publication of the mark, should such publication be ordered.

It was held, as suggested by the Examiner, that "ELECTROCRAFT" used by itself without reference to any product would indicate to prospective purchasers goods of the nature of applicant's product, but in any event, as applied to such a product for craftwork the significance is immediately apparent.

R. H. MACY & CO., INC., *v.* WILMINGTON HOSIERY MILLS, INC., Opposition No. 24,697.

In a decision rendered July 13, 1948 (169 Ms. Dec. 880, 78 USPQ 130), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the opposition of R. H. Macy & Co., Inc., of New York, N. Y., to the application of Wilmington Hosiery Mills, Inc., of Wilmington, Del., to register, under the Trade-Mark Act of February 20, 1905, the word "IRONYON" as a trade-mark for hosiery, and dismissing applicant's counterclaim for cancellation of opposer's trade-mark registrations relied upon, namely, "Irontex" for hosiery and "IRON CLAD" for shoes.

After noting that the counterclaim requesting cancellation of opposer's registrations is not pressed upon this appeal, it was held that it would not be considered except to express agreement with the conclusions reached by the Examiner of Interferences concerning this phase of the proceeding.

It was held that there remains for discussion only the issues of nonuse and abandonment of "Irontex" and of confusing similarity between that mark and "IRONYON."

It was held that suspension of sales by opposer under the mark in 1942 due to causes arising out of the war, with no resumption at the time of taking testimony in July 1946, does not establish abandonment on the record presented.

It was held that the Examiner of Interferences was right in ruling that the similarity of the marks predominates, and that the differences in the second syllables are insufficient to afford reasonable assurance that these marks may be used concurrently upon the identical goods without likelihood of confusion.

SEALY, INCORPORATED, *v.* NATIONAL MATTRESS COMPANY, Opposition No. 25,267.

In a decision rendered July 14, 1948 (169 Ms. Dec. 885, 78 USPQ 131), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences dismissing the notice of opposition of Sealy, Incorporated, of Memphis, Tenn., to the application of National Mattress Company, of Huntington, W. Va., for registration of the word "LIFETIME" as a trade-mark for mattresses, under the act of February 20, 1905. The notice of opposition alleged ownership and prior use of the mark "Durolife," and ownership of a registration of that mark.

It was held that while each of the marks includes the word "life" as one of its syllables, their connotation is not the same, and as presented they do not appear similar in sound or appearance, so that the conclusion of the Examiner of Interferences, that the marks of the parties are so unlike in significance, appearance and sound as to indicate that there is no likelihood of confusion from their concurrent use by the respective parties, is considered correct.

It was held that since the dissimilarity of the marks appears to be determinative of all issues in this proceeding, certain other questions considered by the Examiner of Interferences and discussed by the parties on the appeal need not be considered, although it was noted that agreement was expressed with the conclusions reached by the Examiner with respect thereto.

EASTMAN KODAK COMPANY *v.* FARADAY ELECTRIC CORPORATION, Opposition No. 25,175.

In a decision rendered July 15, 1948 (169 Ms. Dec. 888, 78 USPQ 132), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the notice of opposition of Eastman Kodak Company, of Rochester, N. Y., to the application of Faraday Electric Corporation, of Adrian, Mich., to register, under the act of February 20, 1905, the word "KODEMASTER" as a trade-mark for manually and automatically operable electric calling and signaling equipment and parts thereof, namely, annunciators, bells, buzzers, horns, sirens, trumpets and chimes. Opposer relied upon prior use and ownership of its trade-mark "Kodak" as applied to all types of photographic equipment, and of "KODACOLOR," "KODACHROME," "KODAGUIDE," and "KODASCOPE" on various specific items of photographic equipment and introduced registrations of these marks under the act of 1905 for such products which it owns.

It was held that applicant's use of any other mark than the one sought to be registered is irrelevant to the question of its right to register this mark, so that there is no question as to opposer's proof of priority of ownership and use of all of its marks.

It was held that the Examiner was right in holding that the products covered by applicant's application possess the same descriptive properties as the timers, floodlighting units, and related photographic items sold by opposer under such marks as "KODAK," "KODAFLECTOR" and "KODATRON."

It was held that the broad description of the goods contained in the application rather than the specific products it sells is controlling in this proceeding, so that the opposition must be sustained, since agreement was expressed with the conclusion of the Examiner of Interferences as to similarity of the marks.

After noting that the record does not indicate that any effort has been made by applicant to amend the description of the goods referred to in the application, it was held that applicant having elected to prosecute its application and defend the opposition proceeding upon the issue of similarity between goods for which it sought registration and opposer's products, and the opposer's record having been made upon this issue, no amendment would be proper at this time, even had one been offered.

EX PARTE HALTER'S PRETZELS, INC., Serial No. 487,046.

In a decision rendered July 16, 1948 (169 Ms. Dec. 898, 78 USPQ —), *Assistant Commissioner Daniels* granted to the extent indicated, but otherwise denied, a petition of Halter's Pretzels, Inc., of Canton, Ohio, for rehearing or modification of the decision of June 7, 1948 (612 O. G. 788, 77 USPQ 631).

It was held that the decision should be modified to substitute No. 330,434 for No. 235,366 in the second paragraph and in the second to the last paragraph thereof.

It was held that goods such as those described in the registration referred to must be considered to have the same descriptive properties as those of applicant and the precise methods of sale of the owner of that registration, if they are properly of record, would not be controlling.

FRANCES DENNEY *v.* DERMETICS, INC., Opposition No. 24,675.

In a decision rendered July 16, 1948 (169 Ms. Dec. 892, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the opposition of Frances Denney, of Philadelphia, Pa., to the application of Dermetics, Inc., of Seattle, Wash., for registration of the words "MAGIC TWINS" under the Trade-Mark Act of February 20, 1905, as a trade-mark for face powder and skin rouge. Opposer challenged the right to such registration, and is concededly the owner of a trade-mark, registration No. 140,790 (renewed), for perspiration-deodorizing creams for use upon the person, it being stipulated that this mark has been continuously used by opposer upon the goods stated since 1910.

It was held that it cannot be questioned that toilet preparations of this type sold through the same trade channels to the same class of purchasers are goods of the same descriptive properties within the meaning of the act.

In response to applicant's contention that the marks are not confusingly similar, after noting that the mark sought to be registered includes as a prominent feature thereof opposer's registered mark in its entirety, it was held that even though "MAGIC" is an ordinary word in the English language it must be considered fanciful as applied to opposer's products and the addition of the word "TWINS" does not reduce the likelihood of confusion in these marks, so that considered in their entireties they are so similar that their concurrent use on goods of the same descriptive properties is likely to result in such confusion, and under the facts as stated the specific differences between the products of the parties cannot affect this conclusion.

FIRST INDUSTRIAL CORPORATION *v.* PIERCE LABORATORY, INC., Opposition No. 24,691.

In a decision rendered July 16, 1948 (169 Ms. Dec. 893, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences sustaining the notice of opposition of First Industrial Corporation, of Freeport, Ill., to the application of Pierce Laboratory, Inc., of Summit, N. J., for registration of the word "MICROMOTE," under the act of February 20, 1905, as a trade-mark for electrical circuit breakers. The notice of opposition alleged prior use of the words "MICRO" and "MICRO SWITCH" on switches and other similar products by opposer and its predecessors for many years prior to any date on which applicant claims use of its mark.

After noting that there is no question as to the goods being substantially alike in character and function, in response to applicant's contention that opposer is not entitled to maintain the opposition because the words "MICRO" and "MICRO SWITCH" as applied to opposer's products are merely descriptive of such goods, it was held that the question of whether or not opposer's mark is or is not descriptive or suggestive is immaterial to the right to maintain this opposition if the marks of the respective parties are confusingly similar within the meaning of the act.

In response to applicant's contentions that opposer's testimony is not sufficient to prove transfer of any rights from its alleged predecessors to the marks, it was held that the testimony submitted appears sufficient to establish earlier use of "MICRO SWITCH" by the corporations to which opposer refers, and that opposer has acquired the business and all assets and good will connected therewith, but in any event establishes that opposer itself has used the mark since a date prior to the date of first use of its mark claimed by applicant.

It was held that the conclusion of the Examiner of Interferences as to similarity of the marks was correct, since as applied to the goods here involved the question of cumulative dissimilarities cannot apply.

After noting that certain matters of an ex parte nature were passed upon by the Examiner of Interferences, it was held that these, because of their ex parte nature, need not be considered on this appeal.

THE J. R. CLARK COMPANY *v.* THE RICH LADDER & MANUFACTURING CO., Opposition No. 23,508, Cancellation Nos. 4453 and 4516.

In a decision rendered July 16, 1948 (169 Ms. Dec. 896, 78 USPQ —), *Assistant Commissioner Daniels* denied a petition entitled "Petition to Apply 1946 Act," requesting the Commissioner of Patents to apply the 1946 Trade-Mark Act to the two registrations and the application involved in the above entitled proceedings. The Commissioner affirmed (588 O. G. 684, 70 USPQ 1) the action of the Examiner of Interferences sustaining the petitions for cancellation and the notice of opposition. The United States Court of Customs and Patent Appeals affirmed (78 USPQ 23) the Commissioner's decisions and on June 14, 1948, denied a petition for rehearing.

After noting that the petition for rehearing denied by the court was based upon the same contentions here presented and requested that the court consider the provisions of the Trade-Mark Act of 1946 and hold that the trade-mark involved has become distinctive of Clark goods in commerce, and hence under the 1946 act is entitled to registration and to remain on the register, it was held that that petition having been denied the court has refused to take the action requested, and the Patent Office can take no further action in the matter.

BOTANY WORSTED MILLS (BY CHANGE OF NAME, BOTANY MILLS, INC.) *v.* MATTHEW M. ADLER, LTD., Opposition No. 25,193.

In a decision rendered July 19, 1948 (169 Ms. Dec. 899, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of Botany Worsted Mills (by change of name, Botany Mills, Inc.), of Passaic, N. J., to the application of Matthew M. Adler, Ltd., of San Francisco, Calif., for registration of the notation "Towne Deb," under the act of February 20, 1905, as a trade-mark for women's, misses', juniors', and children's wearing apparel consisting of coats, suits and dresses, the word "Towne" being disclaimed. The opposition was based upon opposer's conceded ownership and prior use of the trade-mark "Towntree," registered under the act of 1905, for woolen and worsted piece goods.

After noting that no question is raised on this appeal as to priority, the similarity of goods, nor any other question except that of whether or not the marks are confusingly similar within the meaning of the confusion-in-trade clause of section 5 of the Trade-Mark Act of 1905, it was held that the Examiner of Interferences was right in ruling that the resemblances between the marks as a whole are substantially as great as those involved in a number of prior cases, and therefore that their concurrent use on the goods involved is likely to cause confusion in trade.

It was further held that this appears to be a case in which any possible doubt should be resolved against the newcomer.

EX PARTE M. BLAZER & SON, Serial No. 489,936.

In a decision rendered July 21, 1948 (169 Ms. Dec. 901, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Marks refusing to register, under the Trade-Mark Act of 1905, to M. Blazer & Son, of Paterson, N. J., a mark consisting of the words "'WEATHER' HOT or COLD Think of Us—," together with an oval design accompanied by two fanciful figures representing "Old Sol" and "Jack Frost," the word "WEATHER" appearing above the design, the words "HOT or COLD" in the oval. "Think of Us—" below the oval, the fanciful figures appearing at each end of the oval and the words "HOT or COLD" being disclaimed, for use on air conditioning, heating, ventilating, cooling, humidifying and dehumidifying units for commercial, industrial and residential use, the exact nature being described in some detail.

It was held that the Examiner was correct in refusing the registration upon prior registration, No. 331,059, comprising the word "WEATHER-MASTER" for goods which are concededly the same.

It was additionally noted that much of applicant's argument to distinguish between the marks would necessarily indicate that the mark sought to be registered is an advertising slogan rather than a trade-mark.

HARZFELD'S, INC., *v.* MORRIS SILVER (GORT GIRLS' FROCKS, INC., ASSIGNEE, SUBSTITUTED).

In a decision rendered July 22, 1948 (169 Ms. Dec. 903, 78 USPQ —), *Assistant Commissioner Daniels* denied a motion by appellee, Harzfeld's, Inc., of Kansas City, Mo., to dismiss an appeal taken by the appellant (respondent in the cancellation proceeding before the Examiner of Interferences), Morris Silver (Gort Girls' Frocks, Inc., Assignee, Substituted), of Bronx, New York, N. Y.

Although the record shows that appellant submitted no evidence and did not appear at final hearing or file a brief, it was held that appellant was, however, the respondent in the cancellation proceeding, and was entitled to rely upon the record as made if it chose and had no burden to sustain at that stage of the proceeding.

The appeal being regular upon its face, and no question being raised as to its having been properly filed and served within the required time, in response to the grounds requesting dismissal relating to alleged lack of factual or legal basis on the record for the various grounds of appeal set out, it was held that those questions cannot be disposed of on motion at this time, since whether or not there are good grounds for the appeal is a matter on which appellant will have the burden when the appeal is heard, and appellant is entitled to have the matter presented on briefs and oral hearing.

THE VENDO COMPANY *v.* VENDERLATOR CO., Opposition No. 25,102.

In a decision rendered July 23, 1948 (169 Ms. Dec. 904, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Interferences dismissing the notice of opposition of The Vendo Company, of Kansas City, Mo., to the application of Vendorlator Manufacturing Co., of Fresno, Calif., to register the word "VENDORLATOR" as a trade-mark for vending machines under the Trade-Mark Act of February 20, 1905. Opposer relied upon its ownership and prior use of the trade-mark "VENDO" registered under the Trade-Mark Act of 1905 for coin controlled bottle vending attachments for refrigerated cabinets and certain named parts of said attachments, alleging that registration of applicant's mark should be refused under the confusion-in-trade and corporate-name clauses of section 5 of the Trade-Mark Act of 1905.

It was held that the Examiner was right in reaching the conclusion that taken in their entireties there is no reasonable likelihood that confusion will result from the contemporaneous use of these marks upon the goods of the respective parties.

It was held that since applicant has not merely appropriated the outstanding feature of opposer's corporate name, the Examiner of Interferences correctly held that the application of the name clause of section 5 involves substantially the same questions here as the confusion-in-trade clause of that section.

After noting that opposer also raised certain questions as to "unclean hands" on the part of applicant, it was held that this involves an ex parte ruling as to which opposer may suggest action but may not be heard, although agreement was expressed with the disposition of this issue by the Examiner of Interferences.

KAYLON, INCORPORATED, *v.* JOSEPH P. ROSENBERG, Opposition No. 24,454.

In a decision rendered July 26, 1948 (169 Ms. Dec. 907, 78 USPQ —), *Assistant Commissioner Murphy* affirmed the action of the Examiner of Trade-Mark Interferences sustaining the opposition of Kaylon, Incorporated, of New York, N. Y., to the application of Joseph P. Rosenberg, of Everett, Mass., for registration of the mark "BALLERINA" for use upon sportswear, consisting of shorts and skirts to wear with shorts for ladies, misses and children, and holding the applicant not entitled to the registration sought, and further adjudged the applicant to be not entitled to the registration sought in view of the prior registration, No. 351,141. Opposer relied upon its mark, "The Bambalina," shown in renewed registration, No. 180,639, for men's and boys' collars, pajamas and shirts, namely, dress, negligee and work shirts.

It was held that the Examiner of Interferences was right in holding that the goods of the applicant and opposer's goods are of the same descriptive properties within the meaning of the statute.

It was held that the Examiner was right in ruling that, notwithstanding the difference between them in significance, the marks of the parties, "BALLERINA" and "The Bambalina," are otherwise much too nearly alike to enable their concurrent use upon the items of clothing specified without reasonable likelihood of confusion in trade and deception of purchasers.

In response to applicant's contention that the opposer is estopped in this proceeding to oppose the registration sought by applicant because it has not taken action against the registration of the mark "BALLERINA," registration No. 351,141, it was held that in view of the statutory bar present here, the doctrine of estoppel cannot be applied in favor of this applicant, since the question of estoppel has no place in this opposition proceeding.

After noting that the record shows that the application for registration was initially refused in view of registration No. 351,141, above referred to, but that after applicant procured a consent to registration from the present owner of this mark his application for registration was passed to publication, it was held that, additionally, the applicant is further adjudged to be not entitled to the registration sought in view of the prior registration No. 351,141, since the fact that a letter of consent was procured does not alter the situation as to applicant's right to registration.

PHILLIPS PETROLEUM COMPANY *v.* L. P. G. EQUIPMENT CORPORATION, Opposition No. 26,933.

In a decision rendered July 26, 1948 (169 Ms. Dec. 913, 78 USPQ —), *Assistant Commissioner Daniels* denied a petition by opposer, Phillips Petroleum Company, of Bartlesville, Okla., in the opposition against registration to L. P. G. Equipment Corporation, of Dallas, Tex., of a mark comprising the letters "L. P. G." displayed on an oval background, that supervisory authority be exercised. The notice of opposition alleged in effect that the letters are used as an abbreviation of the name of a particular type of gas, and are commonly used in the industry in lieu of the full product name, and as such are either descriptive or generic, and in any event unregistrable.

In response to opposer's request to direct the Examiner of Trade-Marks to enter the amendment containing a disclaimer of the letters filed by the applicant, it was held that the Examiner was clearly correct in ruling that unless the letters referred to are in fact descriptive or otherwise in the public domain, a disclaimer cannot be entered, and that if they are merely descriptive of the goods as alleged in the notice of opposition, a disclaimer would be improper as an attempted evasion of the descriptiveness clause of section 5 of the act of 1905.

In response to opposer's request to direct the Examiner of Interferences to dismiss this opposition in accordance with the stipulation filed by the parties, it was held that while at this stage of the proceedings, the opposer would ordinarily have an

unqualified right to withdraw the notice of opposition if it chooses to do so, nevertheless, the request here presented is not an unqualified withdrawal of the notice of opposition or request for dismissal, since it is contingent upon the entry of a disclaimer in the application opposed which appears to be improper whether or not the letters are descriptive.

It was further held that whether or not a conversion of the application to one for registration on the supplemental register of the act of 1946 might resolve this problem to the satisfaction of the parties without the necessity of further contested proceedings is not presented for consideration on this record.

JOHN L. PRIESS *v.* EDWARD T. BEISER COMPANY, INC. (OSCAR BEISER, ASSIGNEE, SUBSTITUTED), Cancellation No. 4750.

In a decision rendered July 28, 1948 (169 Ms. Dec. 917, 78 USPQ —), *Assistant Commissioner Daniels* granted the motion by petitioner-appellant, John L. Priess, of Chicago, Ill., that the proceedings be remanded to the Examiner of Interferences and reopened, where the Examiner of Interferences had dismissed his petition for cancellation of registration No. 251,775, of Edward T. Beiser Company, Inc. (Oscar Beiser, Assignee, Substituted), of Riverside, Conn.

It was held that while each of the parties argues that the answers and admissions appearing in the record are sufficient to justify or require a finding in their favor, it cannot be definitely determined on this record that the Examiner of Interferences' decision would or would not have been different had the answers to the interrogatories been responsive or so clearly stated that no misunderstanding might have arisen, so that it is desirable to grant the motion to remand this proceeding to the Examiner of Interferences for such further proceedings as may be necessary to bring out the actual facts in order that the case may be considered upon a record which will permit final disposition on the merits with a greater degree of certainty than now exists.

BOTANY WORSTED MILLS (BY CHANGE OF NAME, BOTANY MILLS, INC.) *v.* ALFRED LEON, Opposition No. 25,051.

In a decision rendered July 29, 1948 (169 Ms. Dec. 919, 78 USPQ —), *Assistant Commissioner Daniels* affirmed the action of the Examiner of Trade-Mark Interferences dismissing the notice of opposition of Botany Worsted Mills (by change of name, Botany Mills, Inc.), of Passaic, N. J., to the application of Alfred Leon, of Los Angeles, Calif., to register, under the act of 1905, for ladies' coats and suits, a mark comprising the word "POLABY" associated with a pictorial background. Petitioner relied upon prior use and ownership of the trade-mark "POLATROPICS" for woolen and worsted piece goods and ownership of registration No. 385,683 therefor.

After noting that the goods are concededly of the same descriptive properties, it was held that, whether the words are considered independently, or in connection with the background shown, the Examiner correctly found that "POLABY" does not bear such near resemblance to opposer's mark "POLATROPICS," either in sound, appearance, or significance, as to be likely to give rise to confusion in the trade when applied concurrently to the products of the parties.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 31, 1948

[VOL. 613. NO. 5]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 493,423. HARRY ATKINS, Chicago, Ill. Filed Dec. 17, 1945.

chiffon weight

FOR FUR SKINS.
Claims use since Nov. 2, 1945.

CLASS 5

ADHESIVES

Ser. No. 510,224. ABRIL CORPORATION (GT. BRITAIN) LIMITED, London, England. Filed Oct. 4, 1946.

ABRIL

FOR LIQUID, SEMI-LIQUID, OR SOLID NON-DRYING ADHESIVES, BEING CHEMICAL PRODUCTS CONSISTING OF NITROGEN DERIVATIVES OF ORGANIC COMPOUNDS FOR THE NON-PERMANENT BONDING OF SUBSTANCES AND MATERIALS.
Claims use since Dec. 1, 1945.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

FOR STOMACH TONICS AND BITTERS.
Claims use since July 1905.

Ser. No. 524,204. PARFUMS BLANCHARD, New York, N. Y. Filed June 14, 1947.

SMALL FRY

FOR BUBBLING BATH OIL.
Claims use since May 24, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 502,592. PATRICK O'DRAGO, doing business as Sta-Bull Fence Co., Detroit, Mich. Filed May 22, 1946.

The term "Fence Co." is disclaimed apart from the mark.
FOR METAL FENCES, METAL GATES, METAL CLOTHES POSTS, AND WIRE SCREENING.
Claims use since May 15, 1935.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 524,776. THE CARPENTER STEEL COMPANY, Reading, Pa. Filed June 25, 1947.

UNIVERSAL D.R.

FOR STEEL IN THE FORM OF WIRE, STRIPS, BARS, BILLETS, AND SHAPES.
Claims use since 1919.

CLASS 15

OILS AND GREASES

Ser. No. 498,936. THE STANDARD OIL COMPANY, Cleveland, Ohio. Filed Mar. 25, 1946.

SOHIO
X-TANE

The term "Tane" is disclaimed apart from the mark as shown.
FOR AVIATION AND AUTOMOTIVE GASOLINES.
Claims use since Jan. 6, 1946.

CLASS 19

VEHICLES

Ser. No. 522,570. CROSLEY MOTORS, INC., Cincinnati, Ohio. Filed May 17, 1947.

CROSLEY MOBILE

FOR AUTOMOBILES AND STRUCTURAL PARTS THEREOF.
Claims use since May 12, 1947.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 520,376. BOOSEY & HAWKES LIMITED, London, England. Filed Apr. 9, 1947.

WIREK

FOR ELECTRICAL SOUND RECORDING AND SOUND REPRODUCING INSTRUMENTS IN WHICH THE RECORDING IS MADE MAGNETICALLY ON A MAGNETIC WIRE OR TAPE FOR USE WITH RADIO, PHONOGRAPH, AND TELEVISION APPARATUS.
Claims use since December 1944.

Ser. No. 524,577. SON-CHIEF ELECTRICS, INCORPORATED, Winsted, Conn. Filed June 20, 1947.

SON-CHIEF

FOR ELECTRICAL APPARATUS—NAMELY, AUTOMATIC AND NON-AUTOMATIC TOASTERS, AUTOMATIC IRONS, HEATING PADS FOR GENERAL USE, CORD SETS, HOT PLATES, HEATERS, CURLING IRONS, SANDWICH GRILL, NON-AUTOMATIC IRONS.
Claims use since Jan. 1, 1932.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 514,120. LEKTROLITE CORPORATION, New York, N. Y. Filed Dec. 12, 1946.

FLIPNIFE

FOR PENKNIVES AND POCKET KNIVES.
Claims use since June 26, 1946.

Ser. No. 517,146. NATIONAL SILVER COMPANY, New York, N. Y. Filed Feb. 7, 1947.

Royal Baby

FOR TABLEWARE AND CUTLERY—NAMELY, KNIVES, FORKS, AND SPOONS MADE OUT OF BASE METAL, STAINLESS STEEL OR CARBON STEEL.
Claims use since Oct. 24, 1946.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 495,465. FRED GALBRAITH, doing business as Galico Co., New York, N. Y. Filed Jan. 26, 1946.

No claim is made to the words "Kalico" and "Products" apart from the mark as shown.
FOR COMBINATION COVER AND IRONING BOARD PAD.
Claims use since June 26, 1944.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 510,712. MANNER EQUIPMENT COMPANY, INC., Chicago, Ill. Filed Oct. 11, 1946.

BALANCE MASTER

No claim is made to the use of the word "Balance" apart from the mark.
FOR MACHINES FOR CHECKING THE DYNAMIC AND STATIC BALANCE OF THE WHEELS OF MOTOR VEHICLES.
Claims use since Nov. 2, 1939.

Ser. No. 519,075. LEONARDO LAMP MFG. CO., New York and Brooklyn, N. Y. Filed Mar. 15, 1947.

FOLLO-FLOOD

No claim is made to the word "Flood" apart from the mark as shown.
FOR PHOTOGRAPHIC LAMP MOUNTING BRACKETS.
Claims use since Feb. 3, 1947.

Ser. No. 519,450. SPECIALTIES, INC., Syosset, N. Y. Filed Mar. 22, 1947.

FOR AIRCRAFT INSTRUMENTS AND PARTS THEREFOR—NAMELY, ELECTRICAL COMPUTERS FOR USE IN AIRCRAFT INSTRUMENTS, ELECTRO MECHANICAL TELEMETERING AND SERVO MECHANISMS, FILM SPEED SYNCHRONIZER FOR AERIAL CAMERAS, REMOTE CONTROL EQUIPMENT FOR PILOTLESS AIRCRAFT, SIGHT UNITS FOR MILITARY AIRCRAFT, BOMBSIGHTS, TORPEDO DEPTH POSITIONERS, GYROSCOPES, ANGLE OF ATTACK INDICATORS FOR AIRCRAFT, SKID INDICATORS FOR AIRCRAFT, AIR STREAM DIRECTION DETECTOR, AIRSPEED INDICATORS, ALTIMETERS, RATE OF TURN INDICATORS, RATE OF CLIMB INDICATOR, TRAILING SKID VANES USED AS DIRECTION INDICATORS WHEN SUSPENDED BENEATH AIRCRAFT, YAW HEADS FOR DETECTING LATERAL MOVEMENT, YAW RECORDERS, TACHOMETERS.

Claims use since Dec. 29, 1942.

Ser. No. 525,951. RADIO CORPORATION OF AMERICA, New York, N. Y. Filed July 3, 1947.

FOR CALCULATORS OF THE SLIDE RULE TYPE, PHOTOGRAPHIC LENS, AND ARTICLES COMPOSED WHOLLY OR IN PART OF NATURAL AND/OR SYNTHETIC RUBBER SOLD AS PARTS FOR AND AS REPLACEMENT PARTS OF SOUND MOTION PICTURE RECORDING AND REPRODUCING EQUIPMENT—NAMELY, CAPS FOR PROTECTING PHOTOGRAPHIC LENS, BUMPERS, COUPLINGS, ENDLESS BELTS, AND FEET FOR PROJECTORS AND RECORDERS.

CLASS 1
RAW OR PARTLY PREPARED MATERIALS

Ser. No. 518,552. MONSANTO CHEMICAL COMPANY, St. Louis, Mo. Filed July 12, 1947.

SCRIPTITE

FOR SYNTHETIC RESINS FOR USE AS PIGMENT BINDING AGENTS IN THE PREPARATION OF COATING COMPOSITIONS FOR TEXTILES, PAPER, AND COMPOSITION SHEET MATERIAL.
Claims use since Nov. 20, 1946.

Ser. No. 527,162. THE CHAR-LITE MANUFACTURING COMPANY, St. Louis, Mo. Filed July 5, 1947. Under section 2f of the act of 1946.

FOR CHARCOAL BRIQUETTES.
Claims use since Aug. 1, 1932.

Ser. No. 528,347. GREAT LAKES FOUNDRY SAND COMPANY, Detroit, Mich. Filed July 11, 1947.

Juniata

Applicant claims ownership of registration No. 412,283.
FOR FOUNDRY SAND.
Claims use since January 1925.

Ser. No. 539,388. ATTAPULGUS CLAY COMPANY, Wilmington, Del., and Philadelphia, Pa. Filed Oct. 29, 1947.

ATTASOL

Applicant claims ownership of registration No. 421,948.
FOR FINELY DIVIDED FULLER'S EARTH.
Claims use since Sept. 23, 1947.

CLASS 2
RECEPTACLES

Ser. No. 530,486. EVANS CASE CO., North Attleboro, Mass. Filed Aug. 5, 1947. Under section 2f of the act of 1946.

Evans

FOR COMPACTS AND LIPSTICK HOLDERS.
Claims use since 1935.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 549,253. HICKOK MANUFACTURING CO. INC., Rochester, N. Y. Filed Feb. 10, 1948.

Live FLEX

Applicant claims ownership of registration No. 405,904.
FOR WALLETS AND KEY CONTAINERS.
Claims use since May 20, 1943.

Ser. No. 549,912. S. DRESNER & SON, INC., Chicago, Ill. Filed Feb. 17, 1948.

MISS 1948

Applicant claims ownership of registration No. 431,771.
FOR LADIES' AND MISSES' FITTED (OVERNIGHT) CASES.
Claims use since July 1947.

Ser. No. 549,946. OSHKOSH TRUNKS AND LUGGAGE, Oshkosh, Wis. Filed Feb. 17, 1948. Under section 2f of the act of 1946.

Land-or-Sea

Applicant claims ownership of registration No. 159,209.
FOR WARDROBE TRUNKS.
Claims use since Apr. 2, 1921.

Ser. No. 549,947. OSHKOSH TRUNKS AND LUGGAGE, Oshkosh, Wis. Filed Feb. 17, 1948. Under section 2f of the act of 1946.

OSHKOSH

Applicant claims ownership of registrations Nos. 109,228, 201,560, 214,178, and 420,791.

JET-OIL

Applicant claims ownership of registration No. 134,303.
FOR SHOE POLISHES.
Claims use since 1899.

Ser. No. 536,082. HANS JACOB HECKMANN, doing business as Hans J. Heckmann Company, Towson, Md. Filed Sept. 29, 1947.

"GLASSENE"

FOR HOUSEHOLD DETERGENT FOR CLEANING DISHES, COOKING UTENSILS AND GLASSES, AND KINDRED USES.
Claims use since Aug. 1, 1946.

Ser. No. 537,411. BURMA-VITA COMPANY, Minneapolis, Minn. Filed Oct. 10, 1947. Under section 2f of the act of 1946.

Burma-Shave

Applicant disclaims right to the exclusive use of the word "Shave." Applicant claims ownership of registrations Nos. 227,135 and 410,732.
FOR SHAVING CREAM TO BE USED BEFORE SHAVING.
Claims use since Jan. 1, 1926.

Ser. No. 544,972. BONIDE, INC., Bayshore, N. Y. Filed Dec. 20, 1947.

Bonide

FOR GRINDING AND LAPPING ABRASIVE PASTES.
Claims use since Dec. 2, 1947.

Ser. No. 545,393. SANITATION CORPORATION, Chicago, Ill. Filed Dec. 24, 1947.

S'COR

FOR PURE COCOANUT OIL TOILET SOAP, PINE OIL LIQUID CLEANING COMPOUND HAVING DISINFECTING AND DEODORIZING PROPERTIES, AND LIQUID SCRUBBING CONCENTRATE FOR FLOORS AND GENERAL CLEANING PURPOSES.
Claims use since Dec. 15, 1947.

Ser. No. 546,008. METAL TEXTILE CORPORATION, West Orange, N. J. Filed Jan. 2, 1948.

CHORE KNOB

The word "Knob" is disclaimed apart from the mark as shown. Applicant claims ownership of registrations Nos. 155,734 and 163,807.
FOR HANDLE MOUNTED POT CLEANERS MADE OF METALLIC ABRASIVE MATERIAL.
Claims use since Nov. 20, 1947.

Ser. No. 547,333. GRIFFIN MANUFACTURING COMPANY, INC., Brooklyn, N. Y. Filed Jan. 17, 1948. Under section 2f of the act of 1946.

GRIFFIN

Applicant claims ownership of registrations Nos. 75,292, 135,250, 190,017, 210,467, 279,625, 281,972, 310,170, 382,091, 382,649, 405,014, 405,015 and others.
FOR SHOE POLISHES, SHOE BLACKINGS, SHOE CLEANSERS, LEATHER DRESSINGS, LEATHER PRESERVATIVES AND CLEANING FLUID FOR FABRICS AND LEATHER.
Claims use since Apr. 4, 1894.

Ser. No. 547,340. GRIFFIN MANUFACTURING COMPANY, INC., Brooklyn, N. Y. Filed Jan. 17, 1948. Under section 2f of the act of 1946.

STERLING

FOR PREPARATION IN LIQUID AND PASTE FORM FOR CLEANING, DRESSING AND POLISHING SHOES.
Claims use since 1890.

Ser. No. 547,770. LEE ROTHSCHILD, doing business as Corona Soapcrafters, Redlands, Calif. Filed Jan. 22, 1948.

BIRTHDAY

FOR BAR SOAP IN PACKAGED FORM.
Claims use since Jan. 8, 1947.

Ser. No. 549,405. AMERICAN FINISH & CHEMICAL CO., Chelsea, Mass. Filed Feb. 11, 1948.

AMERIZE

FOR OIL FOR WATERPROOFING LEATHER, PARTICULARLY LEATHER OUTSOLES.
Claims use since Nov. 28, 1947.

Ser. No. 554,313. LEHN & FINK PRODUCTS CORPORATION, Bloomfield, N. J. Filed Apr. 10, 1948. Under section 2f of the act of 1946.

LESQUENDIEU

FOR SOAP.
Claims use since 1904.

Ser. No. 555,161. CONSOLIDATED COSMETICS, Chicago, Ill. Filed Apr. 21, 1948.

TAMBO

FOR TOILET SOAP AND LAUNDRY SOAP.
Claims use since Sept. 11, 1946.

CLASS 5

ADHESIVES

Ser. No. 521,742. MASONITE CORPORATION, Chicago, Ill., and Laurel, Miss. Filed Aug. 28, 1947.

MASONEX

Applicant claims ownership of registration No. 366,368.
FOR BINDERS IN LIQUID FORM FOR BINDING FINELY DIVIDED MATERIAL.
Claims use since Sept. 13, 1946.

Ser. No. 521,743. MASONITE CORPORATION, Chicago, Ill., and Laurel, Miss. Filed Aug. 28, 1947.

MASONOID

Applicant claims ownership of registration No. 366,368.
FOR BINDERS IN POWDER OR OTHER DRY FORM FOR BINDING FINELY DIVIDED MATERIAL.
Claims use since Jan. 13, 1947.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 504,217. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Filed Oct. 29, 1947.

WEED-NO-MORE

Applicant makes no claim to the word "Weed" apart from the mark as shown.

FOR CHEMICALS FOR EXTERMINATING WEEDS.

Claims use since Feb. 26, 1946.

Ser. No. 505,732. CARREL, LTD., Chicago, Ill. Filed Oct. 21, 1947. Under section 2f of the act of 1946.

Volga

FOR COSMETIC PREPARATIONS—NAMELY, BATH PERFUME AND WATER SOFTENER.

Claims use since Mar. 23, 1937.

Ser. No. 508,618. BENJAMIN F. SACHAROW, New York, N. Y. Filed Oct. 23, 1947.

Halt

FOR ANTISEPTIC FOR USE AS A MOUTH WASH AND GARGLE TO OVERCOME BAD BREATH AND A DEODORANT FOR APPLICATION TO THE BODY TO RETARD PERSPIRATION AND STOP ODORS.

Claims use since Apr. 13, 1946.

Ser. No. 509,489. ANABOLIC FOOD PRODUCTS, INC., Glendale, Calif. Filed Oct. 10, 1947.

GLAVEJ

FOR MEDICINAL PREPARATIONS CONTAINING GLANDULAR, VITAMIN, OR MINERAL PRODUCTS, OR COMBINATIONS THEREOF USEFUL AS A DIETARY SUPPLEMENT.

Claims use since Apr. 1, 1941.

Ser. No. 515,526. ANABOLIC FOOD PRODUCTS, INC., Glendale, Calif. Filed Oct. 10, 1947.

Applicant claims ownership of registration No. 379,127.

FOR VITAMIN AND MINERAL PREPARATIONS CONTAINING DESICCATED GLANDULAR SUBSTANCES USEFUL AS A DIETARY SUPPLEMENT.

Claims use since Oct. 9, 1946.

Ser. No. 515,785. POLK MILLER PRODUCTS CORP., Richmond, Va. Filed Oct. 28, 1947. Under section 2f of the act of 1946.

Sergeant's

Applicant claims ownership of registrations Nos. 389,109, 300,694, 331,632, 331,641, 223,439, and 66,521.

FOR MANGE MEDICINE.

Claims use since December 1885.

Ser. No. 515,786. POLK MILLER PRODUCTS CORP., Richmond, Va. Filed Oct. 28, 1947. Under section 2f of the act of 1946 as to Sergeant's.

Sergeant's

Applicant claims ownership of registrations Nos. 388,109, 300,694, 331,632, 331,641, 223,439, 66,521, and 408,549.

FOR DISINFECTANT.

Claims use since December 1885 as to Sergeant's; and since Feb. 21, 1944, on the design.

Ser. No. 516,940. MEAD JOHNSON & COMPANY, Evansville, Ind. Filed July 5, 1947.

SERVAMUS MEADS FIDEM

Applicant claims ownership of registrations Nos. 297,187, 379,232, 184,697, and 295,757.

FOR HYPO-ALLERGENIC PRODUCT CONTAINING SOYBEAN FLOUR; A MILK SUBSTITUTE CONTAINING A HYDROLYSATE OF CASEIN WITH DEXTRINS, MALTOSE, MILK FAT AND OTHER INGREDIENTS; A DRIED HYDROLYSATE OF PROTEIN; AN AQUEOUS SOLUTION OF PROTEIN PRODUCTS WITH AND WITHOUT A CARBOHYDRATE; A SPECIALLY PREPARED PRECOOKED CEREAL CONTAINING VITAMINS AND MINERALS; A SPECIALLY PREPARED PRECOOKED OATMEAL PRODUCT; A SPECIALLY PREPARED MILK MODIFIER; A MILK MODIFIER FOR USE IN DIARRHEA OF INFANTS; A SPRAY DRIED MIXTURE OF SKIMMED MILK AND FATS FOR PREMATURE AND NEWBORN INFANTS; A CALCIUM CASEINATE PREPARATION FOR CORRECTING DIARRHEA AND COLIC IN INFANTS; PROTEIN MILK; LACTIC ACID MILK; POWDERED MILK WITH LOW FAT CONTENT; LIVER OILS OF COD, PERCOMORPH AND OTHER FISHES; ACTIVATED ERGOSTEROL IN OIL; BREWER'S YEAST TABLETS AND POWDER; THIAMINE HYDROCHLORIDE TABLETS; RIBOFLAVIN TABLETS; NIACIN TABLETS; A SPECIAL VITAMIN PREPARATION CONSISTING OF BREWER'S YEAST WITH THIAMINE, RIBOFLAVIN AND NIACINAMIDE; ASCORBIC ACID TABLETS; AND A DRY ENZYMIC DIGEST OF CASEIN CONTAINING AMINO ACIDS AND POLYPEPTIDES; A PHARMACEUTICAL PREPARATION SPECIALLY DESIGNED FOR USE IN HIGH-PROTEIN LOW-FAT DIETS; A PHARMACEUTICAL PREPARATION SPECIALLY DESIGNED FOR USE IN DIETS OF RESTRICTED SODIUM CONTENT; AND MIXED VITAMIN CAPSULES DESIGNED TO SUPPLEMENT THE DIET OF EXPECTANT AND NURSING MOTHERS AND TO AUGMENT THE VITAMIN INTAKE OF PERSONS ON RESTRICTED DIETS.

Claims use since Feb. 1, 1932.

Ser. No. 523,403. MALLINCKRODT CHEMICAL WORKS, St. Louis, Mo. Filed July 5, 1947. Under section 2f of the act of 1946.

OVRLAY

FOR MASKING SOLUTION FOR PHOTO-ENGRAVING.

Claims use since Sept. 30, 1947.

Ser. No. 526,610. THE SCHOLL MFG. CO., INC., New York, N. Y., and Chicago, Ill. Filed July 5, 1947. Under section 2f of the act of 1946.

Foot Comfort

Applicant claims ownership of registration No. 356,284.

FOR MEDICATED CORN, CALLOUS AND BUNION PADS, PLASTERS, SALVES, PROTECTORS AND REMOVERS; MEDICATED BANDAGES, TAPES, SUPPORTS, COVERS, CUSHIONS AND PROTECTORS; MEDICATED FOOT BATH SALTS AND TABLETS, FOOT DEODORIZERS, POWDERS, SALVES, LOTIONS, LINIMENTS AND TINCTURES, IN MEDICAL AND PHARMACEUTICAL PREPARATIONS AND APPLICATIONS FOR THE TREATMENT AND CARE OF THE FEET AND THEIR PARTS AND AILMENTS AND ABNORMALITIES THEREOF.

Claims use since 1916.

Ser. No. 527,949. THE EDWAL LABORATORIES, INC., Chicago, Ill. Filed July 5, 1947.

THERMO FINE

The word "Fine" is disclaimed apart from the mark as shown.

FOR FINE GRAIN FILM DEVELOPER IN POWDER FORM.

Claims use since Jan. 1, 1940.

Ser. No. 528,208. HARRIS EYE LOTION CO., INC., New York, N. Y. Filed July 9, 1947.

Dr. Harris

The name "Dr. Harris" is the facsimile signature of Dr. M. H. Harris, president of the applicant. Applicant claims ownership of registration No. 349,521.

FOR EYE LOTION, EYE DROPS.

Claims use since May 1, 1931.

Ser. No. 531,065. WALGREEN CO., Chicago, Ill. Filed Aug. 11, 1947. Under section 2f of the act of 1946.

Walgreen

Applicant claims ownership of registration No. 413,516.

FOR MILK OF MAGNESIA, MAGNESIA TOOTH PASTE AND ASPIRIN TABLETS.

Claims use on milk of magnesia since Nov. 30, 1929; on magnesia tooth paste since Sept. 6, 1932; and on aspirin tablets since Mar. 12, 1928.

Ser. No. 531,066. WALGREEN CO., Chicago, Ill. Filed Aug. 11, 1947. Under section 2f of the act of 1946.

WALGREEN

Applicant claims ownership of registration No. 413,516.
FOR RUBBING ALCOHOL.
Claims use since Dec. 24, 1935.

Ser. No. 534,797. AGNES SHEEHAN MCCARTHY, doing business as Sur-San Products, Des Moines, Iowa. Filed Sept. 17, 1947.

The applicant's mark consists of the word "Sur-San."
FOR VAGINAL DRY DOUCHE.
Claims use since June 5, 1934.

Ser. No. 535,871. QUAKER CHEMICAL PRODUCTS CORPORATION, Conshohocken, Pa. Filed Sept. 26, 1947.

The center oval portion of the mark is lined to indicate the color blue.
FOR WATER SOFTENER FOR USE IN METAL AND TEXTILE INDUSTRY; ESTERS OF OILY OR WAXY NATURE; SYNTHETIC WAXES FOR TREATING TEXTILES AND OTHER FIBROUS MATERIALS; SYNTHETIC RESINS FOR TREATING TEXTILES AND OTHER FIBROUS MATERIALS; EMULSIONS OF RESINS IN AQUEOUS AND NON-AQUEOUS MEDIA FOR COATING, FINISHING, FILLING TEXTILES, FABRICS AND YARNS; OLEAGINOUS PREPARATIONS FOR USE AS WOOL AND TEXTILE LUBRICANT; ORGANIC WETTING AGENTS; ORGANIC PLASTICIZER AGENTS.
Claims use since May 1, 1928.

Ser. No. 537,148. THE CAREY SALT COMPANY, Hutchinson, Kans. Filed Oct. 8, 1947. Under section 2f of the act of 1946.

CAREY'S

FOR WATER SOFTENER SALT, MEAT CURING SALT, ICE CREAM SALT, AND ALL GRADES OF CRUSHED ROCK SALT.
Claims use since September 1901.

Ser. No. 537,866. AYERST, MCKENNA & HARRISON LIMITED, New York and Rouses Point, N. Y. Filed Oct. 15, 1947. Under section 2f of the act of 1946.

Ayerst

Applicant claims ownership of registration No. 247,645.
FOR ANTERIOR HYPOPHYSEAL GONADOTROPHIC FACTOR AND GROWTH COMPLEX; ANTIPERTUSSIS SERUM; BILE SALT TABLETS; CHORIONIC GONADOTROPHIN; COMBINED VITAMINS AND MINERALS; CONJUGATED ESTROGENS; DIETHYL-STILBESTROL ENCAPSULATED; DIETHYL-STILBESTROL DIPROPIONATE ENCAPSULATED; ESTROGENIC PLACENTAL HORMONES IN TABLET AND LIQUID FORM; FERROUS CARBONATE WITH COPPER, AND FERROUS CARBONATE WITH COPPER, ARSENIC AND STRYCHNINE; LACTOGENIC FACTOR; PERTUSSIS ENDOTOXOID AND VACCINE; STAPHYLOCOCCUS TOXOID; THYROTROPHIC FACTOR; VITAMIN B COMPLEX TABLETS AND PARENTERAL SOLUTIONS; VITAMIN E IN DOSAGE FORM; VITAMIN K FOR ORAL AND PARENTERAL USE; VITAMIN P TABLETS.
Claims use since Mar. 30, 1934.

Ser. No. 539,143. EUGENE, LTD., Brooklyn, N. Y. Filed Oct. 27, 1947.

eugene

Applicant claims ownership of registrations Nos. 200,352 and 242,284.
FOR SOLUTIONS AND PREPARATIONS USED FOR PERMANENT WAVING, HAIR DRYING, HAIR SETTING AND HAIR CLEANSING AND TREATING—NAMELY, PERMANENT WAVING SOLUTIONS, HAIR DRYING SOLUTIONS, WAVE SETTING SOLUTIONS, LIQUID SHAMPOOS, CREAM SHAMPOOS, AND SOLUTIONS FOR EXOTHERMIC HAIR WAVING PADS.
Claims use since May 1922.

Ser. No. 539,145. EUGENE, LTD., Brooklyn, N. Y. Filed Oct. 27, 1947.

Applicant claims ownership of registration No. 245,466.
FOR SOLUTIONS AND PREPARATIONS USED FOR PERMANENT WAVING, HAIR DRYING, HAIR SETTING AND HAIR CLEANSING AND TREATING—NAMELY, PERMANENT WAVING SOLUTIONS, HAIR DRYING SOLUTIONS, WAVE SETTING SOLUTIONS, LIQUID SHAMPOOS, CREAM SHAMPOOS, AND SOLUTIONS FOR EXOTHERMIC HAIR WAVING PADS.
Claims use since May 1926.

Ser. No. 539,170. SAM HOUSTON COMPANY, Birmingham, Ala. Filed Oct. 27, 1947. Under section 2f of the act of 1946.

HOUSTON'S

DERRIS MIXTURE

The words "Derris Mixture" are disclaimed apart from the mark as shown. Applicant claims ownership of registration No. 395,511.
FOR INSECTICIDES.
Claims use since Jan. 1, 1937.

Ser. No. 540,427. MARBLEHEAD LIME COMPANY, Chicago, Ill. Filed Nov. 7, 1947.

"98"

FOR ANIMAL FEED SUPPLEMENT CONSISTING OF PURE LIME AND PURE LIME WITH IODINE AND/OR MANGANESE.
Claims use since July 1932.

Ser. No. 540,758. EDWARD H. ACREE, Schooley's Mountain, N. J. Filed Nov. 12, 1947.

Ivy-24

Applicant disclaims the word "Ivy" apart from the mark.
FOR PREPARATION FOR TREATMENT OF IVY, SUMAC AND OAK POISONING; ALSO BEE STINGS, MOSQUITO AND OTHER INSECT BITES.
Claims use since Aug. 28, 1947.

Ser. No. 540,779. CONTI PRODUCTS CORPORATION, Brooklyn, N. Y. Filed Nov. 12, 1947.

VICEROY

FOR HAIR TONIC.
Claims use since October 1947.

Ser. No. 540,908. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Filed Nov. 12, 1947.

W-N-M

WEED-NO-MORE

Applicant makes no claim to the word "Weed" apart from the mark.
FOR CHEMICALS FOR EXTERMINATING WEEDS.
Claims use since Feb. 1, 1947.

Ser. No. 541,329. NORTHAM WARREN CORPORATION, Stamford, Conn. Filed Nov. 15, 1947. Under section 2f of the act of 1946.

NAIL

Brilliance

The word "Nail" is disclaimed. Applicant claims ownership of registration No. 189,471.
FOR NAIL POLISH, NAIL POLISH REMOVER, BASECOAT AND TOP COAT, CUTICLE REMOVER.
Claims use since July 9, 1923.

Ser. No. 542,559. GIVIRMME, S. A., Milan, Italy. Filed Nov. 28, 1947.

Insidia

FOR PERFUMES, FACE POWDERS, TOILET WATERS, SACHET POWDERS, LOTIONS FOR THE HAIR, AND BRILLIANTINE.
Claims use since Nov. 16, 1945.

Ser. No. 543,184. MARIA HORNES, LTD., London, England, assignor to Maria Hornes, Inc., New York, N. Y., a corporation of New York. Filed Dec. 3, 1947.

Applicant claims ownership of British registration No. B.642,379 dated Nov. 29, 1945.
FOR FACE LOTION, HAND LOTION, FOOT LOTION, TOILET WATER, PERFUMES, FACE CREAM, HAND CREAM, EYELASH CREAM, ROUGE, LIPSTICK, MASCARA, EYE SHADOW, TALCUM POWDER, FACE POWDER, ASTRINGENT LOTION, AND PORE LOTION.

Ser. No. 547,416. AMES COMPANY, INC., Elkhart, Ind. Filed Jan. 19, 1948.

Sulfadiazine-VESS

No claim is made to the word "Sulfadiazine" as apart from the trade-mark as shown in the drawing. Applicant claims ownership of registrations Nos. 384,081 and 413,585.
FOR SULFADIAZINE BUFFERED WITH SODIUM CITRATE.
Claims use since Sept. 26, 1947.

Ser. No. 547,417. AMES COMPANY, INC., Elkhart, Ind. Filed Jan. 19, 1948.

Sulfaguanidine-VESS

The word "Sulfaguanidine" is disclaimed apart from the mark. Applicant claims ownership of registrations Nos. 384,081 and 413,585.
FOR SULFAGUANIDINE BUFFERED WITH SODIUM CITRATE.
Claims use since Sept. 26, 1947.

Ser. No. 547,418. AMES COMPANY, INC., Elkhart, Ind. Filed Jan. 19, 1948.

Sulfathiazole-VESS

No claim is made to the word "Sulfathiazole" as apart from the trade-mark as shown in the drawing. Applicant claims ownership of registrations Nos. 384,081 and 413,585.
FOR SULFATHIAZOLE BUFFERED WITH SODIUM CITRATE.
Claims use since Sept. 26, 1947.

Ser. No. 547,610. GEORGE A. BREON & COMPANY, Kansas City, Mo. Filed Jan. 21, 1948.

BREOGAMINE

FOR PROTEIN PREPARATION USEFUL TO PRODUCE POSITIVE NITROGEN BALANCE IN PRESENCE OF PROTEIN DEFICIENCY.
Claims use since Dec. 2, 1947.

Ser. No. 547,786. STAUFFER CHEMICAL COMPANY, San Francisco, Calif. Filed Jan. 22, 1948.

CROWN

Applicant claims ownership of registration No. 261,403.
FOR SULPHUR.
Claims use since Aug. 5, 1924.

Ser. No. 549,943. NIPA LABORATORIES LIMITED, London, England. Filed Feb. 17, 1948.

NIPAGIN

Applicant claims ownership of British registration No. 614,767, dated Apr. 22, 1941, and United States Registration No. 287,141, dated Sept. 15, 1931.
FOR ORGANIC ESTERS USED AS ANTI-OXIDANTS AND PRESERVATIVES IN PHARMACEUTICAL AND MEDICAL PREPARATIONS, IN ANIMAL OILS, IN ESSENTIAL OILS, IN SOAPS, IN PERFUMES, IN COSMETICS AND IN FOODSTUFFS.

Ser. No. 550,504. THE GREAT AMERICAN TEA COMPANY, New York, N. Y. Filed Feb. 25, 1948.

GOLDEN KEY

Applicant claims ownership of registration No. 200,998.
FOR MULTI-VITAMINS CAPSULES, VITAMIN A AND D CAPSULES, VITAMIN B1 TABLETS, VITAMIN B COMPLEX TABLETS, AND DEODORANT IN LIQUID FORM FOR PERSONAL USE.
Claims use on multi-vitamins capsules and vitamin B complex tablets since July 25, 1944; on vitamin A & D capsules since Aug. 27, 1942; on vitamin B1 tablets since Dec. 11, 1942; and on deodorant on Aug. 1, 1942.

CLASS 7

CORDAGE

Ser. No. 532,172. ST. REGIS PAPER COMPANY, New York, N. Y. Filed Aug. 22, 1947.

SR

FOR WIRE TIES ADAPTED FOR TYING BAGS AND OTHER PURPOSES.
Claims use since Mar. 15, 1947.

Ser. No. 546,774. INDUSTRIAL SYNTHETICS CORPORATION, Garwood, N. J. Filed Jan. 12, 1948.

SUPPLEX

FOR CLOTHESLINE.
Claims use since Nov. 24, 1947.

Ser. No. 549,148. INDUSTRIAL SYNTHETICS CORPORATION, Garwood, N. J. Filed Feb. 9, 1948.

ELASTRON

FOR CLOTHESLINE.
Claims use since Dec. 5, 1947.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 527,902. OLIN INDUSTRIES, INC., East Alton, Ill. Filed July 5, 1947.

Western

The drawing is lined to indicate red. Applicant claims ownership of registrations Nos. 142,347, 149,543, 331,081, 224,874, and 210,699.
FOR SHOT SHELLS AND RIFLE CARTRIDGES.
Claims use since January 1908.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 546,504. MANIFOLD SUPPLIES COMPANY, Brooklyn, N. Y. Filed Jan. 8, 1948. Under section 2f of the act of 1946.

Applicant claims ownership of registration No. 140,284.
FOR CARBON PAPER AND INKED RIBBONS.
Claims use since Sept. 1, 1912.

Ser. No. 547,136. MANIFOLD SUPPLIES COMPANY, Brooklyn, N. Y. Filed Jan. 15, 1948. Under section 2f of the act of 1946.

Applicant claims ownership of registration No. 140,284.
FOR CARBON PAPER AND INKED RIBBONS.
Claims use since Feb. 1, 1941.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 516,796. SILVERCOTE PRODUCTS, INC., Chicago, Ill. Filed Aug. 18, 1947. Under section 2f of the act of 1946.

SILVERCOTE

Applicant claims ownership of registration No. 326,250.
FOR THERMAL REFLECTIVE INSULATION MATERIALS—NAMELY, REENFORCED COATED HEAT-REFLECTIVE PAPER SHEETS, COATED ON ONE OR BOTH SIDES, ASPHALT-LAMINATED SHEETS WITH HEAT-REFLECTIVE COATED PAPER ON ONE OR BOTH SIDES THEREOF, VAPOR BARRIER SHEETS, COATED ON ONE SIDE WITH A HEAT-REFLECTIVE COATING AND ON THE OTHER SIDE WITH ASPHALT, BATT BACKINGS CONSISTING OF A SHEET OF KRAFT PAPER COATED ON ONE SIDE WITH HEAT-REFLECTIVE MATERIAL FOR USE ON THE FOLLOWING ARTICLES—NAMELY, HEAT-INSULATING BATTS, BLANKETS, BOARDS, GYPSUM LATH, METAL LATH, HEAT INSULATION BOARDS AND FIBER BOARDS OF VARIOUS TYPES, AND STRUCTURAL BOARDS OF VARIOUS CONSTRUCTIONS.
Claims use since Mar. 18, 1933.

Ser. No. 528,317. SILVERCOTE PRODUCTS, INC., Chicago, Ill. Filed July 10, 1947. Under section 2f of the act of 1946.

SILVERCOTE

Applicant claims ownership of registrations Nos. 326,250 and 358,988.
FOR REFLECTIVE HEAT INSULATION MATERIALS—NAMELY, REINFORCED COATED HEAT-REFLECTIVE PAPER SHEET COATED ON ONE OR BOTH SIDES, ASPHALT LAMINATED SHEET WITH HEAT-REFLECTIVE COATED PAPER ON BOTH SIDES THEREOF, VAPOR BARRIER SHEET COATED ON ONE SIDE WITH HEAT REFLECTIVE COATING AND ON THE OTHER SIDE WITH ASPHALT, A SHEET OF KRAFT PAPER LAMINATED WITH A SHEET OF PAPER COATED WITH HEAT-REFLECTIVE HEAT-INSULATING MATERIAL, BATT BACKINGS CONSISTING OF A SHEET OF KRAFT PAPER COATED ON ONE SIDE WITH ASPHALT AND HAVING ON ITS OTHER SIDE A SHEET OF PAPER COATED WITH HEAT-REFLECTIVE HEAT-INSULATING MATERIAL, FOR USE ON HEAT-INSULATING BATTS, BLANKETS, BOARDS, ROCK LATH, HEAT INSULATION BOARDS AND FIBER BOARDS OF VARIOUS TYPES.
Claims use since Mar. 18, 1933.

Ser. No. 531,224. LEWIS ASPHALT ENGINEERING CORPORATION, New York, N. Y., and Clark, N. J. Filed Aug. 13, 1947.

KARNAK

FOR WATER PROOFING ASPHALT, COTTON CLOTH SATURATED WITH HOT ASPHALT FOR USE IN ROOFING AND MEMBRANE WATERPROOFING, ASPHALT EMULSION WITH FILLER, ASPHALT LIQUID DAMPPROOFING, LIQUID ASPHALT WITH ASBESTOS THEREIN FOR USE IN ROOFING AND DAMPPROOFING ASPHALT EMULSION FOR PROTECTIVE COATING, PLASTIC ASPHALT AND FIBRE CEMENT, AND ROOF COATING CONTAINING ASPHALT AND ALUMINUM FLAKES.
Claims use since May 26, 1920.

Ser. No. 539,378. AMERICAN CROSSARM & CONDUIT COMPANY, Chicago, Ill. Filed Oct. 29, 1947.

AC&C

FOR WOODEN CROSSARMS, FOR USE ON TELEPHONE POLES, TELEGRAPH POLES, AND THE LIKE.
Claims use since Apr. 13, 1931.

Ser. No. 540,543. LEHWOOD CORPORATION, Mishawaka, Ind. Filed Nov. 8, 1947.

AMERGRAIN

FOR PLYWOOD, UNFINISHED AND FINISHED LUMBER.
Claims use since May 21, 1947.

Ser. No. 541,857. MEXICO REFRACTORIES COMPANY, Mexico, Mo. Filed Nov. 20, 1947.

HELSPOT

FOR PLASTIC FIREBRICK.
Claims use since Feb. 23, 1944.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 527,120. W. N. MATTHEWS CORPORATION, St. Louis, Mo. Filed July 5, 1947.

SCRU LIX

Applicant claims ownership of registration No. 107,886.
FOR GROUND-ANCHORS.
Claims use since July 10, 1915.

Ser. No. 531,311. CARROLLTON MANUFACTURING COMPANY, Carrollton, Ohio. Filed Aug. 14, 1947. Under section 2f of the act of 1946.

Carlton Ware

The word "Ware" is disclaimed apart from the mark.
FOR STAINLESS STEEL COOKING, KITCHEN, HOUSEHOLD AND HOSPITAL WARE—NAMELY, BISCUIT PANS, FOOD BOWLS, CAKE COVERS, CAKE PANS, CEREAL BOWLS, COFFEE MAKERS, COFFEE SERVERS, COLANDERS, CUPS, DEEP PIE PANS, DOUBLE BOILERS AND COVERS, DUTCH OVENS, FOOTED BOWLS, FRYING PANS, INDIVIDUAL CASSEROLES AND COVERS, MIXING BOWLS, OVAL ROASTERS, PITCHERS, PLATES, POTS AND COVERS, PRESERVING KETTLES, PUDDING PANS, REFRIGERATOR PANS, ROUND BEVERAGE TRAYS, ROUND DISHPANS, SALAD TABLE PANS AND COVERS, SAUCE PANS AND COVERS, SAUCE POTS, SERVING TRAYS, STEAM TABLE INSERTS AND COVERS, STEAM TABLE PANS AND COVERS, STOCK POTS AND COVERS, TEA KETTLES, TOAST COVERS, TRAYS, AND TUMBLERS.
Claims use since 1931.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 491,474. GENERAL STEEL WAREHOUSE CO., INC., Chicago, Ill. Filed Feb. 2, 1948.

FOR COLD FINISHED STEEL BARS, AIRCRAFT STRIP STEEL, COLD ROLLED STRIP STEEL, STEEL BALLS FOR GENERAL USE, COLD ROLLED SHIM STEEL, SHEET STEEL, ROUND EDGE FLAT WIRE, FEELER GAUGE, TEMPERED AND ANNEALED SPRING STEEL, ROUND WIRES, AND DRILL RODS.
Claims use since May 1941.

CLASS 15

OILS AND GREASES

Ser. No. 534,687. D. A. STUART OIL CO., LIMITED, Chicago, Ill. Filed Sept. 16, 1947.

STURACO

FOR EXTREME PRESSURE LUBRICATING OILS AND GREASES FOR INDUSTRIAL AND AUTOMOTIVE USES.
Claims use since Feb. 27, 1931.

CLASS 17

TOBACCO PRODUCTS

Ser. No. 531,551. UNITED STATES TOBACCO COMPANY, New York, N. Y. Filed Aug. 15, 1947.

TWEED

FOR SMOKING TOBACCO.
Claims use since May 13, 1938.

Ser. No. 531,552. UNITED STATES TOBACCO COMPANY, Flemington, N. J., and New York, N. Y. Filed Aug. 15, 1947.

SKOAL

FOR CHEWING TOBACCO.
Claims use since Oct. 10, 1934.

Ser. No. 533,950. TAMPA CIGAR COMPANY, INC., Tampa, Fla. Filed Sept. 9, 1947.

The word "Tampa" and the representation of the goods are disclaimed apart from the rest of the mark. Applicant claims ownership of registration No. 177,445.
FOR CIGARS.
Claims use since June 27, 1908.

Ser. No. 541,636. BENSON & HEDGES, New York, N. Y. Filed Nov. 19, 1947.

Pipe Club

The word "Pipe" is disclaimed apart from the mark as shown.
FOR SMOKING TOBACCO.
Claims use since Oct. 4, 1947.

CLASS 19

VEHICLES

Ser. No. 526,986. LOCKHEED AIRCRAFT CORPORATION, Burbank, Calif. Filed July 5, 1947.

CONSTITUTION

Applicant claims ownership of registrations Nos. 319,956, 373,314, 427,507, and 427,508.
FOR AIRPLANES AND STRUCTURAL PARTS THEREFOR.
Claims use since February 1943.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 531,553. UNITED UTILITIES & SPECIALTY CORPORATION, Boston, Mass. Filed Aug. 15, 1947.

Sovereign

FOR ELECTRIC VACUUM CLEANERS.
Claims use since July 24, 1947.

Ser. No. 541,964. RAYTHEON MANUFACTURING COMPANY, Newton, Mass. Filed Nov. 21, 1947.

RAYTHEON

Applicant claims ownership of registrations Nos. 208,886, 237,111, 266,330, 305,916, and others.
FOR ELECTRIC MOTORS.
Claims use since May 19, 1947.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 532,198. THE AUTOMATIC RECORDING SAFE COMPANY, Chicago, Ill. Filed Aug. 23, 1947.

THE TRAVELING TELLER

The trade-mark comprises the words "The Traveling Teller." Applicant claims ownership of registration No. 175,154.
FOR PORTABLE SAVINGS BANKS.
Claims use since January 1911.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 509,151. LANDIS MACHINE COMPANY, INC., Waynesboro, Pa. Filed July 25, 1947. Under section 2f of the act of 1946.

LANDIS

Applicant claims ownership of registrations Nos. 177,617, 233,269, 251,672, 276,140, and 429,522.
FOR THREAD FORMING MACHINES AND ACCESSORIES THEREFOR AND PARTS THEREOF,, INCLUDING MACHINES AND ACCESSORIES AND PARTS FOR CUTTING, ROLLING, AND GRINDING THREADS.
Claims use since 1889.

Ser. No. 527,606. THE AMERICAN FORK AND HOE COMPANY, Cleveland, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

STURDITOOLS

The word "Tools" is disclaimed apart from the mark. Applicant claims ownership of registrations Nos. 163,654, 197,808, and 234,496.
FOR TOOLS—NAMELY, CONSTRUCTION TOOLS COMPRISING CANT HOOKS, CROWBARS, DIGGING BARS, DIGGING SPUDS, TAMPING BARS, LOY OR SLICK DIGGING TOOLS, LUG HOOKS, PEAVIES, PIKE POLES, POSTHOLE DIGGERS, POLE SUPPORTS, RAISING FORKS, TELEGRAPH SHOVELS, TELEGRAPH SPOONS, D-HANDLE SHOVELS, LONG-HANDLE SHOVELS, TIMBER CARRIERS, TAMPING BARS, COMBINED TAMPING AND DIGGING BARS; ICE TOOLS COMPRISING HOOKS, SHAVERS, TONGS, ICE-CREAM-CAN TONGS, BREAKERS; AND OTHER TOOLS COMPRISING BOLT HOOKS, BOAT POLES, BARN SCRAPERS, BOLT OR PULP-WOOD HOOKS, CATTLE PRODS, HOG HOOKS, SIDEWALK SCRAPERS, EARTH TAMPERS, AND CONCRETE TAMPERS.
Claims use since Jan. 1, 1923.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Ser. No. 526,666. AVCO MANUFACTURING CORPORATION, Cincinnati, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

GROSLEY

Applicant claims ownership of registrations Nos. 244,510, 333,597, 384,667, 412,353, and 412,906.
FOR LAUNDRY WASHING MACHINES.
Claims use since January 1936.

Ser. No. 533,805. J. W. STEELE & Co., North Kansas City, Mo. Filed Sept. 2, 1947.

ADAPT-O-MATIC

FOR MEDICINAL SALVE KNOWN AS CAMTHOL, USEFUL IN ALL FORMS OF CONGESTION AND INFLAMMATION AFFECTING THE RESPIRATORY ORGANS.
Claims use since Jan. 1, 1900.

Reg. No. 210,684. Registered Mar. 23, 1926. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

Wilson's
O. K. PLANT SPRAY

The words "Wilson's Plant Spray" are disclaimed apart from the mark shown.
FOR INSECTICIDES.
Claims use since May 1909.

Reg. No. 211,233. Registered Apr. 6, 1926. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

AWINC

FOR INSECTICIDES.
Claims use since May 1918.

Reg. No. 225,266. Registered Mar. 15, 1927. REICHMAN & FAUST, New York, N. Y. Republished by Cheramy, Inc., New York, N. Y., a corporation of New York.

May Flowers
MAIFLEURS

FOR PERFUME, TOILET WATER, FACE POWDER, TALCUM POWDER, ROUGE, BRILLIANTINE, COLD CREAM, CLEANSING CREAM, VANISHING CREAM, LEMON CREAM, TISSUE CREAM, NAIL POLISH, LOTION FOR THE SKIN AND HAIR.
Claims use since Feb. 1, 1926.

Reg. No. 237,004. Registered Jan. 3, 1928. NORDA ESSENTIAL OIL & CHEMICAL CO., INC., New York, N. Y., a corporation of New York. Republished by registrant.

PARANERVA

FOR ASTRINGENTS, ASTRINGENT CERATES, BLEACH CREAMS, BEAUTY CREAMS, COLD CREAMS, AND ALL THE OTHER NAMED GOODS IN THE SAID REGISTRATION.
Claims use since Dec. 3, 1924.

Reg. No. 264,108. Registered Nov. 19, 1929. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

The words "Of Sprays" are disclaimed apart from the mark as shown.
FOR INSECTICIDE IN LIQUID FORM.
Claims use since January 1928.

Reg. No. 265,140. Registered Dec. 17, 1929. SHUPTRINE CO., Savannah, Ga. Republished by Shuptrine Company, Savannah, Ga., a firm.

TETTERINE

FOR PREPARATION FOR RINGWORM, ITCH, AND PARASITIC SKIN DISEASES.
Claims use since July 10, 1883.

Reg. No. 265,213. Registered Dec. 17, 1929. NUMOTIZINE, INC., Chicago, Ill., a corporation of Oklahoma. Republished by registrant.

Numotizine

FOR A PHARMACEUTICAL PRODUCT—NAMELY, AN ETHICAL MEDICINAL PREPARATION FOR USE IN CONNECTION WITH THE TREATMENT OF PNEUMONIA, BRONCHITIS, PLEURISY, PHTHISIS, WHOOPING COUGH, PULMONARY AILMENTS, TYPHOID FEVER, AND OTHER FEBRILE TOXAEMIAS.
Claims use since Apr. 1, 1929.

Reg. No. 275,216. Registered Sept. 16, 1930. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

SCALE-O

FOR INSECTICIDES.
Claims use since May 1915.

Reg. No. 276,028. Registered Oct. 7, 1930. MORTON G. NEUMAN, doing business as Valmor Perfumer, Chicago, Ill. Republished by Valmor Products Co., Chicago, Ill., a corporation of Illinois.

PARIS GIRL

FOR PERFUME, FACE POWDER, TALCUM POWDER, AND ALL THE OTHER GOODS LISTED IN THE ORIGINAL REGISTRATION.
Claims use since Apr. 1, 1930.

Reg. No. 292,497. Registered Mar. 15, 1932. AMERICAN TURPENTINE & TAR COMPANY, LTD., New Orleans, La., a corporation of Louisiana. Republished by registrant.

PINETREL

FOR FLY REPELLENT AND SOOTHING WOUND DRESSING.
Claims use since May 29, 1931.

Reg. No. 296,287. Registered Aug. 2, 1932. HARTMAN-LEDDON CO., INC., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

PARSTAINS

FOR DYES USED AS BIOLOGICAL STAINS.
Claims use since Feb. 1, 1932.

Reg. No. 298,129. Registered Oct. 11, 1932. MORTON G. NEUMANN, doing business as Lucky Mo-Jo Products Co., Chicago, Ill. Republished by Valmor Products Co., Chicago, Ill., a corporation of Illinois.

LUCKY MO-JO

FOR INCENSE, PERFUMES, AND TOOTHPASTE.
Claims use since Oct. 15, 1929.

Reg. No. 308,853. Registered Dec. 26, 1933. GENERAL ATLAS CARBON COMPANY, New York, N. Y. Republished by General Atlas Carbon Company, Boston, Mass., a corporation of Massachusetts.

PELLETEX

FOR CARBON BLACK HAVING A GENERAL USE IN THE INDUSTRIAL ARTS.
Claims use since May 4, 1933.

Reg. No. 308,883. Registered Dec. 26, 1933. MACANDREWS & FORBES COMPANY, Camden, N. J., a corporation of New Jersey. Republished by registrant.

MF

FOR LICORICE PASTE COMPOUND PRINCIPALLY USED IN TREATING TOBACCO.
Claims use since April 1921.

Reg. No. 319,635. Registered Dec. 4, 1934. MARION LAMBERT, INC., St. Louis, Mo. Republished by Pearson Pharmacal Company, Inc., New York, N. Y., a corporation of New York.

DEW CREME DEODORANT

The words "Creme Deodorant" are disclaimed apart from the mark.
FOR CREME DEODORANT.
Claims use since on or about Apr. 6, 1934.

Reg. No. 319,813. Registered Dec. 4, 1934. ELMO, INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

MOTAN

FOR FACE POWDERS AND MAKE-UP LOTIONS.
Claims use since June 3, 1928.

Reg. No. 320,312. Registered Dec. 25, 1934. J. W. QUINN DRUG COMPANY, INC., Greenwood, Miss., a corporation of Mississippi. Republished by registrant.

Q. B. Skin Aid

The words "Skin Aid" are disclaimed apart from the mark.
FOR LOTION FOR TREATING THE SKIN.
Claims use since 1929.

Reg. No. 322,979. Registered Mar. 26, 1935. NUMOTISINE, INC., Chicago, Ill., a corporation of Oklahoma. Republished by registrant.

NUZINE

FOR HEMORRHOIDAL OINTMENT FOR THE RELIEF OF PAIN AND INFLAMMATION IN THE TREATMENT OF HEMORRHOIDS.
Claims use since Sept. 6, 1934.

Reg. No. 328,860. Registered Oct. 8, 1935. HARTMAN-LEDDON CO., INC., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

HARLECO

FOR CHEMICAL LABORATORY PRODUCTS, NAMELY—BIOLOGICAL STAINS, STAINING SOLUTIONS, EMBEDDING AND MOUNTING PREPARATIONS AND PURE SOLVENTS, DRY POWDER AND CRYSTALLINE INDICATORS, H-ION INDICATOR SOLUTIONS, H-ION DETERMINATION AND VOLUMETRIC SOLUTIONS.
Claims use since on or about March 1923.

Reg. No. 343,518. Registered Feb. 23, 1937. J. M. HUBER, INC., New York, N. Y. Republished by J. M. Huber Corporation, Red Bank, N. J., and New York, N. Y., a corporation of New Jersey.

WYEX

FOR CARBON BLACK HAVING A COMBINATION OF USES IN THE INDUSTRIAL ARTS.
Claims use since July 6, 1936.

Reg. No. 345,001. Registered Apr. 13, 1937. OTIS CLAPP & SON, INC., Boston, Mass., a corporation of Massachusetts. Republished by registrant.

SACLETS

FOR SWEETENING TABLET MADE OF SACCHARIN.
Claims use since April 1914.

Reg. No. 349,525. Registered Aug. 31, 1937. THE LUBRISOL CORPORATION, Wickliffe, Ohio, a corporation of Ohio. Republished by registrant.

CARBONTROLED

FOR CHEMICAL MOTOR FUEL ADDITION AGENTS.
Claims use since Feb. 2, 1937.

Reg. No. 350,161. Registered Sept. 21, 1937. SCOTT PHILLIPS, INC., Chicago, Ill. Republished by Pearson Pharmacal Company, Inc., New York, N. Y., a corporation of New York.

The drawing is lined to indicate the color blue.
FOR EYE LOTION.
Claims use since July 9, 1935.

Reg. No. 354,734. Registered Feb. 22, 1938. ELMO, INC., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

EL PATIO

FOR TOILET CREAMS, TOILET LOTIONS, TOILET POWDERS, PERFUMES, TOILET WATERS, AND WATER SOFTENERS.
Claims use since Jan. 7, 1937.

Reg. No. 365,022. Registered Feb. 21, 1939. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

Squito-Rid

FOR LARVACIDE AND REPELLENT FOR MOSQUITOES.
Claims use since June 1937.

Reg. No. 365,371. Registered Mar. 7, 1939. ANDREW WILSON, INC., Springfield, N. J., a corporation of New Jersey. Republished by registrant.

GRUB-O

FOR GRUB PROOFING PREPARATION FOR LAWNS, GOLF GREENS, AND THE LIKE.
Claims use since March 1929.

Reg. No. 372,171. Registered Oct. 24, 1939. J. W. QUINN DRUG COMPANY, INC., Greenwood, Miss., a corporation of Mississippi. Republished by registrant.

SEN-SAN

FOR DIURETIC COMPOUND AND DIURETIC TABLETS.
Claims use since Oct. 5, 1936.

Reg. No. 376,135. Registered Mar. 12, 1940. ELMO, INC., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

Elmo

"Secrets of Loveliness"

FOR TOILET CREAMS, FACE LOTIONS AND FACE POWDERS.
Claims use since Aug. 7, 1939.

Reg. No. 378,524. Registered June 11, 1940. ELMO, INC., Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

Elmo

FOR PACK SOLUTION, TEXTURE CREAM, MELTING CREAM, DUSTING POWDER, ROUGE IN LIQUID, POWDER AND CREAM FORMS, LIP-STICK, EYELASH MAKE-UP SETS, EYE SHADOW, POWDER COMPACT SETS, EYE-BROW PENCIL, MILK PACK, CLAY PACK, VANISHING CREAM, HAND CREAM, BRILLIANTINE, SUNBURN CREAM, TONING OIL, MAKE-UP LOTION, SKIN FRESHENER, CLEANSING CREAM, FACIAL CREAM, LIQUID POWDER, FACE POWDER AND EYE LOTION.
Claims use since 1909.

Reg. No. 387,013. Registered Apr. 29, 1941. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

THIALKENE

FOR SULFUR-BEARING OXIDATION INHIBITOR FOR USE WITH LUBRICATING OILS AND GREASES.
Claims use since Nov. 9, 1940.

Reg. No. 399,033. Registered Dec. 8, 1942. BROWN MANUFACTURING COMPANY, Le Roy, N. Y., a corporation of Tennessee. Republished by registrant.

RAMON'S CO-TABS

FOR PREPARATION FOR THE RELIEF OF COLDS.
Claims use since Dec. 10, 1941.

Reg. No. 403,752. Registered Oct. 19, 1943. G. N. COUGHLAN CO., Orange, N. J., a corporation of New Jersey. Republished by registrant, present location West Orange, N. J.

Easy-Aid

FOR CHEMICAL POWDER USED AS A FIRE SCALE AND SOOT ERADICATOR.
Claims use since Aug. 7, 1941.

Reg. No. 405,562. Registered Feb. 8, 1944. G. N. COUGHLAN CO., Orange, N. J., a corporation of New Jersey. Republished by registrant, present location West Orange, N. J.

CHIMNEY SWEEP

FOR CHEMICAL POWDER USED AS A FIRE SCALE AND SOOT ERADICATOR.
Claims use since Aug. 7, 1941.

Reg. No. 405,784. Registered Feb. 22, 1944. J. M. HUBER, INC., New York, N. Y. Republished by J. M. Huber Corporation, Red Bank, N. J., a corporation of New Jersey.

BUTAC

FOR CHEMICAL COMPOSITION FOR MODIFYING THE PHYSICAL PROPERTIES OF PLASTICS, SUCH AS SYNTHETIC RUBBER.
Claims use since July 6, 1943.

Reg. No. 410,698. Registered Dec. 12, 1944. R. J. STRASENBURGH COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

MAXITATE

FOR MEDICINAL PREPARATIONS IN TABLET FORM FOR PRODUCING VASODILATION IN ESSENTIAL HYPERTENSION AND ANGINA PECTORIS.
Claims use since Nov. 8, 1939.

Reg. No. 410,699. Registered Dec. 12, 1944. R. J. STRASENBURGH COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

METROPINE

FOR MEDICINAL PREPARATIONS IN TABLET FORM ACTING AS A SPASMOLYTIC IN PYLOROSPASMS AND AS A RELAXANT OF SPASM IN BRONCHIAL ASTHMA.
Claims use since Oct. 21, 1940.

Reg. No. 414,744. Registered June 26, 1945. R. J. STRASENBURGH COMPANY, Rochester, N. Y., a corporation of New York. Republished by registrant.

STRASCO

FOR SKIN LOTION, VITAMIN PREPARATIONS IN TABLET FORM, A CHEMICAL PREPARATION IN TABLET FORM FOR PROTECTING SURGICAL INSTRUMENTS AGAINST TARNISHING, RUST AND SCALE FORMATION, AND A CHEMICAL PREPARATION IN LIQUID FORM FOR CLEANING AND LOOSENING PHARMACEUTICAL SYRINGES.
Claims use since about 1917.

Reg. No. 415,039. Registered July 10, 1945. CHATHAM PHARMACEUTICALS, INC., Newark, N. J., a corporation of New Jersey. Republished by registrant.

KOAGAMIN

FOR HEMOSTATICS FOR USE IN THE CONTROL OF VENOUS AND CAPILLARY BLEEDING.
Claims use since Nov. 6, 1942.

Reg. No. 415,645. Registered Aug. 14, 1945. PIERCE'S PROPRIETARIES, INC., Buffalo, N. Y., a corporation of New York. Republished by registrant.

The drawing is lined for the color blue. The word "A-Nuric" is disclaimed apart from the mark.
FOR DIURETIC AND ANALGESIC.
Claims use since Oct. 4, 1944.

Reg. No. 417,531. Registered Oct. 30, 1945. PACIFIC COAST BORAX COMPANY, New York, N. Y., a corporation of Nevada. Republished by registrant.

BORASCU

FOR BORATE ORE USED FOR WEED CONTROL PURPOSES.
Claims use since Oct. 4, 1943.

Reg. No. 420,123. Registered Mar. 26, 1946. BROWN MANUFACTURING COMPANY, Le Roy, N. Y., a corporation of Tennessee. Republished by registrant.

FOR KIDNEY DIURETIC, COLD TABLETS; TABLETS TO RELIEVE PAIN AND DISTRESS FROM HEADACHES, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since Nov. 27, 1906.

Reg. No. 427,464. Registered Feb. 11, 1947. THE LUBRIZOL CORPORATION, Wickliffe, Ohio, a corporation of Ohio. Republished by registrant.

LUBRIZOL

FOR CHEMICAL COMPOUNDS, MIXTURES OF CHEMICAL COMPOUNDS, AND OIL SOLUTIONS OF CHEMICAL COMPOUNDS, AND MIXTURES OF CHEMICAL COMPOUNDS USEFUL AS IMPROVING AGENTS FOR LUBRICANTS AND INTERNAL COMBUSTION ENGINE FUELS.
Claims use since Jan. 16, 1946.

Reg. No. 432,465. Registered Sept. 2, 1947. E. MYERS LYE CORPORATION, St. Louis, Mo., a corporation of Missouri. Republished by registrant.

MYERS

FOR LYE.
Claims use since 1802.

CLASS 7

CORDAGE

Reg. No. 239,527. Registered Mar. 6, 1928. COLUMBIAN ROPE COMPANY, Auburn, N. Y., a corporation of New York. Republished by registrant.

TAPE MARKED

THE GUARANTEED ROPE

The words "Auburn, N. Y.," "Tape Marked Manila, The Guaranteed Rope," and "Trade Mark" are disclaimed apart from the mark shown.
FOR ROPE, TWINE, AND CORDAGE OF VEGETABLE FIBER.
Claims use since June 22, 1921.

Reg. No. 241,907. Registered May 8, 1928. THE EDWIN H. FITLER COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

The trade-mark consists of an elongated lineal blue and yellow yarn, thread, twine or the like incorporated in one of the strands of which the rope or cable is composed. No claim is made to the representation of a rope or cable apart from the mark as shown.

THE F.F.F. BRANDS

The word "Brands" is disclaimed apart from the mark.
FOR FERTILIZER.
Claims use since Mar. 21, 1931.

CLASS 11

INKS AND INKING MATERIALS

Reg. No. 239,099. Registered Feb. 21, 1928. BLACKWELL-WIELANDY BOOK AND STATIONERY COMPANY, St. Louis, Mo. Republished by Blackwell-Wielandy Company, St. Louis, Mo., a corporation of Missouri.

BLUE JAY Rite-Ezy

FOR WRITING FLUID FOR FOUNTAIN PENS.
Claims use since Sept. 28, 1927.

Reg. No. 382,747. Registered Nov. 12, 1940. THE MARKRITE MANUFACTURING CO., INC., Dover Village, Ohio, a corporation of Ohio. Republished by registrant.

Markrite

FOR MARKING INK, RUBBER STAMP INK, STAMP PADS, AND INK TO BE USED WITH MARKING DEVICES.
Claims use since May 1936.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 70,500. Registered Sept. 8, 1908. ALPHA PORTLAND CEMENT COMPANY, Easton, Pa. Republished by Alpha Portland Cement Company (1910), Easton, Pa., a corporation of New Jersey.

ALPHA PORTLAND CEMENT

FOR PORTLAND CEMENT.
Claims use since June 1893.

Reg. No. 101,890. Registered Jan. 12, 1915. UNITED STATES GYPSUM COMPANY, Chicago, Ill. Republished by United States Gypsum Company, Chicago, Ill., a corporation of Illinois.

PYROBAR

FOR GYPSUM TILE.
Claims use since June 7, 1910.

Reg. No. 121,148. Registered Apr. 9, 1918. UNITED STATES GYPSUM COMPANY, Chicago, Ill. Republished by United States Gypsum Company, Chicago, Ill., a corporation of Illinois.

"STRUCTOLITE"

FOR CALCINED GYPSUM.
Claims use since Jan. 6, 1917.

Reg. No. 138,710. Registered Jan. 4, 1921. SOUTHERN WOOD PRESERVING COMPANY, Atlanta, Ga., a corporation of Georgia. Republished by registrant.

Creo-pine

FOR WOOD FENCE POSTS, WOOD CROSS ARMS, WOOD CONDUIT, WOOD PAVING BLOCKS, WOOD FLOOR BLOCKS, DRESSED TIMBERS AND POLES.
Claims use since Dec. 18, 1919.

Reg. No. 155,922. Registered June 13, 1922. ANDERSON-TULLY COMPANY, Memphis, Tenn., a corporation of Michigan. Republished by registrant.

FOR LUMBER.
Claims use since about Jan. 15, 1921.

Reg. No. 160,709. Registered Oct. 24, 1922. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

ELDORADO

FOR CALCINED GYPSUM AND WALL PLASTER.
Claims use since 1904.

Reg. No. 167,733. Registered May 8, 1923. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

CHAMPION

FOR CALCINED GYPSUM, PLASTER OF PARIS, WALL PLASTER, GAUGING PLASTER.
Claims use since 1870.

Reg. No. 172,143. Registered Aug. 21, 1923. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

BONDCRETE

FOR CALCINED GYPSUM AND WALL PLASTERS.
Claims use since July 10, 1922.

Reg. No. 172,927. Registered Sept. 11, 1923. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

RED TOP

FOR CALCINED GYPSUM WALL PLASTERS.
Claims use since Feb. 3, 1923.

Reg. No. 186,147. Registered July 1, 1924. SAMSON PLASTER BOARD COMPANY, Buffalo, N. Y. Republished by United States Gypsum Company, Chicago, Ill., a corporation of Illinois.

The words "Trade Mark" and "Brand" are disclaimed.
FOR CALCINED GYPSUM WALL PLASTERS.
Claims use since October 1915.

Reg. No. 187,560. Registered Aug. 5, 1924. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

TEXTONE

FOR PLASTIC WALL COVERING.
Claims use since Mar. 5, 1924.

Reg. No. 229,491. Registered June 28, 1927. MACANDREWS & FORBES COMPANY, Camden, N. J., and New York, N. Y., a corporation of New Jersey. Republished by registrant, present location Camden, N. J.

MAFTEX

FOR COMPOSITE BOARD AND LUMBER.
Claims use since Jan. 12, 1927.

Reg. No. 255,568. Registered Apr. 23, 1929. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

PYROFILL

FOR PLASTER.
Claims use since August 1917.

Reg. No. 267,902. Registered Mar. 4, 1930. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

SABINITE

FOR PLASTER.
Claims use since June 1926.

Reg. No. 269,253. Registered Apr. 1, 1930. UNITED STATES GYPSUM COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

ORIENTAL

FOR STUCCO AND PLASTER.
Claims use since January 1912.

Reg. No. 322,084. Registered Feb. 26, 1935. THE INSULITE COMPANY, Minneapolis, Minn. Republished by Minnesota and Ontario Paper Company, Minneapolis, Minn., a corporation of Minnesota.

GRAYLITE

FOR FIBER COMPOSITION BOARD.
Claims use since Sept. 2, 1933.

Reg. No. 425,691. Registered Dec. 3, 1946. ALBERT C. FISCHER, Chicago, Ill. Republished by registrant.

SERVICISED

FOR PLYWOOD; ASPHALT FIBER BOARDS AND PLANKS, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since Dec. 1, 1915.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 133,130. Registered July 13, 1920. THE FOWLER NAIL CO., Seymour, Conn., assignor to The Fowler & Union Horse Nail Company, New Haven, Conn. Republished by The Capewell Manufacturing Company, Hartford, Conn., a corporation of Connecticut.

MOLDOCHIL

FOR MOLDER'S NAILS USED IN METAL FOUNDRIES.

"MISSING LINK"

FOR METAL LINKS FOR CHAINS.
Claims use since Jan. 5, 1904.

Reg. No. 164,376. Registered Feb. 20, 1923. THE ASTRUP COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

The word "Hardware" is disclaimed apart from the mark shown.
FOR TENT AND AWNING HARDWARE, TENT SNAP HOOKS AND HOOKS AND EYES, AWNING GEARS AND GEAR BOXES AND BRACKETS, AWNING SUPPORTS, FRAMES AND PULLEY BLOCKS.
Claims use since Aug. 15, 1917.

Reg. No. 293,178. Registered Apr. 12, 1932. THE VOLLRATH CO., Sheboygan, Wis., a corporation of Wisconsin. Republished by registrant.

VOLLRATH WARE

The word "Ware" is disclaimed apart from the mark as shown.
FOR STAINLESS STEEL BOWLS, REFRIGERATOR DISHES, VEGETABLE INSETS, COVERS, PANS, AND TRAYS.
Claims use since Jan. 10, 1931.

Reg. No. 328,399. Registered Sept. 24, 1935. ILLINOIS TOOL WORKS, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The representation of the goods is disclaimed apart from the mark.
FOR LOCK WASHERS, SCREWS, LOCK NUTS, AND LOCKING DEVICES FOR SCREW AND RIVET-TYPE FASTENERS IN GENERAL.
Claims use since Apr. 2, 1935.

Reg. No. 373,895. Registered Dec. 26, 1939. AMERICAN CHAIN & CABLE COMPANY, INC., New York, N. Y., and Bridgeport, Conn., a corporation of New York. Republished by registrant, present location Bridgeport, Conn.

ACCO

FOR GLOBE VALVES, ANGLE VALVES, CHECK VALVES, GATE VALVES, COCKS, PIPE FITTINGS, METAL CHAIN LINK FENCE FABRIC, METAL FENCE GATES, METAL BASEBALL BACK STOPS, METAL TENNIS COURT BACK STOPS, METAL FENCE POSTS, METAL FITTINGS FOR FENCE POSTS, METAL TOP RAILS FOR FENCE, TOWING CHAINS, AND SLING CHAINS.
Claims use since 1929.

Reg. No. 416,891. Registered Oct. 2, 1915. CERTIFIED GAUGE & INSTRUMENT CORP., Long Island City, N. Y. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

KOREX

FOR TUBING MADE FROM STEEL.
Claims use since Feb. 7, 1945.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 238,661. Registered Feb. 14, 1928. MUELLER BRASS COMPANY, Port Huron, Mich., a corporation of Michigan. Republished by registrant.

Tuf Stuf

FOR ROD FORGINGS OF NONFERROUS METAL.
Claims use since on or about Aug. 26, 1927.

Reg. No. 296,814. Registered Aug. 23, 1932. KREMENTZ & COMPANY, Newark, N. J., a corporation of New Jersey. Republished by registrant.

KREMALOY

FOR TARNISH AND CORROSION RESISTING METAL ALLOY SIMILAR IN APPEARANCE TO SILVER AND/OR WHITE GOLD AND/OR PLATINUM AND USED FOR METAL JEWELRY SUCH AS WRIST WATCH BRACELETS AND THE LIKE.
Claims use since Oct. 15, 1931.

Reg. No. 325,100. Registered June 11, 1935. WELDING SERVICE, INC., San Francisco, Calif. Republished by Welding Service Sales, Inc., San Francisco, Calif., a corporation of Nevada.

WELDCO

FOR WELDING RODS.
Claims use since 1923.

Reg. No. 349,401. Registered Aug. 24, 1937. THE INDIANA STEEL PRODUCTS COMPANY, Chicago, Ill., a corporation of Indiana. Republished by registrant.

VOLTA

FOR STEELS HAVING A TUNGSTEN CONTENT.
Claims use since Jan. 1, 1911.

Reg. No. 374,494. Registered Jan. 9, 1940. AMERICAN CHAIN & CABLE COMPANY, INC., Bridgeport, Conn., a corporation of New York. Republished by registrant, present location Bridgeport, Conn.

ACCO

FOR FERROUS METAL WIRE, FERROUS METAL SHEETS AND FERROUS METAL RODS.
Claims use since 1938.

CLASS 15

OILS AND GREASES

Reg. No. 59,851. Registered Jan. 22, 1907. ABRAHAM WALTER HARRIS, Providence, R. I. Republished by A. W. Harris Oil Company, East Providence, R. I., a corporation of Rhode Island.

HARRIS

FOR LUBRICATING-OILS AND LUBRICATING COMPOUNDS.
Claims use since January 1885.

Reg. No. 69,330. Registered June 9, 1908. AUGUSTUS CRANE BUSBY, Philadelphia, Pa. Republished by Keystone Lubricating Company, Philadelphia, Pa., a corporation of Pennsylvania.

KEYSTONE

FOR LUBRICANTS, CONSISTING OF OILS AND GREASES.
Claims use since Dec. 1, 1885.

Reg. No. 98,146. Registered July 7, 1914. A. W. HARRIS OIL CO., Providence, R. I. Republished by A. W. Harris Oil Company (1946), East Providence, R. I., a corporation of Rhode Island.

A.W.H.

FOR LUBRICATING-OILS.
Claims use since January 1885.

Reg. No. 98,870. Registered Aug. 4, 1914. A. W. HARRIS OIL CO., Providence, R. I. Republished by A. W. Harris Oil Company (1946), East Providence, R. I., a corporation of Rhode Island.

EXCELLO

FOR LUBRICATING-OILS.
Claims use since Oct. 3, 1895.

Reg. No. 154,962. Registered May 16, 1922. A. W. HARRIS OIL COMPANY, Providence, R. I. Republished by A. W. Harris Oil Company (1946), East Providence, R. I., a corporation of Rhode Island.

GEM

FOR LUBRICATING OILS AND GREASES.
Claims use since Jan. 22, 1907.

Reg. No. 188,993. Registered Sept. 9, 1924. D. A. STUART & CO., Chicago, Ill. Republished by D. A. Stuart Oil Co., Limited, Chicago, Ill., a corporation of Ontario, Canada.

"KLEEN KUT"

FOR BASE OIL FOR CUTTING FLUIDS AND COOLANTS.
Claims use since March 1914.

Reg. No. 252,602. Registered Feb. 12, 1929. THE GRAPHITE OIL PRODUCTS CORPORATION, Cleveland, Ohio. Republished by The Lubrisol Corporation, Wickliffe, Ohio, a corporation of Ohio.

LUBRI-GRAPH

FOR LUBRICATING OILS.
Claims use since Aug. 20, 1928.

Reg. No. 270,389. Registered May 6, 1930. CONTINENTAL OIL COMPANY, New York, N. Y., a corporation of Delaware. Republished by registrant, present location Ponca City, Okla.

CONOCO

FOR GASOLINE, MOTOR-FUEL OILS, NAPTHA, KEROSENE, DISTILLATE FOR BURNING IN INTERNAL-COMBUSTION ENGINES, GAS OIL, FURNACE-FUEL OILS, LUBRICATING OILS, PETROLEUM GREASES, AND ROAD-DRESSING OIL.
Claims use since on or about June 15, 1929.

Reg. No. 283,569. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

NAVAJO

FOR LUBRICATING OIL.
Claims use since Aug. 27, 1930.

Reg. No. 283,570. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

RAMIL

FOR LUBRICATING GREASE.
Claims use since Aug. 27, 1930.

Reg. No. 283,571. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

REDIND

FOR LUBRICATING OIL.
Claims use since Aug. 27, 1930.

Reg. No. 283,572. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

RODUS

FOR LUBRICATING GREASE.
Claims use since Aug. 27, 1930.

Reg. No. 283,573. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

SUJIND

FOR LUBRICATING GREASE.
Claims use since Aug. 27, 1930.

Reg. No. 283,574. Registered June 2, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

ZUNI

FOR LUBRICATING OIL.
Claims use since Aug. 27, 1930.

Reg. No. 284,811. Registered June 23, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

HURON

FOR LUBRICATING OIL.
Claims use since Aug. 27, 1930.

Reg. No. 285,216. Registered July 21, 1931. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

GERMOLIND

FOR LUBRICATING OIL.
Claims use since Aug. 27, 1930.

Reg. No. 327,796. Registered Sept. 3, 1935. THE LUBRIZOL CORPORATION, Wickliffe, Ohio, a corporation of Ohio. Republished by registrant.

FOR HYDROCARBON FUELS SUCH AS GASOLINE AND CHEMICALLY TREATED LUBRICATING COMPOSITIONS SUCH AS LUBRICATING OIL AND GREASE.
Claims use since Apr. 24, 1935.

Reg. No. 358,864. Registered July 26, 1938. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

NEAX

FOR LUBRICATING OIL.
Claims use since Aug. 26, 1935.

Reg. No. 371,616. Registered Oct. 3, 1939. THE LUBRIZOL CORPORATION, Cleveland and Wickliffe, Ohio, a corporation of Ohio. Republished by registrant, present location Wickliffe, Ohio.

SOLVENOIL

FOR LUBRICATING OILS.
Claims use since Nov. 21, 1936.

Reg. No. 419,247. Registered Feb. 5, 1946. CONTINENTAL OIL COMPANY, Ponca City, Okla., a corporation of Delaware. Republished by registrant.

N-TANE

FOR GASOLINE.
Claims use since Aug. 31, 1945.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 234,365. Registered Oct. 25, 1927. HARRY LEONARD GREENBAUM, doing business as Technical Color & Chemical Works, New York, N. Y. Republished by Technical Color & Chemical Works, Inc., Brooklyn, N. Y., a corporation of New York.

The drawing is lined for the color red.
FOR FLOOR PAINTS, VARNISH STAINS, PAINT ENAMEL, AND THINNER.
Claims use since May 1917.

Reg. No. 238,357. Registered Feb. 7, 1928. THE CLEVELAND VARNISH COMPANY, Cleveland, Ohio. Republished by John Lucas & Company, Incorporated, Philadelphia, Pa., a corporation of Maryland.

PHARAOH

FOR LACQUERS.
Claims use since Nov. 2, 1923.

Reg. No. 244,902. Registered July 31, 1928. THE SMITH-ALSOP PAINT AND VARNISH COMPANY, Terre Haute, Ind., a corporation of Indiana. Republished by registrant.

FASTIME

FOR QUICK-DRYING ENAMEL AND VARNISH.
Claims use since Jan. 2, 1928.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 70,023. Registered July 21, 1908. NEW ILLINOIS ATHLETIC CLUB, Chicago, Ill. Republished by Illinois Athletic Club, Chicago, Ill., a corporation of Illinois.

FOR CIGARS.
Claims use since Apr. 8, 1907.

CLASS 19

VEHICLES

Reg. No. 74,491. Registered July 13, 1909. TRENTON RUBBER MANUFACTURING COMPANY, Hamilton Twp., N. J. Republished by Thermoid Company, Trenton, N. J., a corporation of Delaware.

THERMOID

FOR BRAKES AND CLUTCHES FOR VEHICLES.
Claims use since Aug. 1, 1907.

Reg. No. 119,194. Registered Oct. 30, 1917. LEWIS-SHEPARD COMPANY, Boston, Mass. Republished by Lewis-Shepard Products, Inc., Watertown, Mass., a corporation of Delaware.

JACKLIFT

FOR ELEVATING-TRUCKS.
Claims use since September 1916.

Reg. No. 119,331. Registered Nov. 13, 1917. LEWIS-SHEPARD COMPANY, Boston, Mass. Republished by Lewis-Shepard Products, Inc., Watertown, Mass., a corporation of Delaware.

MASTER

FOR INDUSTRIAL ELEVATING-TRUCKS.
Claims use since September 1916.

Reg. No. 269,605. Registered Apr. 15, 1930. AMERICAN CABLE COMPANY, INC., Bridgeport, Conn. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

TRU-STOP

FOR BRAKES AND PARTS THEREOF AND BRAKE-OPERATING MECHANISMS AND PARTS THEREOF.
Claims use since May 17, 1928.

Reg. No. 314,851. Registered July 10, 1934. BUTLER MANUFACTURING COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

The word "Tank" is disclaimed apart from the mark.
FOR TANK VEHICLES.
Claims use since Feb. 2, 1934.

CLASS 20

LINOLEUM AND OILED CLOTH

Reg. No. 125,035. Registered Apr. 8, 1919. THE COLUMBUS-UNION OIL CLOTH CO., Columbus, Ohio. Republished by Columbus Coated Fabrics Corporation, Columbus, Ohio, a corporation of Ohio.

FOR OILCLOTH.
Claims use since about Jan. 1, 1904.

Reg. No. 231,720. Registered Aug. 23, 1927. ARMSTRONG CORK COMPANY, Pittsburgh, Pa., a corporation of Pennsylvania. Republished by registrant, present location Lancaster, Pa.

Quaker

FOR LINOLEUM AND FELT-BASE FLOOR COVERINGS, BOTH PIECE GOODS AND RUGS.
Claims use since Mar. 17, 1927.

Reg. No. 264,836. Registered Dec. 10, 1929. THE COLUMBUS-UNION OIL CLOTH COMPANY, Columbus, Ohio. Republished by Columbus Coated Fabrics Corporation, Columbus, Ohio, a corporation of Ohio.

Charm Prints

The word "Prints" is disclaimed apart from the mark as shown.
FOR OILCLOTH.

Reg. No. 317,892. Registered Oct. 9, 1934. COLUMBUS COATED FABRICS CORPORATION, Columbus, Ohio, a corporation of Ohio. Republished by registrant.

ART-FELT

The word "Felt" is disclaimed apart from the mark.
FOR OILED CLOTH WITH PAPER OR FIBER BACKING, USED FOR WALL, TABLE AND SHELF COVERING, AND OTHER LIKE PURPOSES.
Claims use since May 14, 1934.

Reg. No. 330,987. Registered Dec. 24, 1935. COLUMBUS COATED FABRICS CORPORATION, Columbus, Ohio, a corporation of Ohio. Republished by registrant.

blenback

FOR TABLE COVERING AND TRIMMING FABRICS MADE OF OILED CLOTH.
Claims use since Aug. 31, 1935.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 240,429. Registered Mar. 27, 1928. THE LINCOLN ELECTRIC COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

LINCOLN

FOR ELECTRIC MOTORS, INCLUDING POLYPHASE INDUCTION MOTORS, SLIP-RING MOTORS, VERTICAL MOTORS AND BACK-GEARED MOTORS, AND FOR ARC WELDERS, AND MOTOR-GENERATOR SETS.
Claims use since 1894.

Reg. No. 326,685. Registered July 30, 1935. ENGINEERING PRODUCTS CORPORATION, Waltham, Mass. Republished by Powrex Switch Company, Watertown, Mass., a corporation of Massachusetts.

Powrex

FOR MERCURY SWITCHES.
Claims use since on or about August 1931.

Reg. No. 379,827. Registered July 30, 1940. THE AUTOCALL COMPANY, Shelby, Ohio, a corporation of Ohio. Republished by registrant.

PAGER

FOR ELECTRICAL SIGNALLING SYSTEMS AND APPARATUS IN THE NATURE OF CODE SENDING DEVICES CONNECTED TO SIGNAL DEVICES.
Claims use since September 1938.

Reg. No. 381,103. Registered Sept. 10, 1940. THE INDIANA STEEL PRODUCTS COMPANY, Chicago, Ill., a corporation of Indiana. Republished by registrant.

FOR PERMANENT MAGNETS.
Claims use since Feb. 20, 1939.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 195,422. Registered Feb. 24, 1925. THOS. E. WILSON & CO., Chicago, Ill. Republished by Wilson Sporting Goods Co., Chicago, Ill., a corporation of Delaware.

Walker Cup

FOR GOLF CLUBS.
Claims use since Oct. 3, 1924.

Reg. No. 208,574. Registered Feb. 2, 1926. THOS. E. WILSON & Co., Chicago, Ill. Republished by Wilson Sporting Goods Co., Chicago, Ill., a corporation of Delaware.

Knit-K-Rocker
DOUBLE LACED

No claim is made to the name except in the exact form shown and the words "Double Laced" are disclaimed apart from the other feature of the mark.
FOR FOOTBALLS.
Claims use since Apr. 2, 1925.

Reg. No. 219,081. Registered Oct. 12, 1926. WILSON-WESTERN SPORTING GOODS COMPANY, Chicago, Ill. Republished by Wilson Sporting Goods Co., Chicago, Ill., a corporation of Delaware.

Famous Player

FOR BASEBALL BATS.
Claims use since Feb. 5, 1926.

Reg. No. 240,425. Registered Mar. 27, 1928. ABERCROMBIE & FITCH COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

Where the Blazed Trail Crosses the Boulevard

FOR PLAYING CARDS, CHESS, CHECKERS, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since about July 1, 1927.

Reg. No. 246,782. Registered Sept. 11, 1928. WILSON-WESTERN SPORTING GOODS COMPANY, Chicago, Ill. Republished by Wilson Sporting Goods Co., Chicago, Ill., a corporation of Delaware.

It's a Wilson

FOR BASEBALL GLOVES.
Claims use since May 1, 1926.

Reg. No. 261,909. Registered Sept. 24, 1929. WILSON-WESTERN SPORTING GOODS COMPANY, Chicago, Ill. Republished by Wilson Sporting Goods Co., Chicago, Ill., a corporation of Delaware.

YOUNG AMERICA LEAGUE

FOR FOOTBALLS, FOOTBALL PADS, HELMETS.
Claims use since Oct. 29, 1928.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 118,664. Registered Sept. 25, 1917. ILLINOIS TOOL WORKS, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The word "Illinois" is disclaimed except in association with the rest of the mark.
FOR LATHES, MILLING-MACHINES, GRINDING MACHINES, FILING-MACHINES, DIES, JIGS, REAMERS, DRILLS, TAPS, THREADING-DIES, GEAR-WHEELS, AND TEMPLETS.
Claims use since the month of August 1916.

Reg. No. 156,673. Registered July 11, 1922. FOREST CITY BIT & TOOL CO., Rockford, Ill., a corporation of Illinois. Republished by registrant.

FOREST CITY

FOR AUGERS, DRILLS, CHISELS, BITS, AND BUSHINGS OR COLLARS FOR HOLLOW CHISELS.
Claims use since January 1891.

Reg. No. 206,703. Registered Dec. 8, 1925. BENNETT PUMPS CORPORATION, Muskegon, Mich. Republished by John Wood Manufacturing Company, Inc., Philadelphia, Pa., a corporation of Delaware.

"GREASE PAK"

No claim is made to the exclusive use of the word "Grease" apart from the mark as shown.
FOR GREASE BUCKETS WITH PUMP ATTACHED.
Claims use since Feb. 10, 1925.

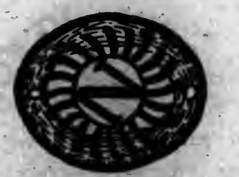
Reg. No. 231,213. Registered Aug. 16, 1927. AMERICAN SAW MILL MACHINERY COMPANY, Hackettstown, N. J. Republished by American Saw Mill Machinery Company (1941), Hackettstown, N. J., a corporation of New Jersey.

Monarch

FOR WOODWORKING MACHINES.
Claims use since Mar. 9, 1927.

Reg. No. 232,873. Registered Sept. 20, 1927. HUDSON MANUFACTURING CO., Minneapolis, Minn. Republished by H. D. Hudson Manufacturing Company, Chicago, Ill., a corporation of Minnesota.

SCOUT



FOR HAND-OPERATED PORTABLE SPRAYERS AND PARTS THEREOF.
Claims use since Jan. 1, 1927.

Reg. No. 232,943. Registered Sept. 20, 1927. HUDSON MANUFACTURING CO., Minneapolis, Minn. Republished by H. D. Hudson Manufacturing Company, Chicago, Ill., a corporation of Minnesota.

MORO

FOR HAND-OPERATED PORTABLE SPRAYERS AND PARTS THEREOF.
Claims use since Jan. 1, 1927.

Reg. No. 242,294. Registered May 22, 1928. THE NASH ENGINEERING COMPANY, South Norwalk, Conn., a corporation of Connecticut. Republished by registrant.

FOR AIR COMPRESSORS, VACUUM PUMPS, VACUUM HEATING PUMPS, BOILER FEEDER PUMPS, TURBINES AND TURBINE ENGINES, CENTRIFUGAL PUMPS, FLAT BOX PUMPS, SEWAGE EJECTORS, BILGE PUMPS, AND SUMP PUMPS, GAS COMPRESSORS, PUMP STRAINERS, CHECK VALVES USED AS A PART OF A PUMP UNIT.
Claims use since Mar. 31, 1919.

Reg. No. 242,759. Registered June 5, 1928. SERVICE STATION EQUIPMENT COMPANY, Bryan, Ohio. Republished by John Wood Manufacturing Company, Inc., Muskegon Heights, Mich., and Philadelphia, Pa., a corporation of Delaware.

ECO

The lining appearing upon the letters is for the purpose of shading only.
FOR AIR COMPRESSORS.
Claims use since January 1927.

Reg. No. 242,801. Registered June 5, 1928. SERVICE STATION EQUIPMENT COMPANY, Bryan, Ohio. Republished by John Wood Manufacturing Company, Inc., Muskegon Heights, Mich., and Philadelphia, Pa., a corporation of Delaware.

ECO

The lining appearing upon the letters is for the purpose of shading only.
FOR REELS FOR HOSE PIPES WHICH AUTOMATICALLY GIVE OFF THE HOSE PIPES UNDER PULL AND TAKE UP THE SLACK ON THE PIPES AUTOMATICALLY WHEN THE HOSE PIPES ARE RELEASED.
Claims use since January 1927.

Reg. No. 243,589. Registered June 26, 1928. SERVICE STATION EQUIPMENT COMPANY, Bryan, Ohio. Republished by John Wood Manufacturing Company, Inc., Philadelphia, Pa., a corporation of Delaware.

ECO

The lining appearing upon the letters is for the purpose of shading only.
FOR COMBINATION AUTOMATIC MECHANICAL LIFT AND SERVICE RACK FOR AUTOMOBILES AND THE LIKE.
Claims use since January 1927.

Reg. No. 246,219. Registered Sept. 4, 1928. WESTERN BLOCK CO., Lockport, N. Y., a corporation of New York. Republished by registrant.

FOR TACKLE BLOCKS AND PARTS THEREFOR—NAMELY, SHEAVES, BUSHINGS, AND HOOKS AND COMPONENT PARTS THEREOF.
Claims use since about 1889.

Reg. No. 321,091. Registered Jan. 15, 1935. FARREL-BIRMINGHAM COMPANY, INCORPORATED, Buffalo, N. Y., a corporation of Connecticut. Republished by registrant.

GEARFLEX

FOR FLEXIBLE SHAFT COUPLINGS.
Claims use since May 25, 1933.

Reg. No. 351,475. Registered Nov. 2, 1937. G. N. COUGHLAN CO., Orange, N. J., a corporation of New Jersey. Republished by registrant, present location West Orange, N. J.

BEAN-X

The word "Bean" is disclaimed apart from the mark as shown.
FOR STRING BEAN PREPARING INSTRUMENTS.
Claims use since Mar. 21, 1934.

Reg. No. 356,041. Registered Apr. 12, 1938. ILLINOIS TOOL WORKS, Chicago, Ill., a corporation of Illinois. Republished by registrant.

ILLINITE

FOR CUTTING TOOLS IN CONNECTION WITH MACHINE TOOLS, TOOL BITS IN CONNECTION WITH MACHINE TOOLS, MILLING CUTTERS, PLANER TOOLS, DRAWING AND EXTRUDING DIES, AND FRICTION RESISTING PARTS OF MACHINERY SUCH AS BEARING SURFACES IN GENERAL.
Claims use since Feb. 6, 1937.

Reg. No. 373,896. Registered Dec. 26, 1939. AMERICAN CHAIN & CABLE COMPANY, INC., New York, N. Y., and Bridgeport, Conn., a corporation of New York. Republished by registrant, present location Bridgeport, Conn.

ACCO

FOR HOISTS AND PARTS THEREOF, TROLLEYS FOR TRAVELLING HOISTS, WINCHES, CHAIN SHEAVES, CRANES, AUTOMOBILE WRECKING CRANES, AIR COMPRESSORS, AUTOMOBILE WASHING MACHINES, AUTOMOBILE TRESTLES, AUTOMOBILE TOW POLES, CAR UNLOADERS, DISPLAY STANDS, HYDRAULIC PRESSES, LIFTING JACKS, PORTABLE AND ADJUSTABLE MOTOR STANDS FOR HOLDING AND HANDLING INTERNAL COMBUSTION AND OTHER MOTORS CONVENIENTLY DURING REPAIR, PUMPS, TIRE CHAIN REPAIR EQUIPMENT, TIRE CHANGING APPARATUS, TIRE SPREADERS, TOWING AND LIFTING CRADLES, SCREW PRESSES, FENCE STRETCHERS, ABRASIVE CUTTING MACHINES, NIBBLING MACHINES, AND CAR REPLACERS IN THE NATURE OF TRACK TOOLS FOR ROLLING DERAILED CAR WHEELS BACK TO THE RAILS.
Claims use since 1938.

Reg. No. 381,837. Registered Oct. 8, 1940. J. H. WILLIAMS & CO., Buffalo, N. Y., a corporation of New York. Republished by registrant.

WILLIAMS'

FOR C-CLAMPS, STRAP CLAMPS, LATHE DOGS, CRANK HANDLES, BALANCE HANDLES, AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION.
Claims use since about 1900.

Reg. No. 383,166. Registered Nov. 26, 1940. SCREW CONVEYOR CORPORATION, Hammond, Ind., a corporation of Illinois. Republished by registrant.

NU-HY

FOR ELEVATING AND CONVEYING APPARATUS COMPRISING ENDLESS BELT AND CARRIER ELEVATING AND CONVEYING SYSTEMS AND PARTS THEREOF INCLUDING ELEVATOR BUCKETS.
Claims use since Apr. 16, 1940.

Reg. No. 385,331. Registered Feb. 25, 1941. VICTOR V. KUNKEL, doing business as Kunkel Metal Products Co., Los Angeles, Calif. Republished by Kunkel Metal Products Co., Los Angeles, Calif., a corporation of California.

K

FOR VENDING MACHINES.
Claims use since about July 30, 1938.

Reg. No. 390,941. Registered Oct. 14, 1941. AMERICAN CHAIN & CABLE COMPANY, INC., New York, N. Y., and Bridgeport, Conn., a corporation of New York. Republished by registrant, present location Bridgeport, Conn.

CUTAMATIC

FOR ABRASIVE CUTTING MACHINE, EXCLUSIVE OF ABRASIVE ELEMENTS.
Claims use since Jan. 15, 1938.

Reg. No. 392,216. Registered Dec. 16, 1941. SCREW CONVEYOR CORPORATION, Hammond, Ind., a corporation of Illinois. Republished by registrant.

SCREW-VEYOR

The word "Screw" is disclaimed apart from the mark as shown.
FOR ELEVATING AND CONVEYING APPARATUS COMPRISING HELICAL AND SCREW CONVEYORS AND PARTS THEREOF.
Claims use since Oct. 1, 1940.

Reg. No. 418,222. Registered Dec. 11, 1945. THE OSBORN MANUFACTURING COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

ECONOMY

FOR BRUSHES USED AS MACHINE ACCESSORIES, BRUSHES MADE FROM WIRE FOR MOUNTING UPON SHAFTING, ROTARY BRUSHES FOR POLISHING AND CLEANING, AND SECTIONS AND PARTS OF SUCH BRUSHES.
Claims use since about 1896.

Reg. No. 420,220. Registered Apr. 2, 1946. FARREL-BIRMINGHAM COMPANY, INCORPORATED, Ansonia, Conn., and Buffalo, N. Y., a corporation of Connecticut. Republished by registrant.

The Gear with a Backbone

The word "Gear" is disclaimed apart from the mark.
FOR GEAR GENERATING MACHINES FOR CUTTING TEETH ON GEAR BLANKS, GEAR CUTTERS FOR USE IN GEAR GENERATING MACHINES, CUTTER GRINDING MACHINES, LAPPING MACHINES, GEAR WHEELS, PINIONS, GEAR DRIVES, TURBINE DRIVING TRANSMISSIONS, AND MARINE PROPULSION DRIVES.
Claims use since on or about July 1, 1938.

Reg. No. 424,878. Registered Oct. 29, 1946. AMERICAN CHAIN & CABLE COMPANY, INC., New York, N. Y., and Bridgeport, Conn., a corporation of New York. Republished by registrant, present location Bridgeport, Conn.

PENNALITE

FOR LAWN MOWERS.
Claims use since 1933.

Reg. No. 428,063. Registered Mar. 11, 1947. AMERICAN CHAIN & CABLE COMPANY, INC., New York, N. Y., and Bridgeport, Conn., a corporation of New York. Republished by registrant, present location Bridgeport, Conn.

KLIFTON

FOR LAWN MOWERS.
Claims use since 1931.

Reg. No. 429,532. Registered May 6, 1947. AMERICAN CHAIN & CABLE COMPANY, INC., New York, N. Y., and Bridgeport, Conn., a corporation of New York. Republished by registrant, present location Bridgeport, Conn.

GREAT AMERICAN

FOR LAWN MOWERS.
Claims use since January 1888.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

Reg. No. 115,328. Registered Feb. 6, 1917. GRINNELL WASHING MACHINE COMPANY, Grinnell, Iowa. Republished by Automatic Washer Company, Newton, Iowa, a corporation of Delaware.

LAUNDRY QUEEN

FOR LAUNDRY WASHING MACHINES.
Claims use since Dec. 1, 1912.

Reg. No. 175,918. Registered Nov. 13, 1923. HILL CLOTHES DRYER COMPANY, Worcester, Mass. Republished by Moulton Ladder Manufacturing Co., Somerville, Mass., a corporation of Massachusetts.

HILL

FOR CLOTHES DRIERS, BALCONY CLOTHES DRIERS, YARD CLOTHES DRIERS, KITCHEN CLOTHES DRIERS, CABINET CLOTHES DRIERS.
Claims use since Jan. 1, 1880.

Reg. No. 375,588. Registered Feb. 20, 1940. BUTLER MANUFACTURING COMPANY, Kansas City, Mo., a corporation of Missouri. Republished by registrant.

UNITHRIFT

FOR DRY CLEANING APPARATUS.
Claims use since Feb. 25, 1938.

CLASS 25

LOCKS AND SAFES

Reg. No. 217,644. Registered Sept. 7, 1926. SARGENT & GREENLEAF, INC., Rochester, N. Y., a corporation of New York. Republished by registrant.

S&G

FOR COMBINATION LOCKS.
Claims use since Oct. 20, 1925.

Reg. No. 321,091. Registered Jan. 15, 1935. FARREL-BIRMINGHAM COMPANY, INCORPORATED, Buffalo, N. Y., a corporation of Connecticut. Republished by registrant.

GEARFLEX

FOR FLEXIBLE SHAFT COUPLINGS.
Claims use since May 25, 1933.

Reg. No. 351,475. Registered Nov. 2, 1937. G. N. COUGHLAN CO., Orange, N. J., a corporation of New Jersey. Republished by registrant, present location West Orange, N. J.

BEAN-X

The word "Bean" is disclaimed apart from the mark as shown.
FOR STRING BEAN PREPARING INSTRUMENTS.
Claims use since Mar. 21, 1934.

Reg. No. 356,041. Registered Apr. 12, 1938. ILLINOIS TOOL WORKS, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Reg. No. 301,060. Registered Feb. 14, 1933. SOYA PRODUCTS, INC., Chicago, Ill. Republished by Allied Mills, Inc., Chicago, Ill., a corporation of Indiana.

The word "Soy" is disclaimed.
FOR COMMERCIAL FEEDS FOR LIVE STOCK.
Claims use since Jan. 19, 1932.

Reg. No. 303,182. Registered May 16, 1933. McCORD-STEWART COMPANY, INC., Atlanta, Ga. Republished by Fleetwood Coffee Co., Chattanooga, Tenn., a corporation of Tennessee.

FOR COFFEE.
Claims use since Apr. 1, 1932.

Reg. No. 304,572. Registered July 11, 1933. JOSEPH ANTOGNOLI & Co., Chicago, Ill., assignor to Joseph Antognoli & Co., Chicago, Ill. Republished by Joseph Antognoli & Co., Chicago, Ill., a corporation of Illinois.

FIORETTA

FOR MALT SYRUP AND MACARONI.
Claims use since June 1930.

Reg. No. 306,483. Registered Sept. 19, 1933. OHIO FARM BUREAU CORPORATION, Columbus, Ohio. Republished by The Farm Bureau Cooperative Association, Inc., Columbus, Ohio, a corporation of Ohio.

GATEWAY

FOR EGGS.
Claims use since Aug. 6, 1932.

Reg. No. 312,984. Registered May 15, 1934. M. J. DUER & COMPANY, INC., Exmore, Va., a corporation of Virginia. Republished by registrant.

The words "Packed for," "Brand," and "Exmore, Virginia" are disclaimed apart from the mark as shown. The drawing is lined for the color red.
FOR FRESH POTATOES.
Claims use since Mar. 1, 1915.

Reg. No. 313,121. Registered May 15, 1934. VOLUNTEER STORES, INC., Chattanooga, Tenn., a corporation of Tennessee. Republished by registrant.

VOLUNTEER

FOR CANNED FRUITS, CANNED VEGETABLES, CANNED FRUITS FOR SALAD, CANNED HOMINY, CANNED SAUER KRAUT, CANNED BEANS WITH PORK, ROLLED OATS, HOMINY GRITS, MACARONI, EGG NOODLES, WHEAT FLOUR, PICKLES, OLIVES, TOMATO CATSUP, AND COFFEE.
Claims use since Nov. 1, 1931.

Reg. No. 322,305. Registered Mar. 5, 1935. COAST FISHING COMPANY, Wilmington, Calif., a corporation of California. Republished by registrant.

PUSS 'N BOOTS

FOR CANNED CAT FOOD.
Claims use since Sept. 23, 1934.

Reg. No. 333,244. Registered Mar. 10, 1936. OSCAR M. MEADOR, Memphis, Tenn. Republished by registrant.

Angel Food

FOR ICE CREAM AND OTHER FROZEN DESSERTS.
Claims use since Jan. 1, 1933.

Reg. No. 333,850. Registered Apr. 7, 1936. MICHIGAN SUGAR COMPANY, Saginaw, Mich., a corporation of Michigan. Republished by registrant.

PIONEER

FOR SUGAR.
Claims use since Oct. 1, 1934.

Reg. No. 335,377. Registered June 2, 1936. AMERICAN SYRUP & SORGHUM CO., St. Louis, Mo., a corporation of Missouri. Republished by registrant.

FOR TABLE SYRUP.
Claims use since Oct. 25, 1909.

Reg. No. 347,947. Registered July 13, 1937. THE ILLINOIS CANNING CO., Hoopeston, Ill., a corporation of Illinois. Republished by registrant.

Baby Bunting

FOR CANNED VEGETABLES.
Claims use since 1893.

Reg. No. 353,081. Registered Dec. 28, 1937. MCCORD-STEWART COMPANY, Atlanta, Ga. Republished by Fleetwood Coffee Co., Chattanooga, Tenn., a corporation of Tennessee.

SOUTHERN CROSS

FOR COFFEE AND TEA.
Claims use since Aug. 21, 1935.

Reg. No. 354,746. Registered Feb. 22, 1938. COMPANIA DE PRODUCTOS MARINOS, S. A., Ensenada, Mexico. Republished by Marine Products Company, San Diego, Calif., a corporation of California.

OCEAN GARDEN

FOR CANNED SHELL FISH.
Claims use since April 1922.

Reg. No. 357,583. Registered June 7, 1938. CHARLES A. GERBER, Bartlett, Ill. Republished by registrant.

TBC

FOR FOOD CONSISTING PRINCIPALLY OF BREAD CRUMBS FOR FUR BEARING ANIMALS AND CHICKENS.
Claims use since Nov. 10, 1937.

Reg. No. 360,731. Registered Sept. 27, 1938. THE FARM BUREAU COOPERATIVE ASSOCIATION, INC., Columbus, Ohio, a corporation of Ohio. Republished by registrant.

MERMAKER

FOR MIXED FEED FOR POULTRY AND LIVESTOCK.
Claims use since Jan. 1, 1933.

Reg. No. 371,866. Registered Oct. 10, 1939. FLEETWOOD COFFEE COMPANY, Chattanooga, Tenn., a corporation of Tennessee. Republished by registrant.

Suparoma-tized

FOR COFFEE.
Claims use since May 15, 1939.

Reg. No. 379,771. Registered July 23, 1940. W. G. GLASCOFF, Waupun, Wis., assignor to Canned Foods, Inc. Republished by Canned Foods, Inc., Waupun, Wis., a corporation of Wisconsin.

GREENIES

FOR CANNED VEGETABLES.
Claims use since Feb. 16, 1940.

Reg. No. 386,220. Registered Apr. 1, 1941. PRICE CANDY COMPANY, Kansas City, Mo., a corporation of Delaware. Republished by registrant.

BUY YOUR CANDY BY THE YARD

The word "Candy" is disclaimed apart from the mark as shown on the drawing.
FOR CANDY.
Claims use since Sept. 1, 1939.

Reg. No. 386,680. Registered Apr. 22, 1941. RED ROCK FISHERIES, INC., Richmond and San Francisco, Calif., a corporation of California. Republished by registrant.

Red Rock

FOR CANNED FISH—NAMELY, CANNED SARDINES.
Claims use since Apr. 1, 1924.

Reg. No. 393,101. Registered Jan. 27, 1942. EBERHARDT-SIMPSON, doing business as Jewell Elevator, Salina, Utica, and Jewell, Kans. Republished by Simpson-Bomeiser-Evans Grain Company, Salina, Kans., a co-partnership.

The lining in the drawing indicates shading only.
FOR STOCK AND POULTRY FEED.
Claims use since Dec. 15, 1938.

Reg. No. 403,518. Registered Sept. 28, 1943. F. H. HOGUE COMPANY, Yuma, Ariz., and Kent, Wash., a firm. Republished by registrant, present location Yuma, Ariz.

FOR FRESH VEGETABLES.
Claims use since Dec. 15, 1938.

Reg. No. 403,519. Registered Sept. 28, 1943. F. H. HOGUE COMPANY, Yuma, Ariz., and Kent, Wash., a firm. Republished by registrant, present location Yuma, Ariz.

ON RUSH

FOR FRESH VEGETABLES AND MELONS.
Claims use since May 10, 1933.

Reg. No. 404,574. Registered Dec. 7, 1943. F. H. HOGUE COMPANY, Yuma, Ariz., and Kent, Wash., a firm. Republished by registrant, present location Yuma, Ariz.

FOR FRESH VEGETABLES.
Claims use since Dec. 10, 1938.

Reg. No. 406,876. Registered May 2, 1944. BANNING CANNING CO., Banning, Calif., a corporation of California. Republished by registrant.

MILE-UP

FOR CANNED FRUIT.
Claims use since 1921.

Reg. No. 407,235. Registered May 23, 1944. F. H. HOGUE COMPANY, Yuma, Ariz., a firm. Republished by registrant.

FOR FRESH VEGETABLES.
Claims use since Dec. 7, 1943.

Reg. No. 409,461. Registered Oct. 10, 1944. JOSEPH ANTOGNOLI & Co., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Candy Boat

FOR CANNED APPLESAUCE, GRAPEFRUIT JUICE FOR FOOD PURPOSES, CANNED FRUITS, CANNED VEGETABLES, CANNED FISH, PEARL BARLEY, SPLIT PEAS, DRIED BEANS, LENTILS, AND RICE.
Claims use since December 1942.

Reg. No. 413,887. Registered May 15, 1945. MORTON SALT COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Free Choice

FOR SALT.
Claims use since Nov. 11, 1944.

CLASS 47

WINES

Reg. No. 306,516. Registered Sept. 19, 1933. BISCEGLIA BROS., San Jose, Calif. Republished by Bisceglia Brothers Wine Co., Fresno, Calif., a corporation of California.

PARADISE

FOR STILL WINES, SPARKLING WINES, FERMENTED WINES, FORTIFIED WINES, CHAMPAGNES, AND IMPORTED AND DOMESTIC WINES.
Claims use since May 1, 1933.

Reg. No. 310,920. Registered Mar. 13, 1934. BISCEGLIA BROS., San Jose, Calif. Republished by Bisceglia Brothers Wine Co., Fresno, Calif., a corporation of California.

Bisceglia's

FOR WINES.
Claims use since May 1, 1932.

Reg. No. 311,676. Registered Apr. 3, 1934. SCHENLEY WINE & SPIRIT IMPORT CORPORATION, New York, N. Y. Republished by Schenley Import Corporation, New York, N. Y., a corporation of New York.

GONZALEZ

ADMIRAL

FOR WINES.
Claims use since December 1932.

Reg. No. 316,651. Registered Aug. 28, 1934. JOSEPH ANTOGNOLI & Co., Chicago, Ill., a corporation of Illinois. Republished by registrant.

POMPEII

FOR WINE.
Claims use since Apr. 20, 1934.

Reg. No. 343,741. Registered Mar. 2, 1937. BISCEGLIA BROS., San Jose, Calif. Republished by Bisceglia Brothers Wine Co., Fresno, Calif., a corporation of California.

PORTOLA

FOR WINE.
Claims use since Aug. 17, 1936.

Reg. No. 343,742. Registered Mar. 2, 1937. BISCEGLIA BROS., San Jose, Calif. Republished by Bisceglia Brothers Wine Co., Fresno, Calif., a corporation of California.

REGAL CELLARS

FOR WINE.
Claims use since Aug. 17, 1936.

Reg. No. 353,913. Registered Jan. 25, 1938. BISCEGLIA BROS., San Jose, Calif. Republished by Bisceglia Brothers Wine Co., Fresno, Calif., a corporation of California.

BISCEGLIAS

CALIFORNIA SAUTELL WINE

The word "Wine" is disclaimed apart from the mark as shown.
FOR WINE.
Claims use since Aug. 17, 1936.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 83,200. Registered Aug. 29, 1911. ACME BREWING CO., San Francisco, Calif. Republished by Acme Breweries, San Francisco, Calif., a corporation of California.

ACME

FOR BEER.
Claims use since Aug. 10, 1909.

Reg. No. 305,900. Registered Aug. 29, 1933. INLAND PRODUCTS COMPANY, Spokane, Wash. Republished by Bohemian Breweries, Inc., Spokane, Wash., a corporation of Washington.

"Bohemian" Club

FOR BEER WITH NOT MORE THAN THE LEGAL ALCOHOLIC CONTENT.
Claims use since Apr. 7, 1933.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 303,179. Registered May 16, 1933. UNITED DISTILLERS, LTD., Vancouver, British Columbia, Canada, a corporation of the Dominion of Canada. Republished by registrant.

FOR WHISKEY.
Claims use since June 1, 1929.

Reg. No. 305,574. Registered Aug. 22, 1933. UNITED DISTILLERS, LTD., Vancouver, British Columbia, Canada, a corporation of the Dominion of Canada. Republished by registrant.

SILVERFIZZ

FOR WHISKEY AND GIN.
Claims use since Dec. 28, 1928.

Reg. No. 305,575. Registered Aug. 22, 1933. UNITED DISTILLERS, LTD., Vancouver, British Columbia, Canada, a corporation of the Dominion of Canada. Republished by registrant.

SILVER SLIPPER

FOR WHISKEY AND GIN.
Claims use since May 23, 1929.

Reg. No. 310,639. Registered Mar. 6, 1934. UNITED DISTILLERS LIMITED, Vancouver, British Columbia, Canada. Republished by United Distillers, (of Canada) Ltd., Vancouver, British Columbia, Canada, a corporation of the Dominion of Canada.

INSPECTOR

FOR WHISKEY.
Claims use since June 1, 1928.

Reg. No. 310,720. Registered Mar. 6, 1934. UNITED DISTILLERS, LTD., Vancouver, British Columbia, Canada, a corporation of the Dominion of Canada. Republished by registrant.

Highland Sandy

FOR WHISKEY.
Claims use since Sept. 1, 1929.

Reg. No. 311,118. Registered Mar. 13, 1934. UNITED DISTILLERS LIMITED, Vancouver, British Columbia, Canada. Republished by United Distillers, (of Canada) Ltd., Vancouver, British Columbia, Canada, a corporation of the Dominion of Canada.

MAIL POUCH

FOR WHISKEY.
Claims use since July 1, 1930.

Reg. No. 311,123. Registered Mar. 13, 1934. UNITED DISTILLERS LIMITED, Vancouver, British Columbia, Canada. Republished by United Distillers, (of Canada) Ltd., Vancouver, British Columbia, Canada, a corporation of the Dominion of Canada.

BLACK JACK

FOR WHISKEY.
Claims use since July 1, 1930.

Reg. No. 312,145. Registered Apr. 17, 1934. UNITED DISTILLERS, LTD., Vancouver, British Columbia, Canada., a corporation of The Dominion of Canada. Republished by registrant.

OLD STONEWALL

FOR WHISKEY.
Claims use since May 1, 1930.

Reg. No. 312,150. Registered Apr. 17, 1934. UNITED DISTILLERS, LTD., Vancouver, British Columbia, Canada, a corporation of the Dominion of Canada. Republished by registrant.

PAUL REVERE

FOR WHISKEY, GIN, AND RUM.
Claims use since Sept. 15, 1930.

Reg. No. 312,660. Registered May 1, 1934. BISCEGLIA BROS., San Jose, Calif. Republished by Bisceglia Brothers Wine Co., Fresno, Calif., a corporation of California.

Bisceglia's

FOR WHISKIES, ALCOHOLIC CORDIALS, BRANDIES, RUMS, GINS, AND OTHER POTABLE DISTILLED SPIRITS.
Claims use since May 1, 1932.

Reg. No. 314,031. Registered June 19, 1934. POTOMAC DISTILLING CORPORATION, Baltimore, Md. Republished by United Distillers, (of Canada) Ltd., Vancouver, British Columbia, Canada., a corporation of the Dominion of Canada.

Edinburgh Castle

FOR WHISKEY.
Claims use since Mar. 3, 1934.

Reg. No. 329,008. Registered Oct. 15, 1935. UNITED DISTILLERS (OF AMERICA) LTD., Baltimore, Md. Republished by United Distillers (of Canada) Ltd., Vancouver, British Columbia, Canada, a corporation of the Dominion of Canada.

UDL
"Original"
CANADIAN WHISKEY

The words "Original Canadian Whiskey" are disclaimed apart from the mark as shown.
FOR WHISKEY, GIN, RUM, BRANDY AND ALCOHOLIC CORDIALS.
Claims use since August 1934.

Reg. No. 335,741. Registered June 16, 1936. T. J. PENDERGAST WHOLESALE LIQUOR CO., INC., Kansas City, Mo., a corporation of Missouri. Republished by registrant.

STONY RIDGE

FOR WHISKEY, GIN, RUM, BRANDY AND ALCOHOLIC CORDIALS.
Claims use since Jan. 13, 1936.

Reg. No. 336,106. Registered June 23, 1936. T. J. PENDERGAST WHOLESALE LIQUOR CO., INC., Kansas City, Mo., a corporation of Missouri. Republished by registrant.

OLD GRIMES

FOR WHISKEY, GIN, RUM, BRANDY AND ALCOHOLIC CORDIALS.
Claims use since Dec. 10, 1935.

Reg. No. 336,115. Registered June 23, 1936. T. J. PENDERGAST WHOLESALE LIQUOR CO., INC., Kansas City, Mo., a corporation of Missouri. Republished by registrant.

BONN BROOK

FOR WHISKEY, GIN, RUM, BRANDY AND ALCOHOLIC CORDIALS.
Claims use since Dec. 10, 1935.

Reg. No. 338,916. Registered Sept. 22, 1936. T. J. PENDERGAST WHOLESALE LIQUOR CO., INC., Kansas City, Mo., a corporation of Missouri. Republished by registrant.

BOND BROOK

FOR WHISKEY, GIN, RUM, BRANDY AND ALCOHOLIC CORDIALS.
Claims use since April 1933.

Reg. No. 343,298. Registered Feb. 16, 1937. T. J. PENDERGAST WHOLESALE LIQUOR CO., INC., Kansas City, Mo., a corporation of Missouri. Republished by registrant.

White Seal

FOR WHISKEY, GIN, RUM, BRANDY AND ALCOHOLIC CORDIALS.
Claims use since May 14, 1912.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 135,387. Registered Oct. 12, 1920. ARCHER RUBBER COMPANY, Milford, Mass., a corporation of Massachusetts. Republished by registrant.

ROYAL ARCHER

The lines in the drawing indicate shading only.
FOR RUBBER SHEETING AND RUBBER BLANKETS.
Claims use since Feb. 1, 1914.

Reg. No. 219,875. Registered Oct. 26, 1926. THE DUBAN SHADE CORPORATION, Rochester, N. Y., a corporation of New York. Republished by registrant, present location Honeoye Falls, N. Y.

DUBAN

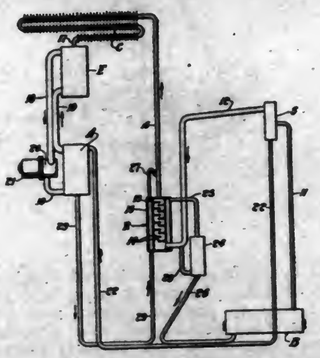
FOR AWNINGS AND PORCH SHADES.
Claims use since June 12, 1919.

Reg. No. 224,335. Registered Feb. 22, 1927. WESTERN FELT WORKS, Chicago, Ill. Republished by Western Felt Works, Chicago, Ill., a corporation of Illinois.

WESTFELT

FOR FELT AND FLOOR PADDING.
Claims use since Oct. 15, 1926.

Reg. No. 339,240. Registered Sept. 29, 1936. TENAK PRODUCTS COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

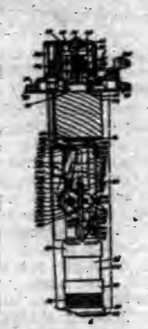


TENAPLATE

FOR MOULDING MATERIAL—NAMELY, A SHEET-LIKE MATERIAL ADAPTED TO BE FORMED BY A DIE OR SIMILAR PRESSING DEVICE TO PROVIDE A MAT FOR USE IN THE FORMATION OF PRINTING PLATES AND SIMILAR ARTICLES.
Claims use since Sept. 29, 1933.

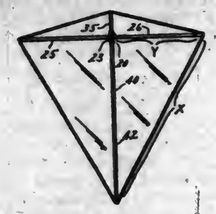
REISSUES

AUGUST 31, 1948



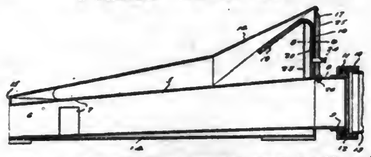
23,032
CONTINUOUS ABSORPTION REFRIGERATING SYSTEM
Curtis C. Coons, North Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Original No. 2,178,870, dated November 7, 1939, Serial No. 94,934, August 8, 1936. Application for reissue January 10, 1941, Serial No. 373,970
15 Claims. (Cl. 62—119.5)

1. In an absorption refrigerating system having a boiler, an absorber, means for circulating absorption liquid between the boiler and the absorber and a liquid heat exchanger, the combination of a rectifier and means for transferring heat from the rectifier to absorption liquid flowing from the absorber to the boiler, the arrangement being such that the absorption liquid flowing from the absorber to the boiler passes first in heat exchange relation with solution flowing from the boiler to the absorber, then in heat transfer relation with the rectifier and then again in heat exchange relation with absorption solution flowing from the boiler to the absorber.



23,033
CIRCUIT INTERRUPTER
Herbert L. Rawlins, Edgewood, and James M. Wallace, East McKeesport, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Original No. 2,405,606, dated August 13, 1946, Serial No. 374,685, January 16, 1941. Application for reissue August 14, 1947, Serial No. 768,638
48 Claims. (Cl. 200—89)

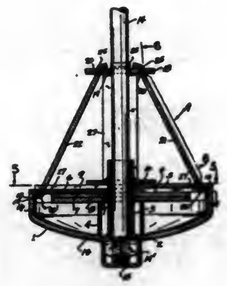
4. In a circuit interrupter, separable contact means, electromagnetic means for separating said contacts, means for automatically reclosing said contacts in response to a circuit interrupting operation, means having a part biased to move in response to a predetermined circuit interrupting operation to one position for preventing a closely succeeding separation of said contacts under the influence of said electromagnetic means, and timing means responsive to operation of said contacts for moving said part away from said one position a predetermined time after reclosure



of said contacts in the event said electromagnetic means is not energized sufficiently to attempt another circuit opening operation.

23,034
KITE
Walter H. Schroeder, Los Angeles, Calif.
Original No. 2,422,804, June 24, 1947, Serial No. 643,651, January 26, 1946. Application for reissue November 28, 1947, Serial No. 788,333
12 Claims. (Cl. 244—153)

1. A demountable kite comprising a socketed frame member, a central positioning pin mounted therein, a pair of transverse kite ribs inserted in the socketed member and having endwise engagement with the pin, an upper kite rib inserted in the socketed member and having endwise engagement with a transverse kite rib, a lower kite rib inserted in the socketed member and having endwise engagement with a side of a transverse kite rib, string securing means mounted adjacent the terminal end of each rib, a cover shaped to cover the area defined by the rib members, a plurality of eyelets secured to the cover and adapted to be positioned one adjacent the terminal end of each rib member, and a string connected to each eyelet and adapted to pass over a rib end to be secured removably to the string securing means thereby removably to attach the cover in position.

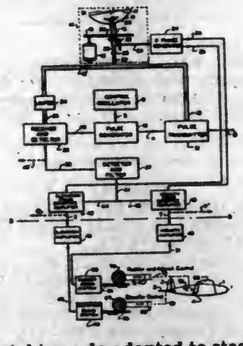


23,035
SUCTION NOZZLE
Harry Stock, Minneapolis, Minn.
Original No. 2,419,740, dated April 29, 1947, Serial No. 518,153, January 13, 1944. Application for reissue October 28, 1947, Serial No. 782,470
2 Claims. (Cl. 302—58)

1. A suction nozzle comprising a suction tube having an intake end and a discharge end, a shell encasing said tube and having a portion extending along one side of the tube from said intake to said discharge end and flaring toward said discharge end, said portion having an open rear end to provide an air inlet into said portion, air inlet ports in said tube adjacent to the intake end thereof establishing communication with said tube and said shell, a flexible slat shutter for closing said inlet, channel tracks at opposite edges of said shutter and opposite sides of said inlet within said portion and in which said shutter is slidably mounted for adjustment to open and close the inlet, said tracks being longitudinally V-shaped to cause said shutter when opened to assume a position at an acute angle to the plane of said inlet for accommodation in said portion, and means to secure the shutter in different adjusted positions.

23,036
EARTH ANCHOR
Oscar F. Tallman, St. Louis, Mo., assignor to James R. Kearney Corporation, St. Louis, Mo., a corporation of Missouri
Original No. 2,427,934, dated September 23, 1947, Serial No. 619,191, September 28, 1945. Application for reissue May 8, 1948, Serial No. 25,961
7 Claims. (Cl. 189—92)

6. An earth anchor comprising a base member, a plurality of flukes slidably supported by said base member for outward movement in different directions with respect to said base member, an anchor rod operatively associated with said base member and extended therefrom, an element guided by said anchor rod for sliding movement longitudinally thereof, a plurality of spreader arms connected at corresponding ends thereof to said element and connected respectively at their opposite ends to different flukes of said plurality of flukes, said spreader arms being provided with

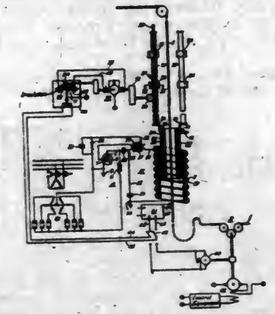


portions at the upper ends thereof which extend through openings formed through said element and are bent to positions where said portions overlie top face portions of said element, and abutments formed on said spreader arms which contact with the lower face of said element, the relationship of the bent portions at the upper ends of the spreader arms and said element being such that the bendable metal of the spreader arms in the region of said bent portions is bent by the action of expanding the anchor before the flukes reach their outward limit of movement.

PATENTS

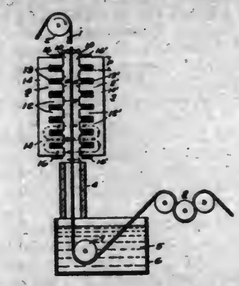
GRANTED AUGUST 31, 1948

2,448,007
SELF-CONTROLLED PROJECTILE
Waldemar A. Ayres, Kew Gardens Hills, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application January 8, 1943, Serial No. 471,781
9 Claims. (Cl. 244—14)



7. An aerial torpedo adapted to steer itself into and explode against a predetermined target, comprising a glider aircraft carrying an explosive charge, a radio sighting means comprising generating means for producing periodic pulses of electromagnetic energy, directive radiating means for projecting said energy pulses into a solid conical angle of space, the axis of said conical angle coinciding with the axis of said glider, means for receiving the corresponding energy pulses reflected from a target located within the solid angle, and means for interpreting the variations in intensity of said reflected energy and producing voltage signals proportional to the angular deviation of the line of sight to said target with respect to the orientation of said glider, and automatic control means responsive to said signal voltages for continuously reorienting said glider into coincidence with said line of sight.

8. A target seeking torpedo of the glider type, means mounted thereon for defining a line of sight to a target including an antenna, a transmitter therefor for projecting spaced signal impulses toward a target, a receiver operatively connected with the antenna responsive to said impulses when reflected back to the antenna from a target, an indicating device controlled by the receiver responsive to the received reflected impulses to aid in initially positioning the torpedo with reference to a target, and means controlled by the receiver in accordance with the reflected impulses on the launching of the torpedo for guiding the latter towards the target.



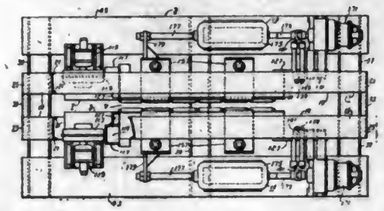
2,448,008
CONTROLLED INDUCTION HEATING
Robert M. Baker, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 7, 1943, Serial No. 513,260
5 Claims. (Cl. 219—13)

1. An electrical heating system for heating traveling material, comprising in combination: an energizable electrical means along a portion of the path of travel for the material, said electrical means being of a type for producing, when energized, a pulsating spacial field of electrical energy in a region in said path-portion for heating the material as it passes through said region; a tube-oscillator generator for electrically energizing said electrical means; means for moving the material through said region; load-controlling means for controlling the output load of said tube-oscillator generator, said load-controlling

means comprising movable electricity-conducting screen-means; and means for variably positioning said screen-means with respect to said electrical means and the field adapted to be established thereby so as to control the heating action of said electrical means and the field adapted to be established thereby on the material, the last said positioning means comprising responsive means moving said screen-means in response to a measure of the heat needed for heating the material.

2,448,009
INDUCTIVE HEATING OF LONGITUDINALLY MOVING METAL STRIP
Robert M. Baker, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application February 5, 1944, Serial No. 521,229
27 Claims. (Cl. 219—13)

1. Induction furnace means of a type described including a relatively wide and shallow work-passage and means for longitudinally passing



travelling work-material, such as strip, through said work-passage, said induction furnace means comprising flux producing means for providing transverse flux across said work-passage, said flux producing means including a magnetizable core having a longitudinal core-edge, supporting means for movably supporting said core, and means operable while work-material is passing through said work-passage in order to be inductively heat-treated, for moving said core for varying the position of said core-edge while maintaining the depth of said work-passage substantially constant.

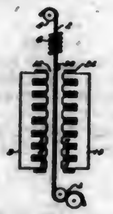
2,448,010

TRANSVERSE FLUX INDUCTION HEATING FURNACE STRUCTURE

Robert M. Baker, Pittsburgh, Gordon R. Monroe, Sharon, and Richard D. Reed, Clark, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application June 27, 1944, Serial No. 542,380
15 Claims. (Cl. 219—13)

1. Induction heating means comprising, in combination, a plurality of magnetic structures having generally matching spaced pole-faces on opposite sides of a work-passage through which elongated material is adapted to be passed for inductive heat-treatment, stationary means for supporting said magnetic structures, said stationary supporting means having material-passage openings aligned with said work-passage, adjustable means, associated with said stationary supporting means and said magnetic structures, for preadjusting the spacing between the pole-faces of said magnetic structures, and a power driving means for changing the relative positions of said magnetic structures, while maintaining the spacing in which said pole-faces have been placed by said adjustable means.



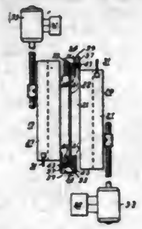
2,448,011

METHOD AND APPARATUS FOR INDUCTION HEATING OF METAL STRIPS

Robert M. Baker, Pittsburgh, and Gaylord W. Penney, Wilkinsburg, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application September 9, 1944, Serial No. 553,380
2 Claims. (Cl. 219—13)

2. Inductive heating means for heating material, comprising means providing a work-passage through which material to be inductively heated may be passed, said means comprising a plurality of inductive heating means, one of said inductive heating means comprising an inductor coil means for providing a longitudinal magnetic field for said work-passage, another of said inductive heating means comprising a core-structure for providing a transverse magnetic field for said work-passage, said core-structure comprising magnetizing coil means, a tube-oscillator generator connected to said inductor coil means for energizing said inductor coil means, a rotary alternator connected to said magnetizing coil means for energizing said magnetizing coil means, and means for passing material through said



work-passage, with the material first passing axially through said inductor coil means, and immediately thereafter passing alongside said core-structure transversely to the magnetic field provided thereby.

2,448,012

INDUCED HEATING OF CONTINUOUSLY MOVING METAL STRIP WITH PULSATING MAGNETIC FLUX

Robert M. Baker, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application September 9, 1944, Serial No. 553,381
16 Claims. (Cl. 219—13)

10. In combination, a transverse-flux induction-heating means including a work-passage through which strip-like material can be moved longitudinally, said induction-heating means comprising flux-producing means having a distinct field-structure on each side of said work-passage, for providing a pulsating magnetic field in said work-passage, means for laterally moving one of said field-structures with respect to the other, and metallic screening-means along each longitudinal border of the work-passage, for screening both longitudinal portions of the material along its edges from the field, each of said screening-means being generally U-shaped in cross-section and provided with passages for cooling fluid in the cross-member of the U.

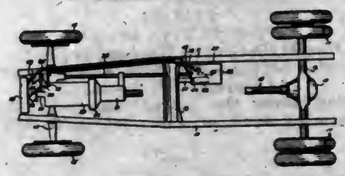
2,448,013

PREPARATION OF β-AMINOPROPIONITRILE

Saul R. Buc and Jared H. Ford, Kalamazoo, Mich., assignors to The Upjohn Company, Kalamazoo, Mich., a corporation of Michigan

No Drawing. Application December 26, 1944, Serial No. 569,920
3 Claims. (Cl. 260—465.5)

1. The method for the preparation of β-aminopropionitrile which includes: introducing acrylonitrile into aqueous ammonia maintained at a



temperature in the range between about 60 degrees and about 130 degrees centigrade in amount such that the ammonia in the reaction mixture is always in molar excess.

2,448,014

DUAL ENGINE VEHICLE COOLING SYSTEM

Lawrence R. Buckendale, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a corporation of Ohio

Application June 7, 1945, Serial No. 598,053
14 Claims. (Cl. 60—97)

1. In a fluid cooling system for associated main and auxiliary engines employing a common fluid cooling device, means for repeatedly recirculating cooling fluid heated by operation of the main engine through the auxiliary engine without traverse of said cooling device and means operative when said cooling fluid has attained a predetermined temperature for automatically introducing said fluid cooling device into the system.

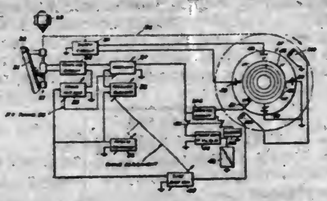
2,448,015

CRACKING OF HYDROCARBONS

Robert E. Burk, Cleveland Heights, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application December 12, 1942, Serial No. 468,813
1 Claim. (Cl. 196—52)

The process of catalytically cracking hydrocarbons, which comprises treating kerosene with a liquid catalyst the inorganic constituents of which comprise primarily about 89 volume per cent of hydrogen fluoride (based on the kerosene) promoted by an amount of boron trifluoride dissolved therein to provide a partial pressure of boron trifluoride of about 150 pounds per square inch, at a temperature of about 90° F., and at a pressure at least sufficient to maintain the hydrogen fluoride in the liquid phase at said temperature, and continuing the treatment for a period of time under the above conditions such that cracking of the kerosene to produce a substantial amount of gasoline and lower hydrocarbons is the principal reaction.



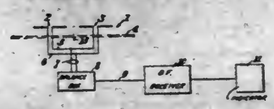
2,448,016

INSTRUMENT LANDING SYSTEM

Henri G. Busignies, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application January 26, 1944, Serial No. 519,764
20 Claims. (Cl. 343—9)

1. A system for guiding a craft to a selected one of a plurality of landing points, comprising a plurality of radio repeaters each arranged adjacent a predetermined landing area, means for giving to each said repeater a predetermined identifying transmitting signal characteristic, a circuit for said craft comprising a transmitter system for transmitting triggering pulses for triggering said repeaters, a receiver on said craft, means for rendering said receiver inoperative during transmission of said triggering pulses, adjustable means coupled with said receiver for rendering said receiver responsive to a selected one of said identifying characteristics, and indicator means responsive to the received signals for indicating



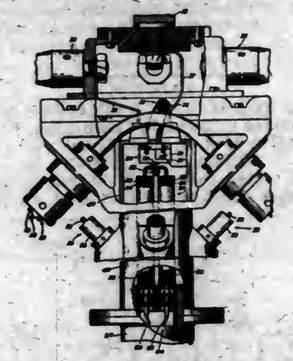
the position of said craft with respect to said repeater transmitting said one of said identifying characteristics.

2,448,017

ANTENNA SYSTEM

Henri G. Busignies, Forest Hills, and Nathan Marchand, New York, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application April 17, 1945, Serial No. 588,848
3 Claims. (Cl. 343—115)



1. In a direction finder system a pair of dipoles extending at an angle of substantially 45° to the vertical and spaced apart, a planar reflector adjacent said dipoles and lying in a substantially vertical plane parallel to the plane in which said dipoles lie, and means for connecting said dipoles in phase opposition.

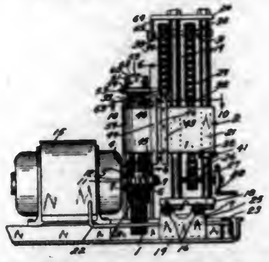
2,448,018

SENSING ANTENNA COUPLING

Trevor H. Clark, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application November 27, 1943, Serial No. 511,937
10 Claims. (Cl. 250—33.67)

1. In an antenna assembly, a loop antenna, a sensing antenna and counterpoise used in operative association with said loop antenna, a transmission line, a coupling circuit for coupling said sensing antenna and counterpoise to said transmission line to provide an impedance to said line substantially simulating the impedance



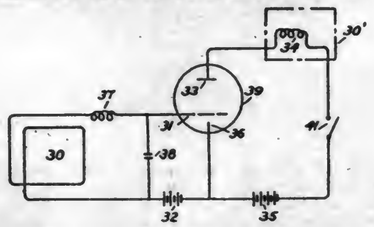
of said loop antenna comprising, a coupling loop having two legs connected at one end to said transmission line, resistance means in each leg of said coupling loop adjacent said transmission line, and a coupling means connected to said sensing antenna and said counterpoise, and coupled to said coupling loop, to transfer energy between said sensing antenna and said transmission line.

2,448,019

GRINDING APPARATUS

John C. Curtis, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania

Application December 30, 1942, Serial No. 470,688
9 Claims. (Cl. 51—95)



1. In a grinding apparatus, a grinding wheel, means providing rectangularly related guideways, said guideways lying in planes perpendicular to planes including the axis of rotation of said wheel, a rotatable work holder mounted on said guideway-providing-means for movement along said guideways and carrying a workpiece, means for driving said work holder to rotate the workpiece about its longitudinal axis during the grinding operation, means for moving said work holder along one of said guideways to move the workpiece in generally the direction of its axis along a rectilinear path tangentially with respect to the wheel periphery, means for swivelling said work holder on an axis parallel to the axis of rotation of said wheel to incline the longitudinal axis of the workpiece with respect to its rectilinear path, and means for moving said work holder along the other guideway to move the workpiece in a direction at substantially right angles to its longitudinal axis toward and from the wheel periphery.

2,448,020

DEVICE FOR HIDDEN EXPLOSIVE MINES

Richard C. Darnell, Champaign, Ill.

Application May 17, 1943, Serial No. 487,295
2 Claims. (Cl. 102—8)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

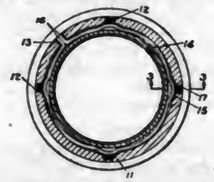
1. A device of the character described comprising, in combination, an explosive device for deterring the exploring of hidden mines by electromagnetic detectors, adapted to be placed in hidden association with the said mines, an antenna in which a voltage is induced by the electromagnetic field of an approaching detector, a self-contained source of current, a cold cathode grid glow tube having its grid in circuit with the said antenna and source of current, a second self-contained source of current, and a primer mechanism the coil of which is in circuit with the said second source of current and the cathode of said controlled glow tube.

2,448,021

PROTECTIVE HOOD

Joseph De Grazia, Washington, D. C.

Application September 20, 1945, Serial No. 617,661
14 Claims. (Cl. 2—205)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



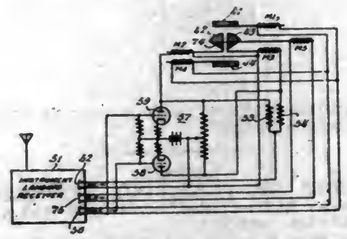
1. A hood comprising a front portion adapted to extend to the shoulders of the wearer and having a face opening, a back portion adapted to extend to the shoulders of the wearer, said front and back portions being joined together at the crown of the hood, wing portions extending laterally of and joining together said front and back portions intermediate the crown and shoulder portions of the hood, and releasable means for retaining said wing portions in a folded position about the neck of the wearer.

2,448,022

FUSE

Eugene J. Fix, Philadelphia, Pa.

Application January 23, 1939, Serial No. 252,415
3 Claims. (Cl. 102—70)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



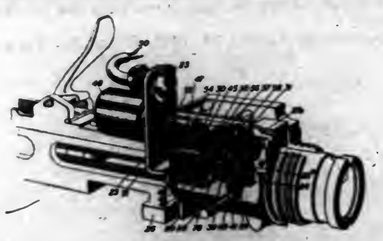
1. In a fuse casing, a pair of telescoped and relatively rotatable members having registering annular grooves, the base of the groove in the outer member having equidistantly spaced recesses, said outer member having a tapped opening in line with each recess and having an opening disposed between recesses, a split coupling ring normally disposed in the groove of the outer member and having arched projections seating in the recesses and bent ends disposed in the opening between recesses, screws in the tapped openings for applying pressure to the arched projections of the ring and displacing the unarched portions of the ring into the groove of the inner member.

2,448,023

FLIGHT INDICATOR

Donald F. Folland, East Hempstead, and Joseph Lyman, Huntington, N. Y., assignors to The Sperry Corporation, a corporation of Delaware

Application July 28, 1945, Serial No. 607,520
23 Claims. (Cl. 177—311)



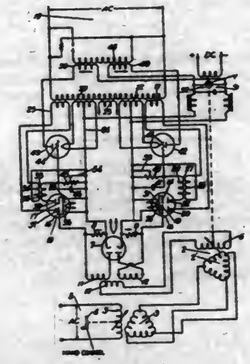
1. Apparatus for simulating the scene viewed by a pilot of a moving aircraft, comprising a projection screen so positioned at an appreciable distance from the pilot's eye as to substantially fill the area through which the pilot normally views the scene generally ahead of the aircraft, and means for representing upon said screen a simulated perspective view of a runway oriented in accordance with craft positional data and a stabilized image corresponding to the apparent junction of sky and land.

2,448,024

MACHINE GUN FIRING RATE CONTROL MECHANISM

William T. Golden, United States Navy

Application March 15, 1945, Serial No. 582,967
7 Claims. (Cl. 89—129)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. In a machine gun having a high-rate recoil-operated firing mechanism, a device for controlling the firing rate of said mechanism, comprising initially dormant power means for producing uniformly spaced power impulses at a rate lower than the high rate of the firing mechanism, transfer means through which said impulses are transmitted to said firing mechanism to substitute for the inherent high firing rate, a dual-purpose trigger, means responsive to one motion of the trigger to animate said power means thus through said transfer means to alter the rate of automatic recoil operation and actuate said firing mechanism at the corresponding low rate thereby accomplishing one of the purpose of the trigger, and means adjustably mounted on the trigger initially disconnected from the transfer means, being settable to couple the trigger with a portion of the transfer means, imparting a subsequent motion of the trigger directly to the firing mechanism to restore automatic firing, thereby bypassing the power means and most of the transfer means and accomplishing the other purpose of the trigger.

2,448,025

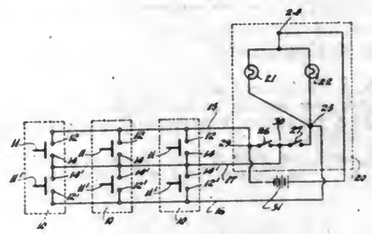
SELF-SYNCHRONOUS CONTROLLED MOTOR SYSTEM

William Christian Grabau, Brighton, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware

Application July 9, 1942, Serial No. 450,329
6 Claims. (Cl. 318—30)

6. In a training control system, a training motor, gaseous conduction tube means having a pair of anodes, cathodes and grid control elements, means for applying an alternating voltage source in opposing phases to said conduction tube means in series with the training motor, a training member for providing a displacement alternating voltage for controlling the direction of rotation of the training motor in a forward or reverse direction, double triode tube means and circuits comprising two sets of anodes, cathodes and grid control electrodes, means for impressing on the anode-cathode circuit of the first triode set a direct current pulse, means dependent upon said pulse for impressing a second pulse on the second set of cathode and anode elements, said second pulse having an increasing magnitude characteristic with the decreasing of said first pulse, means for converting said displacement alternating voltage to provide said first-mentioned direct current pulses and impressing the same on said triode grid elements for controlling the flow of current through said double triode tube and means for impressing the output of said double triode tube on the grids of said conduction tube means for operating said training motor.

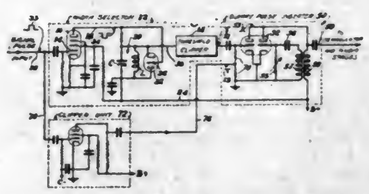
2,448,026



ELECTRICAL DETECTING CIRCUIT AND DEVICE FOR TESTING THE SAME

Harry C. Grant, Jr., New York, and Arthur W. Uhl, Inwood, N. Y., assignors to Specialties Development Corporation, Bloomfield, N. J., a corporation of New Jersey

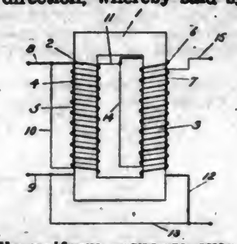
Application April 10, 1943, Serial No. 482,572
8 Claims. (Cl. 177—311)



1. In combination, electric circuit means for detecting external physical conditions including

switch means responsive to such condition for controlling said circuit means, and means for testing said circuit means comprising a series circuit including said switch means, a second switch

means, a source of electromotive force, and a plurality of electro responsive indicating devices connected in parallel relation to each other in said series circuit.

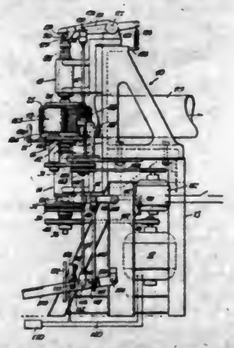


2,448,027
STATIC REDUCING PULSE RECEIVER
Donald D. Grieg, Forest Hills, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application November 23, 1943, Serial No. 511,404
8 Claims. (Cl. 250—20)

4. A system for reducing interference to reception of electrical signal pulses of a given width caused by electrical interference pulses of widths different from said given width, or overlapping said signal pulses to form composite pulses of widths differing from said given width, comprising pulse width selector means to pass pulses of said given width only, a pulse generator coupled to the output of said width selector for producing output pulses at a repetition rate in which the time interval between successive pulses produced is equal to substantially the maximum time interval occurrable between successive signal pulses in the absence of pulses from said width selector, and bias means in said generator responsive to pulses from said width selector to control the timing of said generator according to the occurrence of the pulses passed by said pulse width selector means.

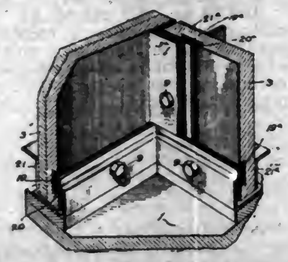
2,448,028
ELECTRICAL SYSTEM
Thomas A. O. Gross, Waltham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application December 24, 1943, Serial No. 515,605
9 Claims. (Cl. 171—119)

8. A transformer system comprising a plurality of voltage-changing transformer sections connected in cascade, each of said sections including superimposed equal-length windings wound in the same direction, whereby said system has a



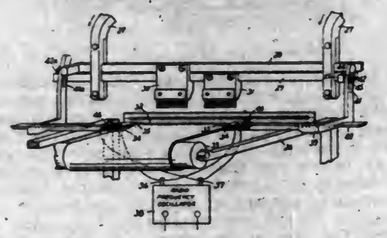
substantially uniform response over an appreciable frequency band.

2,448,029
METHOD OF PREPARING PHENOLSULFONIC ACID-FORMALDEHYDE ION EXCHANGE AGENTS
George Beal Heusted and William C. Bauman, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application February 24, 1947, Serial No. 730,548
2 Claims. (Cl. 260—49)



1. A method for preparing an ion exchange agent which comprises reacting phenol sulphonic acid with from 1 to 2 molecular equivalents of formaldehyde, in the presence of at least 2.3 molecular equivalents of water per mole of formaldehyde, to form a solid resin containing more than 15 per cent by weight of water, and heating a granular body of the unwashed resinous material at temperatures between 100° and 200° C. in contact with a current of a substantially inert gas until it is substantially free of water.

2,448,030
MANUFACTURE OF PHONOGRAPH RECORDS
Frank C. Hinckley, Stratford, Conn., assignor to Columbia Records Inc., a corporation of Delaware
Application August 18, 1945, Serial No. 611,393
6 Claims. (Cl. 29—76)



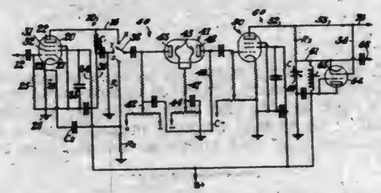
1. In a disk edging machine a rotatable table, a removable arbor for mounting a plurality of disks on said table in coaxial stacked relation therewith, a rotatable clamp adapted to engage and to clamp said stack of disks to said table, a foot lever operatively connected for actuating said clamp, a driving motor for said table and control means for said motor operable by said lever only when said clamp is engaged.

2,448,031
HERMETICALLY SEALED JOINT
Hugh B. Johnson, Falls Church, Va., and Le Roy L. Werner, Washington, D. C.
Application October 26, 1944, Serial No. 560,518
3 Claims. (Cl. 217—65)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A hermetically sealed joint comprising a base member, an upstanding rib mounted on said base member, said rib having a longitudinally extending offset portion, a side member mounted on said base adjacent said rib and provided with a longitudinally extending recess coextensive with and facing said offset portion, a resilient member within said recess, and means spaced from said resilient member and extending transversely through said rib and side member for clamping said offset portion in engagement with said resilient member.

2,448,032
TEXTILE FABRIC
Edgar S. Kennedy, Wayne, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application June 28, 1944, Serial No. 542,459
2 Claims. (Cl. 66—172)

1. A flat plain knit fabric formed of yarns comprising thermoplastic fibers, fibers in a narrow portion only thereof along each of the longitudinal selvages of the fabric being bonded by inherent thermal tackiness of thermoplastic fibers therein to produce a stable, non-curling condition of the yarns without undue loss of pliability, softness, porosity, handle and the like.

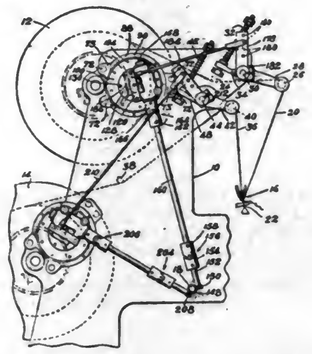


2,448,033
LIP ROUGE DISPENSER APPLICATOR
Ralph E. Kruck, Blaidsell Point, Conn.
Application March 12, 1947, Serial No. 734,122
4 Claims. (Cl. 132—79.2)

1. An applicator comprising in combination, a cylindrical body having a passageway therethrough and an upper end face which is transversely concaved corresponding substantially to the contour of a person's lip, and a plurality of spaced ribs extending upwardly from said face and extending across said face, the upper sides

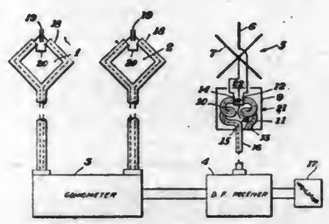
of said ribs intermediate the ends thereof being concaved similarly to the concavity of said end face.

2,448,034
ELECTRICAL PULSE MEASURING SYSTEM
Emile Labin, New York, and Donald D. Grieg, Forest Hills, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware
Application May 15, 1943, Serial No. 487,073
7 Claims. (Cl. 175—183)



1. A method of measuring impulse characteristics comprising translating the impulse into rectangularly-shaped pulses whose widths correspond respectively to certain values of said characteristics, and measuring the widths of said rectangular pulses to obtain measurements of said characteristic values, said translation of the impulse including gate clipping an impulse at successive levels to obtain rectangular pulse slices therefrom whereby the width of the pulse slices represent the width characteristic of the impulse at the levels at which the slices are taken and the number of slices obtainable from a given impulse times the distance between the successive levels represent substantially the amplitude of the impulse.

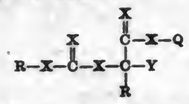
2,448,035
WARP KNITTING MACHINE
Fritz Lambach, Tenafly, N. J.
Application January 24, 1947, Serial No. 723,952
18 Claims. (Cl. 66—86)



1. In a warp knitting machine, the combination of: a rotatable warp beam, knitting implements arranged for engagement with yarns fed by said warp beam, said knitting implements being capable of causing intermittent pulling actions on said yarns, a feeder drive, a clutch interposed between said feeder drive and said warp beam, said clutch having cooperating first and second rotatable coupling means capable of being engaged with each other and of being disengaged from each other, said first coupling means being positively connected with said feeder drive so as to be rotated by the latter during the operation of the machine, means arranged for a positive connection of said second coupling means with said warp beam, braking means, said braking means being capable of applying a braking action on said warp beam, a controlling mechanism associated with said clutch for engaging

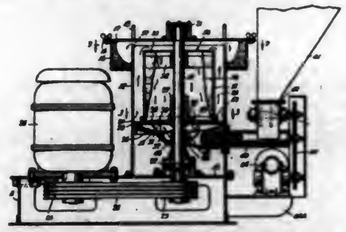
said coupling means with each other in response to such a pulling action and for disengaging said coupling means from each other in response to a lessening of such a pulling action, one of said coupling means being arranged for cooperation

with said braking means so as to release same in response to an engagement of said coupling means with each other, and means for an automatic application of said braking means upon a disengagement of said coupling means from each other.



2,448,036
SIMULATING IMPEDANCE SYSTEM
Lester L. Libby, East Orange, N. J., assignor to Federal Telecommunication Laboratories, Inc., New York, N. Y., a corporation of Delaware
Application April 18, 1946, Serial No. 663,127
5 Claims. (Cl. 178—44)

5. An impedance system simulating the characteristics of a shielded loop having a condenser in series with the inner conductor at the gap of said loop and a resistor connecting the two ends of the shield at said gap, comprising a pair of coils of coaxial transmission line, the inductance of the outer conductors of said coils being substantially equal, a pair of adjacent ends of said outer conductors being connected to ground with the inner conductor of one of said coils at its said adjacent end being also connected to ground and with the inner conductor of the other of said coils at its adjacent end being connected to the output, the opposite ends of said outer conductors being adjacent each other and serving as input, a condenser connected in series with the inner conductors of said coils at said opposite ends, a resistor connecting the outer conductor of said one coil to the outer conductor of said other coil at said opposite ends.



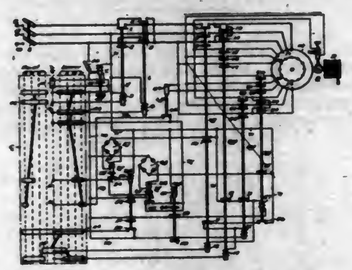
2,448,037
LUBRICATING COMPOSITIONS
Bert H. Lincoln, Ponca City, and Gordon D. Byrkit, Niagara Falls, N. Y., assignors, by mesne assignments, to The Lubri-Zol Development Corporation, Cleveland, Ohio, a corporation of Delaware
No Drawing. Application December 8, 1944, Serial No. 567,304
14 Claims. (Cl. 252—33.6)

1. A lubricant comprising in combination a major amount of oil of lubricating viscosity and from 0.001% to 10% of an oil-soluble neutralized organic carboxylic acid bearing a thiocarbonate radicle having the formula:

where C represents carbon; X is an element selected from the class consisting of oxygen and sulphur, at least one X is sulphur; Y is a halogen; R is an organic radicle; and Q is one hydrogen equivalent of a sole-forming radicle.

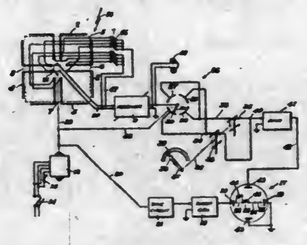
2,448,038
DISINTEGRATOR AND VORTICAL CLASSIFIER FOR SOLIDS
Henry G. Lykken and William H. Lykken, Minneapolis, Minn.
Application August 1, 1942, Serial No. 453,287
11 Claims. (Cl. 241—38)

11. Material handling apparatus comprising a closed casing, a rotating shaft therein, an open ended cylinder mounted on said shaft so as to rotate therewith, the cylinder being of less height than the casing and having a diameter from two to six inches less than said casing, the cylinder rotating at such speed as to set up and maintain a vortex of air and suspended material in said casing, a trough, an opening in said casing adjacent the level of the upper end of the cylinder and communicating with said trough, means for feeding material to be classified to the space between the casing and cylinder, the coarser material passing into said trough through said opening, and means for causing the finer material to enter said cylinder and collect therein.



2,448,039
VEHICLE-ARRESTING APPARATUS
William E. Lynn, Bristol, Pa.
Application September 17, 1947, Serial No. 774,655
14 Claims. (Cl. 244—110)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

10. In combination an aircraft having forward and rear landing elements and having a plurality of transverse stripes of fluorescent material, a landing runway having a source of ultraviolet light thereon directed upward and having a photosensitive cell adapted to receive fluorescence successively from said stripes, a barrier adapted to be moved into a position beneath said aircraft and between said elements, and an electric circuit

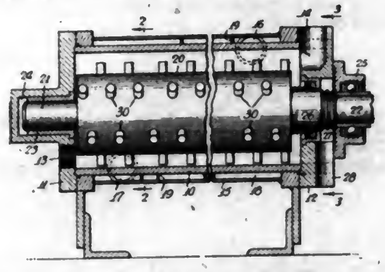


adapted to be activated by said cell and to move said barrier to said position at a time depending upon the rapidity with which said cell receives the successive amounts of fluorescence from the successive stripes.

2,448,040
CONTROL SYSTEM FOR VARIABLE-SPEED ALTERNATING-CURRENT MOTORS
Kurt Mahnke, Forest Hills, and James W. York, Irwin, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 13, 1946, Serial No. 716,030
9 Claims. (Cl. 318—262)

9. A motor control system, comprising an alternating-current motor having terminal groups for operating at different respective speeds, line terminals, speed-controlling contactors having respective contact devices for selectively connecting said terminal groups to said line terminals and having respective coil circuits for closing when energized said respective contact devices, a master controller connected to said coil circuits for sequentially energizing them one at a time, a control relay having a normally closed contact series-disposed in the coil circuit of the one contactor for highest motor speed, said control relay having a control coil and a normally open self-holding contact series-connected with each other and connected to said master controller so that said coil is energizable when said master controller is set for highest motor speed, a load-responsive relay having a coil connected between the one terminal group and the appertaining contactor for highest motor speed to be energized by motor current flowing when said motor is set to run at said highest speed, said load-responsive relay having a normally open contact controlled by said latter coil to close when said current exceeds a given value, a timing relay having a coil circuit interlocked with said one contactor for highest motor speed so as to drop out upon elapse of a timing period after said one contactor has closed, said timing relay having a normally closed contact series-connected with said normally open contact of said load-responsive relay across said self-holding contact whereby said control relay causes opening of said one contactor when said load-responsive relay responds to excessive current after elapse of said timing interval, and circuit means linking said one contactor with the one other contactor for the next lower motor speed so as to cause closing of said other contactor when said one contactor is opened due to excessive current.

2,448,041
DIRECTION FINDER
Nathan Marchand, New York, N. Y., assignor to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware
Application November 25, 1944, Serial No. 565,142
14 Claims. (Cl. 343—120)



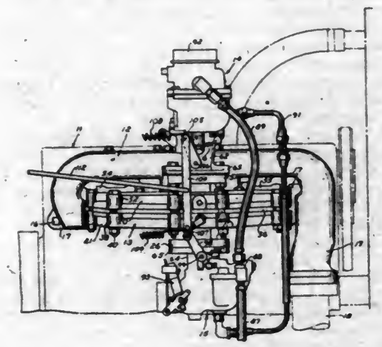
1. An amplitude comparison system comprising a cathode ray tube indicator having a viewing screen, means for alternately applying signals, the amplitudes of which are to be compared, to said indicator, sweep generator means synchronized with said means for applying to provide separate indications of each of said signals on different portions of said screen, variable attenuator means in the path of each of said signals, and means simultaneously and oppositely to adjust the attenuation characteristics on said attenuator means to provide a predetermined relationship of indications on said indicator from said signals, whereby the difference in amplitude of said signals will be indicated by the attenuator adjustment.

3. Means for indicating the direction line to a given transmitter, and the directive sector in which said transmitter lies, comprising an indicator, means for successively coupling a plurality of differently directed antennas to said indicator to provide indications, means for controlling said indicator to separate signals received on said successively coupled antennas to indicate the sector from which the signals arrive, and means for adjusting the amplitude of the indications on said indicator to a predetermined relationship to provide an indication of the direction line to said transmitter.

2,448,042
MIXING APPARATUS
Bruce De Haven Miller, Louisville, Ky., assignor to The Girdler Corporation, Louisville, Ky., a corporation of Delaware
Application September 14, 1943, Serial No. 502,272
19 Claims. (Cl. 259—7)

1. A mixing apparatus having a substantially cylindrical elongated chamber having a peripheral wall presenting a substantially smooth inner surface, said chamber being provided with an inlet and an outlet for the continuous flow of a fluid

generally lengthwise therethrough, a jacket encircling said chamber and having an inlet and an outlet for a heat exchange medium, and an agitator within said chamber and including a shaft of a diameter equal to substantially one-half that of the chamber, and having its axis eccentrically positioned in said chamber to an amount not to exceed the radius of said shaft,



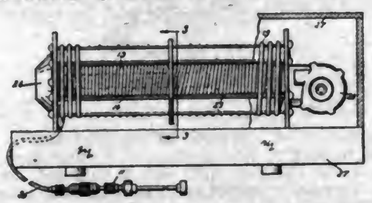
and provided with beater elements spaced apart along the length thereof and offering relatively small resistance to said through flow, whereby the circumferential flow of the fluid in said chamber is substantially greater at one side of said agitator than at the opposite side and stratification of said fluid adjacent to said jacket is prevented.

2,448,043

FUEL FEEDING APPARATUS FOR INTERNAL-COMBUSTION ENGINES

Carl B. Nash, Detroit, Mich., assignor to Divco Corporation, Detroit, Mich., a corporation of Michigan

Application May 23, 1944, Serial No. 536,992
14 Claims. (Cl. 123—127)



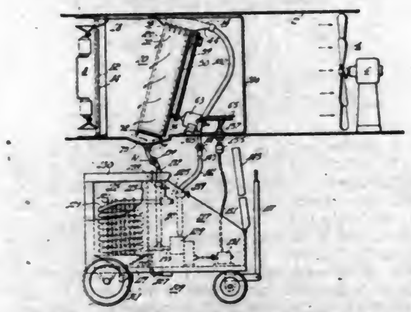
1. In an intake manifold assembly, a housing having two spaced fuel mixture inlet openings adapted to be connected to fuel mixture supply means and a plurality of fuel mixture outlet openings adapted to be connected to the intake ports of an internal combustion engine, a partition dividing said housing into two independent fuel mixture passage sections each communicating with one of said inlet openings and with all of said outlet openings, and means in said housing further dividing each of said sections into a plurality of independent fuel mixture passages between said inlet and outlet openings.

2,448,044

HIGH RADIO-FREQUENCY WATTMETER

Paul J. Ovrebo, Dayton, Ohio

Application December 23, 1944, Serial No. 569,571
17 Claims. (Cl. 171—95)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



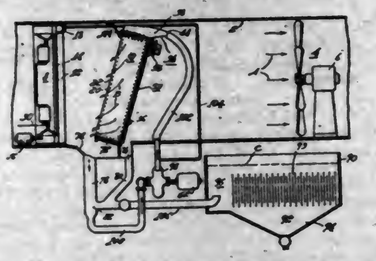
1. A radio-frequency wattmeter including an electrical loss-line conductor adapted for connection to a source of radio frequency energy, and ventedly mounted in a confined area, an electrical resistor interiorly proportioned and shaped at its opposite termini to minimize standing waves, a thermocouple, and a current measuring milliammeter and, in a separate circuit, a cooling blower, said blower being mounted so as to continuously force a blast of cooling air across the loss-line, thermocouple and resistor while measuring current.

2,448,045

ELECTRICAL CLEANING MEANS

Edward H. R. Pegg, Cranford, N. J., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 6, 1945, Serial No. 603,510
6 Claims. (Cl. 183—7)



1. A system of a type described comprising two separable parts at least one of which is portable independently of the other, a first of said parts comprising an electrostatic dust-precipitator for cleaning a gas-flow, comprising a plurality of spaced dust-collecting electrodes, means for discharging a liquid into the spaces between said dust-collecting electrodes, a liquid supply pipe to said liquid discharging means, having a first mateable connector, and a liquid collecting means below said dust-collecting electrodes, having a second mateable connector; a second of said parts comprising a tank, a pump having an inlet and an outlet, pipe means extending to said pump inlet and to a lower part of said tank, said pipe means also comprising a return hose, pipe means connected to said pump outlet, comprising a supply hose, said supply and return hoses having detachable connectors respectively detachably attached to said first and second mateable connectors in the first of said parts.

2,448,046

PRECIPITATOR

Gaylord W. Penney, Wilkinsburg, and George W. Hewitt, Pittsburgh, Pa., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application July 6, 1945, Serial No. 603,503
20 Claims. (Cl. 183—7)

1. A system of a type described, comprising an electrostatic dust-precipitator for cleaning a gas flow, comprising gas purifying means comprising a plurality of spaced dust-collecting electrodes; a loop-circuit including therein: a pump, said dust-collecting electrodes, a nozzle-device connected to the discharge end of said pump and movable across said dust-collecting electrodes, a trough means extending below said dust-collecting electrodes, and a piping means between said trough means and the inlet of said pump; distinct container means outside of said loop-circuit for cleaning and holding cleaned liquid for circulation in said loop-circuit, said loop-circuit extending above said liquid-holding means; a piping connection between said container means and said loop-circuit; and operable for operating said pump during spaced periods and for moving said nozzle-device progressively across said dust-collecting electrodes; said piping connection being open during pump-operating periods and between such periods.

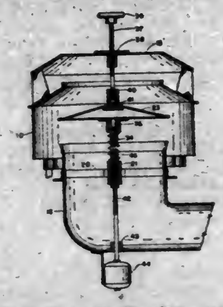
2,448,047

PREPARATION OF UNSATURATED ALCOHOLS

William Jennings Peppel, Lodi, N. J., assignor to Burton T. Bush, Inc., New York, N. Y., a corporation of New Jersey

No Drawing. Application February 15, 1947, Serial No. 728,953
5 Claims. (Cl. 260—618)

1. The process for preparing unsaturated alcohols comprising treating a material selected from the group consisting of citral, lemongrass oil, cinnamic aldehyde and p-isopropyl-alpha-methyl-cinnamic aldehyde with hydrogen in the presence of a supported reduced cobalt catalyst at a temperature between about 90° C. and about 160° C. under superatmospheric pressure until substantially one mol of hydrogen per mol of aldehyde present in the starting material has been absorbed.



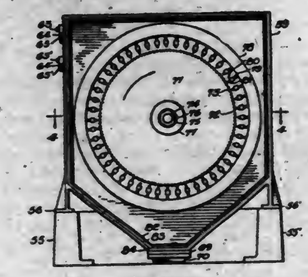
2,448,048

RAIN AND SPRAYPROOF VENTILATOR

Carl W. Porter, Alexandria, Va.

Application August 9, 1945, Serial No. 609,904
3 Claims. (Cl. 183—77)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

3. A device adapted for use in ventilating systems to prevent water and other entrained material from passing therethrough comprising a casing provided with an opening for the intake of air, a duct projecting into and connected to said casing, the bottom of said casing, exteriorly of said duct, adapted to trap and remove water and other material collecting thereon, an assembly of a rotary deflecting plate rigidly attached to one end of stub shaft within said casing, a bearing mounted within and axially of said duct for rotatably supporting said stub shaft, the said



stub shaft being longitudinally movable with respect to said bearing, a coil spring surrounding said stub shaft positioned between said bearing and said deflecting plate adapted to bias the latter into operative position, driving means slidably connected to the other end of said stub shaft below said bearing and means axially connected to one end of said assembly for moving said deflecting plate into and out of closure relationship with respect to said duct.

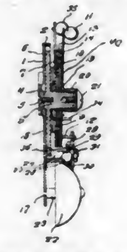
2,448,049

MACHINE FOR IMPACTING PIGMENTS AGAINST A ROTATING DISK ELEMENT

Harold R. Rafton, Andover, Mass., assignor to Rafton Engineering Corporation, a corporation of Massachusetts

Application March 16, 1943, Serial No. 479,373
3 Claims. (Cl. 241—186)

1. Apparatus for treating a liquid slurry of material by impact shock, comprising a disc rotatable in one direction, means for rotating said disc at a high peripheral speed in said direction, said disc being provided with peripheral teeth each having a leading face lying substantially in a plane containing the axis of rotation of said disc and a following face sloping inwardly away from said direction of rotation, a plurality of circumferentially spaced nozzles substantially surrounding the periphery of said disc and substantially equidistantly spaced from said teeth, means for supplying the slurry material to said



nozzles under pressure, said nozzles being positioned in the plane of rotation of said disc and being so oriented as to provide substantially radial jets which are struck by said leading faces when said disc is rotating, the width of said teeth and the thickness of said disc adjacent thereto being at least equal to and only slightly greater than the width of said jets whereby substantially all of the slurry material from said jets will be struck by said leading faces and will immediately be discharged therefrom, and a casing enclosing said disc and said nozzles, said casing having walls all of which are spaced from said teeth sufficiently to prevent substantial recontact of the slurry material with said teeth.

2,448,050

TYPEWRITER PAGE END INDICATOR

Emmett A. Randolph, La Grange, Tex.

Application March 14, 1946, Serial No. 654,453
3 Claims. (Cl. 197—189)

1. In a page end indicator attachment for typewriters, a mounting plate, a graduated dial plate rotatably carried by said mounting plate, means carried by the mounting plate for operatively connecting the dial plate with the platen shaft of a typewriter for rotation in unison therewith, an index plate provided with a plurality of index holes attached to said dial plate and having its index holes arranged complemental to the graduations on said dial plate, a setting plate mounted for rotation with respect to the graduated dial plate and carrying a setting lever, said lever having a pointer cooperating with the graduations of the dial plate to indicate the setting of said setting plate, and also having a pin engageable in the hole of the index plate complemental to the graduation with which the pointer cooperates in any set position of the setting plate to lock the setting plate in set position with relation to the dial plate for rotation therewith, a signaling device carried by said mounting plate, and means on the setting plate for actuating the signaling device in response to rotation of the setting plate with the dial plate.

2,448,051

PRODUCTION OF CARBON

Gustave T. Reich, Philadelphia, Pa.

No Drawing. Application November 13, 1941, Serial No. 419,027
6 Claims. (Cl. 195—85)

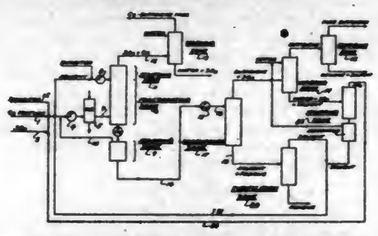
1. In the production of carbon by carbonization of the non-volatile fermentation products from saccharine materials, the improvement which comprises treating the saccharine material prior to fermentation, at a temperature above atmospheric, and at a pH less than 6.5, with a calcium precipitant selected from the group consisting of sulfuric acid, phosphoric acid and water-soluble sulfates and phosphates, separating the precipitated calcium compound, thereafter subjecting the saccharine material to yeast fermentation, distilling the volatile products of fermentation, concentrating the non-volatile fermentation products, and carbonizing the concentrated material.

2,448,052

ACTIVE MATERIAL FOR ALKALINE CELLS AND METHOD OF PREPARING SAME

Ralph Roberts, Eastport, Md.

No Drawing. Application May 14, 1945, Serial No. 593,584
7 Claims. (Cl. 136—24)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



6. A method of preparing active material for the cadmium negatives of alkaline cells which comprises adding an aqueous solution of a cadmium salt and a solution of a cellulose ester in an organic solvent simultaneously to a solution of an alkali metal hydroxide to form a coprecipitate of cadmium hydroxide and cellulosic compound, and reducing the cadmium compound in said coprecipitate to free metal.

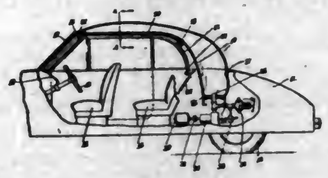
2,448,053

CYCLIC SULFONES OF CONJUGATED DIENES

Frank William Rose, Jr., Media, Pa., assignor to Houdry Process Corporation, Wilmington, Del., a corporation of Delaware

Application December 29, 1942, Serial No. 470,446
5 Claims. (Cl. 260—329)

1. The process which comprises reacting a low boiling conjugated diene with sulfur dioxide to form a less volatile decomposable sulfone in a fractionating zone at temperatures such that the rate of formation of the sulfone is relatively rapid and at pressures such that both sulfur dioxide and said diene are maintained in both liquid and vapor phases, simultaneously fractionally distilling the resulting mixture of decomposable sulfone and unreacted diene and sulfur dioxide in said fractionating zone to effect a downward movement of a liquid phase comprising said decomposable sulfone and an upward movement of a gaseous phase comprising unreacted diene and sulfur dioxide within said fractionating zone, and withdrawing decomposable sulfone from said fractionating zone in an amount greater than the amount formed from said diene and sulfur dioxide at equilibrium conditions.



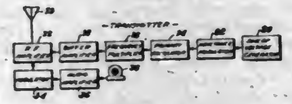
2,448,054

CONVERTIBLE TOP FOR AUTOMOBILES OR THE LIKE

Friedrich Wilhelm Seckel, New York, N. Y.

Application December 23, 1944, Serial No. 569,462
2 Claims. (Cl. 296—107)

2. A convertible top for automobiles or the like, comprising the combination of an inflatable roof which is formed by an airtight bag of elastic material and is adapted to occupy an inoperative position in the rear of the automobile or the like, in deflated, coiled up condition, and to project over the length of the automobile or the like in inflated, extended condition, said bag having springs running in longitudinal direction attached to it, said springs having the tendency to coil up and carry the deflated bag between them, one end of said bag being mounted in the rear of the automobile or the like, with means for inflating said bag and causing it to project over



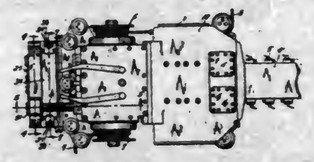
the length of the car when inflated, the rear ends of said springs being fastened to a first cross-beam, while the front ends are fastened to a second cross-beam which, in the inflated, operative position of the bag, is adapted to fit against the front windshield frame of the car, said first cross-beam being fastened to two swinging arms which are under the action of one end of springs, the other ends of the springs being fastened in the rear of the car, said springs tending to revolve said swinging arms towards the rear of the car upon deflation of the bag to assist in the deflation of the bag.

2,448,055

WOBBLED FREQUENCY CARRIER WAVE COMMUNICATION SYSTEM

Martin Silver, Bronx, N. Y., Carl A. Segerstrom, Jr., Teaneck, N. J., and Ralph B. Reade, Riverdale, N. Y., assignors to Federal Telephone and Radio Corporation, New York, N. Y., a corporation of Delaware

Application February 21, 1944, Serial No. 523,194
26 Claims. (Cl. 250—6)



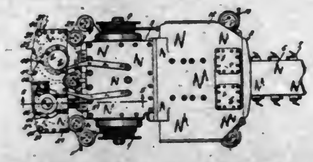
1. A method of receiving intelligence conveyed by a carrier wave periodically varied in frequency, in addition to intelligence modulation, according to a given sweep pattern between limits of a given frequency band, comprising producing substantially regularly recurring synchronizing pulses timed to at least certain of the successive sweep patterns of said carrier wave, producing oscillations varying in frequency according to said given sweep pattern, using the synchronizing pulses thus produced for synchronizing the sweep patterns of said oscillations with the successive sweep patterns of said carrier waves, mixing said oscillations with the carrier wave to produce a wave of substantially constant intermediate frequency equal to the frequency difference between said carrier wave and said oscillations, and detecting said intermediate frequency wave to obtain a signal wave according to said intelligence.

2,448,056

CUTTINGS CONVEYING MEANS

Leon E. Simmons, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania

Application August 11, 1943, Serial No. 498,194
2 Claims. (Cl. 262—30)



1. A cuttings conveying means adapted for association with a coal cutting machine having a frame carrying kerf cutting devices, comprising a conveyor casing having a chamber adapted to receive cuttings from the machine and having spaced apart parallel openings extending longitudinally of the machine frame when in use, the adjacent walls of said openings arranged in spaced apart relation to provide a longitudinal space between said walls, coacting relatively movable conveyor devices operating to move the cuttings from the vicinity of the cutting devices, said conveyor devices arranged longitudinally in said openings respectively and having their inner cuttings-receiving-ends in adjacency to the kerf cutting devices and their outer discharge-ends remote from the kerf cutting devices, said conveyor devices having portions thereof completely enclosed by the opening-walls and other longitudinally inwardly spaced portions disposed in free transverse communication with said space nearer the side toward the kerf cutting devices, and means for concurrently driving said conveyor devices, said conveyor devices arranged and constructed to receive the cuttings at the inner ends of said openings and to move the cuttings longitudinally through said openings to discharge at the outer side of said casing, and said space between said adjacent opening-walls providing a longitudinal passageway between said conveyor devices for the discharge of a portion of the cuttings longitudinally away from the kerf cutting devices.

2,448,057

CUTTINGS CONVEYING MECHANISM

Leon E. Simmons, Claremont, N. H., assignor to Joy Manufacturing Company, a corporation of Pennsylvania

Application October 9, 1943, Serial No. 505,609
12 Claims. (Cl. 262—30)

1. A cuttings-conveying mechanism adapted for association with a coal cutting machine of the kind having orbitally moving kerf cutting devices guided for circulation in a cuttings-receiving chamber within the frame of the machine, comprising a casing attachable to the machine frame of the coal cutting machine and having a chamber for receiving the cuttings brought back from the kerf by the cutting devices and discharged from said machine-frame chamber, and cuttings-moving and ejecting means in said casing cham-

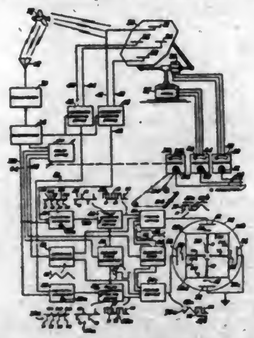
ber for moving the cuttings rearwardly therein and for positively ejecting the cuttings therefrom, said moving and ejecting means including a cuttings-moving member movable orbitally in said casing-chamber about an upright axis, a horizontally swingable cuttings-moving and ejecting element associated with said member and pivotally mounted at one end on said casing at one side of the latter and pivotally connected at its opposite end to said cuttings-moving member and means for rotating said member and for swinging said element horizontally back and forth on its pivotal mounting for causing said member to move the cuttings horizontally and rearwardly in said casing-chamber and said element to receive the cuttings from said member and move the cuttings rearwardly in and eject the cuttings so moved from said casing-chamber.

2,448,058

PROCESS FOR THE MANUFACTURE OF SODIUM PERCARBONATE

Victor Wallace Slater, Luton, and William Stanley Wood, Harpenden, England, assignors to B. La Porte Limited, Luton, Bedfordshire, England

No Drawing. Application July 11, 1944, Serial No. 544,460. In Great Britain August 9, 1943
4 Claims. (Cl. 23—62)



1. In a cyclic process for the manufacture of sodium percarbonate by reacting sodium carbonate and hydrogen peroxide to precipitate sodium percarbonate, the improvement which consists in adding hydrogen peroxide and sodium carbonate to a mother liquor from a previous precipitation containing sodium chloride, sodium carbonate and available oxygen as soluble sodium percarbonate, and so controlling the amounts and rates of addition of hydrogen peroxide and sodium carbonate as to maintain the sodium carbonate in solution and the content thereof in the reaction mixture throughout the course of the reaction at between 40 and 60 gms. per liter of solution in excess of the proportion required by the formula $2Na_2CO_3.3H_2O_2$.

2,448,059

OSCILLOGRAPH TRACE CONTROL SYSTEM

Archibald Delap Smith, Jr., Amityville, and Horace M. Guthman, Brooklyn, N. Y., assignors to Federal Telephone and Radio Corporation, Newark, N. J., a corporation of Delaware

Original application May 29, 1943, Serial No. 488,976. Divided and this application May 21, 1945, Serial No. 594,863
13 Claims. (Cl. 315—24)

1. A method for producing a four-sided tracing for a cathode ray oscillograph having x-axis and y-axis deflecting elements, comprising producing two waves each having alternate cycles of scanning and trace displacement potentials, the scanning cycle of each wave being timed to coincide with the displacement cycle of the other, and applying one of said waves to the x-axis deflecting elements and the other of said waves to the y-axis deflecting elements.

2,448,060

PHOTOGRAPHIC EMULSIONS SENSITIZED WITH SALTS OF METALS OF GROUP VIII OF THE PERIODIC ARRANGEMENT OF THE ELEMENTS

William F. Smith and Adrian P. H. Trivelli, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application July 15, 1946, Serial No. 683,772
19 Claims. (Cl. 95—7)

1. In a process for preparing a sensitized photographic silver halide emulsion, the step which comprises digesting the emulsion, on the acid side of neutrality, in the presence of at least one sulfur sensitizer and at least on soluble metal compound, the metal being selected from the group consisting of metals in group VIII of the periodic arrangement of the elements having an atomic weight greater than 100, the quantity of said soluble metal compound being from 0.8 to 39.4 milligrams per each 100 grams of silver present in the emulsion.

2,448,061

VALANCE

Bernard F. Stenz, New York, N. Y.

Application September 7, 1944, Serial No. 553,008
11 Claims. (Cl. 160—39)

1. In a valance, the combination of two end panels, a center panel having a chamber, two side panels having ends thereof slidably mounted in the chamber of said center panel, a support for anchoring the center panel to a supporting structure, brackets having jaws for receiving the inner edges of the end panels and anchoring the same to the supporting structure, and corner brackets having jaws, one jaw of each bracket receiving an edge of an end panel and the other jaw of each bracket receiving an edge of a side panel.

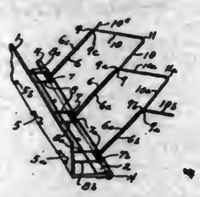
2,448,062

TRANSVERSE FLUX INDUCTION HEATING APPARATUS

Glenn E. Stoltz, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania

Application September 9, 1944, Serial No. 553,363
3 Claims. (Cl. 219—13)

2. Induction heating apparatus provided with a work-passage, said induction heating apparatus comprising, in combination, a plurality of cooperating pairs of electrically-energizable field-establishing means, each pair comprising spaced facing cores for producing a narrow concentrated heat-inducing magnetic field extending across the depth of the work-passage, each core of one pair of field-establishing means also being laterally spaced from a core on the same side of the work-passage which is a part of another pair of said field-establishing means, means for moving material so that separate parts of the material longitudinally pass through said magnetic fields,



the last said means comprising a plurality of endless belts having opposite substantially parallel runs for receiving material therebetween, the said runs being outside of said concentrated magnetic fields, and roller means laterally between the cores on the same side of the work-passage, said roller means bearing on the relativly outer sides of said opposite runs.

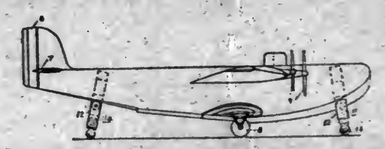
2,448,063

MACHINE FOR STRIPPING HOPS FROM VINES

Edouard Thys, Sacramento, Calif., assignor to Thys and Miller, Sacramento, Calif., a copartnership

Application August 28, 1944, Serial No. 551,457
23 Claims. (Cl. 130—30)

1. In a hop picking machine, a finger bar assembly comprising in combination, a finger bar including notched pivot-pin-receiving-means, a plurality of picking fingers disposed in row formation along said finger bar, pivot pin engaging means at the base of each of said fingers and disposed in the notches in said pivot pin receiving means, a pivot pin slidably and releasably received in said pivot pin receiving means and said pivot pin engaging means, and means to limit the rotative movement of the fingers on said pivot pin, said last named means comprising a freely slidable connection to connect releasably each of said fingers to said finger bar.



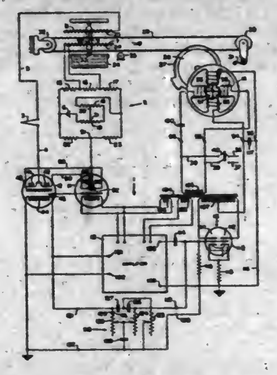
2,448,064

RETRACTABLE LANDING GEAR FOR AIRCRAFT

Edward E. Wallace, Cleveland Heights, Ohio; Daisy T. Wallace, administratrix of said Edward E. Wallace, deceased

Application April 14, 1943, Serial No. 482,991
18 Claims. (Cl. 244—102)

3. In an airplane having a fuselage and wing structures at opposite sides thereof, of landing gears intermediate the ends of said fuselage and below said wing structures, retractile mechanisms mounted within said fuselage forward and rearward of said landing gears, each said mechanism comprising a pair of members mounted at opposite sides of the longitudinal axis of said fuselage and each including an element movable outwardly for engagement with the terrain, and power means for independently moving each of said elements outwardly and inwardly.



2,448,065

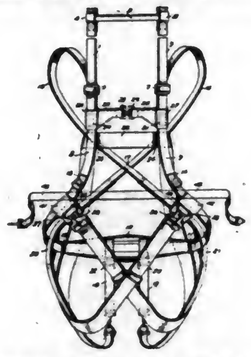
ELECTRICAL HARMONIC REBALANCING APPARATUS

Rudolf F. Wild, Philadelphia County, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania

Application April 25, 1944, Serial No. 532,692
26 Claims. (Cl. 171—95)

1. The method of measuring a direct-current electrical quantity to eliminate the effects of stray fluctuating electrical currents superimposed thereon which tend to disturb the measurement comprising the steps of translating said direct-current electrical quantity only into a fluctuating current having a pronounced harmonic frequency component which is different from the fundamental frequency component of said stray currents, and applying said derived fluctuating current to a measuring device which is responsive only to currents of substantially the same frequency as said harmonic frequency component.

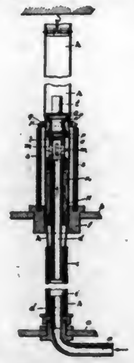
2,448,066



PICKUP PARACHUTE HARNESS

Harry Wilson, United States Army

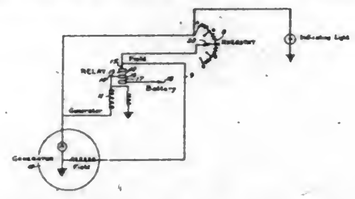
Application December 11, 1945, Serial No. 634,199½
3 Claims. (Cl. 244—151)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A body harness including straps extending upwardly at opposite sides both at the front and the rear of the wearer, the front straps terminating in lift webs, connecting means secured to said front straps, and means secured to said back

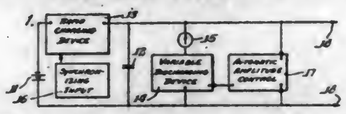
straps for passing under the thighs of the wearer and detachably engaging said connecting means

for maintaining the body of the wearer in a crouched position.



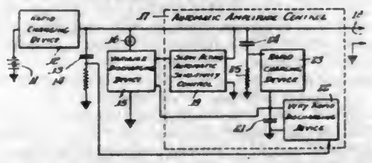
2,448,067
DEVICE FOR THE MANUFACTURE OF ARTIFICIAL SAUSAGE SKINS
Julius Wolff, Amstenrade, Netherlands, vested in the Attorney General of the United States
Application December 2, 1941, Serial No. 421,395
In Germany June 1, 1938
14 Claims. (Cl. 91—32)

12. A device for impregnating fabric tubes with a fibrous coating mass, comprising a pipe over which said tube is adapted to be inserted and through which said mass is conducted, said pipe being provided near one end thereof with lateral discharge orifices by way of which the mass from the pipe penetrates into the intermediate space between said pipe and the inside wall of said tube, a spacer member having a convex outer surface arranged inside said tube below the discharge point of the mass in a position contacting said tube with slight tension.



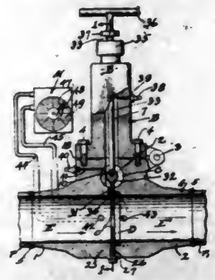
2,448,068
APPARATUS FOR ELECTRIC GENERATOR CURRENT CONTROL AND VOLTAGE REGULATION
Harold Edmund Merrifield, Stemmers Run, Md.
Application April 29, 1946, Serial No. 665,684
3 Claims. (Cl. 322—83)

1. An automatic controlling device for a direct current generator having a shunt field, comprising a variable resistance connected in series with the shunt field, and a reverse current circuit breaker for connecting the generator to a battery to be charged, an electrical make and break switch connected in shunt with the variable resistance and operated directly by and substantially simultaneously with operation of the reverse current circuit breaker with the make and



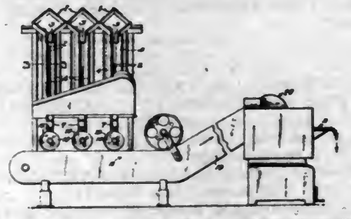
break switch closed when the reverse current circuit breaker is open, for cutting the variable resistance out of series with the shunt field when the reverse current circuit breaker opens the battery circuit, and for cutting the variable resistance back in series with the shunt field when the reverse current circuit breaker closes the battery circuit.

2,448,069
SAW-TOOTH GENERATOR WITH AUTOMATIC AMPLITUDE CONTROL
Millard E. Ames, Jr., Germantown, and David E. Sunstein, Elkins Park, Pa., assignors to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 30, 1944, Serial No. 551,948
22 Claims. (Cl. 250—36)



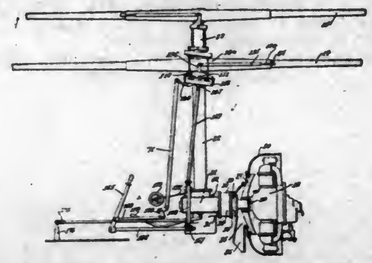
1. The combination comprising a source of unidirectional voltage, an energy storage device, a charging device interposed between said storage device and said source of voltage, a discharging device for said storage device, means for measuring the amplitude of the voltage across said storage device, and means responsive to the measured amplitude for varying the rate of energy flow through one of said charging and discharging devices.

2,448,070
SAW-TOOTH GENERATOR WITH AUTOMATIC AMPLITUDE CONTROL
David E. Sunstein, Elkins Park, Pa., assignor to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application August 30, 1944, Serial No. 551,949
12 Claims. (Cl. 250—36)



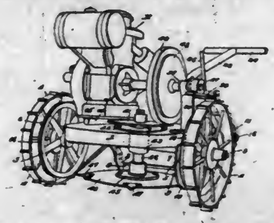
1. The combination comprising a source of unidirectional current, an energy storage device, a charging device for charging said storage device from said source, a discharging device for said storage device, and means responsive to the magnitude of the voltage of each charge of said storage device for controlling the rate of discharge of said discharging device.

2,448,071
ORIFICE EXCHANGER
Bert E. Anderson, Los Angeles, Calif.
Application August 12, 1944, Serial No. 549,226
4 Claims. (Cl. 138—44)



1. A device of the character described comprising: a casing having a channel therethrough; an orifice plate mounted crosswise of said channel; manually operable means for inserting the orifice plate in, and retracting it from said channel, and including a cylindrical transverse chamber through which said plate is movable; a valve extended through said chamber and adjustable into selected position for closing the chamber to the atmosphere and opening the chamber to permit the removal of the orifice plate, said valve having an arcuate elongated outer surface closely fitting against a selected zone of the inner surface of said chamber and a surface joining the longitudinal edges of said sealing surface and spaced away from the path of the orifice plate during the removal of the orifice plate, the edges of the arcuate sealing surface of the valve and of the surface adjoining said arcuate surface affording scraping edges; and means mounting said valve for rotation in said cylinder, whereby said scraping edges may be brought into engagement with the lateral surfaces of said orifice plate so that a movement of the plate relative to the valve will remove matter deposited thereon.

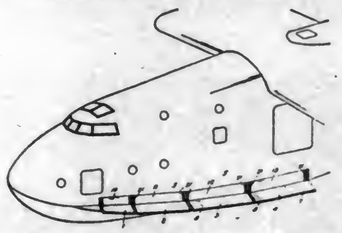
2,448,072
BELT LOADING MACHINE
Edgar Ardell, Middletown, Conn., assignor to Standard-Knapp Corporation, Portland, Conn., a corporation of New York
Application August 22, 1946, Serial No. 692,252
2 Claims. (Cl. 86—48)



1. In a machine for loading pockets in a fabric ammunition belt with cartridges, a shuttle assembly for opening the pockets of the belt, said assembly comprising, a slide adapted to cooperate with the advancing movement of the ammunition belt, a guide piece pivotally mounted to said slide, a nose piece depending from said guide piece, said nose piece adapted to be inserted within the pockets of the ammunition belt, and resilient means connecting said slide with said guide piece.

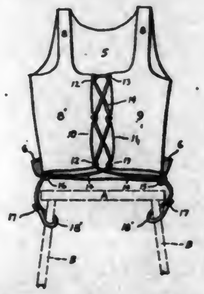
2,448,073
MECHANISM FOR CONTROLLING HELICOPTERS WITH COAXIAL ROTORS
Vincent Bendix, Flemington, N. J., assignor to Helicopters, Inc., a corporation of Delaware
Application June 27, 1944, Serial No. 542,285
16 Claims. (Cl. 244—17)

1. In a helicopter, the combination with counter-rotating, coaxial, multiple-wing rotors, means for varying the sectional shape of each rotor wing and cam followers connected to said means, of actuating mechanism for said followers to vary the shape of said wings cyclically comprising, an upper cam ring adjacent the upper rotor for engagement with the followers thereof, a lower cam ring adjacent the lower rotor for engagement with the followers thereof, means for rocking the lower cam ring about an axis in the plane of said lower cam ring, a member concentric with said lower ring, and pivotally and rotatably movable relatively thereto, and rotatable with said lower rotor, and means connecting said last mentioned member to said upper ring for rotation together in parallel planes.



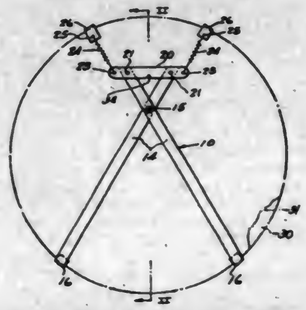
2,448,074
LAWN MOWER
Lewis Bishop, Arcadia, Fla.
Application May 8, 1944, Serial No. 534,630
1 Claim. (Cl. 56—25.4)

A lawn mower including a portable body structure, a disk mounted therebelow and supported thereby for rotation in a substantially horizontal plane, cutting elements extending from the periphery of the disk, a friction wheel connected to and rotatable with the disk, a motor mounted for lateral tilting on the structure, a shaft extending from one side of the motor, a



bearing engaging the extended portion of the motor shaft and cooperating therewith to permit lateral tilting of the motor, a wedge slidably mounted beneath and constituting a support for the bearing, means for actuating the wedge to lift the bearing and tilt the motor, a friction wheel carried by said shaft and shiftable by the wedge to disengage from the first named friction wheel, and yielding means for maintaining frictional engagement between the friction wheels when the bearing and shaft are released for downward movement by movement of the wedge in one direction.

2,448,075
RETRACTABLE SPONSON
William A. Bortner, Baltimore, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application September 14, 1945, Serial No. 616,255
4 Claims. (Cl. 244—102)

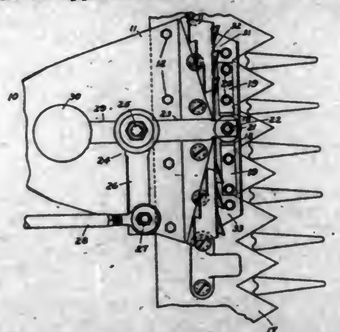


1. A seaplane hull having a recess extending along the chine forward and aft of the leading edge of the wing, a panel pivoted along the chine adapted to move to a position extending laterally of said hull so that the outer surface of said panel forms a continuation of the bottom thereof, a second panel pivoted to the outer end of said first panel, a bracket secured to the upper end of said second panel, track means in said recess and guide means on said bracket moving in said track means, hydraulic means secured to said bracket to retract said hinged panels into said cavity and to extend said first mentioned panel into its operative position forming an extension of the hull bottom.

2,448,076
BIB AND SAFETY JACKET
Rose I. Bradley, Seattle, Wash.
Application November 27, 1946, Serial No. 712,600
1 Claim. (Cl. 2—52)

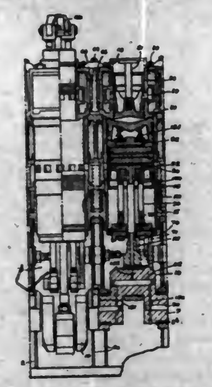
A combined bib and safety jacket for a baby, comprising, a vest closed across the front for a bib to protect the clothing of the baby while eating, the rear side of the vest being provided with a pair of oppositely disposed panels having substantially vertical edges normally spaced apart to provide for adjustments around the baby, a plurality of eyelets spaced apart along the vertical edges for lacings, lacings through the oppositely disposed eyelets and having reaches extended to and fro oppositely to each other for normally sustaining the vest loosely about the body of the baby and for automatically binding the vest tightly about the body of the baby when attempting to rise, the lower ends of the lacings carried down from the outer lower corners of the jacket and having sockets and buttons near the extremities thereof operable with one hand for forming a pair of loops for connection with opposite legs of a chair below the seat thereof to prevent the baby from rising and falling from the seat.

2,448,077
MIRROR HANGER
Tony P. Brooks and Ben K. Wyatt, Little Rock, Ark., assignors to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
Application May 9, 1946, Serial No. 668,382
2 Claims. (Cl. 248—29)



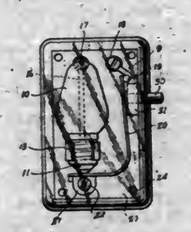
1. A mirror hanger comprising upright intersecting strap elements connected together at their intersecting area and defining an upper suspending frame area, means connected to the suspending frame area to suspend the mirror hanger, the lower end portions of the strap elements extending from one side of said intersecting area having hooks formed thereon for engaging the lower edge portions of a mirror, the end portions of the strap elements at the other side of the intersecting area having resilient tension members mounted thereon, and hooks on the outer end portions of the resilient members for engaging upper edge portions of the mirror, said strap elements including the frame area and said means being substantially inextensible from said means to the hooks at the lower end portions of said strap elements.

2,448,078
RECIPROCATING TEDDER ATTACHMENT FOR POWER MOWER SICKLE BARS
Percy F. Brown, Greece, N. Y., assignor to James Cunningham, Son & Company, Rochester, N. Y., a partnership
Application November 13, 1946, Serial No. 709,485
8 Claims. (Cl. 56—314)



1. A tedder for a mowing machine having a main frame with a forwardly extending portion supporting a reciprocating sickle and means for

reciprocating said sickle, said tedder comprising a plate provided with means for supporting the same for reciprocation in an upwardly extending position forwardly of said frame portion, said plate being substantially coextensive with the front of said frame portion and having its upper portions on opposite sides of the center thereof



inclined downwardly and laterally toward the opposite sides thereof and provided on each side of the center thereof with a plurality of shoulders adapted to successively part and move the material to be cut to the opposite sides of said frame portion to clear said frame portion and means for connecting said sickle reciprocating means with said plate for reciprocating said plate.

2,448,079
CONNECTING ROD ASSEMBLY FOR INTERNAL-COMBUSTION ENGINES
Thomas G. Carrie, Montreal, Quebec, Canada
Application January 20, 1945, Serial No. 573,650
In Canada October 14, 1944
1 Claim. (Cl. 123—176)

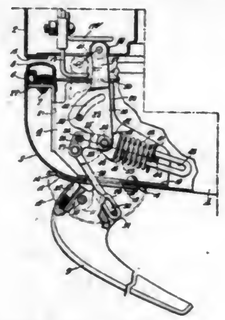
A connecting rod assembly for internal combustion engines, comprising, a connecting rod having a portion adapted to encircle the wrist pin of a piston, said portion having an arbor projecting from each side thereof, a pair of drag links each having an eye adapted to engage one of said arbors, the end of each drag link remote from the arbor being adapted to be connected with a rocker arm, each drag link having a sprayer on the end thereof adjacent the arbor, connecting oil passages in each drag link leading from the point of connection with the rocker arm to the sprayer, said connecting rod having an eye remote from said portion and adapted to engage a crank, said connecting rod having a channel leading to said eye, an opening in said eye communicating with said passage in the connecting rod whereby oil may be transmitted from the crank case to the wrist pin.

2,448,080
AUTOMATIC LIGHT FOR CABINETS
Everett R. Cobbs, Beloit, Ohio
Application March 18, 1947, Serial No. 735,342
1 Claim. (Cl. 240—4)

An illuminating device for cabinets and the like, comprising a relatively thin flat insulating base, a conducting spring clip fixedly mounted upon the base, a light bulb secured within the spring clip and having one terminal in electrical contact therewith, a single substantially L-shaped resilient contact arm secured to the base and including a transverse portion arranged in permanent electrical contact with the opposite terminal of the light bulb and a free portion extending longitudinally of the light bulb for substantially its entire length, said free portion being biased laterally outwardly from the light bulb, a pair of fixed terminals mounted upon the base and adapted for connection with a source of current, a wire connecting one of said fixed terminals with said spring clip, the opposite fixed terminal being normally engaged by the free portion of the L-shaped contact arm to complete a circuit through the light bulb, and a reciprocable plunger mounted upon the base near the end of the free portion and projecting laterally beyond a side of the base, the inner end of the plunger engaging the free portion and directly shifting the same toward the light bulb to open the circuit when the plunger is moved axially inwardly.

2,448,081
AUTOMATIC AMMUNITION FEED FOR FIREARMS
Woodville B. Conway, Escondido, Calif.
Application July 20, 1944, Serial No. 545,755
7 Claims. (Cl. 42—17)

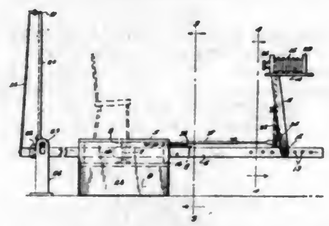
1. In a firearm, the combination of a receiver, a barrel attached thereto, coaxial receiving and firing chambers in said receiver and said barrel, respectively, a reciprocating bolt in said receiver, an elongated cartridge magazine parallel to the



barrel and attached to said receiver, means to deliver cartridges singly from said magazine to a position beneath the receiving chamber transverse to said barrel, an elevator lever pivoted rearwardly of and to said receiving chamber having a cartridge-engaging part moveable vertically behind the mouth of said receiving chamber from a low position under a delivered cartridge at the magazine to engage and elevate such cartridge to position with the engaged cartridge extended crosswise of the receiving chamber, said bolt being moveable from a cocked position to the rear of such cartridge through the receiving chamber to a battery position, said lever having a cam thereon rearwardly of its pivot, spring means between said receiver and said lever urging said lever cam into the path of and rearward of the bolt when the latter is at battery position, and means cooperative with the bolt to orient the elevated cartridge bullet end forwardly for loading engagement of the round in said firing chamber by said bolt on movement of the same to battery position.

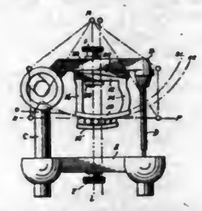
2,448,082
RECOVERY OF WATER-SOLUBLE CELLULOSE ESTERS
Robert M. Creamer, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application May 3, 1945, Serial No. 591,835
13 Claims. (Cl. 260—230)

1. In a process for the recovery of water-soluble organic acid esters of cellulose from the aqueous aliphatic acid solution in which said esters are ripened to water-solubility and in which there is present an inorganic acid ripening catalyst employed in the ripening step, the steps which comprise neutralizing the inorganic acid ripening catalyst present in the aqueous aliphatic acid solution, and subjecting the resulting aliphatic acid solution of the organic acid ester of cellulose to extraction with a substantially water-insoluble organic extractant for the aliphatic acid selected from the group consisting of ethyl acetate, butyl acetate, petroleum ether and mixtures thereof, isopropyl ether and mixtures of ethyl acetate and benzene whereby said aliphatic acid is substantially completely extracted therefrom.



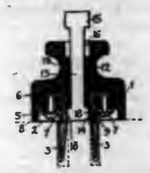
2,448,083
LATCHING DEVICE
George E. Curtiss, Jr., Penn Wynne, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application February 26, 1944, Serial No. 524,096
6 Claims. (Cl. 292—332)

1. In a latch mechanism for latching a door with a fixed structure, a latching bolt mounted on the door and bodily movable on the door in a direction generally normal to the plane of the bolt-retaining surface of a keeper on said structure and between a retracted latching position in engagement with said bolt-retaining surface and an unlatched position projected toward said structure with respect to said latched position, a spring for retracting said bolt, means for guiding one end of said bolt into a position behind and in engagement with the bolt-retaining surface of said keeper upon initiation of the said bodily movement from the unlatched to the latched position whereby completion of said movement may effect a forcible drawing of the door into the closed position, said guide means including a lever pivotally connected to the other end of said bolt and having a dead center relation with the spring when said bolt is in unlatched position and with said bolt when said bolt is in latched



position so as to releasably lock said bolt in the respective positions, and a handle attached to said lever for moving said bolt against the action of said spring into the said unlatched position.

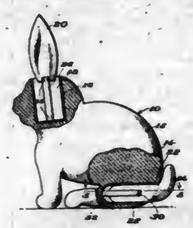
2,448,084
SCANNING CAMERA
Valter V. Davis, Tuscaloosa, Ala.
Application April 2, 1945, Serial No. 586,137
3 Claims. (Cl. 95—15)



1. A photographing apparatus comprising a fixed support, a horizontal beam pivotally mounted upon said support for horizontal swinging movement about a vertical axis, a camera support carried by and projecting upwardly from said beam and mounted on the latter at a point removed from said axis, a fixed support for the subject to be photographed located coincident with said axis, a single lens camera mounted on top of said camera support and arranged to focus upon a subject located substantially at said axis, an image distributor mounted in the camera for swinging movement about a vertical axis and constructed to restrict passage of the image of a portion of the subject onto a restricted portion of the surface of a sensitized element placed in the camera, and connecting means operatively connecting said fixed support to the image distributor for automatically swinging the latter about its axis when the beam is swung horizontally, so that the images of successive portions of the subject are received upon successive different portions of the sensitized element as the angle of exposure changes, whereby to secure a composite having depth appearance upon continued exposure during swinging movement of the beam.

2,448,085
DENTAL TEMPLATE
Ross O. Dickson, Mexico City, Mexico
Application May 27, 1946, Serial No. 672,520
4 Claims. (Cl. 32—32)

1. In the art of artificial denture construction, a template for use with dental articulators equipped with model attaching lock-screws in the base and jaw parts thereof, a mounting for said template and including an elongated base portion having a slot, a clamp means engageable with said mounting and one or the other of said lock-screws to secure the template in an adjusted position, and a guide element carried by said clamp means and engageable in said slot to maintain the alignment of said template and the mounting with respect to the supporting part of the articulator.

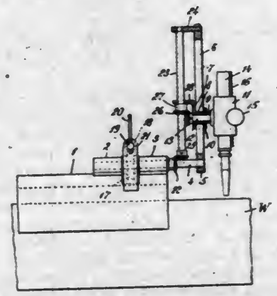


2,448,086
ELECTRIC PLUG
Charles H. Dolan, II, Old Greenwich, Conn.
Application December 28, 1944, Serial No. 570,049
3 Claims. (Cl. 173—361)

3. An electric plug comprising a body made of an insulating material and having an axially extending central opening; prongs extending from the body for engagement with sockets in a receptacle, the body having an opening extending axially in a direction substantially parallel to the prongs; and a plunger slidably supported in the opening and arranged to be moved inwards for removing the plug from the receptacle, the prongs being formed of resilient metal strips doubly bent upon themselves thereby forming rounded ends for insertion into the sockets of the receptacle, one outer end of each strip being secured inside the body, the inner end being bent at right angles and slidably supported inside the body, the plunger having an enlargement at the inner end for engaging the inner portion of the strips and for pressing the strips against the sides of the sockets when the prongs are fully inserted therein.

2,448,087
BUNNY-CAT
Anna Pearl Driggs, Colfax, Calif.
Application November 9, 1945, Serial No. 627,608
5 Claims. (Cl. 46—151)

2. A figure toy comprising a body, a head forming an integral part of the body and provided with a recess opening through the upper side of the head, and an ear mounted in the recess for sliding movement inwardly or outwardly with



relation to the head whereby to extend a large or small portion of the ear beyond the head.

2,448,088
BUNNY-CAT
Anna P. Driggs, Colfax, Calif.
Application July 31, 1946, Serial No. 687,245
4 Claims. (Cl. 46—151)

1. A figure toy, comprising a stuffed body, a tube having a socket on the end thereof mounted within said body, ears movable within said socket, a tail movable within said tube, and means connecting the ears and the tail.

2,448,089
TORCH CUTTING MACHINE
Samuel Duvall, Highland Park, Mich., assignor to Air Reduction Company, Incorporated, a corporation of of New York
Application December 27, 1943, Serial No. 515,747
13 Claims. (Cl. 266—23)

1. A torch cutting machine for cutting round metal stock such as billets, bars and the like, comprising a base, a torch-supporting arm mounted on said base for pivotal angular movement about an axis extending lengthwise of the work-piece, means for moving the arm angularly about said axis, a torch holder pivotally connected to said arm so that it can swivel with re-

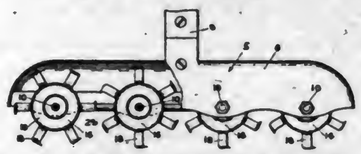
spect to the arm about an axis parallel to said first-mentioned axis, a torch mounted in said torch holder, and means connecting the torch holder and the base and actuated by pivotal angular movement of the arm about said first-mentioned axis to positively turn the torch holder relative to said arm about the axis of its pivotal connection to the arm at such a rate and in such direction as to maintain the torch in a perpendicular direction during said angular movement of the arm.

2,448,090

ANTISEIZE AND SEALING COMPOSITION

Robert C. Fuhrman, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Application May 3, 1944, Serial No. 533,934
3 Claims. (Cl. 106—177)



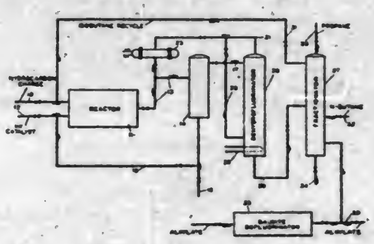
1. An anti-seize and sealing composition for a separable connection part of a high pressure oxygen respiratory line consisting essentially of 136 parts by weight of a cellulose ether selected from the group consisting of ethyl, butyl and benzyl cellulose ethers, substantially 34 parts of tricresyl phosphate as a plasticizer of said cellulose ether, 375 to 425 parts of a water-insoluble soap selected from the group consisting of zinc, aluminum, calcium and lead stearates individually and in mixtures with one another, and 60 to 75 parts of powdery particles of inert material, in a volatile organic solvent for the cellulose ether and soap; and characterized by giving a deposited film which under an oxygen gas pressure of 450 pounds per square inch and at high oxygen gas velocity is essentially stable, non-corrosive, odorless, non-inflammable, non-toxic and non-reactive with oxygen.

2,448,091

LAWN MOWER

Fred W. Gardner, Winter Park, Fla.

Application March 8, 1946, Serial No. 653,089
5 Claims. (Cl. 56—295)



1. A lawn mower comprising a guard having spaced-apart upper and lower walls with spaced-apart, apertured tongues projecting forwardly from the forward edge of the lower wall and apertures in the upper wall in alignment respectively with the apertures in said tongues, a plurality of shafts each extending through two aligned apertures in and secured to said guard against rotation, lower cutter discs having radially-projecting blades journaled one on each shaft immediately above the corresponding guard tongue, a respective lower gear secured to each lower cutter disc and disposed between the latter and the corresponding guard tongue, an upper gear secured to the upper surface of each lower cutter disc, a respective upper cutter disc journaled on each shaft and having radially-projecting blades cooperating with the blades on the corresponding lower cutter disc, an internal ring gear in each upper cutter disc concentric with the upper gear on the corresponding lower cutter disc, an arm secured to each shaft and projecting outwardly therefrom between the corresponding lower and upper cutting discs, an idler gear on the outer end of each arm meshing with the corresponding upper gear and ring gear to drive the associated upper cutter disc from the lower cutter disc in the reverse direction and at a different speed, axle bearings secured to and depending from the lower wall of said guard, an axle journaled in said bearings, and toothed ground-engaging wheels secured on said axle and meshing respectively with said lower gears to drive said cutter discs as said lawn mower is propelled over the ground.

2,448,092

DEHYDROFLUORINATION PROCESS

James D. Gibson, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

Application September 5, 1944, Serial No. 552,764
11 Claims. (Cl. 260—683.4)

2. In a process for producing paraffin hydrocarbons in the motor fuel boiling range by alkylation of a lower boiling paraffin hydrocarbon in the presence of a hydrofluoric acid alkylation catalyst, the improvement which comprises passing effluents of such an alkylation to a settling zone, removing from said zone a liquid paraffin hydrocarbon material containing dissolved hydrogen fluoride and a relatively small amount of organic fluorine compounds as impurities, passing said material to a fractional distillation zone containing a solid dehydrofluorinating material, maintaining contents of said zone at a dehydrofluorination temperature not greater than about 300° F., removing as a low-boiling fraction from said zone a gaseous mixture comprising free hydrogen fluoride and a low-boiling paraffin hydrocarbon, cooling and condensing a major portion of said mixture and returning same to said settling zone, passing a minor portion of said gaseous mixture to said fractional distillation zone at a point below that at which the aforesaid liquid paraffin hydrocarbon material is introduced, and removing as a high-boiling fraction from said zone a liquid paraffinic hydrocarbon material substantially free from hydrogen fluoride and organic fluorine compounds.

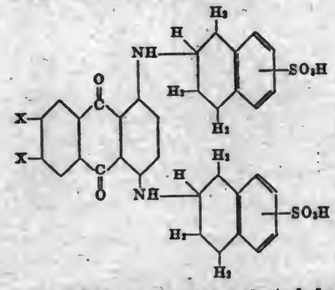
2,448,093

PENETRATING OIL COMPOSITIONS

Lewis D. Gittings, Anniston, Ala., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application October 24, 1945, Serial No. 624,316
6 Claims. (Cl. 252—59)

1. A penetrating oil comprising in combination a hydrocarbon oil and from 5% to about 60% by volume of dicyclohexyl.



2,448,094

DYESTUFFS OF THE ANTHRAQUINONE SERIES

Ernst Gutzwiller, Basel, Switzerland, assignor to Sandoz Ltd., Fribourg, Switzerland, a Swiss firm

No Drawing. Application March 9, 1945, Serial No. 581,957. In Switzerland September 30, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 30, 1963
4 Claims. (Cl. 260—371)

1. An anthraquinone dyestuff of the formula

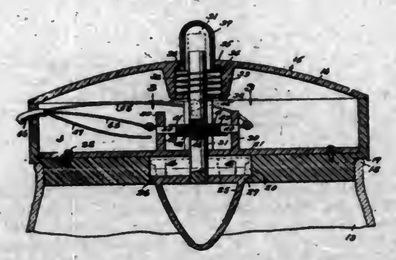
wherein one X is a member selected from the group consisting of chlorine and bromine, and the other X is a member selected from the group consisting of hydrogen, chlorine and bromine.

2,448,095

SIGNAL TYPE TORQUE INDICATING WRENCH

Ernest George Hallett, West Footscray, and Andrew Canfield Brown, Footscray, Victoria, Australia

Application January 4, 1945, Serial No. 571,296
In Australia January 19, 1944
10 Claims. (Cl. 81—52.5)



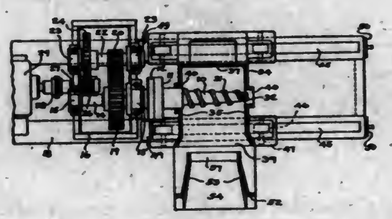
1. Torque applying means comprising a resilient operating lever, a handgrip at one end of said lever, a torque transmitting head secured to the opposite end of said lever, clamping means on said head operable to secure a part engaging member thereto at a plurality of predetermined alternative positions, such that the distance between the operative end of said part engaging member and said handgrip may be regulated, a rigid abutment member on said torque transmitting head, signal means including coacting elements carried respectively by said abutment member and said operating lever, one of said elements being adjustable whereby said signal means will be actuated when a predetermined torque is applied, means carrying a plurality of alternative torque scales corresponding respectively to said predetermined alternative positions of the operative end of the part engaging member, and means coacting with said alternative scales and associated with said adjustable element of said signal means.

2,448,096

LIQUID FLOAT CIRCUIT BREAKER

George P. Hardin, Atlanta, Ga., assignor of one-third to Carlton Blanchard Hardin and one-third to Carl Edward Hardin, both of Atlanta, Ga.

Application April 3, 1947, Serial No. 739,117
6 Claims. (Cl. 200—84)



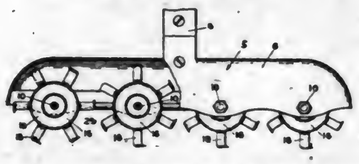
1. In a float switch for coffee percolators, a hollow cap member including a recessed base plate adapted to fit over the top of the percolator, a float vertically movable in the recess, a post of insulating material carried by the upper portion of the float, a band of conductive material surrounding said post, and a pair of oppositely disposed contacts adapted to be connected to the percolator heating element and adapted to be bridged by said conductive band when said float is in its lowermost position, said float being elevated by the rising fluid in the percolator, whereby the band conductive material is elevated disengaging the oppositely disposed contacts breaking the circuit to the heating element.

2,448,097

COBBLE BUNDLER

Charles W. Hawthorne, Conneautville, Pa., assignor to Morgan Construction Company, Worcester, Mass., a corporation of Massachusetts

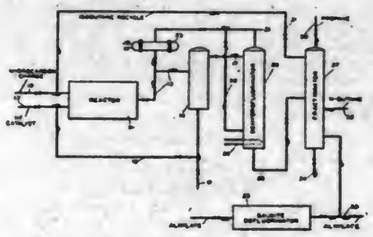
Application June 6, 1945, Serial No. 597,809
6 Claims. (Cl. 242—81)



1. A cobble bundler comprising a rotatable arbor, a casing enclosing the arbor and having side walls which are spaced apart in an axial direction, means to rotate the arbor to form a bundle of metal rod or the like thereon within the casing, the casing and arbor being relatively movable in an axial direction so that the completed bundle may be stripped from the arbor, and guide means for the rod as it enters the casing, the guide means providing a guide opening having a width appreciably less than the distance between the side walls of the casing to prevent the bundle from binding in the casing.

spect to the arm about an axis parallel to said first-mentioned axis, a torch mounted in said torch holder, and means connecting the torch holder and the base and actuated by pivotal angular movement of the arm about said first-mentioned axis to positively turn the torch holder relative to said arm about the axis of its pivotal connection to the arm at such a rate and in such direction as to maintain the torch in a perpendicular direction during said angular movement of the arm.

2,448,090
ANTISEIZE AND SEALING COMPOSITION
Robert C. Fuhrman, Cleveland, Ohio, assignor to The Parker Appliance Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application May 3, 1944, Serial No. 533,934
3 Claims. (Cl. 106—177)

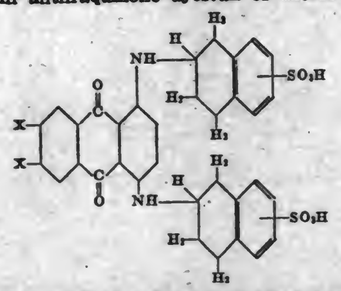


1. An anti-seize and sealing composition for a separable connection part of a high pressure oxygen respiratory line consisting essentially of 136 parts by weight of a cellulose ether selected from the group consisting of ethyl, butyl and benzyl cellulose ethers, substantially 34 parts of tricresyl phosphate as a plasticizer of said cellulose ether, 375 to 425 parts of a water-insoluble soap selected from the group consisting of zinc, aluminum, calcium and lead stearates individually and in mixtures with one another, and 60 to 75 parts of powdery particles of inert material, in a volatile organic solvent for the cellulose ether and soap; and characterized by giving a deposited film which under an oxygen gas pressure of 450 pounds per square inch and at high oxygen gas velocity is essentially stable, non-corrosive, odorless, non-inflammable, non-toxic and non-reactive with oxygen.

2,448,091
LAWN MOWER
Fred W. Gardner, Winter Park, Fla.
Application March 8, 1946, Serial No. 653,089
5 Claims. (Cl. 56—295)

1. A lawn mower comprising a guard having spaced-apart upper and lower walls with spaced-apart, apertured tongues projecting forwardly from the forward edge of the lower wall and apertures in the upper wall in alignment respectively with the apertures in said tongues, a plurality of shafts each extending through two aligned apertures in and secured to said guard against rotation, lower cutter discs having radially-projecting blades journaled one on each shaft immediately above the corresponding guard tongue, a respective lower gear secured to each lower cutter disc and disposed between the latter and the corresponding guard tongue, an upper gear secured to the upper surface of each lower cutter disc, a respective upper cutter disc journaled on each shaft and having radially-projecting blades cooperating with the blades on the corresponding lower cutter disc, an internal ring gear in each upper cutter disc concentric with the upper gear on the corresponding lower cutter disc, an arm secured to each shaft and projecting outwardly therefrom between the corresponding lower and upper cutting discs, an idler gear on the outer end of each arm meshing with the corresponding upper gear and ring gear to drive the associated upper cutter disc from the lower cutter disc in the reverse direction and at a different speed, axle bearings secured to and depending from the lower wall of said guard, an axle journaled in said bearings, and toothed ground-engaging wheels secured on said axle and meshing respectively with said lower gears to drive said cutter discs as said lawn mower is propelled over the ground.

2,448,092
DEHYDROFLUORINATION PROCESS
James D. Gibson, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application September 5, 1944, Serial No. 552,764
11 Claims. (Cl. 260—683.4)



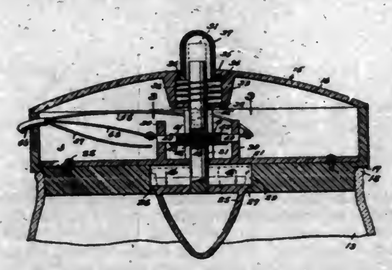
2. In a process for producing paraffin hydrocarbons in the motor fuel boiling range by alkylation of a lower boiling paraffin hydrocarbon in the presence of a hydrofluoric acid alkylation catalyst, the improvement which comprises passing effluents of such an alkylation to a settling zone, removing from said zone a liquid paraffin hydrocarbon material containing dissolved hydrogen fluoride and a relatively small amount of organic fluorine compounds as impurities, passing said material to a fractional distillation zone containing a solid dehydrofluorinating material, maintaining contents of said zone at a dehydrofluorination temperature not greater than about 300° F., removing as a low-boiling fraction from said zone a gaseous mixture comprising free hydrogen fluoride and a low-boiling paraffin hydrocarbon, cooling and condensing a major portion of said mixture and returning same to said settling zone, passing a minor portion of said gaseous mixture to said fractional distillation zone at a point below that at which the aforesaid liquid paraffin hydrocarbon material is introduced, and removing as a high-boiling fraction from said zone a liquid paraffinic hydrocarbon material substantially free from hydrogen fluoride and organic fluorine compounds.

2,448,093
PENETRATING OIL COMPOSITIONS
Lewis D. Gittings, Anniston, Ala., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application October 24, 1945, Serial No. 624,316
6 Claims. (Cl. 252—59)

1. A penetrating oil comprising in combination a hydrocarbon oil and from 5% to about 60% by volume of dicyclohexyl.

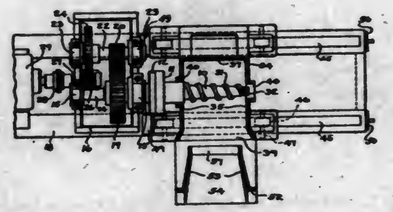
2,448,094
DYESTUFFS OF THE ANTHRAQUINONE SERIES
Ernst Gutzwiller, Basel, Switzerland, assignor to Sandoz Ltd., Fribourg, Switzerland, a Swiss firm
No Drawing. Application March 9, 1945, Serial No. 581,957. In Switzerland September 30, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires September 30, 1963
4 Claims. (Cl. 260—371)

1. An anthraquinone dyestuff of the formula



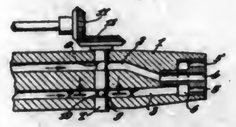
wherein one X is a member selected from the group consisting of chlorine and bromine, and the other X is a member selected from the group consisting of hydrogen, chlorine and bromine.

2,448,095
SIGNAL TYPE TORQUE INDICATING WRENCH
Ernest George Hallett, West Footscray, and Andrew Canfield Brown, Footscray, Victoria, Australia
Application January 4, 1945, Serial No. 571,296
In Australia January 19, 1944
10 Claims. (Cl. 81—52.5)



1. Torque applying means comprising a resilient operating lever, a handgrip at one end of said lever, a torque transmitting head secured to the opposite end of said lever, clamping means on said head operable to secure a part engaging member thereto at a plurality of predetermined alternative positions, such that the distance between the operative end of said part engaging member and said handgrip may be regulated, a rigid abutment member on said torque transmitting head, signal means including coacting elements carried respectively by said abutment member and said operating lever, one of said elements being adjustable whereby said signal means will be actuated when a predetermined torque is applied, means carrying a plurality of alternative torque scales corresponding respectively to said predetermined alternative positions of the operative end of the part engaging member, and means coacting with said alternative scales and associated with said adjustable element of said signal means.

2,448,096
LIQUID FLOAT CIRCUIT BREAKER
George P. Hardin, Atlanta, Ga., assignor of one-third to Carlton Blanchard Hardin and one-third to Carl Edward Hardin, both of Atlanta, Ga.
Application April 3, 1947, Serial No. 739,117
6 Claims. (Cl. 200—84)

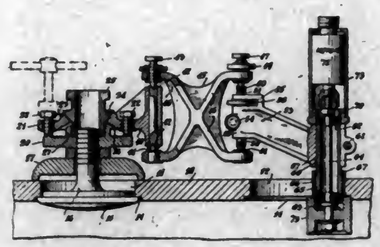


1. In a float switch for coffee percolators, a hollow cap member including a recessed base plate adapted to fit over the top of the percolator, a float vertically movable in the recess, a post of insulating material carried by the upper portion of the float, a band of conductive material surrounding said post, and a pair of oppositely disposed contacts adapted to be connected to the percolator heating element and adapted to be bridged by said conductive band when said float is in its lowermost position, said float being elevated by the rising fluid in the percolator, whereby the band conductive material is elevated disengaging the oppositely disposed contacts breaking the circuit to the heating element.

2,448,097
COBBLE BUNDLER
Charles W. Hawthorne, Conneautville, Pa., assignor to Morgan Construction Company, Worcester, Mass., a corporation of Massachusetts
Application June 6, 1945, Serial No. 597,809
6 Claims. (Cl. 242—81)

1. A cobble bundler comprising a rotatable arbor, a casing enclosing the arbor and having side walls which are spaced apart in an axial direction, means to rotate the arbor to form a bundle of metal rod or the like thereon within the casing, the casing and arbor being relatively movable in an axial direction so that the completed bundle may be stripped from the arbor, and guide means for the rod as it enters the casing, the guide means providing a guide opening having a width appreciably less than the distance between the side walls of the casing to prevent the bundle from binding in the casing.

2,448,098
METHOD OF THERMOCHEMICALLY CUTTING METAL
Howard G. Hughey, Fanwood, N. J., assignor to Air Reduction Company, Incorporated, a corporation of New York
Application December 7, 1944, Serial No. 567,060
6 Claims. (Cl. 148—9)

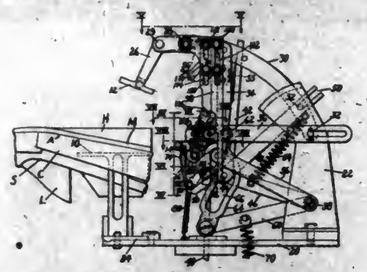


1. The method of thermo-chemically cutting through metal work-pieces of heavy section which comprises initially heating the metal at the place where the cut is to begin to a temperature at which the metal will burn when cutting oxygen is projected thereagainst, projecting cutting oxygen onto the pre-heated work-piece at such place to burn a portion of the metal thereof to form a kerf extending through the work-piece, thereafter alternately and with rhythmic frequency projecting a heating flame and a jet of cutting oxygen into the kerf to continue the cutting operation, said heating flame reaching substantially to the bottom of the kerf, the periodicity of such alternation being such that the metal adjoining the kerf at that place where the cut is to continue never cools to a point below that at which the thermo-chemical reaction will take place.

2,448,099
TOOTHPICK SHAKER
Stephen Kassovic, La Salle, Ill.
Application December 17, 1945, Serial No. 635,571
1 Claim. (Cl. 312—73)

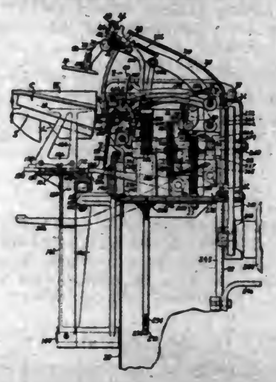
In a toothpick shaker, a tubular casing having one end perpendicular to the axis thereof and the other inclined providing a long and a short side of the casing with an opening in the inclined end adjacent the wall of the long side, the inner surface of said inclined end formed with thickened portions relatively spaced forming a narrow channel for receiving one toothpick at a time and leading to the opening and said thickened portions providing platforms at each side of the channel for retaining the bulk of the toothpicks out of the channel, the said inclined end having a smooth inner surface continuing through the channel to the opening, and the said platforms having arcuate shoulders leading from said smooth surface to the said channel.

2,448,100
GRINDING TOOL FOR REFACING THE SEALING SURFACES OF HEADER ACCESS HOLES
John R. Kruse, Maplewood, N. J., assignor to Combustion Engineering Company, Inc., New York, N. Y.
Application October 18, 1944, Serial No. 559,138
5 Claims. (Cl. 51—241)



1. In a grinding tool for refacing the sealing surface of access holes and the like in drums and the like, the combination of a tool anchor member, means cooperating with an access hole for securing said member to said drum in fixed relation to the hole sealing surface to be refaced, a tool leveling plate, means including a swivel connection for attaching said plate to said anchor member in a manner permitting the plate to be tilted, cooperating leveling means for said plate for adjusting the plane thereof into substantial parallelism with the plane of said hole surface to be refaced, a tool link hinge-connected to said leveling plate at one end and free to swing in a plane substantially parallel to the plane of that plate, a tool arm hinged at one end to the free end of said link and swingable in a plane also substantially parallel to the leveling plate plane whereby the free arm end may be traced fully around the access hole to be refaced, a grinding wheel carried by said arm's free end for rotation about an axis normal to the said arm-link swinging plane and mounted to permit wheel-edge contact with the access hole's sealing surface, tool driving means for rotating said grinding wheel, and means intermediate said wheel and said leveling plate for adjusting the wheel's position along its said rotation axis whereby to bring the wheel edge into desired engagement with the hole sealing surface to be refaced so that by tracing same around that sealing surface while manipulating said plate leveling means the plane of said trace movement may be accurately coincided with the sealing surface plane.

2,448,101
MACHINE FOR TURNING THE PLATFORM COVERS OF PLATFORM SHOES
Robert H. Lawson, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application March 22, 1946, Serial No. 656,457
16 Claims. (Cl. 12—1)



1. A platform cover turning machine comprising a turning tool adapted to engage within an unturned platform cover of a shoe, a member engageable with the bottom of the shoe, means for effecting relative movement in a direction

heightwise of the shoe between the turning tool and the bottom engaging member to turn the

cover over the turning tool, and means acting upon the cover to assist in turning the cover.

2,448,102
PLATFORM COVER TURNING MACHINE
Robert H. Lawson, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application December 31, 1946, Serial No. 719,587
17 Claims. (Cl. 12—1)

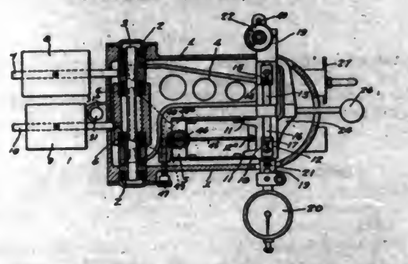
1. A platform cover turning machine comprising a pair of cooperating members constructed and arranged to turn the platform cover of a shoe upon the operative movement of one member relative to the other member while said other member is stationary, a support constructed and arranged for movement of said stationary member into and out of operating position with respect to the operatively movable member, means for causing the operatively movable member to perform its operative movement, and a safety device normally preventing such operative movement, said safety device being constructed and arranged to permit such operative movement when the stationary member is in its operating position.

2,448,103
ERASER TIPPED PENCIL
John F. Linden, Toronto, Ontario, Canada
Application August 20, 1945, Serial No. 611,578
9 Claims. (Cl. 120—38)

1. An eraser attachment for pencils comprising a block of erasive material, and a ferrule adapted to be secured on one end of a pencil, the outer end of the ferrule adapted to project beyond the end of the pencil being implanted in said block in a manner to provide a central tenon of erasive material tightly frictionally fitted in said outer end of the ferrule and to provide an encompassing band-like thickness of erasive

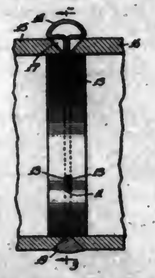
material extending completely around said outer end and tightly frictionally fitted thereon, said block being of greater width than the diameter of said ferrule.

2,448,104
DIFFERENTIAL CONCRETE PUMP
Charles I. Longenecker, Wauwatosa, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application December 6, 1945, Serial No. 633,091
10 Claims. (Cl. 103—168)



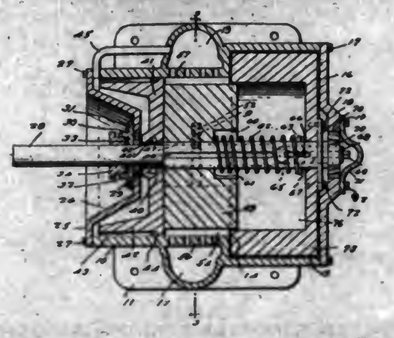
1. A pump for concrete and the like comprising a working chamber having an inlet portion and an outlet portion, a pair of cylinders communicating with said respective portions, reciprocating pistons operating in timed relation in said cylinders to create pressure alternately in said chamber portions, the piston creating pressure in the inlet portion having greater displacement than the piston creating pressure in the outlet portion, and a single valve disposed within the inlet portion movable to check alternately backflow during the pressure strokes of the respective pistons, said valve during the suction stroke of the larger piston providing communication between the inlet of the pump and the cylinder containing the larger piston and during the suction stroke of the smaller piston providing communication between the two cylinders.

2,448,105
CIGARETTE HOLDER
Ralph D. Lynch, Los Angeles, Calif.
Application May 19, 1947, Serial No. 749,060
5 Claims. (Cl. 131—257)



1. A cigarette holder comprising a hollow base formed with a top wall and an internal flange at its bottom, said top wall having a diametrical slot with lugs extending inwardly from opposite margins of said slot, a pair of holding jaws formed with heel projections underlying the top wall and adjacent portions extending through said slot and hinged on said lugs, a disc movable in the base and engaging said heel projections, and a spring compressed between said disc and said flange for normally holding the jaws contracted to holding position.

2,448,106
THREAD CHECKING APPARATUS
Ivan Waldemar Mannerbrink and Nils Johan Ludvig Sandström, Göteborg, Sweden, assignors to SKF Industries, Inc., Philadelphia, Pa., a corporation of Delaware
Application August 9, 1944, Serial No. 548,716
In Sweden August 12, 1943
9 Claims. (Cl. 33—199)



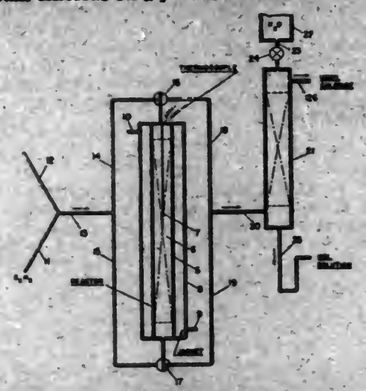
5. Thread diameter checking apparatus comprising a frame having a work-receiving table for supporting a workpiece, a pair of arms, means for pivotally mounting said arms in the frame for free and independent oscillation about a common axis in parallel planes substantially normal to the plane of the work-receiving table, a pair of oppositely directed thread contact points carried one on each of said arms and directed transversely thereto, and resilient guiding and connecting means between one of said points and its associated arm for permitting guided movement of said point in the said transverse direction and with respect to said arm.

2,448,107
METHOD AND APPARATUS FOR MAKING WELDED PIPE JOINTS
John D. Mattimore and Fred C. Smith, Louisville, Ky., assignors to Tube Turns, Inc., a corporation of Kentucky
Application February 22, 1945, Serial No. 579,296
12 Claims. (Cl. 285—111)

1. The method of butt welding the ends of tubular members with a welding ring therein, which consists in assembling said members in alignment with the ends of the members telescoped over a welding ring provided with a plurality of separate spacers against which the ends of said tubular members abut, all of said spacers being frictionally retained in said rings and readily and completely removable intact for reuse, welding said ends together by depositing welding metal in the space between said ends and removing each spacer prior to said welding at the location of said spacer, whereby said spacers are not melted or incorporated in the welded joint.

2,448,108
VARIABLE CAPACITY ROTARY PUMP
Jonathan H. McCaleb, Amite, La.
Application June 4, 1946, Serial No. 674,240
6 Claims. (Cl. 103—120)

1. In a rotary pump, a casing providing a chamber, an inlet and an outlet connection on said casing and in communication with said chamber, a drive shaft extending through said chamber and rotatably supported in said casing, a rotor having sliding blades in the periphery thereof mounted on said shaft for longitudinally sliding movement, a drum having a circumferential recess fixedly mounted on said shaft, the drum being so positioned that its recess receives said rotor, means resiliently urging said rotor out of the recess in the drum, and pressure means operatively connected to said rotor urging the rotor into the recess against the resilient means.



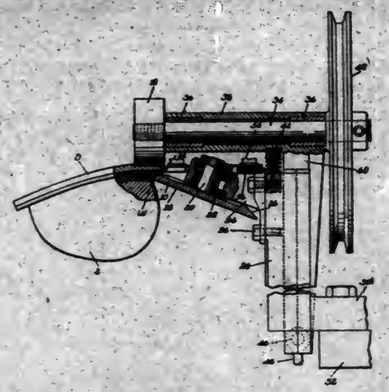
2,448,109
FURRING STRIPS AND CHANNELS AND CONNECTING STRUCTURE
Jack Michael, Cleveland, Ohio
Application January 18, 1946, Serial No. 641,898
3 Claims. (Cl. 72—118)

1. A furring strip adapted to support a ceiling and comprising an elongated structural channel shape secured in position with the web of said channel shape upward and with the sides of said channel shape extending downwardly, strengthening flanges along the bottom edges of said sides, and sheet material readily penetrable by a fastening screw secured to said flanges and spanning the open bottom of said channel shape and adapted to receive securing members for holding said ceiling.

2,448,110
METHOD OF PREPARING VINYL CHLORIDE AND CATALYST THEREFOR
Hoke S. Miller, Stamford, Conn., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application March 16, 1946, Serial No. 654,849
7 Claims. (Cl. 260—652)

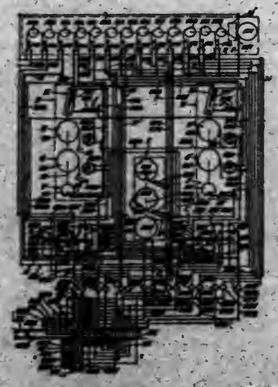
1. The method of preparing vinyl chloride which comprises reacting acetylene and hydrogen chloride in the presence of a heated catalyst consisting essentially of mercuric chloride and thorium chloride on a porous carrier.

6. An improved catalyst for the reaction of acetylene and hydrogen chloride consisting essentially of mercuric chloride and thorium chloride on a porous carrier.



2,448,111
METHOD AND APPARATUS FOR MEASURING CONSTITUENTS OF GASES
Arduo Lewis Nicolai, New York, N. Y.
Application May 5, 1945, Serial No. 592,137
2 Claims. (Cl. 175—183)

1. Apparatus for measuring the volumetric oxygen content in the gaseous products of combustion of fuels comprising; electro magnet means having spaced poles and an intermediate member provided with opposed bevelled end faces forming a pair of spaced gaps expanding in directions opposite to each other and at right angles to the lines of magnetic force; a conduit arranged to conduct the products serially through the gaps in opposite directions and at right angles to the lines of magnetic force; means for introducing the products to and taking them from the conduit; means supporting the conduit for rotation within the gaps across the lines of magnetic force; means associated with the conduit for resisting its rotation within the gaps; and means associated with the conduit for indicating its extent of rotation within the gap and thereby the proportion of oxygen in the products.



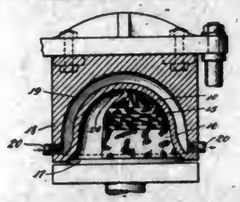
2,448,112
SHOE SOLE ATTACHING
Frederick V. Nugent, Abington, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application January 10, 1947, Serial No. 721,342
14 Claims. (Cl. 12—33)

5. That improvement in attaching soles to shoe bottoms in which the attaching faces of the shoe parts are of thermoplastic materials which comprises positioning a heating blade between the marginal portions of an assembled sole and shoe, causing relative movement of the shoe and sole so that the heating blade progressively engages the marginal portions to activate the thermoplastic materials, and simultaneously applying attaching pressure to the sole and shoe just rearwardly of the zone of heating by said blade.

14. A machine for attaching soles to the bottoms of welt shoes wherein the attaching faces of the sole and welt are of thermoplastic material comprising a roll arranged to underlie and support the welt of an inverted shoe, a feed roll engageable with the marginal portion of an outsole cooperating with said supporting roll for feeding an assembled sole and shoe and for pressing the sole against said welt, and a flexible, thin, electrically-heated blade located immediately in advance of said rolls and arranged to activate the thermoplastic materials of the sole and welt immediately prior to the application of pressure thereto.

2,448,113
TRAFFIC ACTUATED SIGNAL CONTROLLER
Alvin O. Olafson, St. Paul, Minn.
Application March 14, 1946, Serial No. 654,323
20 Claims. (Cl. 177—337)

1. A vehicle actuated controller for controlling signal lights at the intersection of two highways, comprising signal changing means in said controller for changing the "Go" display, switch means controlling said signal changing means,



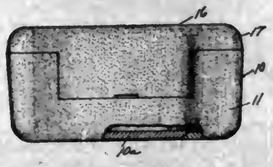
timer unit means controlling said switch means, traffic actuated means operable by traffic approaching the intersection on at least one highway for actuating said timer unit to display a "Go" signal to said approaching traffic for a predetermined period of time, a step-by-step resetting device for de-energizing said timer unit, and means actuating said resetting device step-by-step throughout said predetermined period.

2,448,114

METHOD FOR MAKING HEAT-MOLDED ARTICLES CONTAINING FABRIC REINFORCEMENTS

Frederick F. Olson, Sudbury, and Frank J. MacDonald, Brookline, Mass., assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

Application May 18, 1943, Serial No. 487,466
8 Claims. (Cl. 154—117)



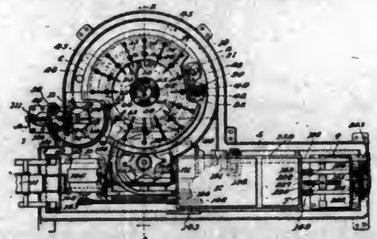
8. The method of making composite articles of hollow cup shape comprising fabric and heat-molded resin, which comprises providing a generally oblate spheroidal form having an equatorial zone of hard material providing a cutting anvil about the minor circumference of the form, causing the form to rotate simultaneously about a major axis and a minor axis while progressively wrapping thereon a strip of fabric material treated with a heat-moldable resin, the said strip being wrapped spirally about the longer circumference of the form and successive convolutions being partially but not completely overlapped edgewise circumferentially about the shorter circumference of the form so as to cover the form completely, causing the form to rotate about its major axis only while wrapping thereon a strip of fabric material treated with a heat-moldable resin, the said strip being wrapped spirally about the shorter circumference of the form on either side of the equator and with successive convolutions partially but not completely overlapped edgewise, severing the covering in an equatorial zone to provide two similarly-shaped blanks by cutting against the said anvil, and separately molding the two blanks to produce similarly-shaped products.

2,448,115

DENTAL FLASK

Nathan Opotow, New York, N. Y.

Application November 13, 1946, Serial No. 709,566
6 Claims. (Cl. 18—33)



1. A dental flask comprising a pair of complementary upper and lower sections, said lower section having a surrounding wall and an opening formed in a rear portion thereof adapted to permit lateral access to the interior of said lower section, and an offset member integral with said upper section for covering said opening when said upper and lower sections are assembled, and plaster retaining means on said upper section so as to retain a mound of set plaster by embracing a portion thereof, said upper section serving as a cover for the flask.

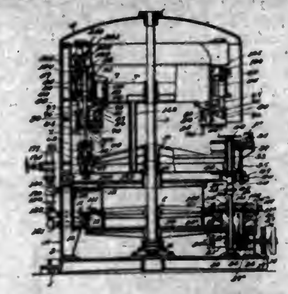
2,448,116

CAN END TREATING MACHINE

Paul E. Pearson and Alfred Treff, Chicago, Ill., assignors to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Application August 5, 1942, Serial No. 453,703
17 Claims. (Cl. 204—200)

1. In a machine of the character described, a can end treating bath, a traveling carrier having a plurality of vertically reciprocatory individual can end carrier elements thereon, means for feeding can ends individually to said elements to be supported thereon, means for holding the can ends individually on the respective carrier elements in predetermined orientation with respect thereto, means for lowering the elements to immerse can ends thereon in the bath then hold them lowered throughout a treating interval and then lift them out of the bath, an electrode in the bath conforming in shape to the path of travel of the elements in the bath, treating circuit means for passing an electrical treating current through the bath and the electrode with each immersed can end connected in the circuit as a second electrode, and means for discharging the treated can ends from the carrier elements.



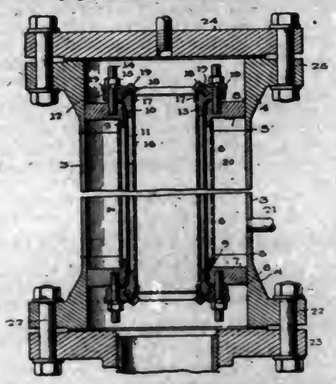
2,448,117

ELECTROLYTIC CAN TREATING MACHINE

Paul E. Pearson and Alfred Treff, Chicago, Ill., assignors to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Application August 5, 1942, Serial No. 453,704
7 Claims. (Cl. 204—200)

1. In a machine of the character described, a frame, a turret rotatable thereon, a plurality of can supports circumferentially spaced around said turret, means mounting said supports for vertical movements on said turret, a plurality of open bottom overflow cups, means mounting said overflow cups respectively above said can supports to move around with said supports and to move vertically toward and away from said supports, a plurality of measuring containers mounted respectively above said overflow cups, valves for controlling communication between said measuring containers and their respectively associated overflow cups, a plurality of electrodes mounted for vertical movements respectively above said overflow cups, cam means on said frame, cam follower means associated with said can supports, said valves and said electrodes for cooperation with said cams during rotation of said turret for raising the can supports to bring the open ends of cans supported thereon into sealing engagement with the associated overflow



cups, opening said valves to discharge electrolyte from said measuring containers into said overflow cups and said cans, and moving said electrodes down into the electrolyte in said cans, and means for establishing an electric circuit through said electrodes, said cans, and the electrolyte therein.

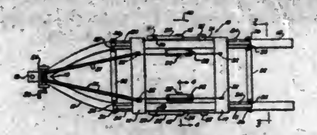
2,448,118

PULSATION ABSORBER

Joseph A. Pellettere, Pittsburgh, Pa., assignor to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Application May 18, 1945, Serial No. 594,565
5 Claims. (Cl. 138—26)

1. In a pulsation absorber, a casing, spaced, internally extending flanges secured to the circumferential wall of the casing, an expansible member, means for securing the ends of the expansible member to the flanges and separate, spaced means carried by the securing means and flanges respectively and spaced from both the expansible member and the circumferential wall of the casing for limiting lateral flexure of the expansible member in opposite directions.



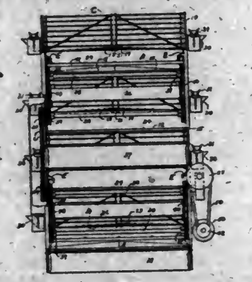
2,448,119

BOAT TRAILER

Clarence F. Peterson, Filer, Idaho

Application October 7, 1946, Serial No. 701,749
2 Claims. (Cl. 214—75)

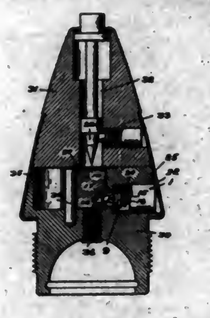
1. A boat trailer comprising a chassis including spaced side members and forming a cradle for a boat, wheels carrying said chassis, leaf springs mounted on said side members, substantially U-shaped hangers suspended from said springs and straddling said side members, a depending eye



carried by each of said hangers, and boat supporting struts extending transversely of said chassis, each of said struts being provided with detents at its ends and the end portions thereof being removably receivable in a pair of said eyes.

2,448,120

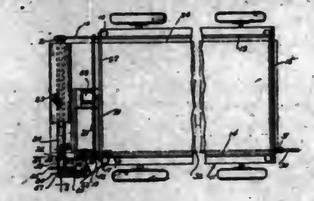
AUTOMATIC CLEANING DEVICE FOR BATTERY BROODERS



Harry O. Petraske, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis., a company of Wisconsin

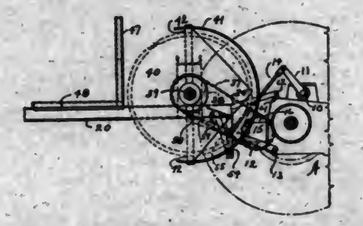
Application February 11, 1943, Serial No. 475,511
4 Claims. (Cl. 119—22)

1. A device of the character described, comprising an elongated frame rectangular in horizontal and vertical section, a droppings pan at the bottom of said frame and a droppings pan intermediate the bottom and top thereof, a screen floor positioned a short distance above each of said pans, closures positioned between the bottom screen and the upper droppings pan and between the upper screen and the top of the device forming compartments, one above the other, guideways positioned between the sides of each of said pans and the adjacent sides of the screen floors, an endless chain on each side of the device, the top and bottom portions of each chain extending along and adjacent the insides of the adjacent guideways, each of said chains extending around sprockets which are positioned at the ends of the frame, and a double edged scraper adapted to lie transversely on each of said droppings pans, their ends being secured to the adjacent portions of the chains, said chains being operatively connected together whereby the scrapers are in vertical alignment when in the longitudinal center of the pans, said guideways having inwardly extending tracks which lie a distance above the adjacent portions of the chains, said scrapers having at each end means adapted to yieldingly contact the under sides of said tracks and thereby yieldingly hold the scrapers downwardly against the droppings pans, whereby the scrapers may be moved in opposite directions simultaneously from one end of the pans to the other.



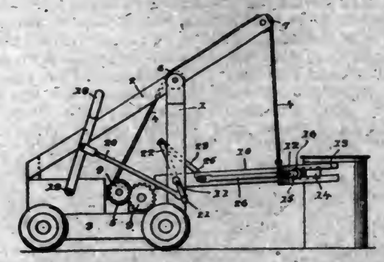
2,448,121
ARMING DEVICE
Henry H. Porter, Silver Spring, Md., assignor to United States of America as represented by the Secretary of War
Application December 12, 1946, Serial No. 715,850
3 Claims. (Cl. 102—79)

2. An arming device for a rotating projectile having an internal firing train comprising in combination, a housing having a cylindrical opening therethrough, said housing being adapted for installation in a projectile with the axis of said cylindrical opening in radial relation with respect to the projectile, the inner end thereof being adjacent the firing train, said cylindrical opening consisting of a chamber portion and a reduced diameter passageway in coaxial relation with each other, said passageway opening through the outer end of said housing, a plunger slidably engaged in said cylindrical opening, said plunger having a tip portion, and a shank portion, a spring engaging and maintaining said plunger in a normal position in said cylindrical passage with said shank portion in axial alignment with said reduced diameter passageway and with said tip portion projecting from said housing radially inward toward the axis of rotation of the projectile into engagement with the firing train, thereby securing the firing train in inoperative relation in the projectile, said housing having an arcuate recess adjoining and axially displaced from said passageway, said recess being rearwardly displaced with respect to the projectile, said recess being terminated by a shoulder at the outer end of said recess, said plunger being constructed and arranged to be tilted into said recess by the linear acceleration of the projectile and engage said shoulder, said shoulder restraining said plunger from radially retracting during said linear acceleration, said spring returning said plunger to a position axially coincident with said passage at the termination of said linear acceleration, in which position said plunger is free to retract under the centrifugal force of the rotating projectile thereby disengaging the firing train.



2,448,122
FARM WAGON UNLOADING DEVICE
Gerald J. Recker, Hopkinton, Iowa
Application November 15, 1946, Serial No. 710,212
1 Claim. (Cl. 214—83.34)

An unloading apparatus for wagons having substantially vertical sides and a flat bottom forming an open end, said apparatus comprising support members secured to the vertical sides and extending rearwardly beyond the same, a substantially horizontal rotary tubular shaft mounted upon said support members and arranged in substantial alignment with said bottom, an elongated sheet of flexible material, means securing one end of said sheet to the tubular shaft, the opposite end of said sheet being free, the body portion of the sheet being receivable upon the bottom of the wagon and beneath the load, a gear housing mounted upon one of said support members, driving and driven gears arranged within the gear housing, an eccentric arranged exteriorly of the gear housing and driven by said driven gear, a relatively stationary plug mounted in said tubular shaft near its end adjacent to said gear housing, an axial rod secured to the relatively stationary plug and extending axially outwardly beyond the end of the tubular shaft, an axially slidable plug mounted upon the rod and having

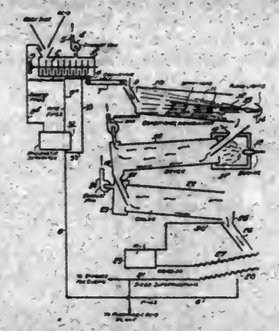


clutch teeth at its outer end, a spring to bias the axially slidable plug outwardly, a rotatable collar including a handle slidably mounted upon the axially slidable plug and including outer tapered cam portions, a ratchet wheel rotatably mounted upon the rod outwardly of the axially slidable plug and including inwardly facing clutch teeth, a stationary collar rotatably receiving the ratchet wheel and provided with inner tapered cam portions to coact with the outer tapered cam portions when said handle is turned, an arm pivotally connected to the rod outwardly of the ratchet wheel and having a part to engage the teeth of the ratchet wheel to turn the same, the free end of the arm contacting the eccentric to be oscillated by the same, means to adjust the extent of oscillation of the arm, and means to drive the driving gear.

2,448,123
CIRCULAR SAW ATTACHMENT FOR TRACTORS
Clarence B. Richey, Quincy, Ill., assignor to Electric Wheel Company, Quincy, Ill., a company of Illinois
Application June 20, 1945, Serial No. 600,618
3 Claims. (Cl. 143—43)

1. In combination with a tractor having a power take-off with a transversely positioned belt wheel operatively connected thereto, draw bars having their front ends hingedly connected to opposite sides of the tractor and below the horizontal plane of the axles of the tractor, a frame hingedly connected on opposite sides to the rear end of said bars, a transversely positioned shaft rotatably mounted on said frame having a belt pulley secured thereto and in alignment with said first belt pulley, and a belt forming an operating connection therebetween, said frame having forwardly extending members adapted to be detachably secured to the upper rear end of the tractor, adjustable stops on said frame positioned a distance from the rear end of said drawbar hinges and providing means whereby the stops may act to limit the upward movement of the forward end of said bars relative to the frame, whereby the rear end of said frame may be lifted until the forward ends of said forwardly extending members are in a position to be secured to the tractor, and whereby when said forwardly extending members are secured to the tractor the frame will be rigidly secured to the tractor.

2,448,124
DRUM LIFTING ATTACHMENT FOR CRANE TRUCKS
Edwin J. Roy, Baton Rouge, La.
Application July 24, 1946, Serial No. 685,986
5 Claims. (Cl. 212—9)



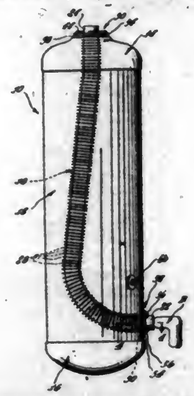
1. In a portable crane of the vertically swinging type, the combination with a hoisting-boom and operating means therefor, of a carrier rigid with the boom and including a U-shaped yoke, slots in the yoke extending outwardly from the bow of the yoke and terminating in openings at the front free ends of the yoke, a pair of opposed clamping jaws, a trunnion on each opposed jaw slidably mounted in its respective slot in the yoke, and adapted to be projected forwardly in the slots into diametrical arrangement with each other to effect clamping engagement with an article to be lifted, and manually controlled means for operating the jaws.

2,448,125
AMIDE DERIVATIVES AND PROCESS OF MAKING SAME
Richard Sallmann, Gelterkinden, and Charles Graenacher, Riehen, Switzerland, assignors to Ciba Limited, a Swiss firm
No Drawing. Application February 4, 1944, Serial No. 521,146. In Switzerland March 26, 1943
16 Claims. (Cl. 260—404.5)

11. A product obtained by condensing 1 mol of an amide containing at least 12 carbon atoms and at least one hydrogen atom united to an amide nitrogen atom with at least 2 mols of formaldehyde and with 1 mol of a member selected from the group consisting of salts of ammonia and salts of primary amines at a temperature of at least 70° C. and in a solvent medium.

2,448,126
GRANULATED SUPERPHOSPHATE MANUFACTURE
Mark Shoeld, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
Application May 17, 1944, Serial No. 536,006
2 Claims. (Cl. 71—40)

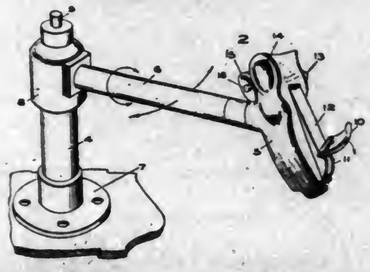
1. A method of manufacturing superphosphate comprising mixing finely divided phosphate rock with an acid selected from the group consisting of sulphuric acid, phosphoric acid and a mixture of sulphuric and phosphoric acids and with a coarse fraction of superphosphate fines to form a thick slurry, discharging the slurry onto a conveyor belt coated with fine superphosphate fines, discharging the slurry together with the fine fines into a conditioning and nodulizing zone, nodulizing the mixture of slurry and fine fines, drying the nodulized material in a drying zone and cooling the dry nodulized material.



2,448,127
METHOD OF REMOVING HALOGEN FROM COUMARONE-INDENE POLYMERS
Herbert Muggleton Stanley, Tadworth, Francis Edward Salt, Banstead, and James Frederick Williams, Tunbridge Wells, England, assignors to The Distillers Company, Limited, Edinburgh, Scotland, a British company
No Drawing. Application July 13, 1945, Serial No. 604,986. In Great Britain June 6, 1944
10 Claims. (Cl. 260—80)

1. A method of removing the combined halogen from a polymer of the class consisting of polyindene, polycoumarone and polystyrene prepared by the action of a Friedel-Crafts type catalyst upon a solution of the monomer which comprises flowing a stream of a solution of said polymer in intimate admixture with a stream of an aqueous alkaline solution through a zone at a temperature between 180° C. and 240° C., in the liquid phase and maintaining said solution of polymer and said aqueous solution in intimate contact with one another under the said conditions until substantially the whole of the combined halogen has been split off from said polymer.

2,448,128
WATER HEATER
Albert H. Trageser, Manhasset, N. Y., assignor to Trageser Copper Works, Inc., Maspeth, Long Island, N. Y., a corporation
Application May 13, 1947, Serial No. 747,606
3 Claims. (Cl. 122—156)



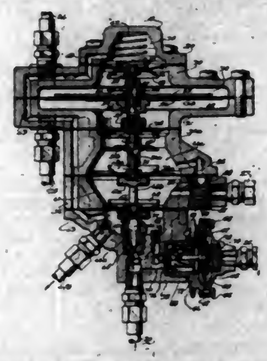
1. A water heater, comprising a water tank, and a heating flue positioned within said tank above the bottom thereof, and having a lower

inlet opening for the heating medium and an upper exhaust outlet, said flue extending continuously upwardly from said inlet to said exhaust outlet, said tank having a top opening through which the upper end of said flue projects and an opening in the side of the tank through which the lower end of said flue projects, a flange on the upper end of said flue externally of the latter in liquid-tight relation therewith, said flange being positioned externally of the tank at said top opening and sealing the

latter, said flange being releasably secured to said tank, and a flange on the lower end of said flue externally of the latter in liquid-tight relation, said last mentioned flange being positioned internally of the tank and sealing said opening in the side thereof, said last mentioned flange being releasably secured to said side of the tank, said top opening being larger than said last mentioned flange whereby said flue is removable from said tank through said top opening when both of said flanges are released from the tank.

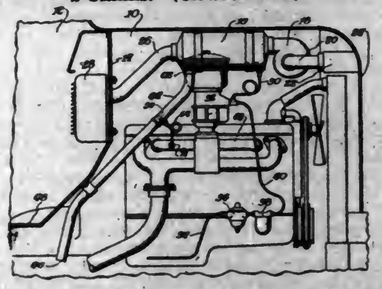
2,448,129
VEHICLE CONTROL UNIT
William J. Turnbull, Towson, Md., assignor to The Glenn L. Martin Company, Middle River, Md., a corporation of Maryland
Application June 26, 1945, Serial No. 601,572
4 Claims. (Cl. 200—157)

1. A directional and control assembly for the manual operation of a multi-control mechanism comprising an upright support securely but pivotally attached to the structure on which the control is mounted, said upright support being of generally cylindrical shape and having a portion adjacent the top thereof affording a grip for one hand of the operator, switch means located on the top of said grip portion for operation by the thumb of the hand of the operator, a member mounted for turning about its longitudinal axis extending laterally from the side of said grip portion, a second grip mounted on the free end of said member for rotating said upright support about the pivotal axis thereof, and for rotating said laterally extending member about the longitudinal axis thereof, switch means in said grip, said grips, switches, and mounting being so constructed and arranged that manipulation of said grips effects multi-directional control of the mechanism.



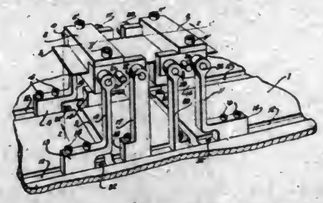
2,448,130
DISPENSER
Robert Van Rosen, New York, N. Y.
Application July 18, 1947, Serial No. 761,799
12 Claims. (Cl. 206—42)

1. In a device for dispensing articles, a backing, an inner plate on the backing thicker than one-half the thickness of an article, an outer plate pivoted to the inner plate to swing thereon and thicker than one-half the thickness of an article, a transparent cover on the outer plate, a top slot in the outer plate as long as the width of a plurality of articles and slightly wider than the width of an article, a free outlet for the top slot at the side of the plate, a curve in the top slot toward its outlet, a bottom slot in the inner plate underlying the top slot and extending in width from one side of the top slot in unswung position to the other side of the top slot in swung position, a free outlet for the bottom slot in register with the outlet for the top slot when it is in unswung position, a curve in the bottom slot toward its outlet, a projection at the top of the curve in the bottom slot extending less than the width of an article from the opposite side of the upper slot when in unswung position but more than the width of an article from the opposite side of the upper slot when in swung position, and a second projection from the other side of the lower slot and more than the width of an article nearer the outlet than the first mentioned projection, the second projection being less than the width of an article from the opposite side of the upper slot when in swung position but more than the width of an article from the opposite side of the upper slot when in unswung position.



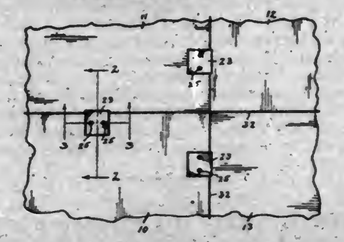
2,448,131
CARBURETING APPARATUS
Lynn A. Williams, Jr., Northfield, William A. Marshall, Jr., Chicago, and William F. Gradolph, Jr., Oak Park, Ill., assignors to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application January 15, 1945, Serial No. 572,766
2 Claims. (Cl. 261—69)

1. In an apparatus for feeding fuel and air to an internal combustion engine intake, the combination comprising: means forming an air induction passage connected at one end with the intake of the engine, said passage being shaped to form a Venturi portion, means for supplying fuel to said air induction passage, the last said means including a fuel pressure regulating valve, operating means for said valve including diaphragm means connected to be sensitive to the fuel pressure downstream of said valve for tending to close said valve when said downstream pressure rises, second diaphragm means connected to be sensitive to the pressure differential created by flow of air through said venturi for tending to open said valve as said pressure differential rises, third diaphragm means connected to be sensitive on one side to the pressure at said engine intake, means forming a passage leading between the two sides of the last said diaphragm, a check valve in said passage, means forming a leak port between the two sides of said check valve, said check valve being so oriented as to close when the pressure on



said one side of the last said diaphragm rises and to open when the last said pressure drops, and means connecting the last said diaphragm to said pressure regulating valve so that the existence of a higher pressure on said one side than on the other side thereof will tend to open said pressure regulating valve, whereby a sudden increase in the pressure at said engine intake will produce a pressure differential across the last said diaphragm tending to open said regulating valve, the last said pressure differential being dissipated over a period of time by leakage through said leak port, whereas a sudden decrease in the pressure at said engine intake will open said check valve and reduce the pressure on both sides of the last said diaphragm substantially equally.

2,448,132
HEATER EXHAUST SYSTEM
Lynn A. Williams, Jr., Indianapolis, Ind., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application June 27, 1946, Serial No. 679,602
2 Claims. (Cl. 237—12.3)



2. A heating system for an automotive vehicle having an internal combustion engine including an intake manifold comprising: a liquid fuel burning heater, means for supplying liquid fuel to said heater for combustion therein, an exhaust pipe connected to said heater for removing products of combustion therefrom, said exhaust pipe emptying to the atmosphere, means forming a liquid trap in said exhaust pipe, conduit means connected between said trap and the intake manifold, and means forming a flow restricting venturi inside said conduit.

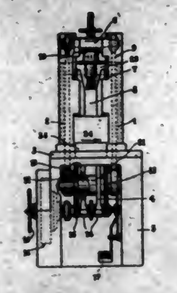
2,448,133
BENDING FIXTURE
Alexander J. Yorgiadis, Greenwich, Conn., assignor, by mesne assignments, to The Baldwin Locomotive Works, a corporation of Pennsylvania
Application February 2, 1945, Serial No. 575,815
11 Claims. (Cl. 73—100)

1. A specimen bending fixture for an alternating force fatigue testing machine comprising, in combination, clamping elements adapted to be attached to each end of a specimen, means for pivotally supporting one of said clamping elements to allow oscillatory movement thereof about an axis transversely of the specimen but to prevent at all times rotational movement of the clamping elements about the longitudinal axis of the specimen, means for supporting the other of said clamping elements to allow pivotal movement about an axis transversely of the specimen accompanied by movement in a direction lengthwise of the specimen, and reciprocating means connected to said clamping elements for imparting an alternating movement thereto about their pivotal axes thereby to repeatedly bend the specimen.

2,448,134
PAVEMENT SLAB CONNECTOR
Franklin W. Abel, Franklin, Ind.
Application May 10, 1946, Serial No. 668,925
2 Claims. (Cl. 94—8)

1. In a pavement formed by a plurality of precast units, one of the units at least having a cavity entering from an edge, a bar anchored in said one unit to extend by a length into said cavity; a second bar anchored in an adjacent unit to extend therefrom and align axially with said first bar when the top, adjacent edge portion of the two units are at a common eleva-

tion; a rigid sleeve telescoping over said two bars; a resilient sleeve closely fitting within said rigid sleeve; and means retaining the sleeves in position bridging across both of said bars; said retaining means comprising an abutment carried by each of said bars; said sleeve having a length not to exceed the length exposed within said cavity of the longest of said bars, plus the axial distance therebetween.



2,448,135
SEPARATION OF SUSPENDED SOLIDS FROM FLUIDS
Bernard M. Becker, Chicago, and Jerry McAfee, Riverside, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application October 25, 1943, Serial No. 507,490
3 Claims. (Cl. 196—52)

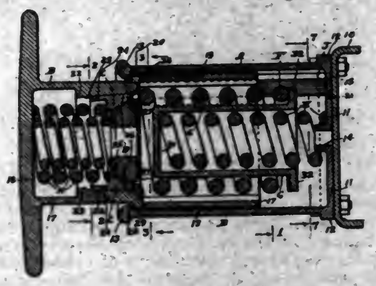
1. In a process for the conversion of hydrocarbons while passing through a fluidized body of subdivided solid catalyst in a reaction zone, whereby a stream of gaseous reaction products discharged from the fluidized body contains suspended catalyst fines, and wherein contaminated catalyst is removed from said body and regenerated by burning combustible contaminants therefrom in a regenerating zone containing a fluidized body of catalyst particles, the method which comprises passing said stream of gaseous reaction products through a compact moving bed of solid particles coarser than said fines to separate suspended fines from said gaseous products, supplying the resultant mixture of coarser particles and fines to a stripping zone, passing an oxygen-containing gas through said mixture in the stripping zone to separate catalyst fines from the coarser particles, returning the latter to said compact bed, removing a suspension of catalyst fines in oxygen-containing gas from the stripping zone and introducing the suspension to the fluidized body of catalyst particles in said regenerating zone.

2,448,136
STAMPING PRESS FOR PRECISION WORK
John Albert Chappuis, Neuchatel, Switzerland
Application July 22, 1943, Serial No. 495,774
In Germany February 29, 1942
Sections 3 and 1, Public Law 690, August 8, 1946
Patent expires February 29, 1962
5 Claims. (Cl. 113—38)

1. In a forming press, the combination of, a table, a pair of hollow uprights extending upwardly from said table in parallel relationship, a tool carrier member movable upwardly and downwardly having guide means thereon cooperating with guide means on said upright members to slidingly support said tool carrying member between said uprights, means forming a bearing member disposed beneath said table and rigidly secured thereto, a crank shaft rotatably supported in said bearing means having an over-

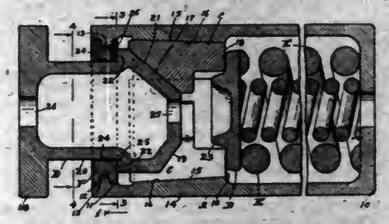
hanging crank arm on each side of said bearing means, a link member extending between said uprights adjacent the upper ends thereof through slots provided in the upper ends of said uprights and connected to said tool carrying member for moving the same, and connecting rod means interconnecting said link and said crank arms extending through said hollow uprights for driving said link from said crank arms.

2,448,137
PICTURE HANGER
William A. Cody, Clay Center, Kans.
Application October 26, 1945, Serial No. 624,760
1 Claim. (Cl. 248—28)



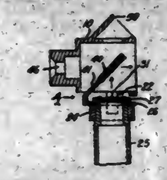
A picture hanger comprising a plate, a prong struck from each end of the plate and bent forwardly and upwardly, each prong terminating in a point below the upper margin of the plate so that the latter will extend between a support and the upper rail of a picture secured upon the prongs, a prong stamped from the lower intermediate portion of the plate and bent backwardly and terminating in a point adapted to be forced into the support, a protuberance pressed outward from the upper intermediate portion of the plate and pierced by an aperture, and an element adapted to enter the aperture and be driven into the support.

2,448,138
CAR-END BUFFER
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application March 23, 1945, Serial No. 584,407
4 Claims. (Cl. 213—221)



1. In a buffer for railway cars, the combination with a housing adapted to be secured to the end of a car; of a buffer head including a friction casing, said casing being slidingly telescoped within the housing; a friction clutch slidable within said friction casing, said clutch including a pressure transmitting wedge block and friction

shoes; means within said casing yieldingly opposing inward movement of the clutch; and means yieldingly opposing inward movement of the buffer head including springs reacting respectively between the buffer head and housing, and a pres-

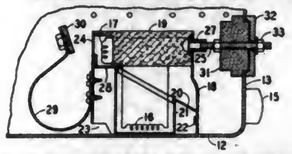


sure transmitting column member interposed between said springs and transmitting the pressure from one spring to the other, said column member reacting between the housing and wedge block after a predetermined compression of said springs to slide the clutch inwardly of the casing.

2,448,139
FRICTION SHOCK ABSORBING MECHANISM FOR RAILWAY DRAFT RIGGINGS
George E. Dath, Mokena, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a corporation of Delaware
Application September 19, 1945, Serial No. 617,296
10 Claims. (Cl. 213—34)

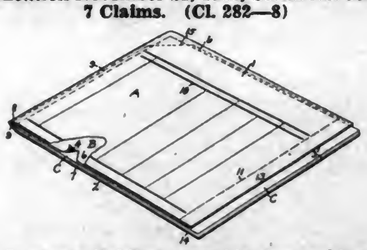
1. In a friction shock absorbing mechanism, the combination with a friction casing open at one end and having interior friction surfaces at said open end; of a friction clutch slidable within said open end of the casing, said clutch including a wedge and friction shoes surrounding said wedge, said wedge and shoes having cooperating wedge faces holding said wedge and shoes against relative rotation, said shoes having friction surfaces interengaging with the friction surfaces of the casing and holding the shoes against rotation with respect to the casing; spring means within the casing yieldingly opposing inward movement of the shoes; a retaining ring in interior threaded engagement with the open end of the casing, said ring having shouldered engagement with the wedge to limit outward movement of the latter; and interengaging means on said ring and wedge for locking the ring against rotation with respect to the wedge, said shoes, in the operation of assembling the mechanism, being displaceable inwardly of the casing with respect to the wedge to disengage the shoes from the wedge and permit rotation of the latter and of the ring which is locked thereto to thread the ring within said open end of the casing.

2,448,140
RETINOSCOPE FOR DETERMINING REFRACTIVE ERRORS OF THE EYE
Marino Di Bonaventura, Southbridge, Mass.
Application August 9, 1946, Serial No. 689,499
2 Claims. (Cl. 88—20)



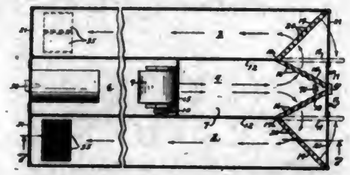
1. In a retinoscope, in combination, a fixed supporting means, a hollow cylindrical body having axially aligned viewing apertures in its end walls, said body being rotatably mounted in said supporting means and being angularly adjustable therein; means to secure said body in angularly adjusted position in said supporting means, a bearing member pivoted to said body and swingable about a diameter thereof, a tube rotatably mounted in said bearing member and having its axis of rotation perpendicular to said diameter and intersecting the same, a light source in the lower end of said tube, and a partially-transparent mirror mounted at the upper end of said tube and within said cylindrical body and at the intersection of the axes of said tube, body and bearing member, and said mirror being both angularly movable and swingable with said tube and being effective to reflect light rays from said light source through one of said viewing apertures to an eye to be tested, and the eye thus illuminated being clearly visible to an observer looking through both of said aligned viewing apertures and through the partially-transparent mirror interposed between said viewing apertures.

2,448,141
SHOULDER BOLSTER AND LINGERIE SUPPORT
Anna E. Farrell, Seattle, Wash.
Application September 4, 1946, Serial No. 694,689
2 Claims. (Cl. 2—268)



1. A device for supporting outside garments, and inside lingerie over shoulders, comprising an elongated bolster with concave surface along the underside and convex along the top ridge, a tongue of relatively narrow width extended from the inner apex of the bolster, a loop of flexible material attached to the lower side of the bolster adjacent its outer end and extending inward therefrom a sufficient length for passing beneath shoulder straps of lingerie under the bolster and adapted to be hooked over said tongue to prevent such straps from sliding off the outer edge of the human shoulder beneath the bolster, the central longitudinal ridge of the bolster being provided with eyelets therethrough of relative size for passage therethrough of relatively small loops of the outer garments and a safety pin lengthwise, for retaining such garment in predetermined position over the bolster when the safety pin is turned crosswise beneath the bolster.

2,448,142
VAPORIZING TYPE BURNER WITH RESISTANCE IGNITER
Raymond E. Fell and John W. Miller, Lansing, Mich., assignors to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application August 12, 1943, Serial No. 498,320
3 Claims. (Cl. 158—91)

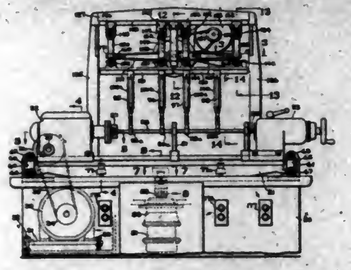


1. In combustion apparatus including a vaporizing pot type burner having a bottom wall, a fuel ignition unit for the burner comprising an electrical heating element, a housing partially enclosing said heating element, said housing being formed to provide an air and fuel inlet adjacent the lower end and an outlet adjacent the upper end, said heating element having a portion in heat exchange relation with the bottom wall of the burner and another portion in close proximity to the outlet from the housing, and heat responsive means attached to said housing adjacent said outlet and movable under the influence of variations in temperature to open and close said outlet.

2,448,143
CARBON INTERLEAVED RECORD ASSEMBLY
Joseph A. Gilbert, San Francisco, Calif., assignor to Moore Business Forms, Inc., a corporation of Delaware
Application November 21, 1944, Serial No. 564,445
7 Claims. (Cl. 282—8)

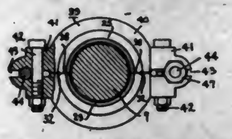
7. In a manifolding assembly, in combination, a sheet of record material folded intermediate its ends so as to form relatively superposed attached record leaves having marginal portions opposite to the fold of the folded sheet which are free from attachment with each other, each of said free marginal portions of the record leaves having a weakened severance line forming a severable binding stub, said binding stubs being free from attachment with each other, a plurality of transfer leaves interleaved in transfer relation with said record leaves, a different one of said transfer leaves having supporting attachment at a marginal part thereof with each one of said severable binding stubs but being free of attachment with another said binding stub, said severable binding stubs being in overlapping superposed relation whereby they can be simultaneously gripped together to provide a separating formation for selective separation of the record and transfer leaves, the margins of said transfer leaves opposite to said supporting attachments thereof being positioned adjacent to said fold of the folded sheet, and a selective separating formation for the record and transfer leaves adjacent to said fold.

2,448,144
DEHYDRATOR APPARATUS
Ervin H. Guthier, Santa Ana, Calif.
Application October 25, 1943, Serial No. 507,525
6 Claims. (Cl. 34—46)



1. A dehydrating apparatus comprising a plurality of enclosed drying tunnels, a heating tunnel, means to heat a drying medium in said heating tunnel, means to impart circulatory movement to said drying medium, a directing chamber at one end of said apparatus in flow communication with said drying tunnels and said heating tunnels, fixed divider members having adjustable baffles positioned in said directing chamber, said divider members adapted to direct drying medium issuing from the heating tunnel to said drying tunnels, movable channeling members having fixed baffles positioned in said chamber each of said channeling members movable across the intake end of a drying tunnel, each of said divider members adaptable to close off communication between said heating tunnel and a drying tunnel, and means to recirculate and discharge selectively and synchronously said drying medium, said last mentioned means positioned in said tunnels adjacent the ends thereof opposite to said directing chamber and comprising automatically controlled damper units acting in synchronized movement with respect to one another.

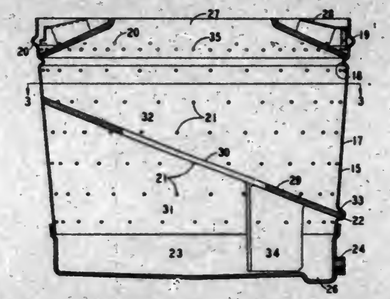
2,448,145
PRODUCING MOIRÉ DESIGNS
August Holterhoff, Weehauken, N. J.
No Drawing. Application April 14, 1947, Serial No. 741,413
2 Claims. (Cl. 26—69)



1. The method of producing moiré pattern effects in fabrics comprising moistening the fabric in confined pattern areas, applying tension to the fabric, drying the fabric while maintaining tension, folding the fabric double, and applying heat and pressure to produce the finished moiré effect.

2,448,146
CAM LAPPING MACHINE
Herbert S. Indge, Westboro, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts
Application July 30, 1946, Serial No. 687,100
16 Claims. (Cl. 51—58)

1. In a cam lapping machine having a reciprocable table, means to reciprocate said table, a headstock and footstock on said table, a pair of rotatable parallel spindles on said headstock, a pair of aligned parallel footstock centers on said footstock rotatably to support a master cam shaft and a cam shaft to be lapped in parallel relationship with each other, means to synchronously rotate said spindles, a pivotally mounted follower arm having a master cam follower roller which engages a master cam, yieldable means to maintain said roller in operative engagement with the master cam, a pivotally mounted lapping arm having a yieldably mounted lapping element engageable with a cam to be lapped, a guide for said follower and lapping arms, and a link connecting said arms whereby a controlled swinging movement is imparted to the lapping element.

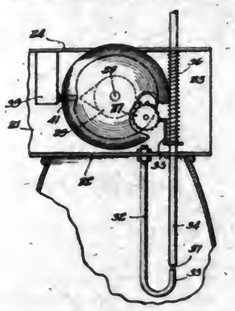


2,448,147
METHOD OF FABRICATING PACKING GLANDS
Oystein Jacobsen, Montgomery County, Ohio, assignor to The Duriron Company, Inc., Dayton, Ohio, a corporation of New York
Application April 29, 1943, Serial No. 484,977
2 Claims. (Cl. 29—148)

1. In a packing seal for pumps handling corrosive fluids, and including a gland of non-corrodible metal for holding the packing in place, the method of fabricating the gland by casting it in a ring form with longitudinal grooves along one of the peripheral surfaces, grinding the critical surfaces of the ring to size, then fracturing the ring at the grooves to divide the ring into a plurality of parts by placing the ring at said grooves between a pair of oppositely disposed wedge shaped members and applying a sudden impact to one of the members then clamping the parts together causing them to contact one another over substantially the entire length and width of each segmental part to form a circularly complete gland for the packing material.

2,448,148
PILOT STRUCTURE FOR POT TYPE BURNERS
John W. Miller and Waldo G. Smith, Lansing, Mich., assignors to Motor Wheel Corporation, Lansing, Mich., a corporation of Michigan
Application September 24, 1942, Serial No. 459,500
21 Claims. (Cl. 158—91)

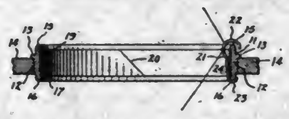
1. A burner of the vaporizing pot type wherein combustion can be localized in different parts thereof by regulating the fuel supplied thereto, said burner comprising a bottom wall, a tubular side wall connected thereto having a plurality of spaced apart air inlet openings therein and a fuel inlet opening in the burner adjacent one side thereof, means cooperating with said bottom and side walls for partially enclosing a portion of the interior of the burner adjacent said fuel inlet opening, said means comprising a pair of spaced apart non-intersecting upright baffles positioned on opposite sides of said fuel inlet opening and certain of said air inlet openings and a third baffle engaging the upper ends of said pair of baffles and lying wholly between the uppermost and lowermost air inlet openings, all of said baffles extending transversely of the burner, one upright edge of each baffle of said pair being juxtaposed to the burner side wall and the other upright edge being spaced a substantial distance from the burner side wall.



16. In combination, an open topped burner pot having a circumferential wall provided with a plurality of primary air inlet apertures located at various levels in the wall, means for delivering secondary air to the mixture of primary air and vaporized fuel moving upwardly through the pot and a pilot housing surrounding the area of admission of the fuel to the pot and defining a space in communication with a plurality of the lower primary air inlet apertures of the pot, said housing including generally upright inwardly converging side walls defining a flame outlet at their convergence, and extending inwardly from the pot wall, and means for delivering liquid fuel to the pot at a point enclosed by said pilot housing.

19. A liquid fuel burner comprising, in combination, a combustion pot having generally upright side walls and a connecting bottom wall, said side walls having upper and lower perforations, said pot being open at the top; means forming a substantially horizontally extending fuel vaporizing chamber disposed within the pot adjacent the bottom wall thereof, said chamber having an air inlet end, said air inlet end being disposed adjacent one side wall of the pot and communicating with certain of said lower perforations, said chamber having a fuel mixture outlet confronting a side wall of the pot opposite said first mentioned side wall; means for supplying liquid fuel to the chamber; and gas and air baffle means intermediate the top and the bottom wall of the pot and extending inwardly from said confronting side wall toward said first mentioned means and located between said upper and lower perforations.

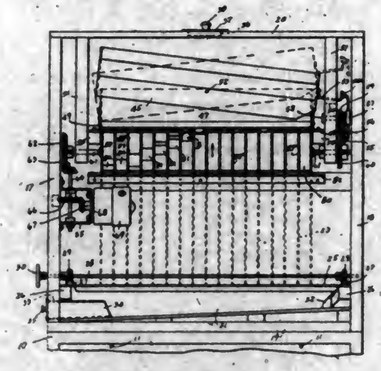
2,448,149
COFFEE BREWING CONTROL
Harry A. Moomjian, Los Angeles, Calif.
Application September 26, 1946, Serial No. 699,548
3 Claims. (Cl. 99—281)



1. In a coffee-brewing timing-appliance adapted for use with a coffee-brewer of known general type having a lower bowl, means to heat water in said bowl, an upper bowl having a conduit connection with said lower bowl to convey hot water from the lower bowl to the upper bowl and to conduct the extracted coffee fluid from the upper bowl to the lower bowl, and a filter to retain the ground-coffee in the upper bowl, said timing device having a spring-actuated clockwork, manually operated means to wind said clockwork varying amounts, and means to indicate the degree of winding of said clockwork, the new means to

releasably lock said clockwork against initiating its unwinding until the introduced hot water comes into contact with the coffee in the upper bowl including the novel combination of an escapement-wheel rotatable with such clockwork, a fixed abutment adapted to occupy said upper bowl, a movable member incorporating means tending to cause it to engage said fixed abutment, a detent adapted to engage said escapement-wheel and prevent its turning and actuated by said movable member, and a water-soluble agent

in said upper bowl having no detrimental effect on the finished coffee drink and located between said abutment and member to hold them apart and thereby render the lock active, said agent quickly melting when contacted by the hot water and allowing said member to move and engage said abutment thus releasing said detent from the escapement-wheel and initiating the unwinding of the clockwork, and means to terminate the heat application to the lower bowl upon completion of the unwinding of the clockwork.



2,448,150
RING AND TRAVELER FOR TWISTER FRAMES
James R. Mulholland, University Heights, Ohio
Application June 27, 1947, Serial No. 757,418
5 Claims. (Cl. 57—119)

1. A ring and traveler for twister frames comprising a hardened steel ring provided with rounded top and bottom edges and a continuous circumferential channel in its interior face, an annular insert formed of a resilient bearing metal softer than the steel of said ring and fitting in said channel, said insert having an internal substantially cylindrical surface and a steel traveler having end portions hooked over the top and bottom edges of said ring and an intermediate portion that slidably engages the cylindrical internal face of said bearing metal insert.

2,448,151
SIMULATED BASEBALL BOX SCORE GAME
Guy E. Noel, Muncie, Ind., assignor to Noel Manufacturing Company, Muncie, Ind., a copartnership
Application October 1, 1945, Serial No. 619,505
7 Claims. (Cl. 273—144)

1. In a game device having a plurality of side by side elongated upwardly directed channel-like compartments open at opposite ends and means normally closing the lower ends thereof, the combination therewith of an elongated cylindrical structure of a length at least as great as the summation width of said compartments and provided with a helical series of pockets upon its periphery, means for rotating said structure for operatively registering the pockets with successive compartments for releasing indicators thereto, and hopper means coextensive with and superposed relative to the cylindrical structure for gravity supply of indicators to the pockets for sub-

sequent individual release to the compartments, the hopper means being common to all pockets, the hopper means comprising a pivoted hopper having a depending discharge portion and a relatively stationary tubular member telescopically associated with the latter portion, the lower end of the tubular member opening upon cylindrical structure periphery for indicator supply to the pockets thereof when the pockets are successively registered with said tubular member lower end, and means for rocking said hopper on its pivot for mixing of the indicators therein.

2,448,152
PROCESSES FOR CONTROLLING POTATO CHIP COLOR
Alva R. Patton, Fort Collins, Colo.
No Drawing. Application January 27, 1947, Serial No. 724,715
8 Claims. (Cl. 99—100)

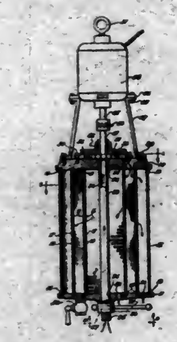
1. A method of producing deep-fat-fried potato products comprising: cutting the potato into pieces; immersing the pieces in a hot alkaline earth salt solution for from 30 seconds to 10 minutes; thence frying the pieces in deep fat.

2,448,153
PROCESS OF MAKING COTTON TEXTILES WATER-ABSORBENT AND ROT-RESISTANT
John David Reid and George C. Daul, New Orleans, La., assignors to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application September 10, 1946, Serial No. 696,024
3 Claims. (Cl. 8—120)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process comprising impregnating a cotton textile with chloracetic acid, treating the impregnated textile with a solution of an alkali metal hydroxide ranging in concentration between 20% and 50% to give a fabric having carboxymethyl substituents in the ratio of one to from 40 to 5 glucose units, and then treating the textile with a solution of a salt which yields metal ions in the solution and produces a non-soluble metal salt of the carboxymethyl groups, the said salt being selected from the class consisting of salts of copper, iron, silver, nickel, mercury, lead and aluminum.

2,448,154
USE OF SYMMETRICAL XENYLTRIAZENES IN MAKING GAS EXPANDED ORGANIC PLASTICS
Henry H. Richmond, Guelph, Ontario, and Markian Tomiuk, Strathmore, Quebec, Canada, assignors to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application October 18, 1947, Serial No. 780,744
16 Claims. (Cl. 260—86.5)

1. The method of making a gas expanded organoplastic material which comprises mixing a symmetrical xenyltriazene with an organoplastic material which is capable of setting to a normally solid state and having sufficient consistency and tensile strength at temperatures of from 120° to 140° C. to retain the expanded structure resulting from the subsequent heating step and decomposing said triazene by heat to evolve nitrogen and expand said organoplastic material.

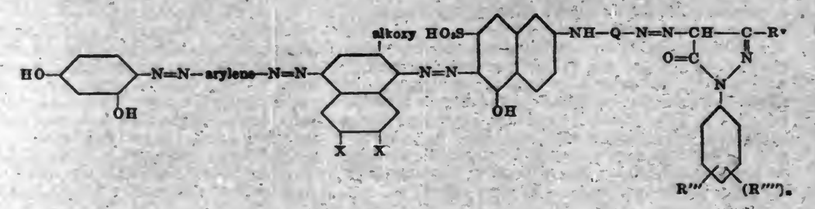


2,448,155
1,3-BIS(O-XENYL)-TRIAZENE
Henry H. Richmond, Guelph, Ontario, Canada, assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application October 18, 1947, Serial No. 780,746
1 Claim. (Cl. 260—140)

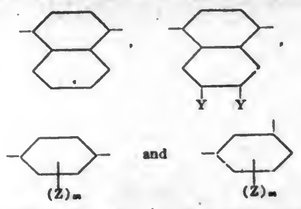
As a new chemical compound, 1,3-bis(o-xenyl)-triazene.

2,448,156
TREATMENT OF BICYCLOPARAFFINS
Louis Schmerling, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Application April 27, 1944, Serial No. 533,054
1 Claim. (Cl. 260—648)

A process which comprises reacting tertiary butyl chloride and bicyclo-(2,2,1)-heptane in the presence of aluminum chloride, said aluminum chloride being dissolved in a nitroparaffin solvent, at a temperature between about —20° C. and about +20° C. to effect conversion of said bicyclo-(2,2,1)-heptane into 2-chloro-bicyclo-(2,2,1)-heptane.

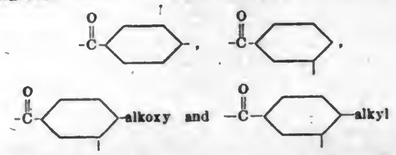


2,448,157
PORTABLE FILTER
Max S. Schneider, Chicago, Ill.
Application September 1, 1945, Serial No. 614,057
7 Claims. (Cl. 210—150)



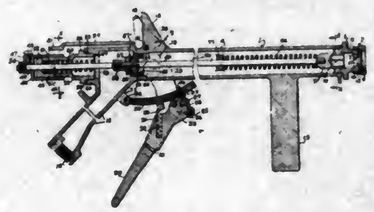
1. A portable liquid filtering unit adapted to be suspended from a carrier comprising in combination a pair of heads and a casing retained by and between said heads, a plurality of filter elements disposed within said casing, each of said heads having a centrally positioned aperture, a centrally disposed tubular member passing through said apertures, means including said member for detachably securing said heads and casing in operative relation, a pump supported on one of said heads and having a suction port and a discharge port, said member providing a passage for the liquid to be filtered to said suction port, and the said one head having a second aperture interconnecting the said discharge port with that zone of the interior of the casing adjacent one side of said elements, the other of said heads having an aperture for discharge of filtered fluid from the unit after the fluid has passed through said elements, means for driving said pump and means for suspending the unit from the carrier.

2,448,158
GREEN TETRAKISAZO DYES
Chiles E. Sparks, Wilmington, Del., James W. Libby, Jr., St. Matthews, Ky., and Joseph H. Trepagnier, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 4, 1945, Serial No. 571,362
4 Claims. (Cl. 260—159)



1. A tetrakisazo compound which in its acid form is represented by the formula

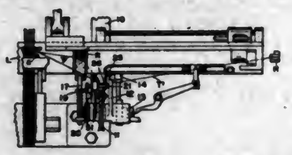
in which one X is hydrogen and the other is sulfonic acid; alkoxy has 1 to 3 carbons; the arylene radical is represented by a formula of the group



wherein one Y is hydrogen and the other is sulfonic acid; Z is one of the group consisting of hydrogen, sulfonic acid, methyl and methoxy; *m* is 1 to 2 and the free bonds represent the positions of attachment of azo groups; Q is one of the radicals

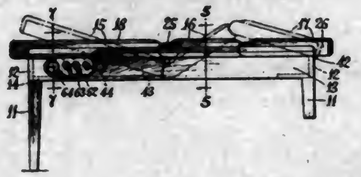
where alkyl and alkoxy have 1 to 6 carbons and each free bond on the benzene rings represents the position of attachment of an azo group; R''' is one of the group consisting of hydrogen and sulfonic acid; R'''' is from the group consisting of hydrogen, chlorine, bromine, alkyl having not more than 3 carbons and alkoxy having not more than 3 carbons, and *n* is an integer not greater than 2; and R^{v} is one of the group consisting of methyl and carboxy; said dyestuff having 2 to 4 sulfonic acid groups.

2,448,159
SPRAY GUN
Warren M. Spreng, Ashland, Ohio, assignor to The F. E. Myers & Bro. Company, Ashland, Ohio, a corporation of Ohio
Application August 2, 1944, Serial No. 547,697
3 Claims. (Cl. 299—150)



1. A spray gun comprising a barrel having at one end a nozzle and at the other end a grip member and an opening and closing valve, a trigger for moving said valve and means for locking said trigger in an intermediate position, said means comprising an eyelet element secured to the trigger and having an opening which loosely receives an arcuate shaped rod pivotally mounted on the grip member, the arrangement being such that at an intermediate position of the trigger the rod and the eyelet are caused to take eccentric positions with respect to one another and thereby to introduce a locking effect.

2,448,160
TREATMENT OF HYDROCARBONS
Charles L. Thomas, Winnetka, and Vladimir Haensel, Clarendon Hills, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
No Drawing. Original application February 20, 1939, Serial No. 257,464. Divided and this application June 8, 1946, Serial No. 675,328
5 Claims. (Cl. 260—671)



1. A process for producing alkylated aromatics which comprises reacting an aromatic with an olefin in the presence of an alkylating catalyst comprising silica, alumina and thoria.

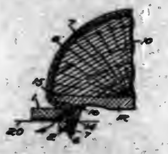
2,448,161
THREAD CONTROL FOR AUTOMATIC LOOMS
Richard G. Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application February 4, 1947, Serial No. 726,297
31 Claims. (Cl. 139—256)

7. In a weft replenishing loom, pneumatic thread remover means, pneumatic thread holder means, a selvage cutter, the loom having a thread normally extending from the selvage to the remover means and having a second thread normally extending from the selvage to the holder means, and a thread parter ineffective to cut either of said threads when the latter extend normally to their respective pneumatic means, said selvage cutter cutting said threads and matting said threads together so that due to pneumatic action of said remover means and holder means at least one of said threads occupies an abnormal position and extends from the remover means to the holder means, and said thread parter being effective to cut only the thread in abnormal position.

2,448,162
THERAPEUTIC EXERCISE TABLE
William L. Wettlaufer, Buffalo, N. Y.
Application October 24, 1947, Serial No. 781,927
6 Claims. (Cl. 128—36)

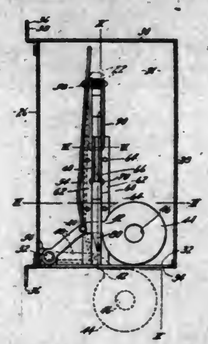
1. A therapeutic exercise table comprising a relatively stationary frame having upright legs and horizontal spaced side and end rails extending therebetween, an articulated top for said frame comprising a plurality of sections hinged together at adjacent ends, and pivots positioned between the side rails and one of the sections to provide a relatively fixed fulcrum about which said section may oscillate, said stationary frame further providing relatively movable fulcrum and supporting means about which other sections of the top may oscillate, the masses and moments of said sections being such that their resultant with respect to said fixed fulcrum urges said sections into horizontal alignment on said frame.

2,448,163
CLOSURE FOR COLLAPSIBLE TUBES
Meredith C. Wilson, Berkley, Mass.
Application July 30, 1945, Serial No. 607,680
1 Claim. (Cl. 222—497)



1. A cap for a dispensing tube comprising a base adapted to be secured to the tube, a neck projecting forwardly from said base and having a side portion formed with a discharge opening, the front end portion of the neck being internally thickened and formed with a longitudinally extending bore having a side extension of reduced width extending entirely through the said internally thickened front end portion of the neck, a plunger slidable longitudinally in said neck from a closed position in blocking relation to the discharge opening to an opened position forwardly of the discharge opening, a stem extending forwardly from said plunger with its front end portion slidably and rotatably passing through the bore and projecting from the front end of the neck and formed with a side finger at its front end of dimensions adapting it to pass through the side extension of the bore as the stem passes forwardly through the bore during application of the plunger to the neck, a spring about the stem within the neck with one end bearing against the internally thickened portion of the neck and its other end engaging the front end of the plunger and urging the plunger rearwardly to its closed position, and a keeper extending forwardly from the front end of said neck and formed with a laterally extending bill for engaging over the finger of the stem and releasably holding the stem and the plunger against forward movement.

2,448,164
PIN TOOTH GEARING
Frank J. Woditsch, St. Clair Shores, Mich., assignor of one-half to Raymond C. Patzer, Detroit, Mich.
Application September 25, 1944, Serial No. 555,680
1 Claim. (Cl. 74—416)

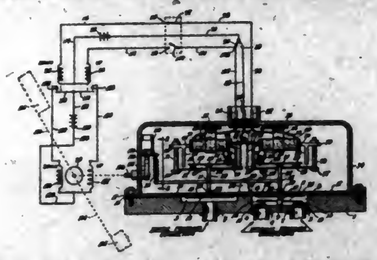


A gearing comprising a pair of gears, each having spur teeth around the periphery thereof and a pin tooth extension of each spur tooth projecting from one end thereof, one of said gears having a cylindrical portion radially within the pin tooth extensions thereof for rolling engagement with the pin teeth of the other gear and for holding the latter against binding engagement.

2,448,165
PREFORMED WELT
Wallace C. Wright, Brookfield, N. H., assignor to Wright-Batchelder Corporation, Boston, Mass., a corporation of Massachusetts
Application May 10, 1944, Serial No. 534,879
7 Claims. (Cl. 36—78)

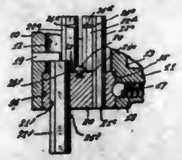
1. A shoe welt of the kind described, having a relatively narrow portion approximately at right angles with a relatively broader portion, the narrow portion being adapted to receive inseam stitching; and the broader portion to receive outsole stitching, the outer angle between said portions being bevelled, and the inner angle being curved.

2,448,166
CIRCUIT INTERRUPTER INDICATOR
Harold B. Adams, Mission, Kans.
Application December 18, 1944, Serial No. 568,735
4 Claims. (Cl. 200—167)



2. In a device of the character described a circuit breaker having a setting lever having an on-position, a trip-position, and a reset-position, a semaphore having a pivoted indicating arm, latch means to normally secure said indicating arm in position to indicate the on-position of the setting lever, means operable by said setting lever as it moves from the on-position to the trip-position to release said latch means whereby the indicating arm is permitted to drop by gravity, and means interconnecting said setting lever with said indicating arm whereby the indicating arm may be manually operated to move said setting lever to the reset-position and then to the on-position.

2,448,167
FLAP CONTROL DEVICE RESPONSIVE TO AIR SPEED
Albert E. Baak, Los Angeles, Calif., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application December 12, 1942, Serial No. 468,841
16 Claims. (Cl. 244—42)

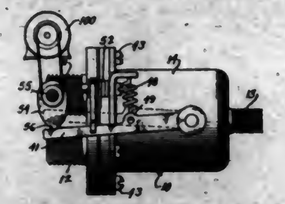


3. An aircraft automatic control device comprising, in combination, a first power flow control means, a second power flow control means, a

fixed pivot, a lever pivotally mounted on said pivot, said first and second control means being operably connected to said lever at opposite sides of said pivot so as to be actuated by said lever, spaced condition responsive means operably connected to said lever at opposite sides of said pivot, independent biasing means operably connected at

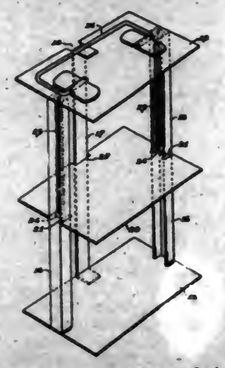
one end of said lever, and power means for adjusting said biasing means operated by said first and second power flow control means in such a manner as to vary the force exerted by said biasing means upon said lever so as to return said lever to a neutral position upon the actuation of said lever by said condition responsive means.

2,448,168
WRENCH KIT
Roland S. Banister, Kokomo, Ind.
Application July 9, 1945, Serial No. 603,825
3 Claims. (Cl. 81—71)



1. A wrench comprising a handle, a head carried on said handle and formed to provide a socket having a polygonal mouth enlarged with respect to the body of said socket to provide a stop shoulder at the base of said mouth, a tool carrier comprising a body enterable in said mouth, contoured to conform to the polygonal shape of said mouth, and seatable against said shoulder, a plurality of tools supported by said carrier and axially slidable with respect thereto, the axial length of each of said tools being materially greater than the axial length of said carrier, and an abutment located in said socket beyond said shoulder and in the path of one only of said tools, as said carrier is entered into said socket mouth, to engage and stop said one tool as said carrier is moved into said mouth, whereby said one tool is caused to project outwardly from said carrier beyond the limits of said socket mouth.

2,448,169
ZINC-TITANIUM-CADMIUM ALLOYS
Edward J. Boyle and Edmund A. Anderson, Palmerton, Pa., assignors to The New Jersey Zinc Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application May 17, 1944, Serial No. 536,017
7 Claims. (Cl. 75—178)



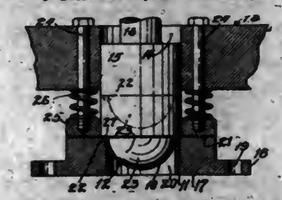
1. A zinc base alloy characterized by high creep resistance and containing from 0.05 to 0.5% titanium, from 0.1 to 1% cadmium, and the balance zinc with not more than 0.1% lead as an impurity.

2,448,170
MIXER VALVE AND CONTROL
Clyde A. Brown, Chicago, Ill., assignor to The Dole Valve Company, Chicago, Ill., a corporation of Illinois
Application March 10, 1944, Serial No. 525,850
3 Claims. (Cl. 236—12)

1. Fluid control means comprising a fluid mixing device having an adjustable temperature responsive means for automatically proportioning fluid of normally different temperatures to maintain the resulting mixed fluid at a predetermined temperature level, a movable adjusting arm for said temperature responsive means pivotally mounted at one end on an exterior wall of said mixing device, means biasing said arm toward one extreme pivotal position corresponding to a first temperature setting of said temperature responsive means, cam control means engaging the other end of the arm for shifting said arm to a second pivotal position corresponding to a second temperature setting of said temperature responsive means, and a latch mounted on said mixing device and optionally movable between latching and releasing positions relative to said arm, said latch engaging said arm at an intermediate point thereof when said arm is in said second position only, thereby retaining said arm in said second position irrespective of the subsequent action of said control means.

2,448,171
FIRST-AID KIT
Edmund M. Campbell, Pittsburgh, Pa., assignor to Mine Safety Appliances Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application January 26, 1945, Serial No. 574,761
3 Claims. (Cl. 224—50)

3. A first-aid kit comprising substantially parallel end members, a pair of oppositely disposed



side members spacing the end members apart and each being provided with a pair of spaced substantially parallel flanges, a plate between and substantially parallel to said end members and movable back and forth between them, the plate having tongue portions projecting between said spaced flanges, coil springs between said spaced flanges with their ends connected to said tongue portions and to one of said end members to clamp between said end member and plate a stack of first-aid boxes removable from between said side members, and a handle attached to one of the end plates for lifting the kit.

2,448,172
AIRCRAFT SERVICE POWER TRUCK
Kibbey W. Couse, Newark, N. J.
Application May 11, 1946, Serial No. 669,113
8 Claims. (Cl. 280—106)

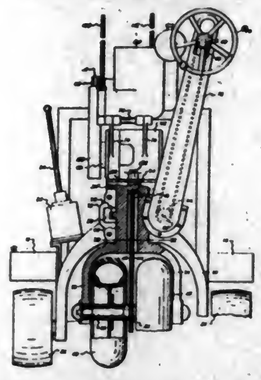
1. A service truck having a chassis comprising a centrally located beam composed of two parts having overlapping ends and joining the front and rear axles having the usual wheels, wheel fenders and carrying an engine and having means for detachably fastening together said overlapping ends, and a top structure positioned above said beam, the top structure including; an arcuately shaped hood extending between and joined to the front wheel fenders, a pair of members positioned one on each side of the truck in a plane above said beam and extending forwardly from the rear of the chassis to which they are fastened and being detachably fastened to said joined parts, and a member located between said pair of members but a substantial distance above them and fixed at one end to a support at the rear of the chassis and detachably fastened to said hood at the forward end of the chassis said three members acting to support hoods.

2,448,173
HOLLOW ARTICLE AND METHOD OF MAKING SAME
Frank V. Cowan, Chicago, Ill.
Application May 20, 1943, Serial No. 487,827
6 Claims. (Cl. 154—16)

5. The method of forming an article from a plurality of parts constructed from thin synthetic plastic sheet material which comprises the steps of forming outwardly extending flanges at the edges of the parts to be secured together, disposing surfaces of said flanges in contact with a solvent to provide a soft, plastic stratum on each of said surfaces, disposing the surfaces of the flanges so treated in face to face relationship to form the article, applying pressure to the flanges so disposed to extrude the softened material inwardly of the article to form a uni-

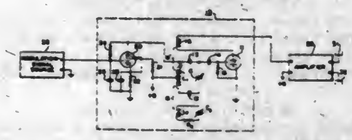
form bridging portion of the material across the marginal portions of the adjacent parts, evaporating the solvent from the extruded material and removing the outwardly extending flange from the article to afford a smooth exterior surface devoid of undulations.

2,448,174
BEATING AND MIXING DEVICE
Walter J. Duvall and Hancil Cordrey, Chula Vista, Calif.
Application February 18, 1946, Serial No. 648,265
6 Claims. (Cl. 259—144)



1. A beater comprising a shaft having a handle portion at one end, and a beater frame rotatably mounted upon the opposite end portion of said shaft, said beater frame comprising a plurality of beater blades which are peripherally arranged with their widths extending radially in respect to their axis of rotation, each of said blades having a notch cut into its outer edge portion, and a ring seated in said notches and by them alone prevented from separation from the beating frame, said ring serving as a wheel to cause said frame to rotate as the latter is given a gyratory movement with the ring in contact with the interior bottom surface of a container, said blades being arranged in pairs, the members of each pair being circumferentially spaced apart and being united at their ends by short runs of sheet metal carrying apertured ears which rotationally surround the aforesaid shaft.

2,448,175
EXTRACTION OF RUTIN
Roderick Koenig Eskew, Glenside, Pa., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application August 9, 1946, Serial No. 689,348
3 Claims. (Cl. 260—210)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

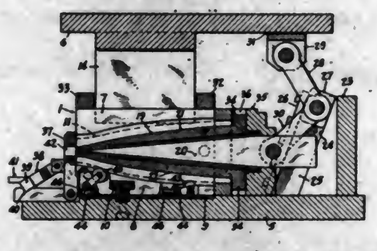


3. A process of removing a tarry mixture of plant fats and resins from a rutin-bearing plant extract containing rutin, the mixture of plant fats and resins and sufficient water at a pH below 7.0 to dissolve the rutin at boiling temperature, comprising boiling the extract to dissolve the rutin and to coalesce the tarry mixture, and mechanically removing the coalesced tarry mixture from the aqueous solution of the rutin.

2,448,176
MOTORIZED LIFT TRUCK
Truman B. Funk, Jackson, Mich., assignor, by mesne assignments, to Truck-Man, Inc., Jackson, Mich., a corporation of Michigan
Application August 7, 1942, Serial No. 453,943
7 Claims. (Cl. 180—13)

1. In a lift truck or the like, a motorized steering and driving column and mounting structure comprising a fixed frame, a full swivel frame supported in said first frame for movement about a vertical axis throughout substantially 360 degrees, a driven wheel mounted in said swivel frame, said swivel frame having a hollow vertical column concentric with said vertical axis, power means carried by the swivel frame above the vertical column, drive means for said wheel housed and extending through said column in the plane of the vertical axis, and steering means carried entirely by the truck, having operating parts carried by the fixed frame and operated parts on the column and housed in said fixed frame and steering operating means presented exteriorly to said column.

2,448,177
VARIABLE-FREQUENCY OSCILLATOR SYSTEM
Malcolm R. Gavin, Wembley, and Vincent A. Heathcote, Fulham, London, England, assignors, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application August 17, 1944, Serial No. 549,840
In Great Britain August 27, 1943
7 Claims. (Cl. 179—171.5)

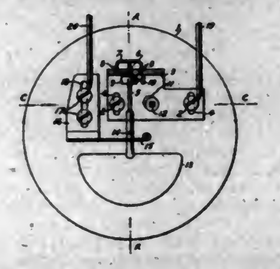


1. A variable-frequency oscillator system comprising, an oscillator having a frequency-determining circuit portion including reactance elements of both types connected in parallel to form a first circuit resonant at a predetermined frequency, modulating means for varying the effective value of the reactance of at least one of said types in said circuit to vary the frequency of said oscillator from said predetermined frequency, and means including a second parallel-resonant circuit having reactance elements of both types and a resistance element and coupled to said first resonant circuit with substantially critical coupling so as to modify the reactance of said first circuit greatly to increase its sensitivity to the modulation effects of said modulating means.

2,448,178
SANDING TOOL
Matthew P. Glowacki, Chicago, Ill.
Application October 18, 1945, Serial No. 623,049
2 Claims. (Cl. 51—187)

2. An abrading instrument comprising a bottom member having a rearward portion extending upwardly, a shank member securely attached to said bottom member intermediate the ends thereof, said shank member extending upwardly and rearwardly from the point of attachment to the bottom member and terminating in a handle member, said bottom member and shank member forming therebetween a chamber for the reception of a roll of strip abrasive material, an elongated spring member supported at one end by the handle member and biased toward and against the rear portion of the bottom member to secure a portion of the abrasive strip thereto, and a clamping means adjacent the forward end of the bottom member to clamp the free end of the strip of abrasive material thereto.

2,448,179
PRESS FOR PROPELLER BLADE SECTIONS
Frederick A. Gruetjen, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application August 14, 1944, Serial No. 549,466
6 Claims. (Cl. 113—48)

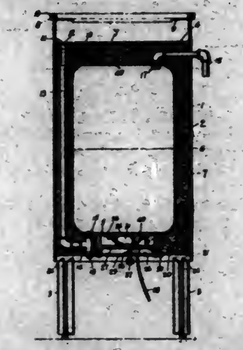


1. In a press, a pair of platens relatively movable toward and away from each other, a mandrel supported by one of said platens for holding a blank therebetween, said mandrel having at least two longitudinally tapered members disposed for enlargement in one direction by relative longitudinal movement therebetween, means operated by the closing of the platens toward one another to effect relative longitudinal movement between the tapered mandrel parts tending to expand the mandrel, said means comprising a cam surface guide member secured to the platen supporting the mandrel, and a slide block engaging said guide and linked to one of said mandrel parts and to the other platen.

2,448,180
MEDICINAL COMPOSITION
Fred J. Helgren, Waukegan, Ill., assignor to Abbott Laboratories, a corporation of Illinois
No Drawing. Application June 30, 1943, Serial No. 492,905
5 Claims. (Cl. 167—51.5)

4. A medicinal composition of putty-like consistency adapted to be inserted into post-extraction cavities in the gums, comprising: a vehicle comprising an inert gum adapted to form an adherent pasty mass with water and having a strong affinity for water, and the remainder a liquid humectant of the polyhydroxy type; said vehicle ingredients being present in the ratio of one part of gum to from about three and one-half parts of humectant to about seven parts of humectant, said vehicle being impregnated with a medicinal agent.

2,448,181
ELECTRIC ALARM DEVICE
Walter P. T. Holm, Buenos Aires, Argentina, assignor to Vibra Co. Soc. de Resp. Ltda., Buenos Aires, Argentina, a corporation of Argentina
Application November 5, 1945, Serial No. 626,628
In Argentina April 30, 1945
6 Claims. (Cl. 200—138)



1. A heat and vibration sensitive switch, comprising a non-conducting base, a pendulum support connected to said base, a pendulum rod carried by said support, a second support connected to said base, at least one thermoscopic rod connected to said second support and adjacent said pendulum rod, and a bolt carried by said pendulum rod extending transversely through the same and adjacent said thermoscopic rod.

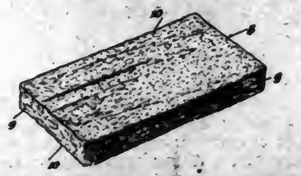
2,448,182
ELECTRICALLY HEATED TOOL
Zoltan Kalfen, Chicago, Ill.
Application July 3, 1946, Serial No. 681,185
7 Claims. (Cl. 219—26)

1. A soldering tip of high thermal conductivity and comprising an elongated fabricated element, a slot extending along a portion of the longitudinal length of said element and beyond the anterior end thereof, said slot being directed inwardly toward the center of said element and extending to a depth slightly beyond said center of said element.

2,448,183
DAIRY WATER HEATER
Ernst B. Koppel, Chicago, Ill., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
Application December 8, 1944, Serial No. 567,252
7 Claims. (Cl. 219—39)

1. In a water heater of the class described, an upright cylindrical casing having a reinforced upper edge, and a filling pan constituting a cover for the casing and having an upper rim supported on the edge of the casing, the pan being relatively shallow and having a splash guard therein, said splash guard being crimped around the rim of the pan to reinforce the same and the pan rim and reinforced casing edge cooperating to prevent denting of each other in service.

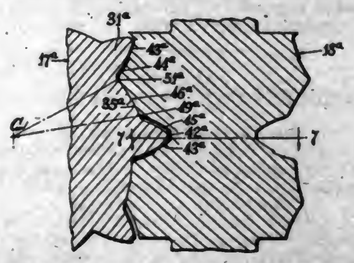
2,448,184
METHOD OF PREPARING OIL-SOLUBLE SULFONATES
Norman E. Lemmon, Hammond, Ind., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana
Application December 22, 1944, Serial No. 569,410
6 Claims. (Cl. 260—505)



1. The method of preparing a preferentially oil-soluble alkylated aromatic sulfonate comprising sulfonating an alkylated aromatic hydrocarbon having at least 18 carbon atoms in the alkyl group with sulfur trioxide, blowing the sulfonated alkylated aromatic hydrocarbon with a gas to remove SO_2 and SO_3, contacting the blown alkylated aromatic sulfonic acid with a small amount of an adsorption clay, whereby an alkylated aromatic sulfonic acid substantially free of sulfuric acid is obtained, and neutralizing said clay-contacted alkylated aromatic sulfonic acid whereby a preferentially oil-soluble alkylated aromatic sulfonate having a relatively low inorganic sulfate content is obtained.

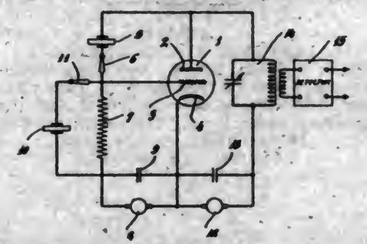
2,448,185
VITAMIN EXTRACTION FROM SUNFLOWER SEED
Ezra Levin, Champaign, Ill.
No Drawing. Original application October 27, 1944, Serial No. 560,719. Divided and this application May 17, 1945, Serial No. 594,362
2 Claims. (Cl. 167—81)

1. A process which comprises extracting oil substantially completely from comminuted sunflower seed with an organic fat solvent substantially immiscible with water, at a temperature below about 75 degrees centigrade, eliminating the last traces of solvent from the defatted seed



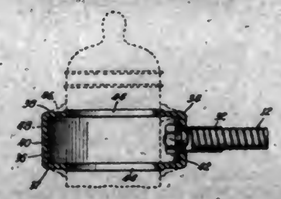
by means of high vacuum at low temperature, then extracting the defatted seed with water at a temperature below 75 degrees centigrade, then heating the solution thus obtained at a temperature and for a time to precipitate the protein, separating the aqueous solution from the solid material thus formed, and evaporating water therefrom to produce a concentrate comprising vitamins and other water soluble components of sunflower seed.

2,448,186
HEAT INSULATION
Lewis B. Miller, Ambler, and Willard R. Seipt, North Wales, Pa., assignors to Keasbey & Mattison Company, Ambler, Pa., a corporation of Pennsylvania
Application June 29, 1942, Serial No. 448,928
6 Claims. (Cl. 154—44)



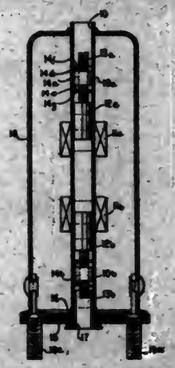
1. A heat insulating structure formed by a series of layers of similar composition, each layer comprising whole mineral fibers in proportion of the order of 25 to 40% by dry weight and tending to run flatwise of the structure and entangled with evenly distributed separate particles of powdery mineral material and evenly distributed separate powdery particles of a binder material of the group bentonite, clays and silicates of the order of 25 to 30% of the dry weight of the insulation and set in place adhering to the fibers and to the powdery material and to each other by surface contact between the individual fibers and individual particles leaving intervening voids to provide an open highly porous structure having a low density of the order of 8 to 15 lbs. per cu. ft. and capable of withstanding for at least six hours a temperature in degrees F. which is over 100 times the weight of a cu. ft. of the insulation.

2,448,187
WORM AND WHEEL UNIDIRECTIONAL TRANSMISSION GEARING
Porter S. Morgan, Westport, Conn., assignor to The Connecticut Variable Gear Corporation, New Haven, Conn.
Application February 10, 1947, Serial No. 727,496
9 Claims. (Cl. 74—458)



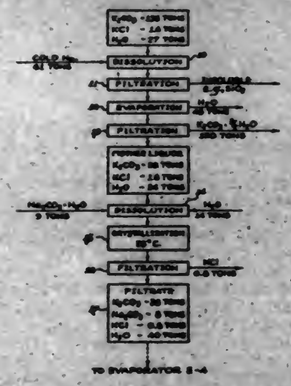
1. A worm and wheel gearing comprising a worm formed with a thread adapted to mesh with the teeth of a worm wheel, said worm thread being formed on one surface with a reversible helix angle portion adapted to engage with a tooth surface when the wheel is rotated on its axis relatively to the worm in one rotative direction, said worm thread also being formed with a top land adapted to engage and interlock with the tooth bottom spaces when the wheel is rotated relatively to the worm in the opposite rotative direction, the worm thread and the wheel teeth being relieved with respect to each other at the remaining portions thereof to insure the stated engagements in response to motion in said rotative directions.

2,448,188
CRYSTAL BEAT-FREQUENCY OSCILLATOR
Montford Merrison, Upper Montclair, N. J.
Application July 19, 1945, Serial No. 605,885
9 Claims. (Cl. 250—36)



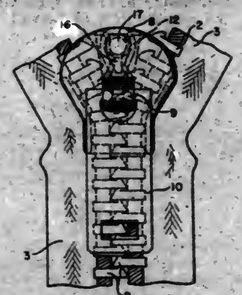
9. A beat-frequency oscillator comprising a single space discharge electronic tube having electrodes including a cathode, a grid and an anode, in combination a piezo-electric oscillatory crystal circuit coupled to two of said electrodes requiring feed back reactively inductive to the frequency thereof to maintain oscillation therein under operation, a second piezo-electric oscillatory crystal circuit coupled to two of said electrodes requiring feed back reactively capacitive to the frequency thereof to maintain oscillation therein under operation, a single capacitive-inductive oscillatory circuit coupled to two of said electrodes and providing reactively inductive feed back to first said crystal circuit and reactively capacitive feed back to second said crystal circuit, and a source of electrical energy connected to said capacitive-inductive oscillatory circuit providing feed back energy to said crystal circuits.

2,448,189
NURSING BOTTLE HOLDER
Carl W. Mott, La Grange, Ill., assignor to Frances M. Muench, Wilmette, Ill.
Application February 15, 1946, Serial No. 647,847
8 Claims. (Cl. 248—104)



7. In a nursing bottle holder, an elastic planar membrane having a bottle-receiving and gripping opening in radially-spaced relation from the perimeter of said membrane, and reenforcing means for said membrane extending about such perimeter.

2,448,190
MAGNETIC-CORE INDUCTANCE DEVICE
Anthony F. Olesky, Chicago, Ill., assignor to Belmont Radio Corporation, a corporation of Illinois
Application July 2, 1945, Serial No. 602,891
2 Claims. (Cl. 171—242)



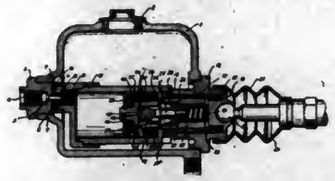
1. An inductance device comprising a tubular form of insulation material having a positioning aperture therein, an inductance winding disposed on said form and spaced from said aperture, a core of magnetic material adapted to be positioned within said form and having a supporting stem thereon, and a resilient member including a portion adapted to receive said supporting stem of said core and a projecting portion, said member being adapted to be compressed and slid in said form while in assembled relation with said core to a position in which said projection on said member engages said positioning aperture in said form to approximately position said core with respect to said winding, said supporting stem of said core being adjustable with respect to said member to accurately position said core with respect to said winding.

2,448,191
SEPARATION OF CHLORIDES FROM POTASSIUM CARBONATE
Robert D. Pike, Pittsburgh, Pa.
Application March 22, 1944, Serial No. 527,607
7 Claims. (Cl. 23—63)

1. That method of separating potassium chloride from carbonate which comprises providing a solution of the crude carbonate, evaporating the solution to crystallize out potassium carbonate sesquihydrate, recovering said sesquihydrate, dissolving sodium carbonate in the resultant mother liquor in such an amount that on cooling potassium chloride crystallizes from the solution and the double salt $NaKCO_3$ formed remains in solution, and recovering the crystallized potassium chloride.

2,448,192
SLIDER FOR SLIDE FASTENERS
Noel J. Poux, Meadville, Pa., assignor to Talon, Inc., a corporation of Pennsylvania
Application November 2, 1944, Serial No. 561,513
16 Claims. (Cl. 24—205)

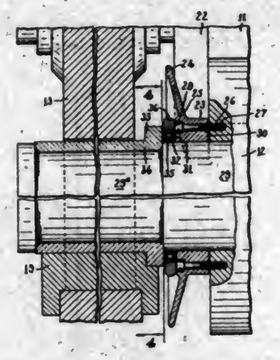
1. In a slider for slide fasteners of the class described, a pair of overlying parallel wings, means connecting said wings together in spaced relation so as to provide a fastener element receiving channel therebetween, comprising an inwardly projecting neck portion carried by one of said wings having a socket arranged therein, an inwardly projecting stud-like portion carried by the other of said wings conforming to and disposed in said socket, and means engaging the outer end of said stud-like portion for holding the same securely in said socket.



2,448,193
SPARK PLUG
Delbert E. Replogle, Ridgewood, N. J., assignor to Global Spark Plug Co., Paterson, N. J., a corporation of New Jersey
Application January 25, 1944, Serial No. 519,670
1 Claim. (Cl. 123—169)

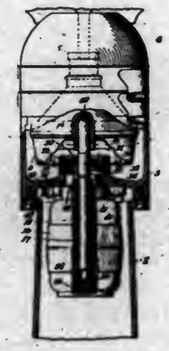
A shielded spark plug comprising a tubular metal shell having one end portion provided with a seat for an insulator and the other end portion of cylindrical form with an intermediate central portion bulged outward to larger diameter in globular formation, a tubular insulator on said seat, an electrode passing through said insulator

and connected at its inner end to a head member extending into said globular formation and having an intermediate narrow neck portion, and a molded insulation filling said globular formation and said shell behind said insulator and around said neck portion of said head to retain said insulator against its seat and lock said head in place in said globular formation and retain the parts against relative axial movement in either direction.



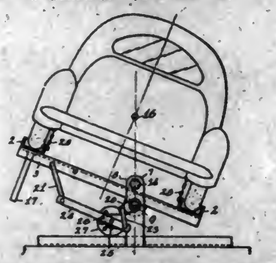
2,448,194
COMPOUNDING MASTER CYLINDER
Steve Schnell, Kirkwood, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application January 4, 1945, Serial No. 571,274
9 Claims. (Cl. 60—54.6)

1. In a compounding master cylinder, a casing; a cylinder mounted in said casing for limited reciprocable movement; a first piston in said cylinder; means forming an outlet passage for said cylinder; a reservoir in said casing; means comprising valve means associated with said outlet passage and controlled by the reciprocable movement of said cylinder for controlling communication between said reservoir, said cylinder and said outlet passage; means for moving said cylinder to close said valve means when said first piston is moved forwardly; a second piston of smaller cross-sectional area than said first piston, said pistons associated for simultaneous movement at all times; means for moving said pistons; valve means between said first and second pistons to allow a rapid flow of fluid on one side of said first piston to the other side thereof on the return stroke of said second piston; and means comprising valve means carried by said second piston operative upon the development of a predetermined pressure by said first piston for rendering said first piston ineffective to develop pressure and permitting additional pressure to be developed by said second piston on the fluid ahead of said first piston.



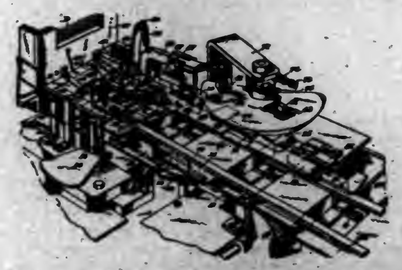
2,448,195
CANE MILL
Carl F. Schnuck, New Haven, Conn., assignor to Farrel-Birmingham Company, Incorporated, Ansonia, Conn., a corporation of Connecticut
Application January 26, 1945, Serial No. 574,741
12 Claims. (Cl. 100—47)

1. In a cane mill, the combination of a top roll having an outstanding flange at the end for controlling the flow of juice, a lower roll coacting with the top roll and carrying at the end a guard member presenting a juice trough in line with the flange of the top roll, said lower roll having an extended shaft with a journal portion, a bearing having a liner embracing said journal portion and spaced laterally from said guard member to provide a receiving space for a sealing member, an annular elastic sealing member in said space having an inner surface in engagement with a portion of the shaft surface, and a pressure ring exerting radially inward pressure on said sealing member whereby it is pressed laterally against



the liner and against the associated guard member.

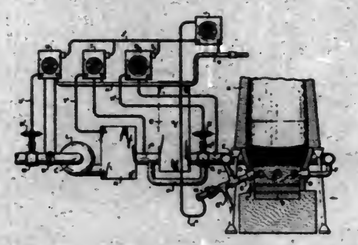
2,448,196
CREAM SEPARATOR DRIVE
Parke B. Shee, Oak Park, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application April 13, 1944, Serial No. 530,916
1 Claim. (Cl. 233—24)



In a centrifugal separator including a bowl, a spindle depending from said bowl, a motor having a hollow vertical shaft with a bearing of relatively short axial extent for the lower end of said spindle, said bearing permitting transaxial movement of said spindle relative to said shaft, radially yieldable means associated with said spindle and remote from the lower end of said spindle and tending to maintain said spindle coaxial with said shaft, said shaft having a coaxial projection, a thrust bearing between said projection and spindle and on which the bottom of said spindle rests, and a clutch spring embracing and bridging said projection and spindle and operative to transmit a one-way drive from said shaft to said spindle while permitting said spindle to rotate about an axis other than the axis of said shaft.

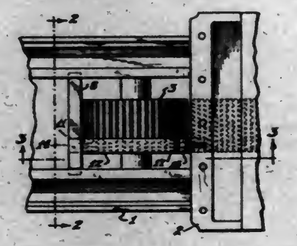
2,448,197
TILTABLE TRACK FOR MOTOR VEHICLES OR THE LIKE
Carl W. Story, San Francisco, Calif.
Substituted for abandoned application Serial No. 212,967, June 10, 1938. This application September 29, 1945, Serial No. 620,054
9 Claims. (Cl. 214—1)

1. In combination, a track for a motor vehicle or the like, spaced cross-pieces connecting the rails of the track, a pair of alined shafts, means for tiltably supporting the cross-pieces on the shafts including a sprocket wheel and coacting means on a cross-piece in engagement therewith, an arm associated with the sprocket, a link pivoted to a cross-member, a second link pivoted to the arm, and a lever having a fixed fulcrum and having its ends connected to the free ends of the links for turning the sprocket wheel when the track is tilted.



2,448,198
MACHINE FOR MAKING CONTAINERS
Charles B. Tennent, Sr., South Richmond, Va., assignor, by mesne assignments, to National Folding Box Company, Incorporated, a corporation of Connecticut
Application August 26, 1943, Serial No. 500,047
12 Claims. (Cl. 93—49)

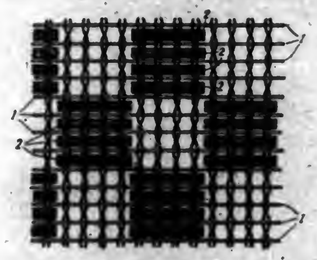
1. In a carton forming machine, the combination of means for advancing a carton blank through the machine; a stationary member frictionally engaging a hinged portion of said blank thereby causing misalignment; and a movable member frictionally engaging said hinged portion for correcting the misalignment caused by the stationary member, the movable member having a linear speed at the point of engagement with the blank greater than the rate of advance of said blank.



5. In a machine for the folding of carton blanks expanded into a hollow structure, said blanks having a cover portion for closing the expanded blank at one end and a tab protruding from the cover portion, the tab being adapted to be folded about a score line into adhesive contact with the end wall of said cover portion, the combination of a conveyor for advancing said blank; a sweep for folding said tab about said score line; and a reciprocable tab engaging member before said sweep for engaging and moving said tab at right angles to the direction of advance of said blank.

2,448,199
CONTROL SYSTEM FOR BLAST FURNACE AIR
Joseph P. Vollrath, North Wales, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 11, 1944, Serial No. 544,405
5 Claims. (Cl. 266—30)

1. In a blast furnace including tuyères and means for supplying blast air to the furnace through said tuyères, a radiation pyrometer means comprising a lens system receiving heat rays from the fusion zone of the furnace through one of said tuyères and focused on a portion of the fusion zone in front of said tuyère and a thermopile to which said heat rays are passed by said lens system, a measuring and control instrument connected to said pyrometer means and means automatically actuated by said instrument to modify a furnace heating characteristic of the blast air on variations in the amount of heat rays received by said pyrometer means.



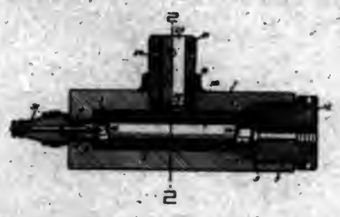
2,448,200
PLANER
John M. Walter, Cincinnati, Ohio, assignor to The G. A. Gray Company, Cincinnati, Ohio, a corporation of Ohio
Application May 31, 1946, Serial No. 673,692
7 Claims. (Cl. 90—58)

1. A planer table restorer for a planer having a bed provided with a bull wheel and carrying a table provided with a rack arranged to mesh with said bull wheel comprising a guide element arranged to slidably engage and be guided by elements on the bed, a rack bar element engaging said guide element, said rack bar element having

teeth corresponding to those on the table rack and having means for engaging it with the table in such position that its teeth form a continuation of the table rack teeth.

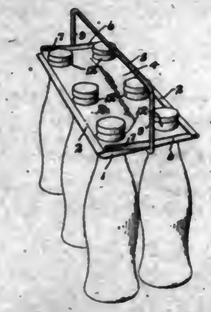
2,448,201
METHOD OF PRODUCING FABRIC HAVING PICK-AND-PICK PATTERN EFFECTS
Robert Whewell, New Bedford, Mass., assignor to United Merchants & Manufacturers, Inc., Wilmington, Del., a corporation of Delaware
Application November 9, 1944, Serial No. 562,765
3 Claims. (Cl. 28—72)

3. The method of producing pick-and-pick pattern effects which comprises weaving two leno weave cloths simultaneously, utilizing shuttles carrying two types of filling, first passing a shuttle in one direction in one of the cloths and on the return stroke in the other cloth, thereafter passing another shuttle, carrying filling of a different type, likewise in one of the cloths in one direction and in the other cloth in the return direction, and slitting the common selvages of the two cloths to produce two cloths each exhibiting a pick-and-pick effect.



2,448,202
NEST STRUCTURE
William Russell Whitfield, Ames, Iowa
Application March 9, 1945, Serial No. 581,844
4 Claims. (Cl. 119—48)

1. In a nest structure, a removable platform adapted to be placed in a nest to support a laying-bird, including a platform means having a low spot with a hole therein through which the egg may pass and supporting elements for the platform means, said platform means having pairs of bayonet type slots, and said supporting elements each having parts normally biased to spread apart for entering said slots and engaging the platform.

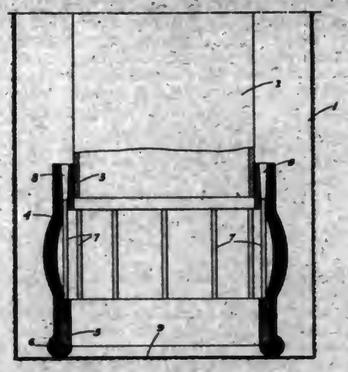


2,448,203
POWDER TESTER
Alfred Africano, Cumberland, Md., assignor to the United States of America as represented by the Secretary of War
Application January 18, 1946. Serial No. 641,904
5 Claims. (Cl. 73—35)

1. In a propellent powder tester of the type comprising an elongated hollow housing having at one end an ignition means, at the other end a force measuring means and a rupturable closure medially of the longitudinal extent of the housing, the improvement comprising a hollow

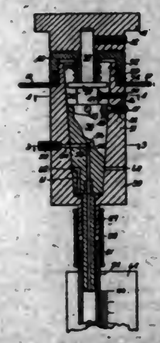
elongated specimen holder received in the housing, its exterior defining, with the interior of the housing free longitudinal passages for the transmission of gases from the ends of the holder to the said closure.

2,448,204
BOTTLE CARRIER
Chester W. Anderson, Grand Haven, Mich.
Application September 9, 1946, Serial No. 695,640
1 Claim. (Cl. 224—45)



A bottle carrier comprising two superimposed plates slidably mounted relative to each other, each plate having bottle neck receiving openings adapted to be brought into alinement with each other, a carrier bail having parallel portions pivoted to the lower plate and cams formed on the respective ends of the upper plate, said cams being engageable with the parallel portions of the bail and shaped to slide the upper plate relative to the lower plate to position to aline the bottle receiving openings in respective plates when the bail is in lower non-carrying position and to move the openings out of full alinement when the bail is raised to carrying position.

2,448,205
WATER SHUTOFF FOR OIL WELLS
Charles Edwin Ashton, Stockton, Calif.
Application August 16, 1944, Serial No. 549,725
4 Claims. (Cl. 166—10)



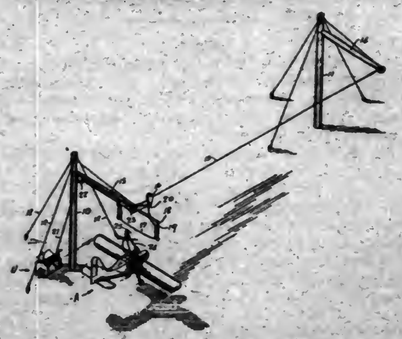
1. A water sealing device for a well-bore having a casing therein of smaller diameter than the bore, said device comprising a collar adapted to be secured on the lower end of the casing, a band of flexible resilient sealing material depending

from the collar and formed with an initial outward bulge, a rigid ring in the band at its lower

end, and a base bead formed with the band and underlapping the ring.

2,448,206
GAS ANALYZER
George B. Bailey, Long Beach, Ind., assignor to The Hays Corporation, Michigan City, Ind., a corporation of Indiana
Application December 29, 1943, Serial No. 516,011
12 Claims. (Cl. 23—254)

11. In a gas analyzer, the combination with a burette, gas supplying means and gas absorbing means, of a chambered valve housing having a plurality of relatively angularly disposed ports connected respectively with said burette and gas supplying and absorbing means, a valve element rotatable in said chamber and having a pair of passages therein each selectively registerable with certain of said ports, a conduit carried by said valve element in communication with one passage and extending into said burette with a capillary clearance, the other passage communicating with said burette through the clearance around said conduit, said valve element being rotatable step by step from a starting position through a predetermined angle and then reversely to starting position successively register said passages and ports during a complete cycle of operation of said analyzer, and interengageable stop members on said valve housing and valve element to limit rotation of said valve element in each direction to the limits required in said cycle of operation.



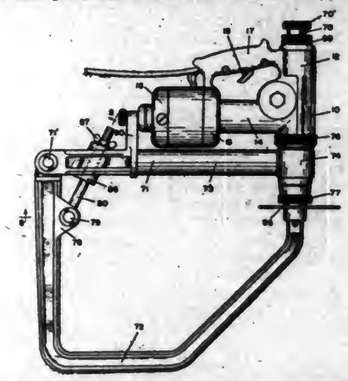
2,448,207
GLYCERIDE OXIDATION INHIBITED BY 5-PENTADECYL RESORCINOL
Harry M. Barnes, Summit, N. J., assignor to General Foods Corporation, Hoboken, N. J., a corporation of Delaware
No Drawing. Application October 17, 1944, Serial No. 559,135
12 Claims. (Cl. 99—153)

8. A composition stabilized against oxidative deterioration comprising a material containing a glyceride of an unsaturated higher fatty acid and a small amount of 5-pentadecyl resorcinol present therein as a stabilizer.

2,448,208
PROCESS OF STABILIZING ORGANIC MATERIALS AND PRODUCT OF SAID PROCESS
Harry M. Barnes, Florham Park, N. J., assignor to General Foods Corporation, Hoboken, N. J., a corporation of Delaware
No Drawing. Original application October 17, 1944, Serial No. 559,135. Divided and this application November 21, 1947, Serial No. 787,482
11 Claims. (Cl. 99—150)

1. A process for stabilizing a material containing an essential oil against oxidative deterioration, which comprises adding thereto a small effective amount of 5-pentadecyl resorcinol.

2,448,209
ARRESTING UNIT FOR AIRCRAFT LANDING SYSTEM
Taylor M. Boyer and Clarence R. Gottschall, Wilmington, Del., assignors to All American Aviation, Inc., Wilmington, Del., a corporation of Delaware
Application January 23, 1946, Serial No. 642,808
6 Claims. (Cl. 244—110)

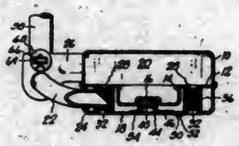


1. In an aircraft landing system, an arresting unit comprising a shaft, a drum drivably mounted on said shaft, a line on said drum, braking devices associated with said drum, a hydraulic system for operating said braking devices and including a main control tank, a threaded sleeve on said shaft, and means meshing with said threaded sleeve and operatively associated with said control tank to render said hydraulic system effective after a predetermined number of revolutions of said shaft.

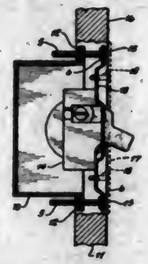
2,448,210
ELECTRIC HAMMER
Curtis Brown, Martinton, and William F. Parke, Chicago, Ill.
Application October 17, 1946, Serial No. 703,790
4 Claims. (Cl. 153—32)

1. A portable electric hammer comprising, in combination, a generally C-shaped frame includ-

ing upper and lower jaw elements, an anvil on the free end of the lower jaw element, a hammer, a hammer motor, a driving connection between said hammer and hammer motor, and a generally T-shaped casing therefor, and including head and staff portions, the hammer having a working stroke across the gap of the C-shaped frame towards the anvil and being enclosed by the head portion, the motor and at least a portion of the driving connection being enclosed in said staff portion, means pivotally mounting said head portion on the free end of said upper jaw element for rotation about its longitudinal axis, the staff portion normally extending along the upper side of said upper jaw element a handle extending between said head and staff portions, and means releasably connecting the free end of said staff portion to said upper jaw element.



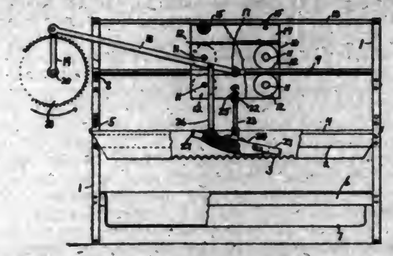
2,448,211
ALKYLATION OF THIOPHENE
Philip D. Caesar, Wenonah, and Alexander N. Sachanen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application February 10, 1944, Serial No. 521,866
32 Claims. (Cl. 260—329)



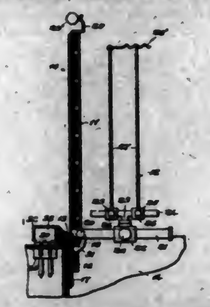
1. The process for synthesizing the homologues of thiophene which includes contacting thiophene having at least one nuclear hydrogen replaced by an alkyl group with an olefinic hydrocarbon for not more than about one hour in the presence of catalytic material selected from the group consisting of activated natural clays and synthetic adsorbent composites of silica and at least one amphoteric metal oxide at temperatures of about 140° to about 400° C., at pressures of atmospheric to 1000 pounds per square inch, the temperature being higher for less reactive hydrocarbons than for more reactive hydrocarbons and the higher the temperature the lower the pressure and the shorter the reaction time.

2,448,212
FLOATING FILTER
Clarence L. Dewey, Elkhart, Ind., assignor to Charles E. Taylor and Harry E. Lerner, both of Elkhart, Ind., copartners, doing business as Taylor Sales Engineering Company, Elkhart, Ind.
Application July 21, 1944, Serial No. 545,950
7 Claims. (Cl. 210—97)

7. A floating filter comprising a housing having an annular wall, opposed end walls and a transverse partition defining a sealed upper float chamber and a lower filter chamber, said annular wall having apertures open at said filter chamber, a substantially annular filter element positioned within and spanning said filter chamber, an outlet conduit communicating with the space enclosed by said filter element, the housing end wall defining the outer end of said filter chamber having an opening therein positioned inwardly of said filter element, a plate pivotally carried by said last named end wall and normally sealing said opening, and a coil spring positioned within and spanning said filter chamber, said spring bearing at its ends against said partition and said plate to normally urge said plate to closed position.



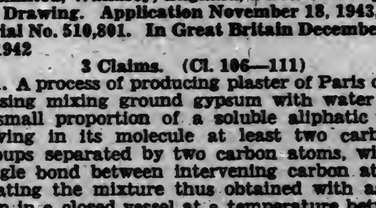
2,448,213
LOCKING SCREW
Everett Ray Doonan, Wichita, Kans.
Application February 23, 1946, Serial No. 649,693
3 Claims. (Cl. 85—9)



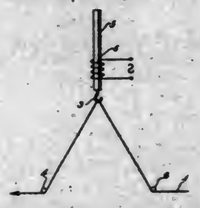
1. In association with an article having an elongated screw opening, a locking screw comprising in combination, a threaded shank and an elongated head thereon, said head being removably receivable in said opening and formed in the opposite ends and side portions thereof with kerfs, said kerfs defining keeper grooves disposed medially the thickness of said head, the inner ends of said grooves being obliquely cut and constituting relatively parallel wedge-shaped portions in said head at the diametrically opposed sides of said shank, said grooves engaging the edges of said opening and said wedge-shaped portions co-acting in a turn-button manner with said edges to lock said head in said opening when said screw assumes a predetermined angular position.

2,448,214
GRANULATING MACHINE
Arthur T. Gardner, Kansas City, Mo.
Application September 6, 1947, Serial No. 772,544
1 Claim. (Cl. 107—7)

In a granulator, a frame, a pair of guide tracks carried by the frame, a carriage mounted to reciprocate on said tracks, a screen below the carriage, an arcuate pressure block pivoted to the carriage and in contact with the screen, a driven crank, a connecting rod between the crank and carriage to reciprocate the latter, and a link connecting the connecting rod and pressure block to oscillate the pressure block on its carriage pivot as said block travels over the screen.



2,448,215
ELECTRICAL COOKING DEVICE
Edgar J. George, Jacksonville, Fla.
Application March 13, 1945, Serial No. 582,437
3 Claims. (Cl. 99—339)

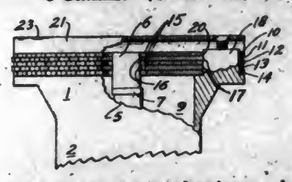


1. An electrical cooking device comprising an electrical heating element, and a grill mounted at one side thereof, said grill comprising a supporting bar mounted fixedly with respect to said heating element and extending at right angles thereto, a sleeve mounted non-rotatably on said bar for sliding movement therealong, a pivot bar extending at right angles to said sleeve and pivoted thereto for axial rotation, a T-head bar carried by said pivot bar, a pair of sleeves mounted non-rotatably on said T-head bar for sliding adjustments therealong toward and away from one another, bars carried by said pair of said sleeves and extending at right angles to said T-head bar and to the pivotal axis of said pivot bar, and food clamping grill elements carried by said last mentioned bars.

2,448,216
SELF-DUMPING WHEELBARROW
John L. Gokey, Columbus, Ohio
Application June 4, 1947, Serial No. 752,408
1 Claim. (Cl. 298—3)

A self-dumping wheelbarrow comprising a substantially V-shaped frame terminating at its rearward end in a pair of transversely spaced handle members, a transversely disposed axle carried by said frame substantially at its forward end, a ground wheel rotatably carried by said axle, a load-receiving body disposed longitudinally above said frame and pivotally secured thereto substantially at the ends of said axle for limited swinging movement in a longitudinal plane with respect to the frame, a brake shoe pivotally secured to said body at its underside and engageable with the peripheral surface of said wheel, a link pivotally secured to the underside of said body in rearwardly spaced relation to said brake shoe, an arm joining said link with said brake shoe, a spring disposed between said body and said link for normally urging said brake shoe into engagement with the peripheral surface of said wheel, a latch carried by said frame and engageable with said link for holding the body to said frame against pivotal movement and for holding said brake shoe out of engagement with said wheel, and a manually operable lever disposed on one of said handle members for disengaging said latch from said link.

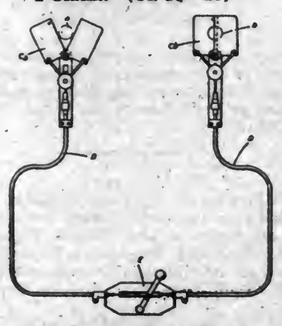
2,448,217
THREAD GUIDE
Victor E. Gonsalves, Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C., a corporation of Delaware
Application September 30, 1946, Serial No. 700,233
In Germany February 12, 1941
Section 1, Public Law 690, August 8, 1946
Patent expires February 12, 1961
7 Claims. (Cl. 242—157)



1. A thread guide assembly comprising an oscillatable thread guiding element contacting a thread, and means for oscillating said element in a plane at an angle to the thread path at a rate of 10^4 cycles.

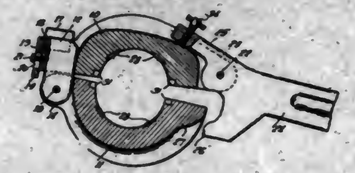
2,448,218
MANUFACTURE OF PLASTER OF PARIS
Cuthbert Leslie Haddon, Newark-on-Trent, England, assignor to The British Plaster Board Limited, Wallasey, England, a British company
No Drawing. Application November 18, 1943, Serial No. 510,801. In Great Britain December 17, 1942
3 Claims. (Cl. 106—111)

1. A process of producing plaster of Paris comprising mixing ground gypsum with water and a small proportion of a soluble aliphatic acid having in its molecule at least two carboxyl groups separated by two carbon atoms, with a single bond between intervening carbon atoms, heating the mixture thus obtained with agitation in a closed vessel at a temperature between 125° C. and 160° C. until the gypsum is converted



into plaster of Paris consisting mainly of hemihydrate crystals of squat shape, the proportion of water being sufficient to maintain a liquid phase throughout the treatment.

2,448,219
SHEARER
Richard V. Hirsch, South Gate, Calif.
Application November 22, 1944, Serial No. 564,612
9 Claims. (Cl. 30—43)

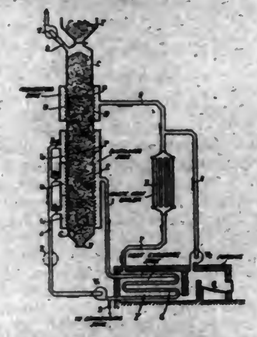


1. In a shearing device having a head and handle-like means to support it, a blade unit in the head having a plurality of laminations with one edge of each lamination adapted to be glided along a surface to be sheared, cutting edges extending from the said one edge inwardly of each lamination to present a large number of cutting edges along the length of the unit, alternate laminations having a fixed relation with the head and the other laminations having means for their reciprocation, said means to support the head having a motor with an eccentric pin extending from a shaft thereof which passes through all the blades, the reciprocable blades each having a perforation with perimetrical walls that engage the pin only on two opposed points thereof, and the fixed blades each having a perforation that is provided with walls that are well spaced from the pin.

2,448,220
CHANGE-OVER SYSTEM FOR CINEMATOGRAPHIC PROJECTORS
Maurice Jenkins, London, England
Application July 25, 1944, Serial No. 546,499
In Great Britain July 1, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires July 1, 1963
1 Claim. (Cl. 88—16)

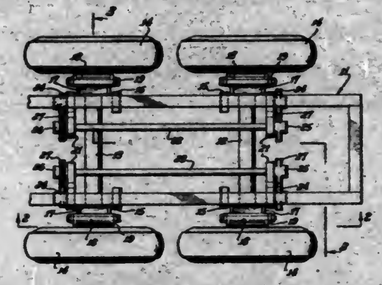
In combination with a pair of projecting machines, a pair of shutter devices, operating mechanism and a universally flexible transmission means connecting each shutter device to said operating mechanism; said operating mechanism comprising a sliding bar connected to each of said flexible transmission means and means for shifting said sliding bar; each shutter device comprising a pair of plates mounted for angular movement about a common pivot and extending laterally and vertically from said common pivot whereby gravity tends to move said plates to open position, a sliding block mounted for movement in a line passing through said common pivot and connected to one of said flexible transmission means and a pair of links each connecting a pivot on said sliding block with an independent pivot on one of said plates; the pivots on said sliding block having a common axis in the line of movement of said block and the independent pivots on said plates being laterally spaced apart from the common pivot thereof, whereby said operating mechanism may be positioned independently of said shutter devices within the range of said flexible transmission means and whereby movement of said sliding bar simultaneously opens one of said shutter devices and closes the other through movement of said flexible transmission means, said sliding blocks and said links.

2,448,221
LINKED JAW PIPE WRENCH WITH ADJUSTABLE LINK PIVOT
Oscar V. Jones, Dallas, Tex.
Application March 12, 1945, Serial No. 582,231
2 Claims. (Cl. 81—67)



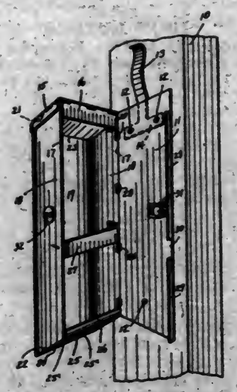
1. A pipe wrench comprising a pair of semicircular pipe engaging jaws, one of which has a handle pivoted to one end thereof and a housing formed on its opposite end, a fulcrum block slidable in said housing having a head on one end and a transverse opening in its opposite end, the other of said jaws having parallel ears between which said block is received, a pivot bolt extending through said ears and the opening in said block, a substantially U-shaped yoke whose parallel arms are receivable by said block to be disposed between the head of the latter and said jaw housing, a tail on said yoke at right angles thereto adapted to bear against said housing and having an elongated slot therein, a bolt extending through said slot into said jaw housing to secure said yoke and to hold said jaws in adjusted pivotal relationship through the medium of said fulcrum block.

2,448,222
GLOBAL WHEEL
Charles Y. Jones, Carlisle, Pa.
Application May 26, 1947, Serial No. 750,489
2 Claims. (Cl. 301—5)



1. A wheel global in form, comprising connected hubs, each hub including a body portion extended taperingly in a direction away from the other hub, and inflatable tires mounted on the hubs, each tire being substantially semi-spherical in outer conformation, and being interiorly formed conformably to the tapered surface of the body portion of the hub on which it is mounted.

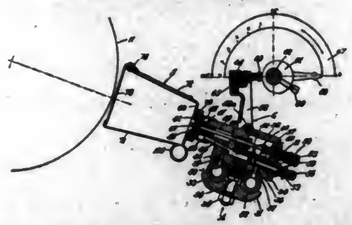
2,448,223
LOW-TEMPERATURE DISTILLATION OF FUELS BY DIRECT CONTACT WITH REHEATED DISTILLATE VAPORS
Henri Lantz, Paris, France, assignor to Societe Chimique de la Grande Paroisse (Azote & Produits Chimiques), Paris, France
Application June 23, 1937, Serial No. 149,982
In France June 30, 1936
Section 3, Public Law 690, August 8, 1946
Patent expires June 30, 1956
3 Claims. (Cl. 202—16)



1. A continuous process of destructively distilling carbonaceous material at a low temperature comprising: feeding the carbonaceous material through an unobstructed vertical column, first downwardly into and through a preheating zone therein, thence downwardly into and through a distilling zone therein; withdrawing distillation products from one side of said distilling zone; passing a portion of said distillation products to a condensing zone; recycling the remaining portion of said distillation products through a heat exchange zone to reheat them and introducing said reheated distillation products into the other side of said distillation zone in direct contact with the material to be distilled; burning a fuel; passing the hot products of combustion of said fuel into said heat exchange zone in heat exchange relation with the recycled distillation products; discharging the combustion products from said heat exchange zone in heat exchange relation with a cooling medium to further cool the combustion products; passing a portion of the so-cooled combustion products into the preheating zone into direct contact with the carbonaceous material to preheat the same; and recycling another portion of the so-cooled combustion products to the heat exchange zone, mixing the same with fresh hot combustion products prior to introduction of the latter into the heat exchange zone; and adjusting the flow of the reheated distillation products through the distillation zone and the flow of the combustion products through the preheating zone so as to maintain substantially the same pressure in both said zones, whereby any passage of gas from one zone to the other is prevented and the whole of the heat used in the process is adjusted by adjusting the recycled part of the flue gases through the heat exchanger.

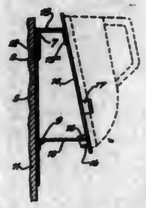
2,448,224
SPRING SUSPENSION FOR VEHICLES
John J. Low, Los Angeles, Calif.
Application March 20, 1946, Serial No. 655,650
13 Claims. (Cl. 280—104.5)

1. A spring suspension for a vehicle having an axle and a frame at least partly supported by said axle, comprising: torsion springs carried by said frame longitudinally of said vehicle and rotatable upon their longitudinal axes; levers carried by said frame pivotable upon axes parallel to the axes of said torsion springs; perches on said axle; shackles connecting said perches with the free ends of said levers; flexible means so connecting said levers to one end of said springs as to be alternately tensed and relaxed in response to movements of said frame in opposite directions relative to said axle, for producing torsional movement in said springs when tensed; and means flexibly connected with the other end of said springs resistant to said torsional movement.



2,448,225
MAILBOX
Richard Malloy, Columbus, Ind.
Application February 13, 1946, Serial No. 647,242
2 Claims. (Cl. 232—17)

1. A mail box including a back member and an open box member side hinged together, the back of the box member being open and closable by the back member and the box member having a mail receiving upper open mouth, a cover hingedly connected to one of the said members and adapted to close the mouth when the box is closed, the box member being of closed bottom type, and means connected at opposite ends to the



box member sides adjacent the rear edges thereof and intermediate the top and bottom thereof, the bottom being inclined upwardly and rearwardly toward the back.

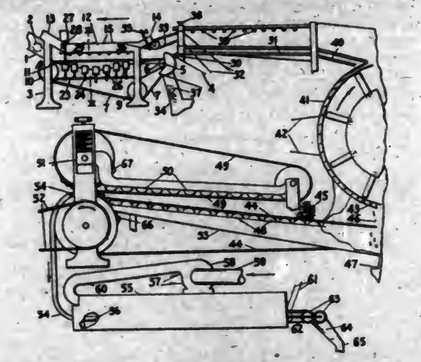
2,448,226
MOISTENING DEVICE FOR OFFSET PRESSES
Horace Edwin Marsden, Snaresbrook, London, England
Application January 15, 1945, Serial No. 572,915
In Great Britain February 4, 1944
9 Claims. (Cl. 101—147)

1. In a lithographic printing press, means for spraying a dampening agent in a dense mist of fine particles directly on to the surface of the printing plate comprising a series of fluid pressure atomizing units each provided with a valve for regulating the admission of compressed air, associated with a valve for regulating the admission of water under pressure in combination with means for adjusting said valves, means for operating said valves in each unit in predetermined succession, means for actuating said operating means, mechanism for adjusting and controlling the operation of said actuating means, and means for varying the function of said control mechanism for controlling the operation of any preselected number of said units independently of the movement of said control mechanism.

2,448,227
IRON HOLDER
Malcolm E. McCan, Kokomo, Ind.
Application November 16, 1946, Serial No. 710,371
1 Claim. (Cl. 248—117.1)

An iron holding device of the class described comprising an iron holding plate having upwardly and inwardly extending tongues formed at its side edges, said tongues adapted to receive the front end of an iron, said iron resting flat on said plate, a substantially inverted U-shaped leg extending outwardly from the rear portion of said plate, a front leg extending outwardly from the forward portion of said plate, said front leg being slightly shorter than the rear leg, an attaching plate having keyhole slots at its upper end for attaching said attaching plate to a supporting wall, the upper edge of said attaching plate bent vertically outwardly to form a groove behind the attaching plate adapted to receive the inner lower end of the rear leg carried by the iron holding plate, and an outwardly extending arm hingedly connected to the lower end of said attaching plate, said arm adapted to extend horizontally, the outer end of said arm bearing against the forward portion of the iron holding plate to hold the latter at an angle from the attaching plate.

2,448,228
DELAY BOOSTER ARMING MECHANISM
James F. McCaslin, Cleveland, Ohio, and Jean Fink, Delavan, Wis.; said Fink assignor to The George W. Borg Corporation, Chicago, Ill., a corporation of Delaware
Application May 24, 1945, Serial No. 595,512
9 Claims. (Cl. 102—83)



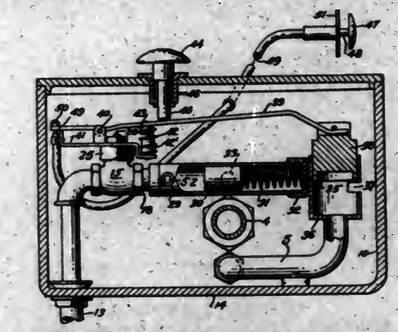
1. A delay arming device for boosters comprising a housing disposed between a fuze and a booster in a rotatable type projectile, a rotor, means rotatably disposing the same in an off-center position in the housing and having a detonator contained therein and normally disposed in a non-registering position relative to the fuse and the booster, said rotor having a slotted portion providing an overhanging flange, an integral gear segment formed on said overhanging flange, a gear train including a pinion of a predetermined diameter and a gear having a diameter greater than that of said pinion and concentric therewith, said slotted portion of said rotor receiving said gear whereby said pinion is adapted to be engaged and driven by said integral gear segment for activating said gear train by rotation of said rotor, and an escapement means associated with said gear train for regulating the same and thereby the speed of rotation of the rotor, when actuated by centrifugal force, to govern the length of time and the distance of flight of the projectile required to move the detonator to a registering position with the fuse and the booster.

2,448,229
PEELING MACHINE INCLUDING ENDLESS TRANSVERSELY DEFORMABLE ABRADING BELTS
Clarence M. McDowell, Toledo, Ohio
Application April 19, 1944, Serial No. 531,833
2 Claims. (Cl. 146—49)

1. An abrading device for derinding citrous fruit, comprising a frame, an endless conveyor belt extending from one end of the frame to the other and having an upper flight and a lower flight, the outer surface of said belt being coated with abrasive material, feed means at one end of the frame to feed fruit to the upper surface of the belt and discharge means at the other end of the frame, means at the ends of the frame to support and move the belt so that its upper flight moves from the feed end to the discharge end of the frame, yieldably mounted arcuate guide means located beneath and in contact with the under surface of the upper flight of the belt between the supporting means to provide for distortion of the abrading surface of the belt into trough shape, a transverse section of which is

concaved to conform substantially to the convex surface of the fruit, yieldably mounted retarding members supported by the frame above the upper flight of the belt and extending into

urging contact with the fruit on the belt to aid in holding the fruit in abrading relation with the belt surface, but yielding to permit the fruit to be conveyed by said abrading surface from the feed end to the discharge end of the frame.



2,448,230
MECHANISM FOR PRECISION SWITCHES
Edwin August Miller, Fairfield, Conn.
Application April 3, 1946, Serial No. 659,197
3 Claims. (Cl. 200—67)

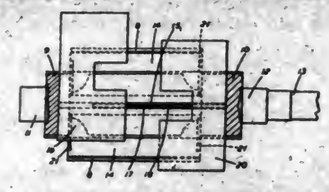
1. A snap-acting control mechanism for a precision switch, the mechanism comprising a sheet-metal oscillating member of which one end is fixed to a base and the opposite end is movable along an arc between two fixed stops, said member having an elongated opening therethrough; a resilient tongue positioned within said opening and fixed at one end to said oscillating member; an actuator movably mounted upon said base for movement along a direct plane intersecting the plane of the oscillating member and having an extremity resting down upon an intermediate portion of said tongue; an arcuate-shaped spring member both ends of which engage a base support upon a surface plane which is parallel to said intersecting plane, the arcuate portion of said spring member hingedly engaging the free extremity of said tongue in such manner that the spring member's compressive force maintains said tongue under compression to maintain the intermediate portion of said tongue bowed either above or below said oscillating member thereby determining the position of the contacts, carried by said oscillating member in a snap-acting movement, with respect to either of said fixed stops.

2,448,231
TOILET FLUSHING ASSEMBLY
James F. Molloy, Oakland, Calif.
Application August 21, 1946, Serial No. 691,910
10 Claims. (Cl. 4—249)

1. A toilet flushing assembly comprising a water tank having a water inlet pipe, a flushing outlet pipe and an overflow pipe extending upward to the water level in said tank; a service valve interposed in said water inlet pipe; a sealed cup interposed in said flushing outlet pipe and having a valve seat therein; a water by-pass leading from said water inlet pipe intermediate said

service valve and tank and terminating in a tubular guide concentric with said outlet valve seat; a buoyant valve closing said seat and having a stem slidable in said guide; a service valve closing means controlled by the overflow through said overflow pipe; and manual means for opening said service valve.

2,448,232
EXTENSIBLE PIPE UNION
William P. Muse, Odin, Ill.
Application December 13, 1944, Serial No. 567,908
4 Claims. (Cl. 285—199)



1. In combination with a pair of suitably supported well pipe sections with internally threaded ends and having their ends aligned and spaced apart, an adjustable pipe union having each end thereof threaded exteriorly so as to thread within said internally threaded ends of said spaced pipe sections to bridge said space between the pipe sections, said union comprising a pair of threaded telescopic members, manually turnable means for longitudinally moving the said members relative to each other so as to accommodate them to the space between said pipe sections to be joined, means for sealing the said threaded telescopic members where their respective threads embrace each other, and means for locking the said members in their adjusted and sealed position after the said pipe sections have been joined together.

2,448,233
ROTARY INTERSECTING VANE ENGINE AND COMPRESSOR
Tage Georg Nyborg, Worcester, England, assignor of one-half to The Mining Engineering Company Limited, Worcester, England
Application November 15, 1944, Serial No. 563,527
In Great Britain November 2, 1943
3 Claims. (Cl. 103—138)

1. In a rotary machine having a rotor provided with intersecting slots, a plurality of blades fitted in said slots, each of said blades having a slot ex-

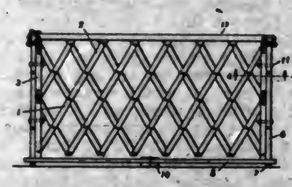
tending axially from one transverse edge for a length substantially corresponding to one-half of the axial dimension of the blade, a pair of said blades being disposed so that the slots therein

open toward the ends of the rotor and a second pair of blades being arranged with their slots opening toward the center of the rotor, so that the slots of each pair of blades receive intersecting pair of blades.

2,448,234
GARMENT HANGER
Charles L. Pandele, Grand Rapids, Mich.
Application August 19, 1946, Serial No. 691,553
1 Claim. (Cl. 223—94)

In a garment hanger, a sheet metal flat disk of circular form, having an opening therethrough above its center and in its vertical diameter, a hook lying parallel to said disk at the back thereof pivotally connected thereto at said opening, the diameter of the disk and the width dimension of said hook being generally the same, said disk having two additional openings therethrough below the first opening, one to each side of the vertical diameter thereof, and said disk adjacent opposite edges having outwardly pressed stops, and two wire arms, each having an eye at its inner end pivotally connected to said plate one at each of said additional openings thereof, said arms being adapted to extend outwardly and downwardly at an acute angle to the horizontal and rest upon said stops, and said arms being foldable upwardly and adapted to lie closely adjacent and parallel to each other at the front of the disk with said hook back of the arms.

2,448,235
METHOD AND APPARATUS FOR REMOVING LEAD CONTAINING INGREDIENTS FROM HYDROCARBON FUELS
Sophus Rasmussen, Albert Lea, Minn., assignor to American Gas Machine Company, Albert Lea, Minn., a corporation of Minnesota
Application May 29, 1944, Serial No. 537,827
2 Claims. (Cl. 196—1)



1. Apparatus for substantially removing the lead containing ingredients of hydrocarbon fuels containing tetra-ethyl lead, comprising a retort adapted to be subjected to high temperatures, said retort having a fuel entrance and a fuel discharge, a filler occupying at least a portion of the interior of said retort between said entrance and said discharge, said filler being composed of a mass of densely related iron containing particles, said particles adjacent the discharge portion of said retort being more densely related than said particles adjacent the fuel intake portion of said retort.

2,448,236
GUARD MEANS FOR FLUORESCENT LIGHTS
Eli Schneiderman, Irvington, and Daniel Tamburi, Newark, N. J.
Application July 21, 1945, Serial No. 606,424
6 Claims. (Cl. 173—328)

1. A guard for use with a fluorescent light tube socket comprising a resilient L-shaped strip, means attaching the vertical member of the L-shaped strip to the back of the socket with the horizontal member turned inwardly under the base of the socket and extending forwardly thereof; the guard further comprising a resilient tube guard band substantially in the form of a segment of a circle with open top and adapted for insertion of the light tube, and means securing the guard band upright on the horizontal member of the L-shaped strip with the axis thereof substantially coinciding with the longitudinal center line of the tube when inserted in the socket and guard.

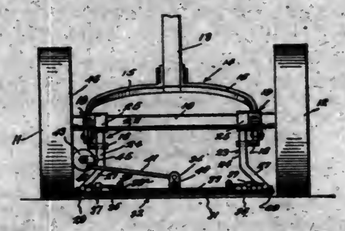
2,448,237
BABY'S PLAY PEN
George Sole, Traverse City, Mich.
Application March 9, 1945, Serial No. 581,831
3 Claims. (Cl. 5—99)

1. A collapsible play pen comprising a sectional floor, the sections of which are hingedly connected to fold up when not in use, openings in the floor adjacent each corner thereof, corner posts detachably received in the openings in the floor and extending slightly below the floor when set up to form feet, pins in said feet to retain said posts in said openings, foldable sides, end rails on the sides, and pairs of fastening devices carried by the corner posts and extending at right angles to each other to engage the end rails of adjacent sides when set up, and removable top rails for the sides having means thereon for connecting said top rails to said spaced end rails.

2,448,238
MOUNTING FOR BAIL HANDLES
Howard V. Stehl, Woodlawn, Md., assignor to Rheem Manufacturing Company, New York, N. Y., a corporation of California
Application January 20, 1945, Serial No. 573,775
4 Claims. (Cl. 16—126)

3. As an improved article of manufacture a mount for a bail and the like, said mount consisting of an elongated blank of resilient sheet metal having a bail pivot receiving means formed in one end and adapted for attachment to a receptacle, the opposite end being determined at a distance corresponding to the arc of movement of the radially extreme part of said bail and adapted for attachment to a receptacle, said opposite end being formed so as to have a downwardly and inwardly directed portion so as to present a longitudinally projecting shoulder to snappingly engage and releasably hold said bail in parallelism with said mount.

2,448,239
AUTOMATIC LOCK FOR DOORS, WINDOWS, AND THE LIKE
Eustaquio Echeverria Urberuaga, Bilbao, Spain
Application April 27, 1944, Serial No. 533,022
In Spain April 30, 1943
1 Claim. (Cl. 292—229)



A fastener for hinged door constructions and the like which comprises a stud fastened to the casing of said door construction with its length parallel to the casing face, a hollow retaining piece fastened to the door and providing a cylindrical wall having an opening in the side thereof which is toward the door face, the axis of the cylinder being parallel to the door face, said opening being formed to receive said stud within the hollow space of said piece when said door is closed, a hollow cylindrical sleeve concentric with and retained within said retaining piece and rotatable therein on said axis, said sleeve having a lateral opening which may be rotated to register with said opening in said piece to permit said stud to enter the hollow space of said sleeve and of said piece when said door is closed, said sleeve having a portion adjacent its opening formed to pass about said stud upon rotation of said sleeve within said retaining piece so as to lock said door to said casing, a projecting finger attached to said sleeve and arranged to engage a member of the door construction upon relative closing movement of said door and said member to effect rotation of said sleeve on said axis to lock said door, and means to bias said sleeve against said rotation to release said stud upon reverse relative movement of said door and said member.

2,448,240
ELECTRIC LAMP ATTACHMENT FOR CAPS
Harvey A. Walworth, Muskegon, Mich.
Application April 30, 1947, Serial No. 744,907
1 Claim. (Cl. 240—60)

In an electric light attachment for caps, a grommet formed with hooks at its ends, a supporting plate having notches in the rear end thereof in which the hooked ends of the grommet are disposed, the forward edge of the plate being curved fitting the curvature of the cap, said grommet urging the supporting plate forwardly within the cap, securing the plate in position, a lamp socket on the plate, said lamp socket being extended through the cloth of the top of the cap, battery clamps secured to the plate and within which batteries are held, electric wires providing a circuit between the batteries and lamp, and a switch for controlling the circuit to the lamp.

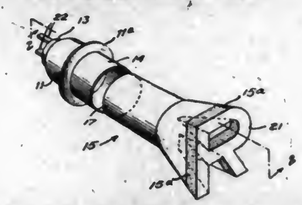
2,448,241
LAWN MOWER
Curtis Williams, Washington, D. C.
Application June 7, 1945, Serial No. 598,030
5 Claims. (Cl. 56—259)

1. A lawn mower of the class described comprising a handle-equipped, wheel-supported axle, a pair of brackets attached at right angles to and rockably suspended from end portions of said axle, ground-engaging rollers mounted on the free, lower, outer end portions of said brackets, a horizontal cutter guard supported and mounted between the respective brackets, a toothed reciprocatory cutter bar mounted for reciprocation atop said cutter guard, said cutter guard being provided, at opposite ends, with fixedly mounted upstanding guides, said cutter bar being provided, at opposite ends, with guide elements slidably mounted in said guides, said cutter bar being provided with longitudinally-spaced, elongated slots, studs carried by and extending at right angles from said cutter guard and projecting through and beyond said slots, coiled springs surrounding said studs and engaging the cutter bar, and retaining nuts on said studs holding said springs in place.

2,448,242
PLASTIC BOBBIN
Paul B. Wilson, Portland, Oreg., assignor to Harold D. Wolgamot, Portland, Oreg.
Application July 5, 1945, Serial No. 603,337
2 Claims. (Cl. 242—120)

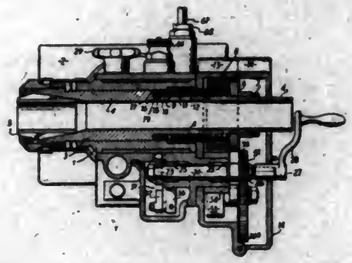
1. A bobbin molded from cellulose aceto-butyrate and having reinforcing metallic members extending from one end of the bobbin to the other and completely embedded within the cellulose aceto-butyrate and said reinforcing members being incased by a metallic tube of screen wire and the like, and the metallic tube and re-

inforcing wires extending longitudinally of the bobbin being completely embedded within the



bobbin and not exposed to the interior or exterior surface of the bobbin.

2,448,243
PROCESS OF PRODUCING MAGNESIUM POWDER BY COLD ROLLING AND GRINDING
Harold P. Anderson, Mountain View, Calif., assignor, by mesne assignments, to The Permanente Metals Corporation, a corporation of Delaware
No Drawing. Application June 15, 1944, Serial No. 540,551
7 Claims. (Cl. 241—3)

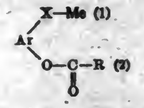


1. A process for producing powdered magnesium which comprises cold rolling crystalline magnesium obtained by sublimation to make the magnesium brittle by mechanically extending the magnesium crystals along a crystal axis, and disintegrating the said cold rolled magnesium by hammering, the rolling and hammering being conducted in an inert atmosphere.

2,448,244
ILLUMINATED DISPLAY DEVICE
Orlan M. Arnold, Troy, N. Y.
Application September 22, 1942, Serial No. 459,263
13 Claims. (Cl. 40—130)

13. An illuminated display unit comprising, in combination, a lamp and a light conducting member, said light conducting member being formed of methyl-methacrylate resin and extending outwardly from said light source, one end surface of said light conducting member facing said light source, and the other end surface thereof, being sloped gradually and differentially at different points about its periphery to the form of an intelligible character, means mounted on said lamp adapted detachably to position said unit, and means securing said light conductor to said lamp.

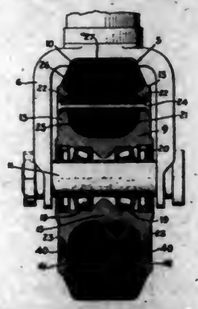
2,448,245
GRINDING FIXTURE
Harding F. Bakewell, San Marino, Calif.
Application January 2, 1945, Serial No. 571,043
20 Claims. (Cl. 51—95)



1. Grinding apparatus comprising a rotatable work-holder element for supporting a tool for rotation about the working axis of said tool; a grinding element for operating on said tool; means connected with one of said elements for imparting relative translatory movement to said elements; said means including fluid displacement type actuating cylinder means for producing said translatory movement upon application of fluid pressure; displacement type pump means for producing such fluid pressure; means for controlling the application of such fluid pressure to adjust the translatory movement of said cylinder means in one direction; operating means for said pump means including a rotatable pump-actuating means; an operating member under control of an operator; and means operatively connecting said operating member to said work-holder element and to said pump-actuating means to effect simultaneous rotation of said pump-actuating means and said work-holder element, and thereby effect a predetermined rotative movement of said work-holder element and a simultaneous predetermined intermittent relative translatory movement of said elements toward and into increasing engagement with one another.

2,448,246
ALKENYL ESTERS OF ALKENOXY-SUBSTITUTED CARBOXYLIC ACIDS AND POLYMERS THEREOF
Robert S. Barker, Oakland, and Lynwood N. Whitehill, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application April 26, 1944, Serial No. 532,889
6 Claims. (Cl. 260—78.3)

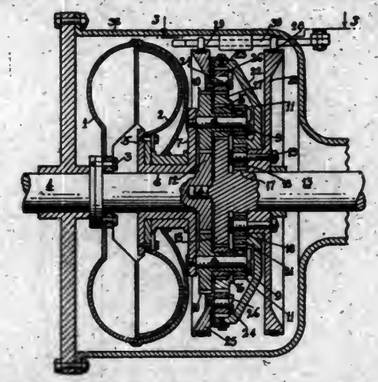
1. Vinyl alloxy acetate.



2,448,247
TREATMENT OF TEXTILES WITH ACYLOXY-SUBSTITUTED AROMATIC ACID SALTS
Carl R. Bellwood, Ridgefield, N. J., assignor to The Cravenette Company, U. S. A., Hoboken, N. J., a corporation of New Jersey
No Drawing. Application March 17, 1948, Serial No. 15,492
10 Claims. (Cl. 8—115.5)

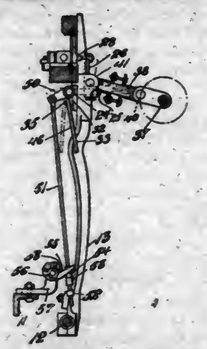
1. The method of treating fibers and fabrics of the kind set forth to render them water repellent, which consists in subjecting them to the action of an aqueous solution of a compound answering to the formula

where
(a) Ar is a divalent aromatic nucleus selected from the group consisting of C_6H_4 and $C_{10}H_6$
(b) R is a saturated aliphatic chain containing 7 or more carbon atoms
(c) X is selected from the group consisting of $(—COO)^-$ and $(—SO_2O)^-$
(d) Me is an alkali metal
(e) And groups (1) and (2) are in ortho or para relationship in the benzene compound and in two-three or one-four relationship in the naphthalene series—
the other symbols having their usual technical meaning; and then drying and baking the material being treated.



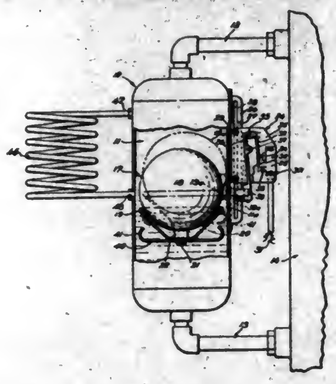
2,448,248
RUBBER WHEEL
James B. Bennett, Los Angeles, and John J. McCarter, Alhambra, Calif., assignors, by mesne assignments, to Thermoid Company, a corporation of Delaware
Application November 3, 1943, Serial No. 508,791
3 Claims. (Cl. 152—323)

1. In a wheel construction, the combination comprising: a hub, spaced side flanges extending from said hub to define therewith an annular channel, said flanges having circumferentially spaced openings, an annular body of rubber filling said channel and projecting outwardly from the perimeter of said flanges to form a tread, bars extending through certain of said openings in the flanges and through the body of rubber to secure it against relative movement, and other of said openings providing spaces for expansion of the rubber body when compressive forces are applied thereto.



2,448,249
VARIABLE-SPEED TRANSMISSION
Walter Richard Bonham, Palo Alto, Calif.
Application August 31, 1946, Serial No. 694,376
3 Claims. (Cl. 74—189.5)

1. An automatic variable-ratio drive mechanism comprising driving and driven shafts, a fluid coupling including an impeller and runner, said impeller secured to the driving shaft, a carrier mounted for rotation about the driving shaft and connected in driving relationship with the runner of the fluid coupling, a sun gear secured to the driving shaft, a plurality of rotatable elements carried by the carrier and arranged in operative relationship with the said sun gear, a ring gear operatively engaging with the rotatable elements, a gear train adapted to connect the ring gear and the driven shaft and arranged to rotate the

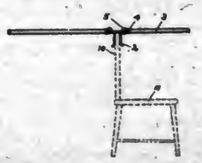


driven shaft in a forward direction, a second gear train connecting the ring gear and the driven shaft and arranged to rotate the driven shaft in a reverse direction, and means for selectively controlling the operation of the two gear trains, whereby the driven shaft may be rotated in either direction.

2,448,250
LOOM PROTECTOR ROD ACTUATING MECHANISM
Clarence H. Callahan and William Languirand, New Bedford, Mass., assignors to Textile Research Co., a corporation of Massachusetts
Application June 6, 1947, Serial No. 753,028
4 Claims. (Cl. 139—347)

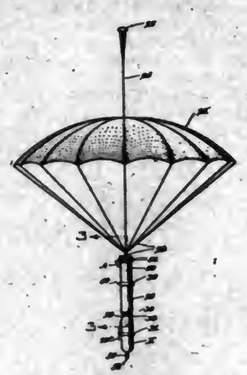
1. A loom comprising a lay having a shuttle box at one end thereof, a movable box wall, a protector rod responsive to the movement of said wall to control the loom stop motion and positive means responsive to the movement of the lay to a predetermined position of the crank shaft to rotate the rod to control the movement of the box wall, comprising an arm on said rod with a link extending from said arm having a finger on said link and a cam on the front girth of the loom to engage said finger and move the link when the lay moves to cause engagement of the finger and cam.

2,448,251
LIQUID LEVEL CONTROL
Julian A. Campbell, Long Beach, Calif.
Application May 15, 1946, Serial No. 669,859
16 Claims. (Cl. 200—84)



8. Liquid level control comprising a non-magnetic vertically extending wall at the side of a chamber and contacted by liquid surging within the chamber, a float in said chamber, a magnetic metal annulus carried by the float in a substantially horizontal plane below the liquid level in the chamber, a movable control element mounted on the exterior of said side wall, and means operable by transmission of magnetic force through said wall at a diameter accommodating the float for actuating said element in accordance with changes of the liquid level in said chamber.

2,448,252
PREPARATION OF PERACID SOLUTIONS
William R. Cornthwaite, Wilmington, Del., and Arthur A. Elston, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 2, 1946, Serial No. 687,974
7 Claims. (Cl. 260—502)

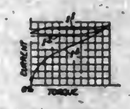


1. The process for preparing a solution of a member of the group consisting of the organic peracids and their alkali forming salts which comprises reacting an alkyl ester of a carboxylic acid with an alkaline aqueous peroxide solution having a pH not lower than about 11.

2,448,253
CLOTHES RACK
Harry J. Criner, Davenport, Iowa, assignor of one-half to A. G. Bush, Davenport, Iowa
Application October 3, 1946, Serial No. 700,966
9 Claims. (Cl. 211—100)

4. A clothes rack comprising an open flat-metal frame with supporting brackets rigidly united thereto whereby the frame may be secured horizontally upon the back of a chair or other suitable support, a plurality of arms having their inner ends slotted to engage the frame and adapted to be held in horizontal position thereby, and reenforcing wires respectively passing through bores in the arms adjacent the inner ends of the slots and bent into rigid contact with the top and bottom of the arms adjacent the slots to prevent splitting of the arms and with the outer ends of the wires extended to encircle the frame and to suspend the arms from the frame when the slots are disengaged therefrom.

2,448,254
PARACHUTE DEVICE ADAPTED TO BE LAUNCHED FROM AN AIRCRAFT OR THE LIKE
Cecil E. Crowther, Pennside, and Walter E. Brown, Reiffton, Pa., assignors to Reading Air Chutes, Inc., West Reading, Pa., a corporation of Pennsylvania
Application June 8, 1945, Serial No. 598,284
19 Claims. (Cl. 244—138)

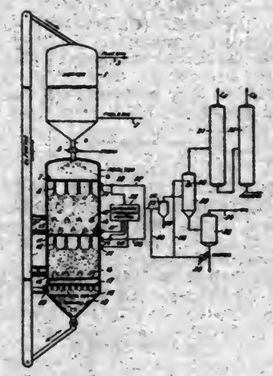


13. A parachute unit adapted to be launched from an aircraft or the like, comprising a cylindrical container provided with a parachute compartment having an opening at one end thereof, a cylindrical closure member adapted to be separably united with the container in overlapping telescopic relation, a plurality of elements arranged between the overlapping wall sections of the member and container so as to maintain said sections in substantially uniformly spaced relation, and means arranged to releasably connect the member and container.

2,448,255
CATALYSTS FOR USE IN THE PRODUCTION OF CHLORINE
Aldo De Benedictis and Daniel B. Luten, Jr., Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application December 7, 1943, Serial No. 513,323
4 Claims. (Cl. 23—97)

1. A process for converting cuprous copper to cupric copper which comprises contacting hydrogen chloride in admixture with an oxygen-containing gas with a fluid melt initially consisting before said contacting of substantially 30 to 50 mol % cuprous chloride, 15 to 25 mol % lead dichloride, and 25 to 45 mol % alkali metal chloride while maintaining said melt fluid at a temperature of about 275° C. to about 375° C.

2,448,256
ELECTRONIC MOTOR CONTROL FOR PRINTING PRESSES AND THE LIKE
William H. Elliot, Shorewood, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application April 9, 1945, Serial No. 587,245
15 Claims. (Cl. 318—212)



1. A method of controlling, through control of a single line connection thereof, a polyphase translating device having all terminals connected to the lines of a polyphase supply circuit which comprises making said single connection dependent upon an electronic discharge produced therein and regulating half cycles of such discharge in respect of ratio of conduction and non-conduction during half cycles individually, thereby to afford different unbalanced conditions in the translating device in a stepless manner through a range which may extend from substantially balanced polyphase conditions to single phase conditions.

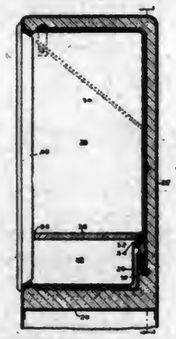
15. In a printing press control system and the like, in combination, a source of polyphase current, a motor having a polyphase primary winding including a plurality of terminals for connecting it to said source, a first space discharge device, a second space discharge device, each of said devices having a control electrode for varying its impedance, means to impress upon said control electrodes a potential varying in response to the speed of said motor to thereby control the current passing through said devices, manual starting means operative to connect said winding through said terminals to said source and to interpose said first space discharge device between said source and one of said terminals for starting and running, and including means to connect said second space discharge device inversely parallel to said first space discharge device, and manual stopping means operative to disconnect said second space discharge device from circuit and render said starting means ineffective to thereby afford dynamic braking.

2,448,257
PROCESS FOR CONVERTING HYDROCARBON GASES
Louis P. Evans, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application July 16, 1946, Serial No. 683,831
1 Claim. (Cl. 260—683)

The process which comprises passing a hot granular solid downwardly in series through an upper reaction zone and a lower reaction zone, transferring said solid downwardly from said upper zone to said lower zone through a transfer zone of restricted cross-section, passing ethane in direct contact with said solid in said upper zone, passing propane in direct contact with said solid at a lower temperature in said lower zone, maintaining the pressures in said upper and lower zones adjacent said transfer zone substantially equal, combining the effluent stream from said upper and lower zones, separating a C_3 cut from the combined streams and recycling said cut to said lower zone.

2,448,258
CONVERTIBLE ALKYD RESINS
Theodore W. Evans, Oakland, and David E. Adelson, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application September 14, 1945, Serial No. 616,474
16 Claims. (Cl. 260—75)

1. A process for the production of a convertible alkyd resin which comprises heating and reacting in an inert atmosphere a compound from the group consisting of dicarboxylic acids and dicarboxylic acid anhydrides wherein the carboxyl groups are the only reactive groups of said compound, with about an equimolecular proportion to 20% excess of a mono-alkenyl ether of glycerol wherein the alkenyl radical contains 3 to 6 carbon atoms and has the olefinic linkage between two carbon atoms, one of which is the carbon atom of a terminal methylene group and the other of which is linked directly to the saturated carbon atom having the etheral oxygen atom of the ether linked directly thereto, said reaction being effected with the reaction mixture diluted with up to about 25% of kerosene.

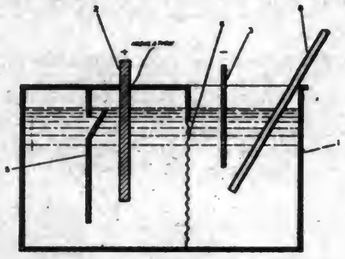


2,448,259
UNSATURATED ESTERS OF SUBSTITUTED ADIPIC ACID AND THEIR PRODUCTION
Harry de V. Finch, El Cerrito, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application October 16, 1944, Serial No. 558,969
21 Claims. (Cl. 260—78.4)

1. A polymerizable ester of an alcohol having an aliphatic multiple linkage between two carbon atoms and trimethyladipic acid wherein the methyl groups are substituted upon the alpha and gamma carbon atoms.

2,448,260
POLYVINYL ETHERS
Nestor Winston Flodin, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 16, 1944, Serial No. 558,970
4 Claims. (Cl. 260—90)

1. The process comprising reacting polyvinyl alcohol with dihydropyran in the presence of an acid catalyst until about 20 to 80% of the hydroxyl groups in said polyvinyl alcohol have reacted with dihydropyran.



2,448,261
CAPILLARY HEAT TRANSFER DEVICE FOR REFRIGERATING APPARATUS
Richard S. Gaugler, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware
Application April 30, 1945, Serial No. 591,113
11 Claims. (Cl. 62—125)

10. A heat transfer device including a liner member, a refrigerating system including a primary evaporator located below the liner member, a secondary heat transfer device including a header and a plurality of tubes extending out of said header into heat exchange relationship with portions of said liner, said tubes containing capillary means extending from said header into the portions in contact with the liner, said tubes including a passage connecting the header with said portions in contact with the liner, said header containing a sufficient amount of a volatile liquid to contact and wet the capillary means, and a conduit means extending from said header at a point above the level of the volatile liquid and extending above the level of the volatile liquid into heat exchange relation with said primary evaporator for condensing vapor discharged from said tubes into the header.

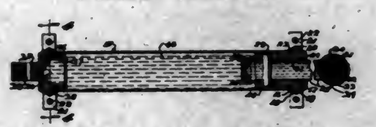
2,448,262
METAL CLEANING
Harvey N. Gilbert, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application July 19, 1943, Serial No. 495,351
7 Claims. (Cl. 204—141)

1. The process for removing oxide from the surface of a metal article compatible with fused alkali metal hydroxide which comprises electrolyzing a bath of fused alkali metal hydroxide with said article as cathode, separating the anode and cathode with a diaphragm, dissolving and maintaining 0.5 per cent to 10 per cent by weight of alkali metal hydride in said bath in the vicinity of the cathode, and dissolving alkali metal monoxide in said bath in the vicinity of the anode and maintaining said monoxide in an amount at least sufficient to react with all of the water formed at the anode.

2,448,263
FINGER WAVING DEVICE
Lucile Hannon, Memphis, Tenn.
Application September 30, 1946, Serial No. 700,247
4 Claims. (Cl. 132—34)

1. A device for curling hair, comprising a motor, a shaft coupled to said motor and adapted for hair winding rotation thereby, and a winding rod assembly removably secured to said shaft and rotatable thereby to effect winding of said hair thereabout, said assembly including an elongated finger-like cylindrical member adapted to receive said hair for winding, an annular collar snugly fitted on said cylindrical member adjacent the base thereof, said collar being slidable along said member in wiping contact with the surface thereof, and means resisting sliding movement of said collar to hold said collar adjacent said member base during rotation of said member, said wiping contact being adapted to compact hair wound on said member for removal therefrom in ringlet form.

2,448,264
STEEL STAIRWAY
Earl A. Jung, Buffalo, N. Y., assignor to August Feine & Sons Co., Buffalo, N. Y.
Application November 29, 1945, Serial No. 631,522
3 Claims. (Cl. 189—43)



3. In a structural steel stairway, a pair of load-receiving tread members having working surfaces disposed in the same plane, each of said members having a substantially plane body portion formed with a plurality of openings over the working surface thereof, flanges extending downwardly from said working surface along the adjacent edges of the tread members, and angle blocks connected in spaced relation to both of said flanges, said angle blocks having one face connected to one of said flanges and the other face underlying and contacting the flange of the adjacent member.

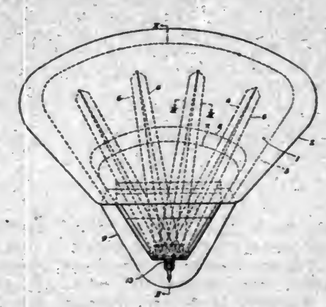
2,448,265
PROTECTION OF CROPS BY SOIL FUMIGATION
John Franklin Kagy and Robert R. McPherson, Long Beach, Calif., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application December 22, 1945, Serial No. 637,105
8 Claims. (Cl. 47—58)

1. A method for protecting the underground parts of crops against attack by soil-inhabiting invertebrates which includes the steps of treating the soil with a liquid composition comprising ethylene bromide as a principal toxic ingredient, and at a dosage of at least 10 pounds of ethylene bromide per acre, and thereafter planting the treated soil.

2,448,266
CYLINDER CONSTRUCTION
Robert A. Kaser, Chicago, Ill.
Application August 30, 1945, Serial No. 613,502
5 Claims. (Cl. 309—2)

5. Cylinder construction comprising a hollow tubular member having its end edges flared outwardly, end closure members having portions thereof inserted one in each end of the tubular member, the outer surfaces of said closure member portions coinciding in contour with the inside of the flared edges, the portions of the closure members extending beyond the tube being tapered to form with the flared edges of the tube angular peripheral flanges, and clamps, having their inner surfaces coinciding with those of the flanges, positioned on said flanges, and means for tightening the clamps to secure the closure members in position on the ends of the tubular member.

2,448,267
FUSE CLAMP
Edwin W. Landmeier, Lakeside Park, Ky.
Application June 22, 1945, Serial No. 601,004
8 Claims. (Cl. 173—328)



1. A fuse clamp comprising a base, a conductor fastened on said base, a yieldable clamp, said yieldable clamp having a portion interposed between said base and said conductor so as to be mechanically fastened in place by said conductor and having another portion extending upwardly above said conductor for yieldable pressure engagement with one portion of a fuse terminal which has an opposite portion thereof seated on said conductor.

2,448,268
TERMINAL CONNECTOR FOR ELECTRICAL CONDUCTORS
William J. Larkin, Lynnfield, Mass., assignor to National Company, Inc., Malden, Mass., a corporation of Massachusetts
Application March 7, 1946, Serial No. 652,650
5 Claims. (Cl. 173—269)

1. A terminal connector for an electrical conductor for making connection to a rod-like contact comprising an elongated ribbon of soft flexible metal, a relatively short piece of relatively hard resilient metal secured to one face of an end of the ribbon, leaving the greater portion of the ribbon as a freely flexible, low resistance conductor for extension to and connection at a remote point, said piece being recurved over the ribbon to provide a resilient arm opposing the other face between which arm and the other face the contact may be inserted to be powerfully pressed into direct contact with the ribbon.

2,448,269
BALLOON SUSPENSION PATCH
Oscar W. Loudenslager, Royal C. Gardner, and Fern E. Ensley, Akron, Ohio, assignors to Goodyear Aircraft Corporation, Akron, Ohio, a corporation of Delaware
Application March 1, 1946, Serial No. 651,258
5 Claims. (Cl. 244—127)

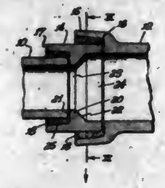
1. A patch for securing a cable, or the like, to a flexible fabric surface, or the like, and comprising a flexible fabric member, a T-shaped metal member, flexible rubberized tapes adapted to be secured at one end to said flexible fabric member at an acute angle to the upright of the T-member and looped over their middle portions around the cross bar of the T-member at one side of the upright and having their other ends adapted to be secured to said fabric member at an opposite acute angle to the upright of the T-member, said tapes being divided equally as to numbers on both sides of the upright of the T-member and fanning out from the top of the T-member to cover the greatest area on the fabric member, and means for holding the tapes supporting the T-member together in patch form.

2,448,270

HEAT-TREATMENT OF PLURAL OXIDE GELS

Milton M. Marisic, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

No Drawing. Application April 6, 1944, Serial No. 529,823
1 Claim. (Cl. 252—378)



The process which comprises heat treating a gel containing a major proportion of silica and a minor proportion of alumina at about 1600° F. for about four hours, whereby the gel is caused to pass through a stage of expansion and thereafter fracture and expand further, reaching a condition of constant volume.

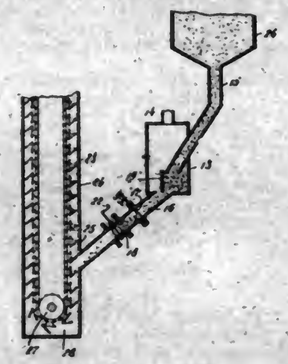
2,448,271

VITRIFIED CLAY PIPE JOINT

Cecil V. McClintock, Whittier, Calif., assignor to Pacific Clay Products, Los Angeles, Calif., a corporation of California

Application July 21, 1945, Serial No. 606,387
5 Claims. (Cl. 285—183)

1. A clay pipe form having for its ultimate purpose the joining of a pipe of large size with a pipe of smaller size comprising: an open ended section having a partitioned interior wall, a partition therefor intermediate the ends of the section, said partition being in the form of an annular, inwardly extending projection having one side thereof flat and transverse to the axis and the opposite side extending angularly outwardly toward the adjacent end, the interior wall section on the angularly sloped side of the projection being parallel to the axis and the interior wall section on the opposite side of the projection having an outward flare.



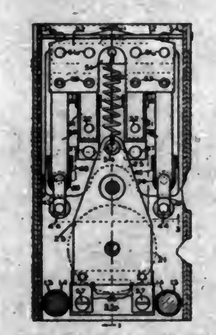
2,448,272

METHOD AND APPARATUS FOR SEPARATION OF VAPORS FROM A CONTACT MASS

John W. Payne, Woodbury, Charles V. Hornberg, Wenonah, and Robert D. Drew, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application August 11, 1943, Serial No. 498,258
13 Claims. (Cl. 183—1)

4. Apparatus for effecting transfer of particle-form solid material from a gas-filled high pressure zone to a zone of lesser pressure comprising a pressure release chamber, conduit means dependent within said chamber to lead a compact stream of solid and gas from the high pressure zone to a point within the pressure release chamber and spaced vertically above the bottom thereof, within said chamber a partition extending upwardly from the bottom thereof to a point above the level of mixed gas-solid entry, arranged to divide said chamber into two portions into one of which the first named conduit discharges and also to determine the level to which solid may accumulate above and around said conduit by permitting overflow of solid into the second portion of the chamber, the level of the top of said partition being a less distance above the outlet of the first named conduit than the distance that outlet is spaced above the entry to the discharge conduit named later herein, gas discharge conduit means leading from a point in the chamber spaced well above said partition, solid discharge conduit means draining solid



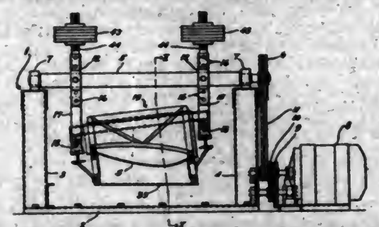
from both the discharge section and overflow section of said chamber and leading to the zone of lesser pressure, said solid discharge conduit means being of greater cross-sectional area than said first named conduit means and being so positioned with respect to said partition that a portion of the area of its inlet end lies below and to either side of said partition, and rate-of-flow control means in said last named conduit.

2,448,273

CONTROL

George C. Pearce, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware

Application December 11, 1944, Serial No. 567,696
23 Claims. (Cl. 200—140)



1. A switch device comprising: a first frame; a second frame; fulcrum means holding said frames together; a snap acting switch on said first frame; a thermostatic power element on said second frame and engaging said snap acting switch; and a manually movable element engaging said frames and adjusting the angle between said frames to vary the temperature setting.

2,448,274

FEMALE JIG FOR CENTRIFUGAL FORMATION OF SHEET THERMOPLASTICS

Mauritz P. H. Peterson, Akron, Ohio, assignor to Goodyear Aircraft Corporation, Akron, Ohio, a corporation of Delaware

Application July 3, 1946, Serial No. 681,254
7 Claims. (Cl. 18—19)

3. Apparatus for forming a plastic sheet into a canopy or the like comprising a jig having substantially U-shaped ends, opposed longitudinals connecting adjacent legs of the U-shaped ends together, the jig being adapted to have a plastic sheet draped in substantially trough shape into it so that the sheet has inner and outer surfaces, means for engaging with the inside surface of the trough-shaped sheet for releasably clamping the edges of the outer surface of the sheet to the ends and longitudinals of the jig and leaving unsupported the remainder of the sheet, means for rotating the jig around an axis positioned adjacent the open side of the trough-shaped sheet to centrifugally form the unsupported portion of the sheet, and a cover around the jig but spaced from the sheet to be formed and as formed to keep at least the outside surface of the sheet enclosed and protected against rapid heat dissipation and the flow of air thereover, the jig having a member with a window formed therein for observing the sheet while it is formed.

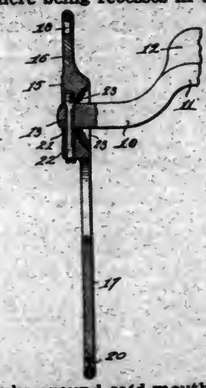
2,448,275

NITRILE-PRODUCING METHOD

Ralph H. Potts, La Grange, Ill., assignor to Armour and Company, Chicago, Ill., a corporation of Illinois

Application June 29, 1945, Serial No. 602,220
8 Claims. (Cl. 260—465.2)

1. In a nitrile-producing process, the steps of maintaining two ammonia-fatty-acid reaction zones, passing fatty acids into the first of said zones, heating said acids in said zone to a liquid phase reaction temperature, contacting the same with ammonia vapors evolved from the second of said zones, passing high boiling fatty acid residue from said first zone to said second zone, contacting the same in said second zone with ammonia vapors, and withdrawing the stripped high boiling residue as pitch from said second zone.



2,448,276

OFFSET BIT SHANK

Fredrick A. Ray, Reseda, Calif.

Application November 4, 1946, Serial No. 707,605
6 Claims. (Cl. 54—7)

6. In an offset bit, the combination with a mouthpiece, of shanks provided with apertures for the reception of the ends of said mouthpiece, those portions of the shanks below said apertures being inset with respect to those portions of the shanks above said apertures, vertically disposed pivot pins seated in said shanks outwardly from the insert lower portions thereof, which pivot pins pass upwardly through the ends of said mouthpiece and there being recesses in the inner faces

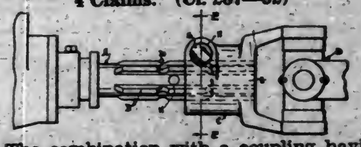
of said shanks around said mouthpiece receiving apertures.

2,448,277

APPARATUS FOR FORMING AND PREHEATING SLUGS OF MOLDABLE MATERIAL

William S. Renier, Milwaukee, Wis.

Application February 1, 1945, Serial No. 575,641
10 Claims. (Cl. 18—16)



1. Apparatus for forming slugs of moldable material comprising a forming member having a forming chamber provided with an open end for receiving moldable material, a movable plunger extending into the opposite end of said chamber with the end of the plunger forming a bottom for said chamber when the plunger is in retracted position, a second plunger supported for movement into the open end of said forming chamber to compress material supported on the first plunger into a pre-formed slug, means for causing simultaneous movement of the ends of said plungers while the slug is gripped therebetween out of the open end of the forming chamber, and means for thereafter heating the slug while gripped between said plunger ends.

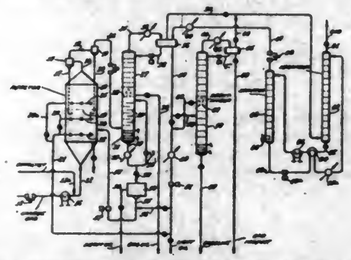
2,448,278

POWER TRANSMISSION COUPLING

Martin Ronning, St. Louis Park, Minn., assignor to Minneapolis-Moline Power Implement Company, Minneapolis, Minn., a corporation of Delaware

Application September 21, 1944, Serial No. 555,080
4 Claims. (Cl. 287—52)

1. The combination with a coupling having a recess adapted to non-rotatably receive a shaft, of means for locking the coupling and shaft against relative axial displacement, comprising a locking pin mounted for endwise movement crosswise in the coupling in a plane intersecting one side of the recess in the coupling, said pin having a reduced portion movable into registry



with the recess to permit the insertion of the shaft thereinto, said pin also having a locking portion adjacent said reduced portion adapted to normally traverse the recess in the coupling, and said shaft having a recess in at least one side adapted for engagement by said locking portion of the pin and the said locking portion of the pin being beveled for wedgewise engagement with said recess in the shaft, and the pin being spring set to urge said beveled portion of the pin tightly into and against said shaft recess.

2,448,279

SYNTHESIS OF ORGANIC COMPOUNDS

Louis C. Rubin, West Caldwell, N. J., assignor to The M. W. Kellogg Company, Jersey City, N. J., a corporation of Delaware

Application August 23, 1944, Serial No. 550,799
3 Claims. (Cl. 260—449.6)

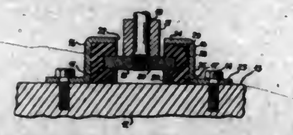
1. A process for hydrogenating carbon oxides which comprises continuously flowing a gaseous mixture comprising hydrogen and a carbon oxide upwardly in a reaction zone through a mass of finely divided contact material comprising a catalyst for the reaction and at the reaction temperature to maintain the body of contact material substantially in suspension, limiting the upward velocity of the gaseous mixture to maintain the greater part of the mass of contact material in a relatively dense pseudo-liquid phase, maintaining the upward velocity of the gaseous mixture higher than the free settling rate of particles comprising a substantial proportion of said dense phase whereby there is produced highly turbulent motion of the particles of contact material in the dense phase in which the particles circulate throughout the dense phase at a high rate to promote uniform temperature conditions throughout the dense phase, providing a contact mass of sufficient bulk to produce a dense phase deep enough to afford a length of time of contact between the gaseous reactants and catalyst in the dense phase sufficient to react a substantial proportion of said carbon oxide with hydrogen, withdrawing said gaseous mixture from said reaction zone after passage thereof through said dense phase, treating said withdrawn gaseous mixture to separate therefrom a liquid containing finely divided contact material carried from the reaction zone by entrainment in said withdrawn gaseous mixture, and returning liquid containing catalyst thus recovered to said reaction zone.

2,448,280

INSULATING GEL

Edmund L. Sargent and Robert C. Wilson, Jr., Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application February 9, 1946, Serial No. 646,690
3 Claims. (Cl. 252—62)



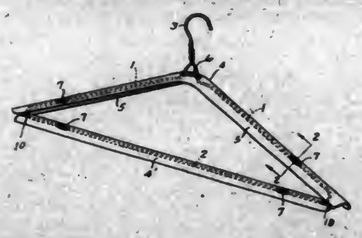
1. A process for manufacture of a cellular mass which comprises forming a hydrosol of inorganic oxide having the inherent properties of setting to a hydrogel without change in chemical composition after the lapse of a period of time and of passing through a viscous state just prior to gelation, spraying said viscous sol against a solid surface in a forming zone, said forming zone being at a temperature in excess of the boiling point of said sol at the pressure of said forming zone, said sol being at a temperature in excess of its boiling point at the pressure of said forming zone and in said viscous state at the time of spraying as aforesaid; whereby the water content of said hydrosol is vaporized, expanding the drops of the hydrosol spray to bubbles which form a foamy mass on said surface and the walls of the bubbles bond together and set to firm hydrogel.

2,448,281

VIBRATION DAMPENER

Curt Saurer, Cleveland, Ohio, assignor to The Ohio Rubber Company, Willoughby, Ohio, a corporation of Ohio

Application March 2, 1945, Serial No. 580,673
4 Claims. (Cl. 248—9)



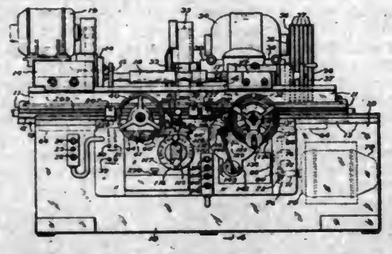
1. A vibration dampener comprising a pair of laterally spaced metal bars each including an outwardly extending longitudinal attaching portion and other longitudinal portions extending upwardly and inwardly, laterally spaced yieldable rubber-like bodies substantially coextensive with said bars and having portions thereof continuously in engagement with the upwardly and inwardly extending portions of the bars, and an elongated load receiving metal body disposed between said bars and having substantially flat longitudinal edge portions extending outwardly into said rubber-like bodies and connected therewith, said rubber-like bodies being bonded to said upwardly and inwardly extending portions of said bars and to said edge portions of said load receiving body with portions of the rubber-like bodies extending over, around and under said edge portions so that relative movement of said load receiving body will be resisted by tensile, shearing and compressive forces in the rubber-like bodies.

2,448,282

GARMENT HANGER

John A. Schmitt, Milwaukee, Wis.

Application June 4, 1945, Serial No. 597,500
1 Claim. (Cl. 223—88)



A hanger guard of the character described including, an elongated inverted channel-shaped body formed of sheet material, said body having its bight portion only formed with an outwardly facing substantially concave recess, the wall defining said recess being cut away along the longitudinal axis of the body to provide a pair of spaced opposed inwardly directed and curved fingers, the longitudinal axis of each of said fingers being transverse to the longitudinal axis of the elongated channel shaped body.

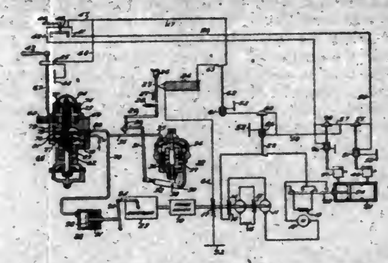
2,448,283

CYLINDRICAL GRINDING MACHINE

Herbert A. Sliven, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a corporation of Massachusetts

Application November 21, 1945, Serial No. 630,045
12 Claims. (Cl. 51—95)

1. In a grinding machine having a base, a transversely movable wheel slide, means rotatably to support a grinding wheel on said slide, a longitudinally reciprocable table, a reciprocating mechanism therefor including a variable speed reversible electric motor, driving connections between said motor and table, an electronic control apparatus to control said motor so as to produce either a relatively high speed reciprocation of the table for a grinding operation or a relatively slow speed for a truing operation, table actuated means to reverse said motor, a control lever for said driving connections, independent manually operable electrical control means operatively connected with said control apparatus to adjust and regulate the speed of said motor for a grinding and for a truing speed, and independent means actuated by and in timed relation with said control lever to render either of said speed adjusting means operative.



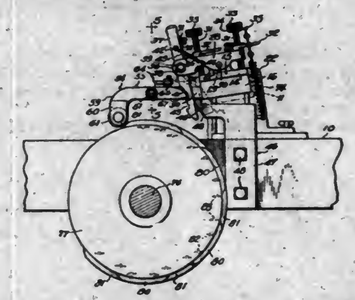
2,448,284

CONTROL SYSTEM FOR ENGINE GENERATOR UNITS

Dana R. Staples, Ridley Park, and John J. Stamm, Chester Heights, Pa., assignors to The Baldwin Locomotive Works, a corporation of Pennsylvania

Application December 22, 1945, Serial No. 637,066
5 Claims. (Cl. 290—17)

1. The combination with an engine, a generator driven thereby and at least one motor supplied by said generator, of means for controlling the excitation of said generator comprising a variable resistor, a pneumatic actuator biased to one position and operable from that position under pneumatic pressure for gradually changing the resistance of said resistor between minimum and maximum values, a pressure regulator for controlling the pressure to said actuator, control means operable through a plurality of positions for adjusting said regulator for application of different pressures to said actuator, and pneumatic means operable as said resistor develops its minimum resistance for increasing the power delivered by said engine to said generator.



2,448,285

PEN CONTROL MECHANISM FOR PAPER RULING MACHINE

Robert J. Thompson, Harrisburg, Pa., assignor to The W. O. Hickok Mfg. Co., Harrisburg, Pa., a corporation of Pennsylvania

Application March 2, 1944, Serial No. 524,766
4 Claims. (Cl. 33—39)

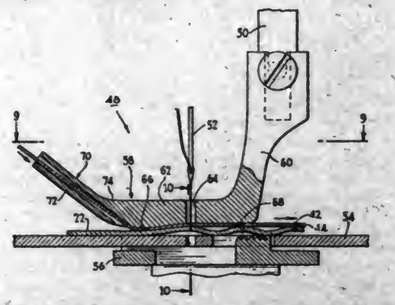
2. In a paper ruling machine having a pen beam provided with a paper ruling pen, means for supporting said beam for rocking movement on a horizontal axis parallel to the paper, said means including a support connected to the pen beam, means biasing said beam for rocking movement in one direction to disengage the pen from the paper, a cam rotatable on an axis parallel to the rocking axis of said beam, a lever pivotally supported intermediate its ends and having one end engageable with said cam to be positively operated thereby, and a motion transmitting element having pivotal connection with said support and being notched transversely of its length at a point spaced from such pivotal connection to receive the other end of said lever to positively transmit movement from said lever to said support to rock said pen beam in the opposite direction to move the pen into contact with the paper upon operation of the first named end of said lever by said cam.

2,448,286

HACKSAW

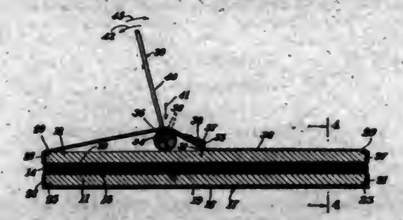
Louis A. Wieland, Pittsburgh, Pa.

Application March 17, 1945, Serial No. 583,249
3 Claims. (Cl. 145—31)



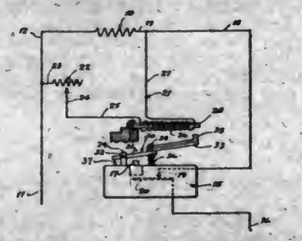
2. A device of the class described having a holder comprised of a strap of metal formed part way of its length into a straight portion of

relatively narrow U section and continued therefrom in a curved portion of relatively broad dished section, said straight portion of U section being adapted to receive the body of a hack-saw blade with its saw edge exposed at the opening of the U, and said curved portion forming a handle, and a clamping device mounted on said straight portion to engage said exposed saw edge and secure said blade in said holder comprising a loop portion embracing and slidable on



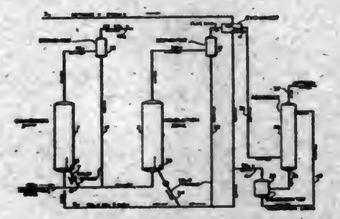
said blade-receiving straight portion of the holder, and a resilient arm portion extending from said loop portion and terminating in a catch adapted resiliently to engage said exposed blade edge, with the loop portion engaging said exposed edge at a point spaced from the catch, said arm portion being movable angularly of said blade-receiving portion of the holder to disengage said catch from said exposed blade edge and to release the engagement of said loop portion with said edge.

2,448,287
GARMENTMAKING APPARATUS
Joseph Abrams, Brooklyn, N. Y., assignor to Louis Saffer Co. Inc., New York, N. Y., a corporation of New York
Application October 4, 1946, Serial No. 701,292
3 Claims. (Cl. 112—132)



1. In combination in a sewing machine, a throat plate, a presser foot having a tread, stitching means including a needle operative through an opening in said tread, an intermittently actuated feed dog having elements operative through openings in said plate, at least one of said elements being ahead of said needle, said tread being undercut across its entire width at and behind the needle opening to provide a downwardly depending mound across the tread ahead of the needle opening, whereby fabric intermittently fed by said elements will be gathered by crumpling beneath said needle opening, and means carried by said foot for guiding a tape to beneath said needle opening, the feed dog elements ahead of the needle cooperating with the presser foot to the side of the tape guiding means so that the tape guiding means guides the tape along a path clear of feed dog elements ahead of said needle, whereby the tape will be pulled to the needle by previously stitched gathered fabric portions and be ungathered as it is stitched.

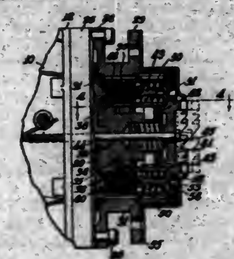
2,448,288
HAND PRESS
Abraham Alk, Paterson, N. J.
Application August 26, 1946, Serial No. 693,106
10 Claims. (Cl. 100—67)



1. In a hand press manually operable to compress material between two flat surfaces, the combination with two oppositely disposed boards each having a flat surface in contact with said material and said boards movable in opposite directions to and from each other for increasing and decreasing pressure exerted against said material, of clamping means comprising strap means having a body portion encircling exteriorly said two boards and having two ends, one of said ends removably secured to the exterior of a board, and tightening means disposed between said body portion and the exterior of a board and adapted to engage the other end of said strap means and manually operable for winding said end around said tightening means, whereby said strap means will be tensioned, in proportion to the progressing winding, to exert pressure against said boards and against said tightening means for frictionally latching the same in position upon cessation of the manually applied winding force.

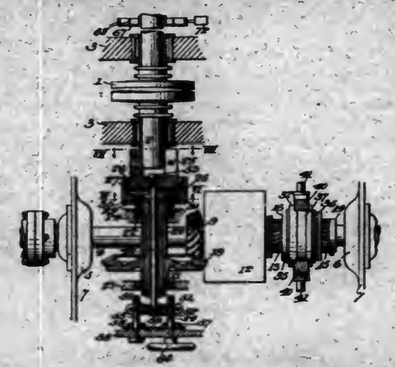
2,448,289
TEMPERATURE CONTROL APPARATUS
Cleophas E. Anderson, Dubuque, Iowa, assignor to Thermo Electric Manufacturing Company, Dubuque, Iowa, a corporation of Illinois
Application June 5, 1946, Serial No. 674,607
2 Claims. (Cl. 219—20)

1. Temperature control apparatus for an electric furnace or the like and comprising in combination, an electrical heating element, a switch connected in series with said electrical heating element, a bi-metallic arm pivotally mounted on said switch and operable upon rotation in one direction to open said switch, a bi-metallic element adjacent to and substantially parallel to said bi-metallic arm, a second electrical heating element wrapped around said bi-metallic element in heat exchange relationship thereto, a variable resistance, said resistance and said second heating element being connected in series with each other and with said switch, and being connected in parallel with said first mentioned electrical heating element, said bi-metallic element being adapted to be deflected into operative engagement with said bi-metallic arm and to rotate said arm in said one direction to thereby open said switch upon application of a sufficient quantity of heat to said bi-metallic element by said second heating element.



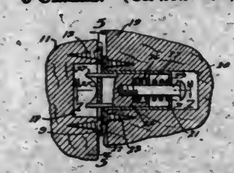
2,448,290
PROCESS FOR THE PRODUCTION OF SYNTHESIS GAS
Harold V. Atwell, Beacon, N. Y., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware
Application December 18, 1943, Serial No. 514,769
3 Claims. (Cl. 23—212)

1. In a process for the production of a mixture of carbon monoxide and hydrogen wherein a gaseous hydrocarbon and a gas selected from the group consisting of steam and carbon dioxide are reacted by passing a preheated stream of said reactants through a reaction zone at reaction temperature in contact with a solid catalyst in a stationary bed provided with passages for the flow of reactants therethrough, the improvement which comprises supplying to the reaction zone all of the additional heat required for carrying on the reaction by suspending in the reactant stream in the reaction zone a powdered solid heat carrier at an elevated temperature substantially above the reaction temperature and in an amount sufficient to supply heat for the reaction and maintain the reaction temperature; withdrawing from said reaction zone a gaseous effluent stream comprising hydrogen, carbon monoxide and powdered heat carrier, separating said heat carrier from the effluent stream; passing the separated powdered heat carrier through a heating zone; heating the heat carrier in the heating zone to the aforesaid elevated temperature; withdrawing heated powdered heat carrier from the heating zone; and supplying said heat carrier at said elevated temperature to the reactant stream entering the conversion zone.



2,448,291
ENGINE STARTER CLUTCH
Charles A. Balton, Buffalo, N. Y.
Original application March 23, 1943, Serial No. 480,173. Divided and this application October 30, 1944, Serial No. 561,017
13 Claims. (Cl. 123—179)

1. A clutch for releasably coupling a driving and a driven part, comprising a cylindrical body arranged coaxially of said driving part and rotating therewith, a second cylindrical body fitting the cylindrical surface of said first cylindrical body and having jaws adapted to engage with jaws of said driven part, means for moving said second cylindrical body axially relative to said first cylindrical body to engage and disengage said jaws, and means compelling said cylindrical bodies to rotate in unison, comprising a projection secured to one of said cylindrical



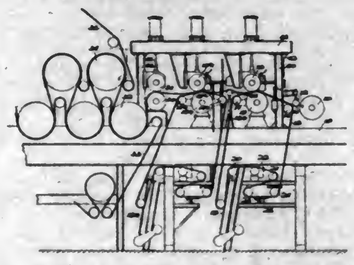
bodies and extending radially therefrom into a helical slot provided in the other cylindrical body.

2,448,292
GEARED ADJUSTMENT MEANS
Howard M. Barber, Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a corporation of Delaware
Application October 22, 1943, Serial No. 507,232
6 Claims. (Cl. 74—395)

1. In combination, a rotary cylinder, its shaft, an auxiliary drive shaft axially aligned therewith and slidably locked thereto, a main drive shaft located adjacent and at right angles to the auxiliary drive shaft, two intermeshing hypoid gears, one on said main drive shaft and the other on said auxiliary drive shaft, and automatically operated means for rotatively adjusting the drive shaft hypoid gear and thereby the auxiliary drive shaft hypoid gear with respect to the main drive shaft, to rotatively adjust the said cylinder.

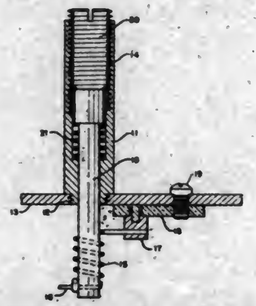
2,448,293
DOOR LOCK
Clarence J. Berini, Detroit, Mich.
Application August 2, 1946, Serial No. 688,058
5 Claims. (Cl. 292—74)

1. In a lock mechanism, a striker plate having an arcuate slot therein forming a tongue having a



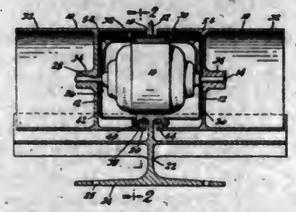
curved edge, a reciprocatory plunger rotatable about its own axis and having a curved recess in its end adapted to engage said tongue, the wall of said recess being curved about an axis directed obliquely to the length of the plunger, resilient means to force said plunger endwise, and means to limit the endwise movement of said plunger caused by said resilient means.

2,448,294
BREAKABLE BUILDING FORM
Francis W. Blanchard, Snyder, N. Y., assignor to Hewitt Rubber Corporation, Buffalo, N. Y.
Original application May 26, 1941, Serial No. 395,160. Divided and this application July 19, 1945, Serial No. 605,905
5 Claims. (Cl. 18—45)



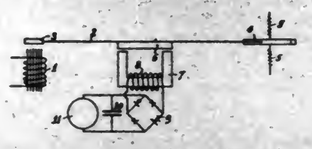
4. A breakable form about which containers having flexible side walls may be constructed, said form being hollow and having relatively thin walls adapted to be readily broken when a container is completed, and being constructed in sections adapted to be secured together, each section having an open side facing the open side of an adjacent section, and bracing and attaching members secured to adjacent sections of said form and extending crosswise of said open sides and having registering portions by means of which adjacent members may be secured together for correctly positioning adjacent sections relatively to each other, said walls of said sections of said forms having openings therein other than those defining said open sides, through which said bracing members may be secured together and through which said members may be removed when said container is completed.

2,448,295
PRESS ARRANGEMENT
Samuel M. Bratton, Wilmington, Del., assignor to The Pusey & Jones Corporation, Wilmington, Del., a corporation of Delaware
Application September 1, 1942, Serial No. 456,932
9 Claims. (Cl. 92—49)



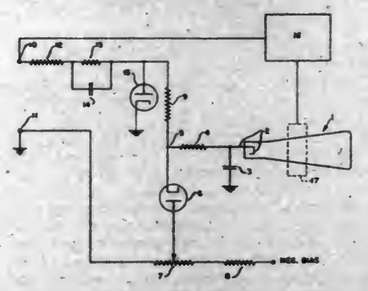
5. A press assembly for use in a paper mill between the making machine and the drying rolls, comprising a pair of parallel, longitudinal beam structures each including a pair of channel members standing on edge in spaced apart relation with their flanges inter-connected, upper and lower slideways secured to said beam structures, a depending hanger suspended from each lower slideway and adjustable longitudinally therealong, a bracket mounted for vertical adjustment on each hanger, a piston-cylinder assembly mounted on each upper slideway and including a rod extending between the channel members and connected to the bracket therebelow, an upper press roll journalled on the brackets, and a lower press roll mounted therebelow and journalled for rotation on a fixed axis.

2,448,296
TUNABLE INDUCTANCE
Raymond J. Cary, Jr., Long Beach, Calif., assignor to the United States of America as represented by the Secretary of War
Application January 29, 1946. Serial No. 644,173
1 Claim. (Cl. 171—242)



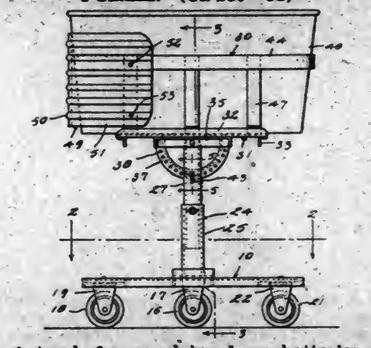
A tunable inductance including a tubular mount having an internal thread at one end thereof, a dielectric rod disposed partly within said tubular body portion and extending externally beyond said tubular mount at the other end thereof, screw means associated with said internal thread and adapted to apply pressure to the end of said rod which is disposed within said tubular mount, spring means disposed about said rod and adapted to maintain the pressure between said rod and said screw means, a helical coil of conducting material disposed about the external portion of said dielectric rod, one end of said coil being rigidly affixed to said dielectric rod and the other end fixed with respect to said tubular mount, whereby the motion of said screw means within said internal thread will move said dielectric rod axially with respect to said mount thereby varying the pitch of said helical coil and changing the inductance thereof.

2,448,297
LIQUID ROTOR SPRAY MECHANISM
Niels C. Christensen, Salt Lake City, Utah
Application November 13, 1944, Serial No. 563,257
11 Claims. (Cl. 299—63)



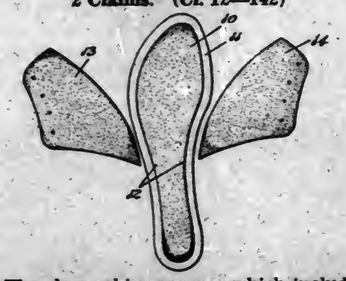
11. Liquid spray mechanism comprising, in combination, a liquid sump, an electric motor, means supporting the motor, a spray rotor comprising two hollow cylindrical rotatably supported end sections substantially surrounding the motor and dipping into the liquid sump and coupled with the motor shaft for rotation thereby upon a horizontal axis.

2,448,298
RECIPROCATING CONVERTER
Wladimir de Fligué, Paris, France
Application February 28, 1946, Serial No. 650,961
4 Claims. (Cl. 171—123)



1. The combination of a resiliently flexible elongated unit including a permanent magnet and a member of magnetic material located at points remote from one of the ends of said unit; movable anchoring means for supporting said unit solely at said end thereof in a variable position; means sensitive to a predetermined variable factor, for adjusting the position of said anchoring means as a function of said factor; means at a point proximate to said magnetic member for inducing therein a variable magnetic field; and means operatively coupled with said magnet for producing electric oscillations in response to the vibrations of the magnet.

2,448,299
BEAM INTENSITY CONTROL
Arthur Dorne, Mineola, N. Y., assignor to the United States of America as represented by the Secretary of War
Application March 29, 1946. Serial No. 657,937
3 Claims. (Cl. 315—22)

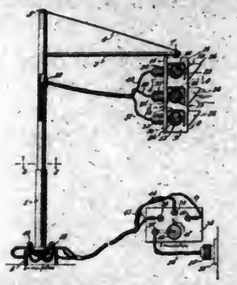


3. In a cathode ray oscilloscope, a cathode ray tube having a cathode and a grid, a point of reference potential, a capacitor connecting the cathode of said cathode ray tube to said point of reference potential, a resistor having a first terminal and a second terminal, means connecting said first terminal to the cathode of said cathode ray tube, a vacuum tube having an anode and a cathode, the cathode of said vacuum tube being connected to said point of reference potential, the anode of said vacuum tube being connected to the second terminal of said resistor, a resistor connected to the anode of said vacuum tube, a capacitor by-passing said last mentioned resistor and means for applying a signal to said last mentioned resistor.

2,448,300
LOOM BATTERY FILLING TRUCK
Ernest J. Eaddy, Spartanburg, S. C.
Application December 15, 1947, Serial No. 791,767
4 Claims. (Cl. 280—34)

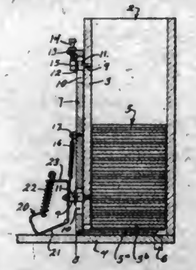
4. A truck for supplying loom batteries with filling comprising a mobile base, a receptacle carrier above said base, a pedestal rising from said base, means pivotally securing said carrier to said pedestal, means locking said carrier in angularly adjusted position on said pedestal, and a bumper carried by one end of said carrier, said bumper being of U-shape in horizontal section and substantially encompassing said one end of said carrier.

2,448,301
METHOD OF MAKING SHOES WITH UPWARDLY DEFLECTED SOLES
Karl Engel, Swampscott, Mass.
Application October 12, 1945, Serial No. 622,615
2 Claims. (Cl. 12—142)



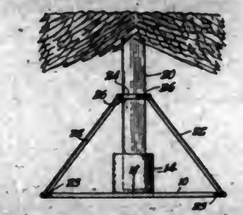
1. The shoemaking process which includes the steps of providing a sole having a shoulder within the marginal edge thereof of convex contour about the forepart and of concave contour rearwardly thereof, providing separate vamp portions having convex curvature about their entire lower edges, conforming the convexly curved lower edges of said vamp portions to convex and concave portions of said shoulder, and fastening them right side out in this relation to said sole, thereby deflecting upwardly a portion of the sole to which the vamp portions are attached.

2,448,302
TOY HIGHWAY TRAFFIC SIGNAL LIGHT
Leslie L. Eyerkuss, Belleville, N. J.
Application February 21, 1947, Serial No. 730,103
7 Claims. (Cl. 177—329)



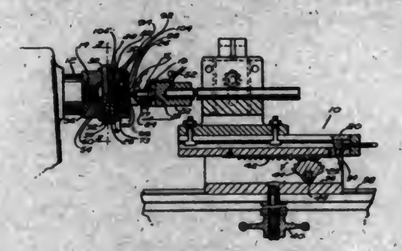
1. In a traffic signal for toy electric railroads, a lamp housing having fixed front and side walls

and a removable rear wall, windows in said front and side walls, lamp sockets carried by said rear wall, transverse plates carried by said rear wall for partitioning the housing into compart-



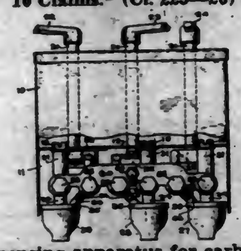
ments, and colored transparent strips extending across said windows and clamped between the edges of said transverse plates and the inner surfaces of said front and side walls.

2,448,303
HOPPER GATE
Manford C. Fors, Salinas, Calif.
Application January 12, 1944, Serial No. 517,929
1 Claim. (Cl. 271—44)



In combination with a wood slat hopper having flat bottom members and arranged to contain a plurality of wood slats of varying thicknesses stacked therein and supported by said bottom members, said hopper comprising a front wall terminating short of said bottom members, a hopper gate comprising two gate members mounted on opposite sides of the front wall of said hopper and arranged for limited vertical sliding movement relative thereto and relative to one another, each of said gate members having an identically beveled bottom end, each said end spaced vertically from said bottom members a predetermined distance substantially equal to the thickness of the thinnest slat in said stack, said gate members each having an adjustable stop means to adjust the predetermined spacing of said bottom ends relative to said bottom members, a slat ejection mechanism to move the bottom slat of said stack of slats forwardly against the beveled ends of said gate members to move said gate members slidably upwardly to permit the ejection of said bottom slat from said hopper, spring means to bias the bottom ends of said gate members downwardly against the top of the bottom slat during the ejection of said bottom slat from said hopper to scrape from said bottom slat another slat adhering thereto, guides connected to said front wall, each said guide comprising a pivotally mounted compression member, and adjustable spring means to urge said compression members downwardly in order to retard the movement of said bottom slat after its ejection from said hopper.

2,448,304
SUPPORTING DEVICE
John Gabel, Chicago, Ill.
Application July 31, 1946, Serial No. 687,390
4 Claims. (Cl. 248—48)



2. A support for engaging and holding upright the trunk portion of a Christmas tree or any other object similar thereto, comprising a pyramidal framework, crossbars at the base of said framework, and a cup adapted to enclose the lower portion of the object to be supported, said cup being notched on its lower edge for mounting on said crossbars.

2,448,305
BOLT POINTING MACHINE
Ernest Girard, Central Falls, R. I., assignor, by direct and mesne assignments, to American Tool Head Corporation, Providence, R. I., a corporation
Application October 19, 1945, Serial No. 623,313
12 Claims. (Cl. 10—21)

1. In a bolt pointing machine, a spindle having an externally threaded inner end, means torque connected to the spindle to rotate said spindle, a slide having a non-rotatable bolt holder on the end thereof in alignment with said spindle, a tool holding head having a cylindrical internally threaded outer portion rigidly mounted on the threaded end of the spindle, a substantially square center portion having an internal bore, diametrically opposite radial tool holding slots and bolt receiving holes exterior of said bore normal to said tool slots, hollow bolt sockets externally threaded to fit in said holes and internally threaded to receive tool clamping bolts and an inner substantially cylindrical bearing holding portion having spaced axial screw holes in the inner end thereof and a bore of larger size than that of said center portion forming a shoulder at the outer end thereof, replaceable pointing tools projecting inwardly of said radial slots in said center portion having ends exterior of said center portion and pointing edges terminating near the center of said head, tool clamping bolts threaded within said bolt socket holes, each having a point extending within a tool holding slot to abut one side of a tool to clamp its opposite side against the opposite side of said slot, a washer abutting the shoulder in the outer end of said inner head portion, an anti-friction bearing having its outer raceway abutting said washer secured against rotation within said inner bearing containing portion of the head, a bushing having an external surface fitting closely within the inner raceway and a circumferential lip projecting radially outwardly at the outer end thereof retained in position by the pointing tools, and an internal bolt receiving orifice to guide the bolt into proper axial alignment with the cutting ends of the pointing tools, a cover for the inner end of said head bearing portion having screw holes, screws fitting within said screw holes in the cover and head for holding said outer anti-friction bearing raceway and washer against said shoulder and means connected to said slide for advancing and retracting said slide, bolt holder and contained bolt at will so that the point of the non-rotating bolt is inserted through the bushing orifice in the head in aligned relationship to the cutting edges of the rotating tools.

2,448,306
DISCHARGE MANIFOLD FOR BEVERAGE DISPENSING APPARATUS
Louis Gottlieb, Philadelphia, Pa.
Application April 3, 1947, Serial No. 739,095
10 Claims. (Cl. 225—26)

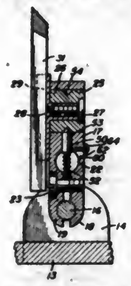
1. A dispensing apparatus for carbonated beverages comprising, in combination, a container having a plurality of compartments for different syrups, each of said compartments being provided with an individual syrup discharge fitting in the base wall thereof, and means for combining carbonated water with the syrup discharged from any one of said compartments to form a carbonated beverage, said means including a manifold body having separate valve controlled passages in respective communication with said syrup discharge fittings and a plurality of valve controlled intercommunicating passages for supply of carbonated water for mixing with a selected discharged syrup, said intercommunicating passages having a common inlet opening into a bore extending transversely of said manifold body, and a supply conduit for the carbonated water removably fitted in said bore, said conduit having a valve controlled passage therethrough terminating in an outlet in registry with said common inlet in the manifold body.

2,448,307
NECKTIE
Bernard Greenberg, New York, N. Y.
Application July 3, 1947, Serial No. 758,750
2 Claims. (Cl. 2—151)

2. In a necktie of the bow type, a neckband provided at each of its ends with a widened portion of a batwing shape, said batwing shape portion being composed of two plies of fabric, one of said plies being an integral extension of the neckband, the second ply being secured to the first ply for the greater portion of the length of the

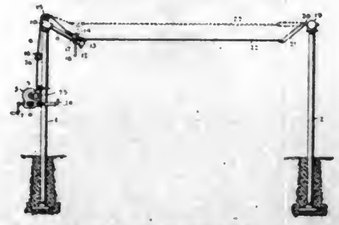
batwing, and providing a free tab portion at one of its ends only, said tab portion being considerably less than one half of the length of the entire batwing, said tab having a rear ply composed of a folded-over end portion of a part of the neckband.

2,448,308
TUNING KEY
George F. Gregg, Yakima, Wash.
Application July 2, 1946, Serial No. 681,087
1 Claim. (Cl. 84—306)



In a tuning key for stringed musical instruments, including a worm wheel, means for manually rotating said wheel, a worm gear in mesh with said wheel, the improvement comprising a shaft fixed to said gear and extending axially thereof, said shaft including a free end formed to provide ratchet clutch teeth, said shaft being formed with an axial bore, a cylindrical rod fixed in said bore and extending axially outwardly of said free end, a sleeve slidable and rotatable on said rod, said sleeve including an inner end formed to provide ratchet clutch teeth complementary to said first teeth and engageable therewith, said sleeve including an outer end formed to provide a winding knob, said sleeve being formed with a transverse aperture for connecting an instrument string thereto, said sleeve being slidable on said rod in one direction to disengage said teeth and permit a coarse tightening of said string upon rotation of said sleeve by said knob, and a threaded connection between said knob and sleeve to compel unidirectional manual rotation of said sleeve to coarsely tighten said string.

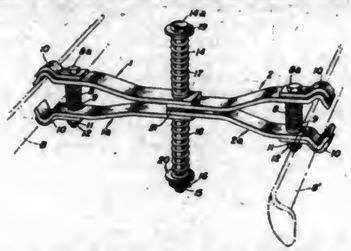
2,448,309
THREADING TOOL GRINDING FIXTURE
Rocco F. Grieco, Millburn, N. J.
Application June 12, 1945, Serial No. 599,022
4 Claims. (Cl. 51—220)



2. In a device of the nature described a flat hingedly mounted block having a bore therethrough, a collar rotatably mounted through the

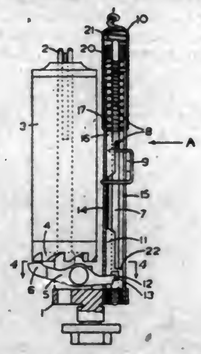
bore, adapted to receive a tool therein, notches about the periphery of said collar, a scale on the face of the block and indicia on the free edge of the collar cooperating therewith for accuracy of adjustment, means for holding the collar in adjusted position, including a resiliently biased pin adapted to engage selective of said notches, a rod

secured to said pin for manual actuation thereof, a flat base upon which the block is hinged, said block adapted to lie horizontally upon the base, a pintle mounted upon the base, said block being split at its hinged end throughout its width to form jaws to clamp upon said pintle, and means for securing said jaws in fixed position upon the pintle.



2,448,310
CLOTHESLINE
Ernest C. Hansen, New Orleans, La.
Application December 13, 1946, Serial No. 716,095
7 Claims. (Cl. 211—119.15)

5. In a clothes line apparatus, the combination of a primary and an auxiliary standard, said primary standard provided at its upper end with a horizontal bar, said horizontal bar provided with rest arms, a floating bar above said rest arms, said floating bar provided on its ends with hook-carrying caps, said hooks extending inwardly under said rest arms, a clothes line attached to said floating bar, means movably connecting said clothes line to said auxiliary standard, and means for raising and lowering said floating bar with respect to said rest arms.



2,448,311
TOW BAR
George E. Hill, Washington Suburbs, Prince Georges County, Md.
Application March 8, 1946, Serial No. 652,901
5 Claims. (Cl. 280—33.14)

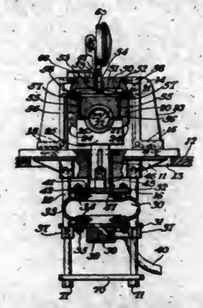
1. A tow bar for vehicles comprising a plurality of draft bars with the inner end of one draft bar overlapping the inner end of another draft bar, a king pin extending through registering holes in the overlapped ends of the draft bars and providing a pivotal connection between said draft bars, said pin being of smaller diameter than said holes and projecting a substantial distance beyond opposite sides of the draft bars, compression springs associated with said pin and

exerting pressure upon opposite sides of the draft bars for urging said draft bars together, and clamping jaws upon the outer ends of said draft bars.

2,448,312
BOBBIN CARRIER FOR BRAIDING MACHINES
Percival Leonard Hobourn, Leamington Spa, and William Henry Joy, Coventry, England
Application January 22, 1947, Serial No. 723,534
In Great Britain March 25, 1946
3 Claims. (Cl. 87—57)

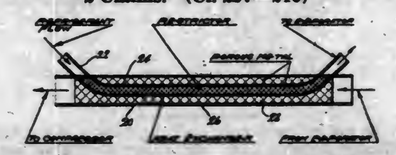
1. Improvements in bobbin carriers for braiding machines comprising in combination a carrier base; a vertical guide post mounted on said carrier base; an abutment at the upper end of said vertical guide post; a thread tensioning compression spring co-axial with said guide post and abutting its upper end against said abutment; a thread tensioning weight having an extension engaging said vertical guide post which extension abuts the lower end of said thread tensioning spring; a longitudinally slotted casing mounted on said carrier base and co-axial with said vertical guide post, said casing being slidably embraced by said thread tensioning weight and receiving through its slot said thread tensioning weight extension for sliding guiding engagement therewith; a second compression spring within said tubular casing surrounding said thread tensioning spring and abutting its upper end against said abutment; a slidable member within said tubular casing abutting its upper end against the lower end of said second compression spring; and a pawl lever pivotally mounted on said carrier base for the control of the rotation of the bobbin spool, adapted to engage the lower end of said slidable member through an opening in said slotted tubular casing for actuation by

said slidable member when the latter is raised by the extension of the thread tensioning weight engaging the upper end of said slidable member when raised by the thread to said upper end.



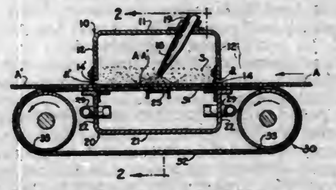
2,448,313
AUTOMOBILE TIRE
Curtis Hughes, Forest, Tex.
Application June 21, 1945, Serial No. 600,704
1 Claim. (Cl. 152—39)

A resilient tire, comprising a plurality of similarly formed segments placed end to end to form a circular tire structure, each segment having an inner U-shaped section seated on a wheel rim, the base of said section being slightly concave, and the flanges thereof extended outwardly of said base, and an outer section having a body part and a curved tread portion, springs supporting the outer section on the inner section, two of said springs being substantially S-shaped leaf springs, and the other spring being a coil spring and located between the leaf springs, each of said springs attached to the inner section and the outer section, side plates having arcuate shaped outer faces attached to the flanges of the inner section and engaging the body part of the outer section and forming an enclosure for the space between the sections, arcuate flanges on said outer sections overhanging the outer edges of said plates, an annular seat in the tread portion of said outer section, a resilient tread member secured to said portion in said heat, the outer section having a body with flat parallel side walls which are adapted to slidably engage the flat inner walls of said plates, ears on said side plates and bolts extending through said ears for attaching the side plates of the sections together to form a tire assembly, and means for attaching the inner sections to the rim.



2,448,314
APPARATUS FOR CHECKING THE EXTERNAL DIAMETERS OF ANNULAR OBJECTS
Thomas J. Kavanagh, Cleveland Heights, Ohio, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a corporation of Ohio
Application November 29, 1944, Serial No. 565,661
6 Claims. (Cl. 33—178)

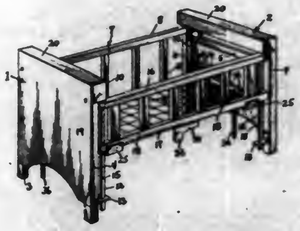
5. In apparatus for testing bushings or the like, a block having a recess shaped to receive a portion of an article to be checked; a second block having a recess shaped to receive another portion of said article, means for urging said blocks toward one another with the recessed portions in registry with one another; a lever carried by one of said blocks; a pivot member for pivotally supporting the lever intermediate the ends thereof; a link for interconnecting one end of the lever with a surface of the other of said blocks adjacent one side of the recess in said block; a second link for interconnecting the other end of said lever with a surface of said other block adjacent said recess at the side of the recess opposite



the first mentioned side; a spring for urging said pivot member in a direction to yieldingly urge said lever and links against said other block; and a movement gauge connected with said first member.

2,448,315
COMBINATION RESTRICTOR AND HEAT EXCHANGER
Theodore W. Kunzog, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application February 14, 1945, Serial No. 577,919
2 Claims. (Cl. 257—246)

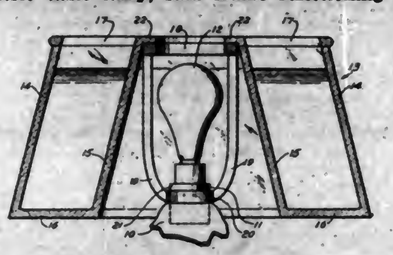
1. A combined restrictor and heat exchanger comprising a unitary structure including two concentric tubes, the inner of said tubes being filled with highly porous metal made from sintered non-compacted metal powder, predominating in copper, said tube being held spaced from and bonded to said second tube through the medium of highly porous metal filling the space therebetween and made from non-compacted highly porous metal powder wherein the pore size of the last mentioned porous metal is greater than the pore size of the first mentioned porous metal.



2,448,316
SYSTEM FOR FINISHING PLASTIC SHEETS
I. Lawrence Lesavoy, Allentown, Pa.
Application August 24, 1945, Serial No. 612,372
7 Claims. (Cl. 51—14)

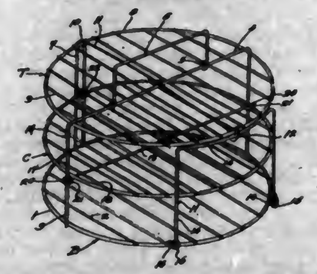
1. In apparatus for subjecting the surface of plastic sheets to agitated sand, in combination,

an upper enclosure having a roof and side and end walls, a lower enclosure having a floor and side and end walls, the side walls of the enclosures abutting in vertical alignment to form an air-tight juncture and the end walls being spaced in vertical alignment to provide end clearances, an endless conveyor belt having an upper horizontally disposed loop passing through the said end clearances to traverse the said aligned enclosures and adapted to carry a plastic sheet, a supply of sand in said upper enclosure above the upper belt loop, the said belt loop serving to retain the sand within the upper enclosure, means for admitting air pressure to the upper enclosure and directed downwardly towards the conveyor to agitate the sand, and means for admitting a heating fluid to the lower enclosure to maintain the said sheet in a semi-plastic state.



2,448,317
INFANT'S CRIB
Bolling B. Lineberry and Garnett E. Branscome, Hampton, Va.
Application September 27, 1944, Serial No. 556,035
2 Claims. (Cl. 5—100)

2. In an infant's crib and the like, a side panel vertically slidable from an upper confining position to a lower non-confining position, a mattress-supporting spring supported at a normal low level in the crib, flexible cables at each end of the crib and attached at one of their ends to the spring and at their opposite ends to said panel, and a pulley rotatably mounted on each end of the crib and above the spring therein, the cable at each end of said spring passing upwardly from the spring and over said pulley and downwardly to its connection with the side panel, whereby vertical sliding movement of said panel in a downward direction from its upper confining position to its lower non-confining position will pull on said cables to move them over said pulleys to elevate said spring from its normal low level to a higher level within the crib.

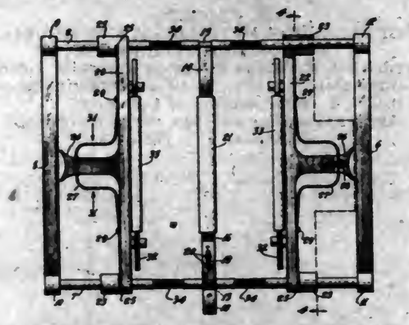


2,448,318
FISH BOWL LAMP SHADE
Hubert Elza Lowry, Lawndale, Calif.
Application June 16, 1945, Serial No. 599,809
2 Claims. (Cl. 240—2)

1. A combination lamp shade and fish bowl, comprising a receptacle having spaced inner and outer walls and a bottom wall, the said inner and outer walls being of light transmitting material, the inner wall being formed to define a central area open at the top and botton, a frame comprising an annular member disposed around the inside of the inner wall, inwardly and downwardly converging arms connected with the annular member and a clamp connected with said arms and adapted to encircle a lamp socket of an electric table lamp, said frame functioning to

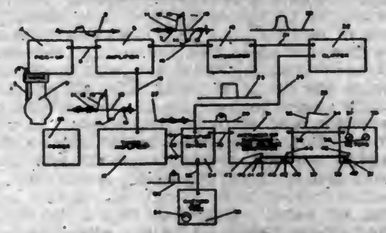
support the receptacle in encircling relation with an incandescent bulb forming a part of the lamp.

2,448,319
PIE-CAKE CARRIER
Edna H. Maranville, Wichita, Kans.
Application August 20, 1946, Serial No. 691,778
7 Claims. (Cl. 224—45)



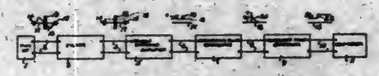
1. An article of the class described comprising a bottom tray, an upstanding member carried by the tray, said member being substantially in the form of an inverted U, a top tray member carried by the upper portion of said second member, a handle engaged with the second member, a central tray and means for removably supporting the central tray member between the bottom tray member and the top tray member, the peripheral portion of the bottom tray member being provided with an upstanding rod substantially midway of the side arms of the second member, a holding member hingedly connected with the bottom tray member at a point substantially diametrically opposed to the rod, and means for detachably locking the holding member in raised position to intersect the space between the bottom tray member and the top tray member.

2,448,320
SHELLAC BLEACHING
William J. McIntosh, Rahway, N. J., assignor to Mathieson Chemical Corporation, a corporation of Virginia
No Drawing. Application June 15, 1945, Serial No. 599,757
9 Claims. (Cl. 106—236)



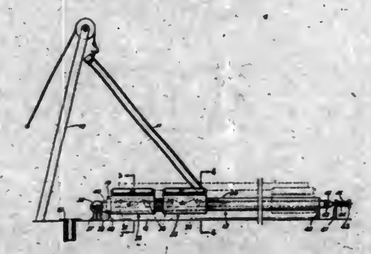
5. In the bleaching of shellac, the improvement which comprises dissolving the shellac in an organic shellac solvent miscible with water, mixing the shellac solution with an aqueous solution of sodium chlorite in the presence of a small amount of an aldehyde, sufficient to activate the chlorite and thereafter adding a sufficient quantity of an anti-chlor to remove available chlorine therefrom.

2,448,321
SURGICAL CLAMP
John A. Metrone, Jersey City, N. J.
Application September 11, 1946, Serial No. 696,225
4 Claims. (Cl. 128—346)



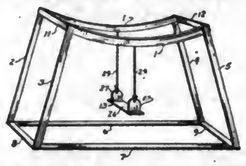
4. A surgical clamp comprising end members, buttress-serrated side members associated with the end members with the buttress faces facing away from the end members, a detachable bar centrally spanning the side members, a clamp slidably associated with the side members on one side of the detachable bar, a clamp slidably associated with the side members on the other side of the detachable bar, a spring associated with the one clamp engageable and disengageable with the serrations, and a like spring associated with the other clamp on the other side of the detachable bar engageable and disengageable with the serrations.

2,448,322
DETONATION METER
Raymond G. Piety, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application September 20, 1943, Serial No. 503,166
16 Claims. (Cl. 73—35)



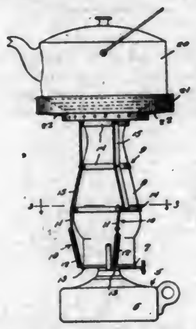
1. The method of measuring the knock intensity during periods of detonation in an internal combustion engine cylinder, comprising the steps of generating a first electrical wave the amplitude of which is in synchronism with and substantially proportional to the rate of change of pressure in the cylinder, transmitting the first wave in two channels of a parallel channel network, substantially integrating the first wave into a second wave substantially comprising pulses having limited portions of uniform and substantially greater amplitude in synchronism with the periods of detonation in one channel of the parallel network, filtering out of the first wave a third wave comprising substantially a selected wave band in the other channel of the parallel network, adding the amplitudes of the second and third waves and measuring a function of the peak amplitude of the combined second and third waves.

2,448,323
DETONATION METER
Desionde R. de Boisblanc, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application August 9, 1944, Serial No. 548,757
5 Claims. (Cl. 73—35)



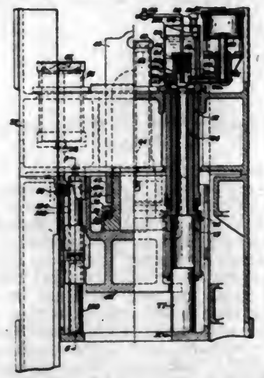
1. In a detonation meter, the combination comprising pickup means for converting pressure variations in the cylinder of an internal combustion engine into electrical voltages representative thereof, said voltages including unwanted components and components representative of detonation, means for filtering said electrical voltages to attenuate said unwanted components, means for feeding the entire output of said pickup means to said filtering means, an amplifier for increasing the amplitude of the filtered voltages without appreciably changing their wave form, means for feeding the entire output of said filtering means to said amplifier a threshold device fed directly by said amplifier and receiving the entire output thereof said threshold device eliminating components of the amplified voltages which are below a predetermined amplitude, said predetermined amplitude being intermediate the peak amplitude of the detonation components and the peak amplitude of said unwanted components in the output of said amplifier, a pulsing circuit fed by said threshold device for converting the output thereof into exponential pulses, a second circuit for converting the exponential pulses into sustained pulses, and means for measuring said sustained pulses.

2,448,324
PIPE HANDLING APPARATUS
Carl W. Pool, Wilmington, Calif.
Application September 24, 1946, Serial No. 699,012
3 Claims. (Cl. 214—1)



3. In pipe handling apparatus, a base, a track section pivotally mounted upon the base and adapted to tilt laterally and including an upper plate, side webs and rails, pipe supporting carriages mounted upon the track section and including top sections, sides secured to the top sections, bottom sections secured to the sides, roller supports secured to the bottom sections, rollers carried by the roller supports for rolling upon the rails, the arrangement being such that the rollers are substantially inclosed by said upper plate said side webs and said rails, and means to move the carriages separately in either direction longitudinally of the rails.

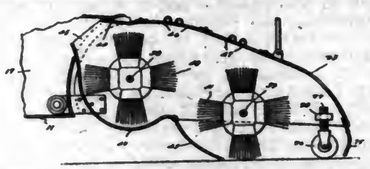
2,448,325
RECREATION APPARATUS
Charles B. Poorman, Jr., Schuylkill Haven, Pa.
Application November 29, 1946, Serial No. 713,044
6 Claims. (Cl. 104—81)



6. A free-swinging recreational swing comprising a pair of suspended trackways, each defining a segment of a large circle, and comprising curved, hollow beam members substantially square in cross section, a pair of independent trolley devices, one operating in each of said trackways, each trolley device including a plurality of wheels and a downwardly projecting link member projecting through a slot formed longitudinally of and on the outer periphery of each of said trackways, a pair of flexible lines, one attached to each trolley device link, a seat suspended between the two lines, and buffer means at each end of each trackway comprising a coil spring adapted to impart to the trolley a catapultic action at the beginning of a downward movement of the swing in a reverse direction.

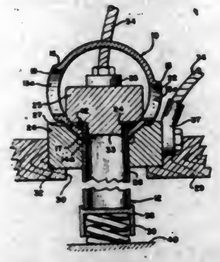
2,448,326
HEATING ATTACHMENT FOR LAMPS
Llewellyn M. Roberts, Northfield, Vancouver Island, British Columbia, Canada
Application May 29, 1944, Serial No. 537,825
3 Claims. (Cl. 126—258)

1. In an attachment for a fuel-burning illuminating lap including a burner, a support comprising a plurality of spaced vertically arranged members, a plurality of bands arranged in spaced superimposed coaxial relation with respect to each other and connected to said members, an annular rest for the accommodation of a receptacle thereon mounted upon the uppermost of said bands and connected thereto, said rest having a plurality of spaced members extending radially from the inner periphery thereof and terminating adjacent its central point, a heat-retaining band provided with a plurality of spaced members projecting radially from the inner periphery thereof concentrically mounted on said rest, the ends of the radially extending members on said heat-retaining band being attached to the outer periphery of said rest, and a plurality of spaced yieldable tie elements having one of their ends attached to the lowermost of said bands and the other of said ends to said burner.



2,448,327
DOUBLE-SLIDE MECHANISM AND DOUBLE-ACTION DRAWING PRESS
Fredrich J. Rode and Meredith R. Hatch, Toledo, Ohio, assignors to E. W. Bliss Company, Brooklyn, N. Y., a corporation of Delaware
Application June 12, 1943, Serial No. 490,600
2 Claims. (Cl. 113—45)

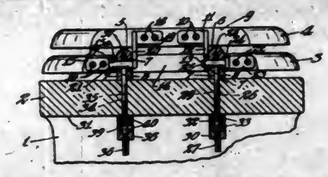
1. In a double action press of the character described having, a mechanically reciprocable die slide, a blank holder slide, an hydraulic interlocking system having tandem cylinder-plunger mechanism operatively disposed between and interconnecting the die slide and the blank holder slide when the latter is brought into and away from work clamping position, valve and fluid interflow control means between the tandem hydraulic units operable upon reciprocation of one of said slides to disconnect the slides and allow predetermined relative vertical movement of the slides during draw and withdrawal portions of the die slide work cycle, an hydraulic pressure system in the form of a differential duplex piston and cylinder mechanism for pressure retention of the blank holder slide in work clamping position during the draw and withdrawal action of the die slide, comprising, an upper cylinder fixed to and within the press frame, an upper cooperating piston therefor, a lower cylinder rigidly secured to said upper piston, a lower cooperating piston reciprocable within said lower cylinder and resting upon the blank holder slide, and means for connecting said lower cylinder with the die slide, said means providing for limited lateral, lost motion movement between said cylinder and die slide to permit self-aligning adjustment of said cylinder relative to its cooperating piston.



2,448,328
POWER-DRIVEN SWEEPING MACHINE
Austin Russell, Elsinore, Calif.
Application January 17, 1947, Serial No. 722,697
6 Claims. (Cl. 15—83)

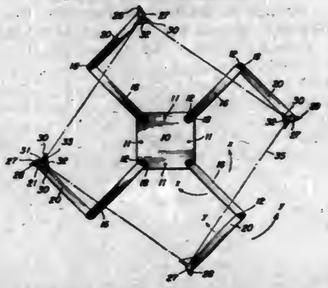
1. A sweeping machine comprising a main body portion having a pair of ground-engaging wheels and formed with a trash-receiving space, said main body portion being recessed at its under side, a brush housing pivotally secured to said main body portion in the recess thereof, said brush housing having a discharge spout extending into said trash-receiving space, brush means in said

brush housing adapted to sweep trash from the ground under the housing to said discharge spout, and means responsive to forward movement of the machine for actuating the brush means.



2,448,329
METHOD OF ELECTRIC BRAZING METAL PARTS
Frank W. Schwinn, Chicago, Ill.
Application April 5, 1946, Serial No. 659,795
3 Claims. (Cl. 219—12)

1. The method of securing together two tubular metal parts in angularly disposed relationship which comprises the steps of providing a side opening in one of the parts, extruding the metal adjacent said opening to enlarge the opening to a predetermined diameter and form an outwardly projecting flange at the edge of the opening, tapering the end portion of the other of said parts to fit tightly into the enlarged opening, pressing the tapered end portion of said other part into the enlarged opening to an extent such that its end margin projects linearly into said one of the parts, positioning said parts with said end margin upright, placing within said one of the parts and around the inwardly projecting end margin of the other a ring of solder of sufficient size to form between the adjacent surfaces of said parts a fillet when the solder is melted, electrically heating the adjoining portions of the parts to a temperature and for a period of time sufficient to melt the solder and effect its flow into the space between the parts, and holding the parts in fixed relationship during the heating and thereafter until the solder solidifies.

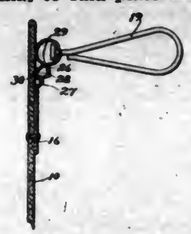


2,448,330
HINGE CONSTRUCTION FOR TOILET SEATS
Peter J. Sperzel, Minneapolis, Minn., assignor to Sperzel Company, Minneapolis, Minn., a corporation of Minnesota
Application September 20, 1945, Serial No. 617,499
9 Claims. (Cl. 4—236)

1. A friction hinge construction for pivotally connecting a toilet seat and cover to one another and an underlying toilet bowl, said friction hinge construction comprising cooperating hinge brackets having aligned apertures and carried one by the bowl and one by the seat, cooperating hinge brackets having aligned apertures and carried one by the bowl and the other by the cover, a hinge pin carried by the cover and extending through aligned apertures of the cooperating bowl and seat brackets, a hinge pin carried by

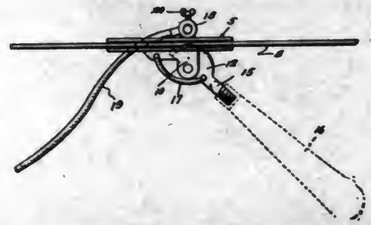
the seat and extending through the aligned apertures of the cooperating bowl and cover brackets, and friction braking means applied to the opposite hinge pins, whereby the frictional braking action applied to one hinge pin will control pivotal movements of the seat and the frictional braking action applied to the other hinge pin will control pivotal movements of the cover.

2,448,331
REPAIR JIG FOR AUTOMATIC RECORD CHANGERS
Alvin W. Staab and Oscar A. Wanden, Milwaukee, Wis.
Application January 3, 1946, Serial No. 638,857
4 Claims. (Cl. 29—288)



1. A repair jig for automatic record changers, radio chassis and other equipment, including a base, horizontal arms pivotally mounted on the corners of the base, means to clamp the arms in adjusted position, other horizontal arms pivoted to the extremities of the first named arms, means to clamp the latter arms in adjusted position, uprights removably mounted on the extremities of the second named arms, and brackets mounted for vertical adjustment on the uprights.

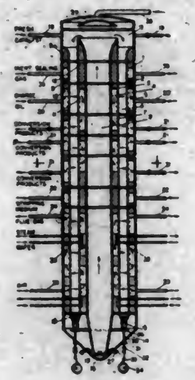
2,448,332
KEY ASSEMBLY
William H. St. Thomas, Gloversville, N. Y., assignor to E. J. Wilkins Company, Gloversville, N. Y., a corporation of New York
Application March 25, 1946, Serial No. 657,050
4 Claims. (Cl. 70—456)



1. A key holder comprising a base plate having at least two spaced parallel spring fingers extending from its top edge, each of said fingers being curved from a point near its root in a forward, downward and backward direction to a point spaced from the front face of said plate,

then extending downwardly and forwardly to a point below said first named point; a key hanger including a shank having an enlarged head, the lateral dimension of the head being greater than the space between adjacent spring fingers and the longitudinal dimension of the head being greater than the normal spacing of said fingers from said plate whereby said key hanger when positioned normal to said plate may readily be

inserted and removed from the space inside the curve of the fingers, the fingers being of sufficient resiliency to permit their being flexed forwardly to permit the passage of the head of the key hanger between the surface of the plate and the overlying edges of the adjacent fingers; and means connecting the ends of the spring fingers to said plate to limit the amount of outward flexing of the fingers.

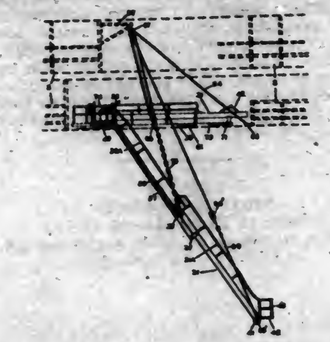


2,448,333
TROLLEY LINE CLAMP
George A. Walters, Nemacolin, Pa.
Application March 21, 1945, Serial No. 583,900
2 Claims. (Cl. 173—273)

2. A trolley line clamp comprising an elongated channelled clamping member having upper and lower flanges adapted to receive the line therebetween, the lower flange having a longitudinal slot therein adapted to expose the line therethrough, a pair of laterally spaced ears depending from said lower flange upon opposite sides of said slot, and a cam member pivoted on said ears to rock between the same into and out of said slot to clampingly engage and release the line exposed through said slot respectively, said cam member having an edge flange thereon acting in conjunction with the back of the elongated clamping member to confine said line in said member.

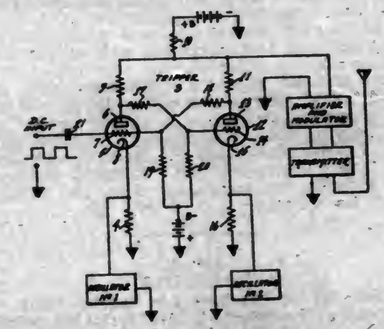
2,448,334
PYROLYTIC CONVERSION OF HYDROCARBONS
Kenneth Merle Watson, Madison, Wis., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine.
Application June 27, 1947, Serial No. 757,641
2 Claims. (Cl. 196—52)

1. In a process for the pyrolytic conversion of hydrocarbons wherein the hydrocarbons in vapor phase are continuously passed in intimate contact with a solid catalyst at an elevated temperature, resulting in the formation of a carbonaceous deposit on the catalyst, and in which the catalyst is intermittently regenerated by burning off the carbonaceous deposit by contact with air, the improvement which comprises passing the catalyst in a relatively narrow, vertically elongated body downwardly through an enclosed vertically elongated chamber, effecting the conversion of the hydrocarbons by repeatedly passing the hydrocarbon vapors transversely through the body of catalyst in an upper zone of the chamber at progressively different elevations, and thereafter separating the hydrocarbon vapors from the catalyst, partially regenerating the catalyst by continuously and repeatedly passing regenerating air



transversely through the body of catalyst in a lower zone of the chamber at progressively different elevations and withdrawing the gaseous products of the regeneration from the system, withdrawing partially regenerated hot catalyst from the lower end of the chamber, suspending it in a current of air and passing the suspension upwardly through a second vertically elongated chamber to an elevation higher than the upper end of the vertically elongated body of catalyst, burning residual carbon from the catalyst during its upward passage in suspension in the air, separating the regenerated catalyst from the resultant gaseous combustion products and returning it by gravity to the upper end of the catalyst bed and withdrawing the gaseous combustion products from the system.

2,448,335
ACCOMMODATION LADDER FOR SHIPS
John J. Wallace, New Orleans, La., assignor to Hepinstall Steel Works, Inc., New Orleans, La.
Application June 27, 1945, Serial No. 601,792
3 Claims. (Cl. 228—54)

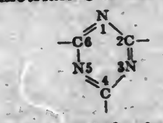


1. In an accommodation ladder for ships the combination of a ladder, a rotatable platform hinged to one end of said ladder at a deck level, means for raising and lowering the other end of said ladder to and from a horizontal position parallel to the side of the ship and at the deck level, a swinging platform pivoted at one end to the deck and supporting the rotatable platform at its other end, a jib beam pivoted to the deck and adapted to engage the underside of the free end

of the ladder while the ladder is in its horizontal position whereby the ladder may be swung in a

horizontal plane to a position over the deck for stowage.

2,448,336
FREQUENCY SHIFT KEYER
James R. Weiner, Brooklyn, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application December 14, 1944, Serial No. 568,090
1 Claim. (Cl. 250—27)



In a frequency shift telegraphy system, two tubes each having electrodes including an anode, a cathode, and a control grid, an impedance connected to the anode of each tube, a separate unbypassed resistance connecting the cathode of each tube to ground for maintaining the cathode of each tube above ground with respect to alternating current and direct current potentials, said separate resistances also serving to provide negative bias on the control grids of the respective tubes, resistances cross-coupling the anodes and control grids of the tubes so that when one tube draws current the potential drop in the impedance coupled to its anode is supplied to the grid of the other tube which is cut off thereby and vice versa, a source of oscillations of a first frequency coupled to the cathode of one tube, a source of oscillations of a second frequency coupled to the cathode of the other tube, a source of control potential the magnitude of which varies in accordance with signals coupled between the grid of one tube and ground and an output circuit coupled to the anodes of said tubes by a common load impedance.

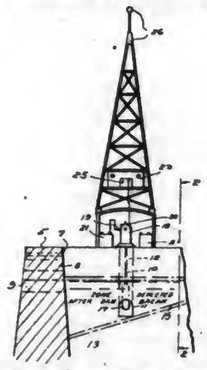
2,448,337
ACTIVATED CARBON PRODUCTS
Leonard Wickenden, Manhasset, N. Y.
No Drawing. Application December 2, 1944, Serial No. 566,389
4 Claims. (Cl. 252—262)

1. An activated carbon product consisting essentially of granular petroleum coke coated with about 3%–6% by weight of a partially oxidized channel carbon black having a mean particle size of less than about 100 millimicrons, substantially ash free and having a molasses value of at least 85.

2,448,338
AMINOTRIAZINE-ALDEHYDE CONDENSATION PRODUCTS WITH LINOLENIC ACID MONOGLYCERIDE AND PROCESS OF MAKING SAME
Gustav Widmer, Basel, and Willi Fisch, Binningen, Switzerland, assignors to Ciba Products Corporation, Hoboken, N. J.
No Drawing. Application March 6, 1945, Serial No. 581,347
2 Claims. (Cl. 260—21)

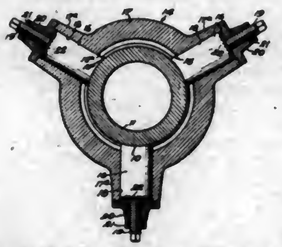
2. The new condensation products useful in the manufacture of lacquers and varnishes, obtained by causing to react, in presence of a low boiling monoalcohol, a formaldehyde condensation product of an aminotriazine of the formula

wherein at least one of the free valencies of the nucleus is substituted by an amino group having at least one reactive hydrogen atom, the remaining free valencies being taken up by a radical selected from the group consisting of hydrogen, hydroxyl halogen, alkyl, alkylene, aryl and aralkyl, with the monoglyceride of linolenic acid, said linolenic acid being the sole acid constituent of the said monoglyceride.



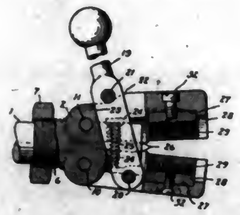
2,448,339
ELECTRICAL PLUG
Alexander M. Williams, Watertown, S. Dak.
Application January 7, 1944, Serial No. 517,407
1 Claim. (Cl. 200—51.02)

An electrical connection plug comprising a plug body having one wall provided with spaced parallel prong-receiving openings, a pair of contact elements connected to said body therewithin and having portions projecting from the side of said body opposite said openings, the projecting portions of said contact elements constituting prongs corresponding in arrangement to said openings, each of said contact elements comprising a pair of contact strips having their portions within said plug body forming contact sockets engageable with prongs inserted through said openings, said plug body having a hollow laterally projecting integral portion, a pair of binding posts carried by said projecting portion remote



from said contact elements, and switch means within the projecting portion of said body for controlling electrical connection between said contact elements and said binding posts.

2,448,340
ELECTRIC FLOOD SIGNAL
Jacob O. Williams, San Bernardino, Calif.
Application October 31, 1944, Serial No. 561,297
1 Claim. (Cl. 177—311)

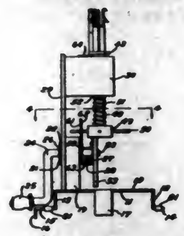


A discriminating protective public alarm system for supervising dikes and dams restraining a body of water, operated only under emergency conditions produced by a dam or dike break, but not operated by normal water level fluctuations, comprising a float chamber forming a separate closed compartment reaching down below the lowest low water level of the body of water, a float operated switch arrangement including a float operating within said float chamber and float controlled switch contacts operative at the lowest float level, a water channel, leading from said float chamber to the body of water and having its intake located below the lowest low water level immediately behind the dam or dike to be protected, within a triangular space uncovered solely upon formation of an inclined water level upon dam or dike break, and means, including an automatically operative broadcast transmitter, for transmitting an alarm message, operated by the said switch contacts.

2,448,341
BEARING FOR ROTARY SHAFTS
Lucien I. Yeomans, Chicago, Ill., assignor to Lucien I. Yeomans, Inc., Chicago, Ill., a corporation of Illinois
Application June 30, 1944, Serial No. 542,910
8 Claims. (Cl. 308—37)

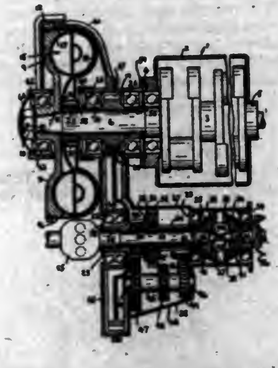
1. In a bearing unit for a rotary shaft, the combination of a bearing and an annular series of non-metallic shoes each adapted to encircle the shaft, housing means for supporting said bearing and series of shoes in closely juxtaposed side-by-side relation, and adjustment means for shifting said shoes individually inward toward said shaft into direct running contact with the latter while it is revolving on center with reference to said bearing and thereafter maintaining said shoes in contact with said shaft, to thereby retain a fixed circumferential clearance between said shaft and bearing.

2,448,342
BROACH HOLDER
Frank G. Zagar, Euclid, Ohio
Application December 11, 1944, Serial No. 567,719
4 Claims. (Cl. 279—35)



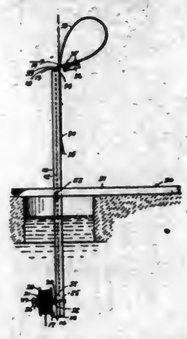
1. A broach holder comprising a body having an attaching portion, a head at one end of the attaching portion, a pair of holding jaws, pivots connecting the jaws to the head, said pivots being transverse to the central axis of the body and on opposite sides thereof, said jaws having alined centrally disposed longitudinal slots disposed transversely of and outwardly of said pivots, a lever extending through the slot of one jaw with its inner end in the slot of the other jaw, a pivot connecting the lever to the latter jaw, and a transverse pin carried by the lever and engaging the outer face of the jaw through which its extends.

2,448,343
PROJECTILE
Solis Myron Zandmer, Los Angeles, Calif.
Application December 14, 1942, Serial No. 468,971
8 Claims. (Cl. 102—92.5)



1. A projectile having balls rotatably seated in its surface and projecting therefrom and disposed in spaced apart relation, to be received in spaced spiral grooves in a gun bore, the seats for said balls in said projectile having a substantially flat or level inner surface providing substantially a point contact with said ball, and the portion of said seat embracing the ball being designed to provide at least one other point contact with said ball, and means temporarily fastening or pinning said ball to said seat substantially at said contact point on said inner surface, said temporary pin being designed to be broken to free the ball for rotation in its seat, upon entry of the balls in the spaced spiral grooves of the gun bore.

2,448,344
KNITTING MACHINE
William C. Adams, Cincinnati, Ohio
Application September 30, 1946, Serial No. 700,193
15 Claims. (Cl. 66—16)

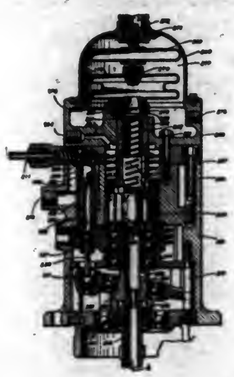


1. In a device of the class described the combination of a base, a support carried by said base, a knitting needle sleeve having slideably mounted therein a plurality of knitting needles, said sleeve being mounted in the support for rotative and axial movement relative thereto, and means for alternately rotating and axially shifting said sleeve.

2,448,345
DRIVE FOR AUTOMOBILES AND THE LIKE
Charles N. Aronson, Niagara Falls, N. Y.
Application December 20, 1944, Serial No. 569,028
3 Claims. (Cl. 180—70)

1. The combination with the crank shaft of an internal combustion engine, of a pair of wheel-driving shafts arranged end to end, a differential between the ends of said shafts including a rotatable casing operative to impart rotation to said shafts, a fluid coupling operative by the crank shaft, and means operative by said coupling to rotate said casing at variable speeds selectively comprising a reduction gear train, and mechanism for establishing a direct drive between one gear of said train and said casing comprising a hollow motion-transmitting shaft surrounding one of said wheel-driving shafts and operatively connected to said casing, a ring gear rotatable around the motion-transmitting shaft and fast to one gear of said train, and a shiftable gear splined on the motion-transmitting shaft and including an internal gear section for meshing with the ring gear.

2,448,346
TIPUP FOR ICE FISHING
Raymond N. Baugh, Bridgeport, and Robert F. Wycinowski, Fairfield, Conn.
Application December 2, 1946, Serial No. 713,496
9 Claims. (Cl. 43—17)

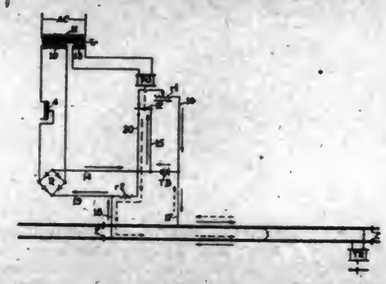


2. In a tip-up for ice fishing, a bridging member for resting upon the surface of the ice and bridging a hole therein, a reel supporting member pivotally connected to said bridging member and adapted to extend substantially vertically above and below it, a real rotatably mounted upon the lower portion of said reel supporting member, a signal carrying spring strip member carried upon the upper portion of said reel supporting member and adapted to extend substantially above it, said strip member having in one edge and contiguous to its upper end a notch adapted upon forming said strip member into a loop to be engaged with the other edge of said strip member at an intermediate point thereof contiguous to the upper end of said reel supporting member, and having at its upper end a lip adapted in said looped position to extend downwardly into engagement with the upper end of said reel supporting member, operating means carried by said reel supporting member for effecting disengagement of said notch of said strip member from its intermediate portion, and means carried by said reel arranged to actuate said operating means upon rotation of said reel.

2,448,347
HYDRAULIC PUMP CONTROL
Louis Beeh, Long Meadow, Mass., assignor to Bulova Watch Company, Inc., New York, N. Y., a corporation of New York
Application October 18, 1944, Serial No. 559,295
18 Claims. (Cl. 103—38)

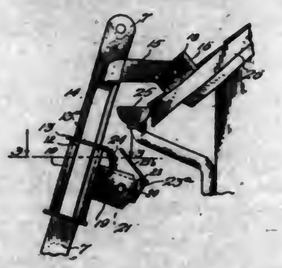
1. In a pump including a supply chamber, at least one pump unit having a barrel with an inlet aperture and a plunger reciprocatable in the coordinate barrel, and a conduit between said supply chamber and said aperture, the combination of first means having a curved face in controlling relationship to said aperture and being movable in an axial direction and a peripheral direction, a second means whereby said plunger and said first means are held in fixed relationship and said plunger reciprocated and said means moved in one of said directions, third means including a hydraulic servo motor to cause movement of said first means in the other one of said directions thereby to change the portions of said face passing said aperture to vary the time during which said barrel is periodically connected to said supply chamber, a control element for

said servo-motor, and a pressure responsive organ in controlling connection with said element



so as to cause movement of said first means in said other direction according to pressure variations to which said organ is subjected.

2,448,348
DENTAL HANDPIECE
Gustaf Erik Björklund, Stockholm, Sweden
Application June 26, 1945, Serial No. 601,596
In Sweden July 3, 1944
4 Claims. (Cl. 279—51)

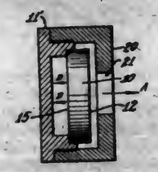


4. In a handpiece, a spindle sleeve, a jam sleeve arranged in said spindle sleeve, an elastic adjusting ring nut coaxial with said spindle sleeve and said jam sleeve and threaded in said spindle sleeve and being provided with teeth on its rear side, a crank lever having a part constituting a short lever arm which is arranged between said jam sleeve and said ring nut and having a curved longer lever arm passing through said ring nut, a sliding forked member which embraces the curved lever arm and is coaxial with the ring nut and provided with teeth on its fore end, and one or more pins or the like passing through the shanks of the forked member and engaging the curved lever arm thereby putting lateral pressure on same when the forked member is pushed axially.

2,448,349
TRACK CIRCUITS WITH BATTERY CHARGING OR DEPOLARIZING MEANS
Harry L. Black, Moncton, New Brunswick, Canada, assignor to General Railway Signal Company, Rochester, N. Y.
Application December 20, 1944, Serial No. 568,991
14 Claims. (Cl. 246—41)

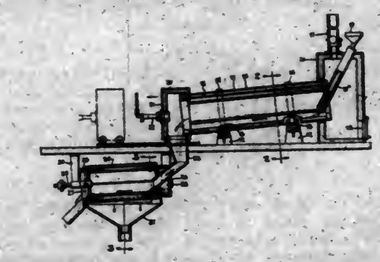
1. Track circuit structure of the type described comprising, a track section, a battery for one end of said section, a track relay connected across the track rails at the other end of said section, a source of alternating current, a rectifier connected to rectify current from said source to deliver a voltage higher than the voltage of said battery, and a power-off relay normally energized from said alternating current source for during the presence of alternating current causing direct current to flow from said rectifier to the track rails at said one end of said section through a circuit including said battery in bucking relationship and for during the cessation of alternating current from said source connecting said battery directly across the track rails at said one end, whereby said battery is at times charged through a circuit including said track relay.

2,448,350
LADDER BRACKET
Cecil L. Brown, Chattanooga, Tenn.
Application November 24, 1945, Serial No. 630,590
1 Claim. (Cl. 228—61)



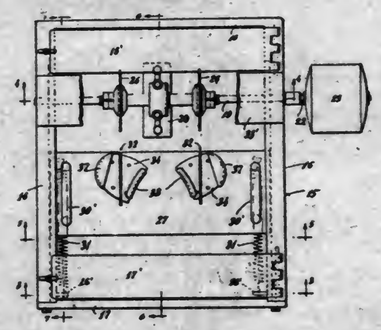
A ladder bracket comprising slides adapted for mounting on the rails of a ladder, pivoted clamping dogs carried by the slides adapted for movement into and out of clamping engagement with the rails to secure the slides in vertically adjusted position thereon and rigidly connected for movement in unison, a pair of separate arms removably carried by the slides and adapted for positioning at the opposite sides of the ladder to project forwardly or rearwardly therefrom, and shoes removably carried by the arms and adapted to rest upon a roof to space the ladder outwardly from the edge of the roof when the arms are projected rearwardly, said arms being adapted to support scaffolding thereon when projected outwardly.

2,448,351
TAPPED FASTENER
Abbott P. Brush, Greenwich, Conn.
Application January 23, 1946, Serial No. 642,851
2 Claims. (Cl. 85—2.4)



1. A hammer driven headless self-securing screw seat forming insert adapted to be anchored and secured against rotation in a circular hole by a simple driving operation and comprising a flat ended headless tubular stud having a split tubular shank for anchoring and holding it against rotation, said shank having a beveled conical tapered end portion for entry in the hole and a sharply angled shoulder meeting intermediate the length of the shank in a sharply defined annular ridge normally circular in cross section, said tubular shank extending from the opposite end inwardly on a slight taper to said abruptly angled shoulder and being slotted inwardly in a single wide slot extending longitudinally from the tapered entry end past said shoulder and thereby separated into two opposed segments, said stud having a circular screw-threaded passage through the headless flat driving end of the same and continuations of said same screw passage on the opposing inner faces of the separated shank segments and said two separated shank segments being convergently collapsed toward each other in sharply angled relation and in contacting engagement so that the opposing walls of the slotted portion at said normally circular annular ridge will form inclined cutting edges to dig into the opposite sides of the wall of a circular hole into which the insert is driven.

2,448,352
PIEZOELECTRIC CRYSTAL MOUNTING MEANS
Benson Carlin, New York, N. Y., assignor to Sperry Products, Inc., Hoboken, N. J., a corporation of New York
Application March 26, 1946, Serial No. 657,306
6 Claims. (Cl. 171—327)

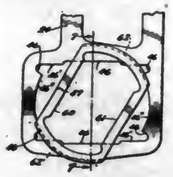


1. In combination, a piezo-electric crystal having a front face and a rear face and adapted to be vibrated, and means for cutting off the transmission of vibrations from predetermined areas of the front face, said means comprising vibration absorptive material in the path of vibrations from the predetermined areas.

2,448,353
PRODUCT AND METHOD OF MAKING FUSED LITHARGE PARTICLES COATED WITH RED LEAD
Melvin F. Chubb, Joplin, Mo., assignor to The Eagle-Picher Company, Cincinnati, Ohio, a corporation of Ohio
Application October 4, 1944, Serial No. 557,146
11 Claims. (Cl. 23—146)

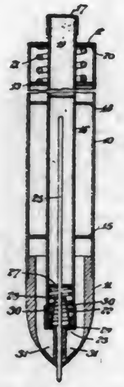
2. A battery oxide consisting essentially of particles ranging in median radius from approximately 3 to 6 microns, said particles having a core of fused litharge and said particles having a coating of Pb_3O_4.

2,448,354
MACHINE FOR CUTTING MEN'S HEELS
Ezequiel B. Cintron, New York, N. Y.
Application December 17, 1947, Serial No. 792,200
10 Claims. (Cl. 12—42)



1. A machine of the kind described comprising a frame, a rotatable shaft supported by said frame, a cutter fixed on said shaft, a manually actuated carriage slidably mounted on the frame and movable to and from the cutter and a heel supporting member on said carriage positioned in the path of the cutter, said heel supporting member having a slot for receiving the cutter.

2,448,355
CAM FOLLOWER CONSTRUCTION
Irving Cisski, Schiller Park, Ill., assignor to Ampro Corporation, Chicago, Ill., a corporation of Illinois
Application August 2, 1946, Serial No. 687,924
7 Claims. (Cl. 74—569)



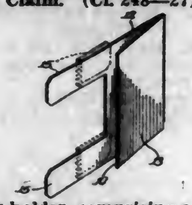
1. A device of the class described comprising, a blade of extremely thin flexible material having an opening formed therein, and a member of

greater thickness than said blade providing opposed cam surfaces and shaped to fit in said blade opening in the plane of said blade with the perimetrical edges of said member bearing against opposite perimetrical edges of said blade, said member having grooves formed in opposite peripheral portions thereof, and shoulders on corresponding peripheral portions of said blade

adapted to fit in said grooves for locking said member in place in said blade opening, said shoulders being adapted to enter into or recede from said grooves when said blade intermediate said shoulders is flexed to dispose such portions out of the normal plane of said blade and said member and blade are given a relative partial rotative movement.

2,448,356
MECHANICAL PENCIL WITH STEP-BY-STEP FEED
Samuel M. Cleveland, Merion, Pa.
Application March 5, 1945, Serial No. 580,958
7 Claims. (Cl. 120—17)

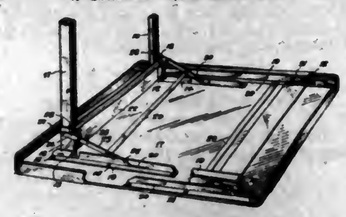
1. In a mechanical pencil, a barrel having a writing tip portion at its lower end, an operating member reciprocable in said barrel, a spring at the upper end of the barrel for normally holding the operating member in non-operating position, lead gripping fingers normally in engagement with the writing lead for preventing upward movement of the lead, and means for propelling the writing lead downwardly upon downward movement of said operating member comprising lead gripping elements normally in engagement with the writing lead for preventing downward movement of said lead when the operating member is in non-operating position and for advancing the lead downwardly upon downward movement of the operating member.



2,448,357
PANEL FACING
Kenneth A. Craig and Richard J. Auchter, Appleton, Wis., assignors to Paper Patents Company, Neenah, Wis., a corporation of Wisconsin
No Drawing. Application November 29, 1945, Serial No. 631,783
4 Claims. (Cl. 154—138)

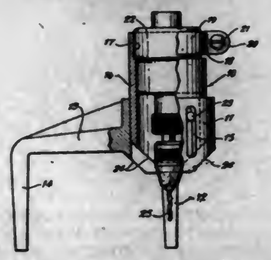
1. The improved process for manufacturing facing sheets having on one side a surface supply of thermoset resin forming a permanent durable finished surface and on the other side a surface relatively free from resin and of such texture that it can be adhesively united to the outer surface of a base member such as a wooden panel, which comprises the steps of loading a face layer of paper with a thermosetting, aldehyde resin of a type which will impregnate paper, coating a side of an anchor layer of paper with a high viscosity, thermosetting, aldehyde resin of a type which will surface coat but will not impregnate paper, assembling said layers together with the coated surface of the anchor layer in contact with a surface of the resin-loaded face layer, and then subjecting the assembly to combined heat and pressure so as to set the resin in the assembly and thereby bond together the surfaces of the two layers and at the same time form a durable finish on the outer surface of the face layer, while the resin coating on the anchor layer prevents penetration of resin through the thickness of the anchor layer.

2,448,358
PLASTICIZED POLYVINYL ALCOHOL COMPOSITIONS
Charles Dangelmajer, Nutley, N. J., assignor to Resistoflex Corporation, Belleville, N. J., a corporation of New York
No Drawing. Application November 27, 1944, Serial No. 565,397
5 Claims. (Cl. 260—31.8)



1. A solid extrudable composition of matter comprising polyvinyl alcohol, polyhydric alcohol plasticizer for the polyvinyl alcohol, and phthalic anhydride in an amount from 2% to 20% of the polyvinyl alcohol.

2,448,359
SWITCH BOX HOLDER
Edward D. Davison, Waukegan, Ill.
Application December 7, 1945, Serial No. 633,506
1 Claim. (Cl. 248—27)

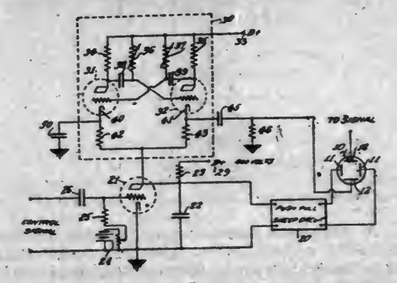


A switch box holder, comprising a body of sheet metal bent into V-shape, one leg of said V being provided with extensions forming holding fingers adapted to be bent inwardly over the edge of a box to be mounted, the free edge of the other leg serving as an abutment for engagement with the inner face of the wall adjacent the opening in which said box is mounted, and said other leg being yieldably displaceable toward said one leg to permit the introduction of the holder in a straight line movement between the box and the opposed face of a wall opening in which the box is disposed.

2,448,360
FOLDING TABLE
William P. De Saussure, Englewood, N. J., assignor of one-half to himself and one-half to James P. De Saussure, Montclair, N. J., copartners doing business under the name and style of De Saussure Equipment Company, West New York, N. J.
Application August 21, 1945, Serial No. 611,757
2 Claims. (Cl. 311—87)

1. A folding table whereof the legs are pivoted to the table top and connected in pairs so that in erecting and collapsing them the legs of each pair will move simultaneously, said table having two sets of toggle links in operative relation to the table top and to the legs of each respective leg-pair, each toggle set having a cross bar extending from a link of one toggle set to the corresponding link of the other toggle set and a spring one end of which is fixed in relation to the table top and the other end of which contacts said bar so as to urge the associated leg-pair at all times toward their erected position, and a friction device carried by a leg of one leg-pair and in such position thereon as to be contacted by a leg of the other leg-pair when the leg-pairs are in their folded position whereby with each leg-pair in its folded position a quick upward movement of the table with its top side uppermost will release the leg-pairs from frictional engagement and permit them to assume their erected position automatically through the action of the springs.

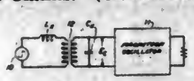
2,448,361
TOOL GUIDE
Stanley F. Dudrick, Nanticoke, Pa.
Application March 11, 1946, Serial No. 653,449
1 Claims. (Cl. 77—55)



A tool guide and support comprising a tubular guide body, a pair of diametrically opposite spaced parallel legs extending downwardly from the lower edge of the body in spaced substantially parallel relation to the vertical axis of the body, an arm extending radially from the body near its lower end, said arm lying in a plane which extends vertically through the body midway between the first-mentioned legs, a leg depending from the arm near the end remote from the body, said leg lying along an axis which lies parallel with the vertical axis of the body, said leg cooperating with the first-mentioned legs in supporting the body in spaced relation and perpendicular to a work piece, a tool embracing carriage slidable axially in the guide body, means at the upper end of the carriage to clamp a tool therein and the lower edge of the body being relieved between the legs to render visible the point of a tool clamped in the carriage.

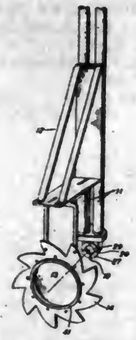
2,448,362
AIRCRAFT BEAM CHORD CONSTRUCTION
Harold W. Earhart, Wichita, Kans., assignor to Beech Aircraft Corporation, Wichita, Kans., a corporation of Delaware
Application September 26, 1945, Serial No. 618,617
5 Claims. (Cl. 189—37)

1. A beam for aircraft comprising a pair of chords connected by a web, said chords comprising outer channels, T-sections having their heads secured in the channels and their flanges secured to the web and superposed laminations of different length secured in the channels in back of the heads of the T-sections.



2,448,363
TIME MARKS FOR THE SWEEP OF CATHODE-RAY TUBES
Floyd A. Firestone, Ann Arbor, Mich., and Ralph B. De Lano, Jr., New York, N. Y., assignors to Sperry Products, Inc., Hoboken, N. J., a corporation of New York
Application June 28, 1945, Serial No. 602,100
11 Claims. (Cl. 315—24)

1. In combination, an oscilloscope having horizontal and vertical sets of deflecting means, a

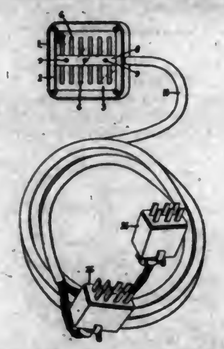


sweep circuit connected to one set of deflecting means, a multivibrator connected to the other set of deflecting means, means including a critical voltage breakdown device for rendering said sweep circuit effective, and means controlled by said critical voltage breakdown device for rendering said multivibrator effective.

2,448,364
PULSE GENERATOR
Albert G. Ganz, New York, and Andrew D. Hasley, New Rochelle, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 28, 1945, Serial No. 590,824
9 Claims. (Cl. 250—36)

1. A high frequency pulse generating system comprising a source of unidirectional pulses, a load device which becomes conductive and draws a predetermined current when the voltage impressed thereon reaches an assigned value, and a circuit coupling said source and said load device, said circuit including an inductance L effectively in series with said load device and a capacitance C effectively in shunt with said load device, said inductance and capacitance producing a transient oscillation on the appearance of a pulse and delaying the operation of said load device, and the ratio of L to C being so proportioned with respect to the resistance impedance Rs of said source that the transient current approximately reaches a maximum and approximately the steady state value of the load device current at the instant the voltage impressed upon said load device reaches said assigned value.

2,448,365
PROJECTOR AND RECEIVER OF SUPERSONIC FREQUENCIES
Rollin W. Gillespie, New Providence, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 27, 1945, Serial No. 607,431
6 Claims. (Cl. 177—386)

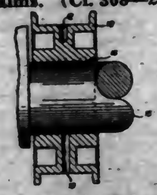


1. A supersonic underwater signaling device comprising a housing, a mounting plate within said housing, a pair of piezoelectric discs affixed to opposite faces of said plate in face to face relation therewith and in alignment with each other, said discs being of a diameter large in comparison to the wavelength in water of the lowest intended operating frequency of the signaling device, means defining a path for the transmission of supersonic signals between one of said discs and the exterior of said housing, means for substantially preventing transmission of supersonic signals between the other of said discs and the exterior of said housing, a supersonic underwater signal lens opposite and in alignment with said one disc, and a shield opaque to supersonic signals encompassing said lens and extending outwardly from the periphery thereof, said opaque shield having an irregular periphery.

2,448,366
BANDAGE
Edward Gledhill, New York, N. Y.
Application October 18, 1945, Serial No. 623,094
5 Claims. (Cl. 128—156)

1. A bandage comprising a tab having adhesive on one side thereof and adapted to be applied adjacent a wound, a plurality of gauze strips having their opposite ends folded into a plurality of plies located on the opposite sides of the approximate transverse center portion of said tab and secured to the adhesive side thereof, certain portions of said gauze loosely bridging the central portion of said tab, and certain other portions of said gauze attached to said tab.

2,448,367
DECELEROMETER
James H. Goss, Essex, Mass., assignor to General Electric Company, a corporation of New York
Application June 19, 1945, Serial No. 600,380
1 Claim. (Cl. 73—12)

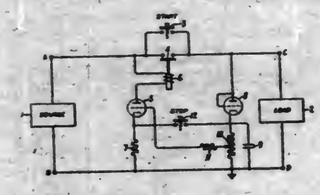


Decelerating force measuring apparatus comprising a support, a plurality of switches mounted on said support each having an adjustable rigid stationary contact and a lightweight resilient movable contact, with the movable contact biased against the stationary contact by reason of the resiliency of said resilient contact, the amount of such bias being adjustable by adjustment of the rigid contact, all of said switches being adapted to be opened in the same direction by the application of decelerating forces acting solely upon the mass of the lightweight resilient contact members in opposition to the resilient bias of such contact members whereby the apparatus may be kept relatively small and light but used for the measurement of relatively high deceleration force values, the tension of said resilient contact members being progressively different by reason of the different adjustments of the stationary contacts and of values calibrated in known terms of the deceleration forces necessary to open the corresponding switches, means controlled by each of said switches for producing an indication of its opening operation and maintaining said indication until reset, and means for resetting said indication producing means.

2,448,368
ORGANIC ACID SYNTHESIS
William F. Gresham and Richard E. Brooks, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 19, 1945, Serial No. 629,699
8 Claims. (Cl. 260—533)

1. A process for the synthesis of organic carboxylic acids which comprises reacting an olefin hydrocarbon having from two to ten carbon atoms per molecule with carbon monoxide and water at a temperature within the range of 175° to 375° C. under a pressure of 500 to 1500 atmospheres in the presence of a metal carbonyl catalyst of the class consisting of nickel and cobalt carbonyls, in the absence of any substantial quantity of free inorganic acidic catalyst, thereafter recovering the metal carbonyl catalyst by direct distillation from the reaction product in an atmosphere of carbon monoxide, and separating organic carboxylic acid from the resulting product.

2,448,369
ENGINE BEARING CONSTRUCTION
Ralph M. Heintz, Cleveland, and John W. Frazier, Shaker Heights, Ohio, assignors to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application April 18, 1946, Serial No. 663,198
5 Claims. (Cl. 308—23)

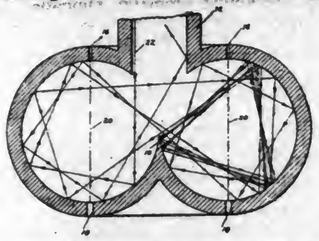


1. In an engine crankshaft bearing assembly, a solid ring main bearing releasably secured to the engine block of nitrided metal to receive in direct surface contact a crankshaft having its bearing bonded thereto and comprising an initial layer of relatively hard metal bonded to the crankshaft, an intermediate layer of indium bonded to said initial layer and an outer layer of relatively soft metal bonded to said indium layer.

2,448,370
SULFONATION OF AROMATIC COMPOUNDS IN PRESENCE OF ACETONITRILE
Donald S. Hendersen, United States Navy, and Alexander N. Sachanen, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application November 18, 1944, Serial No. 564,174
4 Claims. (Cl. 260—505)

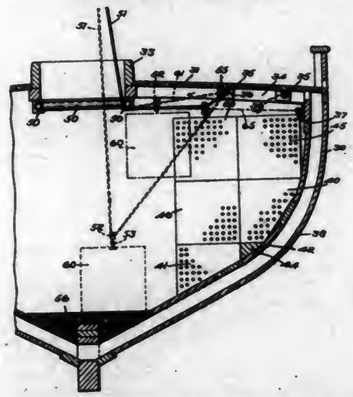
1. A method for sulfonating aromatic hydrocarbons in admixture with aliphatic and alicyclic hydrocarbons which comprises mixing a hydrocarbon mixture containing aromatic, aliphatic and alicyclic hydrocarbons with a sulfonating agent and an amount of acetonitrile sufficient to dissolve substantially all of said aromatic hydrocarbons and to hold substantially all of said sulfonating agent in solution, maintaining said reaction mixture at sulfonation temperatures to obtain sulfonated aromatic hydrocarbons, quenching said mixture containing sulfonated aromatic hydrocarbons, stratifying said mixture to obtain a layer comprising acetonitrile and said sulfonated aromatic hydrocarbons, separating said acetonitrile layer from the quenched mixture and recovering sulfonated aromatic hydrocarbons therefrom.

2,448,371
CIRCUIT MAKING AND BREAKING IN RESPONSE TO POWER FAILURE
Michael E. Hiehle, Syracuse, N. Y., assignor to General Electric Company, a corporation of New York
Application April 4, 1946, Serial No. 659,642
5 Claims. (Cl. 175—294)



5. The combination, with electromagnetic switch means for connecting an electrical utilization device to a source of electromotive force which is subject to fluctuations which may cause the electromagnetic switch means to disconnect said device from said source, of push button means having normally open contacts in shunt with the electromagnetic switch for initially energizing the utilization device, an energy storage device, means to charge said storage device rapidly in accordance with the electromotive force at said load, means including an electron discharge device connected across said source for energizing said electromagnetic switch means, said discharge device being rendered conductive by charge on said storage device and thereby closing said electromagnetic switch, means to discharge said storage device at a relative slow rate upon interruption of electromotive force from said source, whereby if said electromotive force returns to normal within a predetermined time said storage device will have sufficient charge to render said electron discharge device again conductive and to reenergize said electromagnetic switch means.

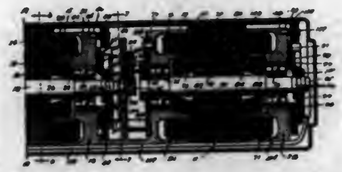
2,448,372
PROCESS OF TREATMENT BY COMPRESSION WAVES
Caperton B. Horsley, Stamford, Conn., assignor to Ultrasonic Corporation, Boston, Mass., a corporation of Massachusetts
Application February 7, 1946, Serial No. 646,178
7 Claims. (Cl. 259—1)



1. The method of improving the characteristics of a fluent material which comprises generating sound waves in a gas contained in a chamber, forming the fluent material into a curtain thin

enough to undulate in reaction to the sound waves, flowing the curtain through the chamber,

and directing the sound waves against the curtain.



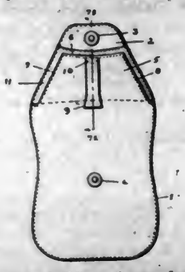
2,448,373
APPARATUS FOR LOADING, STOWING, AND UNLOADING VESSELS
Gilchrist L. Hurst, South Weymouth, Mass.
Application June 2, 1944, Serial No. 538,386
4 Claims. (Cl. 214—15)

2. Ship construction comprising a hold for the stowage of articles, a deck, a hatchway thru the deck, anti-friction rollers mounted in alignment with the lower opening of the hatchway, a plurality of spaced fastening members fixed in predetermined position and spaced relationship remote from the hatchway in the deck and side walls of the ship's hold, in combination with a hoisting cable having a traveling pulley thereon adapted for carrying an article to be handled within the hold by gravity, whereby attachment of the end of said cable and the hoisting operation on said cable will automatically cause a gravity shifting operation of the pulley and the article carried into or out of stowage position underneath the deck.

2,448,374
DUAL SPEED SYNCHRO UNIT
Henry J. Kent, Teaneck, N. J., assignor to Kearfott Company, Inc., New York, N. Y., a corporation of New York
Application June 7, 1947, Serial No. 753,335
4 Claims. (Cl. 171—252)

1. A multiple synchro unit comprising a pair of synchro elements mounted in axial alignment, each of said elements comprising a stator of magnetic material, end plates engaging the ends of said stator, a shaft journalled in said end plates and a rotor carried by said shaft to rotate in the stator, gears interconnecting the shafts of the respective elements, a spacing flange extending between the inner end plates of said elements, and clamping means for said elements comprising a clamping ring adjacent the inner end plate of one of said elements, a plurality of clamping arms carried by said ring, spanning the stator of said one element and terminating in flanges engaging the outer end plate of said one element, members carried by said clamping ring and bearing against said

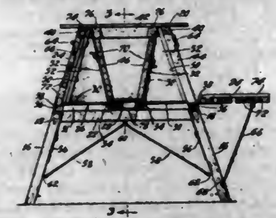
inner end plate for exerting clamping pressure on said arms, a second clamping ring positioned adjacent the outer end plate of the other of said elements and carrying clamping arms spanning said other element and said spacing flange and having bifurcated ends extending on opposite sides of said first arms and provided with flanges engaging said first clamping ring, and members carried by said second clamping ring and engaging said last mentioned outer end plate for exerting clamping pressure on said last arms to secure said other element to first element.



2,448,375
PREPARATION OF CARBOXYLIC ACIDS
Alfred T. Larson, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 31, 1945, Serial No. 625,951
10 Claims. (Cl. 260—533)

1. A process for the preparation of aliphatic carboxylic acids from steam, carbon monoxide and an olefinic hydrocarbon which includes the step of effecting reaction at a pressure of from 500 to 1500 atmospheres in the presence of a catalyst formed prior to the said reaction, said catalyst being a member of the class consisting of nickel carbonyl and cobalt carbonyl, in the presence of active carbon, and in the absence of any other catalyst for the said reaction.

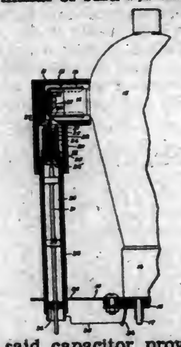
2,448,376
TOBACCO POUCH
Ralph A. Le Fevre, Rochester, N. Y.
Application November 4, 1944, Serial No. 561,939
8 Claims. (Cl. 206—41)



4. A pouch having a long back wall and a short front wall, said walls being attached together on three edges with a wide opening between them at the top of the front wall and forming a pocket, with a tongue at the top of said short wall extending upwardly therefrom, said tongue being otherwise unattached above the front wall, the edges of the back wall and the edges of the front wall being connected together below the tongue to form the body of the pouch, the edges of the back wall at the top tapering toward each other, a wide bridge connected to the tapering side edges of the back wall and forming a spout therewith

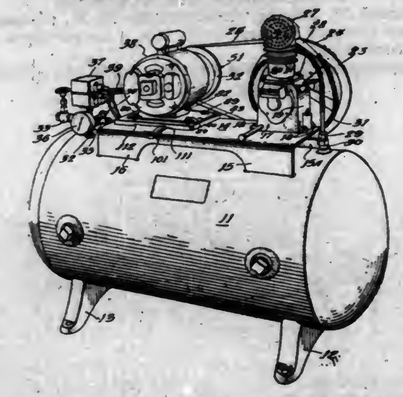
with a narrow opening at the end thereof above the front wall, the parts being so arranged that when the tongue is placed outside of the bridge a wide opening into the body of the pouch can be exposed below the bridge, permitting the easy filling of the pouch, and when the tongue is

placed under the bridge from below, the wide opening below the bridge is substantially closed and the narrow opening of the spout is left open, a narrow opening being provided between the back wall on one side and the top of the bridge and of the tongue on the other side.



2,448,377
FOLDING CAMPING FURNITURE
Frieda M. Lindner, Union, N. J.
Application June 21, 1946, Serial No. 678,399
7 Claims. (Cl. 190—12)

1. In a device of the character described, an elongated cabinet having a top, bottom, two ends and two sides, the two side walls being hinged at their lower edges to be swung to horizontal position, the bottom including two boards each extending longitudinally of the cabinet and alongside one of the side walls, said two boards being hinged at their inner edges and being foldable upwardly, and four legs hinged onto the cabinet and adapted to be folded against said side walls or to be moved to help support the cabinet.

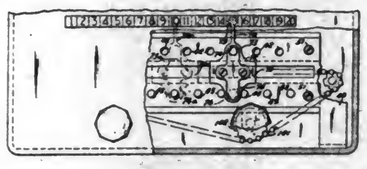


2,448,378
GRID-TO-CATHODE CAPACITOR CONSTRUCTION
Orrin W. Livingston and Elmo E. Moyer, Scotia, N. Y., assignors to General Electric Company, a corporation of New York
Application March 28, 1946, Serial No. 657,877
4 Claims. (Cl. 250—16)

1. A connector including a body of insulating material, a terminal conductor adapted to engage a grid terminal of an electric discharge device and supported within a recess in said body of insulating material, said body having a second recess formed therein, a cylindrical capacitor including inner and outer conducting cylinders positioned in said second recess, a resistance element having a pair of terminals, means within said body of insulating material connecting one terminal of said resistor and the inner cylinder of said capacitor with said terminal conductor, the other terminal of said resistor and the outer

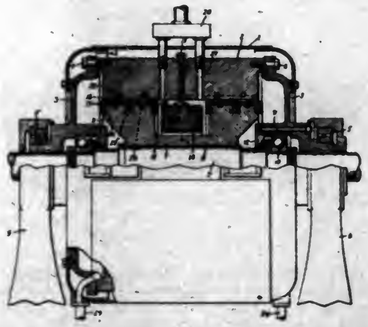
cylinder of said capacitor providing concentric terminals for connection with external circuits.

2,448,379
COMPRESSOR SYSTEM
Burr W. Mantle, Pittsford, N. Y., assignor to American Brake Shoe Company, New York, N. Y., a corporation of Delaware
Application July 19, 1946, Serial No. 684,654
13 Claims. (Cl. 230—11)



1. In a compressed air supply system, the combination which comprises an air compressor including a driven pulley, a driving motor including a variable pitch diameter drive pulley arranged to change said pitch diameter according to tension on a belt passing over said pulley, a drive belt for connecting said pulleys, movable means for changing the tension on said belt to cause said drive pulley to change its pitch diameter, and valve means controlled by said movable means for regulating the output pressure of said compressor in correlation with the speed of said compressor.

2,448,380
SELECTOR SWITCH FOR PHONOGRAPH CIRCUIT
Arthur Paul Marcus, Cleveland Heights, and Frank C. Filo, Cleveland, Ohio, assignors to The Markepp Co., Inc., Cleveland, Ohio
Application March 8, 1947, Serial No. 733,312
7 Claims. (Cl. 200—16)



1. In a remote control selective phonograph circuit, a selector switch, comprising in combina-

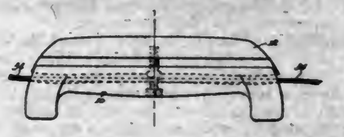
tion, a support member having a plurality of spaced sockets thereon, a dielectric block mounted on the support member having a bus bar and a plurality of switch points of the aforesaid circuit, the said switch points being aligned with the said sockets, a rider member slidably mounted on the support member having a first switch arm engaged with the bus bar, a second switch arm

engageable with any one of the switch points and a locator arm engageable with the socket corresponding to the particular switch point engaged by the second switch arm, and pulley means mounted on the support member and attached to the rider member for moving the latter member relative to the dielectric block.

2,448,381
DYNAMOELECTRIC MACHINE
Harold M. Martin, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application December 18, 1944, Serial No. 568,583
10 Claims. (Cl. 188—104)

1. An inductor eddy current type electrical machine having a pair of relatively rotatable members of magnetic material with an air gap therebetween, a plurality of slots in the magnetic material of both of said members adjacent said air gap, means including a field exciting winding for providing magnetic excitation to said magnetic material members and through said air gap, means substantially filling said slots with nonmagnetic material for providing a substantially smooth surface to said relatively rotatable members adjacent said air gap, at least one of said slot filling means in one of said members being formed as a squirrel cage winding with short circuiting rings secured in enlarged anchoring openings in said magnetic material of said latter member and means for supplying liquid to said air gap intermediate the ends thereof for cooling the air gap surfaces of said member.

2,448,382
SILENCER
Warren P. Mason, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 26, 1944, Serial No. 560,456
2 Claims. (Cl. 89—14)

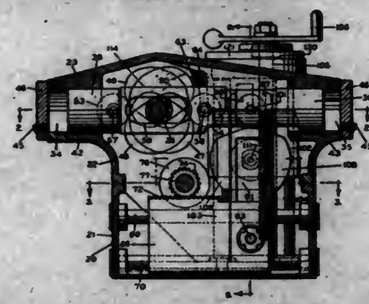


1. A silencer for firearms comprising a chamber and a plurality of annular discs of metal screen positioned within said chamber transversely with respect to the longitudinal axis thereof, said discs being stacked one upon another under compression and substantially filling said chamber except for a passageway therethrough providing only minimum clearance for a bullet.

2,448,383
MULTIBLADED KNIFE
Lillian Wooten Mathaus, Atlanta, Ga.
Application July 19, 1944, Serial No. 545,578
1 Claim. (Cl. 30—304)

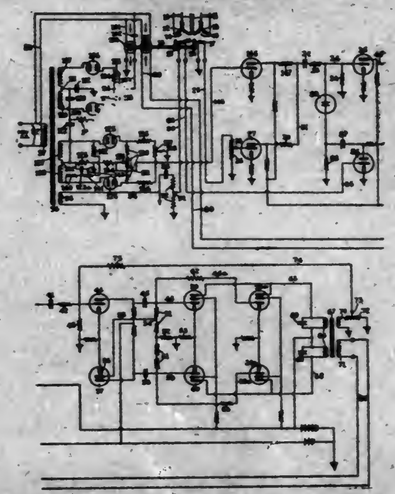
A knife for cutting slices of material of selected thicknesses comprising separate parallel blades, shanks at one end of and integral with the respective blades, said shanks respectively being extensions of the respective blades and being formed throughout of a thickness corresponding to the thickness of their associated blades, separate spacing elements interposed between the shanks and cooperating therewith to form a handle, and means extending transversely through the shanks and spacing elements for holding them together detachably, said means constituting the sole means for holding the shanks and spacing elements assembled, there being a longitudinal slot in each blade constituting means for reducing frictional contact between the blade and the material being cut.

2,448,384
HANDGRIP FOR FISHING LINES
Dale Meinzinger, Detroit, Mich.
Application July 15, 1947, Serial No. 761,989
3 Claims. (Cl. 188—65.1)



1. A hand grip for a fishing line comprising a T-shaped in transverse cross section first element, a second element having a slot therein, a fishing line in said slot, the center portion of the T-shaped element being made slightly smaller than the slot so as to slide freely therein, spring means to separate said elements, means for limiting the separation of the two elements, the first and second elements being made to fit the human hand so as to respond to a grip to hold the fishing line in any preselected position.

2,448,385
DEBURRING TOOL
John P. Michels, Battle Creek, Mich., assignor of thirty-three and one-third per cent to Otto L. Powers, and thirty-three and one-third per cent to L. Reuben Schmuck, both of Battle Creek, Mich.
Application June 10, 1944, Serial No. 539,762
13 Claims. (Cl. 77—73)

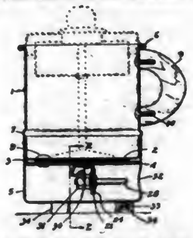


1. A tool which has a substantially rounded profile disc shaped head and an extending handle, said head having a relatively thick edge with channel therein so as to form a pair of relatively sharp edges alongside of and substantially parallel to each other.

2,448,386
MECHANICAL TRANSMISSION
Gothard Theodore Moo, Cranston, R. I., assignor to Weakenson Corporation, Providence, R. I., a corporation of Rhode Island
Application October 29, 1943, Serial No. 508,203
7 Claims. (Cl. 74—124)

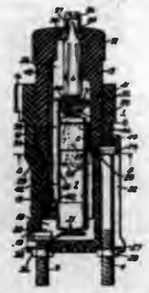
1. In a mechanical transmission, an input shaft; two sets of cams on said shaft, each set comprising two substantially identical cams, one being a power cam and the other being a return cam, the two sets of cams being so mounted on said input shaft as to have a phase relation of approximately 180° with respect to each other; a pair of first members mounted for reciprocating movement at right angles to said shaft, each member having a first elongated transverse aperture through which said shaft extends and a second elongated aperture at right angles to said first aperture to accommodate a set of cams; follower rollers on said members to either side of said shaft, there being a roller for each cam; an output shaft spaced from and parallel to said input shaft; a pair of second members mounted for reciprocating movement parallel to said first members; overrunning clutches operatively connecting said second members and said output shaft to drive the latter; a pair of working beams, each beam connecting a first and a second member; a single ratio-adjusting guideway at right angles to said shafts and to the direction of travel of said first and second members; a single cross-head on said guideway; means for adjusting the position of said cross-head along said guideway; and a pair of fulcrum members independently and coaxially fulcrumed on opposite sides of said cross-head, said fulcrum members slidably engaging said working beams.

2,448,387
ELECTRIC MOTOR FOLLOW-UP SYSTEM
William H. Newell, New York, and Henry F. McKenney, Flushing, N. Y., assignors to Ford Instrument Company, Inc., Long Island City, N. Y., a corporation of New York
Application April 23, 1946, Serial No. 664,206
1 Claim. (Cl. 318—30)



In an electric follow-up system, a pair of receivers having field windings carrying the received position signal and having rotors in which a voltage is induced which is a function of their angular displacement from a zero voltage position corresponding to the received position signal, said rotors being coupled to rotate at different rates to constitute coarse and fine control rotors, respectively, a driving motor for said rotors, an electric control channel for said motor including amplifiers, means supplying a control voltage to said channel from said fine control rotor suited to drive said rotor to zero voltage position, and a circuit to supply a control voltage to said channel from said coarse control rotor, said circuit including an amplifier tube having an input circuit connected directly to said coarse control rotor and having an anode circuit connected to said channel and a gas tube connected in said anode circuit to isolate said coarse control means from said channel, said tube being arranged to become conductive only when the control voltage from said last rotor exceeds a value representing a predetermined error in position.

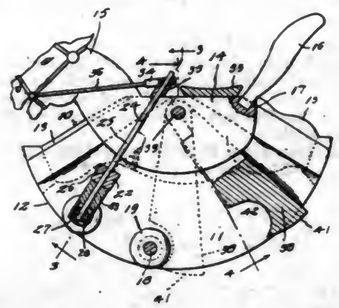
2,448,388
ELECTRIC HEATING DEVICE AND METHOD OF MAKING THE SAME
Percy William Plummer, Winnipeg, Manitoba, Canada
Application December 26, 1945, Serial No. 637,183
In Canada July 13, 1945
6 Claims. (Cl. 219—43)



1. In a heating device, having a flat bottomed container, a flat electric heating element, a re-

taining plate supporting contact prongs, and an element enclosure member having an opening in the side thereof; the method of assembling the above members which consists in: fastening said plate to said container bottom in spaced relation thereto, with said element therebetween and said

prongs thereunder; connecting the leads of said element to said contact prongs; and telescoping said enclosure member over the bottom portion of said container, clear of said prongs, to enclose said element, said plate and said prongs, and with said opening aligned with said prongs.

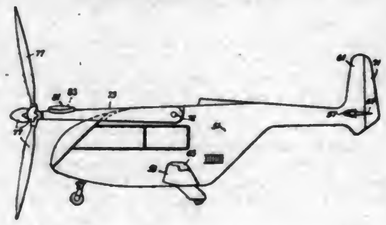


2,448,389
FUSE UNIT
Alric H. Powell, Yeadon, Pa., assignor to General Electric Company, a corporation of New York
Application June 2, 1945, Serial No. 597,207
12 Claims. (Cl. 200—121)

1. A dead front cartridge fuse holder and indicator for a cartridge fuse comprising in combination a base of insulating material having a recess therein, a pair of contact terminals in said recess in said base, a removable insulating member for removably retaining a cartridge fuse within the recess of said base and in series with said contact terminals, an indicating circuit including a lamp contained in said member and visible outside thereof, a support for said lamp mounted within said member for movement relatively thereto and adapted to assume various positions in dependence on variations in the size of said lamp, and means for holding said lamp and said support in position in said member including a conducting member detachably mounted within said insulating member for electrically interconnecting one of said contact terminals with one terminal of the lamp and with one terminal of the cartridge fuse.

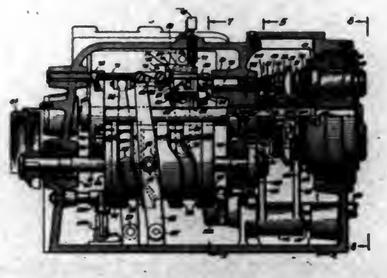
2,448,390
ROCKING HORSE
Edward U. Pugh, Garfield, N. J.
Application April 5, 1944, Serial No. 529,647
6 Claims. (Cl. 272—53)

1. A structure of the class described comprising a body having a rocking surface, a lever suspended thereon extending slightly below the rocking surface, and roller means carried by the body and extending slightly below said rocking surface



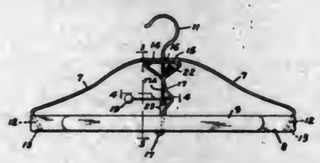
in advance of the lever, said roller means having a fixed axis disposed relatively close to the center of gravity of said body.

2,448,391
ALKENYL SILANE INTERPOLYMERS
James J. Pyle, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
No Drawing. Application October 15, 1946, Serial No. 703,280
3 Claims. (Cl. 260—86)



1. An interpolymer of styrene and tetraallylsilane, the tetraallylsilane being present in an amount equal to from 10 to 50 per cent, by weight, of the total weight of the interpolymer.

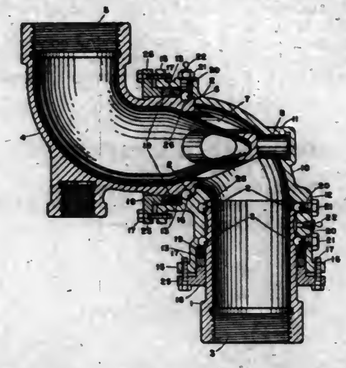
2,448,392
CONVERTIBLE TYPE AIRCRAFT
John C. Quady, Pasadena Hills, and William L. Davis, Jr., Normandy, Mo.
Application April 4, 1946, Serial No. 659,620
12 Claims. (Cl. 244—7)



8. An airplane comprising a frame provided with wing surfaces for forward airplane flight, pylon means pivoted to said frame and movable from a substantially horizontal position to a substantially vertical position, air screw means on the end of said pylon means, an engine in the frame for driving said air screw means regardless of the position of the pylon means, supplementary air surfaces on said pylon means, and operating means automatically moving said supplementary air surfaces from a position substantially parallel to the pylon means when down to a position at a substantial angle to the pylon means when the pylon means is up.

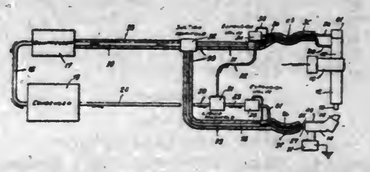
2,448,393
TRIMMING MACHINE
Warren S. Reynolds, Stratford, Conn., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Application April 27, 1943, Serial No. 484,701
4 Claims. (Cl. 29—38)

1. In a machine; a frame; an indexably rotatable turret carrying a plurality of chuck spindles; an ejection and feeding station; and means for simultaneously opening said chucks at said ejection and feeding stations including a cam, a pair of slidable operators for opening said chucks, a crosshead joining said operators, a lever pivotally connected to said crosshead, the fulcrum end of said lever having a floating connection with said frame and the opposite end of said lever engaging said cam for operating the lever and crosshead whereby the crosshead is given a substantially rectilinear motion.



2,448,394
GARMENT HANGER
Werner Richerzhagen, East Detroit, Mich.
Application March 29, 1946, Serial No. 658,299
6 Claims. (Cl. 223—91)

1. In a device of the character described, including a coat hanger element the combination of a terminal bar adapted to serve as a trouser supporting element, a hook having a downwardly extending shank rotatably mounted in said bar, a pair of trouser supporting bars overlying opposite sides of said first named bar, means carried by said coat hanger element for hingedly supporting said last named bars, and means cooperating between said hook extension member and said first named means for locking said bars in close relation.

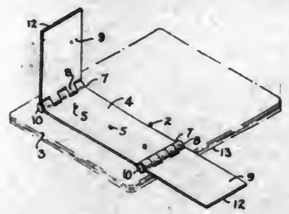


2,448,395
SWING JOINT
William F. Schaetzly, Louisville, Ky.
Application March 12, 1946, Serial No. 653,828
1 Claim. (Cl. 285—97.3)

Swivel joint comprising three tubular sections, the medial section formed as an elbow with cylindrical bores at each end, each end cylindrical bore struck on two concentric diameters, that portion struck on the shorter diameter being the innermost at each end and formed with an inwardly directed ball race, the end sections each formed with cylindrical end portions of a diameter to snugly fit the innermost portions of the end bores of the medial section and of a length greater than the bores at each end of the medial section, said end cylindrical portions of the end sections formed with outwardly directed ball races complementary to the races in the medial

section, balls disposed in said raceways interlocking the sections, packing rings disposed between the cylindrical ends of the end sections and the end cylindrical bores of the medial section having the greater diameter outwardly with respect to the ball races, closure rings having a sliding fit on the end cylindrical portions of the end sections and arranged to bear against the packing rings, and means for drawing the closure rings toward the ball races, to compress the packing rings.

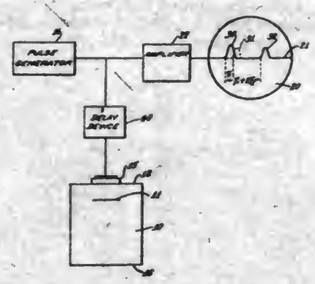
2,448,396
REFRIGERATED ELECTRODE
Carl L. Schebler, St. Louis, Frank Douglas, Brentwood, and Ledru A. Clasquin, Riverview Gardens, Mo., assignors to The Emerson Electric Mfg. Co., St. Louis, Mo., a corporation of Missouri
Application December 2, 1943, Serial No. 512,540
4 Claims. (Cl. 219—4)



1. In a method of controlling the temperature of electrodes, or the like, the steps of providing an expansion chamber in heat-transferring relationship with the electrode, introducing a refrigerant liquid into said chamber so that the same may absorb heat and evaporate in the chamber, withdrawing the evaporated refrigerant from the chamber for reconversion and recirculating, and so controlling the supply of liquid refrigerant to the chamber by the temperature of the evaporated refrigerant that a liquid level of refrigerant will be maintained in the chamber.

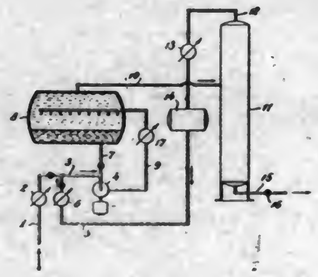
2,448,397
CORROSION RESISTANT COATED STEEL
Albert A. Schilling, Stratford, and Walter L. Finlay, Fairfield, Conn., assignors to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
No Drawing. Application June 7, 1944, Serial No. 539,184
2 Claims. (Cl. 148—6.15)

1. A steel cartridge case having thereon a corrosion resisting coating comprising an undercoat of a phosphate, a coat of furfuryl alcohol resinified with phosphoric acid superimposed on said phosphate coat, and a thin exterior coat of wax, said wax coat being of a thickness procurable by deposition from a solution of wax in a solvent.



2,448,398
SAFETY LATCH ATTACHMENT FOR WALLETS
Elvin Schwartz, Houston, Tex.
Application January 7, 1946, Serial No. 639,528
1 Claim. (Cl. 150—47)

A wallet safety latch for securing the wallet within one's pocket, comprising an elongate flat plate provided with means for attaching it to an outer wall of the wallet, parallel to and near an end edge thereof, the plate being appreciably shorter than the width of the wallet, so that its ends lie well within the longitudinal edges of the wallet, each end of said plate being provided with means for mounting a pivot pin therein at a right angle to the long axis of the plate, a short, flat safety latch plate mounted on each of said pivot pins, whereby both safety latch plates may fall by gravity into their extended latching position within the pocket, when tilted outwardly, or may be collapsed to their inoperative position overlying the elongated flat plate; the overhanging edges of the wallet serving as stop means for the safety latch plates in their latching position, and permitting the wallet to flex slightly at its edges to conform to its natural position within one's pocket.

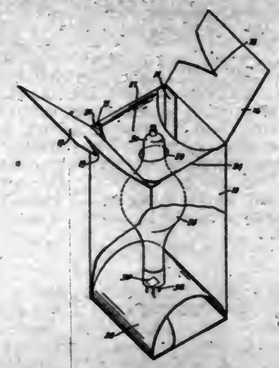


2,448,399
SUPERSONIC INSPECTION
Vincent G. Shaw, Pittsburgh, Pa., assignor to Sperry Products, Inc., Hoboken, N. J., a corporation of New York
Application June 1, 1946, Serial No. 673,723
2 Claims. (Cl. 73—67)

1. A device for inspecting an object, comprising, in combination, a pulse generator, means for transmitting the pulse into the object and receiving reflections of the pulse coming out of the object, an amplifier, means for applying the pulse from the generator directly to the amplifier, means for applying the reflected pulse from the transmitting and receiving means to the amplifier, means for indicating the output from the amplifier, time delay means between the pulse generator and the transmitting and re-

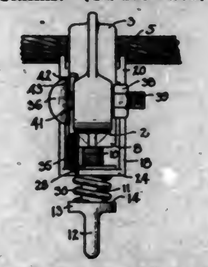
ceiving means and between the transmitting and receiving means and the amplifier.

2,448,400
PROCESS OF ALKYLATION
Emory M. Skinner, Augusta, Kans., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application January 4, 1945, Serial No. 571,282
7 Claims. (Cl. 260—683.4)



1. A process of alkylation comprising reacting an isoparaffin and an olefin in the presence of a complex hydrofluoric acid catalyst of titratable acidity of at least 50% and not greater than about 85%, containing not over about 2% of tar and not over about 2% of water, the remainder of the catalyst complex being composed substantially of hydrocarbons of high sulfur content, which hydrocarbons boil substantially between about 150° F. and about 700° F.

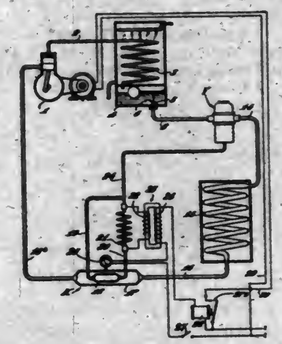
2,448,401
CARTON HAVING INTEGRALLY FORMED CUSHIONING MEANS
Edward Stone, San Francisco, Calif.
Application October 20, 1944, Serial No. 559,561
2 Claims. (Cl. 229—39)



1. A carton for fragile articles comprising, a box shell, closure means for the ends of the shell, extension flaps integral with the walls of the shell arranged in complemental pairs at opposite ends of the shell, the pairs of extension flaps at the respective ends of the shell being disposed

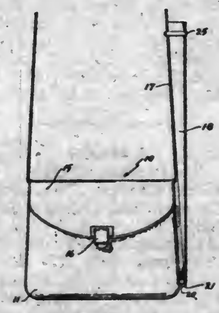
at right angles to each other, and means for interconnecting the complemental extension mem-

bers to form inwardly projecting bowed and resilient supports for the article to be packed.



2,448,402
HOT WIRE CLAMP
Boyd S. Thompson, Houston, Tex., assignor of one-half to M. Brian Jones, Houston, Tex.
Application January 29, 1945, Serial No. 575,103
2 Claims. (Cl. 173—273)

2. A hot wire clamp comprising a body of conducting material, a jaw and a lug each extending from said body in the same plane and direction, said jaw and said lug being spaced apart somewhat, a spindle, means threadedly securing said spindle to said lug for movement toward and away from said jaw, a head straddling said lug, said head having a bearing recess in one end into which one end of said spindle slidably extends, the shank of said spindle slidably extending through the other end of said head thereby mounting said head for limited movement along said spindle, said first mentioned end of said head providing a movable jaw extendable to adjacent said body jaw, and resilient means based on said spindle and bearing against said head to urge said head to clamp the hot wire between its movable jaw and said body jaw upon threading said spindle toward said body jaw.

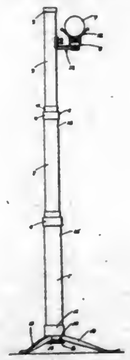


2,448,403
APPARATUS FOR MAINTAINING OPTIMUM CONDITIONS IN GASEOUS MEDIUMS
Jacob L. Turner, Norwell, Mass., assignor to Manning, Maxwell & Moore, Incorporated, New York, N. Y., a corporation of New Jersey
Application November 11, 1943, Serial No. 509,856
6 Claims. (Cl. 62—8)

5. In combination with a conduit through which flows a gaseous medium which at times may contain suspended liquid particles, a hollow bulb within the conduit and in the path of the gaseous medium, a coil of metallic capillary tubing, means providing passages leading from the opposite ends of the coil to spaced points within the bulb, a pressure motor having an expansible-contractible chamber, and means providing a passage leading from said chamber to one end of the coil, the coil, motor chamber and passage being normally filled with a volatile liquid, a valve actuated by the motor and which is operative to modify the rate of flow of the gaseous

medium in the conduit, means connecting the coil into an electrical circuit whereby flow of current in the circuit heats the coil, and means normally maintaining such a current intensity as to heat the coil and the volatile liquid to a temperature slightly in excess of the dry saturated or superheated temperature of the gaseous medium in the conduit, the impact upon the bulb of liquid particles entrained by the gaseous medium lowering the temperature of the bulb and thereby causing operation of the motor and adjustment of the valve.

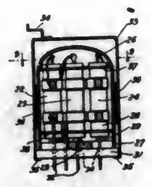
2,448,404
LADY'S HANDBAG
Max Ackerman, Brooklyn, N. Y., assignor to Handi-Bag Co., a firm
Application January 24, 1947, Serial No. 724,211
10 Claims. (Cl. 224—5.1)



1. A lady's handbag of the character described, comprising a bag, a carrying strap secured to opposed sides of said bag and a tubular umbrella holding member secured at its ends to a side of said bag and to the carrying strap thereof.

2,448,405
XANTHONE-DDT INSECTICIDE
James F. Adams, Wilmington, Del., assignor to Allied Chemical & Dye Corporation, a corporation of New York
No Drawing. Application June 23, 1945, Serial No. 601,319
8 Claims. (Cl. 167—30)

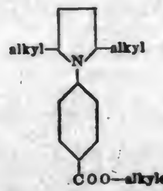
1. An insecticidal composition, the essential active ingredients of which are 2,2-bis(parachlorophenyl)-1,1,1-trichloroethane and xanthone.



2,448,406
TELESCOPE STAND
Herbert William Allen, Fresno, Calif.
Application September 15, 1945, Serial No. 616,511
3 Claims. (Cl. 248—158)

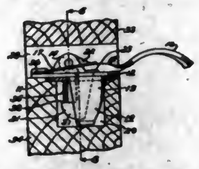
1. A demountable telescope stand comprising a base tube and a plurality of other tubes, all of said tubes having progressively smaller cross sectional diameters, each tube having a fitting at each end thereof, the outer end of the fitting at one end of each tube being counter-bored and threaded, and the fittings at the other ends of said other tubes being exteriorly threaded, such exterior threads on the fitting of one tube being of a size for threaded engagement with the threads in the bore of the tube of next largest diameter, the interior diameters of the base tube and of the exteriorly threaded fittings and the length of the tubes being such that all of said tubes may be telescopically nested, one within the other, with such fittings in closely engaged concentric relation with each other and with the interior of the base tube, and means to removably retain the tubes in such nested relation.

2,448,407
CONDENSER
John J. Anta'ek, Chicago, Ill., assignor to The Rauland Corporation, Chicago, Ill., a corporation of Illinois
Application February 21, 1945, Serial No. 578,999
9 Claims. (Cl. 175—41)



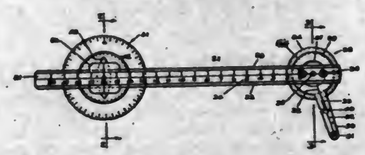
2. In a condenser assembly, a number of tubular dielectric elements formed of a titanium compound in a ceramic binder, each of said dielectric elements having on at least a portion of its external surface a conductive electrode film having at least two longitudinally separated portions, each of said dielectric elements having on its inner surface a conductive electrode film opposing all of said portions and situated substantially coaxial thereto, said dielectric elements being grouped together so that their axes are substantially parallel and all lie along the surface of the same imaginary cylinder, said dielectric elements being located between the same bases of said imaginary cylinder, a closed substantially cylindrical glass container having a bottom, metallic conductors mechanically and electrically connected to said longitudinally separated portions, said conductors having portions thereof extending substantially parallel to the axes of said dielectric elements, extending in the same direction, and passing through and sealed to said bottom, and a good heat-conducting gas in said container relatively inert to said dielectric elements.

9. A condenser assembly comprising a tubular dielectric element formed of a titanium compound in a ceramic binder, on the tubular element at least one outer conductive electrode film and an inner conductive electrode film opposing all outer electrode films and situated substantially coaxial thereto, a metallic electrically-conductive and heat-conducting means in electrical and thermal contact with each outer electrode film and physically connected thereto and comprising heat dissipating surfaces extending outwardly from the tubular element into space surrounding it, a substantially cylindrical sealed container enclosing said tubular element along with said electrode films and said electrically-conductive and heat-conducting means, a metallic conductor for each outer electrode film electrically connected thereto over said electrically-conductive and heat-conducting means within the container and extending from it to the exterior of the container through an insulating seal, and a filling of hydrogen in said container.



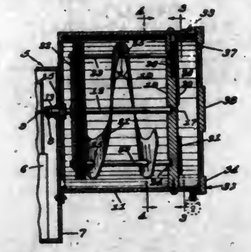
2,448,408
PARA-([N]-DIALKYL PYRRYL) BENZOATES
Souren Avakian, Oreland, Pa., assignor to The National Drug Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application June 19, 1946, Serial No. 677,900
6 Claims. (Cl. 260—313)

1. A compound corresponding to the general formula



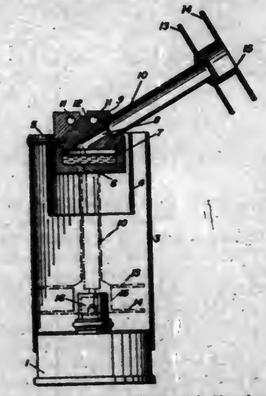
wherein R stands for a member of the group consisting of hydrogen and dialkyl amino groups.

2,448,409
SPRING LATCH MECHANISM
Wallace A. Barnes, Cleveland, Ohio, assignor to The Langenau Manufacturing Company, a corporation of Ohio
Application January 27, 1947, Serial No. 724,606
5 Claims. (Cl. 292—128)



1. In a latch adapted to engage a catch, the said latch comprising an anchoring plate having an aperture therethrough, two tab members spaced on opposite sides of said aperture extending upwardly from said plate, a hook member with a handle, said hook member having a pivot portion with a pivot hole extending transversely therethrough, said hook member being positioned with the pivot portion thereof positioned between the spaced tab members and with a latch portion thereof extending swingably through said aperture, the combination of protruding inside surfaces formed integrally with the spaced tab portions and extending into the said hole of the pivot portion to pivotally engage the pivot portion to said tab portions, and spring means to constrain the hook member to a latched position, the said spring means comprising a first leg portion and a second leg portion, each said leg portion including an anchor end, a contact end, and an interconnecting spring arm interconnecting said ends, said anchor end of each leg including a lever anchor portion and a transverse torsion portion, fastening means for fastening said anchor ends to said anchor plate on one side of said pivot hole, said interconnecting spring arm of each leg extending away from said fastening means in a direction toward said handle, said transverse torsion portion of each leg extending in a direction at an angle to the direction of said spring arm, and said lever anchor portion of each leg extending in a direction at an angle to the said transverse torsion portion, said contact end pressing on said hook member on said other side of said pivot hole and constraining said hook to a latched position.

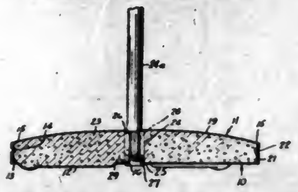
2,448,410
CALCULATING DEVICE
Walter Baumgartner, Bellflower, Calif.
Application August 16, 1946, Serial No. 691,113
1 Claim. (Cl. 235—61)



A calculating device of the character described comprising an elongated transparent member having linear scale indicia thereon, a protractor made of transparent material revolvably mounted onto the said elongated member and concentrically positioned at zero thereon, a course indicating arm made of transparent material revolvably positioned onto the center of said protractor, and radially extending therefrom, a radially extending slot in said indicating arm, a transparent marker slidably mounted onto the said elongated member and capable of being moved to and from zero on the linear scale, and a second protractor concentrically positioned onto the said marker and revolvably supported thereon.

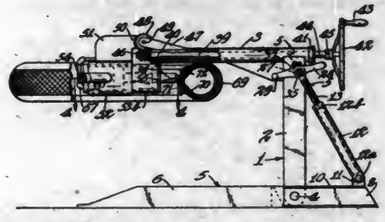
2,448,411
CONSUMPTION REGISTER FOR METERS
Fred S. Beach and Rose B. Beach, Charlotte, Mich.
Application February 26, 1946, Serial No. 650,332
4 Claims. (Cl. 346—28)

1. A consumption register of the class described comprising a casing having an openable front cover, a relatively thick stationary feeding disc for a helical measuring strip secured in and dividing the casing into a relatively deep rear measuring strip storage compartment and a relatively shallow forward measuring strip receiving compartment, said strip feeding disc having a helical marginal strip passage through a portion thereof and opening through opposite faces of the same, a rotary carrier for a helical measuring strip journalled in the rear compartment axially of the casing and including a central driven shaft, and means to couple said driven shaft to the unit hand of an automatic registering meter.



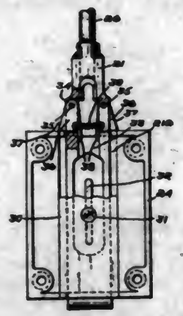
2,448,412
HEATER, STOVE, AND BURNER, PARTICULARLY ADAPTED FOR USE IN MAKING FIELD LABORATORY TESTS
Henry E. Bent, Columbia, Mo.
Application March 6, 1945, Serial No. 581,258
2 Claims. (Cl. 126—256)

1. A stove burner substantially insensitive to drafts, comprising a liquid fuel reservoir, a wick



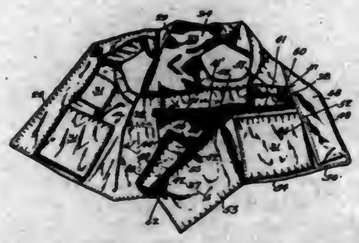
means extending upwardly from an upper central top portion of said reservoir, a tubular shield encircling said wick means and carried on said reservoir and preventing the entrance of air at the level of said wick means, a second shorter and coaxial tubular shield spaced apart from and centrally mounted in the upper portion of said first mentioned shield and above the reservoir thereby providing an air intake between the shields, and a heater block spaced apart from and mounted within but closely adjacent to said second shield and having within its interior an evaporating liquid reservoir.

2,448,413
BASE FOR STANDS
Harold Borghesi, Union City, N. J.
Application March 29, 1947, Serial No. 738,160
3 Claims. (Cl. 248—194)



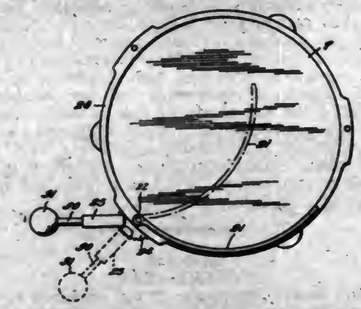
2. A base for stands and the like, said base comprising an upper shell member, a lower shell member engaging said upper shell member, said shell members having central openings formed therein, and a nut member centrally located in said shell members and having its lower end against the inner edge of the opening in said lower member, said nut member having a flange at its lower end embracing the outer edges of said opening, said nut member having an upper surface engaging the edge of said central opening of the upper shell portion.

2,448,414
APPARATUS FOR LIFTING AND SUPPORTING RIM-EQUIPPED TIRES
Charles E. Branick, Fargo, N. Dak.
Application May 25, 1945, Serial No. 595,782
4 Claims. (Cl. 144—288)



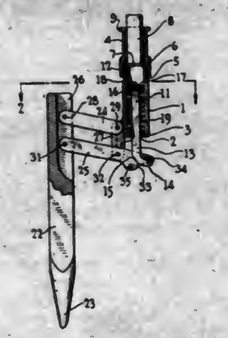
1. In a machine for facilitating the application and removal of pneumatic tires from their rims, an approximately L-shaped frame mounted on a horizontal pivot to a suitable base of support at one of its end portions and projecting upwardly and outwardly from said pivot, means for adjustably moving said frame on its said horizontal pivot to effectively raise and lower the free end portion of said frame, an expanding mandril mounted on a horizontal pivot to the free end portion of said frame, and means for imparting pivotal adjustments to said mandril on said horizontal pivot and retaining such adjustments.

2,448,415
DOOR LOCK BOLT
Oliver J. Bunten, Cambridge, Mass.
Application January 9, 1947, Serial No. 721,059
2 Claims. (Cl. 292—138)



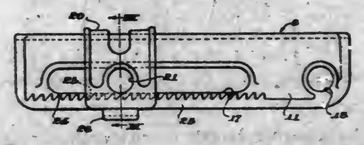
1. Means for preventing unauthorized tampering with a door locking bolt of the vertical type, comprising in combination with such locking bolt, operating means carried by the door at a point remote from the locking bolt and connected to the bolt, and means carried by the bolt for preventing movement of the bolt to locking position except upon simultaneous operation of the means carried by the bolt and the operating means.

2,448,416
REMOVABLE GAME POCKET
Robert E. Carter, Mount Holly Springs, Pa., assignor to C. H. Masland & Sons, Carlisle, Pa., a corporation of Pennsylvania
Application September 24, 1946, Serial No. 699,029
16 Claims. (Cl. 2—94)



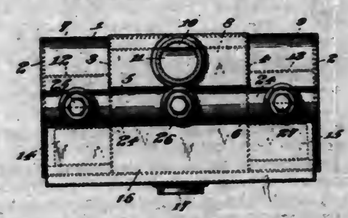
1. A hunting or fishing coat having a pocket access opening extending downwardly and inwardly through one side of the coat, a game pocket extending around the interior of the coat across the side and back thereof below the pocket access opening and having a mouth cooperating with the pocket access opening through the coat, a hookless fastener extending across the top of the game pocket and continuing below the pocket access opening through the coat securing the game pocket to the coat and at the mouth securing the outer side of the game pocket to the coat on the lower side of the pocket access opening through the coat, and removable means for securing the inner side of the game pocket to the coat at the upperside of the pocket access opening through the coat.

2,448,417
ELECTRIC STOVE WITH UTENSIL RETAINING MEANS
Angelo Cecchini, Astoria, Long Island, N. Y.
Application May 15, 1944, Serial No. 535,664
1 Claim. (Cl. 126—24)



In a stove including a hot plate, and a shell supporting said plate and provided with a side boss thereon, an annular band above said plate concentric thereto and adapted to prevent cooking utensils from sliding off said plate, an upright shaft rotatably mounted in said boss, an arcuate arm fastened at one end on said shaft above said band for rotation by the shaft to clamp said utensils against the band, and manipulative means to rotate said shaft into different set positions comprising a U-shaped guide fixed on said shaft and swingable laterally to rotate the shaft, a manipulative stem extending out of said guide for grasping to swing said guide and being endwise slidable in said guide, a fixed ratchet block concentric to said shaft and straddled by said guide, and a dogging block slidable in said guide by endwise sliding of said stem into and from interlocking engagement with said ratchet block..

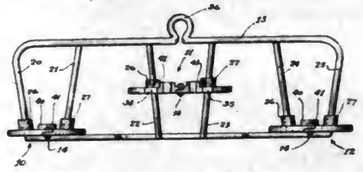
2,448,418
CHEMICAL GUN TRAP
Harold Edwin Cootes, Detroit, Mich., and Hershey Roy Graybill, Manheim, Pa., assignors to Animal Trap Company of America, Lititz, Pa., a corporation of Pennsylvania
Application October 12, 1944, Serial No. 558,436
19 Claims. (Cl. 43—84)



1. A chemical gun trap comprising an anchor stake, a body portion having means for holding a cartridge, parallel motion linkage connecting said body portion with said stake to permit up and down movement of said body portion while maintaining it in an upright position, a firing pin carried by said body portion, a spring for actuating said firing pin, means for releasably holding said firing pin in cocked position against the action of said spring, and means actuated by said linkage upon upward movement of said body portion to release said firing pin to fire said cartridge.

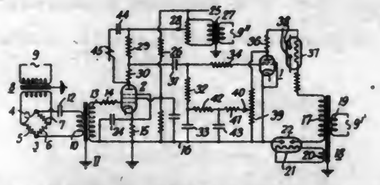
2,448,419
ADJUSTABLE DEAD LEVER GUIDE
Andrew F. Coulter, Wilkinsburg, Pa., assignor to Frederic Schaefer, Pittsburgh, Pa.
Application October 1, 1947, Serial No. 777,236
8 Claims. (Cl. 74—522)

1. A brake rigging dead lever guide comprising an elongated supporting member having spaced side walls provided at one end with aligned pin-receiving holes for pivotally connecting the guide to a truck bolster, said walls also having oppositely disposed longitudinal slots therein adapted to receive a pivot pin extending through the upper end of a brake lever between the walls, the outside of said supporting member being provided along the bottom of at least one of said slots with a series of teeth, and a bearing yoke fitting over and slidable lengthwise and vertically on the supporting member and having an open bottom adapted to receive said lever, the sides of the yoke being provided with holes adapted to receive the ends of said brake lever pin, said yoke also being provided with teeth engaging some of said first-mentioned teeth to lock the yoke against movement lengthwise of the supporting member while the yoke is in its lower position thereon, whereby the brake lever pin can be adjusted to many different positions along said guide.



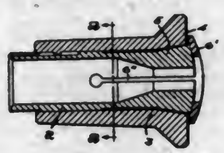
2,448,420
EXHAUST SPARK ARRESTER
Harvey Ellis Davidson, Tulsa, Okla., assignor to Bethlehem Steel Company, a corporation of Pennsylvania
Application May 6, 1944, Serial No. 534,507
3 Claims. (Cl. 183—82)

1. A spark arrester for exhaust gases, comprising a horizontal unitary cylindrical casing, a plurality of intercommunicating compartments in said casing, a tangential inlet to admit exhaust gases to one of the compartments and to impart a whirling motion to said gases therein, means for assisting the whirling gases to pass therefrom into adjoining compartments, means in said adjoining compartments for reversing



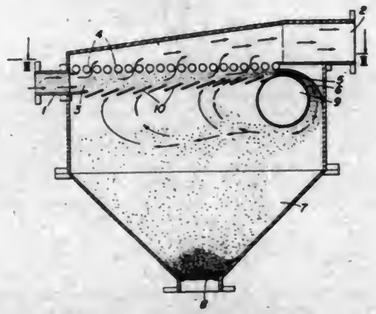
the direction of the moving gases, means for collecting carbon particles beneath the casing, an exhaust box for receiving the spent gases and a tangential outlet for releasing said gases.

2,448,421
POULTRY SHACKLE
Elmer M. Davis, St. Paul, Minn., assignor to Swift & Company, Chicago, Ill., a corporation of Illinois
Application July 12, 1945, Serial No. 604,580
10 Claims. (Cl. 17—44.1)



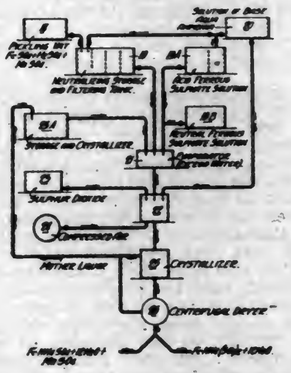
1. A releasable shackle for supporting an article hung therefrom comprising: a pair of pivotally connected jaw elements that may be opened and shut relatively; said jaw elements being adapted to engage and hold the article being worked upon; and supporting means for said jaw elements upon which said jaw elements are slidably mounted; said supporting means including relatively diverging means cooperating with each of the individual jaw elements at a point spaced from the pivotal connection to effect relative opening and closing of the jaw elements upon movement of the jaw elements along the diverging means in one direction or the other; whereby, as said jaw elements move in one direction, they are closed to engage the article to be hung from the shackle, and as said jaw elements are moved in the opposite direction, the article may be released from engagement between the jaw elements.

2,448,422
ELECTRONIC RELAY ARRANGEMENT
Neville Ryland Davis, Bisham, England, assignor to Sun-Vic Controls Limited, London, England, a company of Great Britain
Application April 16, 1946, Serial No. 662,527
In Great Britain May 7, 1945
9 Claims. (Cl. 315—194)



1. An electronic relay arrangement comprising a gaseous conduction discharge device having an anode, a cathode and a control electrode, a control circuit for said control electrode including a capacitance and a discharge path for said capacitance, a charging circuit for said capacitance having rectifying means therein connected across the anode and cathode of said device for charging said capacitance during positive half-cycles of anode voltage to apply to said control electrode a voltage subject to time lag tending to cause anode conduction; a second capacitance in said control circuit in series with means for applying to said control electrode an alternating voltage of a phase tending to prevent anode conduction of said discharge device, said second capacitance being chargeable during non-conduction of said device to tend to produce on said control electrode a unidirectional negative voltage tending to maintain non-conduction after extinction of the anode current, the voltage produced in response to anode conduction on the first said capacitance falling during conduction so as to produce on said control electrode a change of voltage resulting in extinction of anode current, and means for producing in said control circuit a controlling voltage component governing the anode conduction in said device in accordance with the magnitude of an input quantity, whereby periodically to initiate and continue anode conduction during a number of cycles of anode voltage dependent upon the magnitude of said input quantity.

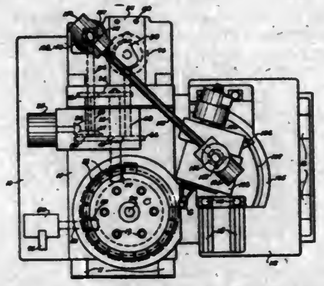
2,448,423
COLLET SEAL
Floyd L. Dodge, Waltham, Mass., assignor to The Wade Tool Co., Waltham, Mass., a partnership composed of W. Stanley Wade and Emily Wade, both of Weston, Mass.
Application September 14, 1945, Serial No. 616,210
3 Claims. (Cl. 279—51)



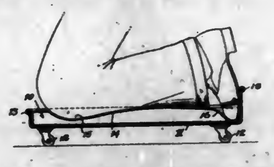
1. A collet sealing member comprising a head portion to bear against the outer end face of a collet around the bore thereof, and a plurality of legs integral with said head and extending rearwardly therefrom and constructed to lie in the radial slots of the collet and to close said slots for a substantial distance backwardly from their outer ends.

2,448,424
DUST COLLECTOR
Henry C. Dohrmann, Jersey City, N. J., assignor to Buell Engineering Company, Incorporated, New York, N. Y., a corporation of Delaware
Application October 11, 1945, Serial No. 621,747
8 Claims. (Cl. 183—110)

1. In a dust collector, an inlet for the dust-laden gases, an outlet of larger capacity for the cleaned gases, and a flow passage connected to the inlet, there being openings in one wall of said passage to permit escape of gases to the outlet, in combination with a dust outlet in the passage for the concentrated dust-laden gases, a closed dust bin connected to the dust outlet, there being openings located in the wall opposite to the wall containing the openings for the escape of the gas, said openings leading from the dust bin back into the flow passage.



2,448,425
PROCESS FOR THE UTILIZATION OF FERROUS SULFATE SOLUTIONS IN THE MANUFACTURE OF FERRIC ALUMS
Charles B. Francis, Pittsburgh, Pa.
Application January 30, 1947, Serial No. 725,402
9 Claims. (Cl. 23—118)

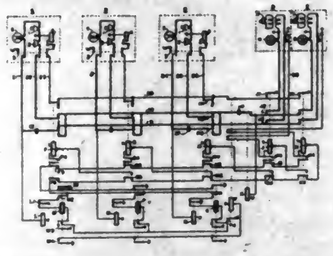


1. In the manufacture of commercially pure ferric alums by reaction of ferrous sulphate solutions and a suitable base, the process which includes the steps of adjusting the acidity of the solution to between approximately pH2 and pH4 by the addition of the said base, oxidizing the ferrous sulphate to ferric sulphate by treating the solution at a temperature between 45° C. and 70° C. with diffused air and a compound of the class consisting of sulphites and sulphur dioxide, continuing this operation with the gradual addition of the base until the sulphate of this base and the ferric sulphate are in proper proportion to form alum, evaporating a major portion of any excess water present, cooling the solution to effect crystallization and finally separating the crystals from the mother liquor.

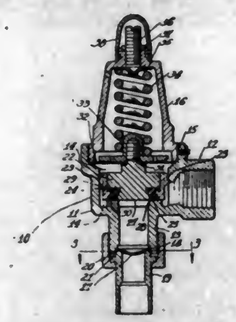
2,448,426
GEAR CUTTING MACHINE
Clarence T. Galloway, Pittsford, N. Y., assignor to Gleason Works, Rochester, N. Y., a corporation of New York
Application February 18, 1944, Serial No. 522,924
3 Claims. (Cl. 90—9)

1. In a machine for producing gears, a frame, a work support mounted on the frame, a carriage reciprocable rectilinearly on the frame, a disc-type rotary gear cutter journaled in said carriage and having cutting blades arranged partway around its periphery and having an indexing gap between the blades, a cam journaled in said carriage for rotation about an axis offset from but parallel to the axis of the cutter, a follower mounted on the frame and engaging said cam, said cam having a peripheral cam surface and being adapted to reciprocate the carriage on rotation of the cam to move the cutter back and forth across the face of the work on each revolution of the cam, a motor mounted on the carriage, gearing driven by said motor for rotating said cutter, and gearing driven by said motor for rotating the cam in timed relation with the cutter so that the carriage makes a reciprocation per revolution of the cutter.

2,448,427
KNEE PAD DOLLY
Benjamin Gordon, New York, N. Y.
Application December 6, 1946, Serial No. 714,571
2 Claims. (Cl. 155—167)



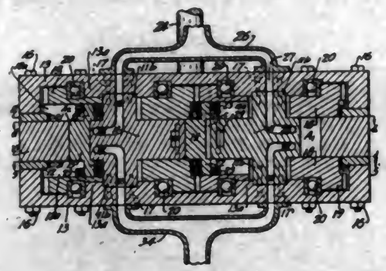
2. In a device of the character described a rectangular platform with raised sides shaped from a single sheet of material, casters affixed to the underneath portion and supporting said platform, a removable air cushion being equipped with means for inflating positioned on said platform, said cushion being pre-formed with depressions shaped to conform to the knees and shins of the operator, additional depressions positioned immediately to the rear of said first mentioned depressions adapted to receive the toes of said operator, raised supports attached to the rear edge of said device adapted to serve as bracers for the operator's feet.



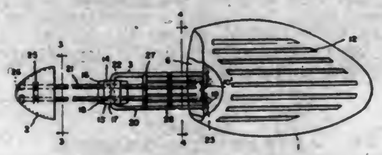
2,448,428
INTERCOMMUNICATING TELEPHONE SYSTEM
Kenneth W. Graybill, Elmhurst, Ill., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application March 10, 1945, Serial No. 582,045
11 Claims. (Cl. 179—31)

1. In a telephone system, a plurality of telephone stations each including an impulsing device, a central station, lines extending from said central station to each of said first stations, each of said lines defining independent incoming and outgoing signal current channels, each incoming

channel normally connected to the corresponding incoming channel of all other of said lines and each outgoing channel normally connected to the corresponding outgoing channel of said other lines, and switching means at said central station operative under the control of the impulsing device at any one of said first stations over the line extending thereto to associate the incoming channel of said one line with the outgoing channel of another one of said lines and to associate the outgoing channel of said one line with the incoming channel of said other one of said lines.

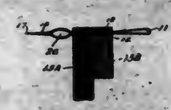


2,448,429
PRESSURE RELIEF VALVE
Guy J. Henry, Chicago, Ill.
Application October 29, 1945, Serial No. 625,253
3 Claims. (Cl. 137—53)



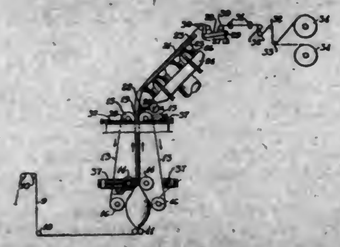
1. A pressure relief valve comprising, in combination, a valve chamber having an inlet and discharge and a valve port therebetween, said discharge being normally closed by a rupturable element extending transversely thereof on the downstream side of the valve port, a valve reciprocable in said chamber to and from closing relation to said port, a diaphragm peripherally secured to the chamber and connected to the valve to control the same, and a spring operable on the valve to urge the same toward port closing position, said diaphragm and valve being located in the chamber whereby in closed position of the valve the same is exposed and subject to closing pressure in the inlet, the diaphragm being exposed to and urged by said pressure in the opposite direction, the effective area of the diaphragm so exposed only slightly exceeding the effective area of the valve so exposed and said spring exerting a force only sufficient to offset the difference in force corresponding to a predetermined inlet pressure acting on the differential in exposed area of the valve and diaphragm.

2,448,430
INTERNAL-COMBUSTION ENGINE
Leif A. Holan and Joseph O. Bourdeaux, Minneapolis, Minn.; said Bourdeaux assignor of one-sixth to said Holan
Application June 3, 1946, Serial No. 673,982
17 Claims. (Cl. 123—12)



1. An internal combustion engine comprising a block having an annular chamber, a plurality of pistons located within said chamber for rotation therein, means for intermittently blocking off a zone of said chamber between adjacent pistons, guiding means driven by the pistons and guiding the pistons as they rotate to cause a timed relative movement between adjacent pistons in such manner that adjacent pistons draw apart as they approach said zone and draw together as they recede from said zone, there being a by-pass passage through said block affording communication between portions of said chamber adjacent the ends of said zone, means supplying a combustible mixture to said chamber at a portion thereof wherein adjacent pistons draw apart, means for conducting exploded gases from said chamber at a portion thereof wherein adjacent pistons draw together, means for igniting a charge in said chamber at a point just beyond said zone and a member in turn driven by said guiding means.

2,448,431
ADJUSTABLE SHOE TREE
Robert Hubbert, Grosse Pointe, Mich.
Application December 17, 1945, Serial No. 635,487
3 Claims. (Cl. 12—128.6)

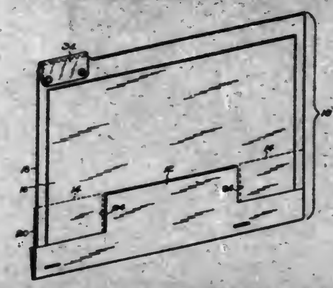


1. A shoe tree comprising a hollow sheet metal toe piece, a hollow sheet metal heel piece, a sheet metal member having spaced end walls formed with aligned openings and also having resilient diverging wings, a U-shaped rod having its base extending through the openings in said end walls and the free ends of its legs pivotally connected to said toe piece, and a U-shaped rod fixedly connected to said heel piece and having its legs extending through the openings in and adjustably clamped by said wings.

2,448,432
SYSTEM OF THREADING NEEDLES
Ruth Huning, Cleveland, Ohio
Application July 1, 1946, Serial No. 680,626
3 Claims. (Cl. 223—99)

1. In combination a plurality of needles having the eyes thereof aligned one with the other, a wire filament extending through the eyes of the needles, said wire being bent upon itself and formed to provide a pair of spaced loops separated by parallel reaches of the double wire on which the needles are positioned.

2,448,433
MAKING WRINKLE-FREE FILM
Carroll R. Irons and Charles E. Sanford, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
Application September 10, 1945, Serial No. 615,276
9 Claims. (Cl. 18—47.5)



1. The method which comprises continuously supplying a tube of normally crystalline vinylidene chloride polymer in the supercooled condition, constricting the tube to close the same, moving the tube vertically upward through and away from the constricting means, filling the tube above the constricting means with a sufficient amount of inert liquid having a density between 0.8 and 1.3 to effect radial distention of the tube, compressing without closing the upper portion of the liquid-filled tube, giving it an elongated cross-section, while lifting the open tube solely by means of a spaced pair of opposed endless belts, both moving at the same linear rate greater than the rate of supply of the supercooled tube, to stretch the tube longitudinally, slitting the tube longitudinally as it emerges from the lifting means, spreading the slit tube to form a flat sheet, all without again closing the tube, and collecting the so-formed wrinkle-free film.

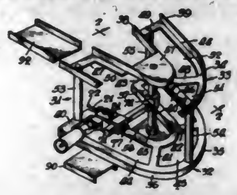
2,448,434
PROCESS FOR PRODUCING NONBREAK OIL
Jakob L. Jakobsen, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
No Drawing. Application October 5, 1946, Serial No. 701,409
9 Claims. (Cl. 260—424)

1. Process of producing a Gardner non-break oil which comprises treating a vegetable oil containing break constituents with a small proportion of a halogenated low aliphatic acid in the presence of water to produce two phases, an oil phase substantially free from break constituents, and an aqueous phase containing the halogenated acid and the break constituents, and separating the two phases.

2,448,435
PAPER FILE
John Arthur Johnson, Jamestown, N. Y., assignor to Art Metal Construction Company, Jamestown, N. Y., a corporation of Massachusetts
Application August 11, 1944, Serial No. 548,959
5 Claims. (Cl. 129—16.7)

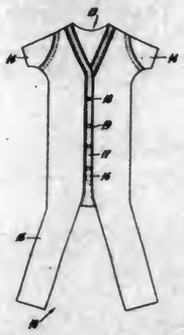
1. In a card file, the combination of two connected walls, one higher than the other, the lower wall being provided with vertical slots open at their upper ends, forming upwardly directed tongues, and the higher wall being provided with horizontal slots open at the lateral edges, defining horizontally directed portions which are passed through said vertical slots, so that tongues of said lower wall lie on opposite sides of said higher wall and form pockets to receive cards.

2,448,436
TRAILER HITCH
Earle A. Jones, Electra, Tex.
Application July 10, 1946, Serial No. 682,482
4 Claims. (Cl. 280—33.44)



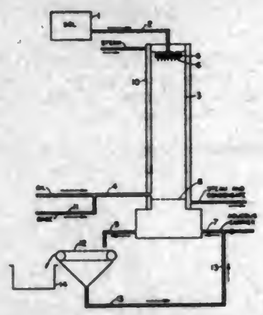
1. An open ended housing having spaced and substantially vertically disposed side walls and top and bottom walls convergent toward the front end of the housing, the front end of said housing being both horizontally and vertically pivotally connected to the vehicle, the rear end of said housing being open, said trailer tongue extending into the housing through the open rear end thereof and being horizontally pivotally connected to the side walls of the housing, and the connection between the tongue and the housing permitting oscillation of the tongue about its longitudinal axis.

2,448,437
DENTAL APPLIANCE
Abraham Kaplan, New York, N. Y.
Application May 3, 1944, Serial No. 533,853
6 Claims. (Cl. 32—67)



1. In a dental device for preparing abutment teeth for mounting a removable restoration, a

vertical guide post, means for mounting the vertical guide post in substantial parallelism with the axes of the teeth in the oral cavity between the contra jaws, means for radially pivoting said guide post, a radial arm, a guide on said vertical post for supporting said radial arm including means to fixedly hold said radial arm on said guide in predetermined angular position while permitting sliding movement in relation to said vertical guide, and pivot means on said radial arm to hold a hand drill piece to direct the cavitating burr angularly to form an anchoring slot

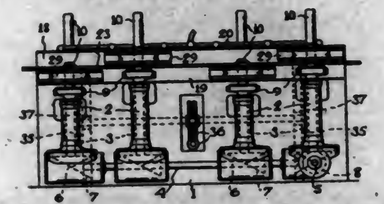


having an opening terminating proximally of an abutment tooth and an entrant opening occlusally, the cavities so formed being in parallelism with each other upon guidance of said hand drill piece in operation upon said support, said supporting means for the vertical post including channelled arch-shaped plates medially open to expose the abutment teeth in the opening thereof, said plates being channelled to receive oppositely directed trays for investment compound and including axially formed bases for supporting said post in the position aforesaid.

2,448,438
PAJAMAS
Jack Kessler, Brooklyn, N. Y.
Application March 12, 1947, Serial No. 734,053
3 Claims. (Cl. 2—83)

3. A bifurcated lower garment having body portions and leg portions and comprising two side sections and a one-piece insert center section, said insert center section extending from the waist line in front through the crotch up to the waist band in back of the garment, said insert center section being of relatively narrow strip form in the front and gradually widening through the crotch and its rear side edges being convexly curved and having an upper rear edge extending for substantially the full width of the back, the rear upper edge of said insert center section being gathered so as to make the garment form-fitting at the waist, said insert center section having one of its edges attached to the adjacent edge of one of the side sections for its full length, the opposite side edge of the center section being stitched to the adjacent side section from a point above the crotch in the front of the garment to the waist band in the rear, the unstitched portions of said insert center section and said adjacent side section forming a fly opening.

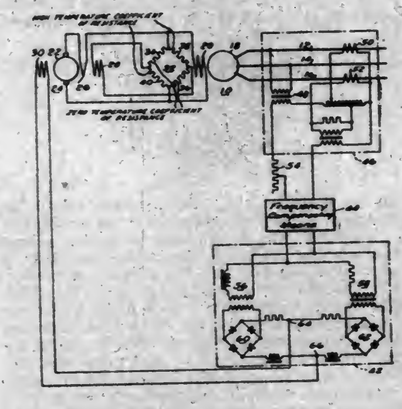
2,448,439
PROCESS OF PREPARING AN INORGANIC HYDROGEL
Charles N. Kimberlin, Jr., and Jerry A. Pierce, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware
Application March 11, 1944, Serial No. 526,050
1 Claim. (Cl. 252—317)



Process for preparing silica hydrogel in spherical form which comprises mixing sodium silicate and sulfuric acid to form a sol having a density of 1.21, suspending spherical droplets of said sol in a mineral oil containing sufficient acetylene tetrabromide to raise the density of the oil to 1.18, passing said suspended sol downwardly through said oil until said sol sets to silica hydrogel spheres, and removing said hydrogel spheres from said oil by dropping into an aqueous solution of sulfuric acid having a density of 1.19.

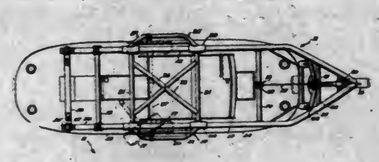
2,448,440
MECHANIC'S SQUARE
Elmer I. King, Jeannette, Pa., assignor to The L. S. Starrett Company, Athol, Mass., a corporation of Massachusetts
Application June 15, 1945, Serial No. 599,651
10 Claims. (Cl. 33—95)

10. In an instrument wherein a rule formed with a groove along one face thereof is releasably secured to a head slotted to receive the rule, said head being formed with a bore in the plane of the slot and with aligned grooves formed in the material of the head at the end of the bore remote from the slot, a clamping bolt received in said bore, its end within the confines of the slot being formed to present a finger having at its free end a transverse rib to be received in the groove in the face of the rule, said bolt intermediate its ends having a non-circular portion formed on the bolt and a washer having a non-circular perforation formed therein to fit slidably on the non-circular portion of the clamping bolt and having a pair of projections formed on one face thereof and engageable in the aligned grooves in the head whereby the transverse rib on the finger of the bolt may be presented to the groove in the rule to engage either face of the rule to either side of the head.



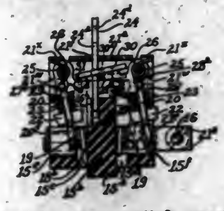
2,448,441
FELTING MACHINE
William Henry Kingston, Drighlington, Bradford, England, assignor of one-half to William Bywater Limited, Leeds, England, a company of Great Britain
Application November 30, 1944, Serial No. 565,985
In Great Britain December 7, 1943
5 Claims. (Cl. 28—14)

1. A felting machine comprising two substantially horizontally disposed tables one of which is superposed above the other and at least one of which is so supported as to permit limited movement thereof in every horizontal direction with no more than a negligible accompanying vertical movement and means for imparting said movement to said one table comprising a plurality of spaced apart rotatable substantially vertically disposed shafts, each shaft carrying a bearing surface which is eccentric to the axis of the shaft, means for rotating each shaft, a plurality of spaced apart bearing members secured to said one table, each bearing member comprising spaced apart, substantially parallel horizontally disposed bearing surfaces adapted to cooperate with one of said eccentric bearing surfaces as it rotates for transmitting motion to said table, each of said bearing members being so mounted as to permit rotation in a horizontal plane and means for securing each bearing member in fixed position with respect to said one table with said parallel bearing surfaces at any angle in a horizontal plane with respect to any fixed linear element of said one table.



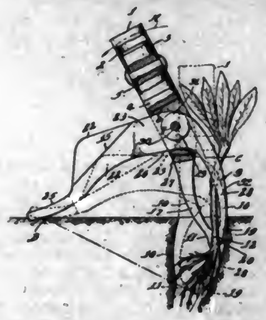
2,448,442
REGULATING SYSTEM
Herbert S. Kirschbaum, Pittsburgh, Pa., assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application August 30, 1946, Serial No. 694,065
4 Claims. (Cl. 322—77)

1. In a regulating system for an alternating current generator provided with a field winding, in combination, a regulating exciter for controlling the field excitation of the generator, a series field winding for the exciter for normally supplying the excitation of the exciter, a control field winding for the exciter disposed to be energized in accordance with a departure of the generator voltage from a predetermined value, a resistor means connected across the exciter and disposed to be responsive to temperature changes of the generator field winding to effect a change in the



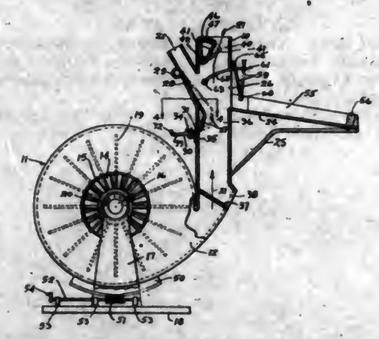
resistance of the resistor means, and a field winding for the exciter disposed in circuit relation with the resistor means to be responsive to changes in the resistance thereof, the latter said field winding cooperating with the series field winding of the exciter for maintaining normal excitation of the exciter under changing temperature conditions of the generator field winding.

2,448,443
BOAT TRAILER AND THE LIKE
Foster Krake, Coloma, Mich., assignor to Sporting Specialties Company, Coloma, Mich., a corporation of Michigan
Application October 18, 1945, Serial No. 623,130
10 Claims. (Cl. 214—65)



1. A trailer embodying a suspension frame for a transportable object to be carried, towing means at an end of said frame, a dependent wheel carrying leg at the side of said frame, and a wheel supporting member on said leg and carrying a wheel in position alongside of said leg, said wheel supporting member being turnable on said leg to dispose said wheel selectively in normal and in shifted positions, on opposite sides of the leg, respectively during overland transportation of the carrier and during the loading or unloading of the transportable object, and means to releasably secure said wheel supporting member against turning movement on said leg when in either normal or shifted position.

2,448,444
ELECTRIC SWITCH
Alvin W. Krieger, Milwaukee, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application September 13, 1945, Serial No. 615,985
7 Claims. (Cl. 200—5)



2. In an electric snap switch mechanism, in combination, a pair of stationary contact members, a metal frame, said frame having a wiring terminal element formed integrally therewith, a pair of contactors each having pivotal and electrical connection with said frame, a coiled compression spring individual to each contactor to effect snap movement thereof from each extreme position to the other, additional spring means individual to each contactor to normally bias the same out of engagement with the stationary contact member respectively associated therewith, a reciprocatable manually operable member slidably supported by said frame in unequally spaced relationship to the points of pivotal support of said contactors, and a flat plate interposed between said last mentioned member and said contactors to form a common operating element for the latter, said manually operable member being adapted to drive said plate in one direction and the latter having a tiltable connection with the former, whereby upon movement of said manually operable member and said plate in said one direction engagement of said contactors with their respective contact members is effected in a predetermined sequence.

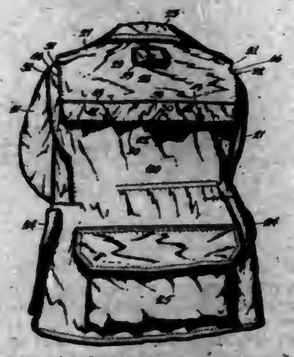
2,448,445
WEED PULLER
Charles E. Krupp, Evanston, Ill., and William R. Peterson, Lowell, Ind.
Application June 27, 1946, Serial No. 679,788
3 Claims. (Cl. 254—132)

1. A device of the class described comprising, a first jaw having an opening, a second jaw having a first portion, a second intermediate portion, and a terminal third portion, the first portion being slidable and rockable in the opening, but being so shaped as to prevent rotation of the jaw about its long axis, the third portion being flat and perpendicular to the first portion and adapted to be withdrawn through the opening only after the jaw has been rotated about its long axis through an angle of ninety degrees, said second portion being adapted for rotation in said opening after translation thereinto, and a pivot normally passing through the jaw and through said first portion.

2,448,446
VERTICAL AIR CURRENT TYPE POTATO SEPARATING MACHINE
Peter La Pointe, Brooklyn, N. Y.
Application December 7, 1945, Serial No. 633,504
2 Claims. (Cl. 209—139)

1. In a potato separating machine, a substantially vertical air discharge conduit having side openings on opposed sides, means for driving a current of air upwards through said conduit, a chute for supplying potatoes and dirt as received from a potato digger and connected with one of said side openings and extending obliquely downwards for discharging downwards and obliquely into said air discharge conduit, a first baffle obliquely from the bottom portion of said chute into said conduit and having a top portion hingedly connected with said chute and forming a slide for said potatoes and dirt and having a bottom portion constricting said conduit for increasing the air velocity at this area and inclined to direct some of the air passing through said conduit to the other of said side openings, means for holding said baffle in various hinged positions for varying the oblique direction of said baffle and for varying the constriction of said conduit, a discharge rack for separated potatoes connected with the last mentioned of said side openings, a second baffle across the last mentioned of said side openings and above said discharge rack for controlling the lateral draft through said last mentioned side opening, means for adjusting said second named baffle, and a grille baffle extending across said conduit and towards and connected with said second named baffle.

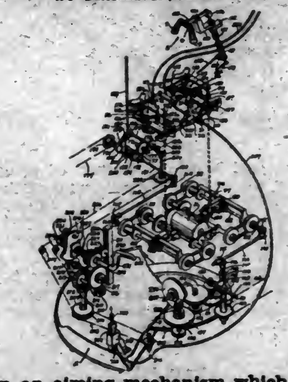
2,448,447
SKID
Herbert C. Lau, Oak Park, Ill., assignor to Signode Steel Strapping Company, Chicago, Ill., a corporation of Delaware
Application August 31, 1944, Serial No. 552,177
6 Claims. (Cl. 248—120)



1. A load carrying skid comprising a plurality of cross positioned members arranged in angular end to end relation to each other, and flexible metal band loops tightened securely about portions of said members so as to hold them strongly

connected together but so as to permit a limited amount of movement of one member angularly with respect to the adjacent member.

2,448,448
DYEING OF TEXTILE FIBERS CONTAINING NITROGEN
James Hutchison MacGregor, Bocking, Braintree, England, assignor to Courtaulds Limited, London, England, a British company
No Drawing. Application November 1, 1946, Serial No. 707,331. In Great Britain June 8, 1942
2 Claims. (Cl. 8—22)

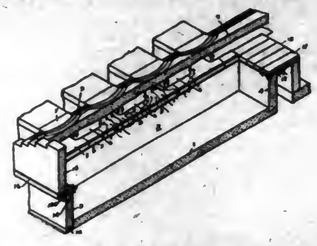


1. A process of dyeing nitrogenous textile fibres which comprises treating the said fibres with an aqueous solution containing a small quantity of free acid and a compound selected from the group consisting of cyanamide, dicyandiamide, melamine, dicyandiamidine, guanidine, biguanide, alkyl, hydroxyalkyl and aryl substituted dicyandiamidines, guanidines and biguanides, and salts of dicyandiamidine, guanidine, biguanide and the alkyl, hydroxyalkyl and aryl substituted dicyandiamidines, guanidines and biguanides, and dyeing the thus-treated fibres with a direct cotton dyestuff from a neutral bath.

2,448,449
COAT
Charles H. Masland, 2nd, Carlisle, Pa., assignor to C. H. Masland & Sons, Carlisle, Pa., a corporation of Pennsylvania
Application October 3, 1946, Serial No. 700,953
7 Claims. (Cl. 2—94)

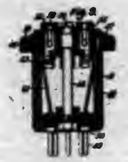
1. A coat having a collar and a back below the collar in which an opening is provided, a cape of substantially rectangular form having sides and extending substantially across the back below the collar and over the opening, closed at the top and back and having an opening across the bottom and openings in the upper ends of the sides and stiffening in the sides adapted to bulge the cape away from the back of the coat.

2,448,450
AIMING MECHANISM
William L. Maxson, West Orange, N. J., Peter J. McLaren, New York, N. Y., and William A. Black, Montclair, and Macen Fry, Harrington Park, N. J., assignors, by mesne assignments, to The W. L. Maxson Corporation, New York, N. Y., a corporation of New York
Application January 27, 1942, Serial No. 428,372
20 Claims. (Cl. 89—41)



1. In an aiming mechanism which includes a member to be aimed, in combination, a power motor, a progressively adjustable, mechanical, speed converting device for securing as an output from said motor various output speeds of rotation in either of two opposite directions within predetermined limits, means responsive to said converting device for driving the aimed member rotatively in linear relation to the output speed, a control member for adjusting the speed converting device, operable in either of two opposite directions from a neutral position corresponding to zero output to produce outputs in one direction or the other depending upon whether the control member is displaced in one direction or the other from the neutral position, and non-linear control connections from the control member to the speed converting device constructed and arranged to cause the output speed to be increased in progressively augmented relation to the extent of departure of the control member from neutral as the control member is moved away from the neutral position in either direction.

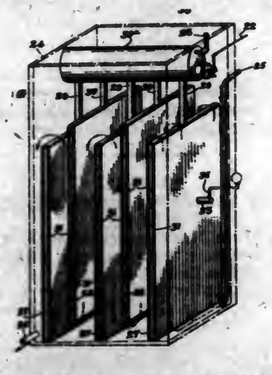
2,448,451
GLASS FURNACE AND METHOD OF OPERATION
John H. McKelvey and John W. Rogers, Kirkwood, Mo., assignors to Laclede-Christy Clay Products Company, St. Louis, Mo., a corporation of Missouri
Application March 16, 1942, Serial No. 434,834
7 Claims. (Cl. 49—54)



1. In a glass furnace that includes a tank formed of refractory material and adapted to contain a pool of molten glass, and an overarching superstructure forming a furnace chamber adapted to receive and to confine above the surface of said pool a stream of flame, with firing and outgo ports opening through opposite walls of said superstructure; the invention herein described comprising a slot-like passageway extending peripherally of the rim of said tank and opening inwardly into the furnace chamber above said rim of the tank and below the adjacent portions of said superstructure, and means for directing

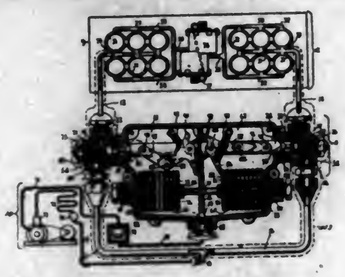
inwardly through said passageway into the furnace chamber streams of cooling gas, whereby wear upon the tank wall is retarded and stingout prevented.

5. The method herein described of prolonging the utility of the refractory side wall of the tank of a glass furnace which comprises substantially continuously injecting along the rim of the side wall streams of cool gas inward into the furnace immediately above the surface of the bath of molten glass in the tank, said streams being so disposed as to form a substantially continuous sheet covering substantially the entire rim of the side wall.



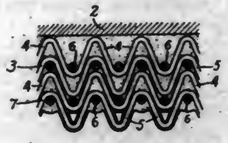
2,448,452
TEST SOCKET
Oliver James Morelock, Short Hills, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a corporation of New Jersey
Application December 21, 1945, Serial No. 636,456
6 Claims. (Cl. 173—344)

1. A test socket for electronic devices which comprises an insulating base; pins carried by said base and forming a plug; an insulating cap superimposed upon said base and fastened thereto, the top of said base extending outwardly beyond said cap forming a ledge, said cap and base providing an inclosed space; a plurality of test tabs projecting outwardly from said inclosed space between said cap and said base, each tab being electrically connected to one of said pins, said tabs being carried in recesses formed in the upper surface of said ledge and terminating a short distance from the edge of said ledge and being exposed on their upper surfaces for the application of a test prod; a plurality of contact elements in said inclosed space, each element being electrically connected to one of said pins, said cap having a plurality of holes in its top aligned with said contact elements for the reception of the pins of a radio tube or the like.



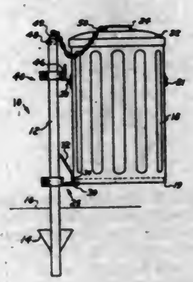
2,448,453
LIQUID COOLING SYSTEM
Joseph I. Morrison, Lincolnwood, Ill.
Application September 11, 1944, Serial No. 553,495
6 Claims. (Cl. 62—141)

1. A cooling system comprising a refrigerator having a refrigerant-receiving and heat-transferring device provided with an extensive heat transfer surface on a face thereof and adapted to receive refrigerant for congealing a liquid on said surface, a tank for containing liquid to substantially cover said heat transfer surface, power means for circulating liquid through said tank over said surface, and means for controlling the thickness of the congealed liquid formed on said surface comprising a container for a congeal-



able liquid located so that at least a portion of the container will be within the field of congelation of liquid on said surface, and comprising also pressure responsive means for controlling the operation of said power means in communication with said container and controlled by the change of pressure therein due to the congelation of liquid therein.

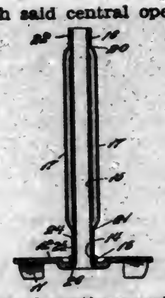
2,448,454
REFRIGERATING SYSTEM
Glenn Muffly, Springfield, Ohio
Application January 23, 1939, Serial No. 252,292, which is a division of application Serial No. 719,099, April 5, 1934. Divided and this application February 5, 1945, Serial No. 576,182
5 Claims. (Cl. 62—3)



2. In a refrigerating system employing a volatile refrigerant, a pair of heat exchange elements, means for directing the flow of said refrigerant so that at one time the greater part of it evaporates in one of said elements and at another time the greater part of it evaporates in the other of said elements, a liquid refrigerant storage receptacle, and means in said system for placing said receptacle in communication with whichever one of the two heat exchange elements is more active as an evaporator, said storage receptacle being adapted to store excess liquid refrigerant during the active evaporating period of one of said elements.

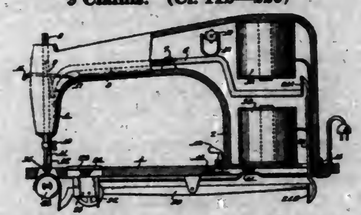
2,448,455
LAMINATED PILE-FABRIC SHOE SOLE
Alan E. Murray, Wilmington, Del.
Application September 20, 1944, Serial No. 555,005
4 Claims. (Cl. 36—30)

1. A shoe sole comprising an outer layer of fabric having a body portion impregnated witn a rubber-like material and pile loops impregnated with similar material but standing out from the outer surface of the impregnated body portion separately from one another, and an inner layer of similar impregnated fabric having impregnated pile loops interlocked with the impregnated pile loops of the adjacent surface of the outer layer.



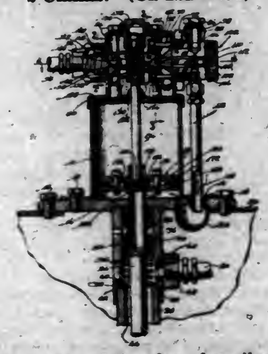
2,448,456
SUPPORT FOR CONTAINERS
William Niskanen and Ernest L. Christofferson, Minneapolis, Minn.
Application April 18, 1947, Serial No. 742,324
7 Claims. (Cl. 248—156)

1. A container support embodying a unitary standard which is adapted to be anchored in the ground and a pair of supporting members adjustably mounted with relation to each other on said standard, one of said members having an upwardly extending grooved portion for engaging a lower peripheral flange of a container, and the other of said members having a stationary hook portion for engaging a handle portion of said container.



2,448,457
COP HOLDER
Robert V. Olson and Bror A. Johnson, Attleboro, Mass., assignors to Mossberg Pressed Steel Corporation, a corporation of Massachusetts
Application September 1, 1945, Serial No. 614,004
5 Claims. (Cl. 242—121)

1. A cop holder comprising a ratchet base having a central opening therein, a pair of center tubes with one telescoping the other, and both extending through said central opening and in



contact at their end portions and secured together.

2,448,458
ELECTROMAGNETIC SEWING MACHINE
Joseph A. Osanich, Detroit, Mich.
Application November 29, 1943, Serial No. 512,118
9 Claims. (Cl. 112—220)

9. In a sewing machine having a reciprocating needle carrying shaft, a complemental looptaker device adapted to operate in a forward and backward motion, a combination of reciprocating levers, resilient members interconnecting the said levers and each of the said levers with the needle carrying shaft and the looptaker device respectively and a pair of electromagnets for alternately driving the said levers in each of their two directions.

2,448,459
PISTON ACTUATED AIR MOTOR VALVE MECHANISM
George H. Palm, Chicago, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Virginia
Application November 1, 1943, Serial No. 508,517
2 Claims. (Cl. 121—164)

1. An air motor of the class described, comprising a cylinder, a piston therein, a port connected

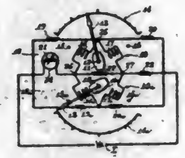
to each end of said cylinder, means for supplying compressed air to said ports, a valve controlling admission of air to said ports, said valve having a ridged surface provided with an apex, a roller engageable with said surface, a yoke supporting said roller, a pin rigid with the closed end of said yoke, a plate having a depression universally receiving said pin, a spring pressing said plate against said pin and said roller against said valve, and means connecting said yoke and piston to cause said roller to move over said surface.

2,448,460

PROCESS OF PRODUCING AN INORGANIC HYDROGEL

Jerry A. Pierce and Charles N. Kimberlin, Jr., Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application March 7, 1944, Serial No. 525,438
7 Claims. (Cl. 252—317)



7. A process for preparing inorganic hydrogel particles in spherical form directly from the initial sol-forming components which comprises agitating an emulsion of one of said sol-forming components in a liquid capable of forming a separate layer in contact with water, adding to said emulsion during said agitation another component capable of forming a sol with said emulsified component whereby said sol is produced in the form of minute droplets suspended in said liquid and containing said agitation for a sufficient length of time to cause said sol to set to a hydrogel.

2,448,461

PLURAL SYSTEM OF SEQUENTIALLY RESPONSIVE INSTRUMENTS

Robert H. Postal, New York, N. Y., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey

Application April 27, 1945, Serial No. 590,681
10 Claims. (Cl. 177—351)

1. In an electrical measuring system including two ratiometer instruments each having a pair of coils and a movable indicating element: the combination of two electrical bridges having a common branch and adapted for connection across a current source; electrical deltas connected across the branches of said bridges respectively, the sides of said deltas comprising said coil pairs respectively, and the bases of said deltas comprising resistance means serially included in said bridges; and means associated with said common branch for varying the potentials in said branch according to a condition to be measured, said electrical bridges being arranged to cause the indicating elements of said instruments to traverse their respective deflection ranges substantially in sequence upon progressive variation of the potentials in said common branch.

2,448,462

CORROSION RESISTANT STEEL AND EQUIPMENT

Louis Secondo Renzoni, Port Colborne, Ontario, Canada, assignor to International Nickel Company, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application March 20, 1946, Serial No. 655,893. In Canada February 12, 1946
11 Claims. (Cl. 75—128)

11. An alloy having an austenitic structure devoid of a sigma phase and comprised of chromium within the range of 21% to 22%, nickel in an amount at least equal to the chromium content and within the range of 21% to 23%, molybdenum within the range of 5% to 6%, not exceeding 0.15% carbon and the balance essentially iron.

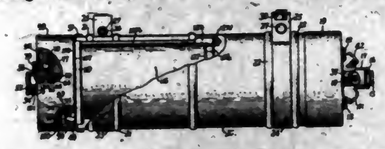
2,448,463

METHOD OF MAKING BRAIDED SLINGS

David S. Robbins, Hamden, Conn., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey

Application May 5, 1945, Serial No. 592,241
6 Claims. (Cl. 87—8)

1. The method of forming an eight-part sling from a left lay rope and a right lay rope which comprises arranging the ropes into a substantial V-shape with each leg of the V having two substantially parallel parts of left lay rope and two substantially parallel parts of right lay rope, leaving an eye at the apex of the V, gripping the ropes at the apex, braiding the pairs of ropes together with the ropes in each pair remaining substantially parallel, said braiding being maintained in one direction throughout, forming a second eye at the end of the braiding, and splicing the free ends of each rope together to form an endless unit after braiding is completed.



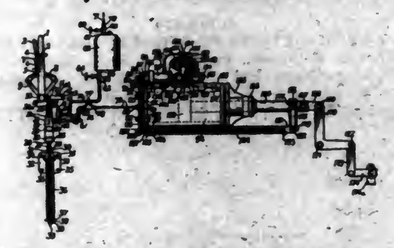
2,448,464

PRESSURE FLUID OPERATED PRESSURE INTENSIFYING MECHANISM

Edward A. Rockwell, West Hartford, Conn.

Application April 11, 1941, Serial No. 388,002
6 Claims. (Cl. 60—54.5)

1. In a device of the character described, a source of power, valve means for controlling the application of the same, a movable wall, having a housing and having a plunger, operated thereby, a cylinder for said plunger, a part adapted to perform work, having a hydraulic connection leading thereto from said cylinder, adapted to be moved by said wall, a mechanism for controlling the application of power to said wall, including a plunger and cylinder for operating the valve means provided with a manually controlled area and a smaller hydraulic power reactive area, manual means for moving said part independently of the application of said power including a manual pressure transmitting and power pressure controlling valve adapted to close when the power is



being applied and a stationary valve seat therefor located apart from said first mentioned plunger, and applying the power to said wall through said mechanism upon the normally developed pressure reaching a predetermined value, and a hydraulic line leading from said hydraulic connection to the second mentioned cylinder to exert a reaction on the manual means coordinate to the force exerted by the manual means.

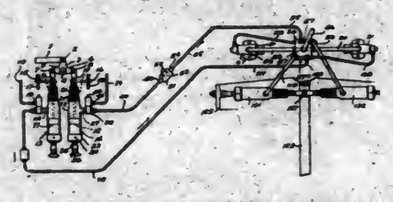
2,448,465

PRESSURE FLUID FOLLOW-UP SERVOMOTOR

Edward A. Rockwell, Cleveland, Ohio

Application June 4, 1943, Serial No. 489,712
1 Claim. (Cl. 121—41)

In combination, a part to be shifted, a compressed air power means connected to the said part for shifting the said part, a hydraulically operated manual control means having an adjustable manual lever means and means to hold said lever means in its adjusted position and including a compressed air valve, a hydraulic motor cylinder, having a piston, connected to the air valve and a master cylinder for operating the motor cylinder piston, for controlling the compressed air power means and a hydraulic cylinder connected to the manual control means, having a piston operatively connected to the part to be shifted, said master cylinder having a piston, a manually movable controller attached thereto and a yielding spring support for the master cylinder to avoid breakage by backed up pressure.



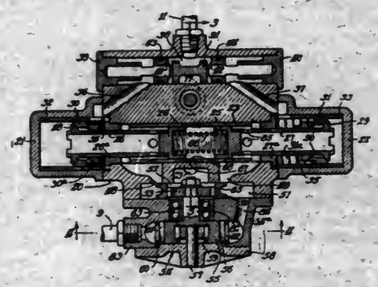
2,448,466

FOLLOW-UP PRESSURE FLUID SERVOMOTOR

Edward A. Rockwell, Cleveland, Ohio

Application June 4, 1943, Serial No. 489,713
1 Claim. (Cl. 121—41)

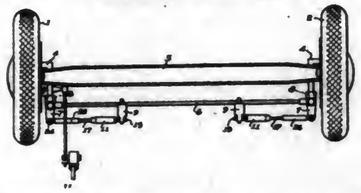
In combination, a linkage suitable for operating a locomotive reverse gear, a compressed air motor, having a cylinder with a piston therein, for operating the same, and a hydraulic controlling means for the motor comprising master cylinders and modulating valves, each of said valves having a hydraulic actuating means for controlling the supply and exhaust of compressed air to said motor, said motor having hydraulic travel control cylinders and plungers operated by the motor, each master cylinder being connected to one of said actuating means to actuate said valves to operate the latter and to a travel control cylinder and plunger for movement of the master cylinder piston with the plunger, said motor having connected to each end of the cylinder thereof on opposite sides of the motor piston, for the operation of the motor piston in opposite directions, one of the said modulator valves and each one of said modulator valves having one of said hydraulic travel control cylinders and plungers connected thereto, each of said modulator valves having one of said master cylinders for operating the same, said master cylinders being provided with pistons in the master cylinders connected together by a manually operable lever for operating the master cylinders inversely with regard to each other so as to produce hydraulically a coordinate travel of the master cylinder pistons and the motor piston, said controlling means also having a connection block connected to a compressed air supply and therefrom to each of said modulator valves as well as being connected to each of said master cylinders and therefrom to each of said modulator valves as well as to each of the travel control cylinders and plungers.



2,448,467

POWER INTENSIFIER TWO STAGE UNIFORM FLOW

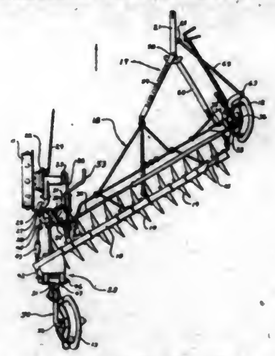
Edward A. Rockwell, Cleveland, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill., a corporation of Illinois



Application October 16, 1944, Serial No. 558,929
6 Claims. (Cl. 103—49)

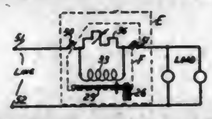
1. In a continuous flow pressure converter comprising a housing, differential plunger means reciprocably mounted in said housing, a valve device having intake and exhaust ports leading to said differential plunger means for supplying pressure fluid thereto and effect the reciprocation thereof, rotatable means for shifting said valve device, a fluid motor acting on said rotatable

means to shift said valve device, said motor having a selected volumetric capacity for imparting a predetermined stroke to said differential plunger means, whereby all of the fluid passing through said motor is transferred to act on the differential plunger means for the reciprocation thereof.



2,448,468
STEERING STABILIZER
Andrew F. Ross, Pittsburgh, Pa., assignor to Safety Steering Stabilizer Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application August 18, 1945, Serial No. 611,292
5 Claims. (Cl. 280—90)

5. A steering stabilizer adapted to be connected to a steering arm member at a steerable wheel of a motor vehicle and to the tie rod member connected to the steering arm member, comprising a hydraulic cylinder, a piston therein projecting from one end thereof, means on the projecting end of the piston adapted to connect it to one of said members, a fluid reservoir secured to the opposite end of the cylinder, means on the reservoir adapted to connect it to the other of said members, said reservoir being provided with a passage connecting it with the cylinder, said passage having an enlarged cross section at the end of the cylinder to form an annular recess provided with axially spaced radial side walls, the side wall at the reservoir side of the recess being an annular seat having an inner diameter smaller than the inner diameter of the opposite side wall of the recess, a floating disc in said passage with its marginal area loosely disposed in said recess where it is adapted to be forced against said seat by a sudden increase in fluid pressure in the cylinder, said disc being provided with a plurality of circumferentially spaced openings therethrough near its periphery in position to be closed by said seat when the disc is forced against it, said openings communicating with said cylinder when the disc is adjacent said opposite side wall of the recess, the disc also being provided with a central by-pass opening, and a spring-biased valve on the reservoir side of the disc for holding said by-pass closed momentarily after the disc strikes said seat.

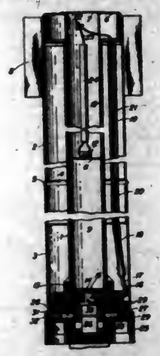


2,448,469
DISK PLOW AND CASTER WHEEL
Alvah E. Rutter, Rockford, Ill., assignor to J. I. Case Company, Racine, Wis., a corporation of Wisconsin
Application January 25, 1945, Serial No. 574,586
3 Claims. (Cl. 97—53)

1. In a disk plow of the type having a plurality of disks disposed axially oblique to the direction of travel so as to result in a landward thrust, said plow having a power lift and a rear furrow wheel, a laterally swingable axle for the furrow wheel, a connection to said axle including a substantially horizontal pivot, a fishtail member carried by said substantially horizontal pivot and a pivotal connection between said axle and said fishtail member providing free lateral swinging movement of said axle at all times, said pivotal connection being upwardly directed and inclined upwardly and toward the landside of said plow for biasing said swinging movement in one direction, said fishtail member including a downwardly directed guiding surface concentric with said pivotal connection

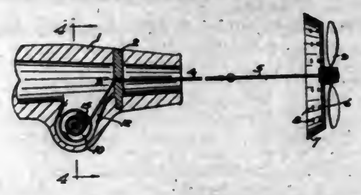
and engaging said axle for guiding it in its lateral swinging, spaced stop portions on said fishtail member for limiting the swinging of said axle, and a connection from said power lift for rocking said fishtail member about said substantially horizontal pivot.

2,448,470
LATCH-TRIP TYPE CIRCUIT BREAKER
Albert B. Rypinski, Laureiton, N. Y., assignor to Metropolitan Device Corporation, Brooklyn, N. Y., a corporation of New York
Application September 25, 1941, Serial No. 412,210
1 Claim. (Cl. 175—294)



In a circuit controlling device of the kind described, the combination comprising a switch element movable between "on" and "off" positions and biased toward "off" position, current releasable latching means for releasably latching the switch element in "on" position including a coil carried by the switch element, and a shunt carried by the switch element and arranged to by-pass a portion of the current around said coil, said shunt having a positive temperature coefficient of resistance.

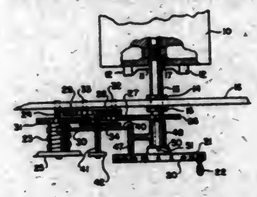
2,448,471
ILLUMINATING FLARE
Conrad David Schermuly, Alfred James Schermuly, and Charles Schermuly, Parkgate, Newdigate, England
Application May 31, 1945, Serial No. 596,850
In Great Britain June 29, 1944
4 Claims. (Cl. 102—7)



1. A flare device adapted to burn while floating on water comprising a casing, a buoyancy chamber on said casing, a flare candle within said casing, a removable ballistic covering enclosing the lower part of said casing, a fuze in said cover adapted to be ignited when the device strikes the water, a candle ignition train leading from a point adjacent said fuze to the top of said flare

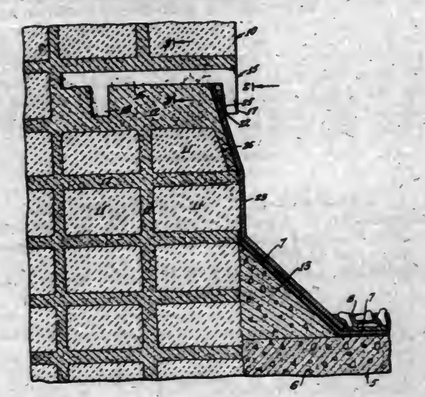
candle and adapted to be ignited by said fuze, a separating charge within said cover for the purpose of separating said cover from said casing said ignition train comprising a charge of powder adapted to be ignited by said fuze, an instantaneous fuze having one end embedded in said charge, a delay fuze joined at one end to

said instantaneous fuze and a length of quick-match joined at one end to said delay fuze and at the other end to the top of said flare candle and powder train means between the fuze and separating charge whereby said separating charge is ignited after the ignition of said candle ignition train.



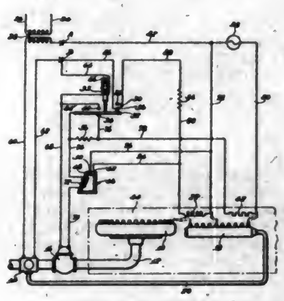
2,448,472
WATER ATOMIZING ARRANGEMENT
Lawrence Schott, Detroit, Mich.
Application March 3, 1945, Serial No. 580,766
2 Claims. (Cl. 299—130)

2. In an arrangement of the character described, the combination of a nozzle having a cavity therein in communication with the bore of the nozzle, a spool rotatably mounted in the cavity, means outside of the nozzle for turning the spool, an element wound around the spool and having one extremity projecting beyond the nozzle outlet, a deflector plate secured to said extremity of the element, and guide means in the nozzle through which the element passes intermediately of the length of the latter.



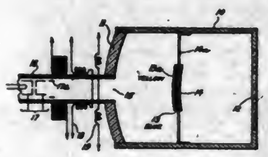
2,448,473
COMPENSATING MEANS FOR INDICATORS ON POSITIONING DEVICES
Robert Sidney Shrewsbury, Dunedin, Fla.
Application May 17, 1946, Serial No. 670,637
13 Claims. (Cl. 116—124)

1. A mechanism for compensating for errors in a positioning device embodying a member rotatable with respect to another member and a screw connection between said members for effecting adjustment of one thereof by such relative rotation, means for producing such relative rotation, an indicator connected to said means, a cam and cam follower connected to be operated in timed relation with said means for producing relative rotation between said members, said cam being shaped to impart a movement to said follower corresponding to departures from an accurate thread



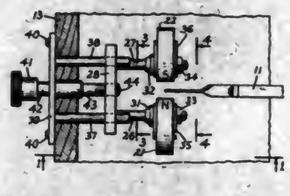
in said screw connection, and a connection from said follower to said indicator progressively and continuously operable in all adjusted positions of said members to apply an adjustment to the indicator in accordance with the position of said follower and thereby to compensate for said departures from an accurate thread.

2,448,474
FLASHING
John D. Stebbins, New York, N. Y., assignor to Allied Chemical & Dye Corporation, New York, N. Y., a corporation of New York
Application April 19, 1945, Serial No. 589,129
4 Claims. (Cl. 108—26)



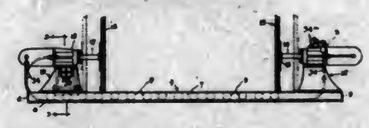
1. In combination with a roof and a contiguous wall involving horizontal courses of masonry elements vertically separated by mortar, a ceramic flashing member of substantially the same coefficient of expansion as said elements, consisting of a horizontal plate, extending at least partially through said wall between vertically spaced courses of said elements, and at least one leg integral with and projecting downward from said plate, the major portion of said flashing member being embedded in and surrounded by said mortar, said one leg being continuous along the edge of said plate in proximity to said roof and being laterally spaced from said mortar and masonry elements to form between the leg and said elements a recess for the reception of flashing, flashing extending into said recess and cemented therein by means of bituminous plastic,

2,448,475
SAFETY CONTROL APPARATUS FOR FUEL BURNERS
Charles K. Strobel and Stanley J. Lakota, Pittsburgh, Pa., assignors to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application October 27, 1942, Serial No. 463,492
17 Claims. (Cl. 158—117.1)



1. A safety control for fuel burners having main and pilot burners, comprising a source of current supply, means movable between positions for controlling the supply of fuel to the main burner, a control device adapted to receive current from said source and being thereby operable for causing movement of said means between said positions, means responsive to one operation of said device for igniting the pilot burner, and means responsive to a flame at the pilot burner for reducing said current to said device and thereby causing another operation of said device to change the position of said movable means and render said igniting means inoperative.

2,448,476
CATHODE-RAY PROJECTOR TUBE
Constantin S. Szegho, Chicago, Ill., assignor to The Rauland Corporation, Chicago, Ill., a corporation of Illinois
Application December 3, 1943, Serial No. 512,710
6 Claims. (Cl. 250—164)

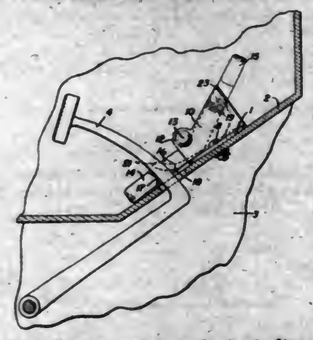


1. In combination, two superimposed convex fluorescent layers the first layer having a long afterglow as related to the afterglow of the second layer, a support therefor, an electron gun emitting electrons which traverse the first layer and excite the second layer, an evacuated envelope enclosing said layers, support and gun, a spherical mirror facing the exposed surface of the first layer for reflecting light emanating therefrom, and a correcting plate in the path of the light rays reflected by said mirror.

2,448,477
MAGNETIC DAMPENER FOR MEASURING INSTRUMENTS
Bernard Waske, Philadelphia, Pa., and John Kistinger, New Rochelle, N. Y., assignors to Voland and Sons, Inc., New Rochelle, N. Y., a corporation of New York
Application May 23, 1946, Serial No. 671,878
8 Claims. (Cl. 73—430)

4. A magnetic dampener for measuring instruments having a movable member, the movement of which is to be dampened, comprising a dampening plate fixed to said movable element, a supporting member adjacent to said movable element, a pair of guide elements extending from said support toward said dampening plate, a cross bar slidably mounted on said guide elements for movement toward and away from said dampening plate, a pair of horse shoe magnets mounted on said cross bar with their opposite poles in opposed, spaced apart relation to define air gaps for receiving said dampening plate, and rotatable means engaging said cross bar for moving said cross bar toward and away from said dampening plate.

2,448,478
PAPER ROLL HEADING MACHINE
Robert White, Montreal, Quebec, Canada, assignor to Williams & Wilson Limited, Montreal, Quebec, Canada
Application December 7, 1945, Serial No. 633,464
5 Claims. (Cl. 93—1)



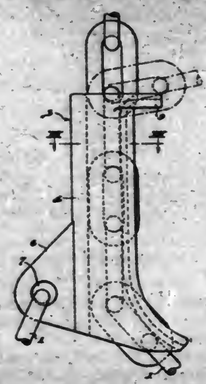
1. In a roll heading machine, a base frame including side members provided with inwardly directed flanges at their upper ends, transversely extending rollers journalled in said frame and a roll heading unit movable longitudinally of said frame, said unit comprising a cylinder, a header disk carried by a piston working in said cylinder, a cylinder-supporting element including a base portion adapted, at times, to rest on said rollers for movement longitudinally of said frame, said base portion including gripping flanges underlying the flanges projecting inwardly from the side members of the frame and pivotally mounted gripping jaws carried by said cylinder-supporting elements and adapted to be moved into and out of clamping engagement with the upper surfaces of the aforesaid frame flanges, the arrangement being such that the flanges of the base portion of the cylinder-supporting element are lifted off the rollers and into gripping engagement with the lower surfaces of the frame flanges when said jaws are operated into clamping engagement with the upper surfaces of said frame flanges.

2,448,479
URANIUM MONOCARBIDE AND METHOD OF PREPARATION
Harley A. Wilhelm and Adrian H. Daane, Ames, Iowa, assignors to the United States of America as represented by the United States Atomic Energy Commission
No Drawing. Application September 6, 1944, Serial No. 552,932
3 Claims. (Cl. 23—208)

1. A method of forming uranium monocarbide which comprises heating to reaction temperature a mixture comprising an oxide of uranium and carbon in substantially stoichiometric proportions required for monocarbide.

3. Uranium monocarbide having the composition UC.

2,448,480
BRAKE PEDAL LOCK
Arthur Willett, Jr., Bay City, Mich.
Application October 20, 1947, Serial No. 780,935
4 Claims. (Cl. 74—542)

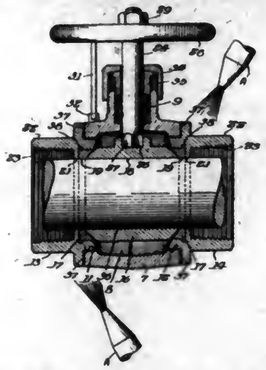


1. A foot brake pedal lock including a base plate adapted to be secured forwardly of the foot brake pedal of an automobile, said plate having a pair of upwardly extending parallel guide flanges formed thereon, a V-shape brake pedal locking arm rockably supported between said guide flanges, a rivet disposed above said pedal locking arm and connected between said guide flanges, said pedal locking arm being formed with a notch in its rear end portion, and brake pedal clamping and locking teeth on the opposite edges of said notch.

2,448,481
WINDOW SHADE SPRING ADJUSTING BRACKET
Charles H. Wise, Philadelphia, Pa.
Application August 27, 1946, Serial No. 693,325
1 Claim. (Cl. 160—324)

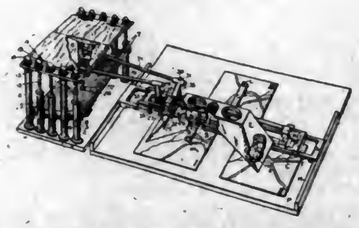
A device of the class described comprising a spring shade roller bracket having an entrance slot and bearing opening adapted for the free journaling reception of the flat pintle of a spring shade roller, a locking device for said pintle comprising an arcuate plate, a lug carried on one edge of the plate for pivotally mounting the plate on the bracket, a lug carried by the plate to be moved over the bearing opening for engagement with said pintle and a strap cam overlying the upper edge of the bracket to be moved into binding engagement with the bracket when the last named lug is engaged with said pintle.

2,448,482
CHAIN COUPLING
Homer J. Woolslayer, Erwin A. Campbell, and Cecil Jenkins, Tulsa, Okla., assignors, by mesne assignments, to Lee C. Moore Corporation, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 30, 1946, Serial No. 713,348
5 Claims. (Cl. 24—116)



4. A coupling for detachably connecting one end of a chain to an intermediate portion thereof to form a loop, said coupling comprising a tubular body adapted to receive a length of the chain's intermediate portion, the side wall of said body having a slot therethrough extending from end to end of the body with the major portion of its length only wide enough to receive a chain link edgewise, one end of said body having an end wall provided with a slot through it communicating at one end with the adjoining end of the side wall slot, said end wall slot being only wide enough to receive a link edgewise, whereby the end wall prevents the chain from sliding through it, a portion of said side wall slot adjacent said end wall being wide enough to form an opening through which the chain can slide into and out of the body, and a perforated member projecting from the opposite end of the body on the side opposite to said wall slot, said member being adapted to be connected to said end of the chain.

2,448,483
METHOD OF MANUFACTURING VALVES
Charles H. Bassett, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois
Application January 26, 1944, Serial No. 519,970
1 Claim. (Cl. 18—59)



The method of manufacturing a valve comprising forming respectively a casing, a closure member with substantially curved oppositely disposed surfaces and renewable plastic seats therefor, positioning the said seats in the said casing in predetermined relation to the said closure member, holding the said seats by means of the said closure member against shouldered portions within the said casing, inserting a snugly fitting shaft through a central portion of said closure member and said seats, then heating the said

seats so as to mold the latter members snugly within the said casing in predetermined form against the shouldered portions of the casing in-

cluding a peripheral portion of said shaft and against the said oppositely disposed curved surfaces of the closure member and then withdrawing the heat and said shaft.

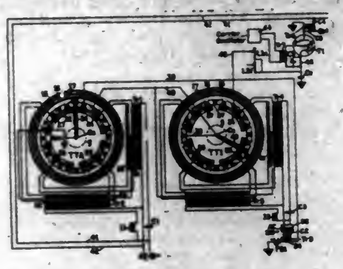
2,448,484
ALTIMETRIC-STEREO-CORRECTOR
Benjamin Arcoverde de Albuquerque Cavalcanti, Rio de Janeiro, Brazil
Application December 27, 1943, Serial No. 515,753
In Brazil March 12, 1943
16 Claims. (Cl. 33—20)

1. In combination with a stereoscopic altitude plotting instrument for pairs of aerial photographs, said instrument including a carriage provided with a marker and displaceable along the stereoscopic parallax and at right angles thereto to determine on one photograph of a selected stereoscopic pair the point to be plotted, an element displaceable relative to said determined point along the stereoscopic parallax for altitude plotting purposes, and a measuring device for measuring the displacement of said element to permit plotting of the altitude at the selected point, an altimetric-stereo-corrector comprising a cam element having a cam surface curved and inclined in function of the curvatures and inclinations of the tilt surface datum for the stereoscopic pair of photographs to be plotted, a lever mounted on said carriage for pivotal movement relative thereto and including a follower in contact with said cam surface for displacement over the latter in function of the displacement of said carriage along the stereoscopic parallax, and means to displace said element and measuring device in unison relative to said determined point along the stereoscopic parallax in function of the pivotal movements of said lever.

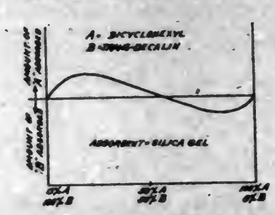
2,448,485
HOSE
Abel E. Chernack, Elmwood, Conn.; Mary Chernack executrix of said Abel E. Chernack, deceased
Application December 11, 1943, Serial No. 513,969
9 Claims. (Cl. 138—56)

1. A hose comprising a metallic spiral formed of a strip of trough-shaped section opening towards the hose axis, a covering on said spiral, binding means engaging said covering and a lining forming a smooth inner surface for the hose secured to said spiral.

2,448,486
HARDNESS TESTER
Milton A. Chester, Wichita, Kans.
Application December 29, 1944, Serial No. 570,393
20 Claims. (Cl. 73—81)



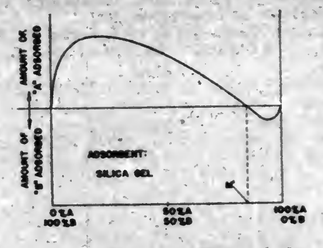
1. A hardness tester comprising a base having a reference face engageable with the piece to be tested; a penetrator on said base and movable thereon from a non-protruding to a protruding position, means for adjustably advancing said penetrator with respect to said reference face from a non-protruding position into engagement with the piece, spring means for forcing the penetrator from said adjustably advanced position into the piece, and means for measuring the movement of said penetrator from said adjustably advanced position and for indicating the value of the penetration so effected.



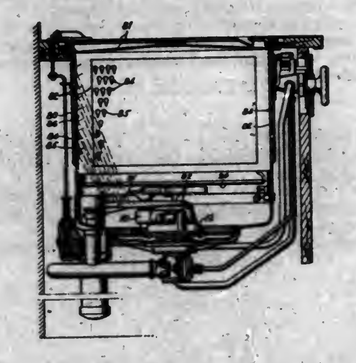
2,448,487
SELECTIVE SIGNALING SYSTEM
Oscar S. Field and Sedgwick N. Wight, Rochester, N. Y., assignors to General Railway Signal Company, Rochester, N. Y.
Application June 14, 1945, Serial No. 599,328
17 Claims. (Cl. 177—353)

1. A centralized traffic controlling and/or indication system comprising, a first stage multiple anode rotating beam electron tube at a control point and at each receiving point, a second stage multiple anode rotating beam electron tube for each anode of each first stage tube, means connecting the cathode of each second stage tube to an anode of the associated first stage tube at said control point, a communicating channel, means for applying an impulse to said communicating channel when the electron beam of a first stage tube and the electron beam of a second stage tube at said control point are each simul-

taneously directed at a particular anode, and electro-responsive means included in a circuit including the corresponding particular anodes at a particular receiving point.



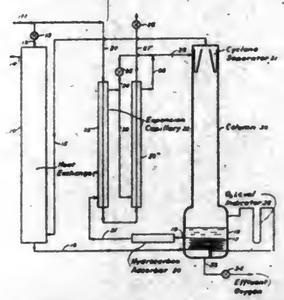
2,448,488
PURIFICATION OF NAPHTHENIC HYDROCARBONS
Alfred E. Hirschler, Drexel Hill, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
Application January 26, 1946, Serial No. 643,763
17 Claims. (Cl. 260—666)



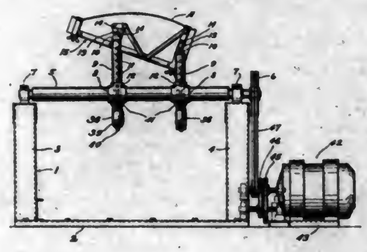
1. In a process of separating a liquid hydrocarbon mixture comprising two naphthene hydrocarbons which differ by not more than three carbon atoms per molecule and in which the two hydrocarbons have different adsorbabilities when they are present within a certain range of proportions, the steps which comprise subjecting a mixture in which the proportions of said naphthene hydrocarbons are within such proportion range to treatment in liquid phase with silica gel, thereby selectively adsorbing one of said hydrocarbons, and separating from the silica gel a fraction containing the other hydrocarbon in more nearly pure form.

2,448,489
SEPARATION OF AROMATIC HYDROCARBONS BY SELECTIVE ADSORPTION IN SILICA GEL
Alfred E. Hirschler, Drexel Hill, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
Application April 14, 1948, Serial No. 20,883
8 Claims. (Cl. 260—674)

1. A process for separating two aromatic hydrocarbons having the same number of double bonds per molecule which comprises passing a liquid hydrocarbon mixture composed at least mainly of such aromatic components through a body of silica gel, thereby selectively adsorbing one of said aromatic hydrocarbons, and separating from the silica gel a filtrate fraction which contains only a portion of the total aromatics in the starting mixture, thereby obtaining a product in which the proportion of one of said hydrocarbons to the other of said hydrocarbons is higher than in the starting mixture.

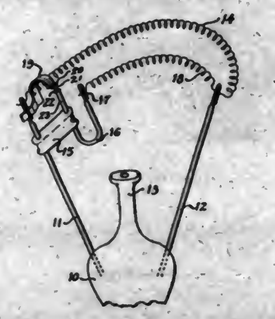


2,448,490
DISHWASHER HAVING DEFLECTING RECESSES IN THE WALL THEREOF
Fredrik Johan Robert Karlström, Stockholm, Sweden, assignor to Aktiebolaget Electkrolux, Stockholm, Sweden, a corporation of Sweden
Original application April 11, 1940, Serial No. 329,092. Divided and this application November 25, 1943, Serial No. 511,665. In Sweden April 12, 1939
3 Claims. (Cl. 134—182)



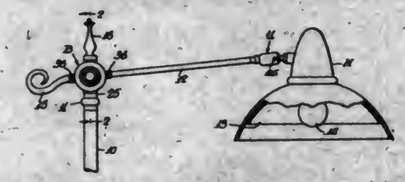
3. In a dishwashing apparatus, a receptacle, a sprayer member within said receptacle, and means for supplying water under pressure to said member to thereby produce a plurality of high velocity streams, an interior wall of said receptacle being formed with a multitude of closely spaced concave bowl-shaped recesses, the surface of each recess intersecting the surface of the wall along a single line closed on itself, said recesses being small enough so that each recess will be impinged by not more than one of said streams which will be redirected towards the interior of the receptacle by the bowl-shaped concave surface of the recess with a minimum of lateral spreading of the stream, each of said recesses being elongated in the direction of the stream which impinges it and having a shape such that the intersection of the surface of the recess with a plane normal to the wall and parallel to the stream is a straight line along the portion of the recess adjacent the spraying member and is an arc along the remainder of the recess, said line being tangent to said arc.

2,448,491
AIR SEPARATING SYSTEM AND PROCESS
Allen Latham, Jr., Jamaica Plain, Mass., assignor to Arthur D. Little, Inc., Cambridge, Mass., a corporation of Massachusetts
Application November 6, 1944, Serial No. 562,215
6 Claims. (Cl. 62—175.5)



6. In a process for the treating of gases by expansion through a capillary expansion element, the steps which comprise first, passing compressed gas through said element to cool and expand said gas until substantial obstruction to the passage of said gas is created by the accumulation of congealed matter in said element, and second, passing a portion of said compressed gas into out-of-contact heat-exchange relationship with the contents of said element for a sufficient time to melt said congealed matter, and then alternately repeating said first and second steps as often as required.

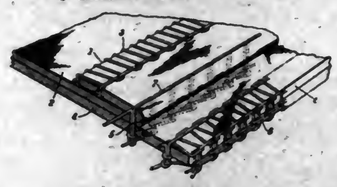
2,448,492
METHOD AND APPARATUS FOR CENTRIFUGALLY FORMING OF SHEET THERMOPLASTICS
Robert Mayne, Akron, Ohio, assignor to Goodyear Aircraft Corporation, Akron, Ohio, a corporation of Delaware
Application March 29, 1945, Serial No. 585,504
15 Claims. (Cl. 18—19)



1. An apparatus for forming by centrifugal force bubbles and like articles made of thermoplastic sheet material comprising a supporting structure including a revolvable shaft and at least one pair of arms spaced from each other, means for separately securing and radially adjusting each arm on said shaft, a jig having contours corresponding to the inner edge contours of the article to be formed, means for adjustably attaching the jig to each pair of said arms, means for clamping at its edges the sheet material to said jig, and means for rotating said shaft.

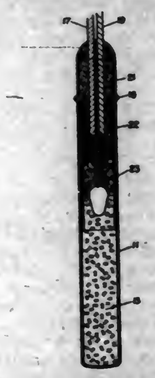
2,448,493
MULTIPLE LIFE LIGHT BULB
Stanley Joseph Meno and John Richard Cavanagh, Toronto, Ontario, Canada
Application August 30, 1946, Serial No. 693,851
2 Claims. (Cl. 315—65)

1. A plurality life lighting device comprising a primary light emitting filament connected across a source of current, and a secondary filament connectable across said source of current when said primary filament fails, a bi-metal element mounted adjacent said primary filament at one end thereof and connected thereby to said source of current and designed partially to enclose said primary filament at a predetermined distance therefrom, said secondary filament and said primary filament being commonly connected at their one end to said source of current, rod means mounting the other end of said secondary filament and disposed to engage said bi-metal whereby to complete the electrical circuit of said secondary filament when said primary filament ceases to draw current, insulating mounting means for mounting said rod and disposing the latter to engage said bi-metal, said bi-metal disengaging from said rod to disconnect said successive filament from its circuit when said preceding filament draws current and emits radiant energy, said bi-metal engaging said rod normally after failure of said primary filament and conducting current from said source to said secondary filament when the latter is emitting radiant energy the exterior surfaces of said bi-metal being designed to reflect heat and light, said filaments being disposed in substantially equivalent light emitting positions, whereby one filament is the equivalent of each other filament in illuminating value.



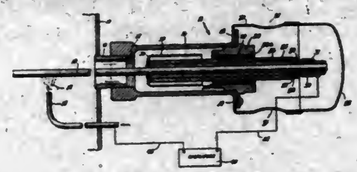
2,448,494
LIGHTING EQUIPMENT
Carl Moser, Larchmont, N. Y., assignor to Lightolier Company, New York, N. Y., a corporation of New York
Application September 24, 1945, Serial No. 618,097
9 Claims. (Cl. 248—122)

5. A lighting unit of the type comprising a standard having a lamp head mounted thereon



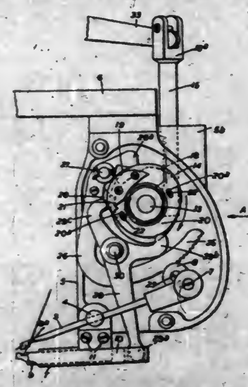
and a universal joint intervening between said standard and said head, said joint comprising a ball having a shank, a cylindrical shell accommodating said ball, a cross-pin assembling said elements, the end of said shell being in the form of a spherical segment, a spherical-ended nipple accommodated in the end of said shell and free to swivel about its axis, a bearing block for said ball, and a spring within said shell interposed between said bearing block and said nipple.

2,448,495
METHOD OF JOINING AND FINISHING THE SEAM-MARGIN EDGES OF FABRIC PLIES
Edward Muecke, Linden, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application October 11, 1947, Serial No. 779,334
3 Claims. (Cl. 112—262)



1. The method of forming an edge-finished and margin-opened joining seam for fabric-plies, comprising, binding an edge of a ply of fabric, folding back upon itself the edge-bound margin of that ply and superimposing said ply of fabric upon a second fabric-ply with the fold-edge of the folded-back and edge-bound margin spaced inwardly from and disposed substantially parallel to an edge of the second ply of fabric, securing the fold-edge of said folded-back margin to the second ply of fabric and simultaneously therewith binding the edge of the second fabric-ply proximate to said fold-edge.

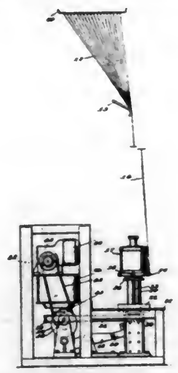
2,448,496
ANNEALED SHELL
William F. Reager, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
Application October 22, 1943, Serial No. 507,267
3 Claims. (Cl. 102—28)



3. An electric explosion initiator which comprises a drawn metal shell having a closed bottom, an explosive charge in said shell, and a seal closing the top of said shell; a portion of said shell adjacent said explosive charge being annealed to a soft condition so as to provide a place of easy rupturability through which the initiating force may be directed.

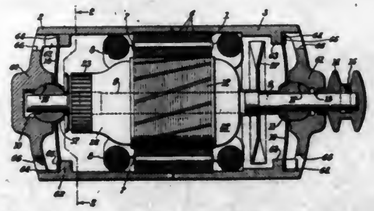
2,448,497
FLAME ELECTRODE CONTROL DEVICE
John O. Rosche, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application April 18, 1945, Serial No. 588,960
5 Claims. (Cl. 158—28)

1. In a combustion indicating device, in combination, an electrode for conducting current in a circuit which includes a flame, means for insulatingly supporting a portion of said electrode adjacent a combustion area, and means for preventing formation of a continuous conducting deposit of the products of combustion between said electrode and said supporting means, said means including a hollow cylindrical member surrounding said supporting means in spaced relation and sealed thereto at the end nearer the combustion area to form a static air pocket in cooperation with said supporting means.



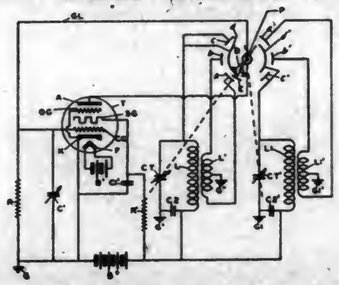
2,448,498
MECHANISM FOR FEEDING YARN IN CIRCULAR WEFT KNITTING MACHINES
Arthur Shortland, Leicester, England, assignor to Mellor Bromley & Co. Limited, Leicester, England, a British company
Application December 14, 1945, Serial No. 635,026
In Great Britain December 19, 1944
19 Claims. (Cl. 66—134)

1. In a circular weft knitting machine, in combination, at least one needle cylinder, a set of independent needles for operation in said cylinder, a circular series of sinkers arranged to co-operate with the needles when knitting, and mechanism for feeding yarn to the needles, said mechanism comprising a movable yarn guide, an associated



trapper, and means for operating the said guide and the trapper in timed relation suchwise that when the mechanism is rendered operative a length of yarn held between the guide and the trapper is initially positioned so as to extend from front to back of the sinkers and to be engaged by a sinker to effect introduction of the yarn to the needles.

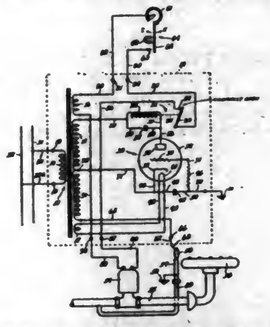
2,448,499
METHOD OF PRODUCING STRANDS OF INTERTWISTED GLASS FIBERS
Carl C. Swann, Kingsport, Tenn., assignor to Owens-Corning Fiberglas Corporation, a corporation of Delaware
Application March 10, 1944, Serial No. 525,968
4 Claims. (Cl. 49—77)



1. The method of producing in a single operation strands of intertwisted glass fibers directly from a source of molten glass which comprises flowing a plurality of streams of molten glass to be attenuated to fibers, collecting the fibers into a strand at a fixed point between the source and the point of attenuation, and winding the strand onto an angularly stationary support by revolving the strand therearound under tension, said winding concomitantly imparting a twist to the strand and effecting attenuation of said streams in advance of said collecting point.

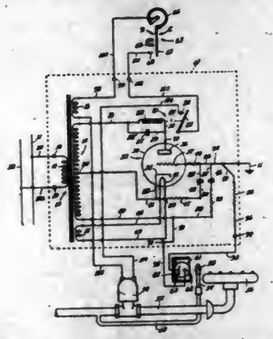
2,448,500
BEARING ASSEMBLY FOR DYNAMO-ELECTRIC MACHINES
Edgar P. Turner, Fanwood, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application April 23, 1945, Serial No. 589,779
10 Claims. (Cl. 308—72)

10. In a dynamoelectric machine, a frame including an end cover having a bearing-bushing seat, a bearing-bushing disposed in the seat of said end cover, a bearing-bushing retainer comprising a spring member disposed in engagement with said bearing-bushing and resiliently opposed to said seat, and latching means for said retainer providing for limited radial and lateral bodily movement of said retainer relative to said bearing-bushing.



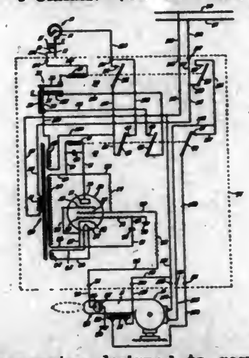
2,448,501
ELECTRICAL ALTERNATING CURRENT GENERATOR
Howard J. Tyzzer, Caldwell, N. J., assignor to Ferris Laboratories, Boonton, N. J., a corporation of New Jersey
Application June 28, 1944, Serial No. 542,497
11 Claims. (Cl. 250—36)

7. In a system for generating electrical alternating currents of sinusoidal wave form in a region of ultra high frequencies somewhere in which the inherent nature of the system per se renders it without the power to further generate: the combination of a standard electronic tube having an electron source in spaced relation to an effective electron attracting positive potential anode and a negative potential control grid interposed therebetween in normal spaced relations thereto; a positive potential screen grid interposed between said grid and anode; a plurality of circuits comprising paralleled inductance and variable capacitance and means for conductively interposing any one of said circuits between said anode and said electron source; an energy extracting coupling associated with a newly chosen one of said circuits having effectively opposed in phase terminations; and a capacitance including lead from said control grid to means for selectively making contact with either one of said terminations of said energy extracting coupling of the newly chosen circuit; whereby generation of electrical alternating currents can be effectively continued at frequencies well beyond the neighborhood of the frequency at which the power to generate ceased due to the replaced circuit no longer being electrically qualified to support generation.



2,448,502
CONTROL DEVICE
John M. Wilson, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application November 6, 1942, Serial No. 464,732
13 Claims. (Cl. 250—27)

12. In combination; an electrical device; a space discharge amplifier having an anode, a cathode, and a control grid; a transformer having a primary winding and a secondary winding; connections between spaced points on said secondary winding and said anode and cathode; said connections including said electrical device and constituting an output circuit for said amplifier; a condenser connected between said control grid and said cathode independently of said transformer; a resistor; and means for charging said condenser comprising a series circuit including said condenser, said resistor, and a gap adapted



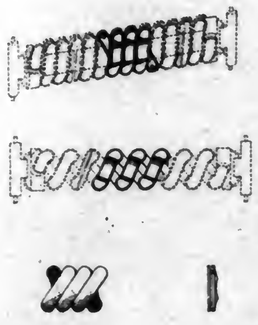
to be bridged by a rectifying impedance having its direction of greatest conductivity such that said condenser is so charged as to increase the potential of said grid in a positive direction with respect to said cathode.

2,448,503
CONTROL DEVICE
John M. Wilson, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application November 13, 1942, Serial No. 465,476
17 Claims. (Cl. 250—41.5)

1. In combination; an electrical device; a space discharge amplifier having an anode, a cathode, and a control element; a source of alternating power; circuit connections for controlling said electrical device including said anode, said cathode, and said source of power and operative to cause said electrical device to be energized when the potential of said control electrode is within a first of two ranges of values; connections between said control electrode and a point on said source of power such that the connections tend to maintain said control element at an alternating potential within one of said two ranges of values; said point being the only point on said source of power independent of the cathode connection to which said control element is connected; said last named connections including a gap adapted to be bridged by a rectifying impedance; means associated with said last named connections and effective when said gap is bridged by a rectifying impedance to maintain said control element at a potential within the other of said two ranges of values; and means in said last named connections in parallel with said gap, said last named means being substantially non-conductive to a continuous current in the direction of rectification of said impedance.

2,448,504
ELECTRONIC APPARATUS
Vilynn O. Beam, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application September 17, 1945, Serial No. 616,791
9 Claims. (Cl. 250—41.5)

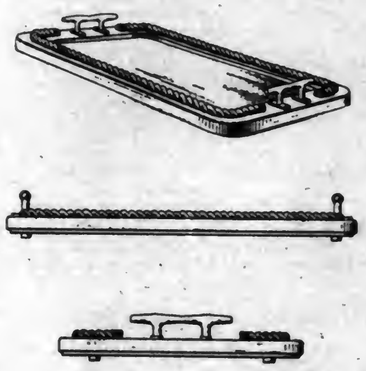
1. In apparatus designed to respond to the presence of a rectifying impedance, an electrically operated device, a source of alternating power, means for controlling the energization of said device including said source of power and an electronic discharge device having an anode, a cathode, and two control electrodes, a condenser connected between one of said control electrodes and said cathode, said control electrode normally assuming a potential such as to prevent said discharge device from operatively energizing said electrically operated device, electrical connections from said source of power to said condenser, said electrical connections adapted to include an impedance which is capable of being asymmetrically conductive, means including said connections effective when said impedance is asymmetrically conductive to impress across said condenser a voltage such as to render said discharge device sufficiently conductive to cause operative energization of said electrically operated device, and means including said other control electrode effective when said impedance is symmetrically conductive to impress across said condenser a voltage such that said electrically operated device is effectively deenergized, regardless of the effective magnitude of said impedance.



2,448,505
PAINT CONTAINING AN ALKYD RESIN AND A HALOGENATED AMINE
Paul Zurcher, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware
No Drawing. Application February 27, 1942, Serial No. 432,647
10 Claims. (Cl. 260—32.6)

1. A paint composition comprising an alkyd resin as a principal vehicle and normally deficient in hiding power containing a halogenated amine in an amount sufficient to increase the hiding power of the paint.

DESIGNS



AUGUST 31, 1948

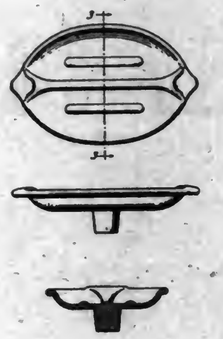
150,746
DESIGN FOR AN EXPANSIBLE WATCH BRACELET OR SIMILAR ARTICLE
Arthur Albanese, Providence, R. I., assignor to Marvel Jewelry Mfg. Company, Providence, R. I., a corporation of Rhode Island
Application July 1, 1947, Serial No. 140,036
Term of patent 7 years
(Cl. D45—4)

The ornamental design for an expansible watch bracelet or similar article, as shown.

150,747
DESIGN FOR A TRAY
Frederick Henry Berlin, Jr., New York, N. Y.
Application June 29, 1946, Serial No. 131,193
Term of patent 3½ years
(Cl. D44—10)

The ornamental design for a tray, as shown.

150,748
DESIGN FOR A CONTROL COLUMN
Robert E. Bingman, Detroit, Mich., assignor to Mechanical Handling Systems, Inc., Detroit, Mich., a corporation of Michigan
Application February 9, 1946, Serial No. 126,405
Term of patent 14 years
(Cl. D26—5)

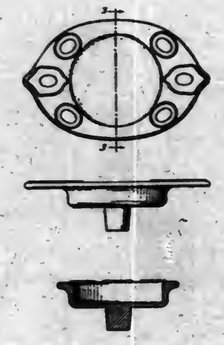


The ornamental design for a control column, as shown and described.

150,749
DESIGN FOR A CONDIMENT SHAKER
Boris Blecher, Philadelphia, Pa.
Application November 1, 1946, Serial No. 134,445
Term of patent 14 years
(Cl. D44—22)

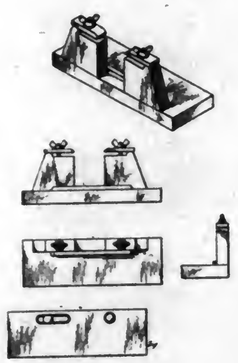
The ornamental design for a condiment shaker, as shown.

150,750
DESIGN FOR A SOAP DISH
Joseph Bozoti, Parma, Ohio
Application March 25, 1947, Serial No. 137,852
Term of patent 7 years
(Cl. D4—3)



The ornamental design for a soap dish, as shown and described.

150,751
DESIGN FOR A WALL BRACKET
Joseph Bozoti, Parma, Ohio
Application March 25, 1947, Serial No. 137,853
Term of patent 7 years
(Cl. D4—3)

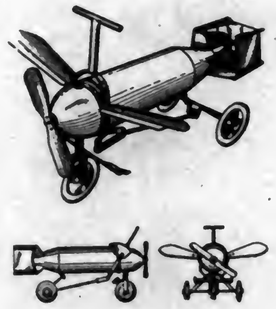


The ornamental design for a wall bracket, as shown and described.

150,752
DESIGN FOR A COMBINED DRINKING GLASS AND TOOTHBRUSH HOLDER
Joseph Bozoti, Parma, Ohio
Application March 25, 1947, Serial No. 137,854
Term of patent 7 years
(Cl. D4—3)

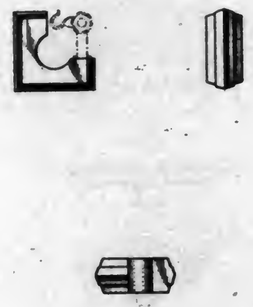
The ornamental design for a combined drinking glass and toothbrush holder, as shown and described.

150,753
DESIGN FOR A TEST MOUNT FOR MINIATURE ENGINES
Elmer P. Carr, Buffalo, N. Y.
Application April 20, 1946, Serial No. 128,811
Term of patent 7 years
(Cl. D54—14)



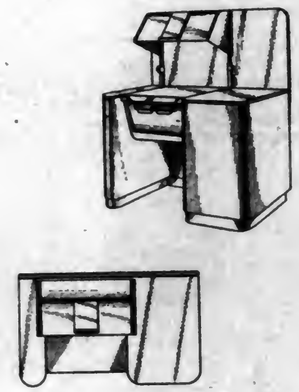
The ornamental design for a test mount for miniature engines, substantially as shown and described.

150,754
DESIGN FOR A TIRE
William Louis Cavin, Terrell, Tex., assignor of one-half to Frank H. King, Terrell, Tex.
Application February 14, 1947, Serial No. 136,916
Term of patent 14 years
(Cl. D90—20)



The ornamental design for a tire as shown and described.

150,755
DESIGN FOR A TRICYCLE
Felix A. Cerasoli, Seattle, Wash.
Application October 4, 1946, Serial No. 133,766
Term of patent 3½ years
(Cl. D34—15)



The ornamental design for a tricycle, as shown.

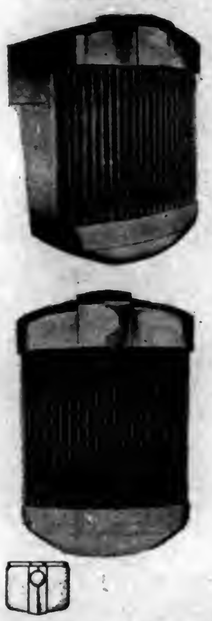
150,756
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Michael Chernow, New York, N. Y.
Application July 19, 1947, Serial No. 140,409
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,757
DESIGN FOR A MARKING TABLE
Walter Clifford Cunningham, Horsham, England, assignor to The National Marking Machine Company, Cincinnati, Ohio, a corporation of Ohio
Application January 27, 1947, Serial No. 136,458
In Great Britain August 13, 1946
Term of patent 14 years
(Cl. D33—14)

The ornamental design for a marking table, as shown.

150,758
DESIGN FOR A PACK FOR FRAGILE ARTICLES
William J. De Reamer, Crown Point, Ind., assignor to Mapes Consolidated Manufacturing Company, Griffith, Ind., a corporation of Delaware
Application November 19, 1945, Serial No. 123,891
Term of patent 14 years
(Cl. D58—13)



The ornamental design for a pack for fragile articles, substantially as shown.

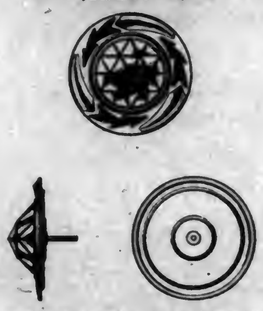
150,759
DESIGN FOR A CHAIR
Wilton C. Dinges, Baltimore, Md., assignor to Emeco Corporation, Baltimore, Md., a corporation of Maryland
Application September 11, 1946, Serial No. 133,240
Term of patent 3½ years
(Cl. D15—1)

The ornamental design for a chair, as shown and described.

150,760
DESIGN FOR A RADIATOR GRILLE AND ENCLOSURE STRUCTURE
Henry Dreyfuss, New York, N. Y., assignor to Deere Manufacturing Co., a corporation of Iowa
Application November 1, 1946, Serial No. 134,459
Term of patent 14 years
(Cl. D14—18)

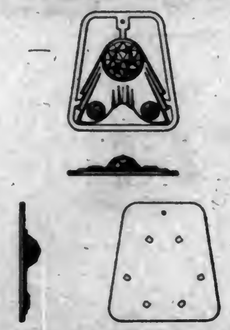
The ornamental design for a radiator grille and enclosure structure, as shown.

150,761
DESIGN FOR A SOAP DISH
Archibald Maclay Gardner, Los Angeles, Calif.
Application March 4, 1947, Serial No. 137,346
Term of patent 3½ years
(Cl. D4—3)



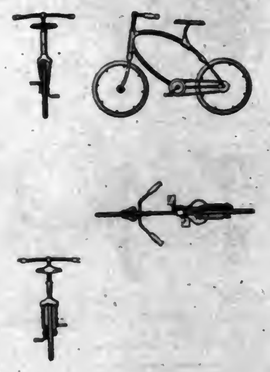
The ornamental design for a soap dish, as shown.

150,762
DESIGN FOR AN END PLATE FOR BICYCLE PEDALS
Harry Golden, New York, N. Y.
Application April 25, 1947, Serial No. 138,608
Term of patent 7 years
(Cl. D90—14)



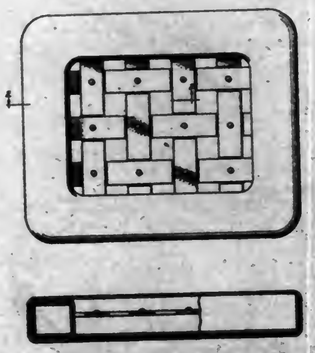
The ornamental design for an end plate for bicycle pedals, as shown.

150,763
DESIGN FOR A BICYCLE AND AUTOMOBILE JEWEL AND SUPPORT
Harry Golden, New York, N. Y.
Application April 25, 1947, Serial No. 138,609
Term of patent 7 years
(Cl. D90—1)



The ornamental design for a bicycle and automobile jewel and support, as shown.

150,764
DESIGN FOR A FENDER FLAP FOR BICYCLES
Harry Golden, New York, N. Y.
Application April 25, 1947, Serial No. 138,610
Term of patent 7 years
(Cl. D90—1)

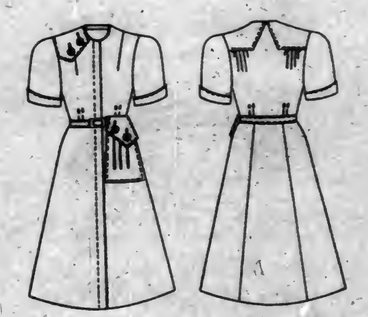


The ornamental design for a fender flap for bicycles, as shown.

150,765
DESIGN FOR A BICYCLE
Hugh Harman, Beverly Hills, Charles F. McGirl, Van Nuys, and Harvey K. Greenlaw, Los Angeles, Calif.
Application September 3, 1946, Serial No. 133,034
Term of patent 3½ years
(Cl. D90—8)

The ornamental design for a bicycle, substantially as shown.

150,766
DESIGN FOR A FLOAT FOR BAR SOAP OR THE LIKE
Ferdinand A. Hilenski, Salem, Mass.
Application October 25, 1946, Serial No. 134,262
Term of patent 3½ years
(Cl. D4—3)

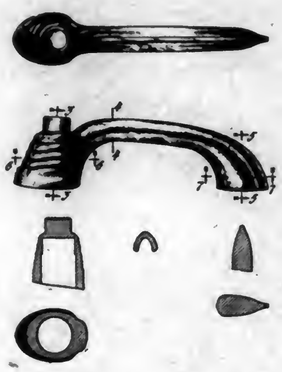


The ornamental design for a float for bar soap or the like, as shown.

150,767
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Edward Hoffschmidt, Brooklyn, N. Y., assignor to David Greenhouse, Brooklyn, N. Y.
Application June 13, 1946, Serial No. 130,674
Term of patent 3½ years
(Cl. D45—19)

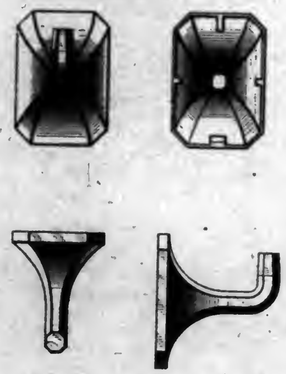
The ornamental design for a brooch or similar article, substantially as shown.

150,768
DESIGN FOR A DRESS
Lucy Hoshafian, New York, N. Y.
Application November 28, 1947, Serial No. 142,838
Term of patent 7 years
(Cl. D3—26)



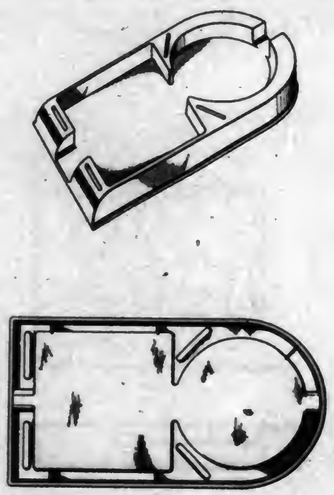
The ornamental design for a dress, substantially as shown.

150,769
DESIGN FOR AN OUTSIDE DOOR HANDLE OR SIMILAR ARTICLE FOR AN AUTOMOTIVE VEHICLE
Myron Hulyk, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 8, 1948, Serial No. 146,237
Term of patent 14 years
(Cl. D10—8)



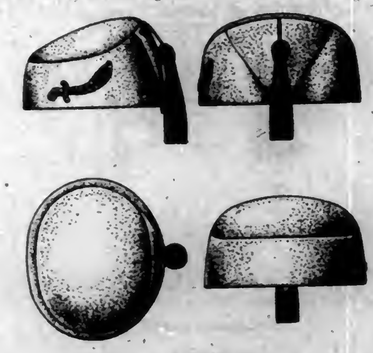
The ornamental design for an outside door handle or similar article for an automotive vehicle, substantially as shown.

150,770
DESIGN FOR AN OUTSIDE DOOR HANDLE OR SIMILAR ARTICLE FOR AN AUTOMOTIVE VEHICLE
Myron Hulyk, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 8, 1948, Serial No. 146,238
Term of patent 14 years
(Cl. D10—8)



The ornamental design for an outside door handle or similar article for an automotive vehicle, substantially as shown.

150,771
DESIGN FOR A BATHROOM FIXTURE
John A. Iskyan, Forest Hills, N. Y.
Application March 26, 1947, Serial No. 137,889
Term of patent 3½ years
(Cl. D4—3)



The ornamental design for a bathroom fixture, substantially as shown.

150,772
DESIGN FOR A COMBINED NAPKIN AND COASTER TRAY
Walter K. Jahn, Beverly Hills, Calif., assignor to New Plastic Corporation, Los Angeles, Calif., a corporation of Delaware
Application September 25, 1946, Serial No. 133,557
Term of patent 3½ years
(Cl. D44—10)

The ornamental design for a combined napkin and coaster tray, as shown.

150,773
DESIGN FOR A LADY'S EMBLEMATIC CAP
Bertie J. Johnson, San Luis Obispo, Calif.
Application March 6, 1947, Serial No. 137,387
Term of patent 14 years
(Cl. D3—13)

The ornamental design for a lady's emblematic cap, substantially as shown.

150,774
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 2, 1948, Serial No. 143,501
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,775
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 2, 1948, Serial No. 143,502
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown and described.

150,776
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 2, 1948, Serial No. 143,503
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown and described.

150,777
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 2, 1948, Serial No. 143,505
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,778
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 2, 1948, Serial No. 143,510
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,779
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 2, 1948, Serial No. 143,512
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,780
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 2, 1948, Serial No. 143,515
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,781
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,762
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,782
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,763
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,783
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,769
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,784
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,770
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,785
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,772
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

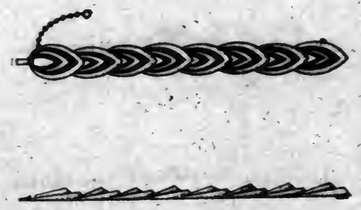
150,786
DESIGN FOR AN EARRING OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,773
Term of patent 7 years
(Cl. D45—9)

The ornamental design for an earring or similar article, substantially as shown.

150,787
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,774
Term of patent 7 years
(Cl. D45—9)

The ornamental design for a brooch or similar article, substantially as shown.

150,788
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,782
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

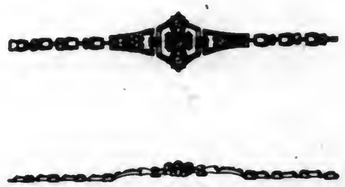
150,789
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,791
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

150,790
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,802
Term of patent 7 years
(Cl. D45—4)

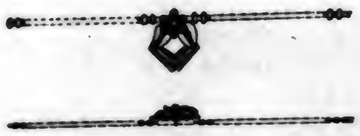
The ornamental design for a bracelet or similar article, substantially as shown.

150,791
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 15, 1948, Serial No. 143,805
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

150,792
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 21, 1948, Serial No. 143,930
Term of patent 7 years
(Cl. D45—16)



The ornamental design for a necklace or similar article, substantially as shown and described.

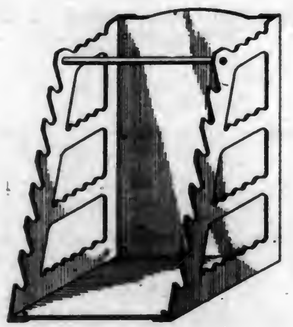
150,793
DESIGN FOR A BRACELET OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 21, 1948, Serial No. 143,936
Term of patent 7 years
(Cl. D45—4)

The ornamental design for a bracelet or similar article, substantially as shown.

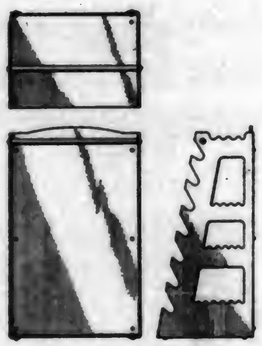
150,794
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 22, 1948, Serial No. 143,966
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,795
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 26, 1948, Serial No. 144,059
Term of patent 7 years
(Cl. D45—16)

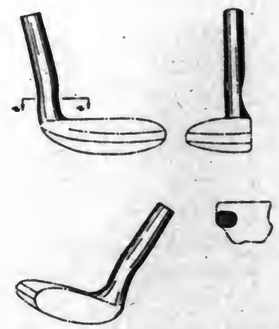


The ornamental design for a necklace or similar article, substantially as shown and described.

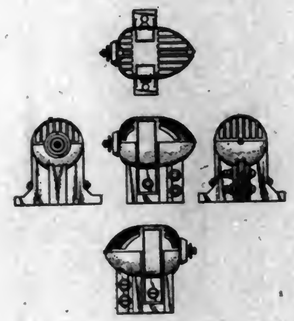


150,796
DESIGN FOR A JEWELRY FINDING
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application January 27, 1948, Serial No. 144,089
Term of patent 7 years
(Cl. D45—1)

The ornamental design for a jewelry finding, substantially as shown.



150,797
DESIGN FOR A PIPETTE SUPPORT
David Lane, Philadelphia, Pa.
Application July 10, 1946, Serial No. 131,458
Term of patent 14 years
(Cl. D80—9)

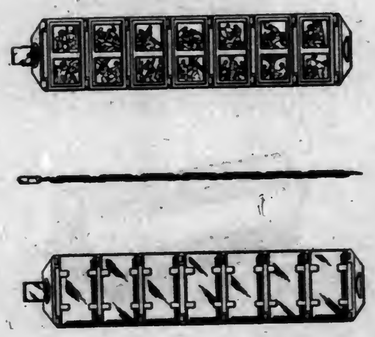


The ornamental design for a pipette support, substantially as shown.

150,798
DESIGN FOR A PUTTER HEAD
Samuel N. Liolich, Detroit, Mich.
Application March 18, 1947, Serial No. 137,721
Term of patent 14 years
(Cl. D34—5)

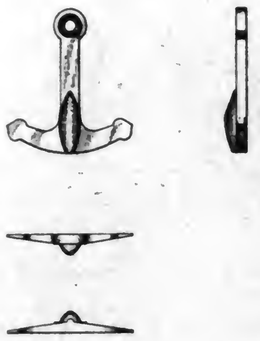
The ornamental design for a putter head, as shown and described.

150,799
DESIGN FOR AN ELECTRIC MOTOR
Carlos B. Livers, North Hollywood, Calif., assignor to Variety Development and Engineering Company, Los Angeles, Calif., a co-partnership composed of Carlos B. Livers and Ralph E. Middleton
Application December 16, 1946, Serial No. 135,542
Term of patent 3½ years
(Cl. D26—5)



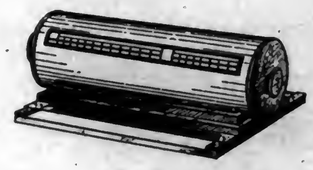
The ornamental design for an electric motor, as shown.

150,800
DESIGN FOR A SOCKET SCREW DRIVER
John Magnus, Jr., Hazleton, Pa.
Application March 19, 1947, Serial No. 137,746
Term of patent 7 years
(Cl. D93—4)



The ornamental design for a socket screw driver, as shown.

150,801
DESIGN FOR A PICTURE-CONTAINING BRACELET OR SIMILAR ARTICLE
Wolf E. Meierowitz, Providence, R. I.
Application January 16, 1947, Serial No. 136,183
Term of patent 3½ years
(Cl. D45—4)



The ornamental design for a picture-containing bracelet or similar article, substantially as shown.

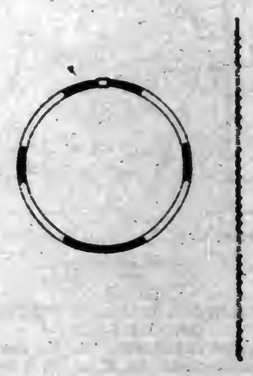
150,802
DESIGN FOR AN ANTIRATTLER FOR WINDOW SASHES
Victor S. Metcyer and Francis D. Kamb, Irondequoit, N. Y.
Application October 2, 1946, Serial No. 133,710
Term of patent 7 years
(Cl. D10—10)

The ornamental design for an antirattler for window sashes, as shown.

150,803
DESIGN FOR A PAYROLL CALCULATOR
Robert Buxton Minor, Richmond, Va.
Application January 29, 1947, Serial No. 136,495
Term of patent 3½ years
(Cl. D74—1)

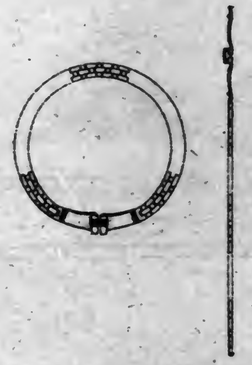
The ornamental design for a payroll calculator, as shown and described.

150,804
DESIGN FOR A CLOCK
Adolph J. Nelson, Oak Park, Ill., assignor to Boyco, Inc., Chicago, Ill., a corporation of Illinois
Application April 14, 1948, Serial No. 145,718
Term of patent 7 years
(Cl. D42—7)



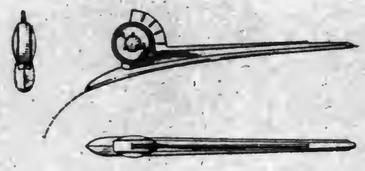
The ornamental design for a clock, as shown.

150,805
DESIGN FOR A BAT
Bernard M. Pauly, Springfield, Ohio
Application April 9, 1947, Serial No. 138,262
Term of patent 7 years
(Cl. D34—5)



The ornamental design for a bat, as shown and described.

150,806
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 27, 1948, Serial No. 144,069
Term of patent 7 years
(Cl. D45—16)

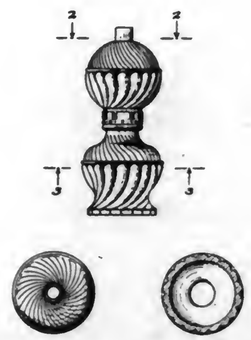


The ornamental design for a necklace or similar article, substantially as shown and described.

150,807
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trafari, Krussman & Fishel, Inc., New York, N. Y.
Application January 27, 1948, Serial No. 144,071
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown and described.

150,808
DESIGN FOR A VEHICLE HOOD ORNAMENT OR SIMILAR ARTICLE
Theodore W. Pietsch, Royal Oak, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application May 24, 1947, Serial No. 139,249
Term of patent 14 years
(Cl. D14—18)

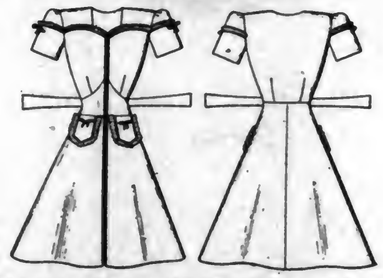


The ornamental design for a vehicle hood ornament or similar article, substantially as shown.

150,809
DESIGN FOR A STAPLING DEVICE
Richard E. Powers, Los Angeles, Calif., assignor to Powers Manufacturing Company, Los Angeles, Calif., a firm composed of Richard E. Powers, Merel E. Powers, and Robert J. Miller
Application October 12, 1946, Serial No. 133,904
Term of patent 14 years
(Cl. D74—1)

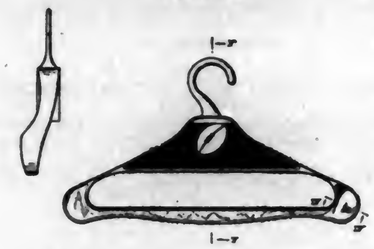
The ornamental design for a stapling device, substantially as shown.

150,810
DESIGN FOR A BOTTLE
Herbert Rubin, New York, N. Y.
Application December 3, 1946, Serial No. 135,222
Term of patent 3½ years
(Cl. D58—8)



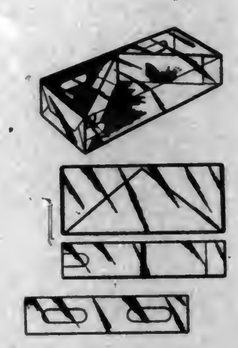
The ornamental design for a bottle, substantially as shown.

150,811
DESIGN FOR A DRESS
Marvin Satin, Chicago, Ill., assignor to H. A. Satin & Co., Chicago, Ill., a corporation of Illinois
Application November 6, 1947, Serial No. 142,332
Term of patent 7 years
(Cl. D3—26)



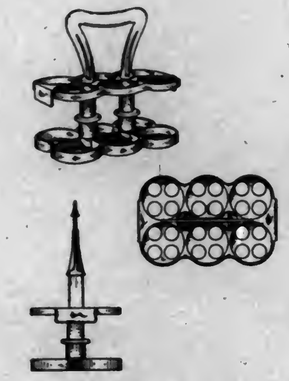
The ornamental design for a dress, as shown.

150,812
DESIGN FOR A DRESS
Marvin Satin, Chicago, Ill., assignor to H. A. Satin & Co., Chicago, Ill., a corporation of Illinois
Application January 6, 1948, Serial No. 142,559
Term of patent 7 years
(Cl. D3—26)



The ornamental design for a dress, as shown.

150,813
DESIGN FOR A GARMENT HANGER OR THE LIKE
Richard Sklaar, Lynbrook, N. Y., assignor, by mesne assignments, to K. & S. Corp., Baltimore, Md.
Application November 25, 1946, Serial No. 135,053
Term of patent 14 years
(Cl. D80—8)

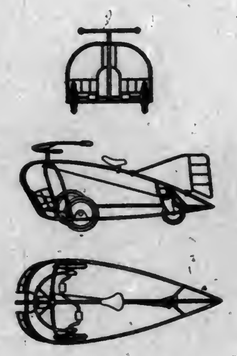


The ornamental design for a garment hanger or the like, substantially as shown.

150,814
DESIGN FOR A CARTON
Charles S. Smith, Arlington, Va.
Application March 19, 1946, Serial No. 127,654
Term of patent 14 years
(Cl. D58—13)

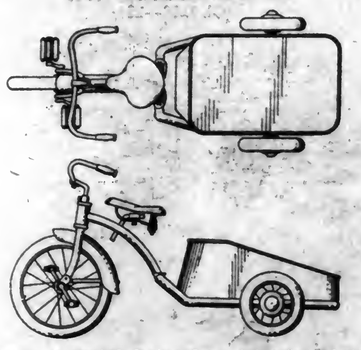
The ornamental design for a carton, as shown.

150,815
DESIGN FOR A BOTTLE CARRIER
Robert G. Stigler, Dayton, Ohio, assignor to Standard Molding Corporation, Dayton, Ohio, a corporation of Ohio
Application July 26, 1946, Serial No. 131,979
Term of patent 14 years
(Cl. D58—4)



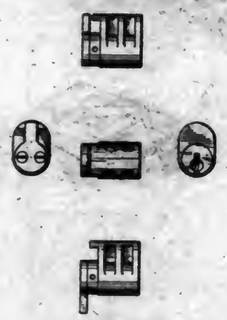
The ornamental design for a bottle carrier, substantially as shown and described.

150,816
DESIGN FOR A LIGHTING DEVICE FOR LOCKS OR THE LIKE
Carl Edward Swanson, Chicago, Ill.
Application August 16, 1946, Serial No. 132,583
Term of patent 3½ years
(Cl. D26—13)



The ornamental design for a lighting device for locks or the like, substantially as shown.

150,817
DESIGN FOR A TRICYCLE
Raymond R. Taylor, Brooklyn, Mich.
Application March 25, 1947, Serial No. 137,859
Term of patent 3½ years
(Cl. D34—15)



The ornamental design for a tricycle, substantially as shown and described.

150,818
DESIGN FOR A TRICYCLE
Earl A. Totz, Detroit, Mich.
Application February 7, 1947, Serial No. 136,751
Term of patent 3½ years
(Cl. D34—15)

The ornamental design for a tricycle, substantially as shown.

150,819
DESIGN FOR A DIAL TELEPHONE LOCK
Bernard Zion, New York, N. Y.
Application June 7, 1947, Serial No. 139,505
Term of patent 14 years
(Cl. D50—7)

The ornamental design for a dial telephone lock, as shown.
